Never do much encouraging harking to your pack, for they will get so after a while that they will not run as well away from the sound of your voice as when you are near them. When your pack lose the trail near or at the edge of a burnt woods or field, always "lift" them; ride rapidly to where you think the fox has passed on the opposite side and yell, "Hark here! hark here!" or anything to get them to follow you. Many a good pack has been ruined by an indifferent huntsman. Did you ever notice anything peculiar about the laying of scent?

When the earth is enrobed with fog you are sure to have a good chase if you succeed in starting a fox. Other days, when you see smoke settling in long blue streaks, you may just as well go home, for though you may start a fox you will probably abuse your hounds for their inferior work; but the scent does not lie well on such days.

My favorite time to hunt is in September and October. There is no animal that affords man so much pleasure to chase as the young red fox. They take circles of two, three or perhaps four or five miles, always returning to where the jump was made, and thus affording ample opportunities for the puppies to get in.

I always leave home in the morning in time to get to the hunting grounds by daylight, for to me it seems out of place to chase a fox in the afternoon.

The red foxhound should not have too cold a nose, for that will make him linger on a trail and blow all day under the shade of a tree. I once knew a hound that had a very poor nose, and when the fox was first started she would run at the rear of the pack; but when they gained on the fox, she would go nearer to the front, and when the fox was caught she was the first hound to put mouth on it.

The voice preferred by hunters differs according to individual taste. I prefer a clear, bell-like note when trailing, which becomes much shorter and sharper when running.

Which is the best strain of foxhounds? That is a very difficult question to answer. There are a number of strains that are very fine, and a number of strains that are said to be fine that are not fit for scavengers. There is but one way to tell and test the superiority of the foxhound, and that way is after the fox, and not on the bench.

Within the past ten years thousands of dollars have been spent on new strains. Some have made satisfactory purchases and others equally the opposite.

Were I able and wanted the best, I would make a tour of the United States (for I believe the best hounds in the world are in this country), take my hounds with me, visit every pack, and when I found hounds superior to mine sell out and buy them, and continue to visit packs and purchase hounds until I was satisfied that I had hounds that could not be improved upon. I would not look at them alone but hunt a week at a time. We all know that hounds of the most ordinary appearance are sometimes better in the field than their handsome and stylish brothers. When you have a good strain of hounds do not cross them. We may pour the purest water and best wine into a vessel, but we cannot draw forth either decent water or passable wine.

Did you ever mate two hounds of almost the same color and have the female throw pups that favored neither the dog nor the bitch? We all have. Mate your hounds according to individual traits if you desire the best results.

The numerous fox-hunting clubs which have been organized in the United States are destined to do a great deal of good toward advancing the interests of the foxhound. Competition is always sure to improve one's pack, for we get weary of being beaten and defeated so frequently and begin at once to obtain better hounds. I know of two cases in my own neighborhood where this is true.

Fox hunting is destined to become our national field sport and I do earnestly hope that it may reach that exalted position during my lifetime.

Brother sportsmen, let us hear your opinion of fox hunting through the always ready and willing columns of the FOREST AND STREAM. J. H. WALLACE, JR.

TOWN CREEK, Ala.

United States Field Trials Club.

NEWTON, N. C.—The committee on grounds for the fall trials of the U. S. Club having decided on Newton, N. C., as the place for the November meeting of the club, I have been here some days arranging the details for the above event. I have leased a large tract of land for the trials, lying on the opposite side of the town from the grounds of the Eastern Club, and fully as good ground. The citizens of Newton and vicinity are much pleased that their locality has been selected for the trials of the fall circuit, and stand ready to assist the clubs in any manner possible. St. Hubert Inn (formerly Hotel Newton) will be headquarters. The rate at this house will be $2 per day, no extra charge for fires in rooms or for lunches sent to the field. This hotel is now fitted with electric bells in all rooms, hot and cold water, bath rooms, insifle closets and wash rooms, and other conveniences same as of the hotels of a good-sized city, the table being supplied with beef from Chicago, fish and oysters from the Gulf, and the best of creamery butter; and with the turkeys and chickens from the neighborhood, visitors can rest assured that the inner man will be well taken care of. Other good accommodations can be had at $1 per day or $5 per week. Livery will be provided at $2.50 per day for two-horse hacks with driver, and $1.25 per day for saddle horses. For the benefit of those attending the trials from the South and West, due notice will be published of the best route and reduced railroad rates. Visitors from the East can secure the same rates as are given to the Eastern Field Trials Club from Washington and New York. I have looked up a number of good locations tributary to Newton that are good points to locate at to prepare dogs for the trials, and if such handlers who expect to attend and who are not familiar with the country will communicate with me, I will give them the names of places that would suit their wants. I have secured the services of a local shooter who is familiar with the grounds. He will draw them carefully just before the trials and locate the bevies, and then act as a guide through the trials and so enable work to move along smoothly and without loss of time.

W. B. STAFFORD, Sec'y U. S. F. T. Club.

National Foxhunters' Association.

MR. ROGER D. WILLIAMS, Lexington, Ky., chairman of the committee, has mailed 300 copies of the following circular letter to foxhunters throughout the United States:

"The committee appointed to select a location and decide upon the time for holding the second annual meeting met at Lexington, Ky., May 2, and selected the week of Nov. 18 as the date, but did not decide upon the place.

"We will be pleased to receive suggestions on the subject. The most important consideration is plenty of red foxes; of this there must be no doubt. Also, state what facilities for getting to and from the place, what accommodations are to be had for man and beast, and the number of horses that can be furnished. No section of country is barred and all locations suggested will have full consideration.

"If you are not a member of the N. F. A. we will be pleased to have you join."

DOG CHAT.

The Chesterford Park Kennels, Maywood, Ill., offer all their dogs for sale. I. M. Sterling, Bridgeport, Conn., offers setters. E. E. Haines, Charlestown, Mass., offers setters. Great Danes are offered by the Hercules Kennels, Ottawa, Ill.; and Beaumont Kennels, New York, have Irish setters for sale. W. H. McQuoid, Middletown, N. Y., wants a first prize English setter field trial winner.

Mr. George W. Rogers, secretary of the National Beagle Club of America, writes us that the club's fifth annual trials will be held at Hempstead, L. I., commencing Nov. 11.

In respect to their new importation, the Mere Kennels, Tarrytown, N. Y., write us as follows: "We received on the 14th per steamship Massachusetts the fox terrier Charlton Nigger, by Success—Sunlight. He has been shown but little in England, and has already won several firsts and specials. He should do much for the breed on this side."

There is a lull this season in the "challenge business" in the dog world which may be considered unprecedented. The sportsmen's journals have not been so free from challenges in many months as they are at present. Can Mr. Madison's remarks last February on the "challenge business" have produced these effects?

The rules of the Bull-Terrier Club of America, with a description of the points of the bull-terrier, are now in pamphlet form. W. D. Brereton, Sec'y, 66 Third avenue, Pittsburg.

Mr. M. W. Reil writes us that Fritz (12,036) died of kidney disease on May 15. Of him Mr. Reil says: "He was the best poodle Styx ever got. He took prizes at Albany, Troy, New York and Brooklyn."

The Oak Grove Kennels write us as follows:

"In your issue of April 27, we notice that you make a mistake as regards the positions in which the Chesapeake Bay dogs were placed at Boston, as you say, "In open dogs Richard Connor's Peter, light in bone, but good in coat and type, won first over Oak Grove Kennels' Curley, a fair average dog, and their Deacon, first at New York, took the reserve." The fact of the matter is that our Deacon won first in this class, Peter second and Curley reserve."

In our business columns, the United States Field Trials Club's fifth annual trials are announced. The fall meeting will be held at Newton, N. C., commencing with the Derby, Nov. 7. This stake is for pointers and setters, each breed to run separately, and each has $150 to first, $125 to second, $100 to third, $75 to fourth, $50 to fifth. Total $1,000. Entries close June 10. W. B. Stafford, Sec'y-Treasurer, Trenton, Tenn.

FIRST ANNUAL

SPORTSMEN'S EXPOSITION,

Madison Square Garden, New York, May 13 to 18.

THE FIRST ANNUAL.

THE Exposition was successful beyond the anticipation of the most sanguine promotors. Every exhibitor must feel that the time and effort and money which the enterprise cost was well expended; and may with reason expect to receive from his participation in the event benefits which will amply repay him. As for some who doubted the expediency of the enterprise, and who were not represented in it, they will feel disposed to take part in the one already contemplated for next year.

The Exposition was held for the purpose of educating the public, and that purpose it served admirably. The sportsmen of New York and vicinity, and thousands who are not sportsmen, visited the exhibition and were interested and entertained. But if the occasion served its purpose—if the public was educated—the exhibitors received their own lesson, too; and if the show this year was successful, those to be held in the future will be much more so.

MADISON SQUARE GARDEN.

The undertaking presented problems altogether new; and that they were solved so well counts for the credit of all concerned. The experience gained in 1895 will insure for the expositions to come schemes more adequate and execution more perfect. From the first, one serious danger has been that the commercial would overbalance the popular side; and had the earlier intentions of the managers been carried out this might have happened. Fortunately the peril was to a great extent avoided; and yet not wholly so, for in some of the newspapers the affair was persistently treated as a commercial project. This is a danger which will always threaten such an exhibition, and it can be avoided only by the adoption of a broad and far-seeing policy, which will not always perhaps commend itself to the intensely practical money-making man who wishes to have in sight the return dollar before he expends the one which is to bring it back.

It is easy now to see some points of weakness in the past; but instead of criticising them we should strive to remember them, so that next year they may be avoided.

The Exposition has shown very clearly that the New York public is willing to pay freely to see an exhibition of sportsmen's implements and equipments, and that dealers in these goods are glad to have the opportunity to display them. If the Exposition had been more ably handled through the press there is no doubt that the receipts would have been quadrupled, and the investment of $1,000 in this way would have brought a return of $10,000. Next year there will not be sufficient space in Madison Square Garden to contain all the exhibitors who will wish to be represented, and with proper management the Exposition, if held at the proper time—say in March or even February—will prove very remunerative to its projectors.

Last week we gave a general description of the Exposition; to-day we illustrate and describe more fully the prominent exhibits.

The Bridgeport Gun Implement Co.

The Bridgeport Gun Implement Co., of Bridgeport, Conn., and of 313-315 Broadway, New York, had an exhibit that it would be a hard matter to duplicate anywhere. The space occupied was barely sufficient for the purpose, the great variety of "gun implements" manufactured and sold by the company requiring really more room than could be spared for that purpose. Gun implements also are not the sole products of the company, bicycle supplies figuring prominently in the exhibit.

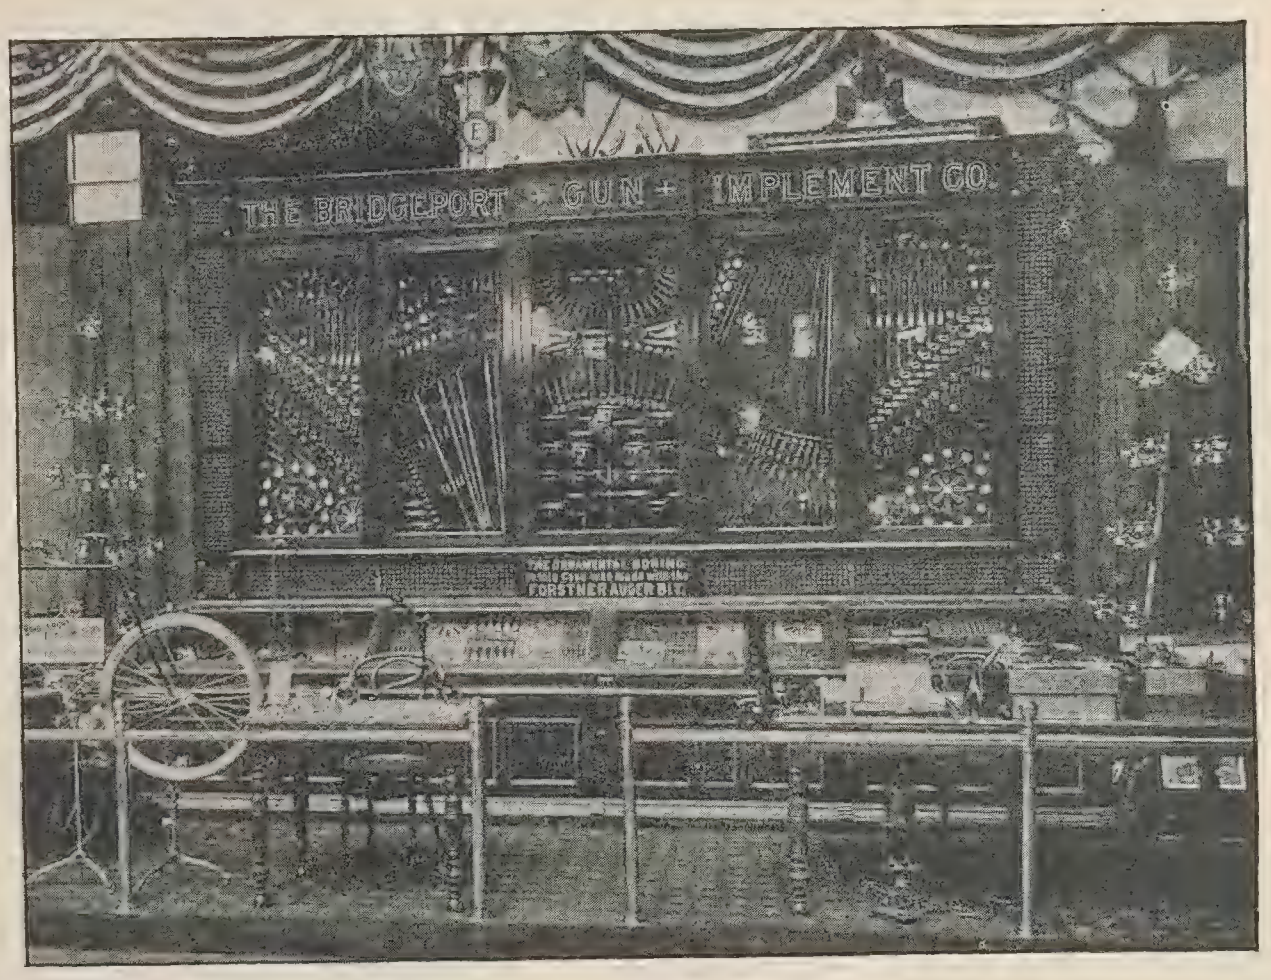

EXHIBIT OF THE BRIDGEPORT GUN IMPLEMENT COMPANY.

The background for the display in the Sportsmen's Exposition was well chosen. As shown in the photograph, the cabinets containing the company's World's Fair exhibit occupied the space in the background, the infinite variety of implements and parts of implements being arranged in a very taking manner. It would be an easy matter to make this part of the exhibit stiff-looking and formal; this danger, however, was avoided when the exhibit itself was put together, with the consequent result that the effect produced was harmonious and artistic.

The showcases containing other specialties of the company's manufacture were filled with a profusion of all kinds of shell-loading and other implements, all of which caught the eye and attracted the attention of the passing sportsman. In the price list, issued May 1, 1895, the company pays special attention to hand-loading outfits, of which they say: "Our aim is to show shooters the necessity of having properly loaded shells, and the tools to be used in loading same. The secret of loading to get good shooting from a shot cartridge is a system of uniform measurement of the charges of powder and shot, with the even distribution of these charges level in the shell, so wads may lie horizontally both on powder and shot, and also placed with uniform pressure each and every time, so all shells will be loaded precisely alike. These results are only obtainable by the use of proper charging and loading tools such as our combination outfits and rapid loaders, which we guarantee to be absolutely correct, being graduated by actual weight of whatever powder the sportsman desires to use. The system of charging with brass plates as used by us in the combination charges is positive, each and every one being stamped for the charge for which it is to be used. There is not the slightest danger of mistake, as these plates are specially flattened and rolled to a uniform thickness, not varying to even one-thousandth of an inch, so that each and every plate and hole is exactly alike. We claim that with these outfits, 25, 50 or 100 shells can be loaded at one time, and that same will not show any variation one from another."

The "Rapid Loader" mentioned above has been known to shooters for many a day. The company, however, has gotten out an improvement, naming it the "New Rapid Loader." At the Exposition, Mr. A. Seipel, who was in charge of the exhibit, explained its many advantages over the old style, and gave practical illustrations of its capabilities.

Another specialty of the company is the micrometer powder and shot measures manufactured by the company. In its catalogue the company says: "The introduction of the micrometer powder and shot measures by the B. G. I. Co. marks another step in their progress toward perfection and absolute accuracy in the loading of ammunition. The micrometer measure can be adjusted to the fractional part of a grain of powder, making it absolutely the most accurate measuring device ever originated. The use of this measure does away with special measures for nitro powders, as it is adapted to all powders, even if of different specific gravity."

The variety of gun-cleaning tools is almost confusing; wool swabs, expansion felt swabs, wire scratch brushes, wormers, flannel wipers, twisted wire bristle brushes, three-row steel wire brushes, etc. In fact, anybody who can't find a gun-cleaner to his fancy among those offered him by the Bridgeport Gun Implement Company, must either be hard to please or else not know what he wants. Rifle and revolver cleaners, field cleaners, pocket oilers, etc., find a place in the catalogue, and were also on exhibition at the Sportsmen's Exposition. Of crimpers, or closers, the company showed several kinds, with reversible shell plates, which permit of all sizes of shells from eight to twenty to be crimped by the same machine.

Bicycle supplies were also a special feature in the company's exhibit. With the aid of an electric motor, the front wheel of a bicycle was kept running, as if on a road, the cyclometer attached to it ringing off the miles at a twelve-miles-an-hour gait. The "Bridgeport Search Light," a powerful lamp for bicycles, is too well known by bicyclists to need more than passing mention.

A new bicycle lock, however, is specially worth noting. This lock, made of nickeled steel, and so small that it can be easily carried in the vest pocket without any inconvenience, can be attached to the sprocket wheel without any trouble, absolutely locking the machine and rendering it useless to anybody save the holder of the key. This is something that is bound to find favor with bicyclists.

So many, and of such different natures were the articles exhibited by this company that more than a passing mention cannot be made. Application, however, to the Bridgeport Gun Implement Company, 313-315 Broadway, New York, will result in the receipt of illustrated catalogues, which tell the story in the most fitting manner. That the exhibit of the company at the First Sportsmen's Exposition was one that was appreciated was proven by the number of visitors to the Exposition who found their way to the exhibit and carefully and critically examined the articles displayed there.

The Colt's Patent Fire Arms Mfg. Co., of Hartford, Conn.

In the very center of the Exposition, at the apex of convergence of two main aisles, and consequently with a fine field open in front of it for its view-ground, was one of the chief exhibits of the Exposition, that of the Colt's Patent Fire Arms Mfg. Co. One of the features of being great is to be known, and surely this great firm is known. This was proved by the large number of visitors at the exhibit, all anxious to see the newest things put out by the Colt's Co., and to study with interest the evolution of firearms so typically shown in the display of arms once thought perfect, but now held obsolete. In another column one of our writers has spoken of gunpowder as the great civilizer, and has called attention to the early and the later days in the history of that agency. Surely the history of firearms, closely connected as that must be with the story of gunpowder, has even a greater interest; for

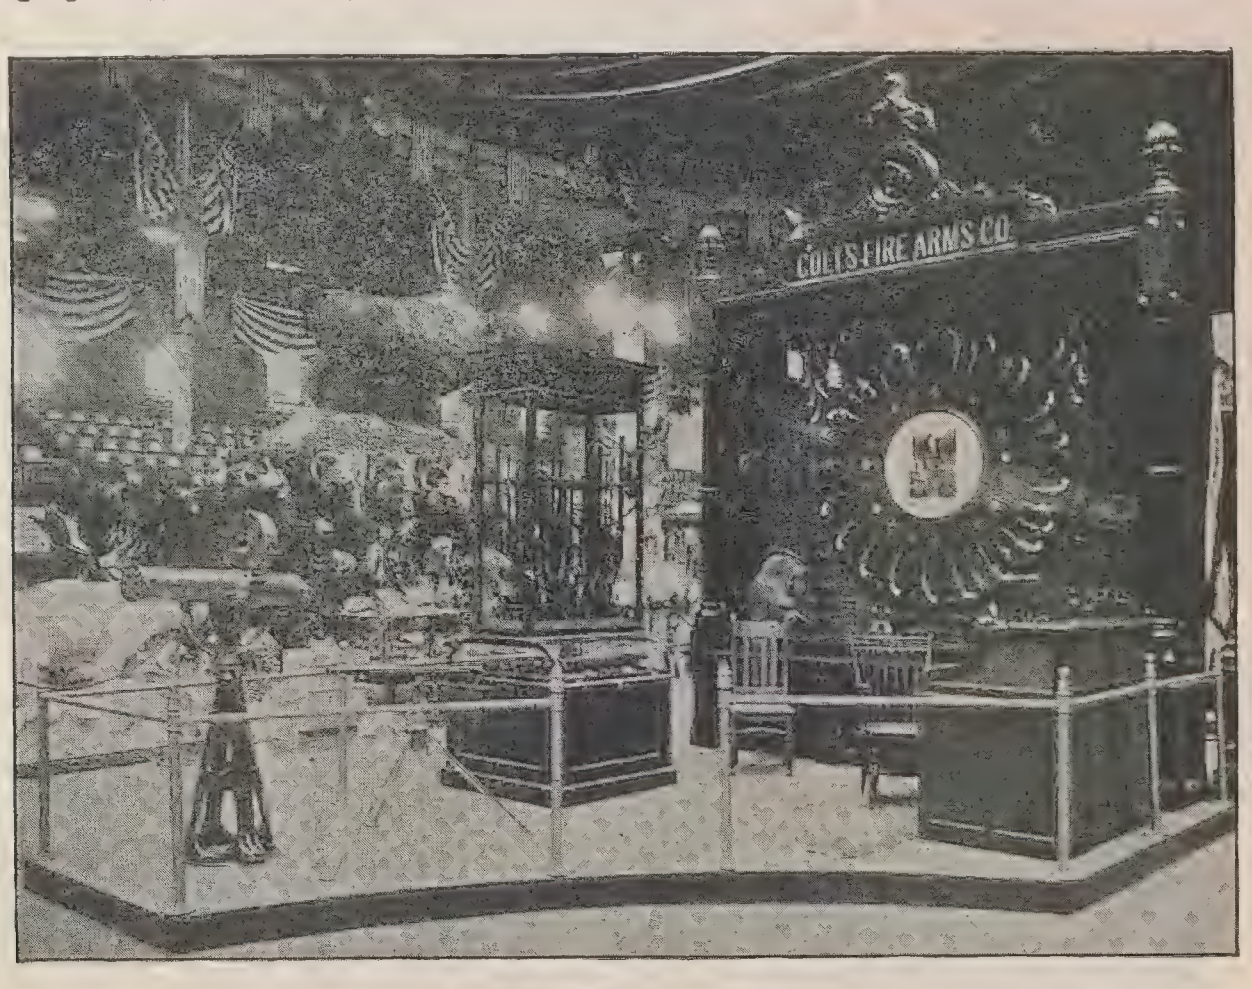

EXHIBIT OF THE COLT'S FIRE ARMS COMPANY.

while the latter has known comparatively few changes, the changes and improvements in firearms have been continual, unpredictable, apparently impossible as they may each once have seemed.

No greater revolution in the making of arms ever occurred than the evolution of the idea of the revolver. Then, indeed, all men did become equal. Justly, the name of the originator, Col. Samuel Colt, became famous to all the ends of the earth for all time when small-arms shall be used by mankind. Thousands of men have risen up out of desperate straits and called him blessed. The mines were opened, the West was civilized by men who were thus enabled to hold themselves equal to any other men, and who had all the dependence in their arms that they had in themselves. No miner, no rancher, no Indian fighter, ever yet was heard to say his Colt "gun" ever "went back on him." The Westerner or the rough rider of any outland "packs" a Colt revolver. He knows that he can hammer an animal over the head with it, throw it down in the sand, lose it, let a herd of cattle run over it, let it soak in the rain, do anything with it, and yet can pick it up and go to shooting with it as soon as it strikes his hand. This is much to say for a weapon whose beauty and accuracy are equally unquestioned.

Revolvers, however, are only a very small part of the product put out by the Colt's Patent Fire Arms Mfg. Co. their great works in Hartford. Certainly the revolvers are but part of the articles shown in the exhibit at the Sportsmen's Exposition.

This company is one of the oldest and largest manufacturers of firearms in the world. In connection with the manufacture of the "Colt revolver," they also manufacture the lightning repeating rifles, hammerless shot guns, Gatling guns and the new "Colt automatic gun."

This company was organized in 1848, and has, since that time, continuously enjoyed the patronage of the military power of not only our own country, but foreign countries as well, their arms having been adopted by both the army and navy.

The "Colt revolver," having a solid frame, is peculiarly adapted for police service, and has been adopted by nearly every large city in the Union; and was given the preference for use by the special police at the World's Fair.

The national guards and naval reserves have adopted the "Colt revolver," and this company is now supplying large quantities of the arms for the several States.

The exhibit of this company was very complete and consisted of a large standing case, a smaller showcase, a gatling gun and their new "Colt automatic gun."

The large case contained a full line of arms now manufactured by them, including also several of the very first revolvers made by Col. Colt in 1835-36. In the center of the large case was a picture of Col. Samuel Colt, the inventor of the modern revolver, and the founder of this great concern. A complete series of gold, silver and bronze medals, which have been awarded to these arms in all parts of the world, were also contained in this case.

The smaller showcase was filled with rifles, shotguns and revolvers, which could be removed for inspection. In this collection were two very highly finished hammerless shotguns, which showed the high grade and perfect workmanship that has always been the standard in the productions of this company.

In the left hand corner of the exhibit stood a ten-barrel gatling gun. This was a formidable looking arm and was mounted the same as they are now furnished to the navy by this company.

In the same corner of the exhibit stood one of their new "Colt automatic guns." The operations of this gun are simply wonderful, it being different from other guns of this kind, inasmuch as accuracy as well as rapidity is one of its main features. In an exhaustive test recently made it proved to be all that the manufacturers claimed for it. Some 7,000 rounds were fired to demonstrate the durability of its working parts, rapidity and non-liability of fouling. At 200 yards for accuracy, 100 consecutive hits were made in 16 seconds. The gun was then buried in fine sand, and, after being taken out, it worked without a hitch, showing that it is very much better for actual field service than any other gun now made—certainly a most important feature, and one that army officers will appreciate.

This gun has one barrel and was mounted on a tripod that can be elevated or depressed, and turned in any direction; it can also be mounted on a light field carriage.

The automatic action of the gun is effected by the pressure of the powder gases in the barrel after the projectile has received its maximum velocity, therefore does not decrease the range or penetration. The troublesome water jacket for cooling, as used on other guns, is not required, which is also a very important feature.

The cartridges used are of the U. S. standard .30cal., with metal-jacketed ball, and are automatically fed to the gun by belts containing either 100, 250 or 500 cartridges each. One man only is required to operate the gun, and single shots may be fired or a continuous volley at the rate of 450 per minute.

Another important feature of this gun is its small size and weight, the whole gun complete, with tripod and mount, only weighing about 100lbs.

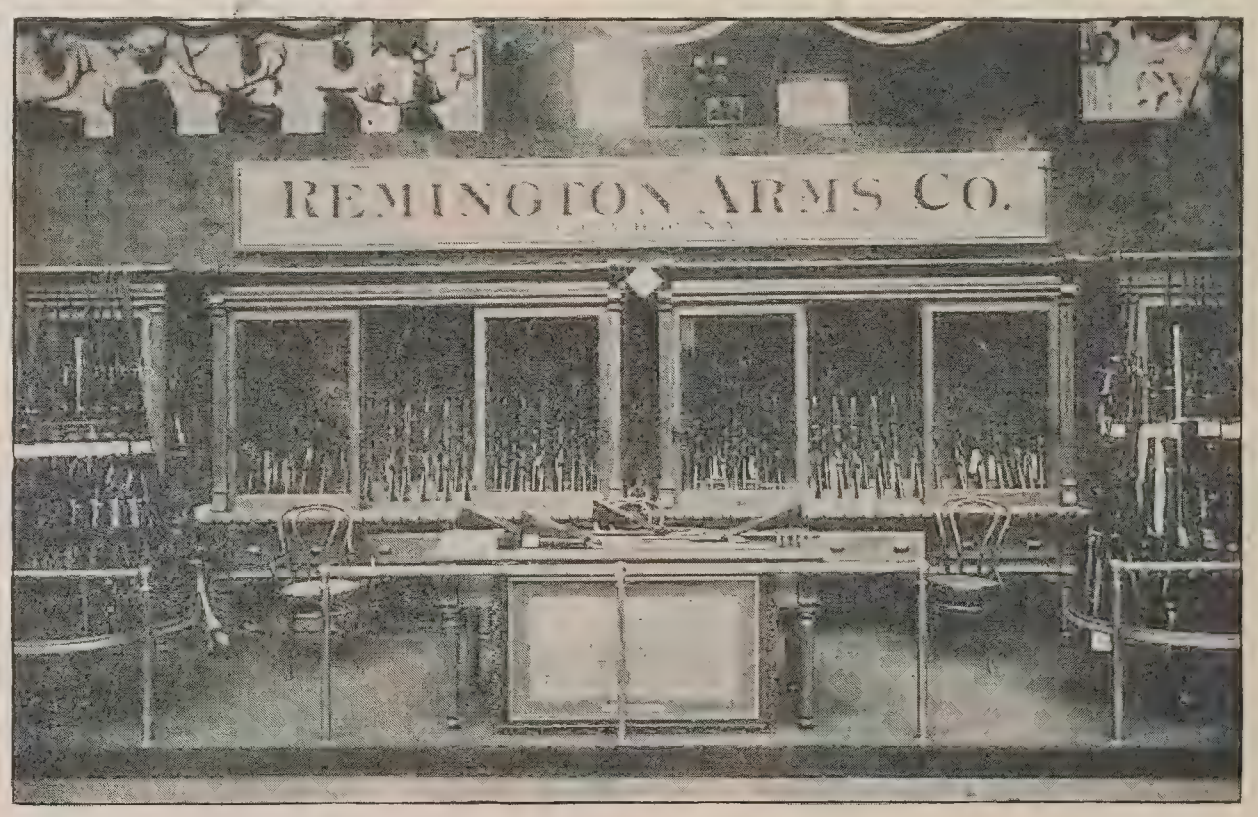

EXHIBIT OF THE REMINGTON ARMS COMPANY.

The great central case of arms shown in the Colt exhibit is characteristic of the "Colt idea" in every particular. It is simple, beautiful, excellent and indestructible. One can only guess at the cost of the vast case, with its great glass front, its pillars of heavy walnut and its frame of richly-polished woods, but probably one would not err at saying this case alone cost between $1,500 and $2,000. The collection of arms it contains is something priceless. The scheme of arrangement is circular and the effect is very happy. The great case of arms has a history. It has visited all the great expositions—Paris, Melbourne, the Centennial, the World's Fair—and each time it has come back with the blue ribbon of surpassing merit. To-day the big case does not show a scratch. Anything turned out by the Colt concern is indestructible.

One would have to go to the great factory at Hartford to see all the things made by the Colt's Patent Fire Arms Mfg. Co., and a product so enormous and so varied cannot be condensed into representation even typically in the limitations of an exhibit. The company showed an exhibit on which it should be highly congratulated. It was simple, rich, elegant and useful, quite above any criticism, as might be expected of anything bearing the name this did. The exhibit was in charge of Mr. C. E. Willard, lately representative of the Colt's Patent Fire Arms Mfg. Co. in the West, but now located at Hartford. Mr. Willard is well qualified to conduct the information bureau necessary in connection with such a display. The "Colt's corner" was one of the show places of the Exposition and was crowded most of the time.

The Remington Arms Co.

The Remington Arms Co., Ilion, N. Y., made a most complete exhibit. A large glass case, extending nearly the full length of the space, contained a complete line of their hammerless shotguns in all grades from $45 up to the highest-priced guns, ejector and non-ejector. There was also a full line of their sporting rifles, showing three different actions, and made in all grades and calibers. Two revolving stands served to make a full display of their military rifles, magazine and single shot, in all patterns and calibers. The penetration of their new Navy rifle, .236cal., was illustrated by sectional blocks showing the course of a bullet through 64⅛in. of pine boards. The bullet, a nickel-jacketed projectile, sustained no apparent injury from the impact. The protection afforded by a tree from the bullets of the older styles of military arms would be nothing against this modern weapon, for the Remingtons claim that, with the smokeless powder used, it will penetrate through an oak tree 2ft. in thickness. The show of rifles included all the numerous models of military arms furnished to all the different nations.

Two cases, one at either end, contained a most interesting and instructive display of the different parts of guns. In one case was shown the rough block of wood, then followed other blocks illustrating all the transitional stages of manufacture to the complete and finished stock. The smaller metal pieces, which are so essential to the gun, and yet so little known of by the laymen, and skeleton actions of different systems of guns which this firm manufactures, were in a profusion of detail, in all showing about 700 operations. Another case at the opposite end of the exhibit was devoted to a display of gun barrels, showing all the different stages of manufacture from the bar of steel to the finished tubes; also the barrels were shown in different material. About eighty-five frames of the hammerless shotguns, showed all the milling operations necessary from the first forging of the frame to its finish. Each piece having received a little gain toward the finished article at each milling. Other parts also were shown in their transitional stages of manufacture.

Numerous medals attested to the success of the firm in its competitions in America and Europe.

A novel gun is their Life Line gun, one of which was on exhibition. It is specially designed for the use of fire departments and life saving stations. The projectile is a heavy tube, closed at one end, which fits the round barrel of the gun closely on its outside, much after the manner of an exaggerated thimble. A light line is fastened to a ring on the projectile, which will carry 100yds. of line to its destination.

The high degree of excellence of the firm's finished arms was brought out in bold relief by contrast with its collection of ancient arms, some of excellent workmanship, yet all primitive in model. Two Moorish rifles, clumsy in design, but most delicately inlaid with gold and mounted with silver, in weight about 70lbs., made a wide two-fold contrast with the little .236, the latter in its superior effectiveness and the former in its much greater size. A Spanish arquebus with a wheel lock and a Spanish match lock were reminders of the very primitive beginning. The idea of the repeater in its first crude stages found expression in a rifle of peculiar mechanism. In it the loads of powder and ball were put in one on top of another. Small vents at regular intervals on the side of the barrel, one at each load of powder, afforded a means of ignition. A lock traveling in a slot could be placed at the vents as desired, and thus each load fired in turn.

The Remington Arms Co. is an old firm and one of the best known. The market for their products is the world over. They claim for their guns exceeding strength and durability, and a simple mechanism which can be readily understood and manipulated by all.

They also manufacture reloading implements, pistols, bicycles and sewing machines. Their illustrated catalogue contains a full description and price list of their goods.

The display was most artistically arranged, and was most attractive to the many visitors who were constantly admiring it and who were interested in the rich collection.

Messrs. Von Lengerke & Detmold.

Space No. 77 was occupied by Messrs. Von Lengerke & Detmold. This space was the southeasterly one surrounding the open center, and, owing to a high partition running north and south dividing the adjoining eastern spaces, and the fact that the exhibits adjoining them on the west—like those of the Winchester Repeating Arms Co., FOREST AND STREAM and others—ran from east to west, it was one of the first to catch the eyes of visitors coming up the main aisle from the Madison avenue entrance.

EXIBIT OF MESSRS. VON LENGERKE & DETMOLD.

The partition or background was of maroon plush, and was tastefully covered with works of art representing our principal game fishes, certificates of awards of "Schultze" powder, etc. The background comported in size and height with the enormous standing showcase of the Colt Patent Fire Arms Co., which covered the same line opposite on the northeastern central space and made a harmonious effect.

Von Lengerke & Detmold's exhibit consisted of Francotte guns, hard grain "Schultze" and Walsrode smokeless powders, fine fishing tackle, imported English leather goods, such as gun and ammunition cases, etc.; the "Luminum" (aluminum) bicycle, a set of J. L. Mott's new patent live pigeon traps, and various loading and ballistic instruments.

Their exhibit was less a showy one than one of quality and merit, for which this firm has been noted many years, and it is well worth going into some detailed description of the articles mentioned.

The whole line of Francotte guns shown was superb, and perhaps there never was a finer and more striking line of guns exhibited before in this country.

There was one gun each of the regular ten or twelve kinds and qualities of which a large stock is constantly kept on hand by V. L. & D., and the others represented some specially fine quality guns running up in price to $500 each and some novelties. Among the latter must certainly be mentioned a single barrel hammerless gun, 12 bore 30in. barrel, weighing full eight lbs., intended for artificial target shooting. General attention has been directed to the phenomenal successes some of the target shooters are having with single barrel repeating guns at the tournaments throughout the country.

It is true that the same men would show up well with any make of gun, on account of their extraordinary skill, acquired through years of constant practice under all sorts of varying conditions, yet it is claimed that they have never done better work with double barrel guns.

This single barrel gun has been modeled by Mr. J. von Lengerke, and it has been his aim to overcome such points as are being objected to by many in the repeating shotguns. The lock action of this gun is claimed to be the quickest yet put in any gun. The rib of the gun is broad and flat, presenting a remarkably clear and pronounced line of sight. The weight of this gun being the same as that of a solid double gun, and the barrels being half octagon, made of Siemens-Martin steel, with a tremendously strong frame and breech action, it may well be imagined that this gun is practically indestructible with anything that can be put into a shot shell. It is said to be a tremendous shooter, and of course shoots as true to center as a rifle. Mr. von Lengerke will give this gun a personal practical trial, and if possible make some further improvements in it. He feels sure that there will be a public demand for a gun of this kind.

Another novelty is shown in some of the finest guns—a sextuple top snap action representing six different locking devices worked by the top lever. We doubt whether such actions are necessary, but they can do no harm. As samples of the wonderful art work Francotte can turn out they are certainly a success. The action consists of the ordinary two under bolts, the Greener cross bolt, Purdey side breech projections, Doll's head extension, with extra side extension bolt. So perfect is the whole mechanism and so perfectly is each of these devices fitted that the top lever operates the whole as easily as an ordinary single action gun, and when together it is almost impossible to see where the barrels and breech join.

Among the guns shown are quite a number of automatic ejectors. These range in prices from $175 up. The ejecting devices are contained in the fore end of the gun, and are entirely independent of the lock or closing mechanisms. The advantage claimed for this is that, should anything break in the ejecting mechanism, it does not interfere with the ordinary use of the gun.

Many of the guns have Siemens-Martin steel barrels, and some years ago, upon private advices from England that this make of steel barrels had shown the greatest resisting strength in the most exhaustive barrel trials ever held, Von Lengerke & Detmold ordered Francotte to use these barrels for various of their regular qualities, and they have never had any reason to regret it. The barrels, like all fine steel barrels, are very handsome to look at in connection with high grade work in frame and action and stock, and they are constantly growing in popular favor. The mixed iron and steel or Damascus barrels used by Francotte are certainly beautiful to look at. They are an entirely different kind of barrels from those generally classed as Belgian barrels. The percentage of steel in Francotte barrels is very high, and it is claimed that the maker has a secret process of hardening and toughening the barrels to the greatest possible resisting power. The pronounced successes of the many hundred extremely light weight Francotte guns in this country seem to give pronounced color to this claim.

VON LENGERKE & DETMOLD—SCHULTZE POWDER EXHIBIT.

The general quality of the Francotte guns is of the very highest, and the finish, fitting, style and quality of engraving, balance and model of the higher grades of guns shown is certainly not surpassed by any maker in the world, not excepting the world-renowned Purdey.

No wonder that this make of guns has come to the front with a rush in a few years, and holds first rank with so many of the most exacting connoisseurs of the shotgun as well as the trap shooters of the country who are looking for quality irrespective of cost.

Both members of the firm as well as several other practical representatives were kept busy from early till late showing and explaining the guns. Catalogues greatly reduced in size, but otherwise exact counterparts of their regular catalogues, were distributed by the thousand, and we notice that the same contain a complete copy of the FOREST AND STREAM report of the pattern and penetration trial of a Francotte featherweight gun, with fac simile of patterns, published at the time. The high record of this little gun must prove a good advertisement.

The "Schultze" powder exhibit was educational on milar lines as at the World's Exposition at Chicago, where "Schultze" powder was awarded the medal for smokeless powders.

A handsome glass case contained samples of the powder in various stages of manufacture. Beginning with the natural wood, 1 forms the base of the powder; 2, wood fiber disintegrated and purified; 3, wood fiber nitrated and rendered explosive; 4, "Schultze" powder, granulated form, 1878; 5, present hardened and waterproofed issue.

The case also contained samples of the former issues of "Schultze" powder, which, with the exception of the first style of powder, the so-called sawdust style—consisting of small particles of the natural fiber of the wood made explosive by nitration, which was the first smokeless or nitro shotgun powder on the markets of the world—do not differ much in outward appearance. Samples of the various canisters and drums and packings were shown.

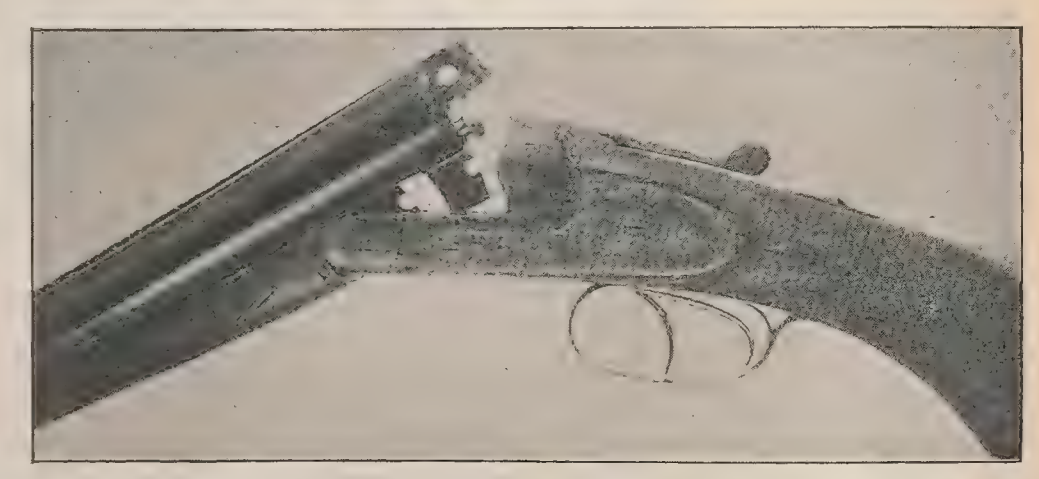
Although the exhibit was very interesting to many, the illustrated pamphlets describing the history of The Schultze Gun Powder Co., Ltd., London, its works and details, made a still greater hit. This elegant little book was gotten up by the "Schultze" Co. in England, and, judging by the light elegance in appearance and the excellent half tone photo engravings, it looks as if they had profited by similar little works of art gotten up on this side of the water, as we have seldom seen English publications of the kind which would please the American ideas more.

The pen photo description of the works was excellent. The Schultze Gun Powder Co. are the oldest and to-day the largest manufacturers of smokeless powders in the world, and their product is looked upon as a standard the world over. At night the whole works and buildings and outside are brilliantly lighted by electricity, and, strange as it may seem, work is going on in these powder works day and night—the night force being almost as large as the day force, as nearly all processes are going on at night the same as in daytime.

It is rumored that the "Schultze" powder business is growing to such proportions in America that already calculating preparations are going on for an American factory, which seems desirable if one thinks of the enormity of the last shipment brought over, namely 80,000 pounds.

The Walsrode smokeless powder was also well advertised by circulars, signs, etc. This powder is the best known and most generally used of the gelatinized condensed strength nitros. A large photograph of the Peekskill Gun Club's winning team, which made such a wonderful score with Walsrode powder, was prominently displayed, and was curiously studied by many who had read of their phenomenal performance.

All the leather goods shown were of English manufacture. Von Lengerke & Detmold have for years operated and owned one of the best and largest canvas and leather sportsmen's goods factories in this country, and sold the same only a year or two ago. Their aim was always high class goods, and the goods made by them were as good as could be bought of domestic makes.



The display made in fine fishing tackle was certainly a credit to the firm as well as to Mr. John Wright, who has charge of the Von Lengerke & Detmold fishing tackle department.

It is impossible in a pen picture to do justice to the hand-made split bamboo and wood rods shown. They must be handled to be fully appreciated, and looked over with critical eyes and a magnifying glass.

Their lines of reels also contained original designs and kinds, aluminum forming a good part of the metal used in their manufacture. A new style of a patent collapsible landing net which should take well was among their exhibit.

Mr. Wright took particular pride in some salmon flies and salmon leaders. The latter, judging from appearance and actual tests made on a scale, seemed certainly able to hold any salmon that lives, or to stand more strain than any rod would bear. The gut was a special selection by one of the best judges in Europe, and they were tied by the best hands in this country. They were examined by several expert salmon fishermen, and as the supply of similar material is limited the firm's supply will find ready takers even at the high cost, which seems exorbitant to the ordinary disciple of Izaak Walton, who does not figure that the success of the expensive luxury of salmon fishing depends greatly upon the leader. Von Lengerke & Detmold's whole fishing tackle display was one of the highest quality, suitable mostly for fine trade.

The Mott's patent live pigeon traps shown have been in use on the Westchester Country Club's grounds. They looked smoother and more substantial than the traps in general use, and are called by those who have seen them worked practically a great improvement on anything yet had in that line, either here or in Europe. They are arranged to work either mechanically or by electricity. With either arrangement it is impossible for collusion between the puller and outside parties, as the former can never tell which trap will open. The trap has the shape of a half circle, and when opened the cover turns on its axle and disappears beneath the smooth platform. An ingenious starting device has been attached and the traps are said to be the fastest yet seen.

THE FRANCOTTE GUN.

The extensive hand-loaded shotgun business of the firm was represented by a sample shell and charging block, accurators, shot counters, bursting pressure gauges, cap tester, lock tester, scales, micrometer and other instruments constantly used by the firm for testing the various kinds of cartridges they load.

Union Metallic Cartridge Co.

The exhibit of the Union Metallic Cartridge Company, of Bridgeport, Conn., is altogether unique. As the title of the company suggests, it (the exhibit) deals almost entirely with ammunition for rifles and shotguns. The space occupied, some 500sq. ft. of the floor, has enabled the company to give visitors to the Sportsmen's Exposition some idea of the magnitude and comprehensiveness of its manufactures.

The design itself is original and taking. On a platform raised some 6in. from the floor, covered with a sea green carpet and surrounded by a gilded rope which runs through standards also coated with gold paint, stand three pagoda-like structures of ebonized wood picked out with gold. The bases of these stands, as they may be termed, are hexagonal. and upon these bases stand six-sided cones which reach up to the top of each stand, being crowned at the apex with electric lights of an artistic shape. It is on the sides of these cones that the U. M. C. Co. displays a portion of its products. It is unnecessary to add that the effect of the brass and copper of the cartridges and the colored paper of the shot shells, with a background of solid black, add greatly to the attractiveness of the exhibit. A reference to the photograph of the exhibit itself will readily explain all the above details.

In order that some idea may be gained regarding the nature of this exhibit, it is better to take each of the stands in order. Naturally, the center one attracts the most attention. Everybody appears to be more interested in cartridges for revolvers and rifles rather than in paper shot shells, which have charms chiefly for devotees of the shotgun. For the sake of simplifying the description of the whole exhibit it will be as well to call each of the three separate portions of it by a title that is borne out by its contents. The center one, therefore, should be called the "cartridge and bullet exhibit;" the one at the Madison avenue end of the U. M. C. Co.'s space would be the "shell and wad exhibit," the third, at the Fourth avenue end, would be the "primers, caps and brass shot shells exhibit." Before entering into details of the exhibit as a whole, further mention should be made of the bases of the separate exhibits mentioned above. The panels of the center or "cartridge and bullet" exhibit are filled with cut glass, upon which are written, in letters of gold, such mottoes as "U. M. C. Co.," "Government Contractors" and "Metallic Ammunition;" a motto in each panel. In similar panels on the shell and wad exhibit are the mottoes: "U. M. C. Co.," "Primers," "Percussion Caps," "Gun Wads," "Paper Shot Shells" and "Loaded Paper Shot Shells." On the third exhibit the mottoes are: "Bullets," "Loaded Paper Shot Shells," "U. M. C. Co.," "Gun Wads," "Primed Shells" and "Paper Shot Shells." These mottoes, besides calling attention to the firm itself, and to its manufactures which are placed on exhibition, also add greatly to the appearance of the exhibit as a whole, by removing whatever traces of heaviness there might be about the bases of each of the stands.

As stated above, the center portion of the exhibit is the one which attracts general attention. One side of the cone is devoted to military ammunition, with but few exceptions. Commencing from the bottom, the first row of cartridges consists of Martini-Henry, the old English model. Next comes the Peabody-Martini, the Turkish old model. The third row is the Gras, an old model that was used by the French. The next three rows are the old U. S. Government cartridges, the .50-70, .45-70-405, and .45-70-500. Above the latter is the new U. S. Army cartridge, .30cal., for the Krag-Jorgensen rifle. This cartridge is loaded with 35½grs. of Troisdorf powder, and carries a 220-grain steel-cased bullet of about one inch in length, with an initial velocity of about 2,000ft. The penetration of this bullet is 30in. of yellow pine. The next row is the .236cal. cartridge adopted by the U. S. Government for use in the navy. This cartridge is loaded with 33½grs. of Troisdorf powder, and carries a steel-cased bullet that weighs 135grs., with an initial velocity of 2,400ft. The penetration of this bullet has been proved to be 41in. of yellow pine! The U. M. C. Co. has on exhibition blocks of yellow pine showing the penetration of both the .30 and the .236, as given above. The cartridge on the next row is the .30cal. Savage, a cartridge made for a new magazine sporting rifle that will soon be put upon the market. The fourteen remaining rows contain specimens of the following cartridges: .30-187-29, carrying a steel-cased bullet; the .45-70 U. S. Government, short range; .45 Accles; .43 Mauser, an old German model; .42 Russian and .43 Spanish, also old models; .45-70 Gould, a sporting cartridge; .45-3¼in. Sharp's for target, long rang, and .45-70 Sharp's, medium range; .44-77 Remington, medium range; .40-3¼ Sharp's and Remington, long range; .40-2½ Sharp's and Winchester; also a .40-1⅞in. of the same class; the topmost row of all being cartridges for the .44 Evans, about one of the first repeaters ever gotten out.

On one of the sides next the one above described are displayed sporting cartridges suitable for almost all sorts of rifles. In all twenty-eight different kinds of cartridges are exhibited. These are: .50-110, .50-95 and .45-125 Winchester express; .45-90, .45-75 and .45-60 Winchester; .45-90 and .40-82 Winchester, with metal-cased bullets; .38-55 and .32-40 Ballard and Marlin, metal-cased; .38-90 Winchester express; .40-82, .40-65 and .40-60 Winchester; .38-56 Winchester and Colt; .45-70 Marlin; .45-85 Marlin and Colt; .40-60 Marlin; .38-55 Ballard and Marlin, long and short range, and the .32-40 of the same style; .38 50, .38 40, .32-40 and .32 30 Remington; .32-35 Stevens and the .32 Ideal.

Another panel of the cone shows forty-two other kinds of cartridges; these are for sporting rifles and for revolvers. Among them are the Winchester sizes, the celebrated .25cal. cartridge, Smith & Wesson's self-lubricating cartridges, Smith & Wesson's smokeless, Marlin's smokeless and shot cartridges. The next panel shows the empty brass shells for military and sporting rifles; thirty-two different varieties are on exhibition.

Bullets patched and unpatched, bullets for military and sporting rifles, and for revolvers, bullets for the .30cal. army rifle and for the .236cal. arm of the U. S. N., metal-cased bullets, mushroom bullets, Smith & Wesson's self-lubricating bullets; in fact, bullets of fifty-five different kinds are displayed on the fifth panel of this exhibit. The sixth and last panel shows rim-fire cartridges of all sizes from the .56cal. Spencer down to the comparatively harmless BB cap; this includes the .25-10, .22 long rifle and .22 smokeless, for which the U. M. C. Co. are celebrated. Blank cartridges of several different kinds find a place on this panel, which is one of the most interesting of the six panels of the cone, although perhaps not as attractive to the eye as one or two of the other panels.

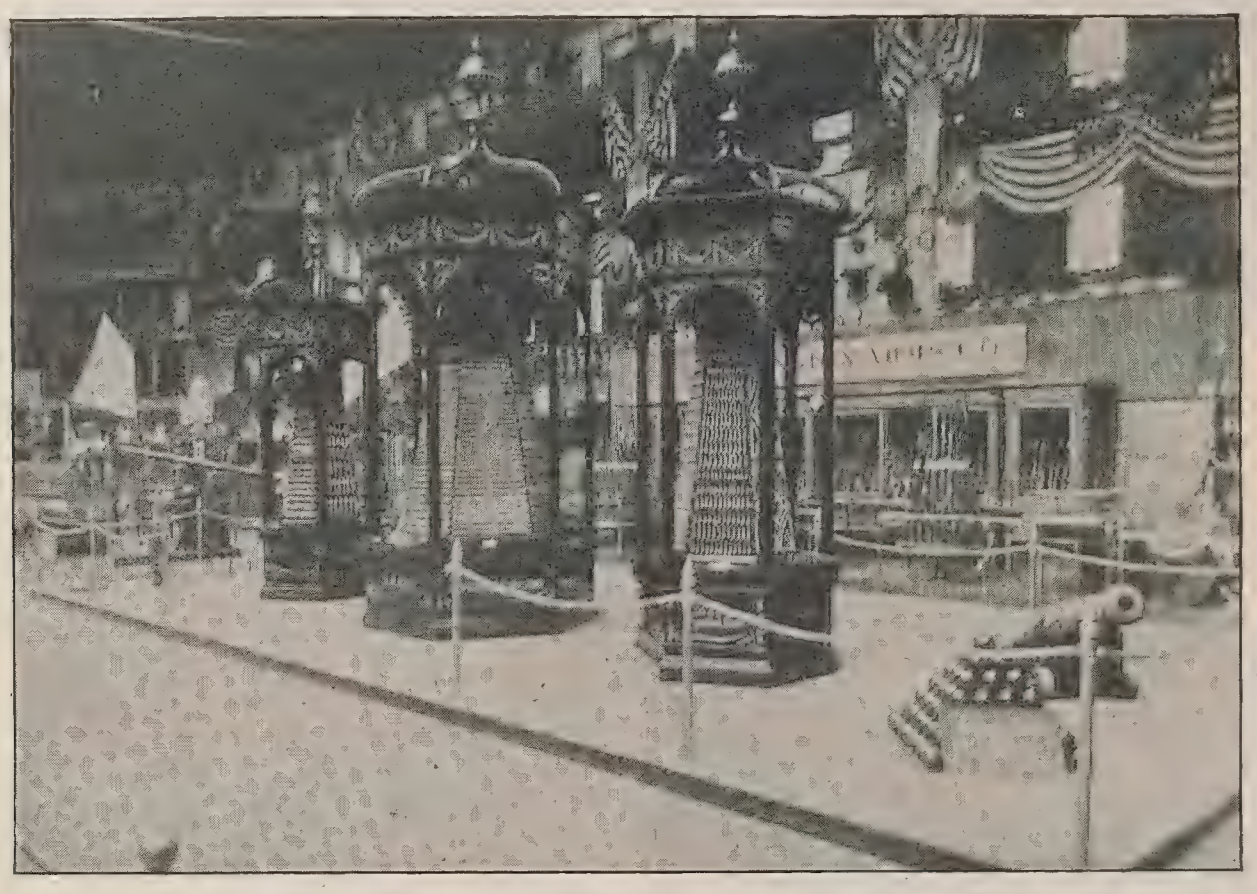


EXHIBIT OF THE UNION METALLIC CARTRIDGE COMPANY.

The second portion of the exhibit, the "shell and wad exhibit," naturally comes next. This is at the Madison avenue end of the whole exhibit. One panel of this cone consists of a series of loaded shells, specialties of the U. M. C. Company. Sportsmen and shooters will readily recognize them by the names of "Trap," "Smokeless," and "Walsrode." The green color of the "Trap," the bright red of the "Smokeless," and the maroon of the "Walsrode" make this panel extremely pretty to look at. For shooters, whether experts or amateurs, the panel has additional interest. On it are displayed shells of the above varieties, loaded and wadded in the manner which, by infinite research, the experts of the company have found to give them the most satisfactory results. In order that the powder, wadding and shot may be seen at a glance, a few rows of each kind of shell are exhibited with a slice of shell removed, a piece of transparent celluloid being inserted, acting as the part of the shell that has been removed. These shells are loaded with Schultze, E. C., Troisdorf, DuPont, S. S., American Wood and Walsrode, the powder, wadding and shot being placed thus before the eye. These shells are what are known as the U. M. C. Co.'s "factory-loaded" ammunition, and are prepared specially for live birds, inanimate targets, and for field and brush shooting.

Another panel contains all sizes of black powder shells from the yacht gun shell and "new club" shell down to the 20-gauge. These shells are also loaded, and the method of wadding is shown as in the nitro powder shells. Next to this panel comes one that shows the nitro powder shells manufactured by this company, the "Trap," "Smokeless," "Walsrode," and the new maroon-colored shell "Nitro," from which the company expects great results.

The next two panels show the wads used and manufactured by the company. These wads are arranged in all sorts of devices that attract attention. One panel shows the "black edge," "pink edge" and the "card" wads; the other shows "salmon," "express," "white felt," "trap" and "top-shot" wads. The bright colors of the latter wads, the "top-shot," although at the apex of the cone, are bound to catch the eye of even a casual observer. To the shotgun men, as distinguished from the men who devote themselves to the rifle, this portion of the U. M. C. Co.'s exhibit is of infinite interest.

At the other or Fourth avenue end of the exhibit is the "primers, caps and brass shot shells exhibit." This portion undoubtedly occupied a great deal of time in the arrangement of the different articles exhibited on its panels. On one are the one-powder, rapid-fire, short and long cartridges. The shell itself is shown in sections, as well as the fuses for the same, the mechanism of each being easily examined. The primers also for the brass cases are shown, as well as the old-time cannon primers. The next panel contains first-grade brass shot shells, including all sizes from a No. 4 to a No. 20. Another panel is made up of "club" brass shot shells in all lengths for 10 and 12-gauge guns.

The other three panels are given up to primers and caps, the boxes containing the same being placed at the base of each panel, while the name and number of each primer or cap is worked on the black cloth in letters and figures formed by the primers and caps themselves. One panel shows all kinds of nitro primers for cartridges and shot shells; the numbers by which these primers are known being 3, 5, 6, 6½, 7 and 7½. The No. 5 primer is a new product of the company and is used in the "nitro" shell mentioned above. Another panel is devoted to primers for black powder, Nos. 0, 1, 1½, 2, 2½; also Nos. 1 and 1½ Berdan primers, No. 1 being a military primer, 1½ for shot shells. The last panel contains caps of all kinds: Colt's pistol, F. C., central five, double waterproof caps, market caps, etc.

The above account tells in detail what is to be seen in the three main portions of the U. M. C. Co.'s exhibit; it is impossible to convey accurately an idea of the artistic appearance of the whole. That must be left to the photograph that accompanies this description. It should be added that the name of each article is given on a card that is tacked up beneath it. This aids considerably in an intelligent examination of the exhibit.

It remains now to mention two other articles placed on exhibition by the company. Though both are of the same nature, yet one is the exact opposite of the other. At the Madison avenue end was shown a relic of the Revolutionary War. This was a cannon, period 1740–1790, found at Germantown, Pa., and loaned for the purposes of the Exposition by the owner, F. Bannerman, 27 Front street, New York city. Alongside this cannon was a pyramid of 12lb. balls, the size and weight of those that were used in this cannon.

At the other end of the exhibit was a splendid specimen of modern gun-making, a six-pounder Driggs-Schroeder rapid-fire gun, built by William Cramp & Sons, Philadelphia, Pa., fitted with all modern improvements and as perfect as a skilled workman could make it. Big as this weapon is, it can be depressed or elevated, moved to the right or left, and fired with almost as much ease as an ordinary shotgun. Alongside was a chest of ammunition for use in the gun. In front was another portion of the U. M. C. Co.'s exhibit which attracted a lot of attention during the Exposition, a 4in. wrought iron plate showing ten clean perforations made by projectiles fired out of a six-pounder similar to the one on exhibition. A projectile that had made one of the holes in this 4in. plate was also exhibited. How well it had stood the test may be judged from the fact that it was practically uninjured.

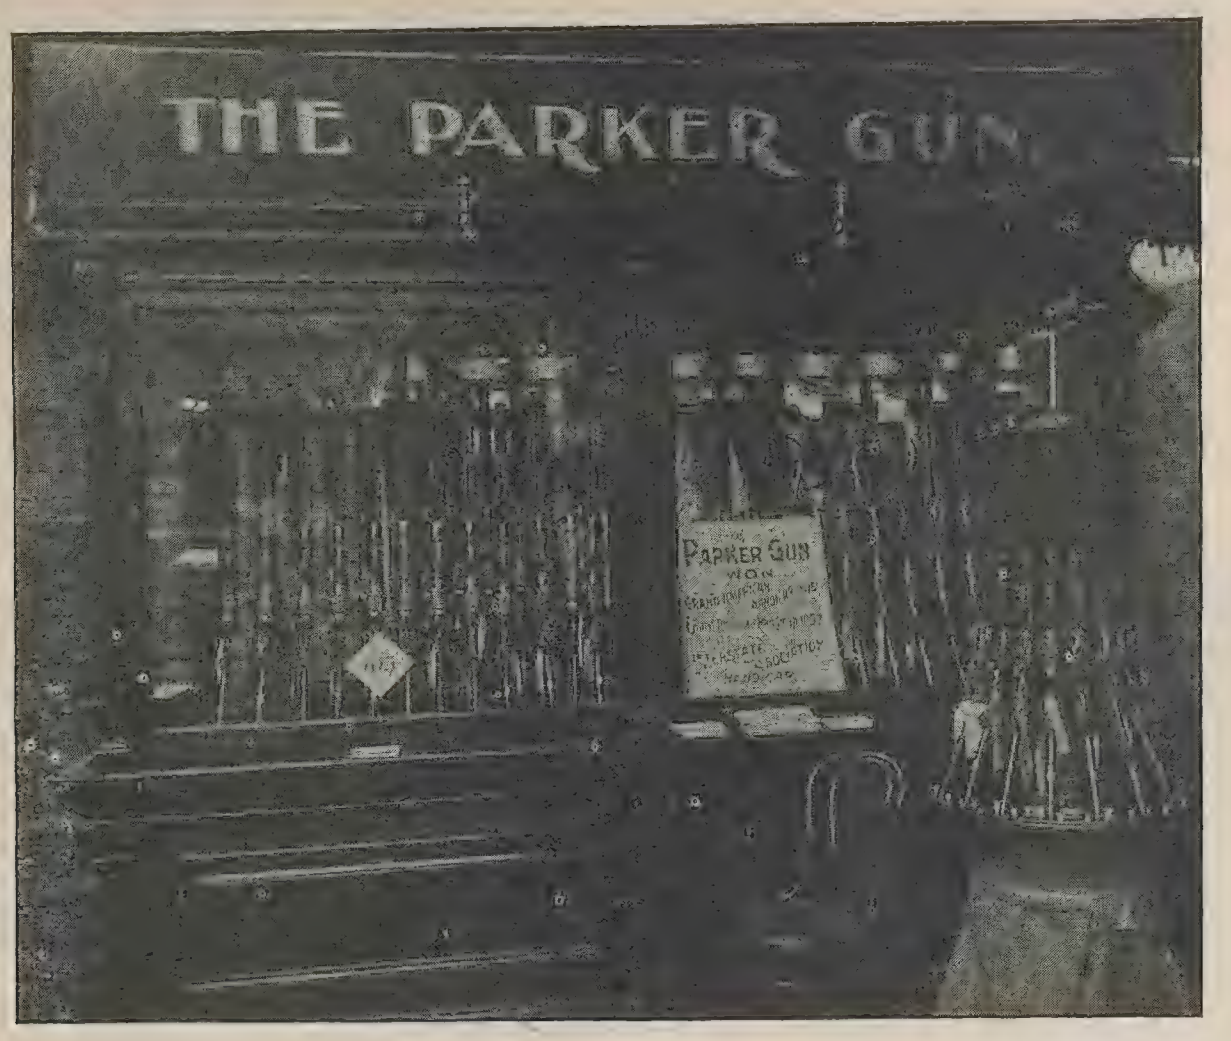
With the above must be brought to a close the description of the Union Metallic Cartridge Company's exhibit. To Mr. J. A. H. Dressel, manager of the New York branch of the U. M. C. Co., and to Mr. W. M. Thomas, the company's chief inspector, of Bridgeport, Conn., must be given the credit of designing and carrying out the general idea of the exhibit. To Mr. Thomas also belongs the credit of arranging the various articles on each portion of the exhibit in the artistic and telling manner so much admired by visitors to the First Sportsmen's Exposition.

The Parker Gun.

Mr. James Fadden, it may be remembered, was much surprised and perturbed when first he came into the presence of an actual gentleman. Perhaps he was looking for an individual with large plaids in his trousers and a shirt front adorned with diamonds of great size and brilliancy, and whose usual converse should smack of the Roman emperor returning from successful war. Instead of this he found a man dressed as plainly and simply as possible, with conversation mild and modest, and displaying no ostentation whatever. Unused to inquiring into fields out of his daily experience, it may be that Mr. Fadden did not at first credit his eyes. Perhaps he reserved in favor of the plaids and jewels his opinion of what made a gentleman.

That was because Mr. Fadden was ignorant.

In ignorance some men are often misled by display or by pretense. They may be slow to realize the merit of the simple, the modest, the plain, the severe. They may misapprehend the men who are really at the top, because these men, being at the top, do not find it necessary in their own creeds to proclaim continuously the fact that they are at the top. The gentleman has no need to boast, and does not boast. Yet a gentleman may be good company when it comes to an awkward place or a hard emergency. It is best not to be misled by swagger or haughtiness, but to look carefully at the simple, the plain, the unaffected, the genuine. Having found such a character, be sure it will know how to give itself proper dress when the time comes.



For thirty years the Parker has been the gentleman of guns. In that time there may have been a few who did not recognize it as such. That was because they were ignorant. It is recorded that Mr. Fadden learned to admire the type he first viewed in the disbelief borne of ignorance. He came to recognize actual superiority. For thirty years the Parker gun has known itself a gentleman, and so have many thousands of its friends known.

At the Exposition one could see the Parker (in its simple but elegant home) in all sorts of clothes, depending upon the work in hand—in rough clothes, in business clothes, in morning dress, in half dress, in evening clothes. Every time (if you know gentlemen yourself when you see them) you could see the gentleman beneath the clothing, simple, plain, dependable, honorable, thoroughbred.

This is how we should describe the Parker. It is a gentleman, not only a part of the time, but all the time and in every situation. You can depend upon it.

Capt. A. W. du Bray—whom all the country knows as the most generous-minded of enthusiasts on the gun—was in charge of the Parker exhibit, and a happier arrangement than this could not have been devised, for he has been a devoted admirer of the Parker gun for these many years, and his ardor knows no cooling. Perhaps—one does not know but only guesses—it was his enthusiasm which suggested many recent improvements in outline and ornamentation in the higher grades of this standard arm.

"I claim for this Parker gun," said Capt. du Bray, lovingly fondling the most expensive of the guns shown in the exhibit, "that in outline, finish, symmetry, balance, ornamentation, in short every element of beauty and completeness, it is the peer of any gun made on earth. As to its shooting or its durability I need not speak, for everyone knows how our guns shoot and how they wear. We have never made so fine a gun as we are making now, and I believe no one on earth is making finer. Look at this engraving. You see no longer pictures of dogs and game, but masses of close scrolls and lines, flowers, leaves, all making a solid and continuous mass of ornament. You will like this better than the old ways, but you do it unconsciously, you don't know why. The secret is, you are looking at the last word in artistic gun engraving.

PARKER BROTHERS' EXHIBIT.

"Look at these barrels. Do you see the sheaf of wheat stamped in the metal? That is the stamp of Sir Joseph Whitworth. It means these barrels are good as wheat, good as gold. They are the finest fluid steel made on earth. They come to us wrapped in tissue paper, each tube having Sir Joseph Whitworth's certificate appended to it. To the purchaser of one of these guns we give Sir Joseph's barrel number certificate, and add our own that the barrels named in that certificate went into that gun, number so and so. Our guaranty is thus perfect. I think there is no more perfect gun made. It lists $400. Here is another in Damascus, a fine pigeon gun, at $300. At $200 and $100 you have excellent high grade guns, modern and handsome every way, and of course, the more moderate buyer can find good Parkers all the way down the scale. Here is a beautiful little 16-gauge, and I own I can't help loving it even though it has hammers. It is one of our old makes, but it is still a sweet sixteen to me. In 12-gauges we fit you as light as 6lbs. 2oz., and here is a lovely 20 gauge which would delight the most fastidious of those Texas small-bore lovers of whom one hears sometimes. I don't believe a more perfect or more beautiful 20-gauge than this was ever made. It is good enough to eat." (Even when no one is around Capt. du Bray sometimes takes some of his favorites out of the cases, to look at them just once more!)

The display of Messrs. Parker Bros. is made in one of the same great cases which they had at the World's Fair. At that place there were 103 guns shown. Here there were 75, but a very complete line, from cheap grades up to the highest price pigeon guns. These latter are in a nicely padded revolving case, and being so accessible were perhaps more generally observed than the long double row of sturdy 12s. and 10s. within the big case. Even some 8-gauges were on hand.

The Parker exhibit was open and homelike, with no inclosing rail and no raised platform. It was right on the aisle, near the door of the main entrance, and consequently was much visited. "I believe there must be 500,000 of our guns in use," said Capt. du Bray. "They come in here and say, 'Ah, here is where we are at home. My brother shoots a Parker, or my cousin shoots a Parker, or my aunt's brother-in-law shoots a Parker.' And I tell you, they all swear by the old gun."

Well they may, for the old gun is a thoroughbred all the way through. For instance, there was one plain, ordinary gun shown in the Parker exhibit which was snapped (on the empty barrels) 1,003,000 times before it went out of the factory. Then it went out to the World's Fair and was snapped there no one knows how many thousand times. Then it went back to the factory, and a boy was hired to open and shut it, cock and snap it, for two weeks all day each day, the boy doing nothing else. Then the makers took out the right hand mainspring, cut away the plates so the locks could be seen, and sent these two locks, the old one and the new, down to the Sportsmen's Exposition to have the gun snapped some more. If there is any difference between the strength and action of the two locks, it is such as the ordinary ear cannot detect. Locks such as those would wear out a dozen guns. They are, as their makers claim, indestructible. Yet this particular pair of locks was no better than those put into all Parker guns.

The cutting away of the plates over the locks of one of the guns showed the excellence of the cocking device. "This gun does not cock with a twist or a wrench," said Capt. du Bray, "but you can see it is cocked by a direct, positive pull, not a strain. The fore end, too, is built with a wedge principle, so that it can never become loose, because the wedge simply goes further into its engagement and takes up any wear. It is a compensation without any screws. Yet you can take this fore end off with one hand and with perfect ease"

One could spend a long time at the Parker exhibit and learn something all the time. It was a dangerous place to go unless one wanted to buy a gun, for honest enthusiasm is infectious. Indeed, it must needs be a cold American who could help feeling an enthusiasm of his own for the beautiful specimens of gun-making shown in this display. This was one of the educating influences of the Exposition. Let one treat it as he may, it will trouble him to find more satisfying looking guns than he could see there. No one ever doubted the excellent qualities of this typical American gun, but once there was a cry against all American gun-makers, "Give us more grace of outline." In all justice this cry should now be relegated to the past, and the force of this is unavoidably felt by any one who did his duty at the Exposition and passed a few moments with the Parker gun.

Wiebusch & Hilger, Limited.

Space 63, occupied by Messrs. Wiebusch & Hilger, Limited, of 84 and 86 Chambers street, New York, was a constant center of interest to visitors. Their exhibit was artistically and attractively arranged. It contained firearms of world-wide fame.

EXHIBIT OF WIEBUSCH & HILGER.

This company are the sole agents of Messrs. F. Dumoulin & Co., Liege, Belgium, one of the oldest and best known manufacturers of Europe; also for the Smokeless Powder Co., Ltd., London, England, and for the J. Stevens Arms and Tool Co., Chicopee Falls, Mass.

The exhibit of shotguns consisted of a full line of medium and high grade hammer and hammerless guns, in which were samples of the cheapest double-barrel gun up to the most perfect and finished self-ejecting hammerless.

A novelty in the way of new mechanism was a single-trigger hammerless, which greatly pleased all who inspected it. It worked as effectively as a gun with double triggers, with the advantage that there was no loss of time or accuracy from transferring the trigger finger from one trigger to the other, as when double triggers are used. Another novelty was the recoil butt plate, which took up the recoil in a mechanical device arranged in the stock. There were also samples and models of the C. F. Franklin hammerless gun, which received many expressions of approval for its simplicity and strength, and its easy cocking device.

A light double-barrel lady's shotgun, of .44cal., was a marvel of elegance and lightness, as was a single-barrel gun of the same caliber. Both were finished most artistically. There were novelties in Belgian repeating rifles and Flobert rifles; there was a partially made tube which showed the manner of constructing a Damascus barrel; also a lock of a hammerless gun, consisting of five pieces, simple and effective in its mechanism; and there were some models of stocks beautifully carved.

The exhibit of Stevens rifles, included everything from the Small Hunter's Pet, Favorite and Sure Shot rifles, up to their largest grades.

The New Ideal rifle won many friends. It is a first-class, high-grade, reliable and accurate rifle, a model of beautiful workmanship. It has a detachable barrel which can be quickly taken apart and put together. The Little Favorite also was much approved and admired. The rifles are famous throughout the land and great scores have been made by them.

The Messrs. Wiebusch & Hilger had also a full assortment of samples of Smokeless Powder S. S.; Rifleite 303-450 for small and large calibers of rifle; S. V. for revolvers and S. K. for rook rifles. The firm claims for its powders the merit of superior high velocity, low pressure, reduced recoil, greater penetration, long range, regular pattern, safety, clean, quick and regular action, and that they contain no gun cotton, nitro glycerine or chlorate of potassium in composition; and that their chemical purity prevents any pitting or rust appearing in gun barrels, and that they are not affected by climative changes.

The exhibit was surmounted by an artistic electrical sign which consisted of the words "Smokeless Powder," and the well known S. S. in the center designated the brand. The "S. S." was of blue electric lights, while a 4ft. circle of electric lights around it appeared to revolve.

The affable and well informed attendants in charge of the exhibit were pleased to give every information to those making inquiries.

The Empire Target

trap and electric trap pull were shown by W. Fred Quimby. A full line of sportsmen's wear, manufactured by the W. Fred Quimby Co., was also on exhibition, as well as many beautiful specimens of Divine rods and American E. C. powder, mentioned elsewhere.

The targets, traps and pulls were displayed to advantage, and among the thousands who visited the Exposition there will be few who will not remember the pyramid of Empires, surmounted by the golden trap. This trap may not be solid gold, but it is no doubt worth its weight in gold to many sportsmen.

Empire targets, we are told, are made entirely by automatic machinery. "After the material is melted in large kettles on the third floor of the factory, it is run into the mixers on the second floor and thoroughly mixed with other ingredients into a plastic compound. From the mixers it is placed in the receivers, suspended over the machines on the ground floor, and by an ingenious mechanism just the amount of composition to make a target is fed, automatically, into the revolving mold blocks that pass, while other targets that are finished are being deposited on the conveying belts that carry them to the packers."

The Empire electric trap-pull possesses many original features, "besides throwing known traps in irregular order by pressing a single lever, it will throw double birds by a single movement of same lever. Unknown traps are sprung without the use of an indicator in such a manner that even the trap-puller will not know from which trap the next target will be thrown. The battery is guaranteed to last a year when used constantly by the largest gun clubs, and when exhausted the batteries can be replaced with new ones at small cost."

The Winchester Repeating Arms Co.

The exhibit of firearms and ammunition at the Sportsmen's Exposition was full and complete, and that of the Winchester Arms Co. was just as varied and interesting as is usually made by that company. Their exhibit at Chicago was much larger, but it was impossible in the space allotted to them at the Garden to use those cases; and to equalize the difference, perhaps, they have in this instance departed from their usual habit and had their goods shown and explained in detail by Mr. Daggett and Major Albee, who came down from the factory on purpose.

The case in which the rifles were exhibited was one used by them at the Paris Exposition of 1889, where they took the Grand Prize over their competitors; and while some of the rifles and guns shown last week were the same as those used at the Chicago Fair, most of them were new and especially made for this Exposition.

In single-shot rifles were shown some novelties, among them being a small carbine, weighing 4½lbs., intended for the Mexican market, and which could be aimed and fired with one hand readily. There was also a sample of the .236 single-shot rifle for the new navy cartridge with a special barrel, a handsome and light gun and one for the .20cal. U. S. army cartridge; some fancy designs in nickel and gold and one remarkably beautiful single-shot in the glass case for target shooting. This was an octagon barrel of .32-40cal., weighing 18lbs. This gun was finished handsomely, with cheek piece, Swiss butt, fancy stock, etc., and attracted a great deal of attention. In model

EXHIBIT OF THE WINCHESTER REPEATING ARMS COMPANY.

1886, a sample of the light-weight half-magazine gun in the .45-70 seemed to be in continual demand, and the new cartridge for this model rifle, .50-100-450 was asked for and given to many people as a souvenir. The Winchester people also handed out dummies in the .236 navy and .30 U. S. army cartridges. In one of the glass cases was exhibited a model 1890 rifle, beautifully engraved and finished, which listed at $51, and when one considers that this rifle is probably the cheapest and strongest rifle of its kind made in the world and lists at $16, the ingenuity of the Winchester Co. is shown in their ability to engrave and decorate a small frame like this, so that it would bring that price. The rifle was a beautiful work of art.

The model 1894 rifle, model '82, model '86 and model '90, are now all made in the "take-down" pattern, if wished, so that, in any reasonable caliber, one is certain to be able to pack his rifle in a trunk if he wishes. The take-down mechanism for the 1886, 1892 and 1894 models is particularly ingenious, the barrel going on to the frame by an interrupted thread. A sample of their new model 1894 to carry a .30cal. smokeless cartridge was expected from the factory, but had not arrived at the time this article was written. There was much inquiry for it.

In ammunition, a new feature in jacketed bullet was shown in a .30cal. U. S. A. bullet with a soft nose, and one that had been fired showed the upset of the bullet. Some of the new smokeless powder cartridges and all of their extensive line of wads were shown in one of the glass cases; also several varieties of patched bullets, the Army and Navy bullet, and samples of their shot shells in all varieties, including their "Leader" for any load of smokeless powder with their new No. 4 "smokeless" primer. Some celluloid wads, made by John P. Lower's Sons, of Denver, were shown here in Winchester shot shells.

Metal-patched bullets in great variety were in the case on the side aisle; a full line of primers and caps, including the 6-split, foil-lined and varnished, and Spanish-ribbed musket caps, of which the Winchester people are the only makers in this country. There was also shown in this case a sectional model of their '86 rifle, and on the counter, in front of the display of cartridges, were shown samples of gun forgings which were remarkable as such. Those who are familiar with forgings did not hesitate to declare that few concerns who make a specialty of forgings could equal these in beauty of lines and finish.

Here was shown the method of the manufacture of their famous shotgun barrels, in a separate block of steel, about a foot long, through the center of which a hole has been drilled. This is rolled out by their improved machinery until it reaches the required length of 30in., and the barrel is thus made solid without seam or weld. The remarkable excellence in shooting qualities of these shotguns has been a matter of general comment since the gun was first introduced, and the mode of manufacturing the barrel interested many on that account.

In large ammunition they showed the armor-piercing rapid-fire projectile, and cases made by them for the U. S. Navy, and also a Hotchkiss gun carrying a 1-Pdr. projectile. It was intended to show the large gun they use at their proving grounds at New Haven, but it was not possible to set it up as the barrel projected into the aisle so far that it would hinder traffic. Their exhibition of the plate used at their proving grounds and penetrated by the projectiles of their own manufacture was especially interesting and was examined by crowds daily.

The entire exhibit was in charge of Major Albee, who gives special attention to the heavy ammunition for the Hotchkiss gun, of which he is the Winchester Company's expert.

In smokeless powder rifle cartridges the Winchester Company are making careful and costly experiments, and each week sees the results of their attention to this departure in the appearance of new sizes adapted to the more popular calibers. At present they have ready most of those most called for from .22 short to .41 long double action, and other larger calibers are looked for daily.

The exhibit was well arranged and well explained, and, while it did not cover so large a space as their remarkable Chicago display, this was the fault of the hall rather than that of the material that the company could display if the space were provided.

Away back in the early '60s times and customs and costumes were different in this country from what they are to-day. A great many men in a certain part of the country wore gray-colored clothing, and in another section of the land a great many men wore a garb of blue. Nowadays nearly all the men you see are sound of body and limb. You see few cripples among the mature men of average walks of life. In those days a good many men were seen who had lost an arm or a leg, or who were injured in some other way. In short, those were the days of cruel war.

In those days, as the writer of these lines can well remember, though then he was but a boy, a great many soldiers came home from the seat of war to visit their friends for a short time "on furlough." (Alas! some had furlough that never took them home.) Even so far removed as they were then from active war, these men, whether sound or maimed, whether well or sick, clung to the garb they wore "at the front," and usually they brought with them also the weapons they were wont to use.

At first these weapons were the long muzzle-loading Enfields, the muskets almost as terrifying to him who shot them as to him who was shot at. Then the Springfield rifle came in view. At that time no one had any idea of shooting more than once without reloading. Many sorts of rifles came home on furlough, but not one of them borne by a soldier was anything but a single-shot affair.

One day the newspapers told of a company of U. S. troops which had been armed with a new-fangled rifle, called the Henry rifle, which shot sixteen times without reloading. This company, posted to defend a certain bridge, repulsed a body of troops many times their number. The repeated fire of these first old Henry rifles confused and terrified the enemy, many of whom were killed and wounded, and some taken prisoners. One of the prisoners expressed the feeling of his whole regiment when he said that "It was no use trying to stand up against guns which were wound up Sunday and shot all the rest of the week."

From that time on the idea of the repeater grew. It is remembered that a great many of these old Henry rifles were brought home by discharged soldiers at the close of the war. Large numbers of soldiers turned from hunting men to hunting game. In a very short time the reputation of the repeater as a game gun—even in so poor a form as it then had—was established and began to spread all over the country. Once established, men began to wonder why they had not thought of it before.

As a matter of fact, it has been thought of before, and it is not meant that the old Henry rifle, with its brass fittings and magazine, was the first repeater ever made, though it was the best up to that time.

We think, without wishing to be unfair to others, that we may say the old Henry rifle, poor as it was by comparison with the repeaters of to-day, was practically the first repeating rifle ever used to any extent or any success on game.

It will be accurate enough for general purposes to state also that the old Henry model was the grandparent of the Winchester repeating rifle, which soon began to make its appearance in the hands of so many men in this nation of natural sportsmen. It is not very far from 1863 to 1873. Yet in 1873 the Winchester Repeating Arms Co. put on the market their .44-40 rifle, the "model '73," as it is now generally known. This was a light and compact central-fire rifle, using a cartridge which was easily to be obtained and which could be used also in heavy revolvers. Perhaps no weapon of the kind has ever been more popular. To-day many hunters prefer some of the many later products of the Winchester Repeating Arms Co.; but the fact remains that the .44-40 Winchester, model '73, has killed more game than all the other rifles of this make put together. This was largely due, of course, to the fact that it was the repeater first at hand in the game country when civilization began its rapid march to the West. To-day many hunters like this old model and will have no other for bear or deer or elk, and many even stick to the carbine model, shooting the same cartridge. These may have their choice. Others of different tastes can certainly find wide range for the gratification of their preferences.

Three years after the '73 model there appeared another "Winchester," the "Model '76." This shot the bottle-necked shell, .45-75, with 350grs. of lead. Many an antelope and elk was killed with this arm, and a great many hunters thought perfection was attained, though the argument between these and the men who preferred the Winchester using the old Government cartridge, .45-70, with 405 or 500grs. of lead, was something which history does not record as settled.

In short, the Winchester Repeating Arms Co., quick to grasp the popular taste, now began to manufacture new and improved models almost as fast as one could snap his fingers. Any man could suit his theories in the proportions of lead and powder, for the firm was making all sorts of ammunition for all sorts of rifles.

To-day one cannot tell without counting it up in the catalogue just how many sorts of cartridges are made by the Winchester Repeating Arms Co., but it is somewhere between 300 and 400 different styles. You can hardly think up a cartridge you would like to see, but what you can find it already listed in the Winchester catalogue.

In rifles of every sort, from the tiny .22, which you can pack in your trunk, up through .25, .32, .38, .44, 45, .50, in repeaters, single shots, heavy express—in brief, of every useful or practical sort of arm for use on game or at the target, the produce of the great factory has been continually enlarging, and becoming more curious and comprehensive. Truly, the name of Winchester has become in America a household word.

Not in method is it capricious or fanciful; and adopting any suggestion only after the most careful weighing and most exhaustive test, they have studied closely and carefully the tastes and requirements of the public, and have at length found themselves in a position to realize their ambition of becoming manufacturers of arms truly to be called popular. Such popularity could only be attained by thought and effort, and can only be retained by uniform excellence in product.

Yet that general popularity obtains for the arms of the Winchester Repeating Arms Co., not only in this country, but in every country on the globe. In every land of the earth the Winchester is found. Surely, somewhere in all the earth, the defects of the Winchester goods would be found, if any such existed.

It has not been in the manufacture of repeating rifles or rifle ammunition alone that this extensive company has engaged itself. Ever in touch with popular needs and popular tendencies, the company recognized the growth of the shotgun idea, in the field and at the trap. Shooters began to need a better class of shotgun ammunition, from wads to shells and primers. The Winchester Co. began to supply the want, and as usual to supply it conscientiously, thoroughly and well.

To-day you find Winchester shotgun shells by the banks of the remotest duck marshes of the country, and at the great trap tournaments the same shells, improved in the most scientific manner to meet the latest requirements of the modern trap-shooter, are to be seen in every corner of the land. The shooters use them just as they do all the goods of the Winchester Co., because they know they are not offered on the market until the most conclusive tests have proved them perfect.

Shooters for a long time paid large prices for their rifles, till the Winchester Repeating Arms Co. put on the market a perfect weapon at a price within the reach of all. By and by some one began to ask, "If a repeating rifle was such a good idea, why should not a repeating shotgun also be good?" So the company put out the Winchester repeating shotgun. The first model worked with a lever, as the rifle did.

Then came the sliding fore-end, or "trombone" action. To-day you see this repeating shotgun in the hands of many game hunters, and at the trap tournaments it cuts a very large figure. Bored so that its shooting is perfection, its excellence and regularity are proved by the record-breaking runs it has made in the hands of expert shooters. Cheap, durable, reliable and effective—it is predicting little to say, that it too will soon be a household word.

In fact, it is no self-flattery for the Winchester Company to feel that it has attained success. All over the world its goods are known.

But as this company gained its success by careful study of the public, so it knows that it can best hold and increase its success by keeping its goods continually before the public by all legitimate and respectable methods of advertising.

This company sets no limit for its attainments and knows no such word as "good enough." Naturally as one essential method of impressing this fact upon the public, the company would have representation at any great exposition where sporting material could be shown, and therefore, at the really great expositions of the lands, the Winchester Repeating Arms Co., has had extensive display made of its extensive line of goods.

At the World's Fair its exhibit was one of the most elaborate and most popular installed. Of course, too, at the Sportsmen's Exposition a Winchester exhibit was essential as Hamlet in the play.

E. I. DuPont de Nemours & Co.

Under all the finish and refinement of the civilized man run still the broad impulses of barbarous and primitive man. All the world will always love the hero, and all mankind will ever concern itself with war, for war is woven into the principles of life. We gladly read back into the time when the hero was the man of thews and sinews, and when humanity was of necessity brutal; because there still survives hidden in us a current of savagery and an admiration for savage force. It was not meant, however, that this should continue as more than an undercurrent. Civilization was to be, and to-day it is, and civilization means more nearly an equality among men. We shall not go far amiss, then, in calling that the greatest instrument of civilization which did most toward making men equal. We read with eagerness and curios-

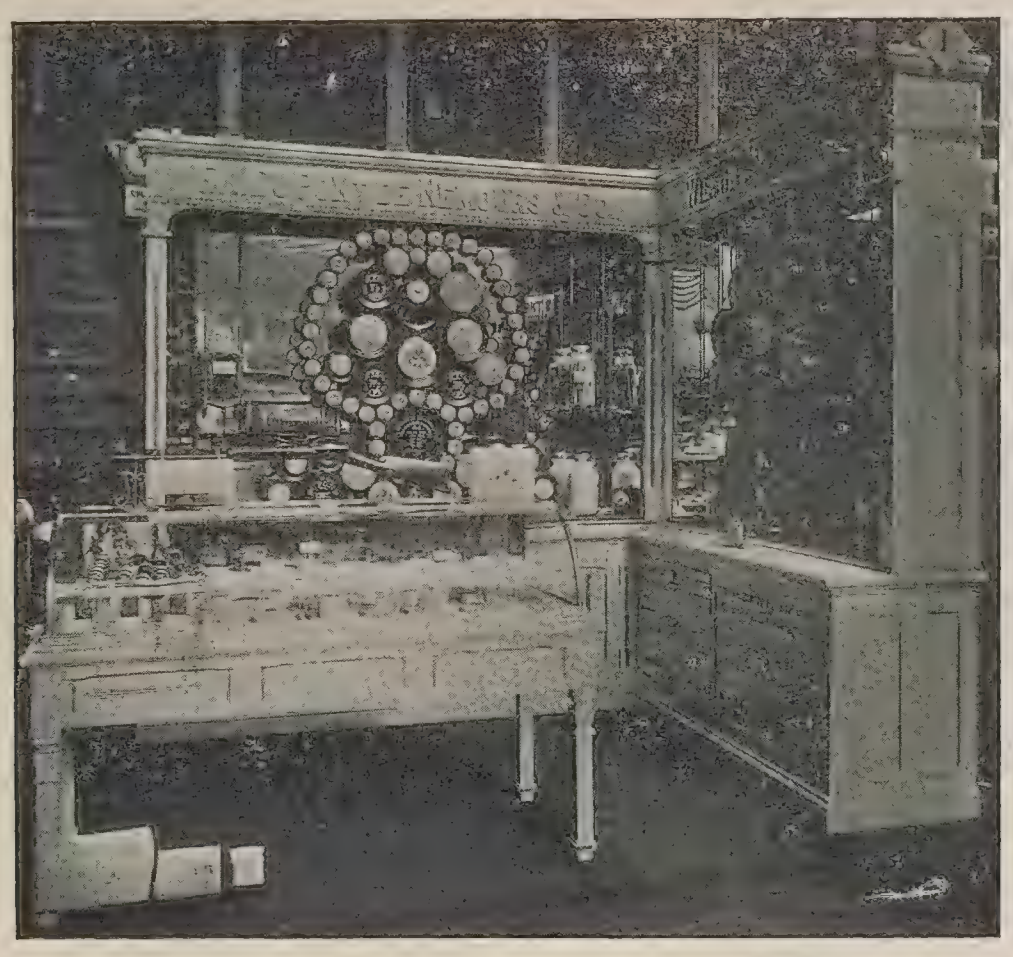


EXHIBIT OF E. I. DUPONT DE NEMOURS & COMPANY.

ity the works of the masters of history or fiction which take us back to the less civilized ages. The pens of Chas. Reade, of Conan Doyle, of Edwin Lester Arnold, interest us most when they tell of the days of the "Cloister and the Hearth," the "White Company," of "Phra, the Phenician." And all these writers seize upon that dramatic time when the long bow gave way to the arbalest, the arbalest to the petronel—when gunpowder began to make all men equal, when feudalism gave way to humanity, and when serfs dropped off their shackles. The great writers know what that dramatic epoch has meant to mankind.

As gunpowder gave man liberty and progress, so to-day it preserves liberty and assures progress. The idea of war (with it well mingled the idea of sport) obtains to-day and must ever obtain while human nature lives. If, then, one be in the least interested as a student of broad causes, of motive and of agencies, what more interesting line of study can one have than the study of gunpowder, the destroyer, the civilizer, the equalizer, the servant of man's sternest and his lightest moods? From its beginning to its highest perfection, what more interesting study?

At the Sportsmen's Exposition one can study gunpowder through a century of growth right here in America, and not in other lands or times. Indeed, we can temperately say that one can see not only part but all the history of gunpowder in the beautifully neat and tasteful exhibit of the old American firm of E. I. DuPont de Nemours & Co.; for if they do not show one everything, they can tell him of what came before their time in the history of powder, and after their time they have been in the forefront of progress in the practice and manufacture and development of explosives.

A knowledge of the ingredients and nature of gunpowder is of great antiquity. The Chinese made use of an explosive compound fully two thousand years ago, but it devolved upon a higher civilization to make the discovery of much practical utility.

Gunpowder was made in this country during the last century, but the early manufactories were of the rudest and most primitive description.

Eleuthère Irénée DuPont de Nemours, who came from France to the United States in the fall of 1799, was the founder of the gunpowder works near Wilmington, Del. He had acquired a practical knowledge of the manufacture of gunpowder under the instruction of the celebrated French chemist Lavoisier, who was superintendent of two government powder mills at Essone, before the French Revolution. Some months after Irénée DuPont's arrival, his attention was called to the bad quality of the gunpowder made in America, and he conceived the idea of erecting works for its manufacture. He went back to France early in 1801, returned to the United States with some of the necessary machinery, and selected in 1802 a site on the Brandywine Creek, a few miles from Wilmington, Del., where he at once began the erection of the works. The business has been carried on ever since, without interruption, by the founder, succeeded by the members of his family, under the firm name of E. I. Du Pont de Nemours & Co.

The space occupied by E. I. DuPont de Nemours & Co. has been arranged with a view of exhibiting the many materials that enter into the manufacture of gunpowder, the manufactured article itself in its many varied forms, and also the packages in which the powder is sold. The arrangement of these empty packages is unique and original. A cabinet occupies two sides of the space, of which cabinet the upper part is open, the back and sides being lined with plate glass mirrors. In this cabinet is grouped a collection of kegs and canisters in such a manner as to show each individual keg and yet have a neat and tasteful form. The kegs and canisters, reflected in the mirrors, their gay colors contrasting finely with the cream white and gold of the cabinet, make a striking picture, which must be seen to be fully appreciated.

At the sides of the groups of kegs are arranged eight large clear glass bottles containing the raw materials from which gunpowder is made.

The materials thus exhibited are as follows: Saltpeter—The crude salt as it comes from India; crystallized; refined 1 in 10,000 of impurity. Sulphur—Common; refined. Willow wood, from which the charcoal for the fine sporting powders is made. Charcoal—Common, for the lower grades of powder.

A showcase stands in the front of the space in which are exhibited a number of samples of gunpowder and explosives. They are placed in crystal glasses resting on a bed of rich velvet.

The regular grades of rifle and shotgun powders are designated by the letters O.T.P., Fg, FFg, FFFg. V.G.P. is a superior trap-shooting powder. Choke bore, a selected powder well suited to choke-bore guns. Gun Cotton—Service gun cotton of the U. S. Government; for use in the manufacture of blasting gelatine; for use in the manufacture of smokeless powder. Smokeless Powder—For shotguns; for .22cal. gallery rifles; for .45-90-300, .38-55, .32-40 and .25-20; for field guns; for U. S. Government .30cal. rifle. Cubical powder. Hexagonal powder. Sphere-hexagonal powder. Prismatic powder, for 5, 6, 8, 10, 12 and 13in. rifles. Saltpeter powder, U. S. Army.

An assortment of loaded shells for shotguns is a special feature. A piece of mica has been introduced in the side of these shells so that the position of the powder, wads and shot can be plainly seen. These shells have been loaded in the best manner and show the wadding used with the justly celebrated "DuPont smokeless."

Another feature of the exhibit was a Winchester rifle from which have been fired one hundred shots of the DuPont smokeless rifle powder, the barrel being in the condition the last shot left it, not having been cleaned. The rifleman has but to look at the interior of the barrel to be convinced that the powder fired from that rifle is absolutely clean and not at all injurious to the barrel.

Blasting powders shown by Messrs. E I. DuPont de Nemours & Co. were as follows: A blasting, used for quarrying and rock blasting, and for all kinds of work which is too hard for the common B blasting. C, F, FF, FFF and FFFF were the sizes of grain exhibited. B blasting was shown in the following sizes and is used for coal mining and earth blasting: CCC, CC, C, F, FF, FFF and FFFF.

No powder ever manufactured has ever sprung into the sudden popularity attained by the famous DuPont smokeless, and no powder has ever better justified its own popularity.

The visitor at this pleasant corner could learn many things of curious interest, which he might have known, but did not. For instance, one knows that saltpeter, charcoal and sulphur are the common ingredients of gunpowder; but he may not know that the old formula (much varied in application) was 75 parts of saltpeter, 15 of charcoal and 10 of sulphur. Charcoal he may think easily obtainable, but the polite managers and attendants at the exhibit will tell him that the high grade powders need the best of charcoal, which is only made of the best of willow. Only the branches of the willow can be used, not the trunk wood. The DuPonts get their willow from widely scattered parts of the country, but they get the best material in every case for the manufacture of their many products.

The exhibit of Messrs. E. I. DuPont de Nemours & Co. seems to have been arranged so tastefully under the care of Mr. Francis G. DuPont, and it was left in care of a very courteous and efficient attendant in M. Pierre Gentieu, long with the DuPont house. Very pleasant and instructive and satisfactory was this exhibit, which was situated at the entrance of the main aisle of the Exposition.

The "Three in One" Compound.

Modern firearms are much more complicated than those used by our ancestors a few generations ago. The fowling pieces used by our grandfathers, for instance, besides the ramrod, of which the erring small boy stood in such mortal terror, consisted of the fewest and simplest parts imaginable in lock, stock and barrel. Such guns required very little care, and were supposed to shoot just as well, or perhaps a little better, dirty as clean.

Things have changed very much in our era. Improved firearms, with more complicated and more delicately adjusted parts, have made it absolutely necessary to take better care of them. They must be kept clean and guarded against rust in order to insure their efficacy.

It is no longer believed that fouled barrels will make better shooting than clean, and sportsmen have universally learned the necessity of caring for their guns.

Heretofore they have been obliged to use various dispreparations to accomplish this end. The locks and other mechanism must be lubricated after they have been cleaned, and care must be taken to preserve all metal parts against rust.

They will hail with delight therefore the advent of a preparation made for their especial use that cleans, lubricates and preserves from rust all at the same time. Such a preparation has at last been placed upon the market.

In space 51 G. W. Cole & Co., 111 Broadway, New York (with branches in Chicago and San Francisco), exhibit their "Three in One" compound. This Exposition has brought to light many new and meritorious articles, but none that more nearly meets a long-felt want to the gunner, fisherman and bicyclist than this "Three in One." It thoroughly cleanses a gun after shooting, and prevents sweat of the hand, water and salt air from rusting the nickel and steel parts, and, strange to say, it is an excellent lubricant for the lock, as it does not gum or harden.

EXHIBIT OF THE "THREE IN ONE" COMPOUND.

'Three in One" is unique in that one article cleans, prevents rust, and lubricates, and it is entitled to a thorough trial by all sportsmen who will appreciate the advantage of protecting their guns, reels, fishing tackle and bicycles with a transparent compound that contains no acid, that cannot be seen, yet does the work required. Numerous testimonials were distributed showing these facts. "Three in One" is clean to handle, and will not soil the clothing.

The liberal distribution of samples made at the Exposition will no doubt increase the already great demand for this article, and make it as necessary to the sportsman for his gun and fishing tackle as it has become to the bicycle riders of this country for their bicycles.

Messrs. Cole & Co. will mail a large oiler filled with "Three in One" compound, upon receipt of five two-cent stamps, for trial, and will send testimonials of many sportsmen, some of whom may be residents of the city of the applicant, and may so serve as personal references.

The Hunter Arms Co.

EVENTS move rapidly in America, but there are few shooters now before the public in America who cannot easily remember back to a time when a certain event of importance occurred in the history of guns and gunnery in this country. It seems a good while ago, but really it was not so very long ago when the first L. C. Smith gun was put on the market and began to be advertised as a good gun for American shooters to have. Comparisons are usually odious, but comparisons are very well when one compares his own success with his earlier shortcomings, and it will hurt no one to refer to the quality of the early L. C Smith guns. Those were the days of 10-bores, of tremendously heavy barrels, of clubbish proportions and general clumsiness and awkwardness in gun-making in the United States—the days when foolish men carried around a cannon of a gun and shot at quail with 5drs. of black powder and 1¼oz. of shot. The shooter of those days boasted of the solidity of his L. C. Smith gun, which weighed perhaps 11¼lbs.—a truly awful weapon. Still, no one even to-day could deny the shooting qualities of these guns, for even in those days it was evident a splendid system of boring had been discovered. The most heated discussion arose over the shooting of these guns, but the guns went right on shooting. Still another fine feature of these old guns was the Smith cross-bolt, beyond doubt the best breech fastening ever put on any gun. Foreign guns have several very pretty fastening bolts, but some of them have not stood the test of time. In a few months the gun is loose, and hence dangerous and worthless. No one even in the modern days of excessive charges of nitro powder has ever seen a loose L. C. Smith gun. Even the old cannons, if you could resurrect them to-day, would be tight and sound. The Hunter Arms Co., manufacturers of this gun, are the only firm on earth who guarantee their guns not to shoot loose with nitros. No other maker has this fastening. Then came the day of the hammerless guns, and the L. C. Smith gun as usual was a little ahead of the time. It happened that the writer, away back in the early '80s, purchased one of the very first of these guns brought into his State. It was a 12-gauge and weighed 8¼lbs. Eight years later it was still a sound, good gun, but the march of the L. C. Smith had long gone past it. The nitro powder had come to stay. The L. C. Smith gun was the first to experiment with proper boring for the handling of the new powders. It was always ahead, not a little behind. Long ago, by this time, the reputation of the L. C. Smith gun was permanently established, and it was known as a perfect shooter in every corner of the land. Long since Harvey McMurchy had carried the banner of the L. C. Smith everywhere in America—and either then or to-day a better representative of a gun or a keener student of events never existed than Mr. McMurchy, and probably the public will never know just how much of the continued improvements in this gun have been due to him. Certainly it is only due to him to say that he and the gun grew up together. It was a matter of course that when Mr. L. C. Smith disposed of his interests to the firm which for some years have manufactured this gun (the Hunter Arms Co.), Mr. McMurchy should go on at Fulton, N. Y., with his old sweetheart, the L. C. Smith gun. Apparently there has never been any regret on either side since then. Certainly there have been many changes and improvements in the gun since then. Even more than ever, it has been the gun *par excellence* of America. It had ideas, and was not afraid to carry them out.

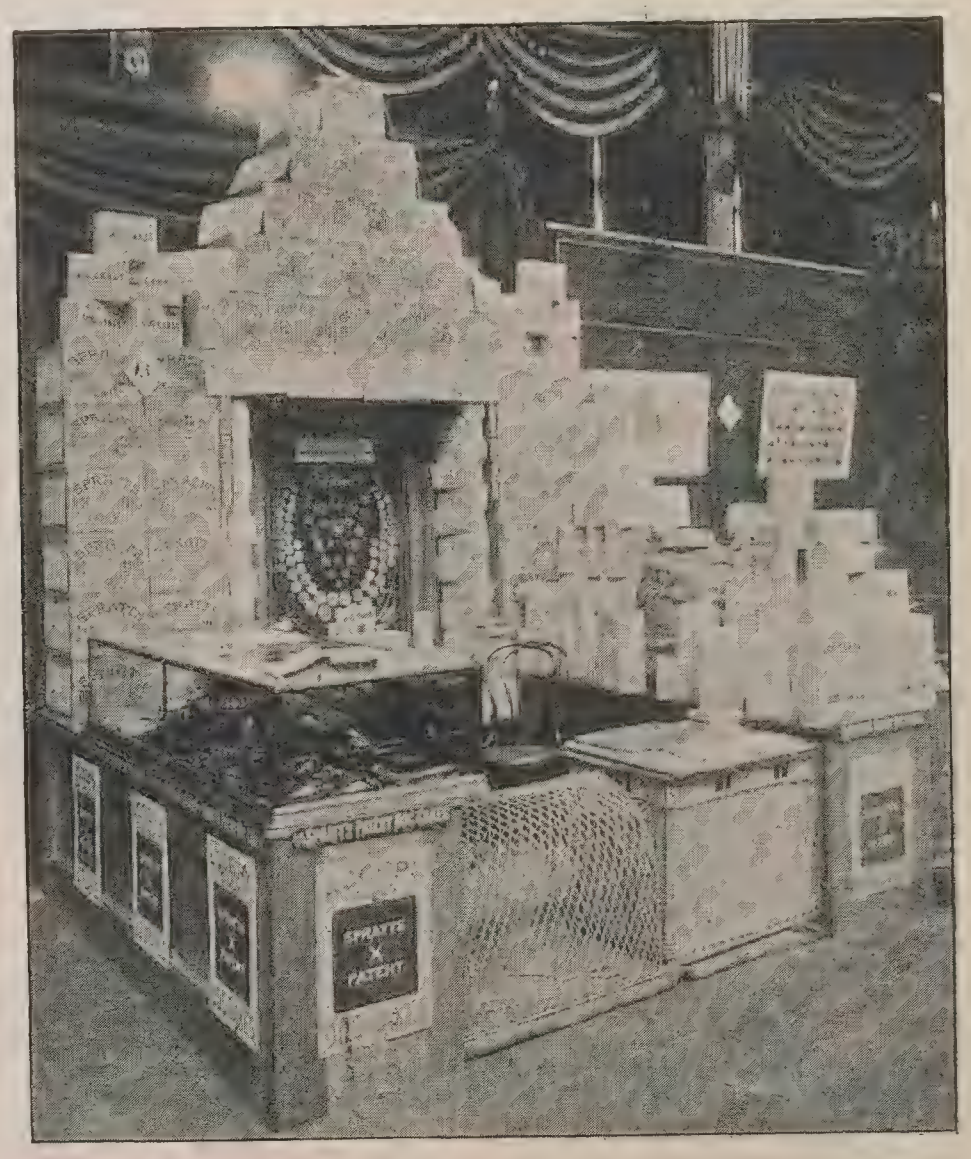
Shooters began to be dissatisfied with American guns. They would shoot all right and wear all right, but they did not balance and handle right—they lacked elegance of outline and general symmetry. The Hunter Arms Co., always a little ahead, recognized that the great question next to be met was that of getting out a more shapely gun. Slowly and surely the lines of the L. C. Smith began to improve. People began to say, "What a pretty gun!"

Foreign guns began to appear with ejectors on them. Always a little ahead, the Hunter Arms Co. was the first to grasp the ejector idea. No better ejector has ever been devised by those who took more time to ponder. Simple and positive, with few parts, and so arranged that you can't load your gun without leaving it in firing order, it is all that can be asked and quite as good as has appeared. You can use this ejector in sea shooting, and it will work. Moreover, it will not "break" you to buy it. It is not a luxury, to go to the rich alone.

THE HUNTER ARMS COMPANY'S EXHIBIT.

But long before this another thing had happened which shows the good luck and good foresight of the owners of the L. C. Smith gun. This was the fortunate arrangement by which Mr. Fred Quimby became selling agent of the gun. The firm is now the W. Fred Quimby Co., of 294 Broadway, New York city, and it cuts a great and growing figure in the sporting goods trade of the United States. As selling agent for New York, the Eastern and Southern States for the L. C. Smith gun, this firm does one of the great gun businesses of the country. This is how the Hunter Arms Co. exhibit was made in connection with those of the W. Fred Quimby Co. The goods were shown by Mr. Robert Hunter, Mr. William Hunter, Mr. Thomas Hunter. There are six of the "Hunter boys" in the firm of the Hunter Arms Co. They are nearly all large specimens of manhood, and Mr. Thos. Hunter said that he and his brother William together weighed 465lbs.

And so our story of the growth of a gun has approached the exhibit at the Sportsmen's Exposition. What shall we say of the exhibit itself? Very little. The story that has gone before is the best description of a gun which has always been ahead in methods of manufacture and of distribution on the trade. There were twenty odd guns displayed, running in price from $45 up to $500, and not in any one of them could you find a hint that it was one of the offspring of the old L. C. Smith gun described in the opening lines of this story—except that it would shoot, and that it would not shoot loose! In total value the display was worth about $2,500. To show how the public likes a good article, it will do to note the fact that over $1,500 worth of these guns were sold during the week, more than half the total number shown, one a magnificent specimen which sold for $500. This gun was of Whitworth fluid steel barrels, magnificently engraved finish, and of a purity of outline hitherto unknown in American gun-making art. After this the foreigners must come to us to learn how to make a symmetrical and finely balanced gun. The art is at length attained here.



Of the guns displayed in the cases the majority showed the Crown steel barrels, so popular as made by the Hunter Arms Co., though fine Damascus and the cheaper laminated barrels were also shown. A full line of sectionals showed the beautiful working of the lock, safety and ejector mechanisms, and one grand gun was shown unbrowned, "in the bright," to display the beautiful engraving before sending it to the bluer and browner people. The bulk of the twenty guns shown were of Crown steel barrels (this was the first gun firm to use that barrel material in America), and the straight hand, as made on all the handsome ejector pigeon guns. By the way, the L. C. Smith was the first also to adopt this fashion of stock, now rapidly becoming so popular. In short, this is the gun which has always been a little ahead.

Of Mr. L. C. Smith, often called the "lucky man," it was sometimes said that if he should fall into the ocean he would come up covered with diamonds. Now, whether it was the inventor of this gun, or Mr. McMurchy, who so ably has shown it and seen it win the highest sort of honors, or whether it was the Hunter Arms Co. who have put their money boldly into making a gun "always a little ahead," or whether it was Mr. W. Fred Quimby of New York, who has and probably always will handle this gun—whichever it was that was to blame for it most no one knows; but certainly the combination has been a great one and a winning one. Out of this the public can draw its own inferences in regard to the present and the future of the gun which has been "always a little ahead."

Spratts Patent.

The exhibit of Spratts Patent, Limited (American), was most complete in its array of dog furnishings and foods. No sportsmen's exhibition would be complete without such an exhibit, and no exhibit could be more complete in itself than was that of Spratts Patent at the Sportsmen's Exposition in Madison Square Garden last week.

There were dog collars large and small, some plain and strong with a view to practical usefulness, others strong and ornamental with a view both to use and beauty.

THE EXHIBIT OF SPRATTS PATENT.

Dog chains of the best material and construction were in sizes from the light slender chain used on toy dogs up to the heavy chains needed for the largest St. Bernards and Mastiffs. Neat leathern leads of different weights and sizes for the show ring, and for leading the dog about in security or for exercise; metal pans which cannot be upset, and which can be used for feeding and watering; dog

crates of wicker or wire work for travel or for security and comfort; dog medicines for every disease which afflicts the dog—were features of the Spratts Patent display.

Boxes of different dog foods were placed one above anther, forming a back for the exhibit, a recess in the middle being left for a neat medal frame, which displayed medals won in all parts of the world at the most noted exhibitions. This array of medals is sure to catch the eye of the visitor. The medal frame was arranged in 1881, and though it contains many medals, their total is but a small percentage compared to the great number won in the past fourteen years. In it, however, are 22 gold, 141 silver and 14 bronze medals, a total of 177.

The exhibit displayed, in all styles, everything necessary for use in the kennel and poultry yard, but the specialties of this famous firm are patent foods for dogs, cats and fowls, also condiments, medicines and soaps for their health and care.

Their Meat Fibrine Vegetable Dog Cakes find great favor with bench show managers and kennel owners, and also they are recognized as a staple canine food in the civilized world.

THE ROARING LION.

The next food in importance is the puppy cake, the staple food for all breeds of puppies. Other cakes are the Pet Dog Cakes, especially prepared for puppies, toy and other small dogs; Cod Liver Oil Cakes, invaluable for delicate or old dogs, or for dogs which are recovering from sickness; greyhound cakes, which contain 35 per cent. of meat and a large percentage of oat and wheat meal. These cakes have proved most successful as a food for training, many of the noted winners of the Western coursing events having been trained on them.

There are Oatmeal Dog Cakes for greyhounds, when preference is given to training on meat. There are also plain round meal cakes for use in kennels where the hounds or other dogs are fed on flesh.

The next display of importance was the Puppy Food and Pepsinated Puppy Meal, the former being a substitute for natural milk if the dam dies or if she is unable to supply sufficient milk for her young; the latter food is for use in weaning puppies or for delicate, poor feeders.

In this advanced stage of civilization fowls claim and receive as much attention as dogs, judging from Spratts Patent's display of foods for all kinds of them. There was poultry meal in two grades of fineness for fowls and chickens, and also Game Food, Pigeon Food, Prairie Meat Crissel, made of dried sound beef and ground beef; staple foods of the feathered tribe, excellent and superior to the natural foods.

Adjuncts of great value are their Granulated Bone, Bone Meal, Granulated Oyster Shell, Cardiac Condition Powder, and scientifically prepared remedies for all known ailments. Other foods are Canary and Cage Bird Food, and Fish Food for rearing trout, etc.

Last, but not least (for cats have suddenly sprung into national prominence), is their cat food, a perfect and complete food in itself, specially prepared and cooked.

This well-known firm, in its business scope, covers every detail of kennel interests.

It boards dogs at its commodious kennels at Closter, N. J.; it furnishes advice on canine diseases free. All kennel implements—brushes, combs, dog gloves for grooming the dog, dog clothing in all shapes, sizes and patterns, dog harness, muzzles, whips, whistles—in short, everything which appertains to the health, comfort and management of the dog and cat is supplied by Spratts Patent, Limited, as is also everything for the care and raising of poultry. Their catalogue, besides giving the usual information regarding their goods, gives much valuable information on the diseases and care of dogs.

Taxidermy.

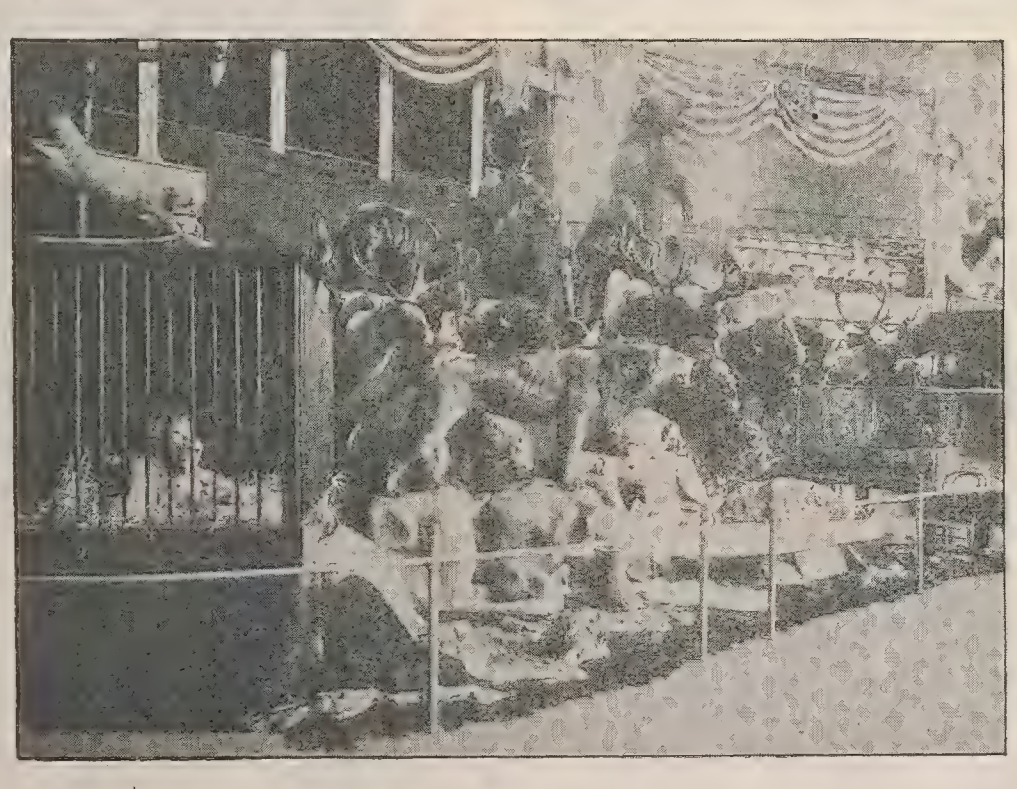
In taxidermy the exhibits were numerous. Not only were there considerable displays by several taxidermists and furriers, but a great number of mounted heads and horns were shown, either for decorative purposes or to exemplify the game found in some particular region.

Of the heads, two collections, notable because of their numbers, were those of the Maine Central R. R. and of Mr. Phillipp Liebinger, of Brooklyn. The first of these comprised heads of Maine game—moose, caribou and Virginia deer, mounted by Mr. S. L. Crosby, the well-known Maine taxidermist, while the other consisted of Western game—moose, elk, mule deer, sheep, antelope and buffalo. Of the latter there were several heads and skulls, very large and with fine unmarred horns. They were dated 1893 and 1894, and so must have been killed in the neighborhood of the Park, and if in Montana, in violation of law, for that State has had a statute absolutely protecting the buffalo for a term of years. Of the lesser collections of loaned heads those belonging to Hon. Theodore Roosevelt, Mr. G. O. Shields and to Thomas W. Fraine, of Rochester, are worthy of special note. Mr. Roosevelt showed specimens of buffalo, sheep, antelope, goat, elk, caribou, bear, cougar, white-tail deer and a fine mule deer, remarkably large and with many points, and Mr. Fraine a very symmetrical, though not large, sheep, and a male goat killed by Dr. Walter James, of this city, which is unusually large and admirably mounted. Mr. Shields's collection was large and showed most of the varieties of Western game, an elk head with very massive horns, and a very large sheep's head being the most noteworthy. Among the single heads shown, a mountain sheep head killed last winter in Lower California by Mr. George H. Gould and exhibited in the FOREST AND STREAM space, was the finest one of its kind for symmetry and length. It measures 16¼in. at the base of horn aud 42½in. in length. In the cabin of the U. S. Cartridge Co. were many hides, heads and mounted animals, prepared by Messrs. Southwick & Critchley. A tiger skin and a bear skin were large and handsome, and a mounted Virginia deer stood on one side the door, while on the other was a two-headed ruffed grouse.

In the exhibit of C. G. Gunther's Sons there was a great mass of material, some of it very good and some very commonplace. Among the more interesting specimens were two little muskox calves, a mounted bighorn with massive horns, 17¼in., a fine mule deer with many-pointed horns.

F. Sauter, the taxidermist, had a large exhibit, not only in his own space, but also loaned to other exhibitors. A group of dogs pulling down two wild boars, leopards attacking a gnu and wolves pulling down a buffalo were the most pretentious pieces. Besides these we noticed two running deer, the largest buffalo head in the exhibition—said to have been killed in Montana in 1894 and so illegally slaughtered—with its robe. This is very likely a National Park buffalo.

The cyclorama of sport at the east end of the garden prepared by the Webster Studio, consisted of five pieces representing big game hunting, duck shooting, fox hunting, trout fishing and a mischance. These pieces were designed by Mr. G. Muss-Arnolt and executed by Mr. Frederic S. Webster. The first showed a bull elk just killed, and two hunters looking at the game. The dead animal was remarkably well done. In the second the gunner and his dog were seated in a boat in a blind, awaiting the flight of the fowl. The motion of the water and of the boat gave a realism to the scene and the accessories were skillfully worked out. In the third scene the fox hunter was seated on a log in the woods, his hound lying beside him and two dead foxes, artificially preserved, resting on the dry leaves near him. The trout fishing picture showed an angler just grasping the fish which he has lifted from the water of the brook at his feet. In the last scene a gunner was supposed to have discharged his single barrel shotgun at a grouse, and the report has startled a young buck which is bounding off through the cedars, while an expression of deep disgust is seen on the hunter's face. The ideas of all these compositions are excellent, and the execution for the most part good, but an extremely difficult matter it is to represent in a lifelike way the humam form, features and flesh.



W. W. Hart & Co.

The exhibit of W. W. Hart & Co. was small, but its quality was of the very highest order. Here were seen large heads of musk ox, caribou and moose, the latter with a spread of 67in. Besides the usual skins and heads, there were two groups which are of extreme interest. One of these was a lioness in a cage with two tiny cubs. The mother has a matronly expression, which is very attractive, and the whole pose is bold, free and dignified, while the anatomy is well worked out. A roaring lion, standing close by, is another good piece of work. The firmly braced legs, the tense belly, the drawn in ribs and the veins of the legs, make this single figure a remarkable reproduction of life. The best of Hart's groups, and the best example of taxidermy in the Exposition, was one showing two young tigers. The larger is crouched on a little elevation and has under his forepaws a small antelope just killed. His head is turned and he is snarling at a smaller tiger which, with slow and stealthy motion, is crawling toward him. The courage of the man who mounted this last animal is admirable, and he has dared to draw out this creature so long and so thin as to make it at first glance seem a caricature; yet as one looks at it, he realizes that it reproduces in a wonderful way the actions of the cats, and the anatomy is worked out with startling fidelity. The man who did this piece is a sculptor, who has begun to study his art at the right end. We believe that he has a great future before him if he is faithful to this art. It appears to us remarkable that this group should not have attracted more attention in the daily newspapers, which are wont, as the saying is, to "catch on to" such a thing as this without delay.

Their moose head, 67in. spread, is the largest there is any record of, and the mounting is exquisite. The musk ox head is also the finest specimen in this country and beautifully set up. The tame bear, cinnamon bear, Russian wolf, the enormous Alaska grizzly, the otter group with water effect, their fine specimens of caribou heads, mountain sheep and goat, two choice black bison heads, antelope, black leopard, mountain lion, and some birds went to make up their well-selected exhibit.

Schoverling, Daly & Gales.

Perhaps the most interesting feature of this firm's comprehensive exhibit was the Chas. Daly guns with the new Krupp steel barrels, for which Mr. Daly is the United States agent. These are beautiful guns in every respect, and have the usual high finish characteristic of Daly guns. The Krupp barrels are said to have withstood in tests twice the bursting strain of Whitworth steel, and three times that of Bernard Damascus. The barrels are therefore especially well adapted for feather-weight guns. They may be very much reduced in weight without impairing their strength. In fact, barrels measuring only thirty-two one hundredths of an inch at the breech withstood severe tests very satisfactorily. A fair selection of Chas. Daly hammerless and three barrel guns were also shown. The exhibit included one curio in the form of a Persian gun 200 years old, loaned by Wm. Sherer, Jr. This gun is a handsome flint-lock with genuine Damascus steel barrel, and has a bore at the muzzle measuring 2¾in. in diameter. It is an ugly looking barrel from the muzzle end, but when one is told that it only measures .32cal. at the breech it loses its formidableness. The gun would be a good thing for Chinese warfare, but not of much consequence for a man who means business. Messrs. Schoverling, Daly & Gales are agents for Wright & Ditson, and also for A. J. Reach & Co., and exhibited a complete line of sporting goods manufactured by these firms. Among other novelties which they control were shown imported picnic hampers, Lemaire field glasses, fencing foils, alligator gun cases, leather goods, and fifty-six different styles of sporting shoes. Small gold-plated compasses and whist counters were given away as souveuirs, and were in eager demand.

THE EXHIBIT OF W. W. HART & COMPANY.

The Ideal Manufacturing Co.

showed the various specialties which have made the name of this firm famous in the line of gun tools. These were tastefully arranged on the sides of a truncated pyramid, and were shown to good advantage against a dark background. The exhibit included the new "Ideal High Grade Closer" and the "Spangler Ideal Closer," as well as a complete line of rifle and shotgun reloading tools, bullet moulds, measures, etc.

The Forest and Stream Publishing Co.

The FOREST AND STREAM was the first journal to show its faith in the enterprise of a Sportsmen's Exposition by engaging space for its own use; and when the time came there was provided here an exhibit which our friends were so good as to say was in keeping with the character of the Exposition and worthy of the FOREST AND STREAM and the place it holds in the sportsmanship of the day. In conception and execution, as these same friends were pleased to declare, the exhibit was original, dignified, enterprising and creditable. Generous attention was bestowed upon it and appreciative study given it.

The exhibit occupied two spaces and was divided into two distinct and complementary divisions, one of the journal itself with its adjuncts, the other of the Native American Hunter. A carefully prepared booklet added to the interest of both of these.

The "Forest and Stream."

The central and chief exhibit was of the FOREST AND STREAM, shown in forty-three richly bound volumes, covering the entire term of publication from the first number in August, 1873, to the beginning of the present year. There were also files of the AMERICAN SPORTSMAN (1871 to 1875) and of the ROD AND GUN (1875 to 1877), journals which were merged into the FOREST AND STREAM. Very impressive were the stately volumes, standing in line, side by side, one added to another, the growth of the years, and full of suggestion were they to him who can discern beneath the surface of things For amid all the purely material features of this great Exposition—the implements and accessories and trophies of sport—here was the finer essence and the spirit.

The great hit of the exhibit, if not indeed of the Exposition, was the oil painting of the sportsman "Chained to Business," that figure now so familiar from the Atlantic to the Pacific. The canvas, 5x8ft., set in a heavy oak frame, showed the victim in life size, and the effect was heightened by the employment of an actual chain—not in any sense a toy affair, but one of iron, with ponderous links, and securely fastened with a padlock. The FOREST AND STREAM of the picture was also an actual copy of the paper in its file-binder. "The chain is a real one," explained the booklet, "as with most of us our chain is, But the FOREST AND STREAM is real, too; and the lesson which the picture is intended to teach is that every one may have with his real chain the solace of a real FOREST AND STREAM. Remember that. There is no more important truth to be learned in the entire Sportsmen's Exposition."

No booklet was required to explain the significance of the picture; it spoke for itself directly to the heart. As there are thousands who are "chained," so were there thousands at the Exposition last week who saw in the man at his desk another self. As the throng came through the aisles and paused before the FOREST AND STREAM space, their faces would light up with smiling recognition of the picture's significance, and as for the expressions of appreciative comment these forty pages would not suffice to record them.

THE FOREST AND STREAM'S EXHIBIT.

CHAINED TO BUSINESS?
Can't go fishing?
Do the next best thing—
Read the "Forest and Stream."

Of the books on outdoor sport published or imported by the Forest and Stream Publishing Co., the display was extensive. The collection covered the several branches of fishing, shooting, natural history, travel, camping, yachting, canoeing, boating, the dog.

Among the pictures were a framed set of the FOREST AND STREAM'S color pictures given as premiums—"Jacksnipe Coming In," "He's Got Them" (quail shooting), "Vigilant and Valkyrie," "Bass Fishing at Block Island." Enlarged copies of some of the Amateur Photography Competition were shown; and there was a striking field picture by Prof. Osthaus.

Yacht models illustrated the three leading types, as represented by a shoal centerboard of extreme beam, a keel yacht similar to the famous Gloriana, and the fin-keel Scarecrow. Canoeing was represented by models of three different types of early canoes—McGregor's Rob Roy, the Jersey Blue and the English canoe Pearl.

Mounted heads of big game, with birds and fish, were employed for decorative effect. The heads were of buffalo, mountain sheep, antelope and whitetail deer, the last noteworthy for the size and symmetry of the antlers. Locked deer horns from Mississippi told of a death strug-in the swamp.

There were shown the head of a 23½lbs. black bass from Florida, and the skin of a 9 or 10ft. rattler from Texas.

Among the arms were a Long Tom flint-lock musket carried in the Revolutionary war by Warren Winslow, a powder horn, curiously decorated, of the same period, and a flint-lock pistol carried by an officer at the battle of Bunker Hill; these were loaned by Messrs. W. A. Abel & Co., of Syracuse. A percussion revolver carried by Commodore Semmes excited much interest.

A pair of holster pistols, which were old when they were first used by Kelpie in the early '50s, their horn, which is an ancient relic from Vermont, a rifle charger, an old Hirschfanger or German hunting sword, a Norse fisher's knife and two home-made hunting knives were loaned by Mr. F. H. Thurston, of Michigan.

Then there was a beautiful example of a flint-lock fowling-piece, made by Tatham, of London, for George IV., and presented by that monarch to Kamehameha II., of the Sandwich Islands. The date is not given, but Kamehameha died in 1824. This gun was loaned by Mr. W. P. Anderson, of Warwick, N. Y.

The snowshoes and *skis* were relics of the FOREST AND STREAM'S Yellowstone Park Game Exploration of the winter of 1893–94.

The Native American Hunter.

That portion of the FOREST AND STREAM exhibit devoted to the evolution of the Native American Hunter attracted much attention from press and public, and was a center of attraction for crowds during all week. The daily papers spoke of the exhibit as one of vast interest, and as a matter of fact there was nothing in the Garden into which so much history was compressed as in this. In this exhibit the pages of the past were turned back, and the public were told something of the mode of life and the methods of hunting and fishing in the old America by the real American, as illustrated by his implements here shown. In these reminders of the old days the changes could be traced which have taken place in the hunting of our big game, from the time before the white man came, down to the advent of the breech-loading rifle which exterminated the buffalo.

Thus was shown the evolution of the American hunter. And this evolution shows why and how the wild things

THE FOREST AND STREAM'S EXHIBIT OF THE NATIVE AMERICAN HUNTER.

—whether brute or human—have gone; for it shows how to kill became constantly more and more easy. Besides this story told by the transition from primitive weapons to improved ones, as a centerpiece of the exhibit, there was what is even more important and interesting—the note-book of a primitive hunter, the tanned skin of a buffalo cow, on which he has recorded the story of his

life. It is the written chronicle—the literature—of the native American hunter.

As the white man found him, the Indian was in the stone age of development. For the most part, the flesh of wild beasts and the wild fruits of the earth supported him; skins covered him; wood, stone and bone armed and equipped him. He had no knowledge of metals, but fashioned his edge tools of sharpened bits of flint, his axe and war club of larger stones. His house he built of poles and bark and grass and skins. His cooking utensils were earthenware pots baked in the fire, or tight baskets in which food was cooked by placing hot stones in the water which they held until it boiled. His only domestic animal was the dog, which was also his beast of burden.

Wherever he lived the Indian made the most of the food that nature furnished for him. The women cultivated their corn patches and gathered wild nuts and berries and roots. Shellfish contributed largely to the support of the tribes which dwelt along the coast. Along the great rivers they took the alewife, the shad and the salmon; on the lakes, trout and whitefish. Yet, after all, the Indian's main reliance for food was on the chase. He was, before all else, a hunter—the Native American Hunter.

By exhibiting a few characteristic specimens of his arms and implements, the FOREST AND STREAM presented a succinct view of the life of the Indian of the West, both in his primitive state and in the period of his change; the man of the stone age and the same man modified by contact with civilization.

The first panel showed the Indian before the coming of the whites. Here were seen a series of stone arrow heads of different tribes, from the Atlantic coast (Virginia), from the plains (Blackfoot), and from the Rocky Mountains (Snake), stone scrapers or tanning instruments (Arapaho and Cheyenne), a stone knife (Arapaho), a mortar pestle (from Oregon), two stone hammers (Pacific coast), an ancient bone knife (Blackfoot), a small hammer and its stone for pounding choke cherries (Arapaho), a Moqui child's basketwork cradle and doll, loaned by Mr. T. G. Peck, of Haverstraw, a pair of firesticks (Squamisht), elk-horn fleshers (from an Arapaho battleground), a buffalo-horn ladle and spoon (Blackfoot), spoons and ladles of mountain sheep and mountain goat-horn (mountain tribes of Pacific coast), a flesher made from the cannon-bone of a buffalo Blackfoot), a woman's maul (Snake), two war axes (Sioux), a frame of pipes (Sioux, Ree, Mandan, Pawnee, Blackfoot, Flathead, Kootenai, Haidah and Southern California), a sheaf of stone-headed arrows (Snake), three buffalo-tail fly brushes. Four original Catlin sketches, showing primitive hunting scenes were kindly loaned this exhibit by Mr. J. W. Buton, who owns the series—over thirty in number—exhibited in London in 1859.

The first panel was separated from the second by a two-pronged salmon spear, the weapon of the primitive fisherman, brought years ago from the Northwest coast, where it was purchased from its owner, who was using it.

Native Hunting Records.

The second panel had for its centerpiece and chief attraction an interesting specimen of Indian manuscript, a primitive book. It is the autobiography of Red Crane, a Blackfoot warrior, and sets forth the most remarkable adventures and noteworthy events of his life. It is a fine example of picture writing. This man, his record tells us, was at once a hunter, a warrior and a naturalist. As war in the Indian's estimation was the most worthy and honorable occupation a man could follow, it is natural that a good part of this history should be devoted to warlike exploits. The story reads, in part, that once on a time Red Crane set out on his war journey, and that soon after starting he killed an elk; then went on further and met an enemy with whom he fought. Here he is shown to have taken three scalps, there a gun, and again a mule. Many other war journeys are described, and in one place we find that with some companions he was surrounded by the enemy in a patch of brush, yet escaped. His hunting adventures are not passed over lightly. Here in one part of the chronicle we are told how he killed a mountain lion, how twice he was charged by bears, how on such a day he went eagle catching to secure the tail feathers. He had various minor adventures, in which at different times a beaver, a porcupine, an otter and a squirrel were concerned. He saw and wondered at certain strange water animals which are unmistakably drawn.

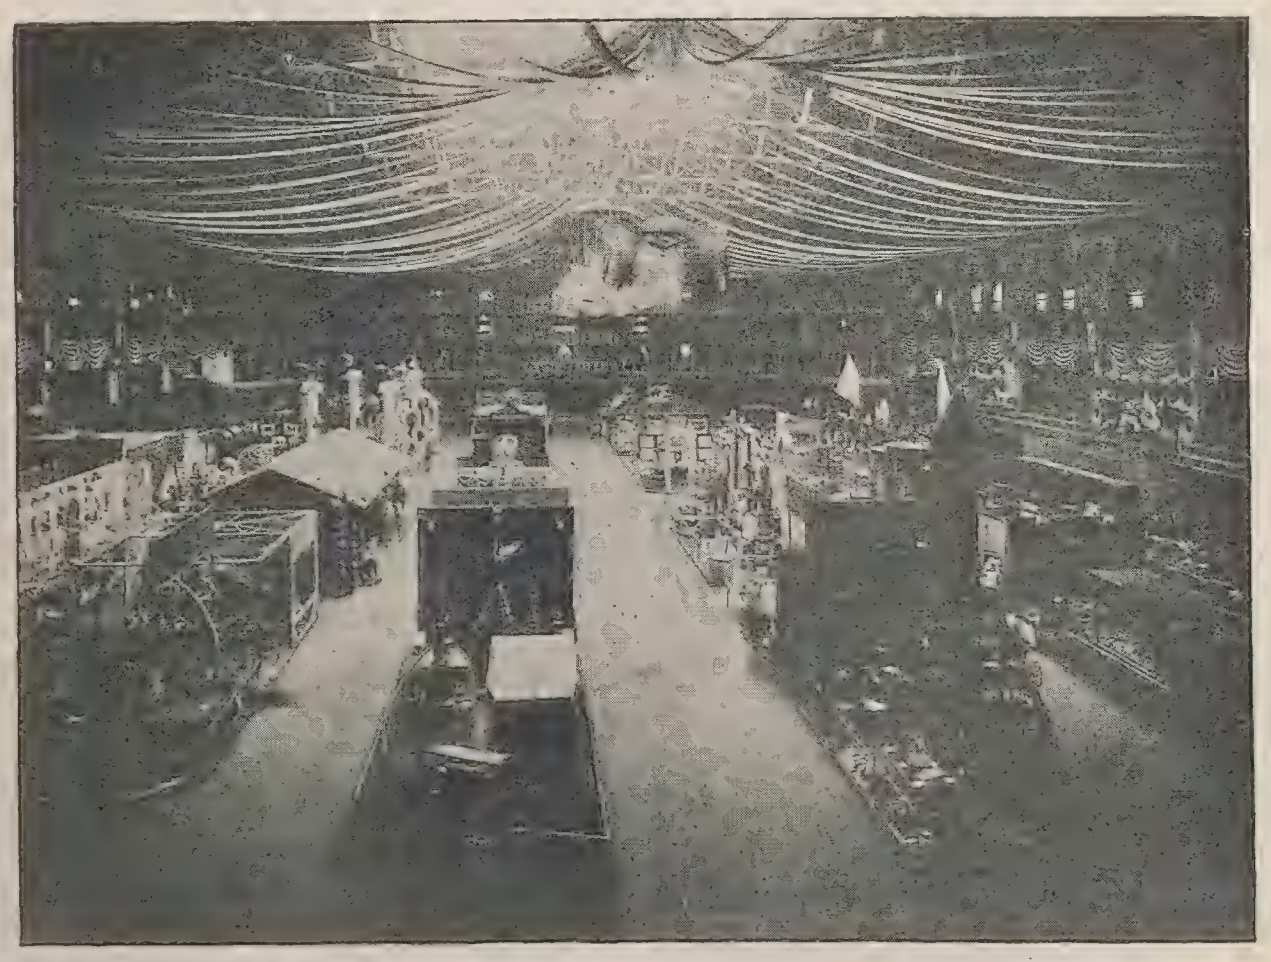
NATIVE HUNTING RECORDS—AN ILLUMINATED BUFFALO COW SKIN.
From Photograph by E. Bierstadt, New York.

In fact, we have here set down by a keen observer the notes of a long and adventurous life. The manuscript—a primitive diary or note-book—was given by its author to Joseph Kipp, of Montana, and by him in turn presented to its present owner.

Grouped about this primitive diary as a centerpiece were arranged the arms and implements of the Indian of the transition period. He has met the white man and now knows what metal is, and has obtained the horse. His implements are ornamented with beads and brass. Here were a parfleche, used for packing; a high peaked saddle, a drum for dance music or religious ceremony, medicine sacks, rattles for doctoring, a war shield, bows and iron-pointed arrows and a bow case and quiver of otter fur, highly ornamented: tanning implements edged with iron, pipes and fire-bags, and ornamented knife sheaths.

In a show case, under the upright wall on which the larger articles were displayed, were the smaller implements, chiefly of bone or stone; a Moqui earthenware water bottle, a basketwork bottle, gambling sticks from the Rocky Mountains and the Pacific coast, moccasins bright with beads or quills, a stone mask from Mr. Peck's collection, and many other interesting articles.

And here the story of the primitive hunter ends and merges into that of the old-time trapper, the last examples of which survived the building of the trans-continental railroads only a very few years.



At the top of the last panel were the weather-worn skulls of a bull and cow buffalo, the animal which, on the plains and among the mountains, furnished support to the early traveler, whether his skin was red or white. Here hung the trapper's buckskin clothing, beaded, fringed and trimmed with red cloth and fur, according to the taste of his dusky spouse. Below these were his arms, his powder and bullet pouch and their shoulder belt—all ornamented by his woman—and a series of guns running from the old Hudson's Bay flintlock fuke of the period of 1820 up through the crooked stock, muzzle-loading percussion rifle, the double-barrel pill rifle, loaned by Mr. Charles Fenton, of the Adirondacks, to the buffalo gun used in the early '70s. Each one of these arms—and, indeed, each article in this exhibit—has its history. Below is an old-fashioned T.-Gray axe, the earliest trade axe carried to the plains, and a Hudson Bay dagger of ancient type. The whole display was not only interesting historically, but highly decorative as well.

The color scheme of the illuminated cow skin presents a difficult task for the camera, and the FOREST AND STREAM was extremely fortunate in enlisting the co-operation of Mr. Edward Bierstadt, of No. 94 Reade street, this city, from whose admirable photograph of the subject the engraving was made.

The Diamond Hitch.

FOREST AND STREAM occupied a position of importance in the Exposition very well described by that ancient gentleman who said modestly, in regard to certain historic happenings, "*Pars quorum magna fui*," which being interpreted means, "I was right in it all the time myself." The FOREST AND STREAM exhibit was one of the *fin de siècle, de luxe*, A1, G in alt features of the show every minute of the day and night. Any one who had ever gone shooting or fishing or that sort of thing could only approve the FOREST AND STREAM display in every detail, and any one who had never gone could learn enough to make him want to go. The greatest of all sportsmen's papers showed itself, as usual, at the head of the line in all the possibilities of its field, and it offered some features never thought of by less experienced or slower-witted rivals. One of these features, and one which was a leading attraction for many at the Exposition, was the packing of a horse *à la* Rocky Mountains; as the hunters of the West are obliged to do in their travelings over the rough and untracked mountain ranges where the game is found.

The mountain packer can give the oldest sailorman cards and spades on knots, ties and splices. What he can not do with a rope is to be left undone. Years ago the Rocky Mountain packer invented a rope lashing which remains unparalleled to-day as a lead pipe cinch in fastenings. If the prisoner of Chillon had been tied out of doors with a diamond hitch, they wouldn't have needed any dungeon, for he couldn't have got away in a thousand years. Where an army mule could not get away from his pack under the diamond hitch, the prisoner of Chillon would have no show on earth.

A GENERAL VIEW.

There are few men who can "throw the diamond hitch," as this phrases itself in the mountains. Some men can never learn to do it. Any man who can do it has passed away and up and out of the realms of tenderfootdom, and to him the secrets of the mountains and the respect of the mountain men are open.

FOREST AND STREAM can throw the diamond hitch, and

it decided to show the public how it was done. Billy Hofer, the best known guide of the Rocky Mountains, was employed by FOREST AND STREAM as head packer, and a number of exhibitions of the diamond hitch were given each day and evening, much to the wonderment and pleasure of a great many observers.

It was in connection with the FOREST AND STREAM diamond hitch operations that one of the most exciting incidents of the Exposition occurred.

FOREST AND STREAM did not propose to give a realistic horse drama without a real live horse. A visit was made to several stables, a smallish, innocent-looking horse with a mild expression of face was secured as one of the actors in the diamond hitch drama. On the way over to the Garden it was observed that this horse showed no saddle marks, but did show certain range brands.

"If he would only buck a little!" said Billy Hofer.

For prudential reasons it was thought best to pack this horse in private for the first time. He was taken down stairs, and a select coterie witnessed the experiment. Billy made up the packs, settled them in place in the sling ropes, made some weird convolutions and intricacies of lash rope in the air, out of which a fine large diamond of rope, with each corner drawing even, appeared on top of the horse's back. The FOREST AND STREAM diamond hitch savant was on the other side. To him called out Billy, "Cinch!"

It was a cinch. Both packers inserted their heels in the horse's ribs and pulled back. At this the horse's face assumed a look of surprise and disapproval. With a loud grunt of pain he went up into the air and began a little Wild West circus of his own. The man who was holding his head got a drop on the tiling of the cellar floor, and a moment later the horse bucked himself over a slippery place and went down also. With a grieved look he got up and bucked no more. The diamond hitch remained placid and unmoved on his back.

"Oh, this horse is gentle," said Billy. "He's all right, but I wish we had a wilder one, so we could give the crowd a show."

The Crowd Got the Show.

It being now established that the FOREST AND STREAM horse was perfectly gentle, the drama was shifted to the main floor of the Exposition, and here Billy repeatedly packed the gentle horse for the multitude, all of whom thought they understood the diamond hitch, and not one of whom could have "thrown" it for $1,000. The horse apparently got rather proud of wearing diamonds, and became so peaceful that Billy began to pack him without blindfolding him.

Beware of innocence. All this time the FOREST AND STREAM horse was meditating how to get even with the men who put their heels in his ribs and hollered "Cinch!"

On Thursday afternoon Billy was packing the horse, as usual, before a goodly number of observers, and this time the offside assistant was a big Swede, a mountain packer who had just struck town with a carload of young elk for the Exposition. The FOREST AND STREAM horse pondered for a few moments and at length concluded he didn't like the smell of elk. Having entertained this thought, he revolved it in his mind.

It may be that the equine actor in the drama of the diamond hitch, who had begun in comedy and risen into melodrama, now aspired to be a tragedian. It looks that way, and came very near being that way. Before the packs were quite fastened by the lash ropes, the earnest young actor gave a shrill squeal, made a swift kick at the big Swede and then on the floor of the Exposition began a lovely fit of high-class bucking. He tore away from the holder, bucked everything about him into a panic and scattered the observers every way. He knew very well that the FOREST AND STREAM expected every horse to do his duty as an actor, and he did his turn with spirit. The old Irishman who tended door at the Fourth avenue entrance was away from his post. The horse saw a streak of light and made for it. The old Irishman got in the way and was thrown aside. The horse dashed through the narrow door, down the steep and narrow stone stairs to the street far below. He had his head down and was bucking like a fiend. In one of the busiest sections of the heart of great New York city he continued the enactment of the diamond hitch story as he understood it. Scattering the terrified people from side to side, he bucked across Fourth avenue and into a side street, opposite a little butcher shop. Here a narrow stairway, about 3ft. wide, steep and deep, led to a cuddy-hole of a cellar. The horse, now wild and blind with anger, pitched down this narrow way, carrying on top of him the outside cellar door and the slab of stone to which it was hinged. He broke through the lower door, stuck one leg through the stairs behind him, and one through a barrel of eggs in front of him, and lay there breathing hard, as actors do after a long emotional scene. And the diamond hitch was nestling calmly and cosily on his back.

The owner of the butcher shop was deceived by the earnestness of the show. He said he would have damages before the horse could be removed from his cellar. Billy told him it looked as if the horse would have to be blasted loose before he could be got out anyhow, so the butcher had better keep the horse. Butcher relented then, and Billy got a rope and fished out the horse's legs one by one, and by some sort of mountain magic coaxed him out of the eggs and up the slide rock of the ruined stairs. Meantime the old door-tender had been taken home, groaning that he had been killed entirely, though he wasn't, but only scared entirely. The list of other victims is not yet all in, but things are cheerful at this writing, though it will be impossible to restore the barrel of eggs to its original integrity.

It is absolutely certain that the man who went to the Exposition got the worth of his money, and will get it at the next Exposition in '96. FOREST AND STREAM at that time may have something new, but then, as now, it will give a good realistic show, and it will engage only the best of talent.

The Lefever Arms Co.

If it may be permitted to say so, the best thing about the elegant Lefever exhibit was "Uncle Dan" Lefever himself, a man who has grown gray in the business of gun making, and who has seen the trade in America from its infancy up. Uncle Dan was making good guns when most of the present youngsters of the trade were trying to bite their toes, and from all appearances he will continue making good guns, better guns, after a good many of them have bitten the dust.

"So this is FOREST AND STREAM?" said Mr. Lefever. "I have paid that paper many and many a thousand dollars for advertising in my time. I can't say I'm sorry for that, though, for the paper has much more than paid it back to me. Yes, I think this paper and our guns both get better every year."

About a dozen of these guns were shown, one a sectional and one "in the bright," the better to show the methods of construction and ornamentation. The ejector mechanism of the guns shown elicited the approbation of the groups of shooters always to be seen here. Of the collection of Lefevers displayed in the cases of the booth three showed the new "snake" grip, or straight hand, and one had a Monte Carlo stock. The whole exhibit of goods was rich and perfect.

The American E. C. Powder.

Certain pretty bell glasses, filled with a compound which looked good enough to eat with cream, indicated the exhibit of the E. C. smokeless powder. This was under charge of the W. Fred Quimby Co., selling agents for the powder. The factory (managed by Capt. A. W. Money and Mr. Noel Money) is at Oakland, N. J., a very good factory, too, and one which turns out great quantities of this popular gun food. The display also showed a glass or two of brownish-gray powder, the smokeless .22cal. and the smokeless revolver brands of the E. C. These are not so pretty as the roan-colored E. C., but they are described as well adapted to their purposes. Indeed, the E. C. is even manufactured with special reference to the climatic conditions of America, and is not injured by any of our prevalent weather conditions. That its manufacturers have succeeded in their efforts to give American shooters a powder correct for their needs is attested by the many placards displayed recording the many important winnings at the trap made by E. C. It is well made and confidently put forth, and the shooting world knows the results.

The Marlin Fire Arms Company

exhibited rifles of all the models turned out by this company. A number of very handsome revolvers of Marlin manufacture are also shown, as well as the Rust Repeller, sights, etc. Among the rifles are a number of elaborately engraved guns and guns in all styles of plating and finish. Sycamore and birds-eye maple are used in some cases instead of walnut for butts and forearms. Two rifles used by Annie Oakley on her last European trip form part of the exhibit.

An interesting feature is the new .25-36 model of '93 rifle, which has just been perfected. This gun is now ready in all styles. The ammunition is made by the U. M. C. Co. The bullet used in the factory ammunition will weigh 105gr. and will be nickel coated. This latter feature is made necessary by the quick twist and heavy powder charge. The gun will have a very flat trajectory and has proved extremely accurate. Of course there will be abundant opportunity for rifle cranks to experiment with bullets of varying weights, etc., and special reloading tools will be adapted for their needs.

The Syracuse Arms Co.,

for which Messrs. Herman Boker & Co. are agents, was represented by a good selection of the four grades of guns which the company now have upon the market. The exhibit was in charge of Mr. George Mosher, who was kept on the jump explaining the merits of the mechanism of the guns to interested sportsmen. Mr. Mosher says the gun has fewer parts than any other hammerless, and that as there is not a screw in the lock to jar loose, the gun is particularly adapted to stand the strain of nitro powder. This feature also makes the gun very easy to dismount and assemble, which operation may be performed without other tools than a screw driver.

In the exhibit were several very handsomely engraved guns, the work of the company's expert, Mr. Glahn, who is an artist in his special line.

The exhibit also included a number of feather-weight guns, which this company has especial facilities for producing.

Smith & Wesson.

The exhibit of Smith & Wesson was displayed in the handsome oak case which was made for the World's Fair; and consisted of a full line of the arms manufactured by this firm. There were tiny pistols of the finest workmanship, pistols long and short, slender and thick, yet all were built on the symmetrical lines so well known of the S. & W. pistols. The finish of the pistols was the perfection of skill. Handles in silver, pearl and other material added to the exhibit materially. Included in the exhibit are a number of revolvers decorated by Tiffany & Co., and the Gorham Manufacturing Company. One particular feature is a Russian model .44cal. revolver elaborately engraved in bas-relief, the background inlaid with gold. This is the same model of arm with which William Petty won the Winans trophy. The goods manufactured by this firm are all of the first quality and the parts are strictly interchangeable. It is their constant study to keep their arms up to the highest standard of perfection. Their works are situated at Springfield, Mass., and the capacity is 8,000 revolvers per month.

The Layman Patent Pneumatic Boat,

manufactured by A. G. Spalding & Bros., was shown under conditions approximating actual service in a tank 16ft. by 8ft. in size and about 5ft. deep.

The exhibit was in charge of Mr. H. S. Welles. The tank was filled with genuine water, and was at all times a center of attraction for large numbers of spectators, who watched the maneuvering of the buoyant rubber boats. Three different styles of boats, including two sizes of each, were shown.

Mr. Welles reports that a great number of these boats have been sold, including one for President Cleveland, which measured 36×51in. in girth.

The Anker Bouillon Capsule Co.

had a stand tastefully decorated in pink and white, near the west side of the Garden. This stand was presided over by Mrs. M. A. Carley and Miss O'Brien, who served bouillon in dainty cups to visitors.

The process of making the bouillon is very simple. Each capsule contains all the necessary ingredients properly seasoned to make one cup of bouillon.

A cup is filled with boiling water and a capsule dropped in and stirred till it dissolves, which only takes a second, and the drink is ready.

These capsules should prove especially valuable for sportsmen who wish to carry concentrated food of high nourishing power. The ease of preparation will also recommend them to campers-out.

St. Lawrence River Co.

Considering the importance of yachts, boats and canoes as auxiliaries of outdoor sport, the exhibit was small, and might be greatly improved in the future. The only complete display of boats was that made by the St. Lawrence Skiff, Canoe and Steam Launch Co. (A. G. Spalding & Bros.). One portion of this exhibit was one of the most popular features of the entire show, a large tank nearly filled with water, in which was a Layman pneumatic boat, with a small colored boy aboard. At almost all times the sides of the tank were crowded with interested spectators who watched the crew of the novel craft as he sculled about with his feet and distributed circulars from side to side. The boat was exhibited in its various forms, both inflated as in use and deflated and packed compactly in a knapsack.

The regular boat exhibit of the firm included a very handsome St. Lawrence River skiff, fitted for sailing, with Radix board and canoe sail. Another similar skiff was fitted with a sprit sail. The general use of these noted boats in other waters than the St. Lawrence and for different purposes has led the firm to make some changes in the original skiff model, and the present boats are decidedly deeper and abler than those of a few years since and very much better for salt water and all-around boating and sailing. There is shown a very fine boat of this class, specially intended for salt, or rather for open water, as about New York and the Sound. The characteristics of the St. Lawrence skiff are retained, but the added depth and beam make the boat much safer and more seaworthy. There is in the exhibit a very good specimen of the stock square-sterned boat, for rowing and fishing; a hunting skiff, a small and handy double end skiff of 13ft., and an open Canadian canoe, all well finished. The company has this year a new model of yacht tender, 9 by 4ft., a special design, which promises to prove a success. The model is full and round, but fair, with good carrying capacity. The sides are high amidship and there is practically no sheer, in order that the boat may stow snugly on deck when turned keel up. The workmanship and finish on all the boats in the exhibit are very good.

U. S. Net and Twine Co.

Mr. George Paddock exhibited a full line of the above named company's specialties, including fine quality tackle, reels and rods bearing the "Kosmic" stamp. Artificial baits, gut, etc., manufactured by S. Allcock & Co., of Redditch, England, were also shown.

The stand was tastefully decorated, and the rods and other tackle shown to perfection against a background of pink minnow net overlying a darker color scheme.

The American Smokeless Powder Company

had a very complete exhibit of their powders for shot guns and rifles. The powders were put up in neat white enameled cans, stamped on one side with the loading directions, and on the other with a large "W. A." W. A. stands for Whistler-Aspinwall, the names of the patentees of the powder, which is hard grained and an improvement on the original Leonard Ruby. The company's chemists are now adapting a smokeless rifle powder for one of the large cartridge companies that will load bulk for bulk with black powder. They received an order May 15, for several thousand pounds of .30 cal. rifle powder for the Government.

Gas Engine and Power Co.

The exhibit of the Gas Engine and Power Co. occupied a prominent space facing the main entrance, where it attracted much attention. The firm was represented by two very handsomely finished boats, one of 25 and one of 23ft., besides a small model of a cabin naphtha launch. The larger launch was fitted with a canopy top, the hull being painted, with oak wash streak and bright decks. The smaller, an open launch, was built throughout of mahogany and all varnished. Both boats were of good model and excellent workmanship. The miniature model was very neatly made and showed a type of launch which has become very popular.

E. & H. T. Anthony & Co.

had on exhibition an elaborate assortment of hand and view cameras and apparatus for the use of both amateur and professional photographers. Their cameras ran the gamut of size from the tiny Kombi to a 14×17 instrument. A feature of the exhibit was the electric light apparatus for photographic studies. This apparatus is designed to insure perfect results, no matter what the weather conditions may be, and practically makes the photographer independent of daylight.

Hulbert Bros. & Co.

had a comprehensive exhibit of sporting and athletic goods, including Majestic bicycles, photographic outfits, fishing tackle and a full line of the Hopkins & Allen Manufacturing Co.'s revolvers, shotguns and rifles. This exhibit occupied four spaces near the east end of the Garden. At the rear was an open Adirondack camp built of red cedar logs and comfortably fitted out with every convenience a sportsman could desire. On a rustic cot in the corner was one of the Kenwood sleeping bags for which this company is agent. This is said to be the lightest and most easily carried sleeping bag made. It is made of heavy blanket material woven bag shape, closely felted and has a soft nap inside. It is cut down the front, and provided with special fasteners, provisions which enable the camper out to completely envelope himself and defy the coldest zero weather.

The Burgess Gun.

This exhibit was in charge of Mr. C. A. Damon. It included a general exhibit of the various grades of sporting shotguns, as well as the new folding police gun. A very beautiful and finely engraved gun listed at $300 was a feature of the exhibit. This gun had a fluid steel barrel.

A number of the new trap guns were also exhibited. These guns differ from the standard gun in having a

finely matted rib which is matted by hand in a kind of frost-work pattern, and not machine milled.

Several other improvements may be noted, notably the unlocking device, which in all the latest models is placed inside the finger guard, instead of in front, and the wooden pistol grip which supersedes the original hard rubber grip.

The folding police gun attracts a great deal of attention, and visitors watch with unconcealed amazement the lightning-like rapidity with which Mr. Damon whisks it out from under his coat and pumps half a dozen dummy shells through the action. As the gun only measures 20in. folded it is easily concealed when carried in its holster under an ordinary length coat.

The Tatham Shot Tower.

The first object seen, when entering the Garden, was the model shot tower erected by Messrs. Tatham & Bros. Provision was made for showing the complete process of manufacturing shot, from the molten metal to the perfected pellets. From the top of the tower the melted lead dropped into a tank of water at the foot, whence it was carried up into the polishing cylinder, thence through various stages until it came out in the familiar Tatham shot bags. There was always an interested gathering about the tower, and the exhibit proved one of the most instructive shown.

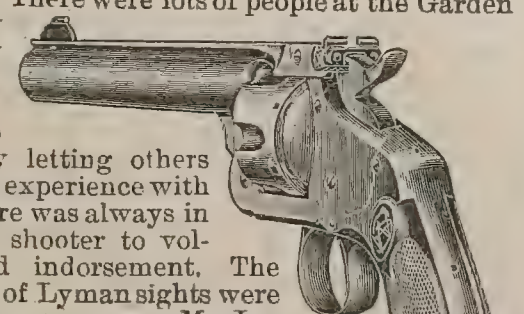
Horton Manufacturing Co.

In fishing rods, the Horton Manufacturing Company exhibited their famous "Bristol" steel fishing rods in various lengths, and of two kinds, bass and fly-rods. During the week these rods have been closely scrutinized and have made many friends. Their lightness is remarkable, while the small space occupied by a complete rod when telescoped is also worth noting. For example: The bass rod, 10ft. in length, weighs but 10oz.; when telescoped it is only 37in. in length. In this rod the line runs through the center of the rod. The 10ft. fly-rod weighs 9½oz., is jointed and has standing guides, together with a three-ring tip. The 9½ft. fly-rod weighs 1½oz. less, and is a very pretty specimen indeed.

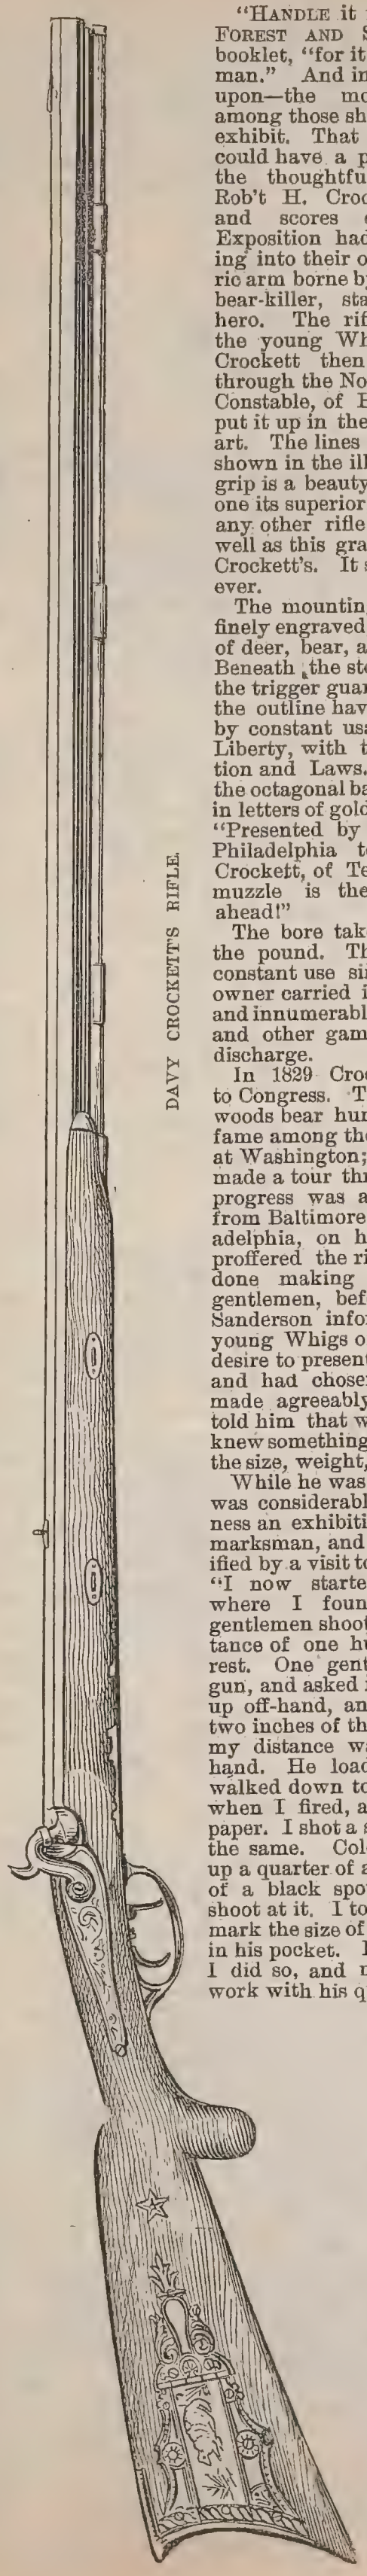
Cushman & Denison.

Cushman & Denison, of New York city, placed on exhibition their pocket oilers. The exhibit consisted of the case which won the medal at the World's Fair in 1893, and was in charge of Mr. Jos. W. Cushman, with his assistants, Robert G. Grunert and Arthur Spiller. The "Perfect" Pocket Oiler is a remarkably useful oiler. It is made of only the best quality of metal, it regulates the supply of oil to a nicety and doesn't spill a drop. This oiler consists of a tube for holding the oil, fitted at the top with a patent tip, which can be unscrewed to refill the oiler. This tip prevents leakage, but additional protection is provided by a cap which fits over it, and prevents the tip from being bent or getting filled with dirt when carried in the pocket. The tip throws only a few drops at a time, preventing all spilling or waste of oil. In shape and finish, it is as neat and convenient as possible.

The Hazard Powder Co.



A very neat and tasty little corner of the show was the display of the Hazard Powder Co., where drums, canisters, cans and cannikins enough were shown to blow Madison Garden into the sweet by and by if they had all been loaded. Back of the display an electric sign said "Hazard," and below this sign a number of little powder cans spelled out "Hazard Smokeless." It may not generally be known but is none the less a fact, the Hazard Powder Co. has on the market—or will have as soon as it can get a shipment of the goods—still another American nitro powder. Of the old and reliable Hazard black powder of all sorts the public has long known, and to many visitors these seemed like old friends.



Chamberlin Cartridge and Target Co.

This exhibit was on the left of the main aisle as one entered from Madison avenue, and fortunate in a good locality and cheerful light. Here Paul North dispensed information, bluerocks, programmes, the latter descriptive of the second annual tournament which will be held at Cleveland, June 19 to 21, $1,200 in cash being added. The goods displayed in this exhibit were of course limited in range, consisting of targets (decorated uniquely and fetchingly with portraits of shooters), together with the traps to throw them, from the regulation battery up to the expert trap capable of a geometrical progression of curves, inshoots and angles. North's electric trap pull was of course in evidence. In fact, nothing lacked except shooters to start a tournament, and one half looked for the call "All ready, No. 1 squad!" One hardly needs attempt description of goods so well known, but the display of the goods deserves highly creditable mention. The design of the booth (in black and yellow—the trade color of the bluerock target) being by a professional decorator. The bands of yellow and black were very striking in effect, and the chief object of such an exhibit—to strike and compel the eye of a sated sight-seer—was obviously and handsomely accomplished. Very well might the visiting shooter obey the legend displayed on each face of the exhibit, "Shoot bluerocks."

William Lyman.

It is easier to see through a Lyman sight than through William Lyman. There were lots of people at the Garden who thought they could do both. By the first night Mr. Lyman was hoarse. And after that he spelled himself by letting others tell of their actual experience with the sights, and there was always in the throng a rifle shooter to volunteer praise and indorsement. The well known makes of Lyman sights were shown, and some new ones. Mr. Lyman has lately perfected a rear revolver sight, which, in connection with his front revolver sight allows of very quick and accurate aim of a Smith & Wesson. The cut gives a good idea of how it appears. One advantage of these sights over any other revolver sights is that good shooting can be done in all kinds of weather and light.

DAVY CROCKETT'S RIFLE.

Davy Crockett's Rifle.

"HANDLE it reverently," said the FOREST AND STREAM'S Exposition booklet, "for it is a relic of a great man." And indeed so was it looked upon—the most interesting arm among those shown in this journal's exhibit. That Davy Crockett's rifle could have a place here was due to the thoughtful courtesy of Col. Rob't H. Crockett, of Arkansas; and scores of visitors to the Exposition had the privilege of taking into their own hands the historic arm borne by the famous pioneer, bear-killer, statesman, patriot and hero. The rifle was presented by the young Whigs of Philadelphia, Crockett then being on a tour through the North. The maker was Constable, of Holyland, N. Y., who put it up in the highest style of the art. The lines of the gun are well shown in the illustration. The pistol grip is a beauty; we have never seen one its superior, nor did we ever hold any other rifle that "came up" so well as this grand old arm of Davy Crockett's. It shoots as well now as ever.

The mountings are of coin silver, finely engraved, with representations of deer, bear, alligator and raccoon. Beneath the stock, just in front of the trigger guard, is, or was—all but the outline having been worn away by constant usage—the Goddess of Liberty, with the words "Constitution and Laws." Upon the top of the octagonal barrel is the inscription in letters of gold sunk into the barrel: "Presented by the Young Men of Philadelphia to the Hon. David Crockett, of Tenn." And near the muzzle is the famous rule, "Go ahead!"

The bore takes thirty-two balls to the pound. The gun has been in constant use since first the original owner carried it back to Tennessee, and innumerable deer, bears, turkeys and other game have fallen at its discharge.

In 1829 Crockett was re-elected to Congress. The honest old "backwoods bear hunter" had won great fame among the Whigs by his course at Washington; and when in 1834 he made a tour through the North, his progress was a continued ovation from Baltimore to Boston. In Philadelphia, on his first visit, he was proffered the rifle: "I was hardly done making my bow to those gentlemen, before Mr. James M. Sanderson informed me that the young Whigs of Philadelphia had a desire to present me with a fine rifle, and had chosen him to have her made agreeably to my wishes. I told him that was an article that I knew something about, and gave him the size, weight, etc."

While he was in New York, there was considerable curiosity to witness an exhibition of his skill as a marksman, and this desire he gratified by a visit to a Jersey City range. "I now started to Jersey City, where I found a great many gentlemen shooting rifles, at the distance of one hundred yards with a rest. One gentleman gave me his gun, and asked me to shoot. I raised up off-hand, and cut within about two inches of the center. I told him my distance was forty yards, off-hand. He loaded his gun, and we walked down to within forty yards when I fired, and was deep in the paper. I shot a second time, and did the same. Colonel Mapes then put up a quarter of a dollar in the middle of a black spot, and asked me to shoot at it. I told him he had better mark the size of it and put his money in his pocket. He said, 'fire away.' I did so, and made sleight-of-hand work with his quarter."

Returning to Philadelphia upon the adjournment of Congress, he found the rifle ready: "Next morning I was informed that the rifle gun which was to be presented to me by the young men of Philadelphia was finished, and would be delivered that evening; and that a committee had been appointed to wait on me and conduct me to where I was to receive it. So, accordingly, in the evening the committee came, and I walked with them to a room nearly fornent the old state house; it was crowded full, and there was a table in the center, with the gun, a tomahawk, and butcher knife, both of fine razor metal, with all the accoutrements necessary to the gun—the most beautiful I ever saw or anybody else; and I am now happy to add as good as they are handsome. My friend, John M. Sanderson, Esq., who had the whole management of getting her made, was present, and delivered the gun into my hands. Upon receiving her I addressed the company as follows: 'Gentlemen: I receive this rifle from the young men of Philadelphia as a testimony of friendship, which I hope never to live to forget. This is a favorite article with me, and would have been my choice above all presents that could have been selected. I love a good gun, for it makes a man independent, and prepared either for war or peace.

"'This rifle does honor to the gentleman that made it. I must say, long as I have been accustomed to handle a gun, I have never seen anything that could near a comparison to her in beauty. I cannot think that ever such a rifle was made, either in this or any other country; and how, gentlemen, to express my gratitude to you for your splendid present, I am at a loss. This much, however, I will say, that myself and my sons will not forget you while we use this token of your kindness for our amusement. If it should become necessary to use her in defence of the liberty of our country, in my time, I will do as I have done before; and if the struggle should come when I am buried in the dust, I will leave her in the hands of some who will honor your present, in company with your sons, in standing for your country's rights.

"'Accept my sincere thanks, therefore, gentlemen, for your valuable present—one which I will keep as a testimony of your friendship so long as I am in existence.'

"I then received the gun and accoutrements, and returned to the hotel, where I made an agreement with Mr. Sanderson and Col. Pulaski to go with them the next day to the Jersey shore, at Camden, and try my gun.

"Next morning we went out. I had been out of practice, so that I could not give her a fair trial. I shot tolerably well, and was satisfied that when we became better acquainted the fault would be mine if the varmints did not suffer."

Returning home with his gun he was greeted by many friends, who gathered around to inspect the arm. "A large fellow stepped up and asked me why all the members did not get such guns given them. I told him I got that gun for being honest, in supporting my country, instead of bowing down and worshiping an idol. He looked at me and said, that was very strong. 'No stronger than true, my friend,' said I.

"In the course of a few days I determined to try my new gun upon the living subject. I started for a hunt, and shortly came across a fine buck. He fell at the distance of 130 steps! Not a bad shot, you will say. I say, not a bad gun either. After a little practice with her, she came up to the prime, and I determined to try her at the first shooting match for beef."

This is all that Crockett has told us about the rifle. In the latter pages of the Autobiography there are references to "Betsy," but this was his flint-lock, which he took to Texas, leaving the Philadelphia rifle with his elder son, John W. Crockett, from whom it has descended to the present owner.

"The Only Lady Sharpshooters."

"I have been doing exhibition shooting now for nine years," said Miss May Clinton, senior member of the lady rifle team, "Cooke & Clinton," who did the cleverest turn on the stage of amusements at the Exposition, "nine years of hard work. My partner, Polly, here—Miss Pauline Cooke—has only been shooting five years. I found her in a burlesque troupe and we have been working together since then. I was always fond of shooting, and at sixteen years of age I was a good field shot, and I love to go out for a bit of field shooting whenever I can, though that doesn't come very often. We have to work pretty hard, and for forty weeks out of the year are practically at work every day of the time. Polly doesn't care so much for field shooting as I do, but she will in time, I know, though now she does nothing but rifle. I think we could both become good shots with the shotgun, and though I have never much fancied match shooting, I never refuse to shoot a race with any local man who wishes it. Of course, I win some of these—I don't know that I should boast, but you know, I like to shoot and have been handling arms a long time.

"I have traveled all over the country in my business, though now we rarely go further West than St. Louis. I have been all over Texas and the South with good companies. About as hard a time as I ever had was away down in the City of Mexico. I was with a circus company and we gave two performances each day with a parade, and on 'feast days' we showed three times. I was taken sick one day, and while I was doing my act I went dizzy, so I fell over against the center pole. I couldn't see for a while, but pulled myself together and finished. Then I went home and went to bed. What did I have? Oh, nothing, only smallpox! Yes, I got out of it well, without being marked by it. I shall always remember the kindness of the natives to me, and I could fairly love the American mining men and engineers who came and took care of me when I was sick. I was in bed twenty-three days.

"In Mexico I used to see lots of bull fights, but I don't like them. You know, the matador doesn't dare kill the bull until the bull makes a break for him. That is why he waves his cloak, to start the bull. Then he stabs it. He ought to cut the spinal cord at the base of the neck, but sometimes he misses, and the sword runs away in and the bull runs away—oh, it looks awful! You know, the pictures show the bull fighter with a sword with a straight handle, like any other sword; but that is wrong. The handle of the matador's sword is put on crosswise, like a gimlet handle. This gives him a better thrust."

"I'm going to Mexico some day," said Polly, the junior member; "but I don't know just when, maybe never, we have to work so hard. We're going to take up pistol shooting to add to our act, before long, and I expect we will have to study hard on that for a while. It isn't easy to do acts. Oh, it's easy enough to learn the shooting of new tricks, if you know how to shoot, you know; but it's hard to have to keep on working all the time. If we could change off and go out hunting once in while, in our jackets and leggings and caps, as we dress on the stage, I would like that, I think."

These two young women do some very clever trick and exhibition shooting with the .22cal. rifle, their rapid-fire

work on the musical bars being especially good. They empty the magazine in very swift fashion, with hardly the least wavering of the muzzle of the rifle. Miss Clinton shot a souvenir target for FOREST AND STREAM at the close of one of their performances, and at 25ft. eleven of the fifteen shots were in the one-inch black, the other four just out. The firing was about as fast as one would snap his fingers. Two very painstaking and hard-working young people these seemed to be, and between acts they went around and enjoyed the Exposition much as anybody. In their work they use open sights, three of their guns being Winchesters and one a Stevens.

The Natchaug Silk Co.

The Natchaug Silk Co. deserved a better showing than it had at the Exposition. In fact, the tackle trade was not so well represented as it should have been in any respect. Of the Natchaug lines only four varieties were shown, these among others in a general display. Rods, lines, flies and material for angling could well have been displayed in greater abundance.

E. H. Gerrish,

the canvas canoe builder, had a very handsome specimen of his handiwork on exhibition. With this beautiful model for an object lesson, it is no wonder the Indian birch has been superseded.

Notes of Some Other Exhibits.

The Obrig Camera Co. made an elaborate exhibit of the art which is such an important adjunct to outdoor life, and to the sportsman in particular, the art which brings past acts and situations to the eye of the present, as the pen brings them to the memory. Mr. A. C. Wilmerding, the well-known dog fancier, a member of the firm, was affably in evidence in connection with the firm's complete display of photographic goods.

The Heublein Brothers made an exhibit of medicine of universal purport, which they claim was discovered during the Revolutionary war, and which, they also claim, was very popular with the noble, stern people of that day, and has been to the present time. They claim also that their medicine does much to solace the discouraged, cheer the unfortunate and make life brighter.

Messrs. George Barnard & Co., of Chicago, whose hunting clothing and equipments for athletic, outing, gymnasium and sportsmen's use have found favor and approval with sportsmen these many years, had a neat exhibit in connection with that of Messrs. A. G. Spalding & Co. The different costumes used in athletic outdoor sports were realistically displayed on figures of men and women engaged in the sport of which each costume was an index. As to the quality and appropriateness of the costumes, the unbroken success of the firm and the wide patronage which it enjoys are testimonials of their value far above the force of mere words.

The group of guides from the South and West added much to the interest in the artistic exhibit of the United States Cartridge Company. The exhibit consisted of a log cabin, with a wide and cheerful fireplace, which depicted life in the wilderness with a fidelity which won unlimited praise. Of the guides, Ira Dodge was dressed in the full panoply of a Western hunter—buckskin, much fringe and a six-shooter; also boots and a hat. Mr. Dodge is the only man living who has been largely eaten by a bear and grown into usefulness again. He killed the bear after one of the most desperate battles ever related. Then there were Mr. J. W. Schultz and Mr. White, also of Montana, famous as guides and mighty hunters; and from Maine were the equally famous guides, Messrs. Jock Darling and Joe Francis.

In the FOREST AND STREAM exhibit a mounted deer's head, "The Challenge," by Carl E. Akeley, of Milwaukee, was the most admired American game piece in the Exposition; a muskalonge head by the Daniels Antiseptic Co., of Chicago, would have excited the envy of the "Kingfishers;" and the big bear foot sent by Mr. Bobo to Mr. Hough, lent truth to the the tales of the "Sunny South."

Horse Show at Wissahickon Heights. Special Excursion Tickets via Pennsylvania Railroad.

THE fourth annual open-air exhibition of the Philadelphia Horse Show will be held on St. Martin's Green, at Wissahickon Heights Station, Philadelphia, May 28 to June 1, inclusive.

The announcement of an exhibition under the auspices of this organization, which is composed of leading citizens of Philadelphia, is an assurance of perfection in everything appertaining to an entertainment of this character, as all visitors to the exhibitions in former years will attest.

The prize list is liberal, and representatives of the best society of Philadelphia, New York, Baltimore, Washington, and other Eastern cities will enter their horses and equipages in the competition for the premiums.

The grounds, which are located immediately on the Germantown and Chestnut Hill branch of the Pennsylvania Railroad, eleven miles from Broad Street Station, are ample for all purposes of the show, and the accommodations for visitors are complete.

The Pennsylvania Railroad Company will sell special excursion tickets from Philadelphia, New York, and principal intermediate stations to Wissahickon Heights Station, including coupon of admission, at reduced rates.

Tickets will be sold May 27 to June 1, good for return until June 3, inclusive.—*Adv.*

26. California annual regatta, San Francisco Bay.
26. Williamsburg opening sail, Sound.
30. Atlantic opening race, New York Bay.
30. Harlem annual, Sound.
30. Brooklyn opening, Gravesend Bay.
30. Audubon annual, Hudson River.
30. Cor., San Francisco race, San Francisco Bay.
30. San Francisco cruise San Francisco Bay.
30. New Jersey annual, Hoboken, New York Bay.
30. Fall River open, Fall River, Mount Hope Bay.
30. South Boston open, South Boston, Boston Harbor.
30. Plymouth opening, Plymouth.
30. Southwork annual, Philadelphia, Delaware River.
30. Cleveland squad sail, Lake Erie.

THE editorial which we reprint from the Boston *Advertiser* goes direct to the heart of a very important matter, one that directly concerns the future prosperity of yacht racing. What the *Advertiser* says is perfectly true, and by no means exhausts the subject. Assuming that the new Cup defender is successful, will she lead to renewed interest in yacht racing as a popular sport, or to the building of more and better yachts; or, on the other hand, will she not discourage, through the unwarranted expense, the individual ownership and the general use of racing yachts. It is hardly likely that she will lead the way to any practicable improvement in construction, and she certainly will not induce any one or more yachtsmen to build to beat her. She may and probably will save the Cup, but at a very serious cost to American yachting.

Southern Y. C.

LAKE PONTCHARTRAIN—NEW ORLEANS, LA.

THE Southern Y. C. held its forty-sixth annual regatta, on May 11, over the club's regular course—a 5-mile triangle, three times around, 15 miles in all. When there is a regatta to be sailed on Lake Pontchartrain there is, as it seems, either too much wind or not enough, never a happy medium such as one dreams about. The annual regatta of last year was held on a stormy day, the Sully cup race for schooners was fought out in a gale of wind and last Saturday's event has, likewise, its memorable feature.

The race started at 1 P. M. in a very light air, the first leg of the course being a beat right down into a very ominous black squall that was rapidly making in the northeast, and it was a question whether the leading boats or the squall would get to the mark buoy first. The race could be won on that first leg, as the fellows that could reach the mark and round it before the storm broke were going to have considerable advantage, so every nerve was strained and every inch of canvas carried until the minute before the squall struck the fleet. Then there was a dousing of canvas on the laggards and the majority of the fleet came to anchor in various stages of confusion. In just one minute it was blowing forty miles an hour and in less than two minutes a sea was kicked up that rolled the little ones bowsprit under. Three of the yachts had succeeded in weathering the stake and had squared away for the eastward mark before the wind increased. The famous open sloop Mephisto, Vice-Com. Brewster, had walked through and weathered the whole fleet, and after rounding the stakeboat she started down the course before the storm, with jib alone, like a scared deer. J. Walton Glenny's new and unnamed cabin sloop, with jib alone, and Peter Labouisse's big cabin sloop Montauk, with jib and scandalized mainsail, followed. After rounding the eastward stake, Mephisto took in her large jib and set a jib from the mast for the reach to the home stake. In the meantime the wind was moderating and the boats at anchor were reefing and getting under way. By the time the first round was completed, the wind had gone down to a stiff lower sail breeze, and found the various classes well dispersed and humming along in the form of a procession long drawn out and not very interesting as a race. The guests of the club had been well repaid, however, for their visit in seeing some excellent seamanship during the fierce blow, there being no accidents or capsizes during the half hour it lasted. The new Glenny boat, her maiden race, sailed well and looked better and is undoubtedly fast. She is said to be built on the lines of Madrine, the fast Northern sloop. Another new sloop, Naiade, G. B. Penrose, also won her maiden race, and with the before-mentioned sloop and the little 18ft. fin-keel Trilby was the center of attraction. Although not sailing a winning race, Trilby demonstrated the fact that she is a great little vessel and could not be capsized. She was as hard on the mouth as a yoke of untamed Texas steers; her helmsman could not hold her, so it is evident her sail plan needs attention, or perhaps it is that dark secret of the fin-keel that is said to be not yet understood. She hammered along through the water and her crew of three say any other boat of her inches would have been wrecked and lost half a dozen times. At one time, if not most of the time, she was nearly on her beam ends, with her sails almost in the water, and, although she would not luff, she eventually bobbed up nobly.

The following boats were awarded the (cash) prizes in their various classes: Class 1, cabin sloops, Montauk; class 2, Florence; class 3, Glenny's Entry; open sloops, class 5, Naiade; class 6, Nyanza; class 7, Alice; class 9, catboats, Honorine; class 10, motors, Idylle. L. D. S.

"Unsportsmanlike."

From the Boston Advertiser, May 9.

So much is being heard just now about the costly construction of the Bristol boat, Defender, that the average reader of yachting news might be well excused if he drew the inference that the greater the cost of a cup defender the more reason there is for pride on the part of the American people. Correspondent after correspondent has gone into ecstacies over the calculations which prove that so many tons of aluminum at $1,600 a ton must be used in the construction of the cup defender. The statement that "money is no object," as a motto of the cup-defender syndicate, has been repeated more than once in the past two weeks, and it seems true enough, for although the cost of aluminum has been much reduced within recent years, the metal still costs between 75 and 85 cents per lb.

Altogether, it is calculated by the gleeful champions of the syndicate that the actual cost of putting the defender in a position to race for the America's cup, will be certainly above $150,000, and possibly as much as $200,000. Of course, from certain points of view it is nobody's business what kind of a boat the New York syndicate has decided to build. Yet the friends of true sport in this country have a proper interest in this matter, inasmuch as it concerns not only the affairs of the gentlemen connected with the syndicate, but also the interest of amateur sport in the United States. Two years ago, when the trial races for the America's cup defence were held, four new boats competed. This year but one new yacht will take part, although the Boston boat, Jubilee, will probably be remodeled in time to enter the trial races. Still, it is tacitly admitted among American yachtsmen that the task of defending the America's cup properly has grown so expensive that only a millionaire can afford to undertake it by putting a new boat into the field.

Surely, this is not a pleasant condition to contemplate. It was hoped that the contest for the America's cup would bring into play the best talent obtainable in yacht designing and yacht building; but as matters now stand, it is practically certain that some worthy gentlemen, whose names can be predicted beforehand, will give the designer, whose name may also be announced confidentially in advance, an order for a single vessel of such and such a length. So far as the main body of American yachtsmen are concerned, they have no personal part in the matter, and are merely privileged to look on at the races which the eminent and respectable millionaires have decided to hold.

Unless the signs of the present time are at fault, men of the style who formerly upheld the yachting supremacy of the United States in the Cup races will be compelled to give way to a new class of men whose money is their only qualification. Nobody supposes that the average American yacht in the near future is likely to be built of aluminum, and there is no reason why the Cup defender should be built of that metal. The purpose for which the America's Cup races were originally designed was to promote an improvement in the design of yachts generally, and the trial races produced the best models which could be worked out at that time. Under the new system, however, the Cup races are likely to show merely the improvement which can be secured by some single favorite designer, whose eminence is sufficient to insure him the order from the millionaire syndicate, which may have charge of the construction of the Cup defender at that time.

It is to be regretted that the so-called deed of gift of the America's Cup itself encourages heavy expenditure, inasmuch as it does not allow small sloop yachts to race for the Cup. There would be as much pleasure and as much profit in hodling a Cup race between two 40-footers, as there will be, this coming autumn, in the Cup race which will be held between the two 90-footers. At the same time, in the former case there would be a great number of competitors at the trial races, and the results would almost certainly insure a greater diversity in yacht designing and construction, than may fairly be expected under the present costly and exclusive system.

YACHTING NEWS NOTES.

The Brooklyn Y. C. will sail its annual spring regatta on Monday, June 10, over the club courses in New York Bay. As in former years, this regatta will be open to members of the principal yacht clubs located on New York Bay and the Sound. Entry blanks and circulars may be obtained by addressing the Regatta Committee, Box 154, Brooklyn. Entries must be filed not later than June 4; yachts will be classified according to their racing length.

Rifle Range and Gallery.

Revolver Shooting in England.

LONDON, England, May 2.—At the South London Rifle Club, on April 25, in a gusty wind, the following revolver scores were made:

Twenty yards, stationary target:

F Rand	555777—36	E Howe	447775—34
Capt T W Heath	775547—35	C F Lowe	574276—32

At the North London Rifle Club, on May 1, the revolver scores were as below, Mr. Comber being the first to complete his scores for the championship count, totaling 313; this is too little to be of any use. None of the other members have shot out their scores yet:

Series IV., 50yds:

Walter Winans	776754—36	A J Comber	650774—29
Comber	747674—35	McCormick	547453—28
C F Lowe	255767—32	Carter	536733—27
Clementi-Smith	574636—31	Knapp	235564—24
Howe	644565—30	Capt Earle	345354—24
F Rand	665535—30	Franzmann	265722—24

Zettler's Rifle Club.

NEW YORK, May 12.—The third shoot of the season in the outdoor tournament of the Zettler Rifle Club took place yesterday morning at Wissel's Cypress Hills Park. There were fifteen competitors, including some of the best rifle shots in the country, and each man fired 10 shots at the German ring targets, 200yds. range, off-hand. Michael J. Dorrier led with 231 points out of a possible 250. The next highest man was Champion Fred C. Ross, who scored 226. Geo. Plaisted had 225, Ignatz Martin 217, H. M. Pope 213, Charles G. Zettler 213, M. B Engel 210, Dr. Boyken 208, H. Holges 200, H. Graue 200, Gus. Nowak 199, Bernard Walther 188, William Soll 176, George Balenstadt 162, and H. Heintz 154. On the Wissel target of honor, same range, 3 shots, with a possible total of 75 points, George Balenstadt made 3 bullseyes and won, scoring 75.

Trap-Shooting.

FIXTURES

May 21-24.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $3,000 added to the purses.

May 21-25.—HOUSTON, Texas.—Tournament of the Houston City Gun Club; live birds and targets; open to all amateurs.

May 22-24.—ROME, N. Y.—Annual tournament of the Rome Gun Club; two first day at targets, third day live birds. W. P. Rayland, Sec'y.

May 23.—WAUZEKA, Wis.—Opening shoot of the Wauzeka Gun Club.

May 23-24.—LANCASTER, Pa.—Tournament of the Fairview Gun Club; first day, targets; second day, live birds.

May 27-30.—LITTLE ROCK, Ark.—Fifth annual tournament and meeting of the Arkansas State Sportsmen's Association. For programmes address Paul R. Litzke, Little Rock, Ark.

May 29-30.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters' League, under the management of the Canajoharie Gun Club; targets. Chas. Weeks, Sec'y.

May 29-30.—READING, Pa.—Tournament of the Independent Gun Club, of Reading. A. Knauer, Sec'y.

May 29-30.—JANESVILLE, Wis.—Fifth annual shoot of the Janesville Shooting Club; live birds and targets. H. H. McKenney, Sec'y.

May 29-31.—URBANA, Ills.—Annual tournament of the Crystal Lake Gun Club, of Urbana, Ills., $200 added money.

May 30.—MOUNTVILLE, Pa.—Tournament of the Mountville Gun Club; targets.

May 30.—MOLINE, Ill.—Tournament of the Highland Gun Club.

May 30-June 1.—GRAND RAPIDS, Mich.—Valley City Gun Club's annual tournament; targets; $500 added money. C. F. Rood, Sec'y.

May 30.—ALTOONA, Pa.—All-day shoot of the Altoona Rod and Gun Club at Wopsononock.

June 3-8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual tournament. Convention at Sherman House, June 4.

June 11-13.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 13-14.—FARGO, N. D.—First annual tournament of the North Dakota State Sportsmen's Association; targets. Programmes ready May 15. W. W. Smith, Sec'y.

June 13-15.—OMAHA, Neb.—Annual tournament of the Nebraska State Sportsmen's Association; $500 added money. F. S. Parmelee, Sec'y.

June 13-15.—PORTLAND, Ore.—Eleventh annual tournament of the Sportsmen's Association of the Northwest, under the auspices of the Multnomah Rod and Gun Club. D. L. Williams, Sec'y, Portland, Ore.

June 14.—WORCESTER, Mass.—Seventh and closing tournament of the New England Shooting Association, under the auspices of the Worcester Gun Club.

June 15.—WILMERDING, Pa.—Tournament of the Wilmerding Gun Club. A. A. Mackert, Sec'y.

June 19-21.—CLEVELAND, O.—Chamberlin Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 24-28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec'y.

June 26-27.—VICKSBURG, Miss.—Tournament of the Interstate Association, under the auspices of the Vicksburg Gun Club.

June 29.—MARION, N. J.—Fifth tournament of the New Jersey Trap-Shooters' League, under the auspices of the Endeavor Gun Club.

July 10-12.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec'y.

July 17-18.—MACON, Ga.—Tournament of the Interstate Association under the auspices of the Macon Gun Club; $200 added.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankfort, Pa.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

DRIVERS AND TWISTERS.

The Trenton, N. J., *Advertiser* of May 12 says: "The Eleventh Ward Gun Club was organized recently with fifteen members in Hanger's Hall, on Home avenue. The following are the officers: President, Nelson W. Peck; Vice-president, Chris. Grouser; Secretary, Henry Green; Treasurer, Victor Hangers; Trustees, John Schumann, Steve Gedlinsky, and Charles Kale. The other members are: Robert Tootel, Charles Green, John Schimmel, August Kook, Albert Weber, Fred Schumann, Albert Weiss and Charles Blickert."

Very few trap-shooters have as many assumed names as Louis Schortemeier of this city. "Schorty," "L. Biff," "J. O. Blotz," "Trohes," etc., are some of the titles under which he conceals his right to many a good score at live birds or at inanimate targets. As he is a member of a round dozen of social and sporting clubs, "La Paloma," 201 Pearl street, New York city, Louis' place of business, is a place where visiting sportsmen will always find many kindred spirits, and learn any news in the shooting line that may be going.

The result of the informal meeting held in the club house at the Lynchburg Gun Club's ground, after the Interstate tournament had been brought to a close on Saturday night, must be very gratifying to the Interstate Association and its manager, Elmer Shaner. The resolution endorsing the handicap adopted by the Association was most enthusiastically carried by the very men *who had shot under that system for two whole days.* They should know what they were talking about.

For the information of all shooters from New York, New Jersey, etc., who are intending to be present at the Memphis shoot during the second week in June, I want to state that the 4:30 P. M. train on the Southern Railway Company's schedule carries a through sleeper from Jersey City to Memphis, Tenn. The schedule is thirty-nine hours between those points, the train arriving at Memphis at 7:25 on the second morning.

The Lynchburg boys know how to make it pleasant for their guests, and they turn their knowledge to good account. The Interstate Association's tournament, held at that city on Friday and Saturday, last week, was one of the pleasantest shoots at which I've ever been present. Dropping for place was "out of sight" entirely; no such business would be tolerated by the gentlemen who compose the Lynchburg Gun Club.

The photograph of the "Big Six" at Cincinnati, viz.: J. W. Connor, E. D. Fulford, S. Glover, F. Van Dyke, Dando and Charlie Young, taken immediately after their record-breaking score of 116 out of 120, is a capital likeness of each man. The blackboard is the background, each man's score appearing in clear, sharp figures, speaks in a telling manner of the way in which they smashed the bluerocks.

At the Sportsmen's Exposition on Friday of last week Paul North was distributing among his friends a badge that will be a pleasant

souvenir of the Cleveland shoot on June 18-21. The badge is, of course, black and gold (blue rock colors) and bears an appropriate inscription, together with a cut of Harvey McMurchy, of the Hunter Arms Company, Syracuse, N. Y.

Knoxville to Grand Rapids, Grand Rapids to Chicago, Chicago to Memphis, Memphis to Cleveland; that's the itinerary of many of the big fish among trap-shooters for the next four weeks. I understand, however, that several will take in the Arkansas State Sportsmen's shoot at Little Rock, May 27-30. Paul R. Litzke and his fellow club members will give all such a warm welcome and show them a good time.

Among those present at the Binghamton, N. Y., Gun Club's tournament on May 15-16 were: Neaf Apgar, Evona, N. J.; O. R. Dickey, Wellington, Mass.; C. W. Tuttle and Carr, Auburn, N. Y.; "Mort" Mayhew, Utica, N. Y.; Sanders, Athens, Pa; Stroh and Williamson, Wilkesbarre, Pa. The averages on the first day were: Apgar 93⅓, Mayhew 88, Dickey 85, Kendall and Brown, both local men, 80.

The 4:30 P. M. train on Sunday afternoon from the Pennsylvania station at Jersey City carried a large contingent of shooters bound for Knoxville, Tenn., via the Southern Railway, the new fast train to Knoxville Point, and to the South generally, which went into commission on May 12, having caught the boys' fancy.

Among the programmes received too late for any extended notice prior to the date of the shoots are programmes of the Rome, N. Y., Gun Club's tournament, May 22-24, and the programme for the second annual tournament of Belding, Mich., Gun Club, held May 23.

Local trap-shooters as a body did not patronize the Sportsmen's Exposition as I had expected they would. Many of them will regret their absence when they read this week's issue of FOREST AND STREAM and find out what a really big thing it was.

The Saratoga (N. Y.) Gun Club is leaving no stone unturned to make the annual tournament of the New York State Sportsmen's Association, June 24-28, a great success.

The Interstate Association will give a tournament at New Orleans, La., Aug. 9 and 10, under the auspices of the Louisiana Gun Club. The home club adds $200 to the purses.

Mr. W. A. Skinner, Western agent for the American Smokeless Powder Company, leaves New York this week for an extended business trip through the West and South.

Neaf Apgar and O. R. Dickey were prominent factors when it came to dividing up the purses at the Binghamton, N. Y., shoot last week.

On June 19 the members of the New York German Gun Club will hold their annual picnic and prize shoot at Dexter Park, L. I.

The extremely high averages made at the DuPont tournament must be extremely gratifying to Paul North.

EDWARD BANKS.

WESTERN TRAPS.

IOWA STATE SHOOT.

CEDAR RAPIDS, Ia., May 16.—The State trophy, the L. C. Smith cup, was won at the Iowa Sportsmen's tournament by George Henderson, of the Cedar Rapids team. He scored 20 under the following conditions: Twenty unknown targets, use of both barrels, butt of gun below elbow until target is in the air. The team shoot was won by Cook and Arp, of Davenport, with Wilson and Gilbert, of Emmetsburg, second. Team shoot for State trophy, 10 live birds: First money, Avery and Gilbert, Burlington Gun Club, 29; second, Frazer and Trotter, Lost Nation Club, 28.

NORTH DAKOTA STATE SHOOT.

Programmes are out for the first annual tournament of the North Dakota State Sportsmen's Association, to be held at Fargo, N. D., June 13 and 14. Although it is the first tournament of this young Association, it would seem old shooters had been at the helm in the preparations. Bluerocks will be shot, price 3 cents, deducted from entrance, all ties divided. Note also the following, which shows they are in line in Dakota:

"All programme events each day, except No. 6, will be governed by American Association rules, subject to the following handicap: Winners of first and second money must shoot in the next event in which they enter at known traps and unknown angles. If in this event they fail to secure either first or second prize, they will fall back to known trap and known angle in the next event they shoot, and so continue to graduate, provided that professionals and manufacturers' agents will be required to shoot at unknown traps and unknown angles in all events.

"We have so arranged our programme that even the poorest shots need not fear to compete. There is a place for all.

"Any shooter who intentionally misses a target in order to obtain a certain place shall forfeit his entrance money, all his interest in the purse, and will be debarred from taking part in any tournament given under the auspices of the North Dakota State Sportsmen's Association."

C. E. Robbins is president, W. H. Smith, secretary, Fargo, N. D.

ARKANSAS STATE SHOOT.

Programmes are at hand for the Arkansas State Sportsmen's Association's fifth annual, which occurs at Little Rock, May 28, 29 and 30. There will be $300 added money and a fine target programme is offered and assured by this standard body of sportsmen. The rules published follow. Note what is thought of crooked shooting.

All events open to the world, except the three trophy contests.

Shooting will be known traps, unknown angles, 16-yard rise, rapid fire system, unless otherwise specified.

American Shooting Association rules to govern.

All targets included in the entrance money, for which three cents will be deducted from the purse.

No pooling or dropping for place will be tolerated. Remember, this is no bluff.

Blue rocks expert traps and North latest electric pulls will be used.

MILWAUKEE SOUTH SIDE SHOOT.

A fiery red programme, which promises a red-hot shoot, comes from the South Side Gun Club, of Milwaukee, Wis., invitation to their tournament, May 30 and 31 and June 1. The club adds $600 in cash and merchandise. Bluerock targets and traps are offered. The programme is for targets only, and is interesting. The jack rabbit system is in evidence in some events. Note the growing disposition to favor the amateurs. Professionals will not be allowed to shoot. Any one not wishing to shoot off a tie can draw his entrance. C. W. Milbrath, Sec'y.

NATIONAL GUN CLUB OF MILWAUKEE.

The National Gun Club of Milwaukee, the new shooting club of that city, holds its first tournament, a one-day shoot, at Milwaukee, May 28 (if memory serves). This is a new and enterprising body of shooters in the Cream City, and they will have a good time and a good shoot.

RAVELRIGG.

The Lynchburg Tournament.

THE Interstate Association's tournament at Lynchburg, Va., is over now, and the scores made in the various events on the programme will soon be forgotten in the hurry and bustle of the trap-shooting world during the next three months. There is one thing, however, which occurred on the evening of the last day of the shoot, May 18, that cannot be overlooked and that will not be forgotten for many a day: The resolution, carried unanimously and enthusiastically by both members of the home club and their guests, indorsing the action of the Interstate Association in its efforts to protect the amateur, and approving the handicap now in force at the tournaments of this Association. FOREST AND STREAM's position in regard to the question of protecting the amateur is well known now, and two weeks ago I gave my views on the subject, particularly concerning this handicap. After witnessing the recent tournament of the Interstate Association—Wilmington, May 9 and 10, and Lynchburg, May 17 and 18—and after hearing the remarks of the shooters present as to their opinions of the system, I am fully convinced that the handicap is one that is a step in the right direction and one that will be more popular when it gets better known. It will never be more than tolerated by those who attend tournaments to win money, but I hardly think those parties are worthy of much consideration, and there were none such present at the tournament of the Lynchburg Gun Club on May 17 and 18.

Owing to the Sportsmen's Exposition at the Madison Square Garden, I was unable to leave New York until Friday afternoon, May 17, at 4:30, thus being deprived of the pleasure of being present during the first day of the shoot. The trip to Lynchburg by the Southern Railway Company's Vestibuled Limited is an easy one of just eleven hours, the only drawback—a necessary one—being the hour at which one arrives at that city—3:37 A. M. Before we reached Philadelphia it commenced to rain, and I don't believe it ceased, save for a few minutes or so, until we got to Lynchburg. Of course I went to the Arlington Hotel—all shooters who go to Lynchburg on business or pleasure stop there. The reason is obvious: For some years past the hotel has been in the hands of Col. R. S. Terry, one of the mainstays of the gun club, a good shot and a thorough sportsman. Mr. A. D. Wright, the present proprietor, is a worthy successor to Col. Terry, and bids fair to be as popular with shooters as that gentleman. The resolution adopted by all present at the tournament, according him a vote of thanks for his courtesy and hospitality in providing an excellent lunch in the club house, free of all charge, on both days of the shoot, was as spontaneous and hearty as it was well deserved. Such treatment is naturally all the more appreciated from the rarity of its occurrence. The register of the hotel was the first thing I made for when I got to the hotel, notwithstanding the lateness, or earliness, of the hour—3:50 A. M. A hurried glance showed that the shoot must be a success if, as proved to be a fact, the home club turned out well. Among the names registered were: Charles Tatham, of the firm of Tatham Bros., New York city, president of the Association; Col. J. T. Anthony, Charlotte, N. C. (Major Todd was missing once more!); J. F. Jordan, J. T. Fonda and E. L. "Rastus" Gilmer, of Greensboro, N. C.; H. C. Bridgers, Tarboro, N. C; Capt. A. W. Money, of the American E. C. Powder Co., and George S. McAlpin, of New York city; Wm. Tell Mitchell, Lynch's, Va.; Dr. W. P. Miller, Winchester, Va.; "Uncle Billy" Wagner, B. L. Osborne, Norman Pruitt and W. B. McKelden, Washington, D. C., and, of course, Elmer E. Shaner, the Association's manager. Leaving a note for the latter to come to my room before he went to breakfast, I went upstairs to bed with a view to getting an hour or two of sleep. I forgot Elmer's habit of early rising, but I'll never do so again. Somewhere about 5:30 o'clock he was in my room, and after that there was no more peace for me; I had to get up and dress.

It appeared from Mr. Shaner's account of the tournament that the tournament was a success. Twenty men had stepped up to the cashier the first day and entered right through the programme! The entry list had averaged over twenty-one in all events, a very satisfactory showing, considering the great counter-attractions of the Sportsmen's Exposition in New York, and the Dayton, O., tournament of the Ohio State Sportsmen's Association. I also learned that rains had stopped the shooting at the end of the programmed events, about 4 P. M. Notwithstanding this drawback, 3,840 targets were thrown during the day.

The trip to the club's grounds is one of about fifteen minutes or so by electric cars which run past the hotel. It is, therefore, an easy matter to get to and from the club house, a great desideratum where the members of the club are almost all busy men. The club has a membership of about sixty and owns its own grounds, some fourteen acres, and its club house. The officials for the year are: President, R. S. Terry, who is now enjoying his fourth term of office; Vice-president, W. L. Moorman; Captains, W. W. Dornin and J. M. Cleland; Secretary, George L. Fleming; Treasurer, T. F. Nelson; Executive Committee: E. P. Miller, C. W. Scott, W. P. Clark, Gen. J. H. Smith, B. G. Empie; Official Scorer, W. N. Wellford; Surgeon, Dr. Samuel P. Preston. The treasurer, Mr. T. F. Nelson, has acted in his present capacity ever since the organization of the club. The club house is extremely comfortable and spacious, being about 40×20; the floor is one on which dancing could be enjoyed, while the house itself is finished in good hard pine, giving an air of cleanliness and coolness that contrasts very favorably with most other similar structures. Trophies of the chase and of the taxidermist's art adorn the walls, while a set of foils, boxing gloves, a punching bag, etc., etc., show that the members are fond of athletic exercises. To the rear of the building is a lovely grove of old oaks that would do honor to many an English park. Under the shade of those oaks, and in and around the club house, is where the members, their wives, families and friends come together for an annual picnic on the Fourth of July. If it had been possible, nothing would have given me greater pleasure than to accept the invitation tendered me by many of the club members to be present at this annual gathering on the coming Fourth. The house faces about E.S.E., looking over a lovely stretch of rolling foothills, the horizon being bounded by forest-clad mountains of a sterner type, the beauty of whose densely wooded sides are marred in several places by traces of fires that have swept over them. From the southern end of the broad piazza, looking toward the west, can be seen the Peaks of Otter, blue with the haze that gives its name to the beautiful Blue Ridge. To my mind, the view, as one looked southeast, right across the traps as one stood at the score, was equal to some of the best bits in the Pennsylvania Alleghenies—and that's saying a good deal from my point of view, with all due apologies to my Lynchburg friends.

Manager Shaner had, as usual, a capital working force, excepting, perhaps, the trappers, which were about as "ornerary" a lot of colored boys as it has ever been my lot to see at a tournament. "Pat," to be quite fair, was an honorable exception, and it must be said that he was the sole representative of the club's regular trappers. The rest were "pick-ups," and, like most retrieved targets, were "no account" whatever. Wilmington, N. C., and her Harkness, have perhaps spoiled me for a time! Gen. John Holmes Smith handled the cashier's department excellently, being ably assisted by John M. Otey. Both of these gentlemen are members of the club, and of course gave their services gratuitously for the good of their club, as did also Mr. W. N. Wellford, the club's official scorer, who marked down the 'ones" and ciphers. To Mr. Wellford's care and accuracy I am indebted very deeply, as the manifold copies were every bit as good as most originals. That means more than most club secretaries think; they would understand me better if we swapped jobs for a week or two. The pulling was in the hands of Edgar L. Evans, while Mr. W. H. Dornin, a relative, I believe, of Mr. W. W. Dornin, took charge of the blackboard. The refereeing was done by several different parties. On Saturday, the day I was present, I saw nothing to kick at in the way those duties, always arduous and generally thankless, were discharged.

A word or two about the traps: The club has adopted a plan for putting down its traps that is an excellent one. Five heavy blocks of stone are sunk in the ground, a trap being bolted to each one of these blocks. "As firm as a rock" is a common expression, and it applies well to the condition of the traps when in position. A trench, bounded with good timber, enables the trappers to do their work in comfort; while an iron screen, painted a dark green, and about 3ft. high, is all that is necessary to shield traps and trappers. At the score, five other blocks of stone, about 3ft. square, "steen" inches thick and perfectly flat, mark the positions for the five men who are shooting. Holes full of Lynchburg's red clayey mud in wet weather are thus avoided, while a firm and solid footing is certain under all conditions of weather. A stand for scorer and puller, with an awning to the west to keep off the afternoon sun, completes the list of equipments. The club uses North's electric pull, the wires being protected from the weather by being enclosed in cast-iron pipes sealed at each end to prevent leakage of water into the pipes. For the protection of shooters at the tournament, they had a good sized tent, while the large tent of the Association, with its tables, gun racks and coat racks, was also placed in the rear of the score.

The members of the Lynchburg Gun Club held up their end in great style, coming up to the cashier and putting down their money for every event, shooting along for sport and for the success of their tournament. As far as I can recollect just now their names were: R. S. Terry, W. W. Dornin, W. L. Moorman, T. F. Nelson, B. G. Empie, J. M. Cleland, C. W. Scott, E. F. Stearnes, E. P. Miller, etc. To the above-named gentlemen much of the success of the tournament is due.

On the first day, from what I learn from the scores and from what I heard from the shooters themselves, straights were rare and a steady 75 per cent. gait would have been remunerative. This was due, I am told, in a large measure to the poor light caused by a dull day, which made it hard to see targets that were low in flight. The graduating handicap of the Association was used and gave satisfaction, the purses being more evenly distributed than would otherwise have been the case. For the sake of making things clear I will explain the handicap: Winners of first money shoot as experts (five unknown traps) in the next event they shoot in; if in that event they draw any part of the purse, they shoot again in the next event under the same conditions; if at any time when shooting in the expert class they fail to get any portion of the money, they fall back in the next event into the amateur class. The chief winners of the day were "Uncle Billy" Wagner and Tell Mitchell, both of whom shot well, but still not quite up to their standard. The fact was, the balance of the company present, and particularly the members of the home club, were shooting away below their respective averages. The scores made on this day are given elsewhere and tell their own tale. Names of those who shot as experts in the various events are marked with an asterisk.

Saturday morning (that is, when Elmer Shaner woke me up) was dull, gloomy and wet-looking. As we went out to the grounds about 9 A. M., the sky began to clear, and by the time the first event was started the sun had come out to stay. There are two features of the ride to the grounds that I must mention: one was the sharp ascents and descents made by the electric cars in their wanderings among the hilly streets of Lynchburg; the other is the splendid Rivermont bridge that spans a branch of the James River and the tracks of the Norfolk & Western Railway. This bridge is a wide deck bridge, 110ft. high, with ample room for two sets of street-car rails without curtailing to any serious extent the road space for carriages, carts, etc. There was also another feature that caught my fancy as we rolled past the baseball grounds: just outside the high board fence on the western side of the ground is a house and lot that belongs to an enterprising and business-like man, judging from all appearances. On one side of his lot, close to the above fence, he has erected a kind of conning tower, from which is a free and unrestricted view of the game of baseball as she is played in Lynchburg. This he utilizes as a sort of grand stand, and, I understand, charges a small sum for the consideration of a seat or standing room. I asked the conductor what price was charged for this consideration. "I don't know," said he, "but it's full every game!"

The shooting on this the second day was of a far higher caliber. The light was better, and the traps being elevated, the skyline was also improved. Mitchell, Capt. Money, McAlpin, McKelden, Wagner and Dornin, of the home club, did well; but the North Carolina contingent was not by any means up to the mark it usually shoots at. Whether it was the swift, silent and smooth flight of the targets from the traps of the Interstate Association (North's new expert traps) that fooled the shooters, I can't say. Anyway no one was breaking his usual average of targets. As at all the Interstate shoots this year, bluerock targets were thrown. On the second day the total of targets thrown was 4,510, making a grand total of 8,350 for the two days; had the rain kept off on Friday, this total would have moved up close to the 10,000 mark. The entries on the first day averaged 21 and a fraction; on the second day 19 and a fraction, making an average for the two days of just over 20 entries in each event—a very nice entry list under all the conditions. The scores of the second day, with those shooters who shot as experts marked with an asterisk, will be found in detail below:

First Day's Scores.

No. 1, 15 targets, $1.50:

NOTES OF THE SHOOT.

Some one who was comparing the scores made by "Money" on both days of the shoot, noting the improved totals on the second day, asked Capt. Money: "Was that your son, Noel, who shot yesterday?" Rather rough on the younger of "the Money brothers," wasn't it?

U. M. C. Thomas was a conspicuous absentee at this shoot. The presence of U. M. C. at all the Interstate shoots to date has been so regular that his absence is felt all the more. The Sportsmen's Exposition must bear the blame for his enforced defection.

Mr. Chas. Tatham, of the firm of Tatham Bros., shot manufacturers, and president of the Interstate Association, has set his fellow members an example that should be followed. He stepped up to the score, and, though only a comparative beginner at the sport, broke a good share of his targets.

Every time Gilmer looked at Shaner's red sweater the perspiration rolled down his face. He explained this phenomenon by saying that he just did it for sympathy, adding that "Elmer would look pretty in a gauzy white one!"

"DuPont" Collins was present at the shoot on both days. He left for Baltimore at midnight on Saturday.

The Dayton shoot kept the Winchester Repeating Arms Co.'s representative away, while the Sportsmen's Exposition is also answerable for Tom Keller's, Gus Greif's and DuBray's absence.

Lynchburg, noted for her fair daughters, sent a contingent of the same to witness the shooting. Ladies at a tournament add greatly to the pleasure of those who are taking part in it. EDWARD BANKS.

The Handicap Approved.

AT the close of the Interstate Association's shoot at Lynchburg, on Saturday, an informal meeting was held in the club house. Col. Terry informed those present that the meeting had been called at Col. Anthony's request.

Col. Anthony said that he wished to extend to the members of the Lynchburg Gun Club a vote of thanks for the royal manner in which it had entertained its guests. The shoot, he said, was not so largely attended as it should have been, owing to unforeseen causes, but it was certainly a success. If there was anybody present who thought otherwise, and said so, he (Col. Anthony) could lick them. (Mr. McAlpin, "Second the motion.")

Mr. C. W. Scott said that there ought to be a chairman to take charge of matters; Mr. McAlpin was unanimously elected to fill the position. Upon taking the chair, Mr. McAlpin put Col. Anthony's resolution for a vote of thanks to the home club; the motion was carried *nem. con.* Col. Terry and Mr. Scott replied on behalf of the club, the latter stating that his speech having been prepared for a large assemblage, was therefore unsuited to the occasion; the company present would therefore have to excuse him.

After considerable discussion regarding the handicap used at this tournament, in which Col. Anthony, Capt. Money, Empie, Scott and others took part, all speaking in highly commendatory terms of the system in use at the Interstate shoots, Mr. Scott offered the following resolution: "Resolved, that the handicap adopted by the Interstate Association for use at its tournaments during the season of 1895 is hereby approved by the Lynchburg Gun Club, and by the visitors to its tournament on May 17 and 18. Resolved also that a copy of this resolution be sent to the Interstate Association and to all the representative sportsmen's papers for publication." This resolution was adopted unanimously.

Col. Terry then moved that a vote of thanks be accorded the Interstate Association for its courtesy in giving the tournament that had just closed; and also to the manager of the Association for his capable and effective work as manager of the shoot. Col. Terry's motion was seconded and carried, Mr. Tatham returning thanks on behalf of the Association.

A motion was also made and carried unanimously that a vote of thanks be accorded to Mr. A. D. Wright, proprietor of the Arlington Hotel, for his hospitality in furnishing a lunch in the club house on the two days of the tournament, free of charge, to the members of the gun club and its visitors.

The Memphis Programme.

THERE are programmes and programmes. There are programmes that contain much reading matter, and there are other programmes which contain next door to no reading matter at all, but which are yet as full of interest as the average female Dominick's egg is of meat.

The Memphis Gun Club's programme for its second annual tournament is one of the latter class. Page 2 contains about all that there is to be told. The words used are telling and to the point, and it is very little use for FOREST AND STREAM to remind its readers that when the Memphis Gun Club talks it means just what it says.

Page 2 is headed, "Memphis Gun Club, June 11, 12 and 13, 1895. Rules and Conditions." Under this caption appears the motto, "No handicap, the world invited." Then comes the following: "The referee's decision is final under all circumstances. We mean what we say. We are going to have a dead square shoot. All purses divided 30, 20, 15, 15, 10, 10. Shooting to commence promptly at 8:30 A. M. Contestants requested to make entry for the entire programme for each day. Money refunded for all uncontested events. Grounds open for practice shooting the morning of the 10th. Main street cars running north, pass all hotels and run direct to the grounds every ten minutes. Peabody Hotel will be headquarters. Special rates have been secured at this hotel. The Arlington is on the European plan, and we recommend this hotel to those who wish to live on that plan. Accommodations secured in advance for those desiring it. Shooters wishing to send shells, guns, etc., in advance, can address same to J. G. Schmidt & Son., who will care for them and deliver same on shooting grounds free of charge. Special rates of one and one third fare on all railroads have been secured."

The page concludes with "Our special feature—$500 given away." The way this $500 will be given away is as follows: $500 in cash will be prorated among all contestants who shoot through all events in the three days' programme. Members of the Memphis Gun Club and manufacturers' agents are barred from any share in this division. All shooting will be at known traps, unknown angles.

The next page of the programme contains an introduction that is worth reading: "On Aug. 7, 8 and 9, 1894, the Memphis Gun Club made its first bow to the public. We now present to the shooters of the country our programme of the second annual tournament, which will be held on June 11, 12 and 13, 1895. We take pardonable pride in the fact that, in one single step, Memphis has bounded to the front rank as a shooting center, and in offering $2,000 added money, a greater amount than has ever been given by any club, we hope to attract to our city the better class of shooters from every section of the country, and we extend a cordial, hearty invitation to all to come and partake of our hospitality. It has been our effort to elevate the standard of sport, and we are satisfied from the encouragement that we have received that our efforts have not been in vain. We confidently expect to have the most successful tournament in point of attendance and personnel ever held in the United States. We wish here to express to the sportsmen's journals throughout the country our thanks for the many courtesies they have extended and the aid they have given us in making our shoot what it will be. We do not propose in this programme to show to the world its many advantages, its commercial supremacy or the open-handed hospitality of its citizens. They are all so apparent that he who runs may read.' All are cordially invited to come and judge for themselves."

The events scheduled for each day's programme, the amount of money added, the average money donated, and the entrance moneys, are very easily remembered. The following is the first day's programme:

No. 1, 20 singles, $3 entrance, $50 added; No. 2, 20 singles, $3 entrance, $50 added; No. 3, 20 singles, $3 entrance, $50 added; No. 4. 20 singles, $3 entrance, $50 added; No. 5, 20 singles, $3 entrance, $50 added; No. 6, 20 singles, $3 entrance, $50 added; No. 7, 20 singles, $3 entrance, $50 added; No. 8, 25 singles, $4 entrance, $50 added. Also, $100, to be divided into twenty purses of $5 each, to be awarded to the twenty high guns, shooting in all programme events.

The same also stands good for the second and third day's programme. It was compiled for short memories, and is as toothsome as they're made. With such an invitation, such a prospectus, and with such monetary inducements thrown in, why should not the Memphis shoot be a howling success?

Missoula Rod and Gun Club.

MISSOULA, Mont., May 13.—During the past week the gun club recently organized at Stevensville, thirty miles south, expressed a desire for a match with the Missoula team. The Missoulas were agreeable, and ten shooters were called for to shoot at Stevensville on Saturday the 11th. When the Saturday morning's train pulled out for Missoula a muster of the volunteers found nine ready for action. Upon arriving at Stevensville, it was found that there had been a misunderstanding, and that the entertaining club had only a team of six prepared for the meeting. However, in order to make things pass off harmoniously, they hustled up their extra shooters, and the fun began. Weather conditions were perfect, but the traps worked none too well, and being of the rope-pull sort, rather bothered the Missoulians, who were used to traps manipulated by sundry electric attachments (small boys included). The first round of the five down sufficed to show that the visitors had a walkover, which was continued throughout the match.

A glance at the scores will show that the Missoulians had little grounds for a "crow," although leading their opponents by 38 birds, their own scores being away below par.

Twenty-five singles, known traps, unknown angles:

Missoula.

The return shoot will probably take place in this city on Thursday of the present week, in order to give both teams the benefit of the attendant practice, as some of the members of each will the following day go over to Butte, the Montana State Tournament to be held there on the 17th, 18th and 19th inst. Should our boys do no better in Butte than they did at Stevensville, they will scarcely be "scrictly in it."

As the Missoula shooters did not all return on the day of the match, there were but five contestants in the weekly medal contest held at the usual hour yesterday.

F. P. Kern won the gold medal on a score of 15, and Charlie Lemley secured the silver trophy by default; however, as he also knocked out a score of 15, it is quite apparent that he is entitled to wear the same for a week.

A Class.

New Utrecht Gun Club.

MAY 18.—The attendance at the sixth special 20-bird sweepstake of the New Utrecht Gun Club was very small. The birds were a very good lot. Weather fine, with bright sun and no wind. Several members came too late to enter. Handicaps: Class A, 20 birds; Class B, 2 misses as no birds and 20 birds; Class C, 4 misses as no birds and 20 birds.

Floyd shot a fine race, his fifth bird and only miss dropping just over the boundary line stone dead. Scores:

		Allows.

Weir City's Successful Shoot.

WEIR CITY, Kan., May 11.—Here at Weir, on May 8-10, away down in the southeastern corner of Kansas, was held the ninth annual tournament of the Amateur Trap-Shooters' Association of Missouri and Kansas. Weir is a busy little city of about 7,000 inhabitants, and is the center of the great coal and zinc industries of the State. Aside from the prominent part that Weir City plays in the history of the Sunflower State in the production of minerals and metals, she is known for the aggregation of gentlemanly "sports" who claim the little city for their residence. In years gone by Weir City has been known among men for her baseball team, for her foot-racers and her boxers, but to-day she is better known throughout the Southwest for her gun club. The Business Men's Gun Club of Weir is composed of the leading business and professional men in the city. Dr. D. W. King, its president, and mayor of the city, is a thorough sportsmen. When the writer reached Weir he found the Doctor fulfilling his duties as mayor, by spending his night in person at the mammoth works of the Cherokee Zinc Co., where his presence was needeed in the interest of law and order, arising from the recent labor troubles here. At daylight the next morning the Doctor was going the rounds of his patients; during the day he was on the shooting grounds, working and shooting in the interest of the club, while in the evening he acted as chairman of the entertaining committee.

Secretary W. W. McIlhany, one of Weir's business men, was probably the busiest of the local shooters. He found time during the usual rush of business incumbent upon the cashier to help fill up a squad, and while not always at the top, sustained his reputation, under trying circumstances, as a target smasher. C. C. Calhoun, vice-president of the local club, shot in great form, and aside from winning the individual championship trophy, he made the only straight in the Owl team contest.

On Tuesday afternoon, previous to the opening day of the tournament, the shooters began to arrive, and some little practice was indulged in. Wednesday morning about thirty shooters were on hand, which number during the day was increased to forty or more, making a nice shoot. Among the visiting shooters were C. F. Reust, of Frankfort, Kan., who last year won the State trophy; M. F. McDonald, C. D. Taylor and H. M. Davis, of Richmond, Mo., who made the score of 59 out of 60 in a team shoot at Atchison last month; J. J. Cornett (L. C. Smith), of Lineus, Mo., who is one of the best target shots in Missouri; J. W. Barre, of Louisiana; J. W. Sexton, of Leavenworth, and the irrepressible Lou Erhardt, of Atchison, than whom there is no more popular man in the West. Lou is the life of every shoot he attends, and none throughout the Southwest would be complete without his smiling face and jolly laughter. Numerous other shooters, formerly unknown to the writer, were on hand, and among them were those who could set a pace hard to keep at target shooting. Bluerock traps and targets were used, and Paul North's new electric pull fully demonstrated that it was equal to any of the devices for "slugging the pies." John Parker ("Des-Chres-Chooska Jack"), of Detroit, Mich., representing the Winchester Repeating Arms Co., the E. C. Powder Co. and the Chamberlin Cartridge and Target Co., managed the tournament, and as usual everything went off smoothly. Jack commenced by thoroughly organizing the local force, and never throughout the shoot was there a hitch or balk of any duration. About 16,000 bluerocks were thrown, and none were easy. Still, the high scores made at unknown angles, and at unknown traps and angles, proved beyond question that they could be broken, even by amateurs.

On Thursday evening the annual meeting of the Association was held. Joplin, Mo., was selected as the place to hold the shoot in '96. Dr. D. W. King was elected president of the Association, with A. Dixon, of Joplin, vice-president, Tim Malloy, of Joplin, secretary, and E. L. Fay, of Springfield, treasurer. The dates for the next tournament will be announced by the Joplin Club. Local papers boomed the shoot in great shape and the citizens turned out in flocks to witness the sport. Ample arrangements were made at the Ball Park to accommodate both shooters and spectators, and the visitors all united in the opinion that the grounds were perfect for trap-shooting. Kansas City, Kan., won the great "owl" contest, with Weir City a close second. Dr. King, in a few well chosen words, presented the winners each with a handsome owl pin donated by manager Parker. The Kansas first team won the State contest of Missouri vs. Kansas, with a score of 139 out of 150 (six men). The individual championship contest was the most exciting of the shoot, and was won by C. H. Calhoun, of Weir City, who shot out A. L. Bennett, of Kansas City, on a score of 27. McIlhany, of Weir City, and Reust, of Frankfort, were a close second on 26. One noticeable feature of the tournament was the entire absence of the black powder fiend, as not a single load was fired throughout the three days.

Below are the scores:

First Day.

No 1, 15 singles, $2, $10 added: Reust 11, Sexton 14, Erhardt 13, Barre 13, Clas 12, McIlhany 13, Jones 10, Pugh 13, Sowers 14, Calhoun 14, Taylor 12, L. C. Smith 15, Menefee 10, Marshall 13, Hamilton 13, Green 13, Hughes 8, Bennett 13

No. 2, same: Experts—L. C. Smith 11, Sowers 11, Calhoun 12, Sexton 12. Amateurs—Clas 15, Barre 13, Reust 12, Erhardt 10, Pugh 15, Jones 10, Taylor 12, Hamilton 10, Hughes 5, Menefee 13, Green 14, Marshall 10, Thornton 13, McIlhany 13, Allison 13, Morrison 7, Price 9.

No. 3: Experts—Pugh 13, Clas 12, Green 13. Amateurs—Smith 14, Barre 14, Taylor 13, Sowers 13, Jones 14, Reust 12, Hamilton 9, Marshall 9, Menefee 15, Sexton 11, Thornton 14, Erhardt 14, McIlhany 13, Best 12, Timberlake 5, Calhoun 12, Hughes 8.

No. 4: Experts—Barre 12, Smith 13, Jones 11, Menefee 13, Thornton 15, Erhardt 12. Amateurs—Pugh 14, Allison 11, Sowers 13, Reust 10, Sexton 13, Clas 10, Calhoun 14, Taylor 11, Green 14, Best 13, Timberlake 12, Price 15, McIlhany 14, Abbott 8, Bennett 11.

No. 5: Experts—Thornton 11, Pugh 13, Greene 9, Calhoun 13, Price 14, McIlhany 12. Amateurs—Barre 10, Marshall 12, Menefee 12, Hamilton 8, Hughes 9, Taylor 12, Smith 13, Jones 12, Best 11, Reust 15, Sexton 12, Erhardt 10, Clas 13, Sowers 13, Bennett 13, Timberlake 6, Allison 14, McDonald 13, Mackie 8, Morrison 13.

No. 6: Experts—Reust 11, Greene 12, Allison 7. Amateurs—Barre 12, Sexton 15, Erhardt 11, Clas 12, Calhoun 14, McIlhany 15, Best 13, Pugh 11, Thornton 13, Menefee 13, Marshall 13, Smith 14, Sowers 12, Hamilton 13, Jones 14, Taylor 14, McDonald 11, Price 12.

No. 7: Experts—Sexton 11, McIlhany 14, Calhoun 13, Smith 13, Jones 14, Taylor 11. Amateurs—Barre 13, Marshall 13, Menefee 13, Greene 13, Hughes 6, Pugh 12, Allison 12, Morton 10, Hamilton 13, Reust 14, Erhardt 13, Clas 23, Thornton 12, Bennett 11, Sowers 10, Best 11, Timberlake 10, Campbell 12.

No. 8: Experts—Jones 12, McIlhany 13, Reust 13, Barre 12, Marshall 11, Menefee 9, Greene 13, Calhoun 14, Smith 9, Hamilton 8, Erhardt 12, Clas 12. Amateurs—Price 11, Allison 12, Leeman 12, Sowers 14, W. G. Beck 15, Pugh 14, Sexton 9, Campbell 11, Thornton 10, Bennett 10.

No. 9: Experts—W. G. Beck 8, Calhoun 14, Pugh 11, Sowers 11. Amateurs—W. C. Beck 9, Sexton 14, Menefee 13, Hughes 10, Greene 14, Taylor 12, McIlhany 14, Allison 11, Leeman 13, Reust 15, Timberlake 9, Smith 10, Hamilton 9, Marshall 10, Campbell 14, Jones 13, Thornton 10, Barre 13, Bennett 13, Clas 14, Erhardt, 13.

No. 10: Experts—Reust 14, Calhoun 14, Sexton 9, Green 12, McIlhany 14, Leeman 13, Campbell 13, Clas 14. Amateurs—Menefee 13, Taylor 12, Pugh 12, Hamilton 10, Marshall 11, Hughes 8, Norton 14, McDonald 8, Barre 10, Jones 15, Morrison 10, Smith 15, Mackie 11, Holmes 9, Best 13, W. G. Beck 9, Somers 14, W. C. Beck 11, A. Dixon 13, Liles 11, Edmiston 5, Thornton 12, Erhardt 14, Bennett 15, B. A. Fay 13, C. Dixon 9.

After the conclusion of the regular programme as above, 12 extra events at singles and doubles, to suit visitors, were shot off.

Second Day.

No. 1: Sexton 12, Jones 14, E. L. Fay 12, Green 10, Clas 12, Barre 11, Reust 14, Menefee 10, Pugh 12, Campbell 9, Leeman 14, McIlhany 13, Best 13, Erhardt 8, B. A. Fay 10, Hamilton 11, Marshall 13, Taylor 13, Thornton 12, Liles 12, King 10, Norton 14, C. Dixon 11, Smith 12, Bennett 14, Calhoun 14.

No. 2: Experts—Jones 14, Reust 14, Leeman 12, Norton 14, McIlhany 12, Best 10, Bennett 13, Marshall 12, Taylor 13, Calhoun 15. Amateurs—Sexton 13, Clas 14, Pugh 14, Green 15, Menefee 13, Campbell 12, King 10, A. Dixon 11, E. L. Fay 12, Liles 9, Barre 11, Smith 13, Erhardt 11, Thornton 14, Hamilton 9, B. A. Fay 12.

No. 3: Experts—Green 12, Clas 10, Pugh 11, Jones 10, Reust 13, Norton 12, Calhoun 13, Thornton 13. Amateurs—King 7, Best 14, E. L. Fay 14, Sexton 15, Campbell 13, Smith 13, Leeman 10, Erhardt 11, B. A. Fay 9, Edmiston 12, Taylor 12, Menefee 12, Marshall 9, Barre 8, Liles 15, Histed 10, A. Dixon 15.

No. 4: Experts—Sexton 12, Best 12, E. L. Fay 11, Liles 12, Bennett 14, A. Dixon 13. Amateurs—Jones 15, Reust 12, Clas 13, Green 11, Menefee 12, Pugh 12, Campbell 13, Leeman 10, Erhardt 13, Taylor 9, B. A. Fay 10, Edmiston 13, Calhoun 15, Marshal 14, Hamilton 10, Smith 12, Thornton 10, McIlhany 12.

No. 5: Experts—Jones 13, Bennett 13, Calhoun 14, Marshall 12. Amateurs—Pugh 12, Edmiston 10, Erhardt 14, Class 14, Reust 14, Menefee 13, Norton 11, Best 13, King 7, Taylor 11, Liles 12, Hamilton 9, Sexton 15, Hughes 12, E. L. Fay 11, Green 14, Campbell 11, C. Dixon 12, Smith 13, B. Fay 10, Barre 14, McIlhany 13, Thornton 15, W. G. Beck 14.

No. 6, Kansas vs Missouri, 25 singles, six men to team:

Kansas Team No. 1.

Reust	1111111101111111111011111—23
McIlhaney	1111111110111111111111111—24

Hamilton	1110110101	1010001001	0011101111—17
L C Smith	1111111101	1011111001	0011101111—23—64

Galena, Kan.

Horn	1111111111	1111111101	1001100110—24
Stice	1101001001	0110000101	0011100111—14
Grantham	0110101111	0111101101	0011010000—17—55

Weir City No 2.

Hayden	1110101111	0110000100	1101101110—17
S W Marshall	1110110111	0010010101	0101101000—16
J H Hamilton	1100111110	1111011011	0100111110—21—54

Nine extra events were shot after the regular programme had been finished, which were well filled up from the ranks of the 75 per cent. shooters, as well as by those whom the mediocrity were pleased to term "the cracks."

Third Day.

No. 1: Sexton 14, Reust 14, Erhardt 12, Bennett 12, Calhoun 13, Grantham 10, McIlhany 14, Barre 10, Best 15, Parker 14, Marshall 13, Green 14, Smith 15, Menefee 13.

No. 2: Experts—Smith 14, Sexton 13, McIlhany 13, Reust 15, Best 14, Parker 13, Green 11. Amateurs—Erhardt 12, Calhoun 15, Bennett 11, Barre 13, Marshall 14, Menefee 14, E. L. Fay 11, C. Dixon 12.

No. 3: Experts—Smith 9, Reust 13, Calhoun 13, Best 13, Marshall 13, Menefee 14. Amateurs—E. L. Fay 13, Barre 14, Erhardt 13, Sexton 11, Green 14, C. Dixon 14, McIlhany 15, Parker 12, Grantham 7.

No. 4: Experts—C. Dixon 10, McIlhany 11. Amateurs—E. L. Fay 7, Reust 12, Calhoun 15, Erhardt 14, Sexton 12, Bennett 14, Best 13, Parker 14, S. W. Marshall 15, Morrison 7, Abbott 14, Beadle 5.

No 5, individual championship of Missouri and Kansas, conditions same as "Owl contest:"

Menefee	1111111111	0001101111	1001101110—22
Marshall	1101111110	1111111111	1101110100—24
Green	1111111011	1101011111	1111110110—25
Barre	0101100101	1101011110	1110110011—19
Erhardt	0111110110	0111010111	1101010111—21
Reust	1111111110	1110111111	1111101110—26
C Dixon	0111111100	1111111111	1011111101—25
E L Fay	0010101111	0101011110	1111111110—22
Sexton	1101010111	1111111111	1100101111—24
Best	1111101111	1111111010	1011110111—25
Calhoun	1111111111	1101011111	1111111110—27
McIlhany	1111011111	1011101111	0111111111—26
Bennett	1111111111	1111111011	1011011111—27
Abbott	0111110100	1100010111	1101001111—19

Calhoun and Bennett tied for first place and shot off as noted below, Calhoun winning. Second money was divided by McIlhany and Reust, third going to Green, C. Dixon and Best.

Tie for trophy:

Calhoun.....1111111111011101—13 Bennett.....1111110010010001— 9

No. 6: Experts—Sexton 12, King 10, Best 14, Reust 14, McIlhany 15. Amateurs—Allison 11, Bennett 13, Parker 14, Erhardt 12, Calhoun 12.

No. 7: Experts—McIlhany 12, Best 12, Reust 14. Amateurs—Sexton 14, Erhardt 12, Calhoun 14, King 9, Abbott 8, Bennett 12.

No. 8: Experts—Reust 14, Sexton 13, Calhoun 14, Parker 14. Best 15, Amateurs—Erhardt 13, King 12, Bennett 11, Abbott 8, McIlhany 15. Morrison 10.

This concluded the programme for the day, but sweepstake shooting was continued in all its phases, from common singles, through unknown doubles, to Jack Parker's "Des-chres-choos-ka game," and only the darkness of the closing day put an end to the greatest tournament ever held by the Owl Association.

The Joplin boys were loud in their praise of the tournament, as in fact were all visitors; and Vice-President Allen Dixon prophecies even a more glorious meeting in the thriving city of St. Joseph in 1896, while all alike will hope to meet "Jack" Parker again in the capacity of manager.

SMOKELESS.

Go to Memphis.

MR. IRBY BENNETT writes very enthusiastically of the coming Memphis tournament, and there is every reason to believe his statements are well within probability: "We have worked earnestly, and at last our programmes are out—at least will be to-morrow—and we'll mail you the first one. I attended the DuPont shoot last week and there saw many of the prominent shooters. I am certain I will not exaggerate if I predict the largest attendance of shooters at our tournament ever seen in America. They are coming from every quarter, and many are impatient for the day. Our programme says: 'We are going to have a dead square shoot,' and that is exactly what we mean. Every honest, square shooter will have a good time at the only Memphis and go away with pleasant remembrances and a determination to return again, but the 'other fellow' has no place here, and if he comes he must shoot according to the programme, 'dead square.' We will introduce something new during our tournament. We will shoot from a double set of 15 traps. That is at No. 1, two traps; No. 2, two traps, and so on. When a shooter calls 'pull' and the bird breaks in the trap it is only necessary to call 'pull' again, and the bird goes from 'the sister trap.' Or, in case a trap breaks it causes no delay, and we hope to obviate many delays that would occur under ordinary circumstances.

"I had hoped to be in Chicago for the shoot, but fear it will not be possible. Divine and I cannot both go to Knoxville and Chicago, and I guess it will result in my going to Knoxville, while Tom will make himself heard in your company. IRBY BENNETT."

Boiling Springs Won the Cup.

RUTHERFORD, N. J., May 16.—A contest took place on the grounds of the Boiling Springs Gun Club this afternoon. The contestants being teams representing the home club, the Unions of Springfield, Climax of Plainfield, and the Endeavors of Jersey City. The shoot was for the *Shooting and Fishing* trophy, the conditions being: Five men teams, 30 singles, one man up, five unknown traps, and 10 pairs. Scores:

Boiling Springs—Eddie Collins 41, J. H. Richmond 42, Hall 38, Simpson 36, W. H. Huck 31—186.

Union—Quimby 40, Sickley 39, Sigler 37, Williams 35, Dr. Jackson 31—182.

Climax—Dutchy 39, Money 39, Brantingham 37, Ivins 35, Terry 28—178.

Endeavor—J. A. Creveling 39, Al. Heritage 31, J. S. Duston 28, M. F. Lindsley 25, W. Piercy 23—146. W. H. HUCK.

Worcester Sportsmen's Club.

WORCESTER, Mass., May 15.—The following are the scores made in the third series of the merchandise prize shoot, and also on the third series of the cash prize shoot:

Meadville Gun Club.

MEADVILLE, Pa., May 15.—This shoot did not bring out the usual number, but it showed some very good work. Of the twelve who took part four were new beginners and the other eight, who shot at 50 targets each, broke in the aggregate 300 out of 400, or 75 per cent. I have noticed reports from several clubs who could not do as well as our club.

No. 1, club shoot, 15 known angles and 10 unknown:

Smith	1111111111111111001111111	—23
Apgar	1111111101111101111111111	—23
Brantingham	0110111011111111111111111	—22
Keller	1011111010111101111111001	—19
Short (1)	1111111111110110110111111	—23
D Terry (1)	1011011110011111011111111	—20
Taylor (3)	1110111111110101101111101111	—23
Scott (3)	1011101100111100101000101001	—15
D Darby (5)	1110111111101111100111110111	—24
Williams (5)	0110111000110000111111110011	—19
J Goodman (6)	1111000001010010011010000011110	—15
J Darby (7)	1110111111011001110101010011011	—21
Grier (8)	0111111110111011011111111111111	—29
Charles (10)	1101110111111001000111010100100111	—21
Singer (10)	1100110000011111100111000111010010 0	—17

Other events were as follows:

No. 1, 10 targets, unknown angles: Apgar 10, Smith 9, Keller 9, Short 9, Squires 8, D. Terry 7, Brantingham 7, Wilson 6, Scott 5, John 5.

No. 2, same: Smith 10, Keller 9, Apgar 9, Brantingham 9, Short 8, D. Terry 8, Grier 6, Squires 5, S. Darby 5.

No 3, same: Grier 10, Apgar 9, Short 9, D. Terry 9, Smith 8, Keller 8, Brantingham 7.

No. 4, 5 pairs: Apgar 9, Short 7, Keller 6, Smith 5, Grier 5.

New York German Gun Club.

DEXTER PARK, L. I., May 15.—The members of the New York German Gun Club held their monthly shoot this afternoon. Dr. Hudson, who shot in great form during the afternoon, killing 20 out of 21 birds, won the gold medal, Sauter giving him a close run; the latter won the "Charles Lenone" medal. B. König won the "Peter Garms, Sr." medal after a tie with Frazer. Scores:

Medal shoot, 8 live birds:

Huff	01221002—5	Smith	11100212—6
Kransberg	10001011—4	Messmann	10100000—2
Boudan	10220010—4	B König	02112111—7
Thamforde	00101221—5	Edwards	20111010—5
Hudson	12121211—8	Frazer	11121201—7
Sauter	21212221—8	Dreste	10100010—3
Aug Schmitt	10110111—6	Lucas	10111212—7
Wellbrock	01012101—5		

Ties; Hudson 2, Sauter 1. B. König 3, Frazer 2.

No. 2, 5 birds: Hudson 5, Edwards 5, Woelfel 4, Frazer 4, Kransberg 4, Smith 4, Wellbrock 4, Sauter 3, Lucas 2, Schmitt 2, Dreste 2.

No. 3, same: Hudson 5, Kransberg 4, Lucas 3, Woelfel 3, Frazer 3, Schmitt 2, Edwards 0.

No. 4, same; Kransberg 4, Schmitt 3, Lucas 3, Huff 1.

No. 5, same: Kransberg 5, Schmitt 3, Lucas 1.

Hingham Gun Club.

THE *Journal*, of Hingham, Mass., May 10, gives the following: "The second regular shoot of the Hingham Gun Club was held at the Turkey Hill range Saturday afternoon, May 4, twelve shooters taking part. Mr. Blanchard, of the firm of Blanchard & Farrar, Boston, has become a member of the club, making a total of 36. Mr. Allison, of Norwell, captured the class A medal, and Mr. Higgins, of Cohassett, took class B medal home with him." The scores made in this event, which was at 30 singles, unknown angles, and 5 pairs, were as follows:

Allison	1111111111110111010110111111111111110111	10 11 10 11 11—43

The Newburgh Tournament.

The tournament of the West Newburgh Gun and Rifle Association, of Newburgh, N. Y., was held on May 9-11. The scores of the first day have failed to reach this office, but those of May 10 and of May 11, live-bird day, are to hand, and are given below. It will be noticed that James Taylor, of the home club, distinguished himself at targets, while J. B. Halstead, of Peekskill, N. Y., shot a great gait at live birds. Halstead killed 38 out of 39 live birds, while Taylor broke 112 out of 115 targets. Scores:

Second Day.

No. 11, 15 targets, $1:

J Taylor	110111111111111—14	Collins	101111111111111—14

Grand Rapids Tournament.

GRAND RAPIDS, Mich.—The Grand Rapids, Mich. Tournament, under the auspices of the Valley City Gun Club will take place on May 29, 30 and 31, and promises to be one of the large shoots of the season. The club added $500 in cash to the purses, and every race has from $10 to $25 added. The grounds have been remodelled, shooting sheds built over the scores, the trap pits roofed in and cables laid underground to the pulling house, so that the traps are always ready for use, and disagreeable weather cannot interfere with shooting. A new feature is the system of handicapping adopted, the amateur getting one, and in some races two birds more to shoot at than the expert, this should give the average amateur a good chance for his money and should draw a large amateur attendance.

The grounds are first class, there are none better and the arrangements will be as nearly perfect as it is possible to make them. The members of the Valley City Gun Club will endeavor to make things as agreeable as possible for visiting shooters. Some form of entertainment will be provided for them, probably a repetition of last year's banquet at the Reed's Lake Pavilion, but the entertainment programme has not yet been fully decided on.

Reduced rates have been secured from Knoxville to Grand Rapids and to Chicago via Grand Rapids, and anyone wanting an enjoyable shoot and a good time generally cannot do better than take it in. For programme and information address, C. F. ROOD, Sec'y.

12 MONROE STREET, Grand Rapids, Mich.

South Chicago Gun Club.

BURNSIDE PARK, Chicago, Ill., May 8.—The following are the scores made at the club shoot of the South Chicago Gun Club to-day:

Live bird medal, 20 live birds per man:

L C Willard.11112211112221111111—19 A Reeves.02100121221010102011—13
G Sibley ....02100121221010102011—12

Target medal, 30 empires per man: L. C. Willard 28, A. W. Reeves 27, George Sibley 15. RAVELRIGG.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

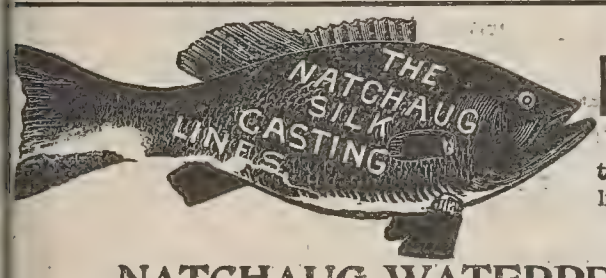
CHAMBERLIN TOURNAMENT, June 19th--21st.



$1,200.00 in Cash Added to the Purses.

Shoot Blue Rocks and get in line for all the large tournaments.

Have you noticed those widely advertised scores made by R. O. Heikes last year? Some claim it was the gun, some claim it was the powder, and Rolla even thinks he had something to do with them; but we know we were to blame. We loaded the cartridges and made the Blue Rocks, and the traps and electric pulls that threw them.

Shoot Blue Rocks and Chamberlin Nitro Cartridges, and you may become famous also. Ask your dealers for them and accept no imitations. Send for handsome programme of tournament.

Chamberlin Cartridge & Target Co., Cleveland, O.

THE ONLY PERFECT FISHING LINE IS THE

Natchaug Braided Silk Line.

Made from the choicest stock braided 16-strand three-cord silk. They will outwear three ordinary lines. Spool perfectly when in use.

Never flatten or become water soaked.

NATCHAUG WATERPROOF BAIT & FLY LINES

on the water. The finish cannot be broken. Those who have used them will have no others. cents for samples and prices and pamphlet containing our awards of prizes for last season and for 1895. For sale by all dealers.

$225 in Gold Given Away!

WE offer the following Prizes for the Season of 1895, $225 in Gold for the largest fish caught on the

NATCHAUG SILK LINES

From April 1st to November 1st, 1895.

First Prize—$25 in Gold for the heaviest Muskallonge.
Second Prize—$25 in Gold for the heaviest small-mouthed Bass.
Third Prize—$25 in Gold for the heaviest large-mouthed Bass.
Fourth Prize—$25 in Gold for the heaviest Lake Trout.
Fifth Prize—$25 in Gold for the heaviest Mountain Trout caught west of the Mississippi River.
Sixth Prize.—$25 in Gold for the heaviest Brook Trout caught in Maine or Canada.
Seventh Prize—$25 in Gold for the heaviest Brook Trout caught in the United States, east of the Mississippi River, outside of Maine and Canada.
Eighth Prize—$25 in Gold for the heaviest Pickerel, Pike or Salmon.
Ninth Prize—$25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.

CONDITIONS:

All of these fish must be caught with the Natchaug Silk Fishing Line, and by fair angling.

Competitors must forward to us their full name, P. O. address, together with description and weight of fish caught, and name of dealer from whom line was purchased, within thirty days after such catch is made, together with the name of one reputable witness affixed. On November 7, 1895, the award will be made and the list of successful competitors announced in the FOREST AND STREAM and the *American Field*.

All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.

If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JUNE 1, 1895.

VOL. XLIV.—No. 22 No. 318 BROADWAY NEW YORK.

For Prospectus and Advertising Rates see Page vii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

AN EXTREMELY GREEDY CLASS.

THE Pennsylvania Legislature passed a measure this year forbidding the sale of ruffed grouse at any time. Gov. Hastings has vetoed the bill. For his action he gives two reasons: "First, that it was unconstitutional because it prohibited transmission companies from receiving for transportation; second, that it was unconstitutional because it made two classes of citizens, the one class who were denied the privilege of eating game because they could not buy it or receive it from their friends by express, and the class who could get all they wanted for themselves and families by going out and shooting it."

Which is bosh.

The constitutionality of the measure so far as it concerns transportation companies has been fought out in the courts; and if the Governor had been informed in these matters he would have known that no question of the constitutionality of such legislation any longer exists. There have been Illinois cases, for example, which turned upon this very point, and the result of these was to uphold the law of that State forbidding the sale or transportation for sale of certain game killed in the State. The principle is so well established by repeated test cases that an executive who adduces unconstitutionality on this ground as a defense of his veto simply advertises his own want of information.

The second objection also, that the law is unconstitutional because it is class legislation, has been refuted in the courts again and again. There is no shadow of class legislation in the proposed statute.

But as matters now stand in Pennsylvania the Governor's veto is directly in favor of a class, and a very greedy class at that—the pot-hunters who are despoiling the game covers and reaping the game for themselves at the expense of public policy. The present situation there in respect to the game supply is this: The market hunters have plied their business so systematically and persistently and successfully, that the covers have not been able to stand the drain. The birds have been killed out for market. There is unquestioned need of some measure to end the traffic or practical extermination—we do not believe utter destruction—is imminent. Wisdom dictates cutting off the agency which is most destructive. Common sense calls for the prohibition of market hunting. Why? Because of the rule of securing the greatest good to the greatest number. In game matters that means so regulating the taking of birds as to afford the largest number of citizens the opportunities and benefits of their pursuit. It is the protection of the rights of a hundred amateur shooters against the claim of the market killer; the privileges of the thousand against the ten, of the community against a class and, as we have said, an extremely small and selfish class at that.

This howl of "class legislation" against the game laws has been heard always, and we may expect to hear it for a long time to come. It is usually raised by those who demand something for themselves at the expense of the public. Game laws are in principle for the common good of the community. They are neither in theory nor in practice in the interest of a favored class. Loose thinking or deliberate sophistry may on occasion befog the issue, but when the truth is revealed clearly and honestly our game protective system is recognized as beneficent in intent and effect.

SNAP SHOTS.

THE Sportsman's Exposition was educational and in some instances the information there acquired was of a nature delightfully unexpected. For instance: There have been in this office for ten years or more two pairs of Virginia deer horns firmly interlocked. The correspondent who sent them wrote that in the fastnesses of a Mississippi swamp he had found them so united, and the story which they seemed to tell was that two rival bucks had come together in battle, in the conflict had locked their antlers firmly together, and unable to separate themselves had perished. The story was accepted by us and was published at the time; it has been repeated to persons innumerable. The antlers were shown in the FOREST AND STREAM exhibit in the Exposition; and before them, on the first afternoon, halted a dignified and benevolent old gentleman and his sweet wife. "Impossible," was his verdict on the locked antlers. "It never could have happened in nature." And the tone was as of one who says a thing and it is. To contradict and controvert; to declare that the thing was possible in nature; to make affirmation, if need were, that oneself had been in the swamp and in person had found the antlers interlocked—this was the impetuous impulse of the moment; but one look at the dear old lady by his side dispelled the thought. What he said was law and gospel with her, that was clearly to be seen, and if he declared that this thing couldn't happen in nature, it couldn't and there was the end of it. Give over to the teeth of the porcupines all the locked horns of the wilderness; perish every buck solitary and alone; but let not this wifely faith in the dictum of her lord be shaken one jot or tittle.

One thing not shown in the Sportsmen's Exposition, but deserving of a place there, was a buffalo chip. The plains traveler of to-day knows nothing of the chip save by tradition; and yet we saw in Madison Square Garden the other day more than one grizzled old-timer whose heart would have beaten more quickly at sight of the familiar object. In the exposition of 1896 there shall be a buffalo chip; the FOREST AND STREAM has already commissioned a trusted agent to secure the relic.

Massachusetts Game Laws Repealed!

Everybody may shoot anything any time.

That would be a startling headline for news from Massachusetts; and we rejoice that it is not true. Yet the condition of things in that Commonwealth could hardly be more desperate in some sections were the game laws actually repealed and blotted out. Read the notes printed to-day from Shirley, with their story of May potting of game and song birds. That is a reign of deviltry that could not be outdone if the game laws were actually repealed. What is the particular advantage, we may ask, of the statutes if they are unenforced? And with spring shooting of nesting birds in New England, what need is there of our naturalists seeking in the cold winter of the South an agency to account for the scarcity of the songsters?

Up to the hour of our going to press Governor Morton had not signed the Donaldson game bill, which, among other provisions, would permit the sale of game the year around. The interests of game protection in New York and other States tributary to its markets would be best served if the bill should be vetoed. Whatever may be the event, there is reason to believe that we shall have another siege of game law tinkering next winter; for the Senate committee will go on another round of hearings this summer. One of the last resolutions of the late session was put in by Senator Childs, and provided that he and his fellow committeemen, Donaldson and Guy, should visit Canada and other sections "in order to secure unanimity in the game laws." That probably means nothing more harmless than junketing; but Chairman Donaldson has shown that he is capable of mischief; and it would be a good thing for the game interests of the State if he could be persuaded by his district to stay at home when the next Legislature meets.

It is said that John Liberty, who has been for many years the clerk of the Chief State Game Protector's office in Albany, must now be "fired out" because he is a Democrat. Mr. Liberty is an efficient and honest man, in a position which his long experience and faithful discharge of duty should insure to him so long as he may be able to fill it. But he is not a Republican. The new board of commissioners hold that an individual's politics are of more moment than his qualifications and record. The president of this board of fisheries and game and forests boasts that he does not know hardwood timber from soft, nor an eel from a sucker; but he does know politics, and when it comes to bouncing clerks and protectors to make berths for men of his own party he is right at home. The removal of Hawn and the threatened removal of Northrup give some hint of the demoralization that is to come to the force of protectors if the commission shall go on as it has begun.

The story of Mithridates' duck has been retold by a Boston physician, who brings it out to show that antitoxine is no new thing. Mithridates lived and reigned and went duck hunting two thousand years ago. Pliny tells us that the monarch rendered himself proof against poison by inoculating himself with the blood of a certain wild duck which was reputed to subsist wholly upon substances fatal to mankind. This shows, says the Boston man, that the antitoxine idea antedates the Christian era. Our notion is that this physician has not read his Livy with an enlightened mind, for it is prudent sometimes not to interpret these old authors too literally. Translated with the light of our own modern experience, what Livy meant to relate was this: That amid his wars and conquests and affairs of state the great monarch made time to go duck shooting, and in the pursuit of the wildfowl he found such rest and recreation, and renewal of strength and refreshing of soul, that it was as if he had partaken of a magic elixir. That, we may be certain, is all there is in Livy's wild duck story and the Boston doctor's ancient antitoxine theory.

What Mithridates did in Asia twenty centuries ago you may do in America to-day. Here and now are wild ducks of virtues as protent as there and then; and in the pursuit of them, on marsh and slough and river and bay, may be found renewal of strength and refreshment of spirit, and strength and courage, clearness of vision and joy of being.

If only, when autumn shall have come, you will break that chain.

It is naughty for little boys to rob birds' nests in May, but there is a youngster in Passaic, N. J., whose tree-climbing exploits have brought him such fame and fortune that his example will go far toward stimulating anew the army of nest robbers. When this fortunate young gentleman had shinned up the tree after a strange nest, he found his prize to be a tin box containing a wad of bills amounting to $1,000. Is there any actual bird's nest one might find in these times worth a thousand dollars?

The most valuable birds' eggs are those no longer to be found in nests. At an auction sale in London this year an egg of the extinct great auk sold for $900, a sum pretty near to the Passaic boys' find. Auk eggs are so rare that this $900 specimen would probably have brought a higher price if it had not been for the recent death of an auk egg collector, who had in his possession nine eggs; and these nine eggs, to be thrown on the market, were enough to depreciate values. In times past auk eggs sold for $1,000 and $1,500. The collector of the nine eggs, the late Mr. Champley, of Scarborough, Eng., was an enthusiastic student of great auk lore and statistics. Mr. W. B. Tegetmeier tells us in the London *Field* that Mr. Champley compiled a list of all the skins known and of their location, the number of skeletons known and also of the eggs and bones. In this list, which was published in 1888, he recorded the total number of skins as being seventy-nine, of which the British Isles possess twenty-two, ten being in museums; the total number of skeletons ten, of which eight fortunately are preserved in museums; the total number of eggs sixty-eight, of which the British Isles possess forty-five, and of these twelve are in public collections.

The Sportsman Tourist.

OUTING ON PINE ISLAND.

ST. PETERSBURG, Fla.—*Editor Forest and Stream:* Three of us, who had rather fish than eat, chartered a small sharpie, and after fitting her out with wood, water and provisions, we sailed out of the harbor with Pine Island for our objective point.

We had to beat against a heavy sea and flood tide until we cleared Point Pinelos, when we had a free sheet, and fairly flew from the top of one roller to another. In about two hours we again changed our course, bringing the wind on the beam, when we began to roll so badly that one of the party got seasick.

Our course now took us over about three miles of shoals, through which we could clearly see the bottom every foot of the way. With our centerboard well drawn up, we fairly flew wing and wing over water that was in many places only a foot deep, and which at low tide left only a series of naked sandbars. We beat our sharpie through the long and deep Pass à Grille against wind and tide, and finally ran out on the great Gulf of Mexico. Sailing along the west coast of Pine Key until we entered a land-locked cove, we beached our boat and took possession of an old weather-beaten house which had long been occupied on and off by fishermen.

After cleaning house, we nailed mosquito bars over the open windows, moved in our provisions and bedding. From pine knots we made a camp-fire, over which our kettles and frying-pans were soon singing.

A sloop hove in sight, headed for our dock. With a field glass we could see ladies on board, and, as we could also see bedding and boxes of provisions on deck, we concluded the intruders had designs on our pre-emption. We held a council of peace and concluded to give the ladies the best room of the four, take the two next best rooms for ourselves, and courteously permit the men to occupy the remaining poorest room. We greeted them politely. Before we could tell them our plan of dividing the rooms, the captain coolly informed us that he was the owner of a part of the island, including the house we had pre-empted. We speedily made a compromise by taking the poorest room. This party was headed by a Baptist preacher, with son and daughter, a photographer and wife, a young widow, a young "cracker" merchant and the Floridian skipper. The preacher complained because there were no chairs, napkins or teaspoons. In consideration of his profession, the ladies gave him the best of the two rooms that the captain had assigned for their exclusive use.

The key which we occupied had a poor sandy soil. The island was sparsely covered with palm, wateroak and mangrove trees, under which grew a coarse, saw blade grass unfit for stock, but well adapted to hiding rattlers, of which we saw none. Way out eight miles from our camp the Government has anchored a "whistling buoy," which makes a never-to-be-forgotten mournful sound as each great wave fills the wind whistle with air, warning mariners that there is great danger lurking under the water that covers Boca Ceige shoals.

About two miles northwest we saw a sand key that was fringed with a long line of scrubby mangrove trees. We took the sharpie, sailed out and made a landing under the lee of the trees. We waded out and soon found a clam bed, where we "trod for clams," which we found in great plenty. Then we gathered shells and curios until near sundown, when we returned to our boat. We found it high and dry. After waiting two long hours, we got under way and sailed home. After supper the whole party found easy positions around the camp-fire and sang some plantation melodies.

The next morning the minister and his party took their departure. During the day we caught a fine string of mackerel and one large grouper. There are a great many quail on the island, but as we brought no gun, they were safe. Evenings we generally took a stroll on the beach and watched the sun as it sank into the water, looking like a great ball of fire heated to a cherry red.

We are up with the sun—no one lingers in such a bed, namely, a single blanket spread on the pine floor—and take in the morning fishing, never failing to get enough for breakfast. For a butter-dish we used a large clam shell. For salt and pepper dishes we use scollop shells. We drank our coffee from tin cups, which we kept bright by scouring with sand and water, and clean and polish our iron knives, forks and spoons in the same manner. For light, we use home-made candles.

The old house was much out of repair. Indeed, no small part of the building had been used up in fuel for camp-fires. The "small truck" farmers had robbed the building of its windows and doors, and the only furniture we found was a rough board table, which we scrubbed with sand and lime juice until it was comparatively clean.

For all time to come we shall have infinite respect for the woman who keeps kettles and kitchen clean and tidy.

On the same day that we arrived a 10-ton schooner came in from the Gulf and remained over night. As her captain and crew landed at midnight, carrying baskets of merchandise to a sandy plateau in the middle of the island, we concluded they were smugglers. Before daylight they sailed in a southerly direction.

After breakfast we took their track and tried to find the *cache*, but we might as well have tried to find a track in the water as in the sand of this plateau.

Two days afterward a sharpie came in from the bay with three men on board, who told us they came to fish, but as they had no ice nor salt, we concluded they were confederates of the smuggler. During the following night they, having the bearings of the *cache*, brought back the goods in sacks and sailed up the bay toward Tampa. We were told that Pine Island and Long Key are much used as a rendezvous by smugglers, for the reason that Government vessels never run in at Pass à Grille.

The wind blew a gale from the southwest for two days. With every wave we could see some small shells that quickly dug holes in the sand. They were about as large as a bean, varied in color, with shells so soft that we could crush them with thumb and finger. They are called pompano shells.

The pompano is the choicest and most expensive fish that swims in the Gulf. They are not beautiful like the Spanish mackerel, but they stand at the head as a table fish. They have fewer bones than any other fish. Their bones are soft and largely disappear in cooking. The meat is fine-grained and rich in flavor. They have no teeth. Indeed they need no teeth, for they do not live upon other fish, but upon the above described soft pompano shells. They do not bite at a hook, and are taken only with gill-nets. They have no scales, and are as smooth and as easily dressed as a brook trout. They bring fifty cents per pound, fresh, in Northern markets.

R. P. BELL.

THE MUSEUM CARIBOU.

[*Continued from page 409.*]

NUEL went in the rain to his snares. He found three hanging up dripping with water. Two of these rabbits (hares) were not quite gray, as we say, on one side. It was brown on one, and the rump was the same color—as though the winter had not quite changed it.

This was Sunday, and we were to have a rabbit stew for dinner. For amusement I wanted to try my hand upon a stew. Of course I could not do as Maria taught me years ago, but I could make noodles of prepared flour; and that it was good the quantity that Nuel ate was proof. After he had eaten more than a whole rabbit he remarked, with a smack and pat of his stomach, "Good, Doc'or. You beat squaw an' white cook. Me like dem dis kine rabbit. Mose so good as moose. We never starbe wid dis dinnie."

Well, I thought myself it was pretty good, though it lacked all vegetables, even onions. There was rabbit, slips of bacon, salt, pepper and dumplings dropped in gravy. It was well I learned to make this stew. We found its use afterward.

The camp outside was damp, and everything was dripping with water. I noticed, too, that Nuel seemed to have a little cold, and I felt myself like clearing my throat very often. But the rain continued the following day, and in consequence Nuel could not start until 12, and then the short brush drenched him. He insisted on going. He said, "Dis good time for hunt um. Not make no noise. You watch um from tree. Tell me w'at you see."

We found no rabbits in the snare. The cause, he tells me, was because "It not run in rain. He hate wet."

I busied myself during the afternoon in chopping more billets. I wanted to have plenty of wood. Nuel returned by 3, and a more bedraggled man I never saw. I could see, too, that something was weighing on his heart besides his heavy clothes. I said nothing, though, except to remark, "Well, Nuel, you are wet. Get off those clothes and put around you your blanket and my comfortable. We will dry your clothes soon."

"Oha, bad luck" said Nuel. "Me is so sorry. Too bad, too bad. Cou'n't help."

Of course, I was very anxious to know what had occurred, but said nothing until I had made the pancakes. Meanwhile Nuel, half clad, shivered occasionally as he turned around to the blazing fire. When we were seated he commenced. "Doc'or, me sad. Me sorry you call. I dis'poin.

"Why! What is the reason? What has disappointed you?"

"Berry much. Dis ticulum ticulum in my trote make me mose crazy. Made me lose callebou. An' de more me try not ahem hem, an' den it seem all de worse. Me tot me hear calleboo comin' dis way. Me lissen. Me try to shut my trote, but it will ticulum ticulum. Den me put leaf in my mouf. Mose choke my trote, but it will ticulum. Me sit down and lissen. No more soun' for good w'ile. Den me wait. Not hear um sound. Me say day gone. Me fine dem 'reckly. Well, me go on careful an' den dat ticulum ticulum come again. Cou'n't help, an' away went calleboo, two, four, six. Oh me dreadful sorry. Can't sleep, me afraid."

"Oh never mind, Nuel. It was unfortunate."

"Un-for-tu-nate. Worse dan dat. It make me lose um dat calleboo."

But it was not many minutes before I found something that might be worse than Nuel's disappointment and my loss. I found that Nuel continued to cough and I heard from time to time a hoarse sound in his chest. From experience I knew what was seated in the breast of many Indians and how many would die of consumption. Nuel was among the doomed ones. But how to help and save him was now the question with me. I saw his flushed face and his restlessness as he turned from side to side.

In my box were a few remedies intended for myself, if needed, but how could I minister to Nuel was the question. I first gave him a little muriate of ammonia to allay the cough. Then in a little time I said: "Now, Nuel, I must give you something more [his head seemed heavy and his eyelids dropped down]; I am going to take the same myself. I think it will be good for you. It is very bitter. I am going to take a little brandy with it too."

Brightening up—"Some rum. Me guess it will do belly good."

"Yes, but you must take some quinine with it."

"Can't me take de rum firs' an' den de med'cin'?"

"Why yes, but it will make the medicine taste the worse."

"Nev' mine. Me can take anyt'ing affer rum."

I took about 5grs. of quinine and a teaspoonful of brandy and swallowed it. Nuel preferred to take his in a tablespoonful of cold tea. I mixed it with 12 or 14grs. of quinine and a moderate drink of brandy in a tin cup, as a reward for taking it Nuel made a gulp of the tea and quinine. He thought it was going right down without difficulty, but he found he had to swallow more than once to get it down. His exclamation was: "Oh, Doc'or! dat de worse med'cin' me ever tas'ed. Screw me all up. Worse dan wile turnip an' skunk cabbage root."

But the brandy and water was swallowed without complaining. I told him to be careful and keep his blanket and comfortable around him. "Never mind," I said, "if you feel hot. It will make you well."

"Ah! me un'erstan' you. It good for belly trote. Dribe out pain."

"And now, Nuel, if your head sings and you can't think well, don't mind it. You will feel better next afternoon."

With these precautions Nuel went to sleep. I could hear him muttering from time to time, but he slept well. Not until the morning did he speak. Then he said: "Doc'or, dis drunk not gone away. Ear sing an' head fall doun. Me fraid me sick."

I simply said: "Oh, no, Nuel. You are all right. Sleep as long as you can. You don't cough now and no ticulum. By and by I will give you some dinner."

"Me all right, you say, Doc'or?"

"Yes, and to-morrow you will feel well."

"Is dat so? All right. Me do as you say, but me berry sorry me lose calleboo an' gib you trouble."

"Are you nice and comfortable, Nuel? Are you warm?"

"Yees, Doc'or, berry comfor'ble. Me go 'sleep. Eyes shut um up. Can't help um."

And poor fellow, he did sleep, and I imagined never on a more comfortable couch than this. He did not awake until after 2 o'clock.

During the morning I went to the snares. It had rained nearly all night and we found only one rabbit. This was made for a stew, as Nuel thought. From hour to hour I visited our tree, as I could. It rained so hard and so frequently I did not dare to visit it very often. Oh, what a dreary day! The sky like lead and only occasionally rifts of light and gusts of wind and rain that would threaten to upturn the roots. I noticed, too, that there was sleet with the rain and appearance of colder weather. The most of my time was spent with my chopping block. Between times I would chop until we had enough wood, but it required a deal of billets.

As I said, soon after 2 Nuel woke up. His eyes and his face looked better, especially after he had demolished two cups of coffee and the most of a rabbit and two large pancakes. His exclamation was: "Me guess drunk all gone. You said not drunk. Me Glad. You said me goin' to be well morrow. It goin' to be cole an' snow, I t'ink.

The weather was very much as Nuel said. Next morning everything was covered with ice and snow. "No doubt," I said, "it is one of those November storms that almost invariably come at this time." Nuel said: "Me guess it goin' freeze up swamp. We mus' have hunt now. Good time."

But I said: "No, no, Nuel; not to-day. Go to-morrow. Then you will be well and see how the ticulum is." He coaxed very hard to let him go; but no, I said, and laid his gun over by my side of the camp. "What would I do?" I urged. "What would I do if you were sick and we had nothing to eat?"

"Umph. Yees, yees. Me see; but me wan' to hunt all de same."

The day was not eventful. When Nuel came back from his snares he found another rabbit and, to my astonishment, an old cock partridge was hanging up without its head. I knew there had been no shooting around here, and I was led to ask Nuel how it came.

"Berry funny. I was set snare—one, t'ree, two, an' me only gone little way w'en me hear drum, drum, drum. Jus' like fly an' drummin', an' me say, 'mus' see dis.' Den me see. Neck caught by snare. Goin' to strangle. Me cut off kcch. Make um blood. You said bes' to kill."

And there was still more to interest me. The air was very still after the storm of yesterday, and I noticed an unusual sky. The heaven was much like ashes, with only a dim spot in the firmament. Even the Canada jays seemed silent, and a few chickadees, that turned upside and underside as they hunted for food, simply called *teek*. It was so dark before 3 o'clock that it appeared like evening. Nuel remarked, "Me t'ink goin' be snow. Dat good. Me see um plain. Not make um much noise."

But next morning we had more snow than Nuel had bargained for. Everything was covered to the depth of eighteen inches or perhaps two feet, and the snow was piling up as fast as ever. The camp was so warm that we had to open our bark opening, and the camp poles appeared to bend under the weight of the snow. From time to time the fireplace would hiss with steam as pieces of falling snow would tumble in from the apex. Nuel had to shovel with his snowshoes a way to the spring. Everything that could possibly bear a flake of snow was laden with it. The spruce trees and firs, large and small, seemed like white tents throughout the landscape. But Nuel was determined to try his luck at 9 o'clock—snow as it did—and it seemed to me to snow just as hard as ever. It could not be less than two and a half feet. His suggestion was, "Doc'or, you had better stay roun' wigwam. Freese han's an' slip if you walk, an' berry, berry easy to lose in woods."

However, it was not long before Nuel returned. He looked woebegone and tired enough to fall down. His words were, "Ush! My Doc'or! Me so glad to see you. No luck but dees rabbit. Eberyt'ing bury in snow. Skirls can't run, nor rabbit; only plunge aroun' an' flounce, you call. Me never saw worse snow. Snare no good. Can't fine no more. S'pose you gib me leettle rum? Do my belly good. You see on back—two rabbit."

"No, no, Nuel. Rum bad for Indian. You go and dry your clothes and put a blanket on you. I will give you some coffee and plenty of my squaw food. That is best for you."

"Well, maybe; you know bes'. But I like um rum."

The truth was, I had not much brandy. I only kept it for emergencies.

Before Nuel had arrived home I found a great change in the weather. The snow had been changing into rain. By 2 o'clock it was raining hard and before evening the plastered snow limbs and loaded branches gave way with a rush. But before 10 o'clock the weather changed. We could feel it too, and I had to close our back door. However, everything looked cosy and warm inside the camp. We could make all the heat we wanted and with not very much smoke.

Next morning everything was frozen up and we could walk where we liked on the crust. As early as we could see, Nuel ascended our tree, but made no report until a little after sunrise. Then he reported. "Doc'or, you jus' come an' see de calleboo—one, tr'ee, five. One big one—you call stag—two smaller an' two two-year-old."

And sure enough, there was a little band, walking along in regular order, going out, it was evident, with the intent of visiting the little island, as Nuel called it.

From this place it seemed to be about a mile and a half away, but from the edge of the outer woods not more than three quarters of a mile. But now everything was excitement with Nuel and I think considerable excitement with myself. Nuel's charge was: "Now, Doc'or, me must go an' see if me can't get to udder side of islan'. Calleboo done smell quite so much as moose, but he see on snow an' hear crus' berry good. You hab better stay here an' watch um tree, an' w'en calleboo start to come dis way (he will come dis way, me tink) right down dare—you see, hollow place—den you be ready. If me miss um, get some calleboo any kine—if you can."

I listened very attentively to his charge and in a short time Nuel was away.

Meanwhile my attention was given to the little band and then to my surroundings. And first of my surroundings. As I looked in a general way, we saw only a wide lake of snow, bordered by the distant evergreen hills that might be ten miles away. Then as I looked more attentively I saw larger or smaller dark patches, and in one place what might have been a small stream. It was more than simple patches, they seemed to run too much in places, and I thought they must be the general run of the bog. Then as I looked closely, I saw that this was not a mere waste of snow—like a lake or a prairie. No, I could see above the snow and small spruce trees, and some of them just above the top of sticks and bushes. And I could see two bleached dwarfed beeches and lifeless alders, and mixed among them the withered leaves of oaks that trembled in the air.

But now the sun is shining and the crust is glistening in my eyes, and I can see a deeper shade of color than that that fringed the border of the barren. But, above all, my attention is fixed most closely on the little island, as we have called it, with its higher spruces and longer fringe of trees. I can see these quite plainly. One of the caribou seems to be pawing at the ground, and his front feet and his nose are beneath the snow. And just beyond him, not two rods away, is a large boulder. It is perfectly white, and the rock might be thought to resemble an immense white elephant lying down.

But see those caribou—two seem to be lying down. They are so mixed up with those browned oaks that it is hard to tell what they are. I wonder will Nuel get any? I have waited for a long time now, it seems to me (only two hours), since Nuel left. I don't see him. He was to return in an hour to try and see if he could not get a shot. I am looking most carefully to see if I cannot detect his approach. But no. Nothing in sight but a few stunted spruces. But what is that? It seems to me I see a new place is coming under my vista. Does it change? It does, I declare. See how this bush changes! Yes, I see something like a spruce bush. I did not see those same bushes nor in the same position before. Take a line. Yes, the bush has changed. That bush was not there before, and now—see, the spot is coming this way. Yes, yes, there is a thick-branched spruce—nearing and nearing. It stops and then turns to the right and then to the left, and although Nuel is approaching—sometimes almost straight to my watch tree—I can see his dodge to get under the boulder and the island fringe.

Now I watched, as I suppose I never watched Nuel before. I cannot see him distinctly. Maybe I imagine, but he is approaching. I think I can see the heel of his moccasin as he steps. His body is too close to the bush for me to see more. Now he is very cautious. He turns to the left. Now he makes a few steps forward. Now I can see the skirt of his short coat—now his shoulder—now his English cap. Now he pauses and I pause, too.

I can see the caribou. Three are digging under the crust and two are lying down. A fine stag, I could see, was pawing, and I judged hooking up the crust.

But look! I see a bluish puff of smoke. Then four animals as for a moment in consternation stood and circled around, and the fifth made off in a straight line, with his head lower than when he came from the timber to the island.

But this is no time for me to look. I must be down as soon as I can and try to intercept the flight.

It did not require more than six minutes to get to my station and I was ahead of the caribou, but I could hear him as he came along crushing through the crust. The four were in advance of the stag—two females and two yearling males. And the stag I could see was tired and I thought badly hurt. He comes right along though, only pausing for a moment as though he wanted to rest. This was my chance and I fire. The ball struck the animal just behind the fore shoulder and with a convulsive shudder it was dead.

When it fell I must confess a curious sensation overcame me. It was a kind of remorse—as much as to say: "Well, you have obtained what you wanted and the poor harmless thing is dead. Does it pay?" But men do not analyze their sensations. It is not good perhaps at times, and, as I heard Nuel rushing on through the brush I forgot those death spasms only a few rods away.

Nuel's exclamation was: "Well, Doc'or, you got um shot. Did you kill um?"

"Oh yes, Nuel."

"W'at! got um dead?"

"Yes."

"Not run more?"

"No. There he is. See him?"

"He! ho! horoah! Ain't me glad! Me so glad me wan' to shake um han' like Englese do."

"Well, come along, Nuel. Now the thing is to get home."

"Ugh. Never mine 'bout dis. Me know de ways to get back. Blenty eat for a good long time."

With Nuel we inspected the stag. His question was: "Now, Doc'or, done you t'ink dis good 'pecimen? No poin's broken."

"Yes, Nuel, it is a very fair specimen. Not so large as some I have heard of, but a very good one indeed."

Of course, the caribou was measured and at once the skinning commenced. It was nearly noon now, and as Nuel said, "Skin come off good now," may be he had some idea too of a caribou steak for dinner. Not many minutes after the skinning began he remarked: "No more squaw meat." And pausing, as it were, to think of what he said, he added, "but Doc'or, you make so good as Englese an' F'ench cook."

Dinner over, Nuel told me about the stag. "Well, Doc-'or, me berry glad here. Only luck. Berry bad walkin' firs'. Snow all pile up in heap un'er tree. Little cradle hill, you call, an' den crust won't bear me some time. Take long time to get to bog, an' den dat white field. How me get there 'cross dat snow lake—it was guessin'. Me t'ink can't crawl, can't hide myse'f behin' brush. No, no brush in some place. Den me say me get big brush, wide, get two, make dem t'ick an' me walk behin' bush. Had to go berry careful. Only more slow on line where we see little stag. Udder ones not see him. But leetle stag he see, dough he was lyin' down. Saw him rise up he head more 'an once, an' his ear, too. But me had leetle peep-hole, an' w'en stag seem 'larm, me stan' long time. Not move till head down. Den I move, get sideway, get tudder, get 'hine again of bush. Now me 'gin to tumble. No care for calleboo, but for you. You wan' dem so much.

"But w'en me got 'hine big white rock den me walk fas', an' more slow away from rock. Me see udder bushes, get 'hine udder bush, creep up. Big, fine stag, me say, 'He no smell um me. Win' away.' Big stag, he pawin' wid his big hoof an' me t'o't punch some crus' wid his horn. He w'at we call moss, eatin' it. W'en he not hab his head up me crawl, an' young stag 'hine brown leaves an' udder tree away from leetle one, me not see um till I fires. But 'reckly me t'ink me near 'nuff for shot. Can't get no near widout me fright him. He head to me. Dat not good. Say, 'mus' shoot in neck, close to shoulder. Me make prayer. Bang! An' jus' as me shoot me t'inks, 'You said cuss word 'bout Paul,' an' away went stag an' udder calleboo. An' me said in my mine de Good Spirit punish me for my cuss word. An' me say cou'n't help. Me sorry now.

"But big stag he went off. He some sick. Me saw some spot ob blood an' he leetle lame, but he not blood much. (You say me hurt him bad—blood inside.) Den, you know, me run fas' as me can. Felt [hem-hem-hem] ticulum all de time. Me t'ink a leetle rum would cure um now. W'at you t'ink, Doc'or?"

"Oh, I only have a little, Nuel. Must save it. You might be sick or I might."

"Dat berry sad, you get sick. Me wish you hab blenty rum, dough."

"It would be bad for you, Nuel."

"He! he! Me like to try one bad. Not w'en it hurt, I s'pose, me like um rum. Never mind. Calliboo here. Paul did not fool me. Me will be good wid him. He try me. Me done like deceive—you call. *Hoo hoo*, jus' as owl say, an' dat *snicher*,"

"What do you mean by this *snicher*, Nuel?"

"Well, me mean w'at you call squirrel. W'en he run upside down—make he tail w'en he head down—flat he body, like fly squirrel, say '*smitchet, smitchet*'—dat one kine ob him. Den, w'en he turn up he body—run up tree berry fas'—mock—say snick, snick, snick; he 'nudder kine. Den mose importan' is dis—up, chit—me; me, me, fit, fit; peffer, me, seeket, fee, an' sit on rump, an' wag he tail up an' down; shake it."

"Well, Nuel, what does that mean?"

"All de same as good luck. Mean um same. Calleboo gone dis way. Look out. Be careful an' you catch him.

"But de worse of all is what you call um bluejay. He be a berry debbil. He make me lossun more 'an once."

"Why, what does he do, Nuel?"

"Oh, dat bluejay, w'en you hear him say *pe-ya, pe-ya, pe-ya*—fas' as he can—den look out. De fun is end den. An' dat deebird, he putty bad, too; w'en he say *dee, dee, dee*, he mean somethin', too. But w'en he say *pe, tee*—whistle [slow, high up, low down], dat not bad. He mean he happy. Sing more in late spring. Bluejay he say *run, run, run*. Deebird—*dee, dee, dee*, mean same as *see, see, see*—somefin' goin' on. Meat hawk, moose bird, Canada jay, you call. He putty quiet 'cept w'en he berry hungie. He too busy to pay 'tension to animal. He say *wht, wht, wht*, or somethin' like dat. Maybe he mean scrap, an' he quiet only so all kine of animal may eat up w'ot left. Me goin' to gib meat hawk now. Me so glad to give him feas. Now me goin' begin toboggan. Two better dan one. Me tell you reason morrow. Me glad to look out ob wigwam an' see skin an' horn right un'er my eye."

After dinner I left Nuel to his own devisings, nor did I see him again until just before tea time. Then he returned with some large hoop poles, I would call them, with pieces of wood, I saw, for pins. He looked very much pleased, and his remark was, "Got w'ot me wan', Doc'or. Make toboggan—two of 'em. Good for crus'—easy. Hope it las' t'ree day. Guess it will."

Soon after supper Nuel said, "Doc'or, me goin' morrow mornin' to our firs' place for hunt, w'ere me left canoe. Wan' to see canoe. Good trabbling now. Can go an' back 'for dinnie. Not so far as we walk. Me goin' to carry one hine leg for calleboo along wid it. Day af'er morrow me wan' you come if wedder fine. Get early start. Go all way to 'foolhouse.' Den if freese hard all way to you inn. You un'erstan', Doc'or? You be ready?"

"Yes; and I think it is a good plan. I will get ready by to-morrow and we can start the day following. You had better take my heavy gun with your leg of caribou."

"Yes, make lighter. Very easy af'er we get to canoe. Run right along, 'cept rapids or airhole. I watch."

And so, after an early breakfast, Nuel started, as he said, on his toboggan, with his venison and gun, and returned home just before dinner.

"Firs' rate," was his exclamation. "Canoe not spoil at all, only on one bow, high up, leetle crack. Branches came down on snow heavy, pile um all up. But moccasin berry thin. Me can't get you skin—he, he! Nev' mine, me fix 'em 'enight."

But now I was so absorbed in my cleansing of the caribou head that I hardly gave a thought of the herd until Nuel came. Moose bird, meat hawks, chickadees, squirrels, all left me alone. At least I did not hear them until after Nuel came. I even forgot to climb the watch tree, much to Nuel's disgust.

[TO BE CONCLUDED NEXT WEEK.]

The Cat and Game.

THERE is no kind of vermin so destructive to bird life as the domestic cat, if that animal acquires habits of roaming and hunting. The fox is not nearly so bad as he is painted. An examination of the contents of the stomach of those killed will show usually that field mice are largely consumed, and when hungry they will eat grasshoppers and crickets with evident relish. The otter is supposed to be a rare animal in settled regions, but from its shyness and noctural habits, it may escape observation even when traces of its existence are frequently found. It is said that eels are its favorite food. I am told that a specimen or two still haunt Rockland Lake.—*Haverstraw (N. Y.) News.*

Canoe Trip to Hudson's Bay.

Messrs. Kirkwood & McKinnon, the enterprising Sault Ste. Marie guides, write us that they have six sportsmen already booked for their first Hudson's Bay expedition, which will leave June 20.

They will journey by steamer to Jockfish Bay on Lake Superior, from which point their route runs north through numerous lakes and rivers to the Albany River. This river will furnish them a highway to James Bay. The whole trip, including the return, will only take about thirty days.

"MUD-PLUGGING."

ONCE in a great while a slur hits me in a tender spot and I feel inclined to squeal. "H. W. D. L." did that last week. Hence this squeal.

Now, I don't claim to be a bit broader-minded than the average man; yet I do try to get in as much enjoyment out of diverse things as possible, and if I light on something that I don't enjoy I try to believe that some one else does and thus admit that it has its own excuse for being.

Fifty weeks in the year I'm a "shut in." I wasn't made for one exactly. I may growl to myself because I am. Yet duty to others may after all be as good a motive for an existence and demnition grinding as charging a battery to order. So I try to make up for it through imagination.

I admit that much of the dog chat is Greek to me. Thirty years ago my last dog died by poison, and to this day I know how a man feels who wants to commit justifiable homicide. And yet now and then I light on a column that is not outside of my capacity of hearty enjoyment—often enough, too, to make it worth my while to be patient for the search through unknown and unknowable matters, and to be glad that there are others to whom there is so much enjoyment which is a sealed book to me.

I grant that yachting is largely an imaginative pleasure to me. But once did I ever handle the tiller (of a catboat lobstering). Yet sea terms are familiar words to me, and the old skipper doubted my veracity when I stated that I had never steered a sailing craft before—till events half an hour afterward convinced him. For this practical ignorance means simply that what friends I have are not yachtsmen, and one naturally doesn't get sailing invitations from friends who don't know him; so I enjoy as much of yacht talk as I can understand, and am too grateful for such crumbs to grudge the more knowing their technicalities.

I confess that I am no sort of a shot,—eyesight must stand the brunt of that excuse. Still I could probably hit one of friend Hough's bears if I was near enough—and not too near, just right, so to speak. And I dearly love one of J. G. Rich's reminiscent yarns, knowing the dear old man as I do. A rattling, racy description of a trap-match is a joy to me, though I couldn't hit a driver to save me, and never bet a dollar in my life. [I'm a little weak on that point perhaps, for I confess I never could see the fun of betting—perhaps from lack of capital which I could afford to lose. Still, I know there are plenty in the world who can afford to, and if they can get more happiness—and do more good with it—in that way, why, o. k.]

I own that I never saw a salmon outside of a fish market or a dinner-course. No friend of mine owns a salmon stream that I am aware. Nor did I ever catch a 4lbs. black bass. Yet the half-dozen odd two-pounders which I have taken for my share of the world's sport have educated me enough to read with avidity every angling line, and—up to 2½lbs. I have been high line in more than one trouting party. The Magalloway is not altogether *aqua incognita* to me, and I would rather fish than eat any day. [By the way, what on earth do the fellows do with the "five or six tarpon a week" which they are catching? Can such celestial hunger exist in terrestrial stomachs?] And yet again, rain or high water have made my last two lake trips failures, since I cannot afford expensive guides and must take my outing when it is allowed—in midsummer. So I take it out in reading about the fun of others. Good boys! I'd like to pat you all on the back, if I had the fingers of Briareus.

But now here comes "H. W. D. L." and in one stilleto innuendo accuses me, together with the great army of bicyclers, of "mud-plugging," *i. e.*, riding with eyes glued to the road. My dear Alphabetical Section, I must cry, "Hold up! Ye know not what ye do."

There are lots of duffers, of course, in any sport. There are still more tenderfeet, and must be, or where would the veterans come from? Look sharper, friend, and you will find that as a rule it is not the vet. who rides that way.

Ten to one you will find him as erect as a gentleman; at least, so you will find him in this latitude. To the young and rapid, speed is the all in all, be it with horse, yacht, bike or balloon. As we grow older and acquire some education we find that the world around us is of a beauty not to be overlooked save by the few and rare nature-blind, color-blind and note-deaf, who are mercifully unaware of their disadvantages and thus are still open to the happiness that their limits allow. With my love for outdoor sport, and my out-of-the-running for most of it, a world of enjoyment is still open to me at five o'clock every pleasant morning. I have but to descend from my eyrie, take my wheel from the basement, and in half an hour I am five miles away from the roar of the city. Eyes on the road? Not much! Eyes everywhere else. Eyes roaming across the hedges, with best glasses on, watching the birds getting their breakfasts, the squirrels all undisturbed by my noiseless approach [I barely escaped running over a big gray] at their matutinal skirmishing, the sunlight, the sweet notes twittering from the leaves! My physique, H. D., is not up to long tramps. A four mile walk is apt to weary me beyond comfort. Yet my wheel gives me the power to enjoy the shifting scenes in a morning for, say, three hours—one out, one back, one roamin g around, perhaps with my "horse" locked to a tree—and a distance of say 25 miles comfortably enjoyed. How much time did you have to devote to that 50 mile tramp, did you say?

I have wondered just how much agony a painometer would have measured in your small boy before his boyish pride would permit him to own that he was played out. Had you taken that trip on a tandem, you would have had the same enjoyment, as your nature well indicates, and as much more as new scenes, permitted by the extra space per hour that could be covered, would allow. More; when the little fellow was tired, your greater strength would be able to assist him without much strain on your own resources. You could even "go it alone" for a time with fair comfort, and thus afford him a good rest. Then how much happier you both would be, whirring along together afterward! Yes, H. D., WheeL and be happy.

In the rain? Certainly, if you see fit.* One of my happiest rides was a burst through a rainy section at high speed, with the water whistling down in sheets and the

*Moreover, is it not better to exercise even thus than to study street loafing as a fine art, as would be the course of instruction of many a now most rapid youth if he were wheel-less?

mud flying till I felt like a duck—a most glorious relapse backward over more than a quarter century and into my mud-pie days! I don't know that I would exactly recommend it as a paying investment of time, however, in view of cleaning up afterward; but one can thus acquire more real estate in a minute than by any other method known to me—without capital.

An yet, "cleaning up" is not unhappy. Much of our wet Easter Sunday—the Sou' Easter, as we call it here—I passed sitting on an inverted bucket tenderly going over my possession. Not a half-inch of that 22lb. wheel failed to gets its share of polish. Cork handle, rubber pedal, wooden rim, spiderweb spoke—they all got it, and yet did not need it. But I loved to do it. Merely to look at it brought to mind so many happy memories when we—the wheel and I—had whistled over the undulating roads together, with never a failure of either in any emergency that arose. It is a different affair from polishing a pair of boots. I always hated to do that. But you brothers of the shooting-iron will understand.

And that reminds me! Some such brother lately commented on the need of a dress or costume for ladies which would be suitable for them while hunting or mountaineering, and lamented the lack.

My friend from the Rockies, there is no lack! Any fair day, around Boston, you could now see dozens of fair ones in exactly the costumes wanted, skimming along awheel. Stouter material, of course, would be needful than what they wear, but the pattern is correct. I have watched it coming for years, and now it is here; and for two two-cent stamps I could put you in the way of it. N. B. This is not an advertisement, as I have nothing to sell, and should probably have to buy what I should send you. Perhaps the better way would be for you to write direct to some bicycle firm that advertises in the FOREST AND STREAM—or that doesn't. J. P. T.

BOSTON.

UNCLE RUSTY AND OLD SILE.

A Backwoods Correspondence.

BY F. BERKELEY SMITH.

Little Otter Pond.

WELL, sir, me and ole Drive got talkin' about ye considerable of late. There ain't nothin' that pleases the ole cuss more'n when I git talkin' about ye. Yer letter with all them pictures about spring done me good. Ole Drive and me hain't been out to the settlement yet. Wall, I say hain't been out, we have mogged it down for what mail I've had, but we hain't stayed none. Goll, I can't stand it to hum' long in these spring days. I can't actilly sleep nights up here in the shanty, thinkin' of the fishin'. The dog says he see some ole whoppers above the big falls; goll, he says they was nice ones. He says he see one that he cal'lated weighed close onto 4lbs. Says he was an awful trout. I been mendin' my ole horsehair line and cut me a pole, and tied up some bungly flies out of some deer hair and some wool from my shirt, and now the old dog says they got to come.

I kin see it now; thar ain't nothin' like fishin' for a feller in the spring. Git up at jest daylight with the woods a-drippin', stretch your legs and shake the blankit, and gap considerable, and take the axe and split off some of the old stump back of the camp. Shave some of them "plumes" we used to call 'em, and pile 'em julluk a wigwam—so—. Thar, now, draw that brimstone kind of hasty over them old homespuns of yourn, and put the rest of 'em back in that leetle box the city feller give ye. Now go down to the brook and fill the kittle and souse your head in the stream, and come back and cook your breakfast and git started soon 's you can, and then paound it for Beaver Medder Brook and strike in at the big hole. Thar, now, put on that bungly tied fly the city feller gave ye and draw it kinder jerky acrost the pool.

Ker slosh! Thar now—don't let him git under that driftwood and give an extry sink to the hook; them old fellers' mouths are pure gristle, and don't you forgit it. Takes considerable power to sink the hook well into 'em. Thar—easy now. Wall, I swan, you did git him, didn't ye? I'll be beat if he ain't a nice one, too—fatter 'n a mink. Bimeby it'll git most noon, and you'll try more 'n a dozen times to stop fishin' and pick out a flat rock to stretch out on and smoke and eat suthin; but ye can't. And when you're so hungry you're hollewer 'n a gourd you'll stop and brile one of them fish, and arter a lickin' good smoke you'll stretch out and shut your eyes and listen to the brook talkin' to itself and grumblin' in under some old rock, and swirlin' around side of ye and purlin' along. Goll, how drowsy it'll make a feller. Open your eyes and see how it flashes along over the stones at the aidge of them ripples.

Bimeby you'll git to fishin' ag'in, and jest at dark you'll be down to the still waters. How black and smooth the water looks ahead of ye; hear them bull bats screamin' overhead. You kin hear a white-throated sparrer, one of them clear, sweet notes, away back in the swamp. How cool it's gittin', and all the time you're gittin' so dummed hungry ye wish ye hadn't come. But ye can't stop fishin'—you ain't got a bushel, but ye got some nice ones; and ye ain't been fishin' slow, have ye? Bimeby it gits so dark ye can't see your line, and you git out of the water and peek about to see how the mountain's a-p'intin', and then leg it for camp, your ole shoes goin' souse-souse-kerswish at every step, and that last trout ye took now and then jumpin' in your basket. Hello! See that red spark between them black trees? That's the camp, and 'tain't no time 'fore you're thar and have slung off the strap from them two sore spots on your shoulders, and have the fire a-blazin' and the kittle a-b'ilin'.

Like as not I never told ye how me and ole Drive ketched forty-two of the nicest speckled trout once through the ice to Otter Pond. We'd had a hard winter, no use talkin'. Ole Drive and me had eat up all thar was in the shanty, and we done our best trappin,' but 'twarn't no use; it'd snow most every day and kiver our traps up 'fore a sapil or a mink could git to 'em, nor we hadn't no fish hook nuther, nor no am'nition. The ole dog he sot up thinkin' what we was a-goin' to do; bimeby he says to me, you git your axe, says he, and come along down to the pond, and I presume likely we'll git some fish, says he. How you goin' to git 'em, says I, when we hain't got no fish hooks? You come down, says he, and I'll show ye. Wall, sir, we done so; the ole dog he went back of the shanty and found an ole sapil head, and I got the axe, and we started for the pond. When we got thar we begun to chop a hole about forty rod from the Fish Rocks. Now, says ole Drive, you git some string and tie that sapil head onto it and hold her over the hole and git a club. Goll! I done so; and 'twarn't a minute 'fore a trout that'd weigh two pound jumped clean out for that sapil head, and I gin it to him with the club, and out he went spinnin' onto the ice; then ole Drive he out after him and fetches him back. Quick as I'd hit 'em Drive he'd go out and git 'em and pile 'em up whar we was, and 'fore we quit we had forty-two of the nicest speckled trout that was ever ketched at Otter Pond.

Wall, sir, they come in good, and don't you forgit it; and they run all the way from a pound to five pound. Wall, we eat what we could and smoked the rest of 'em, and 'twarn't long 'fore the snow begun to melt and we had luck trappin', and that's the time I ketched them beavers.

Ole Drive sends his respects. SILE.

NOTES FROM CAMP NESSMUK.

III.—Snakes and Presentiments.

ONE afternoon an incident occurred in Spook Hollow that gave me something to puzzle over. But to understand it, we must go back a little. A few weeks earlier I was out looking for squirrels on the Big Island which Dan River forms with the Black, down near the Arkansas line. For an hour or more I had been moving slowly through the woods, craning my neck and scarcely ever looking where I trod. Suddenly, as though commanded by a sharp voice from the air, the feeling struck me: Look at your feet! I did so, and sprang back, for one step forward would have landed me on a fair-sized copperhead, coiled and ready to strike. I stood a moment watching the little villain, and then made a feint of attacking him, to test his mettle. He was game, and gave me to understand that this was strictly a business affair, and that he wouldn't run from anything on two legs.

I had not slain a serpent since "Coahoma" took me to task about that blacksnake. But the ethics of this case seemed different. *Homo* was not the aggressor. *Ophis* had plenty of time to give half the road. But no; he preferred to stay and wantonly kill something that he had no use for, and which, according to Missouri laws, was out of season. It is true that he did not charge; but that was scarcely to his credit, for I was saving him the trouble by blundering right into his mouth. Even a rattlesnake would have shown some regard for my pedestrian rights by giving warning; but this lurking little assassin simply drew back his brazen head and said: Retreat or die! On the whole, it seemed to the jury that the said snake was taking a cowardly advantage of unoffending innocence. It was not a fair show for Kephart. So I drew bead on Mr. Snake and blew his head off.

After examining his fangs and finding them in prime working order, I realized that this had been a pretty close shave. In fact, after deliberating upon the æsthetics of dying alone in the woods and upon the chances of a proper obituary certificate being framed which would be binding upon the insurance companies, I took the shortest cut for camp, where Barnes looked up surprised at the announcement:

"You can do the hunting to-day; I'm out of it."

It is matter for regret that this adventure so soured my disposition that a few days later I killed a perfectly harmless king snake for no other reason than that he wriggled; and subsequently, on running across a puff adder that blew itself up and hissed like a goose, I shot it to demonstrate to a skeptical companion that this species has no fangs, and consequently should be let alone. After these lapses I punished no snakes until the afternoon that I started to tell about.

Again I was squirrel hunting. Again looking aloft and letting my feet take care of themselves. Again the mysterious warning. Again I found myself in the act of stepping on a copperhead. Again the little imp refused to give me room, but lay there, coiled and darting defiance from his forked tongue. And again he was decapitated with the .22. Strangely enough, this snake turned out to be deformed. It had the head and neck of an adult, but its body tapered off so abruptly that the creature looked somewhat like a lizard without legs. But there was nothing deformed about his poison apparatus.

For some time after this I carried about with me a queerish feeling of uncanniness—not on account of the snake, but because of the warning. Call it premonition or what you will; was it not weird? At first I thought that the snake must have been on the very edge of my field of vision, so that I saw it dimly without realizing the fact. But this could scarcely be, for in both instances the warning came like lightning, when the snake was so near that it could not have been seen without glancing downward. I find that when standing erect and looking straight ahead, my eyes lose sight of a bright object on the ground at a point at least a yard ahead of me. In both cases I was looking upward at a considerable angle, and the reptile was within two feet of me when discovered.

It would be pleasant to believe in a good angel aloft who looks after the poor woodsman; but—why should one sinner be favored and another stricken?

I move that the discussion be closed.

HORACE KEPHART.

On the Beaverkill.

ROSCOE, N. Y.—We started from this place and drove up the Beaverkill about nine miles, where we stopped at Mrs. Voorhes's. It is one of the loveliest spots on the stream, and no one who has ever been there but carries back some pleasant recollections of trout that he has caught and trout that he has eaten, cooked under the hostess's own direction in a manner that would tempt the most delicate taste. We stayed two days and caught about 200 trout, several of which were of goodly size. In the pool just in front of the house two were caught which tipped the scales at 1½lbs. each; and one, caught just below, a fine specimen of California trout, weighed 2½lbs. The stream is in the proper stage for fishing and the trout are rising to the fly very well. If any one cares to take a trip to this section I do not know of better directions to give than to go to the Beaverkill Beach House, kept by Mrs. Voorhes.

W. H. JOHNSTON.

Natural History.

TROPHIES AT THE EXPOSITION.

THE committee of the Boone and Crockett Club, to whom was intrusted the duty of measuring the game heads shown at the Sportsmen's Exposition, have made their report as follows:

NEW YORK, May 22.—*Mr. Fred. S. Webster, Sec'y.*—Dear Sir: The committee requested by you to measure the heads of American big game animals displayed at the recent Sportsmen's Exposition begs leave to report as follows:

The committee met on the afternoon of Wednesday, May 15, at the Madison Square Garden, and devoted the whole of that afternoon to the work in hand. It did not pretend to measure all the heads exhibited, but picked out only the larger ones with the view of establishing in this country an authentic record of some heads with which comparison could be made in the future. In the case of caribou, white goats and moose the spread was not given.

Where the heads belonged to private individuals and a history of them could be given, locality and date of capture were given. It is usually impossible to obtain such data as to heads in the possession of professional taxidermists. Yours very truly, THEO. ROOSEVELT,
ARCHIBALD ROGERS,
GEO. BIRD GRINNELL.

The Song Birds.

SAN LUIS POTOSI, Mexico, May 22.—General notes recently published in regard to the scarcity of spring visitors remind me of reports that reached me after the February norther. This was the severest weather that had been known along the Mexican coast for some twenty years. Coffee and other tropical plants were frozen as far south almost as the latitude of Vera Cruz. In this latitude—that of Tampico—there was a sharp frost and in many places a heavy fall of snow. This was accompanied by two or three days of chilly clouds and fogs. Friends who live in coffee belt—that land of eternal green and of infinitely luxurious life, both vegetable and animal—gave me most interesting accounts of the effects of those cold days. The little birds took refuge in the houses, seeking warmth and food. Their stiff bodies could be seen everywhere in the shrubbery. The withering effects of the frost left the deer without forage, and they became astonishingly tame and thin. Pumas and jaguars followed them into the settlements, and caused a general panic. How far these bird sufferers were migrants I have no means of ascertaining. As great numbers of song birds are known to visit Cuba in the winter, it is altogether reasonable that they also follow the mainland southward to where similar climatic conditions prevail. But Mexico has been strangely neglected by the bird students. AZTEC.

The Few Spring Birds.

CHARLESTOWN, N. H., May 20.—Birds are as scarce here as everywhere else this year. Have seen a few robins and ground sparrows, a flock of "yellow birds" or goldfinches, which have gone again, and one swallow. Of course he did not make summer, for we have had a sharp frost since.

Have not seen a bluebird nor an oriole yet. It is very dry and the streams are getting low again, and the earth is too much like ashes to plant my flower seeds, but it is Anniversary week in Boston, and we may hope for rain.

VON W.

MONGOLIAN PHEASANT HABITS.

MILWAUKEE, Wis.—*Editor Forest and Stream:* I notice in your issue of May 18 an article from a correspondent at Oneonta, N. Y., in which he states that the Mongolian pheasants pair off when liberated. I think he has made a mistake, according to the best authorities and my personal experience. Last year, before I succeeded in getting our protective law passed, we liberated three hens and one cock. Each hen raised her brood within a quarter of a mile from the place where she was set down. The birds act in confinement the same as they do in their wild state. It is almost impossible to change the nature of a bird in confinement. They can be tamed to a certain extent, but the Chinese pheasant cannot be domesticated. In my pens, of which I have a score, I put five hens to a cock and find that all my eggs are fertile.

If people before turning out birds would study some good authority they would save money—Tegetmeyer, for instance.

I have been instrumental in getting a law passed this year protecting them in our State for a term of five years, consequently I am very much interested in these birds. I have not yet pinned my faith on either the Chinese or the English birds. I have both in my pens and am watching them very carefully. Next spring I shall turn out both Chinese and English. I have two localities in mind, and shall turn out one strain in each and watch them carefully, and shall be pleased to give the benefit of my experience to brother sportsmen.

There is another fallacy in the article from your correspondent from Oneonta, and that is as to their raising two broods in a season. We will take his statement, although I think twenty-five to a brood is a great many. The hens commence to lay from April 15 on. Out of a hundred hens I received my first egg April 28. We will, however, say the hen commences to lay April 15. The period of incubation is twenty-four days. It would take twenty-five days for the hen to lay her eggs for a brood of twenty-five birds; consequently it would be May 9 before she would commence to sit. Providing she hatched out every bird and with twenty-four days for incubation, it would be June 2 before her brood was hatched. The hen cannot leave her brood until they are two months old, consequently it would be Aug. 2 before she could commence to lay. Another sitting taking twenty-four days to hatch the eggs, it would be Sept. 1 before the young birds were out, when it would be impossible for the hen to rear her brood, as cold and dampness are death to young pheasants.

If a hen should have her nest destroyed by vermin or some other cause early in the season, she would in all probability go to work and build another, which will account for the young broods found early in the fall.

I am very much interested in these birds; have been breeding them and studying their habits for three years; have been working to get them introduced in our State, and hope to see the time when they will be found in every State in the Union. H. F. BOSWORTH.

A Montana Elk Farm.

MINNEAPOLIS, Minn.—*Editor Forest and Stream:* The Bert Bryant spoken of in the inclosed clipping is C. A. Bryant of Columbia Falls, Mont., an old friend of mine. I spent one year in the vicinity of Columbia Falls, and found it a great country for large and small game.

D. A. B.

The report reads: "The business genius of the ranchman of Flathead valley is not confined to the raising of wheat and spuds, the opportunity for side issues is gradually being improved. Bert Bryant, a year ago decided that the raising of elk would prove a profitable and pleasant pastime—more profitable than cattle or cayuses—and having a ranch especially adapted to the industry, he started for the mountains to catch a pair of the wary animals for a starter. To start to catch the fleet-footed elk would appear to be a task to discourage the average mortal, but Bert says it's easy when one knows how. Last winter Bert Bryant and C. Christiansen captured two handsome calves, a male and a female, but the male broke its neck on a picket rope within ten days of its arrival at the ranch. The other calf thrived and proved domestication possible. This year Bert Bryant and Ernest Christiansen went out and returned Thursday with six handsome specimens. A 4-year-old bull, four cows and one calf were brought in and on Friday were taken to the ranch. Three of them attracted considerable attention as they were led through town. They were fat, sleek, and carried their pretty heads high in the air, but their keen eyes observed everything that went on.

"To capture an elk requires several unusual accomplishments. One must be expert in throwing the lariat, and must be able to ride the kind of snowshoes known as 'skis.' The elk browse in the ravines and the hunters keep along the hills, several hundred feet above. When a band of elk is seen below the hunters select the route with the fewest obstructions and then start down. The fastest coasting ride is slow compared with the flight of the smooth 'skis,' and before the elk have had time to start the hunters go whizzing into the band and the lariat has been thrown over the neck of one or more. The captured elk will struggle vainly for awhile, then get mad and show fight, and the hunter who gets familiar too soon will find himself in the snow with four sharp feet pounding him with surprising force. After an hour or two of patient work the elk may be led, although frequent efforts for freedom will be made.

"Mr. Bryant now has seven of the animals, and as elk can be raised as easily as cattle the enterprise is sure to be profitable. Competition is not likely, as there is hardly one man in a thousand who could capture an elk. This band of elk will prove one of the attractive sights of the valley, for it is safe to assert that comparatively few persons have seen an elk."

Michigan Spring Birds.

WHITE LAKE, Montague, Mich., May 23 —*Editor Forest and Stream:* The spring birds have all been late in arriving here this year, in fact, some have not made their appearance yet. I have not seen a single bluebird. Scarlet tanagers are unusually numerous. Robins are numerous, also Baltimore orioles, but I have only seen two pewees. Kingbirds, killdeer, tipups, chipping sparrows, orchard orioles, martins, swallows and blackbirds are here in abundance. Wrens, catbirds, chewinks and thrushes have not arrived. We had a very cold snap last week, ccompanied with frost and snow, and most of the birds mentioned above as being here, arrived after the cold weather disappeared.

I have seen only two nests that contained eggs, one a bluejay's, the other a flycatcher's. Crows are unusually numerous, also hawks of all descriptions. Grouse are fairly abundant. Squirrels of all kinds seem to have disappeared.

Trout fishing has been very good this season, some extra large catches being made. Capt. Lysaght, of the White Lake Life Saving Station, made a catch of fifty-six brook trout May 1, some very large ones, too. All the streams in this vicinity have been well stocked with trout, and we have had good fishing for the past four years. This is the nearest point to Chicago where good trout fishing can be obtained.

I saw a large flock of ducks in the lake this evening. A flock of geese stayed here all the spring, but they migrated last Thursday. The water in White Lake and in Lake Michigan is nearly 3ft. lower than it was a year ago.

Several times of late I have heard and seen whippoorwills. This bird is to be found in large numbers in this part of Michigan. E. S. D.

Florida Plume Birds.

A ST. AUGUSTINE correspondent who has been interested in the effort to secure a more effective law for the protection of plume birds, writes as follows of the defeat of the bill in the House: Well, the "Birds of Plumage" bill, which passed the Senate so easily under the leadership of Senator Gennar, who introduced it, was killed after all in the House. It is too bad. Of course there remains the old law, which is better than none, but is far from being as effective as the amendments would have made it. At the next session of the Legislature we shall renew the contest, we hope with better success. The birds of plumage, which give such added effect to much of the scenery of Florida, must be protected if any are to remain. Great efforts will be made to secure the enforcement of the present law, failing to secure the passage of a better. W.

Adirondack Indian Relics.

NEW YORK, May 22.—*Editor Forest and Stream:* Being somewhat familiar with the Adirondack region, and having made a small collection of Indian relics in that locality, I have lately been asked to advise one of our public museums as to the best places for systematic exploration in the interests of archæology. That I may do this intelligently, I ask the courtesy of your columns to inquire whether any of your readers know of Indian village sites, burial places or mounds in the Adirondacks or other places where relics have been found. If so, I should be greatly obliged if they would write me, giving such particulars as they think would be important. My address is 111 Broadway, New York city. HERBERT M. LLOYD.

Robins Island Pheasants.

NEW YORK.—*Editor Forest and Stream:* The Robins Island Club have purchased, through Mr. John Glessing, of Forest Gate, London, some fifty to seventy-five pheasants, the purpose being to introduce fresh blood into their present stock, as we all know too well the consequence of inbreeding.

The superintendent gave the members most excellent sport last fall on these game birds, and by this importation he expects to excel all previous efforts. These pheasants have been purchased in small numbers from different aviaries to get as many changes of blood as possible.

WILLIAM GLESSING.

The Rifle on Grouse.

PORTLAND, Ind.—When one of your sportsmen lays aside his shotgun, chains Tobe to his kennel, takes up a rifle, and, going into the brush, picks the heads off half a dozen grouse while they are walking, please print it in italics so I will be sure to see it, and I will write and call him brother. C.

Carrier Pigeon J. C. D.—1894—3.

A PIGEON which seems very tame and quite exhausted came to us last Friday. We wish very much to find its owner, and the fact of its arrival; please insert in your paper. The mark upon it is "J. C. D.—1894—3." The owner may find it at 28 Crescent street, Fitchburg, Mass.

Game Bag and Gun.

ONE DAY WITH THE QUAIL.

IN your issue April 20 last I enjoyed "A Quail Hunt on Horseback," by Meb Worcester. It encourages me to give you an account of one I had last fall in Munroe county, Georgia.

While we had a fair crop of birds in Georgia the past season, yet there were not so many as we ofttimes have, large bags not being very frequent.

Early in December last I met at Dames's Ferry on the Southern Railroad, 18 miles above Macon, my clever friend H. W. E., to take an outing after bob whites.

E. had a young pointer bitch in training for a friend of his, taken in hand about two months prior to our hunt. When he got her she was very green, and the gentleman offered to wager that E. would never teach her to take a bird in her mouth. We will see how great a mistake he made ere our hunt is over. I had my old dog Max, of whom you have heard before, not thoroughly trained, but a fine hunter and fair "all-round" dog.

We mounted our horses, and having heard of a covey near by proceeded thitherward and Max soon located them. I was shooting a Winchester "pump," my second days' experience with one in the field, and when the covey flushed I took a right hand bird, which I did up in fine shape, but failed to put in the second shot, as the gun worked awkwardly to me. E., however, bagged three birds at two shots, thereby scoring two on me. We followed them into a fairly good place to shoot. One got up wild, which I killed, and then another, which I shot, but it went wabbling down into a thick place, but the dogs failed to secure it. Several more were flushed, but we failed to score another.

Mounting our horses, we go forward, and in a short while had located a very fine bevy, in fact, it was the largest I have seen in quite a long time. We bagged four birds on the rise, and I worked the gun on as satisfactory a double as one could wish, except the second bird flew 100yds. before falling. We followed the birds into a thicket, where E. secured one and I another. There was too much woods to kill many. Leaving these birds, we go on, and in a few minutes Max had located a small batch of birds. Quickly tying our horses, we soon had them up, but under such disadvantages that I got only one, while E. did not get a feather. The birds followed a branch bounded by thick canes. One bird flushed and E. grassed it with a quick snap-shot. A little lower down, and E.'s dog had one pinned down on the bank of the Ocmulgee River, when he called to me, "What shall I do with this bird if it flies over the river?" I replied, "Why, shoot it." He flushed it, fired and it fell 30yds. out in the water, when the bitch, that "wouldn't ever take a bird in her mouth," sprang into the water, swam quickly to it and retrieved it beautifully. Not only did she retrieve the bird, but on every occasion when she could get the bird did she promptly bring it, handling gently and delivering it to E. with great satisfaction. She is one of the best I ever saw in the field, and to my mind a good field dog does not nearly reach perfection unless he faithfully and promptly retrieves your dead birds. The best dog I ever owned, as to bird sense, would not retrieve, and hence I could not call him first-class.

When E. fired at his bird, two others flushed; one coming directly over me. I turned and fired at it. Though hit hard, it flew into a cane thicket, and the dogs could not find it. Moving on up the railroad, and near to the river, we found a covey in a small pine thicket; got them up, and scored one bird each. We soon found the scattered birds. I bagged one and missed another; then E. got two more, and I followed suit by bagging two and then missing one. This covey gave us more sport than any we found.

Pushing forward, we covered considerable distance before we found another small flock. I got one bird. E. bagged one and missed one, and I likewise. E. then killed one, and I shortly afterward got another very satisfactory kill. We passed over a steep hill down into a branch crossing, paused to water our horses, when, in attempting to pull up a steep bank, my horse slipped, fell to her knees, while in the struggle I came very near being badly bruised, besides ruining my gun. Outside of considerable scare, with much grit and sand on my gun, I was soon o. k., when we mounted, and shortly had located a remnant of a covey, out of which we secured three birds. I made here a seeming inexplicable miss; but, following my bird, found it barely able to fly, and had the satisfaction of knowing I did not make so bad a miss after all.

We hunted over considerable territory after this, bearing around back toward our starting point, but away from the river. We lingered at a branch to refresh the inner man with a very enjoyable lunch, mounted and anxiously looked forward to the next covey. We finally reached good and familiar ground, where Max pointed a bevy in the edge of a patch of short-leaved pines, which rose very badly, out of which I scored one very excellent shot, while E. failed to bag one. We did nothing further with that cover, unless it was one more bird, and I am not sure of that.

Passing over and beyond a branch the dogs struck a familar path leading over a long hill, and on toward the top Max rapidly sped, for he had several times found birds there. When I reached the top I found both dogs on a staunch point. Tying my horse I called to Henry to hurry forward, which he did. We had shot birds several times here, and you may imagine our surprise when a large covey rose instead of six or eight birds, as we expected. I bagged two birds and badly wounded another on the rise, which I got later on at another shot. Henry killed two or three out of that covey and I killed four. The last bird I shot at towered high into the air, flew behind some pines and I failed to secure it because I could not mark it down. I generally count all such birds as my meat, if I can locate them, as it is invariably the case that an eye is out, or the bird is crazed by a shot in the head, consequently it is easily caught if located.

Having gone several hundred yards I missed Max. Calling E., we retraced our steps, and turning aside over the hill opposite where we found the last birds, the dog had spotted another small bevy in pine thicket, out of which we got only two birds. Our hunt was rapidly drawing to a close, and as we followed a footpath I noticed Max, ahead of me, drop suddenly into a beautiful point. Having passed a bevy in the sage, I grassed one, followed into the woods and downed another there, but the dogs could not find it. Thus ended quite a pleasant shoot. We had thirty-nine birds—honors about even—with several more to my credit than to Henry's. OLD SUBSCRIBER.

Canvas Boats.

OMAHA, Neb.—I wish to assure E. R. E. that it was far from my intention to condemn the folding canvas boat. I fully agree with him that for the purposes for which it is intended it stands without a rival, and that but for its aid I would have many times been debarred from much pleasure. But just the same, when I get in one it is with fear and trembling, and my sensations are much the same as those experienced by a tenderfoot when he first attempts to ride the festive bucking broncho. I simply recorded my experiences.

On the trip in question we were 20 miles or more from the railroad, and but for the folding boat would have had but little shooting, for there was no wooden boat there and we did not have the facilities to transport one so far.

I have often seen my friend George go out in very rough weather in the canvas boat and not ship a drop of water, but when I am aboard it is a hundred to one shot that we get ducked before we get back to land. George says what I need is a big raft, and he knows. He always insists on my lying down in the bottom of the boat and wants me to part my hair in the middle as well. W. R. H.

Small-Bore Bullets.

NOW THAT the small-bore army cartridges are adapted to sporting rifles, it seems in order for any who have tried them to give us some light as to the killing qualities of these missiles. Is there any proof that a deer hit by a .30cal. bullet, half-jacketed or otherwise, will "drop as if struck by lightning," as we are told? "I want to know," and I imagine there are others in the same fix. AZTEC.

MOOSE CALLING EXPERIENCE.

My experience in moose calling, derived from half a dozen expeditions covering the calling periods of as many seasons, in widely separated localities, is necessarily limited compared to that of many others. I am familiar with two methods of calling, one by which the notes of the cow are imitated, and the other in which the calls of both bull and cow are produced, each system embracing at critical moments the low coaxing call with the horn held close to the ground, and the challenge note of the bull, I have seen both methods successful. The imitation of the thrashing of the antlers among trees and saplings, by scraping a tree or the side of a canoe with the bark call, and the use of the same implement to represent the sound of micturition, I have heard practiced under favorable conditions without success.

It is difficult to convey by description an idea of the calls made in decoying moose, but the average man can, with a little instruction and practice soon master the art to a degree that will assure occasional success to his own efforts. The great danger lies in calling too frequently, and the principal obstacle to success is the ill-timed breeze which often arises, then if the bull is not already in that position he will work to the leeward, scent danger and retreat silently as a shadow. The birch bark horn or call varies slightly in construction, and is familiar to most sportsmen from use or description. In localities where white birch is difficult to procure a section of the trunk of a small dry cedar or pine will answer the purpose. The billet is shaved into the required shape, split in two pieces, which are hollowed, then rejoined and secured with buckskin strings. I have seen an Indian make one of these calls in a few hours, using only an axe and the inevitable knife with the farrier's curved blade. Several good specimens of these calls may be seen in the Museum of Natural History in New York city.

The following instances are taken from the notes of a trip made some years ago: Sept. 11, take out shooting license No. 43, showing that forty-two non-resident moose killers have preceeded me thus early in one county of the Province. Oct. 28.—For six weeks have called on all favorable occasions, canoeing daily on the lookout for game. Ten moose have been called up. Three have been seen, two killed, one shot lost by leaving position too soon. Heard answers from only three bulls and distinct answer from but one. Most opportunities, probably ruined by winds. The moose secured were small bulls, probably three years old. They were 6ft. and 2in. high from hoof to ridge between shoulders. The antlers spead 24in. and 27in., and their weights were 649lbs. and 662lbs., including blood and entrails. They were cut up and weighed in sections with accurate salmon scales. Both were killed with a .45-90 Winchester, presenting easy broadside shots at 50 and 70yds. Each hit back of the shoulder, the balls ranging forward. In neither case was the off shoulder broken nor did the balls pass through the animal. Each fell almost immediately. I have seen deer and antelope run 100yds. after receiving similar wounds. These bulls were killed Oct. 1 and Oct. 8, they were lean and infected with ticks, and the flesh was poor compared to moose meat secured earlier in the season. They came to early morning calling when the air was still and frosty, and sound traveled easily a long distance. In the first instance, the calling place selected was perhaps 20 miles from the home camp, and the guide and I reached the place late in the afternoon. Pitching a very small slate-colored A tent in a thicket close to the river, we made a small fire from wood prepared several days before, cooked supper, floated down stream, caught three or four trout for breakfast and turned in to sleep. The call was made at 4 o'clock the following morning, and the sharp-eared half-breed claimed to have heard an answer, and heard it again later. Waiting patiently over two hours, as the sun was rising I heard a peculiar muffled, smacking, continuous sound, and the bull shambled into sight, presenting an easy broadside shot. The experience with the other moose was similar, except that no answer was heard, and a second call was given, an hour after the first.

On another occasion we pitched the A tent on a lake shore, portaged the canoe across a short carry to a second lake near whose shore, some 400yds. from the carry, was a small knoll from which we intended calling in the morning. We were there on time, and gave the third call after breakfast. While the guide was packing our outfit, I took the horn, rendered a verse or two of our national anthem through it, and varied the performance with many outlandish sounds. Recrossing the portage, we embarked for the head of the lake, and on looking at our late stand saw close to it a fair-sized bull, evidently watching us. We headed for him, but he turned and walked away deliberately. There was too much motion of the water, and the distance was too great for a probable hit, and I watched him with field glasses travel a short distance, until he disappeared in thicker growth. He walked slowly and carefully, winding his neck from side to side and weaving his horns between the saplings, as if endeavoring to avoid all noise. The guide was surprised at these actions of the bull, as the wind would not carry our scent in his direction, and from the guide's experience and various moose traditions, we should have been able to paddle within easy shooting distance. Since then I have known of two moose approached and killed under the same conditions. We laid out several nights, hoping to hear the voluntary notes of cow or bull, without success.

On one occasion when the conditions were favorable I decided on calling at night, though the guide protested that at best only an uncertain shot would be attained. We approached close to the stand selected by canoe, well supplied with blankets, and were soon comfortably established, sheltered by a spruce growing near the center of a small marshy opening in the timber. The first call was made at 10 o'clock when the nearly full moon showed above the treetops. The answer was immediate and unmistakable. The *oh-ah—oh-ah—oh-ah* of an old bull was as distinct and clear as possible. All was quiet for twenty minutes, when his approach began with calling at every step. This approach, calling and stopping to listen, occurred many times in the next two hours, combined with much thrashing by the antlers, sounding, the guide said, like a man falling with a canoe on a rough portage. It was now full midnight, the moon was high and the night unusually light, the air still and frosty, the moose only 200yds. away, as revealed by the tracks the following morning. Any moment might afford the shot. Then the squalling call of a young cow, preceded by the deep notes of the bull, rang out sharp and clear. They remained near us perhaps half an hour, and when heard a second time, were fully a mile distant and an hour had elapsed since the meeting. While they were close at hand, the bull challenge note brought back a short, hoarse, angry response, some thrashing with the antlers, and no more. To approach them, with some noise and the challenge call might have been successful, but I had firmly resolved against such a risk. The father of the guide and one brother, had lost their lives in such attempts, and the preceding year, in this same locality two sportsmen were killed by a caller whom they were approaching for a moose. The caller in turn, mistaking them for an incoming moose, shot. Most unfortunately, his ball passed through the neck of the first man and lodging in the head of his companion following, killed both. Twice in my own experience had I seen shooters called up, and had resolved to follow the advice of an experienced caller, "never to sneak a moose." The call of the cow we had heard was not orthodox, which was explained by the guard's remark, "Young cow squall good many ways." It is marvelous how such a balky, clumsy animal as a moose can effect his retreat as noiselessly as he does in difficult ground. On one occassion a bull had approached within 60yds. of my stand, where I was well ambushed. He was to my left front, and in a low dense growth of soft maples occasionally the swaying of the top of a sapling gave evidence of his position. A morning breeze drew down the lake at my back; I felt it on my neck, and saw the brilliant leaves flutter above the moose and heard no sound from his cautious retreat. Examining the track later, we saw that he had approached the thicket across a cranberry marsh, and that had our position been advanced 50yds., he would have been in full view while walking across the opening for 200yds. We saw where he had turned in the thicket without apparent sound or commotion, how he had back-tracked across the marsh walking, and then turning to the left, made off at a trot. I have been present at the calling of many bulls, four of which have presented easy pot shots at from 40 to 70yds., and were secured. Another moose was shot by my cook, within 60yds. of the home camp, while I was at my stand 150yds. distant, having called twice myself, early in the morning. On another occassion one of my Indians killed my bull under similar circumstances, though it is improbable that I would have secured a shot in either case. And once again I lost an easy shot by leaving my stand too soon. The largest bull killed was probably five years old. He was 6ft. 4in. high, girthed 6ft. 11in., and weighed in life, estimated, 1,000lbs. His antlers spread but 37in. On only two occasions have I heard the distinct and repeated answers of old bulls when coming to the call, though neither afforded a shot. Several times I have heard a cow call, usually at sundown. In the bull call—*oh-ah*—the first sound of the vowal O, slightly prolonged, is clearly pronounced, and the short second sound of the vowel U is given in the last note of the call; accent and inflection can hardly be described. The cow call varies, usually consisting of three notes—the second one greatly prolonged, and possessing the greatest volume of sound. *Moo-waugh-yuh* expresses the sound to me, and one of my guides always contended that the cow said plainly, "Who are you?" I doubt if the first and last syllable can be heard at any great distance, and thus the call often seems to consist of one syllable. I have no doubt that old bulls sometimes weigh 1,500lbs., or even more; but know nothing personally of such. I once measured a pair of moose antlers, in the city of Quebec, which spread 60in., and have seen in the office of the steamship company at Digby, Nova Scotia, a very large pair, said to spread 74in. I believe that moose come most readily to a night call, and have on several occasions drawn them close to my camp after dark, though with no expectation of a shot. I have heard from trustworthy sources of bulls, deceived by the challenge call, charging to within a few yards of the caller on moonlight nights, then stopped by a shout, and easily killed. A .45-90 cartridge is ample for any moose if the ball is well directed, but a certain percentage of them will miss fire, sometimes under most annoying conditions. I have grown to pin my faith to a short, heavy, double semi-express by Purdey, using 150grs. No. 6 powder, with a solid ball of 490grs. and a slightly hollowed ball of 440grs. It kills quickly and mercifully. A most useful little weapon on any hunt for large game will be found in a light .22, or better still, .25cal. rifle. It will enable you to bag many ruffed grouse, now and then a black duck or mallard, affording much amusement, and the report is not loud enough to disturb game at any distance. In most districts where moose are found, heavy rains are apt to prevail during the calling season, and a good waterproof coat and long wading boots are essential to comfort. They are clumsy things for walking or shooting, but occupy small space in the canoe when not in use.

EDWARD E. FLINT.

THE FIRST TIME ON A RUNWAY.

I HAD spent several weeks at Charleston, Ontario, bass fishing in Charleston Lake with fair luck, taking ten to fifteen bass each day, weight 1 to 3¾lbs., with live bait trolling on a 7oz. rod, when a friend from New York city came up and took a seat with me in my boat for a week's fishing. Thence I determined to go to Childwald, St. Lawrence county, N. Y., to try my luck with deer. On Saturday morning, Sept. 26, having engaged Alvin Gale as guide—one of the best in the Adirondacks—we started for Grasse River Camp, and after a drive of three and a half miles reached the camp, accompanied by a gentleman from New York and his guide. Accompanied by a gentleman and his guide, whom we found at camp, all six started out to find a deer. It is against the law to hunt deer with dogs in St. Lawrence county, so the guides placed us there on a runway and went off to drive the deer up to us.

The guide had left me only a few minutes, when, sitting on the ground with my back against an old stump, I found that by stooping forward and low down I could see some distance into the woods and underbrush.

At length I saw some small object flit down upon the ground, which I took to be a little chickadee bird; but I kept my look fixed on the spot. Presently it moved again, when I distinctly saw that it was a deer's foot. In the thick bushes it appeared about 6 or 8in., which was all I could see. The distance, I should judge, was about 150yds. In a moment I could see more feet and knew there were more than one deer. They seemed to be coming toward me, and as I could not see their bodies at all concluded to await events. Presently one o them stepped out into the clear about 80yds. distant. He squatted when he came from behind the bushes, and as he was in the red coat I thought it might be a fawn and looked for spots. He walked immediately behind bushes again out of sight and then his companion, a full-grown deer in the blue, stepped into view behind a large spruce tree. The hind quarters with a small part of the body was all I could see. I at once drew a bead as close to the side of the tree as I could and fired. The smoke for an instant shut off my sight and I did not see nor hear anything more of my deer. After listening a minute and not hearing a sound I started to get up, when the first deer made a dash out of the bushes, and with head and tail aloft with great energy made off through the woods before I could regain my feet.

I went to the spot where I thought the deer had stood when I fired, but could find no signs, and thinking the guides might start a deer my way, I returned to my stump and sat down again. In about twenty minutes the guides came in, and when I showed them where I thought the deer had stood when I fired, my guide very soon went on about 20ft. further in and there he found tracks and blood. He followed up the signs about 40 rods into the woods, and found the deer dead and stiff, shot through and through the very center of the body.

I am an old man, and probably shall never go into the woods again, but shall do my hunting in future sitting in my easy chair by my own fireside out of the FOREST AND STREAM.

I like to read the details of a hunting or shooting or fishing account, and thought perhaps there were others who cherished the same tastes and might feel interested in reading my story, which is strictly true in all particulars.

W. R. G.

"ON THE CHIPPEWA."

Editor Forest and Stream:

I HAVE read with much interest from time to time the sketches contained in your valuable paper, and thinking that a few words from me at this time may not prove uninteresting to some of your readers, I will give you a brief account of a hunting trip in Northern Wisconsin.

Oct. 3, 1893, found George Seamans, Ike Weaver, Dr. Hulburt and myself, accompanied by Harry Bartlett, our guide, at the home of a frontier settler, whither we had come with a team. Early the next morning we left the hospitable cabin and started northward, following an old Indian trail, for the head water of the Chippewa River. The guide led a pack horse, burdened with its heavy load of camp outfit, blankets and supplies, while we followed slowly on in single file, each carrying a small load. We were informed by our guide that our camp was located about twenty miles distant. The trail in places was very rough. About two hours after dark we finally arrived at a rudely constructed hunter's cabin, which the guide had previously built for our use. We were all very tired from the effects of the day's journey. After a hastily prepared meal of bread and bacon, we rolled up in blankets and soon slept the sleep of the weary.

As the first faint streaks of dawn appeared in the eastern sky, our guide announced "Breakfast is ready!" and we all rolled out of our blankets somewhat stiffened from the previous day's tramp. After a hearty morning meal we buckled on our cartridge belts and with rifle in hand wandered about to view the surroundings. We found our camp located in a narrow valley. A few feet from the door was a large flowing spring. On two sides of us were steep hills covered by a dense growth of spruce and stately pines. Looking a short distance below our camp we saw the early sunbeams mirroring the bosom of a beautiful shallow lake. The silence of its sedgy shores was broken only by the faint murmur of the waves, the cry of the bittern, and the whirring wing of the wild duck. This charming lake, which is nearly surrounded by a succession of terminal high ridges, separated by narrow ravines and deep gorges, has its outlet at the south end, and its cool waters after numerous windings join the Chippewa River a few miles below.

We were in the heart of an unbroken forest which extended for many miles. We did little hunting during the first day in camp, but spent the time in getting the lay of the country we were in, and in planning for the future. The thickets abounded in rabbits and partridges. The streams were filled with trout. Ducks loitered about the lake in large numbers. Game trails and signs of deer were plentiful, and bear tracks had been discovered. We were in a veritable hunter's paradise, unmolested and alone. On the morning of the second day in camp we all arose early and started out with our guns just as the morning voices of the wilderness began to break the deathlike stillness of the night. In less than an hour a big buck with magnificent antlers fell dead from a rifle ball, to the credit of Weaver. This was the first big game killed by our party, although all met with success sooner or later.

Although the trip was mainly intended for shooting deer, we were agreeably surprised to learn that bear were also plentiful in the vicinity of camp. We were very anxious to meet one in the open, but they appeared, however, to move about but little during the daytime, remaining in thick cover until night. About a mile from our camp, in a deep ravine which leads back from the lake to the great timbered regions beyond, bear signs were found fresh and plentiful.

After supper on the evening of the fifth day in camp, Seamans, who had hunted bear on previous occasions in the Rockies, remarked to the rest of the group, "Boys, we must get a bear to-morrow, or know the reason why we can't." The Doctor, who had already expressed a desire to meet a bear, consented to accompany him on the following day in quest of the much desired bruin, and accordingly the two started for the ravine early the next morning. They took with them a can of cold coffee and a lunch bag full of fried venison and camp cakes, intending, if need be, to remain away from camp until late in the evening. Seamans also took from the provision sack a small package of honey, placing it in his own game sack.

They were off before daybreak, and reached the ravine just as the gray streaks of light began to appear in the eastern sky. They were in hopes by careful watching to get a shot at a bear's hide at early dawn. Signs of bear were fresh, but no game presented itself to view. After waiting and watching until about 4 o'clock in the afternoon, Seamans took from his game sack the package of honey. He then kindled a fire on a flat stone which he found near by. After it had become sufficiently heated,

the embers were hastily removed and extinguished. The heated stone was then carried by means of a couple of sticks to an open spot of ground. Upon this stone was placed the honey. The two hunters then stationed themselves in a tree near by to prevent the bear's smelling them. With their rifles at the ready they quietly awaited the coming of the bear, which they hoped would be attracted by the smell of the burning comb and honey. A gentle wind from the lake slowly carried the fumes up the ravine toward the deep recesses of the woodland, where the desired game was supposed to be quietly concealed. That night, as we all sat about the camp-fire at a late hour, the Doctor related the following:

"We sat in that tree anxiously awaiting the appearance of something to shoot at, until I had given up all hopes of the success of our undertaking. My legs were becoming cold and stiff. Our lunch bag and coffee can had been emptied at our midday eating, night was coming on, and in the gathering gloom we could no longer see the sights on the rifles. It seomed useless to wait longer. We were about to descend and start for camp. At last as we were starting to move we heard the sound of the breaking of a stick, as if made by the tread of some heavy creature. We listened and looked in breathless suspense. In a few moments, in the dim shades of evening, the huge black bulk of old Ephraim became visible as he escaped from the thick cover of young spruce. He had scented the honey and was slowly approaching the bait which had been prepared for him.

"I was fairly aflame with excitement. Seconds seemed like hours. Finally the dark approaching mass reached the open spot of ground, in full view, and only a few feet away. At a whispered signal we both fired our rifles at nearly the same instant. The huge black creature uttered a fierce, gutteral growl, which ended in a melancholy moan, and after a few convulsive struggles became motionless."

We afterward learned that both shots had taken good effect—one ball entering the brain, the other ball passing into the spine behind the shoulders. We also learned that the Doctor refused to leave the tree until Seamans had first descended and upon personal and thorough examination had pronounced the bear to be stone dead. The bear was a large one, and with two exceptions the largest one I have ever seen.

At a later date Weaver and myself crossed the lake on a rudely constructed raft, to bring in a doe which had been killed by us and hung up in the woods too late to bring it to camp on the previous evening. On reaching the spot we found that some beast had torn down and devoured a portion of the deer carcass. We regarded this as being the work of a bear, and concluded to try our hands at bagging him. We expected he would return at evening for another meal, and we at once laid plans for his coming.

We took positions in a tree near by and waited. We listened with strained ears for some time. Night was rapidly approaching. The woods seemed vast and lonely. Strange noises now and then broke the silence. The owls began to hoot dismally. The howling of a timber wolf arose from the depths of the woodland. The wild creatures of the forest had begun to move about, and their noises seemed to mark the sad and melancholy unrest of the great forest about us. We saw nothing, but waited in the growing dusk until tall trees and hills blended into one dark, frowning mass.

Finally our ears caught the sounds made by some stealthy creature only a short distance away. Our veins stood out like whipcords as we discovered the dim outlines of an object slowly approaching the deer carcass for another meal. Our rifles were ready. Aiming them at the object as best we could in the dusk of evening, we pulled trigger. The simultaneous reports of our rifles were followed by a terrifying screech and a deathly silence. We had killed a large lynx. We reached camp with our prize at a late hour to find a warm supper awaiting our return. Seamans and the Doctor had brought in another fine buck. As we all sat about the camp-fire that night we feasted well and held high carnival over our success.

On the morning of the day we broke camp we were startled while breakfasting by strange sounds up the valley in which our camp was located. We grabbed guns and hastened out of doors in time to see a fawn bounding by toward the lake. The frightened creature was blatting frantically, while close behind followed a large timber wolf in hot pursuit. We fired a volley at the wolf, but without effect. He desisted from his murderous course, however, and sneaked off at a rapid rate.

The fawn, continuing its course, plunged into the lake and swam to a small island. Having reached this position it glanced backward for a moment and then disappeared in a thicket, where we left it without further molestation.

We remained in camp ten days. We had killed during this time a bear, a lynx and seven deer, besides numerous small game shot near the camp for variety. Our guide had served us several fine messes of brook trout and we were all sorry when the time arrived for leaving. The guide generally remained at camp, prepared the meals, put up the lunches and did general camp work. He dressed and cared for the game killed—a part of which was packed in brine to preserve it. We did our hunting in pairs. All of the shooting was at close range, except one deer which was killed by Seamans near the edge of the lake. In this instance the distance was over 60 rods, but was regarded by us all as being merely a chance hit.

We all used the ivory hunting front sight on our repeaters, with a narrow bar rear sight (no notch). For quick shooting at moving game, and for shooting in dim light, we found the plain bar far superior to the ordinary buckhorn sight, and with it one can do very accurate shooting at close range. Our game was nearly all killed early in the morning or late in the day. The game in the region of our camp had apparently been but little disturbed previous to our arrival, but owing to dense woods and thickets it was not always an easy matter to find it. Our guide was a jolly fellow and a good cook. He afforded us much valuable information in regard to the country about us, and did all in his power to make the trip a pleasant one.

Now that we had decided to return home, we found ourselves burdened with a much greater supply of meat than our pack horse could carry away. Our guide had cured a considerable portion of the venison. Packing up the bear and lynx hides, several pairs of antlers and such other things as we wished to take with us, we left the rest in the cabin to be taken away a few days later by the frontier settler at our request.

Our return was without incident except that during our journey on foot to the frontier cabin a cold, drizzling rain set in which wet us to the skin and chilled us to the bone. In due time we returned to civilization and home again, much refreshed by the trip. I have taken several hunting trips, but, all things considered, I enjoyed this one most of all, and in the midst of the cares of an active business life I often long for the freedom and pleasures which were enjoyed at what was known to us as Bartlett's Camp on the headwaters of the Chippewa. TOM BARNEY.

SOME CALL IT "FEVER."

OMAHA, Neb., May 20.—*Editor Forest and Stream:* Brother "Kingfisher" seems to have stepped into a hornet's nest unawares, and all over the proper term to use in designating that too common complaint with Nimrods. It seems a pity that so much good ink and paper should be used to so little purpose, for after all has been said pro and con on the subject, what will it amount to whether it be called "fever" or "ague?" The unfortunate result is the same, whether the cold chills chase each other up and down one's spinal column, or a burning fever and hectic flush ensue. The fact remains the same; the deer has gone free and our hunter has missed his golden opportunity, and I don't believe that he can tell whether it be fever or ague. His mental faculties are in too chaotic a state to know "where he is at."

I lived when a boy in the extreme South, in the peninsula of Florida, and there the negroes and poor whites called everything a "fever," from a toe ache up. Just what they called the malady in question I do not remember—"fever," most likely, but I know that I had it. I well remember my first deer. I had never yet been on a deer hunt, for I was not deemed worthy to hunt larger game than birds and rabbits, and on the day in question was roaming around the plantation armed with an old muzzle-loader, and in search of anything to shoot at. I am afraid I did a great deal of potting in those days, in fact, I had to rest the muzzle of the gun on something in order to hit the game. I had wandered away from the open fields up on a sandy hill covered with scrub oaks and stunted pines, and in passing around a rosemary thicket I walked right on to a deer that was indulging in a noonday siesta. I don't know which was the most surprised or scared, the deer or I. In the excitement my gun went off and the deer and I both fell down, not 5ft. apart, he with a hole blown clear through him, the effects of a double charge of bird shot.

I don't know how long I sat there looking at that deer, and I don't know whether I had a fever or a shake, but something evidently made that gun go off; it was not intentional on my part, but at this distant day I have a right smart suspicion that it was the "ague."

W. R. HALL.

Editor Forest and Stream:

I have just read your editorial, "Buck Fever". Now in my thirty years' acquaintance with many hunters of Northern Pennsylvania, I have very often heard them tell of having an attack of buck fever, but I never heard one of them speak of buck ague, and I believe that if any one had mentioned buck ague there would have been an honest inquiry if it was any thing like fever and ague. Uncle Dave R., who has lived on Pine Creek waters for the past fifty years and has killed as many deer as any man in this section of Pennsylvania, always spoke of buck fever when relating. How some of his friends missed a good shot. I could name a dozen of old hunters, who hunted in this section sixty years ago, who often spoke of some of their experiences with buck fever; but never did I hear one of them speak of buck ague. I never heard "Nessmuck" use the term buck ague, but he often spoke of buck fever striking some of his hunting parties. Now we know nothing of buck ague up here in Northern Pennsylvania. And this reminds me of my first and last attack of buck fever.

Uncle Dave R. had often invited me to come up Pine Creek for a deer hunt. In October, 1885, I went. Early in the morning we got our party together with hounds and started for the Izaak Walton House; there we got more recruits, gave the hounds in charge of a good man to climb the mountain and put them on the track for a race. I asked Uncle Dave to put me on a runway where I would stand some chance for a shot and he said he would. I was put upon the lower runway down Pine Creek, a quarter mile above Long Run, with a single barrel rifle, the barrel of which it seems to me was 5ft. long (I guess it wasn't), with a load in the gun and an extra charge of powder in a cap box with ball to go with it.

Soon after we had got into position we heard the bugle notes of the hounds. They circled around on the top of the mountain for a half-hour or more, then the race was for Pine Creek. In due time I heard two reports from the rifles above, and very soon I heard three other shots in quick succession. I then thought the race was over, and as I sat upon the banks of the creek 50ft. or less above, I thought there was no show for me. Casting my eyes up the creek, I saw a fine buck in the water. I raised the rifle to my face, took good aim and fired. I saw his flag flirt, then drop. I had been told that this would happen when a deer was hit, so I concluded he was hit. Immediately I began to reload, poured the powder out into my hand and from that into the barrel; got out my ball, patched it, rammed it down, and to make sure gave it an extra ramming, and the ramrod went out of my reach just ¼in. too short. In the meantime the deer was running down the creek. Time was precious. I put on a cap and drew the barrel up to my face to shoot ramrod and all. As I did so the thought came to me, "The ramrod will throw the ball out of range." I dropped the butt at my feet, pulled out my pocket knife, opened the small blade, stuck the point of it into the end of the ramrod, drew it out, dropped rod and knife, drew up the rifle, got sight and fired as the deer was making a jump into deep water 35 rods away. He only made the one jump.

I had scarcely set the rifle down before the buck fever took hold of me as very few persons have it. Did I shake? Well, yes. Did I tremble? Well, it was a general mix-up of shaking and trembling indescribable. The singular part of my attack of buck fever was that it did not come on until the shooting was all done, and as the deer was hit with both shots, it goes to prove that my nerves were tensioned up solid and steady, as I claim they were.

The deer after the first shot ran 6 or 8 rods, then lay down in the water for a few seconds, then got up and started down the creek.

I got a hind quarter of the deer and the hide, which old Hod tried to beat me out of, but Uncle Dave looked after that.

Of course all of the old hunters had to discuss my case of buck fever, but none of them even hinted that I had an attack of buck ague. All of them have passed over the river but Uncle Dave, who with his three-score and ten and more years never has missed his fall outing until last fall, and it nearly broke his heart. ROCKWOOD.

WELLSBORO, Pa.

A CUSTOM HARD TO OVERCOME.

OKANOGAN, Wash., May 5.—*Editor Forest and Stream:* I find it very hard entirely to overcome the habit of spring shooting, which was contracted in boyhood and has been followed more or less for forty years. Yet there are but few who are so fond of hunting as I am, and have the opportunities, who do not shoot more in the spring than I do. This spring I had the oxen turned out on the Okanogan, and about the 1st of April the geese put in an appearance there. The lake was still covered with ice. The boys had been after them for several days, but nary goose materialized.

One nice afternoon Mr. Beal and I went up along the lake, and when near the British Columbia line we saw two old honkers sitting on the edge of the ice about 150yds. from the shore. There was a sand hill where we could approach to within 300 or 350yds. of them unobserved. We rode around and hitched our horses and peeped over the bank very cautiously, and guessed at the distance. Beal thought it 400yds., so I raised my Lyman sight up to seven points and fired. The bullet struck very near, only right over. The geese stood up, but did not move. I lowered the sight one and a half points and fired again. One of the geese tumbled over and began flopping. Then said Beal, "You've killed one, now try the other." I fired again and the goose flew, but I had cut feathers out of its back. Beal said it was the best shot he ever saw, irrespective of the cartridge (which was .22 long rifle).

We found some slabs that had been pinned together, and with these I poled out and secured our goose. It dressed 10½lbs. and was quite fat.

All of the grouse family wintered well here, and the birds are now beginning to lay. Deer got through this winter well. There was not snow enough to let the wolves and coyotes catch many. LEW WILMOT.

Massachusetts Spring Potting.

BOSTON, Mass., May 18.—*Editor Forest and Stream:* Just note the date of the letter inclosed, and then tell me, if you can, what we are to do to wake up our fish and game commissioners, our game wardens and our game protective associations, that we may at least put some curb on this infernal spring potting of game and song birds. W. W.

The letter our correspondent sends is dated Shirley, Mass., May 10, and reads: The thermometer has got up to 122° in the garden, where I have been planting corn, and I have concluded to adjourn to the house, where it is warmer, and write you a few lines, as I have a little request to ask of you, and that is that you call on the Hon. Game Commissioners of Massachusetts and ask them whether they are simply for ornament or whether this is an outlawed section of the State, for there seems to be no attention paid to the game laws here whatever, and it seems useless to make complaints. The shooting has been good here for the past six weeks. Partridge, woodcock, wood ducks, robins, bluebirds, kingfishers and anything that comes along with feathers or fur is lawful game, and no one troubles the "sportsmen." Why don't you come up and bring your dogs and guns? there may be a few birds left. And bring a few snares and fox traps, and your friends and friends' friends, and if you don't find any birds in the woods you might come into my barn yard and shoot a few of my doves.

Only this morning, between 5:30 and 6 o'clock, I heard three guns in a locality where yesterday I heard partridges drumming, and upon visiting the place all I find is a lot of feathers and a couple of empty shells. Saturdays and Sundays seem to be the favorite days, as then the mills are shut down and the help have a chance to go shooting.

I don't know as this will interest you much, but I get so full of "mad" I must let it out somehow or burst. I hope that I shall hear from you as soon as you have seen the Commissioners. A.

The Pennsylvania Grouse Sale Bill.

THE bill forbidding at all seasons the sale of ruffed grouse passed both branches of the Pennsylvania Legislature, but was vetoed by the Governor.

Of the veto the Lewisburgh *News* says: "The bill introduced by Representative Focht for the protection of game was vetoed by the Governor on Wednesday, a long message accompanying the bill back to the House. The measure was endorsed by all the sportsmen of the State, and had in view the knocking out of the pot hunter and the fellows who slaughter game for the markets. The view generally taken is that hunting for game should be done for recreation and sport, and not for profit, and as the game of the State is being fast exterminated by those who follow hunting for a livelihood, it was thought necessary to enact a law that would save the few remaining birds from the unerring aim of the man who shoots for dollars. The bill, if it had become a law, would have prohibited the shooting of game for barter or sale, and no transmission company would be permitted to receive game for shipment. This is restrictive, but since the advent of the cold storage system it was deemed necessary. Since meat and game could be kept for a year or more birds are served in and out of season, and the supply must necessarily be made much greater than formerly, hence the needed protection against the ravages of the pot hunter. Gov. Hastings gave two reasons for vetoing the bill. First, that it was unconstitutional because it prohibited transmission companies from receiving for transportation; second, that it was unconstitutional because it made two classes of citizens, the one class who were denied the privilege of eating game because they could not buy it or receive it from their friends by express, and the class who could get

all they wanted for themselves and families by going out and shooting it. The veto is a great disappointment to the sportsmen of the State, and looked upon as an invitation for the market hunters in the pay of the cold storage companies to with renewed energy continue to bang away at the few birds that remain until none are left.

Damages for Gun Frauds.

JUDGMENT was given on the 27th ult. at Melbourne, Aus., in a suit brought by W. W. Greener, gunmaker, of 68 Haymarket, London, for wrongfully making use of the name Greener upon guns not of the plaintiff's manufacrure. The evidence showed that the practice had long prevailed, and the court awarded £5,500 as damages, exclusive of costs.

Trailing Foxes.

THE following query and reply covers matters so novel in respect to fox-hunting that the whole is inserted in full. The queries asked by "E. I. B.," Gardner, Mass., are as follows:

Can a hound trail either male or female fox at this season of the year?

Would the crossing of fox and bloodhounds be any improvement to a foxhound?

To this Mr. W. W. Titus replies as follows:

Re fox matters, I will say that Major Val Young and Capt. Billy Young had a fox chase last week. They experienced no difficulty running the grown foxes, one giving them a race of eight hours. All the others started went to earth after a short race.

They found, however, that their dogs could not trail with any satisfaction the young foxes, probably one-third grown. The dogs would strike their trail and go tearing off in full cry, run over it and circle for a mile, come back to where they lost it and hit it again, and dash off to make a complete loss. They decided the scent was very light, and that the young fox dodged worse than a rabbit.

Regarding the foxhound cross on the bloodhound, W. T. Hunter, of Wheatland, N. D., tried it and three of the pups came down here. They were no earthly good for either trailing man or varmint.

No cross can improve the foxhound, except English foxhound blood on the natives; but as many English dogs run mute, and at the best have choppy mouths and don't give it very freely, only such specimens should be bred to as are free from these faults.

The English hounds excel in speed, have lots of stamina, and push hard for the front. They have a high-headed way of throwing their heads up on a hot trail and straddling the track, and at a run-over, circling till they hit it, perhaps a half mile further on, and so pushing sly Reynard from jump to finish.

Sea and River Fishing.

NEW HAMPSHIRE FISHING.

CHARLESTOWN, N. H., May 20.—I mail you to-day a sheet of the Manchester *Mirror and Farmer* describing the superb fishing of the first week in May at Pleasant Pond, in New London, about ten miles northeast from Sunapee Lake.

This pond has always been famed for trout, but was stocked a few years ago with salmon, and closed for five years absolutely. The result is to be seen to-day as shown. The brooks feeding this lake, which are the spawning grounds, are still closed, and to be kept closed for the present by law.

If any of your New York anglers want to try it, they can go up the Connecticut River road to White River Junction, and then down the Northern Railroad of New Hampshire to Potter Place, or go up from Boston to Potter Place over the Boston & Maine Railroad.

We have no fish stories to tell here. Drought and frost have nearly exterminated the trout, and the town voted at "March meeting" to prohibit all fishing for trout for three years from May 14. This gave the boys a fortnight to try, but I heard of no success. One young friend of mine tried three brooks, covering ten miles of territory one day, without a bite!

I went down myself on May 2 to a little brook which crosses the lower end of the village and is fed by cold springs, within a rifle shot of the main street, and took out ten trout in an hour, of which nine went back into the water as quick as possible. The other one was 7 or 8in. long, and I kept him for breakfast.

I have heard of a few being taken in Vermont, but the catch has been very limited in number to what it used to be.

I have no doubt your correspondent "Mascoma" has been to Lake Pleasant, and look to see a report from him in FOREST AND STREAM. VON W.

Commissioner Wentworth, of the New Hampshire Fish Commission, writes the letter to the *Mirror* referred to by "Von W." and he says: The first day of May found me at Pleasant Pond, New London, where they have had splendid success both with salmon and brook trout. There were parties there from different sections of the State. Mr. Miller and a friend from Westerly, R. I., caught four salmon and five brook trout averaging two pounds each. Ex-Mayor Beasom of Nashua took two salmon, catching them on a nine-ounce steel rod. These are the first salmon he has ever taken, but he handled them like a veteran. He is an artist with both gun and rod. R. F. Sargent, of New London, and A. J. Cheney were two of the most successful fishermen. One old gentleman fishing not far from where I was had a strike from a salmon which took away a part of his line and broke the tip end of his rod. He took the remainder of his line, fastened it permanently to the end of the second joint, making a combination like that we used to fish with when we were boys, for horn pouts and flat fish, and putting a live smelt on his hook commenced fishing again. In a short time he fastened on to another salmon in good shape; then the fun commenced in good earnest, I can assure you. Another fisherman got into the boat and helped land the salmon, which weighed between six and seven pounds.

Capt. Gordon, of Potter Place, a veteran of the late war, a man over 70 years old, was upon the pond three days in succession, driving back and forth a distance of eight or nine miles a day, and fishing as persistently as any of the young men. I saw him land one large brook trout weighing between three and four pounds, which he handled in a manner, if you could have seen him, that would have done your soul good. One man made some suggestions about playing the fish. He was a man 50 years old, I should say. The Captain told him he had caught trout before he was born. The two first days at Pleasant Pond, as near as I could learn, there were twenty-four salmon and ninety-four brook trout caught. If you or any of your friends want some good fishing, by going over the Northern Railroad to Potter Place, there taking a team to the pond, I have no doubt but that you could have some sport.

ANGLING NOTES.

Hudson River Salmon.

SCARCELY a week passes that I am not asked about the salmon in the Hudson, and the people seeking information on the subject are so widely distributed that it cannot be considered a local matter. Mr. George Harris, of Fort Edward, told me a few days ago that a salmon became entangled in a net below the Troy dam only the day before I met Mr. Harris, and while the fishermen were trying to secure the fish it escaped. The salmon was believed by a number of old fishermen who saw it to weigh 40lbs. Mr. Harris further informed me that a number of salmon had been taken in the nets just below the dam, and that they did not get away.

The Mechanicville fishway was cleaned out this spring about May 1, and the Fort Miller fishway was cleaned and repaired; but as the first obstruction in the river, the Troy dam, now has no fishway, the salmon have scant opportunity to try the fishways above. There is no doubt that the nets in the Hudson take a great many salmon every year that are not returned to the water, as the law directs, as there is no penalty for having the salmon in possession after they are illegally taken in nets. The language of the new game bill is the same as in the present law.

The plant of salmon fry in the upper Hudson this year will be small, but the new Commissioners of Fisheries, Game and Forests will retain a few thousands of fry at the Cold Spring Harbor station and rear them to fingerlings at least before planting them.

Fish Scores.

Very lately I have had occasion to know something about the condition of some of the black bass waters of the country through letters from people who desire to restock overfished and depleted lakes and ponds. Perhaps if I say the number of black bass applied for in one year in New York State alone amounts to something like millions, when it is only possible to supply a few thousands, a fair idea may be obtained of the situation.

I believe that a desire to make a big score is a most important factor in depleting black bass waters. On my desk are two advertisements of two hotels in different States, and each to induce the patronage of anglers relates the scores made by visitors in previous years. For instance, one man is credited with an average catch per day of 49 black bass for eighteen consecutive days; another with 63 in two hours (and the card does not say that they were netted); another with 330 in four days, while four men took 572 in two days. What becomes of the bass taken thus by wholesale? The publication of such scores may draw custom for a time, until the bass by reason of immoderate fishing become scarce, and then there will be a demand doubtless for bass for restocking. I imagine that the time will come when fish commissioners will be slow to furnish fish to be slaughtered in the name of sport, and that hotel keepers will be about the last to advertise that fish have been taken in numbers to make a netter blush in the waters near their hotels.

Spawning of Trout.

The time at which trout begin to spawn will vary slightly under different conditions of temperature, and the different species of trout will spawn at different periods in different localities, but the Buckland Museum had last fall three species of trout in the same water and the spawning period was noted in each species. Brook trout (*fontinalis*) began to spawn Nov. 15; the eggs began to hatch out Jan. 11; finished Feb. 10. Loch Leven trout began to spawn Nov. 22; the eggs began to hatch out Jan. 21; finished Feb. 13. Brown trout began to spawn Nov. 26; the eggs began to hatch out Jan. 30; finished Feb. 23. At first the water temperature was 42° Fahr., falling to 35°, and at the finish of the hatching it was 39°.

To Canada.

Yesterday, seated in the smoking compartment of a parlor car on the D. & H. R. R., was a party of men rolling along at forty or fifty miles an hour in the direction of Montreal. General Passenger Agent Burdick, Superintendent Manville, Frederick Remington the artist, the writer and three others filled the compartment. The talk was of fish and fishing big trout, little trout and ouananiche. And naturally, too, for with one exception the gentlemen were going to Lake Edward and Lake St. John for the fishing to be found there. The one exception was the writer, who was going home to work, with no immediate prospect of catching ouananiche or anything else.

Less than a week ago a friend in Montreal wrote me: "I wish to learn when you may be expected to wing your flight northward. Everything is ready, and fishing (trout) has begun in the St. Maurice and Laurentian Club territories. There is no use discussing the 'prospects' or 'catch' in these localities, as the fishing is always very good; but most of us like to wet our lines at this particular season of the year, be it only for a few days. I know that is the case with myself, therefore I shall probably go to the Laurentian Club next week. After that, say the 10th of June, I shall leave for the Godbout and Mistassini" (this is the river flowing into the St. Lawrence, not the one of same name flowing into Lake St. John) "for salmon. Can you join us on this particular trip? * * * We would leave Montreal about the 10th or 11th of June, and be at the Godbout in thirty-six hours. Bring an ordinary salmon rod (or two), not a very heavy rod, as fish do not run as large as in the Restigouche and Cascapedia, but they are much more numerous, and are generally fished for by wading or walking along the banks. Personally, I like this kind of work much better than canoes. Standing up or sitting in a canoe for a couple of hours or more, casting away, is rather monotonous at times, besides one is generally confined to a single pool; but when you can wade the shallow parts of a stream as you would a trout brook, and perhaps land and gaff your fish, the general result is, I think, very satisfactory; the exercise one gets, too, is more beneficial and the sport is much less dangerous. Old John Mowat is writing splendid articles in FOREST AND STREAM, is he not? He knows a thing or two about salmon. Now write and say you will be with us soon after we telegraph for you."

If it is not heart-breaking to decline such an invitation as that, particularly as I have been looking forward to it for some months. I do not know how to describe the feeling which I have. But the writer of the invitation is a most generous angler and he has provided for some future fishing, about which I hope I may tell the readers of FOREST AND STREAM.

Books upon Fishculture.

Frequently I have been asked to recommend some book upon fishculture, and I have always replied to such queries that Stone's "Domesticated Trout" was perhaps the best text-book to be obtained at a moderate cost, that gives the information sought by the amateur fish breeder. I now have two queries asking for the latest work upon fish breeding that is not too expressive for ordinary pockets. The latest and best work is "An Angler's Paradise and How to Obtain it," by J. J. Armistead, proprietor of the Solway Fishery, Dumfries, Scotland. It is an exhaustive work, based upon Mr. Armistead's long and successful experience as a fish breeder. I wish that every angler in the country could read the chapter in this book entitled "Pond Life," and our fish breeders could also read it with profit. The book is published in England, but I presume that FOREST AND STREAM will import it for anyone who desires to purchase it. The price would be about the same as for "Domesticated Trout." I will quote one paragraph from Mr. Armistead's book in view of the discussion in this country about fry and yearlings:

"Stocking with yearlings is a simple and easy matter; any intelligent keeper can do the work successfully. But with fry it is an entirely different affair. It does not matter how intelligent the operator may be, unless he has a fair knowledge of what he is doing, the chances are that some mistake may be made which will frustrate his good intentions. I have now stocked the same waters with fry for many years in succession, and have got excellent results, but they have been introduced at the right time as well as in the right place, and in the right manner."

In regard to food for young fish—a matter of the greatest importance for fish of any age, and one that comparatively little attention is paid to in this country—Mr. Armistead has this to say: "The natural food of yearlings, as indeed of fry, may be largely augmented by the introduction of various insects in their larval forms—not only those which inhabit the water, but also the soil and its vegetation, and a study of flora and fauna therefore becomes very desirable. This applies not only to rearing or nursery ponds, but to streams and lakes, which may often be very materially improved by the introduction and culture of certain forms of life which were formerly non-existent therein. As applied to our natural waters, this subject becomes an exceedingly important economic question, which is well worthy of the thought and study which is being given to it. Some of our winged insects simply abound in their earlier stages in certain localities, and under peculiarly favorable conditions. To supply these conditions in contiguity to our fish ponds is a work of great importance, but which has as yet hardly been entered upon." A. N. CHENEY.

Denver Tarpon Record.

THEY talk more of big trout records than of tarpon scores in Denver, but when a Denver man goes to Florida and has luck he does not attempt to conceal the fact. The Rocky Mountain *News* reports the achievements of a Colorado rod on tarpon: "Everybody in Denver who knows Capt. Jake Sedam knows that he is one of the greatest fishing experts in the West, and is also a lover of that sort of sport. Some time ago he and his wife took a trip down South for health and pleasure, and of course when the captain saw the beautiful blue ocean water off the coast of Florida his desires began to work on him and he soon was on the water. He reports tarpon fishing excellent, the fish running smaller than usual, but in great abundance. He has the scales of six of the largest he killed, and they are now properly mounted on a board in Bostwick's gun store in the Tabor block on Sixteenth street, and are marked as follows: March 6, 107lbs., off Mattleshea, 5 leaps, in one hour and ten minutes. March 8, 110lbs., off Mattleshea, 7 leaps, in fifty minutes. March 9, 120lbs., off Nigger Head, 5 leaps, in two hours and thirty minutes. March 10, 150lbs., Astero Bay, 9 leaps, in one hour and fifteen minutes. March 10, 97lbs., Astero Bay, 1 leap, in two hours and three minutes. March 17, 125½lbs., in first pool off Mattleshea, 4 leaps in thirty minutes. While Capt. Sedam was not exactly high hook he was nearly so. Mr. Cole, of Plymouth, was first; Mr. Borden, of Chicago, second; Capt. Sedam, third.

Parties from Philadelphia heretofore having carried off the honors, this season, with the exception of Mr. Sill, failed to score. Mr. Jones and Mr. Frishmouth—considered the very best tarpon fishermen—were unfortunate in the selection of localities.

Chicago Fly-Casting Club.

THE Chicago Fly-Casting Club held a tournament on May 25 at Garfield Park, and will hold others on each alternate Saturday to Sept. 28. There will be four events in each contest, as follows: 1. Fly-casting for distance and accuracy combined. 2. Dry fly-casting for distance and accuracy combined. 3. Fly-casting for distance. 4. Bait-casting for distance and accuracy combined. Rods must not be over 11ft. long, and must not weigh over 8½oz.; leaders not to be over 9ft. and lines not larger than E. Medals will be given for each event, the winners of the largest number of events during the season to possess the medal permanently. During August there will be a tournament open to the world. Rules governing all the contests can be obtained from Secretary F. B. Davidson, No. 127 West Washington street. The club will go fishing at Lake Beulah, Wis., during the first week in June.

THE MEGANTIC CLUB.

WE have received from the Megantic Fish and Game Corporation the report for the last fiscal year, which contains so much of general interest that a generous share of it is given here.

The Megantic is the largest and best known of such associations in the Eastern States. It had its origin with Dr. Heber Bishop, of Boston, whose personal exploration of the territory showed him the peculiar advantages it offered for club preserve purposes. The membership has grown constantly, new territory has been added from time to time, until the area now controlled comprises 250 square miles of land and water.

The affairs of the club are reported upon in the club book:

The Megantic Fish and Game Corporation was organized in Boston in January, 1887, being incorporated under the laws of the State of Maine Feb. 15, 1887, and obtaining a charter from the Province of Quebec on March 26, 1887.

The club owns and leases a territory comprising 250 square miles, and containing three lakes, twenty ponds, six rivers, eight streams and brooks, and eight bogs.

Besides its club house it has twenty-nine camps and a fish hatchery.

The territory controlled is an unbroken wilderness, 3,000 feet above the sea, lying in the northwestern corner of the State of Maine and extending over the border into Canada. In this domain are found moose, caribou, deer, bears, and all kinds of smaller game. Partridge are very plenty, and all kinds of water fowl infest the lakes and ponds.

The waters abound in trout and bass, and landlocked salmon have been successfully introduced for several years, and the members will soon have this added variety of sports.

The club employs a Main Game Warden who is also General Superintendent of the Preserve, and a Canadian Warden who also looks after the club's interest over the border.

Caretakers are employed during the winter to assist the wardens, and also prepare wood and ice for the summer, and repair camps, boats, etc.

Membership in the club costs $50 for a share of stock and the annual dues (not to exceed $20), which are fixed by the Directors.

Macannamac Lodge.

Situated on the southern shore of the beautiful Spider or Macannamac Lake, in the midst of a tract of land three miles long owned by the club, is the Megantic Club House, called Macannamac Lodge. Inside we find a cosy parlor with beautiful fire-place, piano, etc., a roomy hall with another large and artistic fire-place, a bright, tasty dining-room, and on the other floors are the bedrooms, furnished with hardwood chamber sets, and offering accommodations few expect to find so far back into the woods. The house is also supplied with hot and cold water, baths, etc., and suffice it to say that a more charming spot for comfort, enjoyment and good table cannot be found, and it is little wonder that many members are contented to spend their entire vacation here. The fishing in the lake is very good, especially bass fishing; and the Spider River, near at hand, offers every inducement to those who wish for an abundance of trout. Deer and wildfowl are abundant on this stream and a canoe trip up its waters is a delightful recreation. The club has a commodious camp situated on the stream, and variety can easily be obtained by taking the trip up the stream to this camp and roughing it for a few days.

Crosby Pond.

After a few days' rest at the club house the average sportsman is anxious to start back on the preserve, and with his guide takes the trail (7 miles long) to the nearest camp, situated on the shores of Crosby Pond; or, if the shorter tramp is desirable, he takes the launch to Three Lakes, and then the steamer on Lake Megantic to Woburn, and thence, by buck-board, rides to Cameron's.

A walk of 1 mile brings one to Arnold Pond, crossing which, another tramp of 1½ miles is necessary to reach Crosby Camp. The latter route is very easy and usually the chosen one for ladies.

Crosby Pond is about 1½ miles long and 1 mile wide, round in shape, with a small island in the center. It is an ideal place to camp, and as the club's accommodations are excellent it is a popular resort. The fishing is extremely good, and trout weighing as high as 5lbs. are taken. It is also a favorite retreat for deer, which may be seen at almost any time around the shore.

From Crosby trips can easily be made to Upper Hathan Bog, ½ mile distant, Lower Hathan Bog, 1 mile distant, and Cranberry Bog. Good fishing is to be had in all of these waters and deer are very plenty.

Arnold Pond.

One and a half miles from Crosby and within a mile of Cameron's is Arnold Pond, lying at the base of Black Mountain. It is a very romantic spot, with fish and game in abundance, and excellent accommodations at the club camp situated on a charming point.

From Arnold Pond visits can easily be made to Mud Pond, a quarter of a mile distant, where trout abound. A quarter of a mile further east is Horseshoe Pond, also well supplied with trout. One and a quarter miles from Horseshoe is Otter Pond.

After enjoying the pleasures of Crosby and Arnold, an easy tramp of two and one-half miles brings one to one of the most charming camps on the preserve—Massachusetts Bog Camp. Built in the midst of the forest on the banks of a noisy brook, it makes one appreciate more than ever the vastness of the preserve and the distance from civilization. A short walk and we are on the shores of Massachusetts Bog, a long (two miles) and narrow strip of water lying at the base of the Boundary Mountains. The fishing here cannot be surpassed anywhere, and the low marshy shores make an excellent feeding ground for an abundance of game.

Big Northwest Pond.

Three and a half miles from Massachusetts Bog is a beautiful sheet of water called Northwest Pond. The club has three camps and a spacious dining-room here, all in charge of a steward, and as the fishing is simply wonderful, one lingers long at this delightful spot. Mr. A. W. Gleason, of New York, has a private camp here. Little Northwest Pond, a quarter of a mile, and South Boundary Pond, a quarter of a mile distant, are easily reached, while Grant Pond, a half a mile distant, is noted for its large, gamy trout.

Big Island Pond.

From Grant Pond it is only one mile to Big Island Pond, which is the largest and most beautiful of the Seven Ponds, and derives its name from the large island in its center. From the club camps, situated at the southeastern corner, is one of the most beautiful views to be had on the preserve. Stretching out before you a distance of three miles are its blue ruffled waters, here and there broken by some huge ledge, while the forest closely lines its rough and rocky shores. In the distance are the Boundary Mountains, and towering above the camps is Snow Mountain, one of the highest peaks in Maine. The club has nine camps here, and Dr. Geo. McAleer and J. W. Mason have private camps. A man and woman employed by the club attend to the welfare of members, and a better place to pass a few weeks cannot be found. The trout are plenty, large and gamy, and as the club have planted a large number of landlocked salmon, good fishing of this kind is expected shortly.

The club's hatchery is located here, and is extremely interesting to those who have never visited one. To those fond of mountain climbing, a trip up Snow Mountain is well worth while, as the panorama from the top amply repays for the fatigue.

At Big Island Pond the club has recently purchased a tract of land one and a quarter miles square, bordering on the northern end of the pond, comprising a territory of 1,000 acres, and including the whole of Rock Pond, and at an early date it is proposed to erect camps here.

One-third of a mile from Big Island Pond is L Pond, a favorite fishing resort, where one is always sure to fill his creel.

From L Pond one can visit Beaver Pond, one and a half miles distant, and from Beaver Pond go to Long Pond, a quarter of a mile distant, and Little Island Pond, a half a mile distant.

From Big Island Pond to the camps on Long Pond of the Chain of Ponds is seven and a half miles by easy trail.

Chain of Ponds.

Long Pond at Chain of Ponds is a beautiful sheet of water, 3,000 feet above the sea, with the most charming mountain scenery. The club camps, seven in number, are situated on a small peninsula recently purchased by the club, about midway of the pond, and a man and woman are employed to attend to the wants of visitors. Dr. Heber Bishop, Mr. Geo. A. Gibson, Mr. D. C. Pierce, and Mr. A. W. Robinson have private camps here. The fishing is excellent, especially early in June, when very large trout are taken.

The Chain of Ponds consists of Round, Long, Upper Bag and Lower Pocket ponds, offering a variety of water for the fisherman to try, and, as at other places, the game is abundant.

From Chain of Ponds to the club house by trail is ten and one-half miles, if one wishes to return that way.

From Chain of Ponds to Eustis is twelve miles by buckboard, but, if one prefers, the trip can be made down the Dead River in a canoe, and the latter way is certainly the most desirable. To lazily drift down this beautiful stream, breathing the perfumed air and feasting the eyes on the romantic scenery, and as night draws near to finally reach again the borders of civilization, and sleep once more in a hotel, is certainly the pleasantest way imaginable to end one's sojourn in the woods; and the memories of those last glimpses of deer frightened by the canoe's approach, or a trout darting to a shady nook or leaping from the water, or the wild ducks' rapid flight as you round a bend in the tortuous stream, will long remain, and ere they are quite forgotten you are again anticipating and preparing for another outing in this paradise of sportsmen.

As a matter of curiosity, and also to answer a statement made at Augusta last spring, that it was wrong in principle to charter such organizations as the Megantic Club, which was named particularly, pains have been taken to find out what the club has done for the section it used as a preserve, with this result: Our cash book shows about $9,000 paid by the club itself for supplies, wages and labor, and our records show over 250 people visited the preserve (326 names appearing on our register at the club house), more or less of whom paid directly, to men acting as their guides, the gross amount of $4,000, showing over $13,000 spent by the club and its individual members during the past season. In the Maine Fish Commissioners' report for 1894 the estimate of average amount paid by visiting sportsmen is $75 each, showing at 300 visitors an amount of $22,500.

The hatchery bids fair to prove a success, and of great benefit to us in restocking the waters. While we did not obtain as many eggs as we expected, on account of our ignorance of the spawning beds, we did get 30,000, as follows: From L Pond 6,000 and from Northwest Pond 24,000. The eggs have been this winter in the care of Isaac Tibbetts, of Rangeley, Me., who came to us highly recommended, and his reports during the season so far have been most gratifying, comparatively few of the eggs in his charge having died, and they have passed safely through the severe cold of the first part of February.

Through the courtesy of Hon. H. O. Stanley, Fish Commissioner of Maine, we received 1,000 landlocked salmon which had attained a growth of 2½ to 4in. These were liberated in the brooks flowing into Big Island Pond, and we hope they will do as well as the lot placed there in 1893.

Of this lot there were caught during the season of 1894 about twenty, by parties fishing, 5 or 6in. in size, showing that they have obtained a start, and we confidently expect an increase.

We followed out the policy outlined in the last annual report, and placed in Big Island waters about 3,000,000 fresh-water smelt eggs to hatch and propagate for food for the salmon, and this method we think should be continued.

We now, at the time of writing this report, have the promise of 10,000 salmon eggs and 20,000 trout eggs, which we propose to finish hatching in our buildings. These we propose shall be cared for during the summer and liberated in the fall, when they will be of a size to protect and feed themselves.

BOSTON AND MAINE.

BOSTON, May 23.—Reports from the Maine waters are encouraging as to the fishing. The weather has been very cold indeed, but is warmer again. Mr. C. Z. Bassett, of Appleton & Bassett, who is at Billy Soule's Pleasant Island camps, at Cupsuptic Lake, writes Mr. Appleton that the weather is very cold, so much so that his winter overcoat has been none to warm. The fishing is beginning in good earnest there, with some catches already. Mr. G. N. Smalley is with Mr. Bassett. Mr. and Mrs. N. N. Thayer, of Boston, are also there.

A private letter from Haines' Landing, Mooselucmaguntic, just received, says that the fishing there continues the best for years. There are about twenty-five guests at the Mooselucmaguntic House, and nearly all are having good luck. Mr. George Churchill, of Brockton, Mass., has taken a 5lb. trout within a few rods of the house. Mr. Perry, of New York, has taken a 7lb. trout; Mr. Hooper, of Philadelphia, has taken one of 4½lbs. Miss Grace Hobart's largest trout weighs 6lbs., but she has taken a number of lesser size. Mr. Walter Farmer, of Arlington, Mass., has taken ninety-four trout in one week's fishing, the united weight of his string being about 200lbs. Mr. A. C. Lomberd and Wm. S. Patten, of Lowell, Mass., have taken in one day twelve trout, the creel weighing 24lbs.; the largest weighed 4½lbs. There was also a landlocked salmon in the lot that weighed 3½lbs. Several salmon are mentioned as being taken from Rangeley Lake, but none yet of large size.

Among the shoe and leather trade people who have gone afishing may be mentioned Mr. Shaw, of Gregory, Shaw & Co., with Mr. Johnson. They have gone down to Winn, Me., and from thence to some good fishing grounds not far away. Mr. Pickard, the veteran fisherman, is at the Oquossoc Angling Association's club houses. None are more delighted with the waters and the air of upper Mooselucmaguntic than he. Mr. R. A. Tuttle, of Boston, with his friend Mr. Gilman, is at Lake Point Cottage, where he and Gen. Harmon have spent many happy fishing seasons. Mr. C. F. Hutchins, of Boston, with Lieut. H. G. O. Colby, of the U. S. Navy, will join the Lake Point party on Saturday. Mr. Hutchins and Mr. Colby will be accompanied by their wives and children; all the elders of the party thoroughly enjoying the fishing. They will fish for eight or ten days. Mr. Tuttle writes them that a 4lb. trout is the largest one taken yet in that vicinity.

Senator John Simpkins, of the Cape, started to-day for B. Pond, for a few weeks' fishing. It will be remembered that this is the pond on which Ex-Gov. Russell, with hi friends John E. and Bayard Thayer, with Mr. Simpkin and others, succeeded in getting a special act of the Maine Legislature last winter, closing it perpetually to all fishing except with the artificial fly.

M. Joseph B. Thomas, of New York, and of the American Sugar Refining Co., with Mrs. Thomas, passed through Boston this morning *en route* for Moosehead. Later Mr. Thomas is to be followed by a party of friends. They go for fly fishing only, and it is believed that the water and the weather are both too cold yet.

The Allerton Lodge party comes pretty near to being deprived of one of its most distinguished guests. The party started this morning via Boston & Maine Railroad, but Mayor Edwin M. Curtis is at present kept in Boston by important city business. He will doubtless join the party a few days later. In the party are Col. Horace Rockwell, Col. E. B. Haskell and C. H. Andrews, of the Boston *Herald;* Mr. George A. Priest, Mr. George Young and Dr. Heath. Allerton Lodge is on the east side of Lake Mooselucmaguntic, and is the property of Messrs. Haskell and Andrews. The extremely cold weather being over, the party expects good fishing.

Mr. E. A. Dow, with his friend Mr. Place, returned from Camp Stewart yesterday. They found extremely cold weather, but the fishing was entirely satisfactory to them. They caught all the trout they wanted, with fishing only a small part of the time. Mr. Dow's catch includes a 6lbs. trout, one of 4½lbs., and a good many of 3lbs. and upward. Mr. Place caught a 4lbs. trout.

May 24.—The Produce party to Moosehead Lake is home again. The weather was terribly cold, and almost every man of the party declares that he will never start on a State of Maine fishing trip so early again. There was even more trouble from the terrible winds on the lake than from the cold. It was next to impossible to stay out in a boat after the wind came up in the forenoon. There were only six in the party from Boston after all. They were Mr. Smith, Dr. Foss, Mr. J. H. Davis, Mr. L. G. A. Fauteaux, Mr. L. E. Pierce and Mr. Geo. A. Fales. All are in the produce trade, except Dr. Foss, a dentist, and J. H. Davis, of the firm of Curtis, Davis & Co. Mr. S. R. Ellis was hindered from going, as well as Mr. Wallace F. Robinson, President of the Boston Chamber of Commerce. At Boston this party was joined by the Fales party of Pawtucket, R. I., twenty fishermen in all. The Fales party owns a camp at Moosehead. A good many trout were taken; generally all that the law will allow sportsmen to bring out. Members of this party say that the fish and game wardens are keeping very close watch at Bangor and other points, to see that the 25-pound law limit of trout is not exceeded. Several seizures have been made there. The trout this party found to be larger this year than usual. Several up to three and even three and a half pounds were taken. Generally the fish taken were "square-tailed" or brook trout, the usual volume of lakers not being taken. Considerable fly-fishing was noted—something very unusual for so early in these waters.

The Inglewood Club early party will be a good deal broken up this year. Several of the members are hindered by business. They say that trade has been dull so long, now that a start has come, they do not feel like going afishing. Business must be before pleasure, especially when business has been so long deferred. Mr. Harry B. Moore and George C. Moore sail for Europe tomorrow and cannot be with the Inglewood party this spring.

The Camp Stewart party to Richardson Lake starts this evening. This party is also broken up more than one-half. It is composed of Mr. and Mrs. George T. Freeman and Dr. Wood, of Arlington, with Mr. and Mrs. W. K. Moody, of Boston. Mr. H. S. Kempton, of the Boston *Herald* staff, is prevented from taking his usual spring fishing trip with this party. Mr. W. T. Farley, with Mrs. Farley, who have fished with this party a number of seasons, have gone on a bicycling tour instead. Mr. C. A.

Stearns, the truest lover of the gentle Izaak in the party, was called to go to Montana, after having made every arrangement for his fishing trip. He is the owner of a number of editions of Izaak Walton, and finds the true angler's comfort in them. SPECIAL.

HUB RETURNS AND DEPARTURES.

BOSTON.—W. S. Greenough, Joseph Guild, F. J. Baker and Isaac Colburn, all of Boston, leave in a few days for a two weeks' trip to fish a few choice ponds in the vicinity of Moosehead Lake. Messrs. Guild and Greenough have visited this country each season for some years, and came back each time well satisfied with results.

E. C. Fitch, President of the American Waltham Co., A. K. Sloan, of New York city, and Dr. Brown and J. D. Edmands, of Boston, will shortly leave for Quebec, whence they expect to sail about June 15, on their own yacht, for the river Romaine, on the north shore of Quebec province. This river is classed in England as one of the three best salmon rivers in Canada. The salmon are large in size and fight desperately from the moment they are hooked. All of the party are expert salmon anglers and without doubt will land many fish before their return on August 1. Dr. Brown's experience in salmon fishing is not confined to this country alone. He is a great traveler and has just returned from a trip around the world. In Japan he had the novel experience of fishing for salmon with native tackle, the line being the smallest possible size, and the rod of green bamboo that would almost bend double.

W. B. Farmer, of Boston, has just returned from a ten days' trip to the Rangeleys. He stopped at the Mooselucmeguntic House, and had Ed. Lowell for guide. His score is the best I have seen this season to date, being 100 fish. The largest trout taken weighed 5¾lbs., and the largest salmon 6½lbs. The greatest catch for one day was on May 11, when he landed twenty-one fish (two salmon and nineteen trout), the largest weighing 5¼lbs. The weather was terribly cold and disagreeable most of the time. All of his fish were taken by trolling.

Mr. Fred Winch has just returned from the Englewood Club Preserve. He had good fishing and great luck with the Stanley smelt.

E. W. La Croix and A. F. Marston, of Lynn, have just returned from Billy Soule's Pleasant Island camps. They are well satisfied with the fishing, but have nothing to say in praise of the weather, which they pronounce as awful. The three largest fish taken weighed 4½, 4¼ and 3½lbs. respectively.

The Moose River Total Abstinence Club. When I first heard the name I was under the impression that a branch lodge of the Sons of Temperance had in some way strayed up into the Moose River country and started in to do missionary work with visiting sportsmen and guides. Careful inquiry, however, revealed the fact that such was not the case. A fishing club is the owner of this high-sounding title, and jolly good fellows they are, too. Why the word "abstinence" is inserted I cannot say; possibly it refers to temperance in eating, catching fish, etc. Who knows? The members of this club are Com. L. E. Pierce, who has been fourteen years with the same party; George A. Fales, the Boston commission merchant; James Davis, the soap manufacturer; Dr. L. T. Foss, the dentist, and a Mr. Smith, who presents the remarkable record of forty-nine successive years at Moosehead fishing. This last-named gentleman killed a bear on the present site of the Kineo House years ago, and is the patriarch of the party. The club has just returned from a week's fishing at the lake, and had a grand time. They made their headquarters on the steamer Louise. A number of guests accompanied them, and they had guides and canoes in plenty to enable them to reach all the best fishing points. During the trip Dr. Foss presented a fine rod to the Commodore, made by J. Will Barney. While at the lake a 16¾-pound laker was taken in trolling by a member of the Camp Comfort Club.

E. Billings and friend, of Boston, will leave on May 29 for the Bonney River country. They expect to put in a month's time fishing the waters of this region, most of which Mr. Billings is well acquainted with, having been there several times before. They will stop at the camps of Tom Sullivan.

Quite a number of striped bass from 3 to 12lbs. in weight are being taken in the weirs of fishermen in the Exeter River, N. H. A large tautog was lately caught in the same manner in this stream twenty-seven miles from the ocean.

Geo. W. Tenney and party recently returned from Daw Hole Pond, N. H., report good salmon fishing and a grand time during their week's visit. One salmon was taken which weighed 19lbs. It was an immense fish and gave its captors a great fight. Six other salmon weighing together 60lbs., were taken by the same party. One fish of such a large size goes far toward satisfying the most exacting angler, and Dan Hole Pond has pleased not a few in this respect since the ice left.

The Brackett and Clark party have returned from the Upper Dam, Rangeley Lakes. Two 7lb. fish were the largest weights taken, but a sufficient number of smaller size were caught to make the trip a success. Mr. Brackett had some fair fly-fishing in streams nearby. The party experienced terrible weather, the worst seen in many years' visits to the Rangeleys.

A. G. Weeks, Jr., Herbert Austin, Henry H. Carter and Asa Bond, all of Boston, will leave on May 30 for Grand Lake, Me. They will be away two or three weeks and will spend the time fishing for salmon. Mr. Weeks is particularly expert at this sport, and in the past has made some very good scores. He never gets tired, but stays right with it, and this is what counts after all.

J. Stewart and H. B. Read, of South Weymouth, left on Friday last for Haines Landing and Camp Bemis, Rangeley Lakes. They will stay about ten days and will devote the entire time to fishing. HACKLE.

Red Drum Ashore.

MORRISTOWN, N. J., May 21.—I have just returned from North Carolina, driven home by the cold and boisterous weather. The red drum (channel bass) lay on the beach at Body's Island by hundreds, the supposition being that the cold killed them. It is a curious fact, however, that they were all large ones, from 20 to 40lbs. Where were the small ones? It was reported on good authority that on Hatteras Beach they lay in windrows. BIG REEL.

SOME FISHING NOTES.

HERE are various notes of various fishing by various anglers for various fish in various waters:

TRENTON, N. J.—Mr. Kimball took a 9½lbs. striped bass May 16, and Mr. Seichnor brought in one of 19¼lbs.
C. E. P.

WOODBOURNE, N. Y.—Some recent catches of trout in the Neversink have been: Mr. S. H. Palmer, of New Jersey—three brown trout, which weighed 6¼lbs. in all, one weighing 3½lbs. and measuring 22in. He caught forty smaller brook trout in same catch. The fishing in this vicinity is the best for several seasons. A big catch was made by James P. Hall, of Jersey City, stopping at Woodbourne, taking in all about 400 fish from the Neversink River, in a distance of ten miles from Hall's Mills to Woodbourne. He says he only stopped because he couldn't carry any more home. L. L. WALDORF.

OLD FORGE, Fulton Chain, Adirondacks.—Some May catches have been: By H. J. Mowery (Syracuse), eighty-nine speckled trout, weighing 43lbs.; five salmon, weight 18lbs. By Charles Newman (Newport), two days' catch, sixty trout, weight 34lbs. By Dr. Rasbach (Mohawk), forty-eight trout, weight 20lbs.; one salmon of 14lbs.
W. A. BRIGGS.

HARRISVILLE, N. Y., May 20.—Trout fishing is excellent this season at and in the vicinity of Forest Home. Large catches are being made almost daily. During last week about 300 trout were caught near there. One party of two caught thirty-five in one day, averaging about 1lb. each. Another party of three caught fifty in one day, weighing about ¾lb. each. Now is the time to catch them.
HUMES BROS.

ADIRONDACKS, Old Forge, N. Y., May 25.—Dr. A. B. Stevens, of Watertown, on May 20 took fifteen speckled trout, weighing 8½lbs; Geo. B. Davison, of Utica, forty-two, weighing 26lbs.; Dr. Chas. E. Douglass, of Lowville, fourteen, weighing 9lbs. A. J. Smith and J. R. Devendurf, of Herkimer, on May 21 took thirty-one, weighing 17lbs. The prospects are good for the season.
N. A. BRIGGS.

WELD, Me.—Among May fishermen at Pine Point Camps have been Fish Commissioner H. O. Stanley, who took both trout and salmon; ex-Gov. Marble, who scored a 2½lbs. trout and another of 1¼lbs. The fishing is good this season and promises to hold. W. K. CHASE.

THREE LAKES, Wis.—Lunge, pike and bass fishing will be good by June 1. The prospects look very good. The season is two weeks earlier than it was last year.
T. R. FRENCH.

SYRACUSE.—The water in Seneca River is very low and large quantities of pickerel have been taken with a spoon at Montezuma marshes and Port Byron. A 5¼lbs. California trout was taken from Onondaga Lake early in the month by a small boy, who sold it to E. Loden for $1.50; the fish measured 23in. long. K.

DINGMAN'S FERRY, Pike County, Pa.—Dingman's Ferry still continues its reputation for fishing, and many well-known anglers have visited it during the present month. One of the guests of the High Falls Hotel brought in from this morning's fishing twenty-seven very fine trout from Dingman Creek. P. F. FULMER.

The annual contest of the Honeoye Falls (N. Y.) Anglers' Association will take place June 12. There are fifty-three subscribed prizes from local business men.

We fished the Neversink from Hall's Mills to Big Bend with Willie Dean; caught 123; weighed 24½lbs. On another day fished the Neversink from Hall's Mills to Conklin's Brook and took 84; weighed 15lbs. We stopped at H. W. Dean's, Neversink. W. A. and L. C. K.

Striped Bass.

JERSEY CITY, N. J.—*Editor Forest and Stream:* I send you a photo of live handsome striped bass caught by Mr. A. P. Beck, of Jersey City. They were taken along the

Jersey coast with rod and reel and still fishing on Nov. 12, 1894. One weighed 10lbs., the other 7lbs. He also caught another weighing 12½lbs. a week later, but the negative was not very good. He also caught one in the spring weighing 11lbs. WM. BECK, JR.

The bass are now running in the Hudson, the East River and other waters about New York, and good catches are reported. A writer in the *Sun* says: "What is considered to be the best fishing ground along the Hudson is the shallow water that covers the level bottoms at the mouth of the Croton River. These shallows are very extensive, so that one angler might fish there all day without getting a strike, while another angler, choosing a different position, would make a large catch. It is, therefore, advisable when fishing over these grounds to change from one place to another until the bass make their presence known. The incoming tide is invariably the best, for as the water deepens over the bottoms the fish come in to feed. It is also advisable to take along several kinds of bait, such as sand worms, white worms and shrimp, for striped bass have remarkably fickle appetites, and though they may take white worms greedily on one day, they will touch nothing but shrimp on another."

Six-Inch Justice.

ROCHESTER, N. Y.—*Editor Forest and Stream:* I enclose you a clipping from the Rochester *Post Express*, descriptive of an incident which happened during one of my recent trout fishing expeditions, which may be of interest to you and your readers. While the proceedings narrated might not have been strictly legal, they were nevertheless exceedingly effective. FRANK L. DODGSON.

On May 1, under the law, the season for trout fishing opened in Wyoming county. F. L. Dodgson, of this city, was among those who availed themselves of the privilege of enjoying the sport in that county. He related to a *Post Express* reporter this morning the novel method he witnessed of bringing illegal fishermen to task there.

He said: "On Wednesday, when the season opened, there were a large number of people who availed themselves of the opportunity of enjoying the sport. The game and fish protector was on hand with assistants to see that law was not violated. The law requires among other things that no fish under six inches long be taken from the streams. The game protector had a little tin box just six inches long with which to measure the fish. He had the court with him—that is, he was accompanied by the deputy sheriff and the justice of the peace of the county. The three men stopped all the fishermen they saw and examined their catches. They went to the hotels and wherever they could catch fishermen. They examined each fish individually, measured it by the little tin box and saw that the law was not violated in any other particular. One man had a fish under the regulation size in his basket. The game protector measured it, and on ascertaining that it was less than six inches in length summoned the justice of the peace, who immediately held court and fined the law breaker $10. It was the most summary dispensation of justice I had ever seen and struck me as being worthy of emulation in other places. If there were more such wide-awake game protectors and ubiquitous justices of the peace there would be less violations of the fish and game laws of the State, and their result would accrue to the advantage of all."

What Colors the Flesh of the Salmon?

I SEE the question asked in some issues of FOREST AND STREAM, and authorities are quoted asserting that it is owing to their food at sea, being principally eggs of other fish and crustaceans.

Having drawn the stomachs from 1,000 salmon caught on the sea coast, before reaching the brackish water, I only found in them three varieties of food—the caplin, herring and mackerel, with not a sign of shrimp, sand, eel or egg.

Are you aware that some rivers have fish much more highly colored than others? Those of the Metapedia River (a branch of the Restigouche) have very light-colored flesh, so much so that the Billingsgate dealers in 1880 declared them bull trout. Many are not aware that as the gravid stage approaches the flesh loses its color, becoming a dirty lightish pink.

Again, take a fish that has passed the winter in the river and is on his way to sea in June. He looks bright and clean outside, and has lost all the red spots which he bore in October. Of course he is not filled out in body like a fresh-run fish, but deceives many an angler. Cut into that fish. His flesh is nearly white. It may be the food at sea that does it. My own opinion is that it is the salt water more than the food.

Again, take the Fraser River spring salmon, fine fat fellows, 18 and 20-pounders; one-half of the catch is white fleshed, and he must be an expert who can tell the difference without cutting into the fish. Those fish are all the one family running in from sea together. It is just possible that they may have been on different feeding grounds. You may make any supposition you choose, and you may tell me, if sea water does it to one why not to all. It is one of those conundrums hard to solve.
JOHN MOWAT.

Bass Fishing About Put-in-Bay.

TOLEDO, O., May 25.—*Editor Forest and Stream:* Speaking about bass fishing, this year's experience around the Bass Islands at the western end of Lake Erie will go into history as exceptional in more respects than one. To begin with, the spring at the head of the lake had been an unusually dry one, and the streams which in April and May are usually pouring out a great volume of muddy water into the lake from the plowed farms and big ditches of Ohio and Indiana, were this year uncommonly low and clear, and the lake water was consequently in as fine a condition as it ordinarily is in September and October. The first two or three days of the month (May) were pleasant, the 4th was warm, the thermometer hanging about 85; the 5th was warmer, and then the fishing began. From the 5th to the 10th, both inclusive, those who were fortunate enough to be on the ground at Put-in-Bay or Middle Bass duly equipped and provided, enjoyed such a run of sport as the old inhabitants of the islands love to tell about, but which very few have had the good fortune to experience. Everybody got fish who knew how to handle a rod (and some who did not), the catches in some cases running as high as 100 bass in a single day to a boat with two fishermen. The fish ran larger than usual at this season of the year, and the great majority of those taken were males. This, however, is generally true of the opening of the spring fishing. The night of the 10th was the precursor of the cold snap which swept the entire country, and since that the fishing has been light.
JAY BEEBE.

Trout Fishing on the Beaverkill.

LEW BEACH, Sullivan County, N. Y., May 25.—The "Mountain Villa Hotel" is reached by the way of Ontario & Western Railroad, stopping off at Livingstone Manor, thence by stage, a distance occupying a two hours' drive. Our party, consisting of H. B. Waring, C. H. Rowland and the writer, arrived here during the early part of the week, and although the fishing is far from being phenomenal, yet we have caught as many trout as any party of reasonable fishermen could possibly desire.

The Beaverkill affords exceptionably fine opportunities for casting the fly, being a broad stream and readliy waded.

The trout are at present taken principally by artificial flies, the coachman, queen-of-the-water and Beaverkill. Our catch averages daily, for a few hours' fishing, about fifty trout; although the majority of them are not so very large, yet we have landed some very fine large ones.

Our hotel proprietor is a congenial and popular landlord, the house has a capacity for fifty guests and the table is excellent.

The writer takes the liberty of writing to the FOREST AND STREAM, thinking perhaps that some of its many devoted readers may be glad to know where they can get good fishing, and at a place so situated that it can be reached with comfort and little expense.

For scenery and clear bracing air this section cannot be excelled. JOHN T. WARING, JR.

Pennsylvania Trout Streams.

THERE are three good trouting places in Monroe county, Pa., which I have not seen mentioned. These are Mrs. Maginnis, Swiftwater; Henry (there are two houses here both kept by the Henrys, I can't recall their first names), at Henryville; T. H. Stites, Analomink—all in Monroe county, Pa. The stations for each of these in order named are Forks, Henryville and Spragueville. All these places are reached by a short drive from the station. The two former are on the west branch of Brodhead's Creek, while Stites's is at the junction of the east and west branches of the same stream. Any one going to any of these places would be well taken care of and would have fair chance for sport. The fly-fishing varies as it does everywhere else. Maginnis's and Sites's I can speak of from personal experience, and two finer trout streams as they are at Stites's would be hard to get. The streams are all within stone's throw of the houses named. D.

Crab Packing in North Carolina.

NEWBERNE, N. C.—The crabs are caught around Morehead and Beaufort and packed in Newberne, from whence they are shipped. One man can catch eight barrels in ten hours on these grounds, whereas in Lynnhaven Bay and around Norfolk, in Virginia, where the chief source of supply has been hitherto, a barrel a day per man has been regarded as a good catch. The crabs are caught on trot lines 450ft. long, stretched from stake to stake in the sounds, each line having 300 baited snoods placed 18in. apart. When a line is lifted by a man in a boat about one snood in five will yield a crab. Good hands can catch about thirty barrels in a week and make good wages. This location is said to be the most prolific on the whole coast at this season, and as early as January. In summer they can be taken in abundance anywhere. C. H.

A Michigan Netter Punished.

MATT THOMAS, one of the men arrested last week through the efforts of Henry L. Avery, deputy game warden at large for illegally fishing with nets in Lake St. Clair, was tried on Monday at Mt. Clemens and convicted. He was fined $25, with the alternative of thirty days in jail. Prosecuting Attorney Wickes was assisted in the case by Lincoln Avery, of Port Huron. There are now in possession of the officers about $1,200 worth of nets belonging to the men arrested last week, which are being held until the trials of all the men have been held, when they will probably be destroyed.—*Port Huron Times.*

"Two at a Cast."

MR. THOMAS SEDGWICK STEELE'S well-known trout painting "Two at a Cast" has been reproduced by the Prang people in colors faithful to the original, and the work is admirable. The copy in FOREST AND STREAM'S exhibit at the Sportsmen's Exposition attracted much attention. We can supply it, as is noted in our advertising columns.

Time's Changes.

GODFREY, Ill.—I have fished with rod, reel, flies and artificial bait for years; and have cast flies on many Northern lakes before they were known to many. To-day some of those places are watering resorts. Have dragged my canoe over the very ground that to-day is covered by hotels and summer houses. But more anon. C.

Answers to Correspondents.

WILD RICE, Bridgeport, Pa.—What do wild ducks like to feed on the best, wild celery or wild rice? Where can I obtain either of the seeds? What time of the year must I plant it, and how should it be planted? Ans. They like both, but the wild rice is the most practicable of introduction. You may obtain wild rice seed (in season) from Chas. Gilchrist, Port Hope, Ontario; R. Valentine, Janesville, Wis.; Northrup, Braslin & Goodwin Co., Minneapolis, Minn. And wild celery may be had from W. W. Wentworth, Fort Atkinson, Wis., or E. D. Sturtevant, Bordentown, N. J. In the FOREST AND STREAM of Aug. 25, 1892, Mr. E. E. Thompson concludes an illustrated paper on wild rice with these practical points; "Wild rice is very prolific and grows annually on the same grounds, requiring no care to cultivate. It will grow well in almost any water that has a muddy bottom, is not too cold, and has not a strong current and is not more than 8ft. deep. It will succeed in any of the Middle States and Northwest as far as latitude 50°. Rice has been found doing well on prairie sloughs of Minnesota, the water of which is tinctured more or less with alkali; it has been successfully introduced into many of the salt marshes of the Hudson River and Long Island, and it grows well in fresh water marshes and on the banks of slow-running streams. The proper time for sowing the seeds is immediately after it is gathered ripe, *i. e.*, in September. The plant is hardy, prolific and aggressive, and usually more than maintains a footing once established. Its failure to grow in so many cases is due to the fact that the seed has been impaired by too long keeping, and in a number of cases the seed used has been threshed by the Indians, who scorch the grain to facilitate the operation. A few months seems sufficient to destroy the vital germ, so that, though spring sowing has succeeded in some few cases, the trial of winter storage is usually too much for this delicate grain."

C., Godfrey, Ill.—Can a reservoir, after being stocked by the Government, be leased to private parties, while the public is prohibited from fishing except upon payment of a fee? Ans. The laws of some States now forbid such a thing, but there is no provision in the Illinois law affecting it.

Fisheulture.

Trout for the Big Horn.

SHERIDAN, Wyo.—Supt. S. E. Land has put a plant of 50,000 trout in Dome Lake. The fish were in transit from the State hatchery forty-eight hours and the distance traveled from Laramie to Sheridan, Wyoming, by way of Grand Island, Nebraska, was 1,000 miles. On the arrival of the train a team of four horses was in waiting and the fish were taken a distance of thirty-five miles up the Big Horn Mountain to snow line and planted at midnight in Dome Lake. Out of the lot of 50,000 trout not a dozen were lost. Mr. Land says: "The stocking of this mountain lake summer resort with these red-spotted, fine-scaled, dark-colored, speckled beauties is a commendable enterprise of the Dome Lake Company, and one that the people of Sheridan county and of this State will appreciate in the near future. The location where the fish were planted is one of the finest in the Rocky Mountains, for the reason that the waters of West Fork or Goose Creek run directly through the lake, furnishing an abundant supply of natural food to support fish life. The blood heat of this cold-water fish is 45° and the temperature of water in this stream and lake is at all times of the year at 45°, with a slight variation of 5° colder in the winter."—*Sheridan Journal.*

Our Michigan Review.

WE are surprised to note that the Detroit *Evening Journal* of May 21 copies *verbatim et litcratim* the excellent review of the Michigan State Fish Commission, written by our Detroit correspondent "Keuka," without crediting the same to this journal. Of course it is very gratifying to have our articles copied by other journals, and they are quite at their service, but it is always an added pleasure when journalistic courtesy prompts a proper acknowledgment. In this case the wholesale appropriation of our contributor's carefully prepared *resumé* as original matter by the *Journal* led to repetition of two or three errors, which occurred in setting up the article in the FOREST AND STREAM, one a glaring blunder, in which the number of whitefish planted in Michigan waters in the years 1893-94 was stated to be 290,900 instead of 290,900,000, which were the correct figures. There were other minor errors, all, however, innocently reproduced by our Detroit contemporary. We are willing to put the most charitable construction on the matter and charge the omission to inadvertence or—the office cat.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.

Sept. 17-20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Sept. 24 to 27.—New England Kennel Club's second annual fox-terrier show, Boston, Mass. D. E. Loveland, Sec'y.

Oct. 8-11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at Morris, Man. P. T. Madison, Sec'y, Indianapolis, Ind.

Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.

Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 29.—New England Field Trial Club, at Assonet, Mass. S. R. Sharp, Sec'y.

DOGLY FRIENDS.

IT is unfortunately true that many earnest and steadfast dog fanciers have business interests to look after six days each week of this workaday world.

While they love the dog for his good qualities, such love is not their sole mission on earth. In the large cities the business pressure is intense. Men in professional life are in particular subject to constant exactions of time and attention by their clients. The office of a business man is seldom a place of diversion or recreation. Withal, it seems strange that Smith—let us call him Smith, though that is not his name—who will not tolerate anything but business in his own office, will call at Jones's office, drop into a chair and talk dog, or fish, or gun, or horse, till everybody is tired and life is one vast monotony.

It matters not that customers or clients come in to transact their affairs. It matters not that they may be reticent in the presence of a third party, or that that they have private business to transact which they considered undesirable or against their interests for a third party to hear. It matters not that clients cut their interviews short or are ill at ease, or that there is a tense constraint in the routine of the office, Smith is charged so full of the lore of the horse, dog, fish, canoe, gun, etc., that he waits patiently for the to him interruption to pass and then he dawdles and talks and talks, picking up the most inconsequent trifles for lengthy remarks and discourses, harking back often to subjects already worn threadbare by his tireless tongue; and thus each long hour after hour of his mental drooling goes on in his friend Jone's business hours and office.

The lawyer, the doctor, the blacksmith, real estate man, the merchant, in short, the professional man in general, have all to contend with the bore in some form in their business, yet the bore in nearly every instance is most sensitive to improper interruptions in his own business.

These thoughts occurred to me after witnessing a visit of a dog fancier to a friend in his business office, in St. Louis. The friend's name was Smith. He was busily engaged talking with a client when Jones enters .The latter shakes hands effusively and says:

"I'm awfully glad to see you, old man! Haven't had time to have a chat with you in a month. Anything new? Been fishing yet? Heard that the bass were plenty and biting like all possessed. But I came in to tell you about my new dog, a pointer. He's got the best pedigree in the country. I brought it over for you to look at. See there! Sixty generations. There's the blood of Bow and Foust and Croxteth and Sensation, and Rip Rap and Kent Elgin and Meteor and Tom, Dick and Harry. Now, I'd like to know where that pedigree can be beaten. Got the dog cheap, too. His owner got in debt and had to have the money. He wouldn't have sold me this dog, Duke of Bow of Faust of St. Louis, but for that circumstance. Don't you like his name? I think it a nice name. It gives the idea of such blue blood. He's broken first rate. His owner told me that he pointed."

"Pardon me," said the client, rising to go, "I'll call and see you, Mr. Smith, some other time about that matter we were speaking of. I have an engagement which now demands my attention. Good day, gentlemen."

"Good day!"

"Good day!"

"As I was saying when interrupted," resumed Jones, "Duke of Bow of Faust of St. Louis, pointed a bevy of quails when he was a month old and he never needed any training at all, working naturally to the gun from the beginning and retrieving his birds as well as the best retrievers broken by expert trainers. My wife says that she had heard Tom Brown had said to a mutual friend that that dog, Duke of Bow of Faust of St. Louis, was about the best bench show dog in this country, bar none, and you know that what Tom don't know about bench shows isn't worth bothering about. He is conceded to be——"

Here a client entered, and after the conventional greeting he showed some hesitancy of manner and gazed furtively at Jones once or twice. Then came a number of desultory remarks on the weather, Coxey's army and the fall of office rents. The client was sparring for time, and plainly waiting for Jones to finish up his business and go, so that he could go on with his own affairs without the intrusion of a third party. Jones settles himself comfortably and his manner indicates that he is there to stay and wait. As the constraint grew apace there was labor in the conversation, and Smith, to relieve it, introduced Jones to his client. Then the conversation soon picks up and proceeds naturally and with some animation.

At last Jones says to the client, "Are you interested in dogs?"

"Not very much," is the reply, "though I like them."

"Well, if you could see my new dog," says Jones, "you could not help owning one yourself. I was just telling my friend Smith about him when you came in. Smith is an old friend of mine and likes dogs as well as I do myself. I came over purposely to tell about him this morning. I brought his pedigree along. Perhaps you would like to look at it. Sixty generations, you perceive, tracing to well-known kennels which bred dogs pure for 300 years. If you have time, I will be delighted to take you out to look at him. Beautifully marked! Rich liver and white. Great bench show dog and—what! You are not going, Mr. Client?"

"Yes, I find that I already have overstayed my limit, but the conversation was so charming that I had no consciousness of the passage of time. That little matter of business, Mr. Smith, can wait a week or so now just as well as not. Anyway, I will not have time for it sooner. Good day, Mr. Smith. Good day, Mr. Jones."

"Good-by."

Jones then seemed fresher. The forenoon is gone. Smith invites Jones to lunch. Jones accepts. Smith is edified with more talk about Duke of fine ancestry and residence, and Jones returns to the office with him. He talks dog another hour. Then he rises and says:

"Well, Smithsey, old boy, I'll have to be going. I hope I haven't annoyed you. I know you like dogs, and I was sure that you would be interested in Duke. I'll sell you a puppy cheap if you want one, though they are not for sale. I must say good-by for the present. Come and see me."

They shake hands, and Jones takes two steps, stops, and says:

"Oh! I forgot about the fishing. There seems to be good prospects for the season. I meant to have told you about my new split-bamboo rod. I remember how pleased you were with yours last season."

Jones edges to the chair, drops into it again and stops another hour. Smith talks cheerfully, but his heart is heavy. Jones makes his adieu four times, with four handshakes duly attached thereto, and with long, dreary conversational pilgrimages between. At last he went.

B. WATERS.

The Bulldog Club.

ROCHESTER, N. Y., May 18.—Having been quite ill since the Pittsburg show, I have not seen until recently the edition of the *Kennel News* containing Mr. Watson's New York letters, in which he refers to the formation of the Bull-Terrier Club of America. In his endeavors to convey the idea that Mr. Dole was elected President in spite of the opposition of some "gang," Mr. Watson places Mr. Dole in the position of needing some one to save him from his friends. I presume that as I am responsible for calling the meeting I might be regarded as one of the "gang," but I will state that I am in very good company, as I was in communication with all the bull-terrier fanciers in the country, who were all unanimous as to the necessity of a bull-terrier club;—this was the "gang" that elected Mr. Dole president, which was done upon my motion.

Personally, I have nothing to lose or gain in the success of the club, which is a certainty, as its future now depends upon a class of people interested who will make it as strong as any specialty club in the country, despite the many efforts to throw cold water upon it since its incipiency. The officers of the Club for the year are men who have been successful in their business careers, and who have time and means to devote to the interests of the Club. So far I have gained nothing but a whole lot of abuse and loss of time and money, but I have accomplished what my friends requested. W. J. HIGGINSON.

New England Kennel Club.

BOSTON, Mass.—At a meeting of this club, held May 15, the following was unanimously adopted:

"*Whereas*, Dr. C. A. Lougest has lost the mastiff Beaufort Prince and Mr. Martin Fallon has been allowed to retain it, be it

"*Resolved*, That the vote of the A. K. C., passed Feb. 21, 1895, in relation to this case, is hereby indorsed, and that this club extends to Dr. Lougest its sympathy for his great loss of so valuable a dog; and does hereby instruct its bench show committee not to receive either the entry of Beaufort Prince or any of his get after July 15, 1895, until this dog becomes the property of Dr. Lougest."

D. E. LOVELAND, Sec'y.

A Champion Stake.

STEWARD, Minn.—*Editor Forest and Stream:* The champion stake proposed by W. W. Titus in your issue of May 11 is one much needed. Being in favor of the proposed organization, I hope to see all field trial handlers take an active part in making the stake a success.

FRANK RICHARDS.

POINTS AND FLUSHES.

THE following letter from Mr. Thos. Johnson will be welcomed with pleasure by those who are directly interested in field trials, or in the improvement of pointers and setters. Of course every one knows that two great field trial events are already arranged to be held at Morris, Manitoba, and if the Northwestern Club should arrange the champion stake mentioned by Mr. Johnston, it would round out the competition and add greatly to the importance of the chicken trial competition. There would then be three clubs in action instead of two, with a corresponding benefit to field trial matters.

Mr. Johnson says: "In writing Mr. Brailsford some time ago *re* their new international stake, I incidentally said that if Mr. Lonsdale would like the cup he had promised the Northwestern Field Trials Club to be run for this year, we could have a champion stake at the conclusion of the trials on the same lines as theirs, viz., for winners of first and second in any field trial in the world. I am in receipt of a cablegram to-day saying that Mr. Lonsdale will donate a similar cup to the one given by Messrs. Galt two years ago, and you know that it was a cup any one might envy. I am calling a meeting of the club to see what action they will take, but from conversation with members, their ideas run in the groove above mentioned: that is, for the Northwestern Field Trials Club to hold a champion stake only, making a nominal entry fee of say $5. This to cover everything and the winner to take the cup; or, if those directly interested desire to put up say $25 each, the club will give the whole of it for prizes. We should get at least ten starters, which would make say the cup and $100 for the winner, $100 for the second and $50 for the third. You will understand Mr. Lonsdale donates the cup outright to the winner. I had a letter from him saying that he would suggest a thorough trial of at least one-hour heats, but this was only a suggestion; the details would be left entirely with our club."

The proposition to run a champion stake is most commendable and deserving of general support. A champion stake, moreover, would come in with peculiar fitness at the close of two great trials which have no champion stake and wherein a large number of the best dogs will compete almost to a certainty. It would meet the desires of those who have winners which they cannot run in the regular all-age stakes. In short, Mr. Johnson's proposition is perfectly sound, commendable and deserving. Those who have the interests of field trials at heart should give it their support.

All handlers who can do so should attend the chicken field trials. It is their gain even if they win nothing, for the competition is the life of renumerative handling and breaking. B. WATERS.

American Spaniel Club.

A meeting of the executive committee of the American Spaniel Club was held at 110 East Twenty-second street, May 21. Present: Messrs. E. M. Oldham, R. P. Keasbey, Marcel A. Viti, James Watson and J. S. Bradbury, President Oldham in the chair. Minutes of last meeting approved.

Voted that no challenge prize be offered at any show unless the same has been accepted by the executive committee, and all such prizes must be donated in trust to the American Spaniel Club and placed in competition by it in accordance with terms governing the gift. Mr. George R. Preston, Jr., offers to donate in trust a silver bowl, value $250—to be known as the Brace Challenge Bowl—under the following conditions: To be competed for by braces of all American bred spaniels over 28lbs.—to be placed in competition at least twice a year and only at shows adopting classification No. 1. At least three braces to compete. To be won five times by the same exhibitor before becoming property. Accepted with thanks.

Voted that no persons can compete for prizes offered by the Spaniel Club in a kennel name unless the same has been registered with the secretary of the American Kennel Club, and provided also that each member of the kennel is a duly qualified member of the American Spaniel Club.

Voted that the secretary be instructed to send notice to members on August 1, notifying them that entries to sweepstakes close on September 1, and requesting them to make nominations on or before that date.

Voted that the executive committee extend to Mr. R. P. Keasbey the thanks of the American Spaniel Club for his donation of the Saybrook Challenge Cup.

Voted that at all shows adopting classification No. 3 the Club's donation of $10 be divided as follows: $5 to best brace over 28lbs., and $5 for best brace under 28lbs.

At shows adopting classification No. 2 a donation of $15 will be offered as follows: $5 for best brace of Irish water or clumber spaniels; $5 for best brace of field, and $5 for best brace of cockers.

At shows adopting classification No. 1 a donation of $20 will be offered as follows: $5 for the best brace of Irish, water, clumber, field and cocker spaniels. Mr. Wm. West's resignation was accepted.

Voted that in the case of challenge prizes donated in trust to the Club, the stipulation "donor not to compete" will not be allowed.

Voted that the late E. Bardoe Elliot having been a duly elected member of the Club, resolutions be drafted deploring his untimely demise, and that the same be spread upon the minutes, and a copy be sent to his widow—the committee to draft the same to be the executive committee.

Toronto Dog Show.

THE gentlemen who have been invited to fill the positions of judges for the coming international dog show of the Toronto Industrial Exhibition Association, to be held at the city of Toronto, Sept. 9 to 13, are as follows: James Mortimer, Hempstead, N. Y.; C. H. Mason, New York; John Davidson, Munroe, Mich., and J. F. Kirk, Toronto, Ont. The following gentlemen compose the committee: C. W. Postlethwaite, chairman; Robert Junor, vice-chairman; J. H. Dilworth, G. B. Sweetnam and Robert Wilkie. Dr. F. A. Campbell and Dr. Mole are the veterinary surgeons. Mr. C. A. Stone is secretary and superintendent.

C. A. STONE,
Sec'y and Supt. of Bench Show.

DOG CHAT.

In a letter of recent date Mr. Thos. Johnson writes: "I had a letter from Mr. Brailsford, in which he tells me that a very brilliant pointer puppy bossomed forth in the International stake at the last English field trials. This is the new stake open this year to the world for winners of first or second in any field trial anywhere, in 1894 or 1895. There were 17 starters, and Mr. Brailsford thinks a better lot of dogs never met in one stake before. Mr. Lonsdale won with his Durham Daisy. He also won second prize in the brace stakes with this bitch and Durham Di, and third in the setter puppy stake, which must have been very pleasing to that generous sportsman. But the pointer puppy first mentioned must be a good one when it is considered that he was only eleven months old; and to run second in a Champion Stake against such a lot of high class dogs, without once making an error, was, as Mr. Brailsford says, "A marvelous performance." Mr. Lonsdale must have recognized his merits quickly, as he bought him after he had run his first heat. There was a regret that no American dogs competed in the International Stake, although France and Germany were represented. The stake too was a rich one, viz., £50 to first, £30 to second, £15 to third and £5,50 to fourth; or say $600, the latter two prizes being donated by Mr. Lonsdale. Mr. Brailsford hopes that next year both American and Canadian dogs will be competing."

The International Field Trials Club's financial report for 1893–4 shows a balance of $159.65 on the credit side. This club has always been run on safe lines financially, and therefore its vitality has always been permanent. Those who desire to enter dogs in the club's trials should address Mr. W. B. Wells, secretary, Chatham, Ont. Entries to Derby close July 1.

A meeting of the executive committee of the Canadian Kennel Club will be held at the Queen's Hotel, Toronto, Friday, June 7, at 3 P. M. Business to come up: Field trial rules. Industrial Exhibition Association vs. Fred. Kirby. To consider the cropping system, etc., show dates, new members, the reciprocity of disqualifications with the A. K. C., and other business.

Mr. Angus Cameron, who for several years has trained and run dogs in the trials for the Hempstead Farm Co., contemplates settling in Georgia, where he may take charge of a large tract of land and train dogs for Mr. George Work, well known as a famous trap-shooter.

Mr. John Davidson, who judged the Pacific Kennel Club's show, judging from the favorable newspaper comment, gave great satisfaction as judge and achieved a wider fame. The Fox Terrier Club gave a supper in his honor.

Mr. Heywood-Lonsdale cabled two entries, pointers, for the chicken Derby of the Continental trials, at Morris.

Mr. P. T. Madison writes that the chicken Derby will be a grand success. Entries are coming in well. The quail trials will be judged by tried veterans—Messrs. J. M. Freeman, W. S. Bell and Royal Robinson.

Mr. John Mayfield, Bicknell, Ind., intends to start for the chicken country, in the Northwest, in July, and will probably take active part in the chicken trials which will be run in Manitoba.

A correspondent writes that Mr. Geo. McLin has returned to Bicknell, Ind., and is earnestly resolved on leading a steady business career.

Mr. J. B. Stoddard, well known as field trial judge, writer on field sports and successful field trial handler, was in town during the Sportsmen's Exposition and made us a pleasant call. He starts for Manitoba early in June with a string of dogs for training and for field trial competition. He mentioned that he had room for one or two more. His address is 2423 M street, N. W., Washington, D. C.

Mr. Charles Stedman Hanks writes us that he has sold his kennels to Mr. J. C. Weeks, Baltimore, O., and that his former kennel man, Mr. T. W. Turner, will remain at Seacroft Kennels for the present, but that eventually the kennels will be in the suburbs of Brooklyn, where Mr. Weeks has leased a large farm and is now fitting up kennel buildings on it.

The New England Kennel Club has claimed the dates of Sept. 24th to 27th, 1895, for their second annual terrier show. These dates are the week following the Providence show.

Mr. Al. G. Eberhart writes us that the dog show in Cincinnati, held in connection with the Humane Society's Bazar, was a success. The judging was done each afternoon and evening, which, he said, helped to draw the crowd. Scioto King, a winning fox terrier, was stolen on Thursday night.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

NAMES CLAIMED.

J. E. Slattery claims the name Blue Cloud for English setter dog, whelped June 16, 1894, by Blue Rake V. I.—Gath's Buck.

BRED.

H. Fitzsimmon's beagle Little Belle, April 26, to Laddie.
Ray Baldwin's beagle Belle of Hossier, April 3, to Laddie.
Dr. J. Ferris Belt's fox-terrier Wawaset Luna, April 18, to Warren Safeguard.
Fox-terrier Wawaset Lucy, April 3, to Hillside Royal.
Corktown Kennels' cocker spaniel Tough, April 27, to Corktown Cupid.
Cocker spaniel Rideau Restless, May 4, to Corktown Cupid.

WHELPS.

Neil Lumaree's fox-terrier bitch Columbia, April 29, four (three dogs), by Hillside Royal.
Jas. R. Floyd's fox-terrier bitch Adelina, May 4, six (four dogs), by Hillside Royal.
E. Goodall's cocker spaniel bitch Rideau Rill, March 9, four (two dogs), by Corktown Cupid.
W. J. McGrath's cocker spaniel bitch Dot, April 2, seven (three dogs), by Corktown Cupid.
Corktown Kennels' cocker spaniel bitch Œnone, April 18, four (one dog), by Nerve.
Field spaniel bitch Dot Smirle, April 16, five (two dogs), by Red Obo.

SALES.

Corktown Kennels have sold Rachael Obo, cocker spaniel bitch, whelped March 9, 1895, by Corktown Cupid—Rideau Rill, to F. A. Le Clercq.
Dr. James Ferris Belt has sold Winning Hand, fox-terrier bitch, whelped December, 1889, by Raffle—Warren Jostle, to J. E. Dalton.
Wawaset Princess, fox-terrier bitch, whelped Oct. 30, 1894, by Hillside Royal—Adelina, to J. E. Dalton.
Wawaset Luna, fox-terrier bitch, whelped May 28, 1894, by Hillside Royal—Beverwyck Luna, to A. J. Griswold.
Adelina, fox-terrier bitch, whelped September, 1891, by Ford Verico—Dusky Beauty, to Jas. R. Floyd.

Reduced Rates to Gettysburg, Pa., via Pennsylvania Railroad.

FOR the accommodation of those who desire to witness the Decoration Day exercises at Gettysburg, the Pennsylvania Railroad Company will sell on May 29 and 30 excursion tickets from New York City and all stations in Pennsylvania and New Jersey to Gettysburg and return at *one and one-third fares for the round trip*, good for return passage until May 31, inclusive. This will make the round trip rates as follows: New York, $8.73; Trenton, $6.47; Philadelphia, $5.40; Pittsburgh, $10.93; Williamsport, $5.53; proportionate rates from other points.—*Adv.*

Yachting.

FIXTURES.

*Dates marked thus are unofficial.

JUNE.

1. Yale Cor. annual, New Haven.
1. Royal St. Lawrence, 18ft. skiff and steam yacht classes, Montreal
1. Cor., Atlantic City record race, Atlantic City.
1. Atlantic special, New York Bay.
1-2. San Francisco cruise to Vallejo, San Francisco Bay.
8. Knickerbocker annual, College Point, Sound.
8. Atlantic special, New York Bay.
8. Huguenot special, New Rochelle, Sound.
8. Royal St. Lawrence cruising race to Cascade Rapids, Montreal.
11. Atlantic annual, New York Bay.
11. Williamsburg Club, Sound.
13. New York annual, New York Bay.
15. Atlantic special, New York Bay.
15. Royal St. Lawrence, 18ft. skiff and steam yacht classes, Montreal
15-16. San Francisco cruise to St. Quentin, San Francisco Bay.
15. Larchmont spring regatta, Sound.
15. Philadelphia annual, Tinicum-Delaware River.
17. Massachusetts open, Nahant-Massachusetts Bay.
17. Cor., Atlantic City special cup, first race, Atlantic City.
22. Yankee Doodle-Norwood race, Hudson River.
22. Douglaston annual, Douglaston Sound.
22. Atlantic special, New York Bay.
22. Royal St. Lawrence, A, 30ft., 25ft. and 21ft. classes, Montreal
22. Rhode Island, annual.
22-23. San Francisco cruise, San Francisco Bay.
23. California regatta, San Francisco Bay.
24. Seawanhaka Cor. annual, Oyster Bay, Sound.
24. Pavonia annual, Communipaw, New York Bay.
25-26. Seawanhaka Cor. annual race to New London, Sound.
29. Atlantic special, New York Bay.
29. Yankee Doodle-Vamoose-Rex race, Sound.
29-30. San Francisco cruise to Mare Island, San Francisco Bay.
29. New Rochelle annual, New Rochelle, Sound.
29. Dorchester open, Boston Harbor.
29. Squantum first cham., Squantum, Mass.

JULY.

1. Royal St. Lawrence fourth annual, Sir Donald A. Smith Cup Montreal.
1. Cor., Atlantic City record, Atlantic City.
1. Indian Harbor special, Greenwich, Sound.
2. San Francisco club sail, San Francisco Bay.
3. Seawanhaka Cor. race to Larchmont, Oyster Bay, Sound.
4. Larchmont annual, Larchmont, Sound.
4. Boston City open, Boston Harbor.
4. Lake Michigan Y. R. A. annual, Milwaukee.
4. Cor. Marblehead Club, Marblehead (Mass.) Bay.
4. Northwestern International Y. R. A. race, Seattle, Puget's Sound.
4. Cleveland regatta, Cleveland, Lake Erie.
4-7. San Francisco cruise, up river, San Francisco.
5. American annual, Milton Point, Sound.
6. Royal St. Lawrence Commodore's Cup, Montreal.
6. Riverside annual, Sound.
6. Duxbury Club, Duxbury, Mass.
8. Seawanhaka Cor. special, Oyster Bay, Sound.
9. Horseshoe Harbor special, Larchmont, Sound.
10. Huguenot special, New Rochelle, Sound.
11. New York Athletic Club annual, Travers Island, Sound.
12. Larchmont, 1st class, special schooners, and 34 and 21ft. classes, Sound.
12. Larchmont-Atlantic combined annual cruise, rendezvous at Larchmont.
13. Larchmont to Block Rock.
14. Block Rock to Morris Cove.
15. Morris Cove to New London.
16. Special race, New London.
17. New London to Shelter Island.

THE Cup challenger is now safely in the water, and the work of rigging and fitting out is likely to go on rapidly, but at the same time the new Valkyrie will not be ready in time to join the racing fleet in the south, and it would hardly be worth while to visit the Mersey for one or two races there, so that her initial sailing will only begin with the Clyde matches, early in July. It is probable that she will be tried very thoroughly with Ailsa, either in the regular races of the Clyde fortnight, if the weather prove favorable, or in special matches. Britannia will be in the racing also, and ready, between the two larger and newer rivals, to snatch some odd prizes. Satanita has not fitted out this year. The merits of Valkyrie III. and Ailsa will be well tested by the middle of July, but there is still a probability of both yachts crossing to New York.

FROM the latest reports there is still much work to be done on the Cup defender before she can be launched; the plating and riveting are not completed, the rudder is not finished, and the metal deck framing is not yet ready for the planking. At the same time much important work has been pushed forward; spars, rigging and sails are ready, there will be little or no inside joiner-work, and but little time will be required after the hull is riveted up and deck laid to put her in commission. It is likely that she will be launched by the middle of June at latest, and under way before the end of the month; in which case she may be seen in the Larchmont regatta on July 4.

IT seems probable that the large class, both here and abroad, will be divided into the 95 and 93 boats as soon as the former are once in racing shape. It is hardly likely that Britannia can hold her own with Ailsa and Valkyrie III., and equally improbable that the new defender will not sail away from Vigilant, Jubilee, Colonia and Navahoe. If this should prove to be the case, it would offer a good reason for sending Britannia across to New York with Valkyrie III. and Ailsa; not in the hope of her being chosen here as the challenger, but for the sake of special matches with the "93" boats of the American fleet. The contests between Britannia, Vigilant and Jubilee would prove quite as interesting as the main matches for the America's Cup.

THE publication of "fake" designs of the new yachts has this year reached the extreme point, and one can hardly pick up a paper or even a

magazine without being confronted with an alleged authentic presentment of the lines, details or sail plan of one or the other boat. From the standpoint of the sensational newspaper, there may be some excuse for the dishonesty of these "fake" plans; but there can be none whatever for the ignorance and stupidity which characterize them, one and all. While the exact lines and dimensions of the two new boats are still secret so far as newspaper men are concerned, it is no difficult matter, from such details as are known, backed by a knowledge of yachts in general, and of the recent Herreshoff and Watson boats in particular, to construct a design that would be at least possible and plausible, however far from the truth it might finally prove to be. Such pictures as the alleged section of Valkyrie III. and the same yacht under sail, both of which appeared last week in a leading New York paper, would awaken the contempt of any intelligent boy who was familiar with yachts.

THE meeting of Britannia and Ailsa on the Thames has resulted in two victories for the former, and it is said that Ailsa's alterations have not improved her. The victories of Britannia, though unlooked for, confirm the opinion we have held that some very thorough trials, in addition to the Mediterranean races, will be necessary to determine just how much faster the yacht of 1895 is over that of 1893.

Seawanhaka Corinthian Y. C.

THE fourth regular meeting of the Seawanhaka Corinthian Y. C. was held on May 14 at the Brunswick, the club being without a town house for the present until new quarters are obtained. Com. Benedict presided. The race committee reported in full the result of their correspondence with Mr. Brand, the substance of which is given in the following circular:

As has already been informally announced the Seawanhaka Corinthian Y. C. has offered a challenge cup for the encouragement of international contests between small yachts, and has empowered its race committee to define the general conditions under which the cup is offered, and the regulations governing the competition therefor. The race committee has decided upon the following general conditions governing the cup, and the following general regulations for the control of the races to be sailed this year, subject to such modifications of detail as may be agreed upon with the challenger:

I. The cup shall be a perpetual international challenge cup. The Seawanhaka Corinthian Y. C. shall have the custody of the cup in the first instance, and every challenge shall be through some recognized yacht club of a foreign country, and the cup when won shall be delivered to and held by the club through which the challenge was made.

II. A challenging yacht shall be met by only one competitor.

III. The races shall not be less than three nor more than five in number, the cup to be taken by the winner of the majority.

IV. The American courses, while the cup remains in the custody of the Seawanhaka Corinthian Y. C., shall be on the waters of Long Island Sound in the vicinity of Oyster Bay, or in the bay itself. They shall consist of a triangular course and a course to windward or leeward and return. For the 15ft. class, each leg of the triangular course shall be 2 nautical miles in length and shall be sailed over twice, making a total of 12 miles. The course to windward or leeward and return shall be 3 nautical miles to each leg and shall be sailed over twice, making a total of 12 miles.

V. The start shall be a one gun flying start.

VI. The races shall be sailed without time allowance.

VII. The challenge cup is offered this year for yachts of not exceeding 15ft. racing length (S. C. Y. C. measurement).

The formula for determining racing length under the S. C. Y. C. rules is as follows: $\frac{L W L + \sqrt{\text{Sail area.}}}{2} = \text{Racing Length.}$

VIII. In the 15ft. class yachts shall be measured without crew on board, but instead thereof a weight of 300lbs. shall be carried amidships during measurement to represent the crew.

IX. All ballast shall be fixed. (Weighted centerboards shall be considered fixed ballast.)

X. No outrigger or other outboard mechanical device for carrying live ballast to windward shall be allowed.

XI. In determining sail area a system of measurement shall be employed which will give, as nearly as possible, the actual number of square feet thereof. Sails shall be limited to mainsail, jibs and spinaker. The combined area of mainsail and of the jib used in windward work shall constitute the factor of sail area in determining racing length.

XII. The helmsman and crew shall be amateurs, and the total number of persons on board shall be limited to two.

XIII. Future competitions for the cup shall be limited to yachts of classes from 15 to 25ft. racing length, both inclusive.

Mr. J. Arthur Brand, of 34 Gresham street, London E. C., has challenged through the Minima Y. C., one of the leading English racing clubs, for small yachts, under the conditions above mentioned with his new yacht Spruce IV. (to be constructed), of the English half rater class, or the 15ft. racing length, S. C. Y. C. measurement, a above defined.

Mr. Brand's challenge has been accepted. The precise dates of th races have not yet been fixed, but they will be set for as early a day in September as can be agreed upon with him.

Mr. Brand is a well-known and very successful racing man in the smaller classes, and undertakes his visit to this country purely in the interest of the sport, to which he is enthusiastically devoted. We feel sure that he will receive from all American yacht clubs and yachtsmen the warm welcome to which his character and enterprise entitle him. He is anxious that as many open races as possible shall be arranged, in which he may participate with his Spruce IV.

The defense of the cup is open to yachts owned by members of the yacht clubs of the United States in good standing, and trial races will be held during the month of August, at dates to be hereafter announced, to determine the choice of the defender.

The Seawanhaka Corinthian Y. C. earnestly desires to interest other yacht clubs in providing for the defense of the cup, and also in arranging for open races in which Mr. Brand may participate, and requests that the subject may be brought, as fully as possible, to the attention of all members of the several clubs, who may be likely to interest themselves either in building new boats for the defense of the cup, or in taking part with existing boats in the open races that may be arranged.

As soon as the precise dates of the trial races can be decided upon and other details settled that may be of interest to those who expect to participate either in that contest, or in such open races as may be offered, another circular will be issued, and the race committee of the Seawanhaka Corinthian Y. C. will be at all times very glad to give any information in their power to, or to confer personally with, any one who may be interested in the subject. They may be communicated with at the addresses given below. Race committee: Oliver E. Cromwell, chairman, 48 Exchange place; Charles W. Wetmore, 35 Wall street; Walter C. Kerr, 26 Cortland street; Valentine Mott, M.D., 62 Madison avenue; Charles A. Sherman, secretary, 64 Leonard street.

The special committee on the uniform racing rules presented a report recommending the adoption of a racing length classification and certain other changes, which were substantially adopted, as below. The race committee, through the chairman, Mr. Cromwell, strongly urged the adoption of several changes to accord with the rules recently adopted by the Yacht Racing Union. A resolution was passed favoring the adoption of a sixty per cent. allowance table, but the change could not be made at the meeting, not having been advertised in the notice of the meeting. The club ratified the action of its representatives in joining the Y. R. U. The following amendments to the racing were adopted:

To amend Rule XX., Section 2, by inserting the two following courses:

1. The Sound Triangular Course.—From the starting line N.W. by W. 5 miles to and around a mark about 1 mile S. by W. from Greenwich Point, keeping it on the starboard hand; thence E. ½ N. 5 miles to and around a mark about 1¾ miles off Long Neck Point, keeping it on the starboard hand: thence S.S.W. 5 miles to and around the stakeboat, keeping it on the starboard hand; course to be sailed over twice, 30 nautical miles.

2. The Shippan Triangular Course.—From the starting line due north 5 miles to and around Cowes buoy, keeping it on the starboard hand; thence E. ½ S., 2 miles to and around a mark about 1¾ miles off Long Neck Point, keeping it on the starboard hand; course to be sailed over twice, 24 nautical miles.

The race committee may, in their discretion, direct any courss to be sailed in the reverse direction.

To further amend Rule XX., Section 2, by changing the name of the "Bell Buoy Triangular Course" to the "Oyster Bay Triangular Course."

To further amend Rule XX. by adding a new section thereto, to read as follows:

SECTION 4. When courses are announced to be sailed over twice, the race committee may terminate the race at the end of the first round, if in their judgment the weather conditions make it advisable, and the time allowance shall be shortened accordingly.

The signal for so terminating a race shall be the letter B of the signal code, displayed from the committee boat, or in case of fog or darkness, five long blasts on the steam whistle.

To amend Rule II. so that it shall read as follows:

CLASSIFICATION.

Yachts shall be classified by racing length, as ascertained by measurement under the Seawanhaka rule; in all classes other than Class I. of each rig, the upper limit of the class to be that designated by the name of the class:

Schooners—Class I., all over 95ft.; 95ft. class, 85ft. class, 75ft. class, 65ft. class.

Sloops, cutters and yawls—Class I., all over 80ft.; 80ft. class, 70ft. class, 60ft. class, 50ft. class, 43ft. class, 36ft. class, 30ft. class, 25ft. class, 20ft. class, 15ft. class.

The race committee shall have power to class all catboats, jib-and-mainsail boats, and other craft not included in the above classes.

To amend Rule III. by the addition after the word "amidships" in the second paragraph, of the following sentence: In the 15ft. class yachts shall be measured with a weight of 300lbs. on board, placed amidship to represent the crew.

To further amend Rule III. as follows: In the second paragraph strike out the words "gaff topsail block or sheave on topmast" and insert the words "the sheave of the highest halliard on the topmast" in place thereof. In the fifth paragraph to substitute in place of the words "topsail halliard block or sheave" the words "sheave of the highest halliard sheave on the topmast." To insert after the fifth paragraph a new one as follows: "In pole-masted vessels and in those not carrying topmasts, the distance between the under side of the sheave in the throat halliard block and the under side of the sheave of the uppermost halliard, shall be used in determining the length of the base line in the same way as is the length of topmast where one is carried. In yachts which do not carry any headsail, the forward point of measurement for the baseline shall be the after side of the mast, or of the foremast, if there is more than one mast.

To further amend Rule III by the addition, at the end of the first section, of the following:

"Where, in any case, owing to a peculiarity of rig, the sail area of a yacht cannot, in the opinion of the measurer, be fairly measured in the customary way, he may, with the sanction of the race committee, instead of this take such measurements as will enable him to compute the actual area of sail carried, or that may be carried, on the spars used.

"The customary method of measuring shall, however, be adhered to in all cases where practicable, and where the leach or luff of a sail is extended beyond a straight line, or where, as in a lug mansail, the luff extends forward of the mast, or the head is rounded, the area increased in this way shall be added to that obtained by the customary measurement and the square root extracted."

To further amend Rule III by the addition of a new section, 3:

If any yacht by alteration of trim or immersion by deadweight shall increase her waterline length; or if she shall in any way increase her spar or sail measurement as officially taken, she must obtain a remeasurement.

To amend Rule X. so that it shall read as follows;

CREWS.

Section 1. The total number of persons aboard a yacht in a race shall not exceed the allowance in the following schedule:

Schooners.—Class I., one person for every 2ft. of racing length or fraction thereof; 95ft. class, 32; 85ft. class, 29; 75ft. class, 19; 65ft. class, 13.

Sloops, cutters and yawls.—Class I., three persons for every 5ft. of racing length or fraction thereof; 80ft. class, 27; 70ft. class, 18; 60ft. class, 15; 50ft. class, 10; 43ft. class, 9; 36ft. class, 8; 30ft. class, 6; 25ft. class, 5, 20ft. class, 3; 15ft. class, 2.

Sec. 2. There shall be no restriction upon the composition of crews, but in the 36ft., 30ft. and 25ft. classes only two professionals may be carried, and none in the 20ft. and 15ft. classes.

To amend Rule XXVI. so that it shall read as follows:

Section 1. Floors must be left down, and bulkheads and doors left standing; water tanks in place, and at least one bower anchor and cable kept on board; neither ballast nor water shall be taken in or discharged after 9 P. M. of the day preceding a race; but this restriction may be waived as to water only by permission of the Race Committee. Trimming by deadweight shall not be allowed after the prepratory signal.

Make present Section 4 Section 2.

To amend Rule XXXIII. by inserting the word "first" before the word "crosses" in the third line of Section 2.

Corinthian Y. C. Ocean Race.

THE Corinthian Y. C., of Atlantic City, encouraged by the great success of its open ocean race of last year, has arranged a similar race for the present season, which will be sailed on July 26. In order to call the attention of yachtsmen, the following invitations have been sent by the secretary, Chester Adams, 815 Atlantic avenue, Atlantic City, N. J.; the first to yacht clubs and the second to all yachtsmen whose boats were eligible and whose addresses could be obtained. The race will be open to all yachts, and the harbor will admit those of 7ft. 6in. at ¾ tide. The entrance fee of $10 will be returned to all *bona fide* contestants. Yachtsmen who undertake the trip to Atlantic City may be certain of a cordial welcome.

DEAR SIR: The hotels, railroad companies and residents are providing funds, which will be placed in the hands of the Corinthian Y. C., for furnishing prizes for the proposed open ocean regatta, scheduled to be sailed off Atlantic City, N. J., on July 26 next, under the auspices of this club.

You are hereby respectfully requested to present to the —— Yacht Club our most cordial invitation for it to participate with its fleet in the race mentioned, or to send such representative yachts as may be able to come. A warm and hearty welcome will be extended to each and all accepting.

Invitations have been sent out to 250 yacht owners individually; but as it was impossible to get a complete list of all owners of yachts drawing less than 7ft., many must have failed to receive special invitations. Should there be any such in your club, will you kindly bring this invitation to their personal notice, as explaining why they have not received the special invitation.

The race will be sailed at sea, the start and finish to be outside the bar, and, if possible, made to windward and return over a 20 nautical mile course. All classes above 18ft. l. w. l. may enter.

There is an entrance fee of $10 for each yacht, which will be refunded after the race, provided the yacht sailed over the course specified or should an accident prevent her from doing so. Should any yacht drop out of the race for any other reason, the said sum shall be forfeited.

The race sailed under our auspices last year was so encouraging that we have determined to make this race an even greater attraction to all true lovers of our sport of yachting.

DEAR SIR: Last year the Corinthian Y. C., of Atlantic City, sent out invitations to yacht owners of prominent clubs to participate in an open ocean race.

The result was so encouraging that we propose to give under our auspices another race to be sailed on July 26, 1895. We appeal directly to you, requesting that if at all possible, you will join us in our endeavor to awaken that interest in our sport, south of Sandy Hook, which should exist, by entering and sailing your yacht on the day selected, and by using your personal influence to get other yacht owners to do likewise. The race will be sailed on the open sea and over a 20 nautical mile course.

Ample prizes will be furnished for all classes of cabin yachts. The impetus given by last year's race to yachting in our waters proved so gratifying that this year four newly built yachts will participate with those which entered for last year's race, and others, that will come for the first time during this season.

The club is working hard to create a widespread interest in yachting, and if successful it will make this annual race a fixture, with increasing value in prizes. I earnestly hope you will endeavor to be present and participate with your yacht. Your welcome will be most hearty and sincere, and I am sure you will make a special effort, when I say that this personal appeal to you, if successful, will greatly aid the welfare and prosperity of yachting on our coast, which we have endeavored to encourage. Every arrangement has been made for visiting yacht owners to secure, by prompt delivery, marketing, ice, fresh water, pilotage (one-half rate), etc., and only yachts that can safely cross our bar will receive this invitation.

The date selected for the race, July 26, gives all yacht owners ample time after the race to proceed to Glen Cove, L. I., the rendezvous of the New York Y. C., and follow it in its runs to New London and Newport.

Any information desired will most cheerfully be given.

"Floaty."

WASHINGTON, D. C., May 20.—*Editor Forest and Stream:* Some time ago there appeared in your paper a few new yachting terms and expressions, among others the word "floaty." I send by mail to you a copy of "Proceedings of the U. S. Naval Institute," 1880. Look on page 322 and I think you will see that the term "floaty" at least is quite an "antique." JAS. S. JOUETT.

[The citation is from Fuller's "Worthies of England," published in the year 1662, and reads: "The Dutch build their ships so floaty and buoyant they have little hold in the water, in comparison of ours, which keep the better wind, and so outsail them."]

Centerboard and Keel.

Editor Forest and Stream:

Once again through your impartial paper I ask after years of silence, what has become of the American centerboard sloop? If all reports are correct the Cup defender of '95 bids fair to be a full-fledged keel craft, lacking only the running bowsprit to make her a complete cutter. What a treat that would be for C. P. K. were he with us. What a square back-down and what an acknowledgment of the superiority of British ideas. It carries me back in my thoughts to the days of the cutter Saxon or Kitten of Boston, Madge and Maggie, Winona, Oriva, Bedouin. How the old Saxon was hooted at for her narrow beam and low weight and cutter rig, but how the British have clung to what they contended and landed on top in the struggle for supremacy of yachting ideas.

What a sorry exhibition our last and greatest of centerboard sloops the Vigilant, made on the other side of the ocean. The mighty Herreshoff was forced to succumb and appropriate the methods of his conqueror—Watson—having exhausted all methods known to him of building a superior centerboard sloop.

For years I have been an admirer of Herreshoff until he designed the three large sloops in '93. That he should attempt to give stability for sail carrying power by the use of weighted centerboards to vessels of such cross sections as the Navahoe and Vigilant surprises me exceedingly. That he should design a straight bottom to keels surprised me still more, and when he added the extreme cutaway forefoot and enormous overhanging bow I think he was decidedly lacking in the essentials for successful design.

Faulty as is the design of the Vigilant I do not think she has been at her best. Hang her lead lower by the addition of a rocker keel; fill in her forefoot considerably so that she can carry her old head sails effectively to windward and she will yet prove a tough customer Give the Colonia a chance, deepen her forefoot, fill in that hollow and rocker her keel, she carries her sail well enough without much deepening amidships. Make a keel of the Navahoe and fill in her forefoot, and I will risk her against the Britannia. The board is of no use to her, her cross section is not adapted to loaded centerboard for stability, but those sea spanking bows cannot be remedied. Gen. Paine found out the weakness of these bows in the Jubilee. Nothing would stay in her aloft for a certainty. She pounded the blocks to pieces aloft and smashed the jams of her gaff, she labored so badly. He learned his lesson by experience, so does not lengthen her on deck, but on the waterline only, and I have no doubt of great improvement in every direction. The days of these long overhangs are going, and the days of moderate overhangs, with good forward grips, are coming again with the centerboard sloop. Thistle's weight was more than 3ft. lower than the Volunteer's, but the centerboard won and carried more canvas in hard weather. I am on record as a firm believer in the centerboard sloop, and feel convinced that a centerboard sloop of the waterline length of the defender can be built that will easily outsail the lot, but she would have no abnormal overhangs, nor her forefoot so cut away or S cross section, nor bulb lead.

Take the Volunteer: her forefoot is admirable, and proportionate for the overhang it has to carry; fill out the hollow lines forward, harden her bilge at the turn, take the hollow out of her cross section and deepen her to 14ft. with rocker keel and loaded board dropped bodily (Vigilant's should be used this way, if at all), and I would risk her in any weather to win a large proportion of her races.

POD. AUGER.

The Thames Regattas.

THE racing season in British waters opened on May 17-18 on the Thames, the result in each case being a victory of Britannia over Ailsa. Since the return from the Mediterranean, Ailsa has had some changes made, lead being added to her keel and the weights of spars and rigging reduced. It is reported also that changes have been made in Britannia, but no details are given.

The New Thames Y. C. regatta, on May 17, was sailed over a course from the Lower Hope around the Mouse and back to Gravesend for all of 40-rating and over, the 20-raters rounding the West Oaze Buoy in place of the Mouse. There was a strong northwest wind, and the day was cold and cloudy. Ailsa was rated at 168 and Britannia at 152, the allowance being 2m. 11s., while Ailsa allowed the 40-raters 35m. 15s. The 40-raters were the new Watson boat Caress and the new Fife boat Isolde. In the 20-rating class were Audrey, Lord Dunraven; Stephanie, Prince Batthyany-Strattman, and Luna, F. B. Jameson.

Ailsa started on the gun in the weather berth, Britannia, however, passed her and finished at 3:47:50, winning by 2m. 42s. elapsed and 4m. 53s. corrected. Caress finished at 4:27:00 and Isolde at 4:29:02. The start was made under jibheaders, but Ailsa was forced to house her topmast.

The Royal Thames Y. C. regatta next day had the same course and entries, with Namasa and Maid Marion (Yarana) in a handicap match, and Carina, 40-rater, in the large class. The day was cloudy, with rain at times, and a very variable northeast wind. The start was made under clubtopsails, Ailsa leading by 25s. over the line. Britannia took the lead off Southend, the outer mark being timed: Britannia 1:53:30, Ailsa 1:54:14. The finish was timed: Britannia 3:55:00, Ailsa 3:56:00. Isolde beat Caress by 3m. 55s. The alterations to Ailsa were of a nature to increase her stability, but from all accounts she is less stable than before.

Miramichi Y. C.

THE ninth annual meeting of this club was held in Newcastle Thursday afternoon, May 16. Com. Miller was in the chair.

The following were re-elected: Com., J. C. Miller, Millerton; Vice-Com., J. L. Stewart, Chatham; Rear-Com., John McKane, Newcastle; Sec'y-Treas., J. R. Lawlor, Newcastle; Meas., Thomas Crimmen, Chatham; Trustees, Hon. L. J. Tweedie, R. H. Gremley, P. Wheeler; Election of Members Committee, Dr. Pedolio, R. A. Lawlor, W. A. Park, Howard Williston; Regatta Committee, Col. R. R. Call, E. Hutchison, D. G. Smith, E. Lee Street.

The following were elected to membership: Dr. J. Hayes, Robert Ritchie, J. W. Davidson, Dr. Desmond, Charles Sergeant.

The following were elected honorary members: Thomas D. Adams, of Boston, and James Mitchell, of Newcastle.

It was resolved that the Thomas D. Adams silver cup be held as a permanent racing trophy, to be raced for annually, the winner to hold it till the next year's race.

The following events were decided upon for the yachting season of 1895: May 24, rendezvous at Mill Cove in the forenoon, and sail to whatever point may be chosen; June 6, triangular race; July 1, cruise down river; July 4, race from Chatham to Newcastle and back for the Thomas D. Adams cup, starting at 11 A. M.; Aug. 5, race from Black Brook to Oak Point and back for the Stewart flag; Sept. 7, triangular race off Chatham for the Gould cup, starting at 2 P. M.; Oct. 3, race from Newcastle to Chatham, starting at 11 A. M.

The club voted to buy a $100 trophy to be sailed for.

The Norwalk Y. C.

THE Norwalk C. C. has been reorganized and incorporated under the laws of Connecticut as the Norwalk Y. C., with officers: Com., G. E. Bogart; Vice-Com., A. E. Chasmar; Secy, C. T. Dimond; Treas., J C. Green.

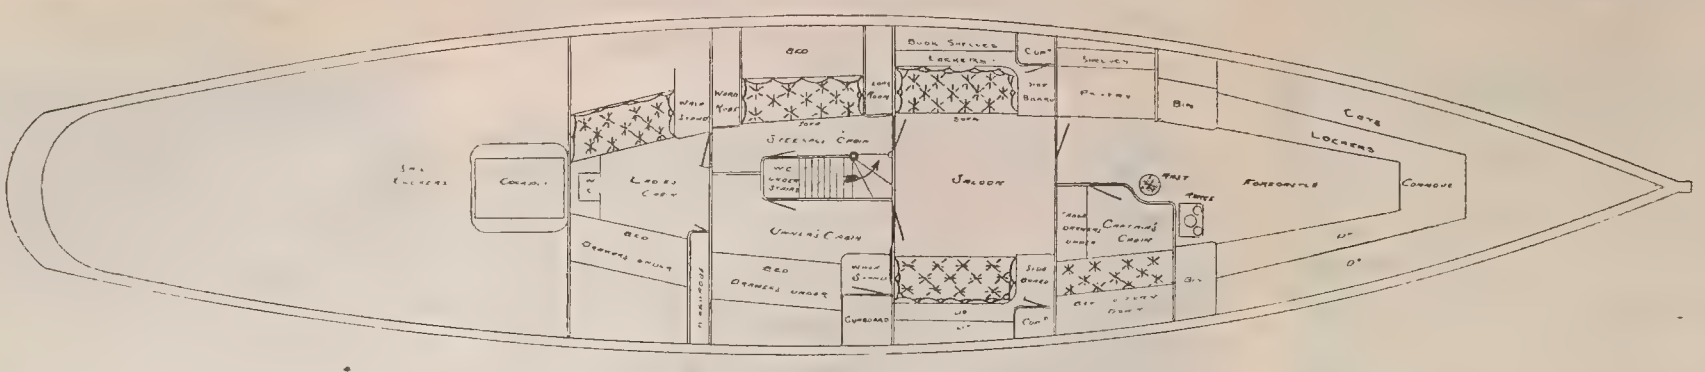
Last fall the club purchased a piece of ground at Wilson's Cove, L. I. Sound, just west of Wilson's Point, Norwalk, Conn.

During the winter a handsome three-story club house has been built, which will be opened on Decoration Day with races during the day and refreshments and dancing in the evening.

The membership is sixty, with a fleet of three canoes, four canoe-yawls, five St. Lawrence skiffs, five sloops from 21 to 30ft. and two naphtha launches.

Good anchorage ground, shelter and plenty of water make the location a good one, and within three minutes' walk are the electric cars which run to South Norwalk and Norwalk.

Club house bears 2 miles N.W. from Sheffield Island Light, showing club flag—a white burgee with red border, with the letter N in a circle of rays in blue. Night signal two red lights placed horizontally.



Hospitality is extended to visiting yachtsmen.

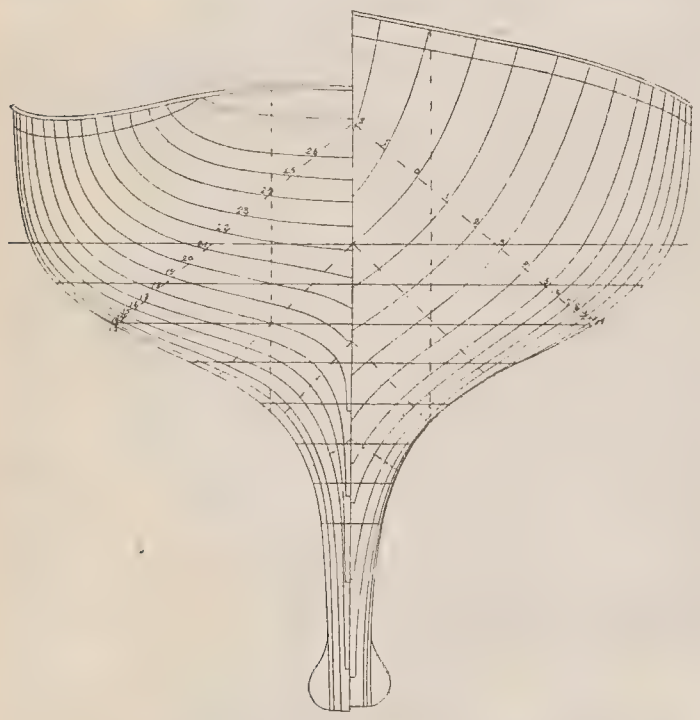
Corinthian Y. C. of Philadelphia.

THE race committee announces the following programme for the season of 1895: Special race for 40ft. class, May 30; special race for 21ft. class, June 1; ladies' sailing race, June 8; annual race, for all classes, June 15; special race, class to be announced, June 22; handicap race, for any rig and class not exceeding 30ft., corrected length, June 29; handicap race, for yachts under 30ft. waterline length, date to be announced; annual cruise, date to be announced; sweepstakes race, for 40 and 21ft. classes, date to be announced; autumn race, for all classes, Sept. 7.

Races will be arranged for every Saturday during the season, and special programmes for each race will be issued in due course. The committee will be glad to arrange additional races, should prizes be offered. The committee reserves the right to invite visiting yachts to enter any of the above races, and to change the order of races and dates, by giving due notice.

ADDISON F. BANCROFT, Chairman,
WILLIAM R. ELLISON,
ISAAC W. JEANES,
Race Committee C. Y. C.

VENDETTA—CABIN PLAN.



Vendetta.

THE SEMI-FIN TPYE.

SPEED being the sole consideration, and the Herreshoff fin-keels having been uniformly successful over other types in all the smaller classes in which they have been tried, there would seem to be good grounds for the adoption of the extreme fin-keel type in the new Cup defender building at the Bristol works. Of the experiments of other designers in large yachts of this type, Jubilee, so far as she goes, is an argument for the fin; and the unsuccessful Pilgrim is but a negative argument against it. While trying the fin type this year in a larger class than before—in two important boats, the 20-raters Niagara and Isolde; in the most important of all, the boat which is to be his masterpiece and which is to once more retain the America's Cup—Mr. Herreshoff has stopped short of the extreme bulb fin, and has taken up instead the intermediate and partially developed type which may be termed the semi-fin-keel.

Contrary to a common idea, the extreme bulb fin-keel is by no means an isolated and independent invention, but the legitimate result of a regular course of evolution extending over some seven or eight years. At one particular point of this evolution, however, the change is so rapid as to mislead those who have not given close attention to the subject. In the search for higher speed in racing, all the designers of late years have worked together in certain definite directions—the reduction of displacement and wetted surface, the expansion of the dimensions, especially beam and draft; the lightening of the hull and the increasing of the proportionate amount of ballast to displacement, with a very great increase of the length of lever on which the ballast acts. Starting from the moderate type of cutter found on both sides of the Atlantic about 1888, such as Minerva, Vreda, Dragon and the American 40 and 30-footers, each successive year has shown a more rapid cutting away of deadwood, both forward and aft, and a much more pronounced hollow to the floor.

The building of Gloriana, in 1891, marked a most important and interesting stage of development; this yacht, while still closely allied to the normal cutter, possessed a number of novel and extreme features; but, at the same time, her extraordinary model by no means prepared yachtsmen for what was soon to follow, in the bulb-fin-keel Dilemma,

VENDETTA.

built late in the same year. The motives which led Mr. Herreshoff to take the wide step from Gloriana to Dilemma in the course of a few months, and in thus doing to pass completely over one very interesting stage of development, have never been known; it is worth noting, however, that after four years' experience and with remarkable success, in the fin type, he has gone back in the new Cup defender to the immediate type of semi-fin, which fills the gap between Gloriana and Dilemma.

The cutting away process to which we have alluded as one of the most striking characteristics of modern designing, not only had its origin on the other side of the Atlantic, but, owing to the greatly increased amount of building and racing which prevails there, the progress has been more regular each year, and not intermittent as on this side. Instead of a phenomenal boat a Volunteer, a Gloriana or a Vigilant at irregular intervals of three or four years, each season in British waters shows a certain improvement in the new boats over the old, making it much easier to trace the progress of design as influenced by many complicated causes. The changes from such cutters as Thistle and Minerva to yachts of very much hollower section and extreme dimensions, but still of the same construction; and from the latter to the extreme fin-keel, may be studied in their regular sequence in the work of the British designers since 1887–8.

We are indebted to the designer, Mr. Arthur E. Payne, of the firm of Summers & Payne, Southampton, for the permission to publish the lines of one of the first large yachts of the semi-fin type, the cutter Vendetta, a racing 40-rater. With a wide and comparatively shallow hull, and a deep and thin keel with bulbed lead that may almost be classed as a distinct appendage, she forms a connecting link between other Payne cutters, such as Decima (1889) and Corsair (1892), and the plate fin type, and at the same time she possesses many of those extreme features which characterize Mr. Herreshoff's Vigilant, the wide beam, the flaring topsides, the very full waterline, the long overhangs, the great hollow to the floor, the deep, thin keel, and the long, easy diagonals. The forward overhang is shorter, there being more of a "Roman nose," but the angles of stem and horn timber with the water are probably quite as small as in Vigilant. While the methods of the two designers are widely different, there is a remarkable agreement in the selection of so many identical points of advantage.

In 1892 Mr. Payne designed and built the 40-rater Corsair for Admiral the Hon. Victor Montague, who raced her through the season, winning 13 first prizes, 8 second and one other for 42 starts, with £695 in money, taking the Queen's Cup of the Royal Yacht Squadron from Meteor (Thistle) and Mohawk. Late in the fall Admiral Montague ordered a new 40 from Messrs. Summers & Payne, and the design was made by Mr. Payne in December, 1892, the yacht being ready early next season. Vendetta is a fine example of semi-composite construction, steel frames and deck beams amidships, and mahogany planking. She came out originally with the after edge of the deadwood very much hollowed out and a balance rudder of the "spade" form, with which she steered very badly. The other forms of detached rudders were tried with no better results, and then the hollow in the deadwood was filled in by a straight sternpost, as shown, and a rudder of the conventional form added, after which there was no trouble in the steering. Her record for the season was 33 starts, with 11 first and 7 other prizes, amounting to £490. She is the longest of the 40 raters, being 60ft. 6in. l.w.l., or nearly a foot above the average, and with proportionately less sail; and, like some other yachts built under the Y. R. A. rule, she undoubtedly had a little too much body for the sail, a serious matter in such a season of light winds as 1893 proved to be. It is quite probable that the real merits of the design would have been better tested had the length been kept to about 59ft. l.w.l. with a proportionate reduction of the other dimensions and something over 4,000 sq ft. of sail. Vendetta's dimensions are:

Length over all	84ft. 3in.
Overhang, bow	8ft. 10in.
stern	15ft.
Length l.w.l.	60ft. 5in.
Beam, extreme	17ft.
l.w.l.	16ft. 3in.
Least freeboard, top of rail	3ft. 3in.
Draft, extreme	11ft. 9in.
Sail area, sq. ft.	3,963
Rating, Y. R. A. rule	40

Her accomodations are excellent, a long forecastle, good pantry and captain's room, fine saloon with owner's cabin adjoining; the usual ladies' cabin aft, and a sofa and bed berth abreast the steerage, with an ample sail locker in the run. There is good headroom, and also stowage place below the floor; though intended for racing, the yacht is fully and comfortably fitted and furnished, and in no sense a mere shell.

For a British yacht, Vendetta is exceptionally wide, and one cannot fail to admire the manner in which this extreme beam is handled, in fact the whole form of the boat bears testimony to the skill and to the artistic perceptions of the designer. With a very full waterline and an extremely hollow section, every curve is fair and natural, and the design shows no attempts at that forcing of the lines which is becoming more and more a feature of *fin de siecle* designing.

The co-efficient of the midship section is very small indeed, but thirty per cent. of the circumscribing parallelogram; and, taken throughout, the design represents the extreme limit of the normal cutter type, just short of the fin-keel.

So far as match sailing goes, the difference in speed in favor of the full fin as compared to the semi-fin type is decisively in favor of the former; but by too small a margin to justify the encouragement of the former in other than the very small classes. Such a midship section as that of Vendetta makes is not naturally a strong boat, the long

VENDETTA——40-RATER, DESIGNED BY ARTHUR E. PAYNE FOR ADMIRAL MONTAGUE—1892.

From a Photo by Sweet & Kenloch.

frames with their two sharp curves and the flat floor between cannot compare with the more compact form of such a cutter as Minerva, and calls for careful bracing; but still such bracing is easily possible. Even in such an extreme form as in Vendetta, however, there is an immense excess of strength over such a construction of hull and fin as was illustrated in our issue of May 11, in the fin-keel 20-raters. It is quite possible that if the occassion arises the problem of constructing a 90ft. fin-keel in which the fin shall not only be amply strong and rigid in itself but in its attachment to the hull as well, may be satisfactorily solved; but it is easily seen that the semi-fin form is far better adapted to secure both strength and lightness.

A great deal has been said in praise of the large fin-keel on the score of accommodation, and it is claimed that such a hull as Jubilee gives excellent living space. So far as the actual living and sleeping apartments are concerned, this is no doubt the case; meagre as the room is in a fin-keel of 5 to 6ft. depth of hull, when we come to such a length as will give a depth of say 7ft., the accommodation is very satisfactory. The long, sausage-like hull will have clear headroom for about three-fourths of the waterline length, which would cut up into wide square rooms, to which would be added a long and large forecastle, though with limited headroom and a similar space for sails and gear in the run. At the same time this is by no means all that is required in a large yact if the owner would liive aboard; there must be stowage space for anchors, chains, ice, coal, stores and sundries; in fact, in a cruising craft about one-third of the total internal capacity is profitably utilized in this way. Those who have been in the hold of Genesta or Galatea, the extreme narrow cutters, will remember the surprising amount of space out of sight below the cabin floors, and every inch utilized to good purpose. Without this hidden space even the elegant and comfortable rooms above would not have made possible such continued and comfortable life afloat as the owners of these yachts enjoyed, whether cruising or racing.

It is in this respect, of necessary stowage room, that the big fin-keels are lacking as habitable yachts, the living space proper is worked clear out to the skin of the boat, much as in the old centerboard sloop, and neither below the floor nor at the sides under the deck is there any amount of stowage room. Where there is nothing in view but a few special races, the crew being berthed and fed on other vessels, this is a small matter, but where all-around use in yachting is concerned, the fin keel is sadly at a disadvantage.

The semi-fin type shows up far better in this respect, what with steel or light composite construction, and the ballast largely bulbed outside the hull proper, there is a large amount of useful space beneath the floor. Even in such craft as Vigilant and Vendetta there is enough space to make a material addition to the main accomodation of the boat.

An interesting point about the design of Vendetta is that, if the waterline be assumed as 90 ft. instead of its true length, the proportionate dimensions will be:—over all 126ft. l. w. l. 90ft, beam 25ft. 6 in., draft 17ft 6 in. With possibly a few inches more draft, these would be excellent dimensions. From all accounts, the new Cup defender will be of the same general type, but with about 2ft. less beam, 1ft. more draft, and much the same rake of sternpost, the heel of the keel being carried deeper and the fore end cut away, giving a curve instead of a straight line to the lower part of the keel.

Naphtha Launch Licenses.

THE bills introduced into the New York Legislature to require a license for operating naphtha launches did not pass. The proposition was a ridiculous one, and we shall probably hear no more of it.

YACHTING NEWS NOTES.

Thomas Clapham is now building, or has just finished, two racing catboats, 20ft. in length, for H. McK. Thombly, for use on Saranac Lake. One of them is built of cedar, with oak timbers. The other is entirely of mahogany, with oak timbers. Two racing and cruising yawl rig boats, about 20ft. in length by 7ft. beam, sharp at both ends. One of these is for H. Musgrave, Chicago. The other for F. E. De Graw, Amboy, N. J. He is also at work on plans and model of a 45 t. sharpie yacht for a South American (Buenos Ayres) gentleman; and is making models and plans ordered by parties in Tasmania, Australia, for two 21 footers, 33ft. over all, to race against the two boats of that class, Ventura and Fairlie. One of the latter is by Mr. Watson, the other by Mr. Fife.

Steam Launches.

A SUMMER CRUISE ALONG THE CHESAPEAKE.

BY ABEL BOWEN NORRIS.

[*Concluded from page 400*].

THERE are two lighthouses at Smith's Point, a lofty, old-fashioned tower on the mainland, and a very pretty modern structure on iron piles at the outer edge of the bar, fully two miles from shore; otherwise the place is bleak, barren and dangerous. I crossed just inside the outer lighthouse, and hauled closer to the wind, south by west, for the mouth of Great Wicomico River, intending if the breeze died out to make harbor there for the night. The breeze held good, however, and at noon Great Wicomico was abeam. I determined to keep on and reach a

VENDETTA, 40-RATER, DESIGNED BY ARTHUR E. PAYNE FOR ADMIRAL MONTAGUE—1892.

small inlet or creek a few miles north of Windmill Point, an ideal place for a canoeist to put in.

The run down the beach from the Great Wicomico River on a clear day is delightful. The green verdure of Northumberland county, Va., on the west, and on the east the Chesapeake, a vast expanse of blue water, shimmering in the sunlight and stretching away north and south far beyond the reach of the human eye, flecked with many sail and now and then a passing steamer, is never forgotten, and must be greatly appreciated by all who love nature in its grand and sublime form.

Tom trolled a while on the way down, but with no success, owing probably to the great speed of the canoe. I knew there would be good fishing where we intended to stop, and preferred to try my luck at another time.

About the middle of the afternoon we stood in the mouth of the creek and found ourselves in a delightful little cove, bordered with miniature beaches of white sand, a spring of sparkling water, a small clump of shade trees, and a well-worn path that evidently led to a farmhouse not far distant.

We soon had our hammocks stretched beneath the trees, and Tom began to forage for soft-shell crabs, bait for the morrow's fishing and food for our supper. We found them very plentiful here, great big fellows that had come in on the flood, shedding their hard shells, and lay among the weeds and grasses, where the ebb tide had left them.

I was congratulating myself on reaching this lovely spot when a voice, clear and musical, came floating across the water with startling distinctness—

"Oh, dat little Pickaninny,
Down in ole Varginny,"

And looking up I saw the ragged back of a darky sculling an old punt down the creek, making directly for the landing where we were. Had I not yelled to him to "look out" he would have fouled my canoe. He stared at us in genuine awe or evidently took us for a couple of Malay pirates.

"Well, my good man, what's the matter?" I asked.

"You s'prised me, boss."

"Don't you look where you are going?"

"Sart'inly, boss, but can't scull a cunner wif your back to de paddle."

I smiled, for I saw the logic of this remark, and said:

"Whose place is this?"

"Marse William Sorrento's, sar."

"Any good fishing hereabouts?"

"Plenty, boss," his face brightening.

"Any oysters?"

"De crik am a natrul bed."

"Ah."

"What's your name?" I asked.

"Pompey White, sar," taking off his hat, bowing low, and showing a row of ivories.

Tom and I both laughed. He was black as a crow.

In the evening a fine, soldierly-looking gentleman and two charming ladies made their appearance. The gentleman was Col. William Sorrento and the ladies his daughters. They admired my canoe and outfit immensely, and were greatly interested in the cruise of the Scud. The colonel bade me welcome and extended every hospitality. Indeed, I shall always remember with pleasure and carry with me ever the memories of my visit there, and the delights of their sunny Southern home. Col. Sorrento was, like many other Virginia gentlemen, rich before the war, which had stranded him, but the people were recovering slowly from its effects, and his broad acres then were marvels of wavy grain and growing tobacco.

Just here let me say on my cruise in Virginia waters I met with this same affability among the poor as well as the rich, the people delighting in rendering me every assistance in making my stay among them pleasant and agreeable.

Next morning we were out on Sheepshead Rock early, casting our lines in four fathoms of water. We had good sport, catching plenty of trout and taylor; the latter I find only in the Chesapeake, and very gamy, taking the bait savagely and requiring the greatest skill in landing them. Our greatest catch, however, was the sheepshead, which we were after. We succeeded in getting a number of these fine large fish and would have captured more, but the wind coming up southeast began making an ugly sea, which drove us in. Sheepshead usually weigh from 6 to 10lbs., and I had rather catch them than tarpon. They are the gamiest fish that swims, and the way the line sings in the water, the bending rod and humming reel, is true music to the fisherman's soul.

We passed several days at Camp Sorrento—idyllic days they were—fishing in the morning, resting in our hammocks at midday, and in the evening at twilight, when the air was still, we brought out our banjos, and to the accompaniment of chirping crickets and the cry of the distant whippoorwill we whiled away the passing hours in music, the songs of camp life:

"With a flowing sheet and a swelling sail,
We are swept along by a driving gale;
'Neath the plunging bow is a roll of white,
And the waves are all flecked with dancing light;
While gleaming fires like diamonds burn
In the seething, lengthening wake astern.

The petrels their feet in the whitecaps lave,
The flying fish flutter from wave to wave,
While the porpoise it rolls thro' the gleaming foam,
And the black-finn'd sharks predacious roam.
Oh, wondrous sights meet the willing eyes
Of those who sail 'neath the sun-bright skies."

One morning, the wind having veered around to northwest, we stood out for Windmill Point, crossed the mouth of the Rappahannock, passed Stinguay, calling out the lightkeeper with our horn and getting in return a salute from his fog-bell, and bore down the beach for the Piyankatank, making Jackson's Creek, just inside its mouth, in good season. We found quite a thrifty settlement here—neat, whitewashed cottages, surrounded with gardens and beds of fragrant flowers, a large general store, a schoolhouse and a church (which the people called a meeting-house), inhabited mostly by oystermen.

The Piyankatank River is in the great oyster belt of Virginia, shipping annually one hundred thousand bushels of very fine oysters, standing about equal in its output to the Rappahannock River, Mobjack Bay and the York River. A large percentage of these oysters also come North in fishing smacks, are used for plants in Long Island Sound, and are erstwhile converted into blue points and little necks, which are so highly prized in our

New York hotels and restaurants. But the very finest oysters in the world are taken from Huggin's Bar in the Potomac River, Md., Cherrystone Inlet on the eastern shore of Maryland, Hampton Bar in Hampton Roads, and Lynnhaven Bay in Virginia. These are famous and known the world over. I might name other localities whose brands are greatly prized, for the Chesapeake is rich in its oyster beds; there are the Severn and Wye rivers, Oxford and Cambridge on Eastern Bay, the Patuxent River, Harper's Straights, Tangier Island and Crisfield, all great oyster producing points and handling thousands of bushels of this toothsome fish every season.

We did not stay long in the Piyankatank, however. At daybreak in the morning we were standing out for the Wolf Trap, a bleak, desolate-looking lighthouse many miles from land, and marking the treacherous shoals of that name in the Chesapeake directly in the path of incoming and outward bound ships.

As we sailed out the river Tom began to sing, and a negro on board a schooner also bound out took up the refrain, his voice echoing with peculiar sweetness on the clear morning air:

Way down yander on de Piyankatank,
Dat's whar de musrats jump from bank to bank.
Oh my, de yaller gals look so sweet,
Brack eyes and great big feet.
Down on Piyankatank's bank.

We passed the Wolf Trap at sunrise, and shortly after the wind died completely out, leaving us becalmed in the broad Chesapeake at a particularly unfortunate place. There was nothing to do, however, but to make the best of it until we did get a breeze, and if it proved too strong to make New Point Comfort or a harbor somewhere in Mobjack, both places being abeam.

The early morning scene was charming, the water smooth as glass, and as I looked down in its clear depths I should liked to have taken a plunge; but there are too many sharks playing around the shoals of Wolf Trap to make it safe—savage, man-eating specimens, such as are encountered on the banks of the Bahamas. Off to the left lay a big, full-rigged ship bound in, her square, white sails hanging limp against her spars, lazily drifting with the tide. Numerous other sail dotted the horizon, and the Carolina, one of the Bay Line steamers, came forging down, passing close, on her way to Norfolk.

Pretty soon, however, as I glanced to the eastward I could see the ripple of a breeze. The big ship caught it first, and as her vast area of canvas filled I could see her heel and gather way, a most beautiful sight, her clipper lines melting gracefully in the sunlight and starting up the bay like a race horse.

At first I was apprehensive that it might prove too strong and kick up an ugly sea, but it soon settled to a steady blow, the Scud taking the long, loping waves with great ease.

With three whole sails drawing and Tom and I perched on the weather washboard, we passed the lonely, isolated lighthouse on the outer edge of York Spit in great shape. I was proud of the Scud before, but her splendid seagoing qualities were showing now, and I felt like dancing with glee.

The big ship was now hull down, and we were heading due south for Hampton Roads. It is a long reach from the Wolf Trap, thirty miles straightaway from land to land; but I was not afraid, and determined to push on. Tom ran up the pennant "The Cruise of the Scud" when the ramparts of Fortress Monroe, with its grim, frowning guns, began to loom up, and shortly after noon we crossed the shoe, ran in under the lee of Old Point Comfort, and tied up at the wharf of the Hygeia, being well satisfied with the day's run and the first half of our cruise.

I met a number of friends from New York at the Hygeia, people like myself who were fond of boating and fishing, and several days were passed in cruising about the Roads, visiting the Rip Raps, Lynnhaven Bay and Newport News.

Newport News is destined to become a great place, and I found much business there. Within easy access of the ocean and on one of the finest harbors in the world, it is always crowded with vessels and ships of all nations. Besides its oyster industry, which is enormous, the Chesapeake Construction and Dry Dock Co., of which C. P. Huntington is president, have their vast yards here, and shipbuilding is carried on to a considerable extent. Back in the village is a splendid hotel, while along its streets are many fine houses and attractive stores. It is also the terminus of the Chesapeake & Ohio Railroad, and the Old Dominion Steamship Co. touch there tri-weekly, bringing its inhabitants in close connection with Richmond and the great cities of the North.

I could fill page after page with the beauties of Old Point and its charming environments, but already are my readers familiar with this noted spot. The garrison of Fortress Monroe, with its artillery school and visiting war ships, make the magnificent Hygeia in the evenings, its spacious ballroom and verandas, brilliantly gay with the uniforms of the army and navy, while the peculiar influence of the saline atmosphere imparts a healthful vigor to the invalid, making, with its manifold attractions, a watering-place especially desirable for the ever-changing and luxurious tourist. Before leaving Hampton Roads I hauled the Scud out and gave her bottom, which was becoming foul, a good coating of verdigris. This added greatly to her sailing qualities, and I consider it as a preparation the best thing in the world for canoes, preserving their bottoms and making them very smooth.

On a Monday morning, with a clear sky and a southwesterly wind, amid the waving of handkerchiefs and a merry *bon voyage*, we bade adieu to Old Point. Once more the Chesapeake was before us, its shimmering surface gleaming in the sunlight. Toward the eastward lay the broad Atlantic, while the barren hills and dunes of glistening sand around Cape Henry were just visible above the horizon. These sights and scenes of the lower Chesapeake soon faded from view as we sped on, leaving only a gray outline of the fast receding shore. We bade farewell to them with reluctance, but our regrets were soon lost in the pleasure and delights of our far homeward cruise.

The run back was leisurely made and uneventful, being practically the same, with probably a few more stops. After a brief stay at my old home, where I left my canoe for the following summer, I was back at my desk in New York city after an absence of five weeks and three days, brown as an Indian and strong as an ox. So ended my "Summer Cruise Along the Chesapeake."

Brooklyn C. C.

THE Brooklyn C. C., foot of Fifty-sixth street, Brooklyn, N. Y., sends us these fixtures for 1895:

Sailing races, 55sq. ft. limit, and Budington trophy, May 18, June 8, June 22, July 20, Aug. 3, Sept. 7. Paddling races, Rudd trophy, May 25, June 15, June 29, July 13, July 27, Sept. 14. Spring cruise, May 29–June 2, Susquehanna River; no races. Annual cruise, July 3–7, Pagan cruising trophy race on Long Island Sound. A. C. A. meet, Lake Champlain, Aug. 9–24. Closing races, Sept. 21, tie records (if any) will be paddled or sailed off.

The races for the Budington and Rudd trophies will only be held on dates given above and not unless challenges are before the committee.

Any event may be omitted at the discretion of the regatta committee.

The 55ft. limit race may be sailed with any style of canoe; but the rule is, one man, one canoe, one rig. No sliding seat. It will be sailed over a short course, under handicap to be hereafter decided upon. A special prize will be given at the close of the season to the winner of the greatest number of these races. The record will be made up from every race on the above list. The winner of each race will receive as many points for the record as there have been starters. Second man, one point less, etc.

After the races, it is proposed to cook supper and eat it. With that idea, let every member keep in his locker such comestibles and the necessary tools and machinery to eat them as may seem to him best suited to delicate constitutions.

The officers are: Com., M. V. Brokaw; Vice-Com., C. R. Lester; Purser, W. McK. Miller. The Regatta Committee: Robt. J. Wilkin, Chairman; W. McK. Miller, J. F. Eastman.

New York C. C. Cup.

No. 70 WILLIAM STREET, N. Y.—*Editor Forest and Stream:* Referring to the dates given to the various races of the New York C. C., I beg to inform you that the date of the first trial races for the international challenge cup, originally set down for June 22, has been changed to June 27, in order to better suit the convenience of canoeists living at a distance from New York city who may wish to participate in this race as well as in the two following ones.

There seems to have been some misunderstanding as to what is meant by holding the second series of trial races, scheduled for June 29, in conjunction with the Marine and Field Club. This means not that separate races will be held on June 29, but that the work of canoeists sailing in the Marine and Field Club races on that day will be taken into consideration by the committee in its selection of the Cup defender. LOUIS L. COUDERT, Sec'y Regatta Committee.

Rifle at San Francisco.

SAN FRANCISCO, May 12.—*Editor Forest and Stream:* A large number of riflemen attended the various club shoots at Shell Mound Range to-day. Several militiamen made good scores at 200yds., two making 47 and several reaching 46

There is much enthusiasm among the users of the Springfield rifle in this city, and much curiosity is felt as to the shooting qualities of the new Krag-Jorgensen arm.

Germania Schuetzen Club scores: Champion class medal won by Dr. L. O. Rodgers with 214 220—434. First class—J. E. Klein 408. Second class—A. Jungblutt 412.

Columbia Pistol and Rifle Club—Medals and cash prizes, open to the world, rifle. 200yds., re-entry: Target rifle, Kuhnle medal: Dr. L. O. Rodgers 10 9 10 10 8 9 10 8 8 9—91, A. H. Pape 86, D. W. McLaughlin 84, F. O. Young 84, Geo. Schultz 76, Jacobsen 68.

Military rifle, Glinderman medal (circular 8in. bullseye): F. O. Young 44, A. H. Pape 43, F. Gehret 43, A. Fetz 43, M. Hinzman 41.

Rest shooting, Young medal: F. O. Young 100.

For members only, no re-entry: Champion class—D. W. McLaughlin 87, F. O. Young 86, Dr. Rodgers 80, A. H. Pape 80. First class—C. Perry 72, J. E. Klein 69. Second class—A. Kennedy 79, A. Fetz 74, J. E Gorman 66, E. Jacobsen 64.

Medals for members only, pistol, 50yds., no re-entry: Champion class—C. M. Daiss 91, E. Hovey 89, F. O. Young 84, A. H. Pape 84. First class—J. E Gorman 84, A. Gehret 84, Dr. Rodgers 81, F. Poulster 79. Second class—C. Perry 76, F. Dennis 72, A. Fetz 70, W. Unfred 57.

Open to all comers, re-entry, pistol, Blanding medal: E. Hovey 94, S. Carr 92, C. M. Daiss 92, J. E. Gorman 92, F. O. Young 92, Dr. Rodgers 88. ROEEL.

Revolver Shooting in England.

MAY 4.—At the North London Rifle Club the below scores were made in revolver shooting.

Twenty yards stationary target: Walter Winans 6 7 7 7 7 7—41, Clementi-Smith 38, Maj. Munday 37, Gould 36, Maj. Jones 34, Luff 33.

Mr. Winans's score is the best made this season in revolver shooting at any of the clubs.

May 3.—Twenty yards stationary target:

Comber	677776—40	Clementi-Smith	776446—34
Maj Munday	676767—39	Luff	557754—33
Chicken	677557—37	Ricketts	762755—32
Knapp	776655—36	Frost	737267—32
Lieut Richardson	476765—35	Thompson	656453—29
Carter	754775—35	Capt Evans	352577—29

May 2.—At the South London Rifle Club the following scores were made at the revolver ranges. Twenty yards:

Walter Winans	775777—40	C F Lowe	774576—36
Lieut Varley	577657—37	Capt T W Heath	666665—36
E Howe	766656—36		

Mr. Winans's score is the highest made this season at the club.

Fifty yards:

Walter Winans	765766—37	C F Lowe	457765—34
Lieut Varley	575746—34	E Howe	556456—31

Rifle at Rochester, N. Y.

THE eleventh annual shoot of the Schuetzengilde, June 5 and 6, will be shot on the Monroe avenue grounds. Four targets will be used, American standards for rest and for off-hand, two of each. No limit to the number of times a contestant may re-enter. The two best cards will be scored. Distance 200yds., five shots, off-hand. A peg rest may be used in contesting for the cash prizes if the contestant so desires. Distance 200yds., three highest cards to count. This will be shot off at the end of the tournament. Shooting begins at 1 P. M. Mr. C. Harvey is the secretary.

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

June 3–8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual ournament. Convention at Sherman House, June 4.

June 11–13.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 12–13.—JANESVILLE, Wis.—Fifth annual shoot of the Janesville Shooting Club; live birds and targets. H. H. McKenney, Sec'y.

June 13–14.—FARGO, N. D.—First annual tournament of the North Dakota State Sportsmen's Association; targets. Programmes ready May 15. W. W. Smith, Sec'y.

June 13–15.—OMAHA, Neb.—Annual tournament of the Nebraska State Sportsmen's Association; $500 added money. F. S. Parmelee, Sec'y.

June 13–15.—PORTLAND, Ore.—Eleventh annual tournament of the Sportsmen's Association of the Northwest, under the auspices of the Multnomah Rod and Gun Club. D. L. Williams, Sec'y, Portland, Ore.

June 14.—WORCESTER, Mass.—Seventh and closing tournament of the New England Shooting Association, under the auspices of the Worcester Gun Club.

June 15.—WILMERDING, Pa.—Tournament of the Wilmerding Gun Club. A. A. Mackert, Sec'y.

June 19–21.—CLEVELAND, O.—Chamberlin Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 20–22.—PORTLAND, Ore.—Multnomah Rod and Gun Club's eleventh annual tournament. D. L. Williams, Sec'y.

June 24–28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec'y.

June 26–27.—VICKSBURG, Miss.—Tournament of the Interstate Association, under the auspices of the Vicksburg Gun Club.

June 29.—MARION, N. J.—Fifth tournament of the New Jersey Trap-Shooters' League, under the auspices of the Endeavor Gun Club.

July 10–12.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec'y.

July 17–18.—MACON, Ga.—Tournament of the Interstate Association under the auspices of the Macon Gun Club; $200 added.

July 17–18.—BELFAST, Me.—Second annual tournament of the Belfast Gun Club; $125 in cash guaranteed.

Aug. 9–10.—NEW ORLEANS, La.—Tournament of the Inter-state Association, under the auspices of the Louisiana Gun Club; $200 added money.

Aug. 20–24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankfort, Pa.

Aug. 27–29.—CHARLOTTE, N. C.—Tournament of the Interstate Association, under the auspices of the Charlotte Gun Club.

Aug. 29–31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Sept. —.—FREDONIA, N. Y.—Tournament of the Clover Trap and Target Company. $1,000 added money.

Oct. 9–11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

1896.

April 1–3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

C. MacAlester and R. A. Welch, of the Riverton Gun Club, shot a match on Saturday last, May 25, with George Work and J. P. Knapp, of the Carteret Club. The match was 100 live birds per man and was shot on the Riverton grounds. The Philadelphia team, Messrs. MacAlester and Welch, won by 7 birds, the scores standing: MacAlester 89, Welch 86; total 175; Work 87, Knapp 81; total 168. The Philadelphians were the favorites, as the New York men have not been shooting in any sort of form lately.

The Rochester (N. Y.) *Post-Express* of May 22 notes the organization of a new gun club at West Rush, N. Y. It says: "The Rush Rod and Gun Club was organized Monday evening with the following officers: E. Mattern, President; Charles Pfistner, Secretary and Treasurer; M. Kinsey, Vice-President; F. Hough, Shooting Master. The club will hold weekly shoots throughout the season and some good scores may be looked for, as there are some good shots connected with it."

In the programme of an "amateur shoot" that was held May 30 at Bass Lake, Indiana, appeared the following note: "The management reserves the right to impose such handicap on shooters as circumstances may require." The reservation is rather vague, but the management evidently intends to do the right thing—"Protect the amateur."

Heikes won the championship of the State of Ohio at the Dayton shoot on May 15 by winning the L. C. Smith trophy with a score of 49 out of 50. This trophy, which is emblematic of the championship of the State, was also won by Heikes last year with precisely the same score.

Owing to pressure on the trap columns this week, scores for the following shoots have been unavoidably held over until the next issue: Texas State shoot, Neponsett (Ill.) annual tournament. These scores, together with one or two others which will also have to suffer a like fate, will appear next week.

The Schmelzer world's championship cup will be competed for at Fairmount Park, Kansas City, and will represent the championship at inanimate targets. The trophy is of elaborate design, is made of silver and gold and is valued at $500. On the top, in the attitude of shooting, is a statuette of Rolla Heikes, whose skill as a shooter is known to all.

Those who contemplate attending the Memphis tournament and other sections in the South would do well to consider the excellent advantages offered by the Southern Railway Company. Their through train, Pullman sleepers, runs through from New York to Memphis without change, leaving New York at 4:30 P. M. and arriving in Memphis at 7:25 the second morning.

A gun club of twenty members, known as the Ingram Gun Club, of Ingram, Pa., was organized May 18, 1895, with the following officers: President, James L. Cravens; Vice-President, J. A. Evans; Secretary-Treasurer, W. C. Wallace; Captain, W. A. Kimmell; Directors, John A. McCracken and Wm. S. Gilmore.

Under date of May 19, Mr. H. H. McKinney, secretary of the Janesville Shooting Club, writes us as follows: "On account of conflicting with the Milwaukee shoot, the Janesville Shooting Club have postponed their tournament until June 12 and 13."

The Multnomah Rod and Gun Club offers a varied programme for its eleventh annual tournament. D. C. Williams, secretary, Portland, Ore.

The Knoxville tournament brought together the greatest aggregation of trap-shooters ever gathered together at any shoot in this country. Nothing but the extraordinarily hard shooting doled out to the boys kept the scores down.

Irby Bennett promises a good time, a square shoot and lots of money to all who attend the Memphis shoot next week. From what I heard at Knoxville, and judging from the way shooters were "talking Memphis," I believe they'll have a larger entry list at this tournament than that at Knoxville. Tennessee is right in line to boom trap-shooting.

Paul North is not saying much about the Cleveland shoot, June 19–21, but what he does say about it is to the point. He predicts a large attendance of shooters with plenty of money to divide.

Missoula, Mont., will have the honor of giving the annual tournament of the Montana State Sportsmen's Association in 1896.

Among those present at the Rome, N. Y., shoot last week were Gus E. Greiff, New York; C. W. Tuttle, Auburn; R. Hunter and C. Wagner, Fulton; M. M. Mayhew, Marcy; John Fulford, H. L. Gates and Gus Dexter, Utica; Geo. A. Mosher, Syracuse; W. H. Skinner, Chicago; W. H. Cruttenden, Cazenovia; W. Hobart, Newark, N. J.

J. F. Schmelzer, of Kansas City, Mo., will give a four-days' tournament the second week of July. This tournament, although it is expressly an amateur tournament, will not be a blank for the expert, as an extra set of traps will be kept running for open sweepstakes. A special feature will be a 100-target event (style of shooting not yet decided upon) for the individual championship of the world at inanimate targets. This event is of course open to the world. The trophy is a remarkably handsome one; it stands three feet high, and is valued at $500.

Jack Parker will manage the New York State Sportsmen's Association tournament at Saratoga, N. Y., the latter part of June.

The Interstate Association will give a tournament at Charlotte, N. C., on Aug. 27, 28 and 29, under the auspices of the Charlotte Gun Club. The amount of added money will be announced later, but I understand from Col. Anthony that it will probably be $300, $100 each day.

Seth Clover tells me that the Clover Trap and Target Company, of Fredonia, N. Y., will give a tournament at Fredonia some time in the month of September. Dates will be announced shortly. As a matter of interest, it will be well to mention that the company will add $1,000 in cash. There will be a citizens' purse as well as merchandise prizes.

The second annual tournament of the Belfast (Me.) Gun Club will be held on July 17-18. The club guarantees $125 in cash.

A special feature of the Knoxville shoot was the side show in the E. C. Powder Co.'s tent. Keller made a capital showman.

In the Intercollegiate shoot on May 14, Princeton beat Harvard by the score of 100 to 91. Princeton thus wins the cup, having won it twice in succession.

A large delegation of the cracks attended the annual tournament of the Arkansas State Sportsmen's Association at Little Rock this week.

EDWARD BANKS.

Prize Shoot at Memphis.

LITTLE ROCK, Ark., May 21.—Last Saturday the Memphis Gun Club had a successful and interesting little shoot. The programme announced that shooting would begin at 12 M., and called for four events, all at unknown angles; three 20-target sweepstakes and a prize handicap. The shooters in this prize event were divided into four classes. The A class men shot at 25 targets, the B class at 26, the C class at 27, and the D class at 28, highest possible score to be 25; all ties were shot off under the following conditions: A class 10 birds, B and C 11 birds, and D class 12, possible total 10. The prizes in this event consisted of an L. C. Smith hammerless, a Burgess Repeater, a Winchester Repeater, 400 nitro powder loaded shells, and 200 nitro powder loaded shells, to be awarded in the order named. The first prize was won by Tom. Divine, president of the club, without a tie, he being the only one to score 24. Erhardt, Robertson and Slack scored 23 each; in the shoot off Robertson broke 10 straight, and took the Burgess gun. Tway, Cockrill, Neeley and Yahnka tied for third prize, each scoring 22. This tie was most stubbornly contested. On the first round Yahnka dropped out; but Tway, Neeley and Cockrill each scored 10. The next round proved disastrous to Tway, as he let one target get away, while Neeley and Cockrill again scored 10. It took 20 more targets each before the ownership of the Winchester was decided, Neeley eventually winning. Hinkle, Pickett, Taylor, Frank, White, Thompson, Allen, Armstrong and Craft tied on 21. In the shoot off Frank killed straight, and took the 400 shells. A. B. Duncan, Greer, Brown, Sullivan, Villipique and Walton tied on 20. It took quite a number of shells and targets to decide the possession of the 200 shells, Brown eventually capturing them.

The weather was fine, and as the scores will show, the attendance was good. Messrs. Thompson, Hinkle, Craft, Erhardt, Lang and Robertson came down from Paducah, Ky.; Tway and Arledge were on hand from Michigan City, Miss., while your correspondent strayed over from the wilds of Arkansas to tell the boys about the State shoot. The arrangements of the grounds and traps were perfect, and everything worked smoothly. Everybody seemed to be enjoying themselves, while the two sets of traps that were used gave everybody all the shooting they desired. The club has everything in shape for their big annual in June; to those who are contemplating attending this shoot I wish to say, "Do so by all means, as the members of the Memphis Gun Club are royal entertainers, and they have many little surprises in store for those who visit them." The appended scores tell the story in detail:

No. 1, 20 targets, unknown angles:

PAUL R. LITZKE.

The Knoxville Tournament.

TO THE Knoxville Gun Club rightly belongs the honor of having broken all existing records in the history of trap-shooting. It is honor that has been so well earned that no one will grudge the club a single leaf from its laurels. The tournament of 1895, which closed on Friday last, May 24, was something that three years ago not even the most enthusiastic trap-shooter would have dared to consider as within the range of possibilities. It was Knoxville and its gun club which made such a meeting not only a possibility but, as we have seen, an actual fact. In 1892 the gun club added $500 in cash to the purses at its tournament. So great was the success that attended this move that the next year, 1893, $1,000 in cash was added to the purses and divided among the shooters, In 1894 a similar sum was added, and the tournament of that year, as its predecessors, was an unqualified success. But the Knoxville Gun Club was not content to keep to its old figure of $1,000 for its 1895 tournament. It determined to add $3,000 to the purses this year and to hold a shoot of unrivaled proportions.

Prior even to the tournament of 1894, its plans for raising this $3,000 were matured. The idea was carried out thus: The club was to give $1,500, manufacturers and dealers of sportsmen's supplies were to add their share of $500 more, and each shooter who desired to enter and shoot in the events on the programme was to pay an entrance fee of $10 for that privilege. By this latter arrangement the club expected to raise $1,000—that is, 100 shooters at $10 each. This sum of $1,000 was fully raised, 100 shooters taking part in event No. 1 on the opening day. The manufacturers' $500 was raised easily, and the balance of the $3,000 was raised by the club. The energy and grit required to carry out the above programme was forthcoming, and the result justified the predictions of its promoters. Never in the history of trap-shooting has there been such an aggregation of crack shots gathered together in any one place.

THOSE WHO WERE THERE.

Look at this list of names and weigh the capabilities of the large majority of them: R. O. Heikes, Ed. Rike, C. M. Raymond, H. Dando and W. Scott MacDonald, Dayton, O.; "Shorty" Bacon, Miamisburg, O.; C. M. Grimm, Clear Lake, Ia.; "Dick" Merrill, Milwaukee, Wis.; Sim Glover, Rochester, N. Y.; C. W. Budd, Des Moines, Ia.; Harvey McMurchy, Syracuse, N. Y.; Andy Meaders, Nashville, Tenn.; H. B. Hill, Aurora, Ind; John A. Flick, Ravenna, O.; L. M. Boykin and J. H. Mooney, Orlando, Fla.; Ferd. Van Dyke, Dayton, N. J.; B. A. Bartlett, Buffalo, N. Y.; B. "LeRoy" Woodward, Campello, Mass.; W. Wagner, W. B. McKelden, Joe Hunter, J. H. Gulick, N. Pruitt and B. L. Osborne, Washington, D. C.; W. Tell Mitchell, Lynch's, Va; J. B. Gay, Pine Grove, Ky.; Stewart and L. S. Byer, Rochester, N. Y.; Paul North, Cleveland, O.; F. C. Etheridge and Harry B. Troutman, Macon, Ga.; E. D. Fulford, Utica, N. Y.; Frank Parmalee and George Loomis, Omaha, Neb.; T. H. Keller, Plainfield, N. J.; Capt. Money and N. E. Money, Oakland, N. J.; "Des-Chree-Shos-Ka Jack" Parker, Detroit, Mich.; "Jenks" P. Easton, Monroeville, O.; "Redwing," alias Ralph Worthington, Cleveland, O.; Charlie Young, Springfield, O.; D. A. Upson, Columbus, O.; Alkire, Columbus, O.; A. L. Ivins, Red Bank, N. J.; "Plumber" Reed, Omaha, Neb.; W. W. Watson, Wm. Clegg and Samuel Hutchings, Louisville, Ky.; Elmer E. Shaner, Pittsburg, Pa.; "U. M. C." Thomas, Bridgeport, Conn.; W. R. Fieles, Christiana, Pa.; A. W. duBray, Dayton, Ky.; G. N. Hughes and J. Sumpter, Jr., Hot Springs, Ark.; Johnny Hoffman, German Valley, N. J.; Billy Drake, Maplewood, N. J.; Maurice Kauffman, New Orleans, La.; Wm. Gerst and Frank Legler, Nashville, Tenn.; R. L. Trimble, Covington, Ky.; J. F. Cherry, Lancaster, O.; Theodore Cicotte, Detroit, Mich.; Col. J. T. Anthony, Charlotte, N. C.; G. S. McAlpin and Justus von Lengerke, New York; Arthur Gamble, Aurora, Ind.; Chas. Lane, Philadelphia; Seth Clover, Fredonia, N. Y.; J. P. Haddox, Winchester, Va.; L. Brown, Sweetwater, Tenn.; T. J. Desmond, Stillmore; F. H. Woodworth, F. J. Waddell and Livingston, Chattanooga, Tenn.; John A. Ruble, Chicago; Tom Callender, Chattanooga, Tenn.; Irby Bennett, Memphis, Tenn.; M. A. Keller, Batavia, N. Y.; Jas. A. R. Elliott, Kansas City, Mo.; J. H. Bortle, Detroit, Mich.; Roger Van Gilder, Somers Van Gilder, C. Ross, J. Ross, J. W. Conner, J. C. White, T. C. Eldridge, Frank Meade and Judge Lindsay, members of the Knoxville Gun Club; Buker, Rockford, Ills; Linderman, etc.

EARLY BIRDS.

A remarkable feature of this shoot was the attendance of sixty shooters at the grounds on Monday, all bent on getting some practice previous to the opening of the tournament. Some 8,000 targets were thrown during the day, Glover, of Rochester, N. Y., carrying off the honors with a total of 173 breaks out of 180, an average of 96 and a fraction. This average was never approached during the four succeeding days. There were three sets of traps used at the tournament, all set in a straight line. From these traps were thrown, including the 8,000 thrown on Monday, over 60,000 bluerocks. On the first day as I figure it 15,720 were thrown; 14,085 on the second day; 12,420 on the third day, and 11,495 on the fourth day, making a grand total, including the above 8,000, of 61,720 targets.

The preliminary practice was all over before I got to Knoxville. Elmer Shaner and I had joined the vestibuled limited on the Southern Railway at Lynchburg, Va., at 3:37 on Monday morning, May 20, having stopped over in the Hilly City after its Interstate tournament. Before we reached Greensboro I went into the Knoxville sleeper and found J. A. H. Dressel and "U. M. C." Thomas, of the U. M. C. Company, and Noel Money, of the American E. C. Powder Company, in the drawing-room. Close by was Paul North, dreaming soundly, in a lower berth, of "bluerocks and how to smash them." Across the aisle was Justus von Lengerke, of the firm of Von Lengerke and Detmold, the American agents for Schultze powder; further on was A. W. DuBray, armed with a Parker gun for fear of train robbers. T. W. Keller, of the U. S. Cartridge Company, was stowed away in an upper and I couldn't locate him. Ivins, of Red Bank, N. J., and Billy Drake completed the list in that car so far as I can remember. Col. Anthony joined us at Statesville, N. C., and accompanied us to Knoxville. I forgot to mention that at Greensboro, while the dining-car was being hitched on to our train, Dressel, Shaner and I promenaded the platform in the vain hope of seeing Fonda and "Rastus" Gilmer; Dressel's crimson slippers excited the cupidity of many a darky. The trip through the mountains, past Hot Springs, up and around Round Knob, where we often looked down upon the road we had just come over, lying some hundreds of feet below; past Asheville and Point Rock, and along the banks of the lovely French Broad River, is a beautiful ride, romantic enough to excite a cynic to poetry. There was a touch of prose, however, on this journey—that was the dinner at Asheville. The gentleman who does the catering for that meal ought to take a course of lessons on "Dinners and how to serve them" from the Savarin who wields his scepter over the dinner table in the station at Charlotte, N. C. The dinner above mentioned notwithstanding, I enjoyed the trip immensely.

During the evening of Monday, S. B. Dow, President of the Knoxville Gun Club, together with some of his fellow members, put in an appearance at the Imperial Hotel, circulating among the crowd of shooters, renewing old acquaintances and making new ones. Roger Van Gilder, secretary of the club, was on hand to take squad entries and to hand out squad tickets. Entries were made for "all day," some of the squads continuing intact until the tournament closed.

THE SQUAD LIST.

The following is a list showing the formation of the squads for the first day:

No. 1: Heikes, Rike, Raymond, McDonald, Dando, Shorty Bacon.
No. 2: Grimm, Merrill, Glover, Budd, McMurchy, R. Van Gilder.
No. 3: H. B. Hill, Andrew Meadows, Gambell, Trimbell, Flick, Boykin.
No. 4: Van Dyke, Bartlett, LeRoy, Gay, Wagner, Conner.
No. 5: W. T. Mitchell, Byer, Stewart, Paul North, Etheridge, Fulford.
No. 6: Parmalee, Keller, Noel Money, Parker, Capt. Money, George Loomis.
No. 7: Jenks, "Red Wing," Young, Upson, Alkire, Ivins.
No. 8: Plummer, Watkins, Gulick, Clegg, Hutchins, Hunter.
No. 9: C. Ross, Shaner, Prewitt, Thomas, Lane, Fieles.
No. 10: Cleveland, White, Eldridge, Dow, DuBray, F. Mead.
No. 11: Hughes, Sumpter, Troutman, Mooney, Hoffman, Drake.
No. 12: Kaufmann, Cicotte, Buker, Gerst, Legler.
No. 13: Anthony, McAlpin, J. Ross, Reeder, McKelden, Osborne.
No. 14: Clover, Haddox, Brown, Morris, Lindsay, S. Van Gilder.
No. 15: Desmond, Linderman, Taylor, Von Lengerke, Woodworth, Ruble.
No. 16: Livingston, Ballard, Fawcett, French, Callender, Bennett.
No. 17: M. A. Keller, Elliott, Bortle, "Lookout."

The first day was windy, cool and dull. The light was none of the best and the targets were thrown hard, low and fast. No one could make good scores, while the screwing up of the traps and tensions necessarily caused much breaking of targets, many consequent balks, and much heartache for Paul North, the work done by the traps not being a fair criterion of their worth by any means. He need not have worried, however, as every shooter present knew his wares well before going to Knoxville. So low were the birds thrown that it was almost impossible to catch them before they were out of sight. Personally I did not like the way the targets were thrown, as it seemed to me to favor the "crackajack" too much. The harder the birds are thrown, the better for him, and I'm in favor of the greatest good to the greatest number. As I was not shooting, of course, there was no kick due from me. The ground beyond the traps slopes sharply away to the left, while it rises equally sharply on the right. This of course makes the flight of the targets very deceptive, and accounts in a great measure for the lost scores.

The second day was a counterpart of the first, only there was more sun and wind. This wind, too, as on the previous day, blew right in the teeth of the shooters, and affected the scores very much. The third day was a perfect one, the best of the four to my mind. As will be noticed from the table given below, there was a gradual dropping off in the number of shooters. The pace was too hot for many of them, and they were not slow to realize it; $28 a day is no small amount to pay out, when added to other expenses. The table gives the number of entries in each event during the tournament, Nos. 3 and 6 each day being 25-target races, $5 entrance; the balance were 20-target races, $3 entrance; $70 was added to each 20-target event, $100 to the purses in the 25-target races.

Events.	First day.	Second day.	Third day.	Fourth day.
1	100	88	82	65
2	98	88	81	64
3	94	81	75	64
4	97	84	79	62
5	97	83	74	61
6	86	76	65	59
7	87	84	60	59
8	82	81	70	60
	741	665	586	494

This gives an average of 92⅝ for the first day; 83⅛ for the second; 73¼ for the third, and 61¾ for the fourth; or a general grand average for the 32 events decided on the four days of 77¾. These averages speak for themselves and show as plainly as words can tell how truly big this tournament was. On the other hand they tell very plainly how sharp were the effects of the extremely hard shooting on several of the boys.

WHERE THE AVERAGE MONEY WENT.

There were six premiums each day for average money. The moneys were $18, $16, $14, $12, $10 and $8. On the first day this money was awarded as follows: First, Parmalee; second, Glover; third, Budd; fourth, Heikes; fifth, McMurchy; sixth, Grimm. It is noticeable that on this day there were no ties for average money.

Second day: First, Noel E. Money; second, Heikes; third, Trimble; fourth, Glover; fifth, Grimm; sixth, Ruble and Livingston.

Third day: First, Heikes and Ruble; second, McMurchy; third, Trimble; fourth, Jenks, Glover and Woodworth; fifth, LeRoy, Bartlett, Loomis and Upson; sixth, Redwing.

Fourth day: First, McMurchy and Upson; second, Noel Money; third, Stewart, Buker and Linderman; fourth, Budd; fifth, Young, Bartlett, Heikes, Redwing and LeRoy; sixth, Jenks, Wagner, Loomis, Shorty and Hughes.

The club also gave six four-days' average premiums: $20, $18, $16, $14, $10 and $10. These went to the following shooters: First, Heikes, 614; second, McMurchy, 611; third, Glover, 609; fourth, Ruble, 601; fifth, Budd and LeRoy, 596; sixth, Parmalee and Buker, 594.

Although Glover won only third place in the general averages, he was the best winner, dropping into some very lucky holes; his consistently good shooting of course was the main cause. With $3,000 *added* money there was naturally something to win, several of the shooters carrying off some hundreds of dollars. A curiosity of the shoot was the third event on the first day: With 94 entries, McDonald won first money alone with 24 out of 25! Was the shooting hard? Another curiosity was the second event on the second day: Noel Money won first alone with 20 straight, second money being divided among eight with 18, there being nobody in the 19 hole. In this event there were 88 entries!

As regards refereeing: That part of the tournament was scarcely up to what I should consider a standard worthy of so great a shoot. With so many targets flying in the air, such an incessant popping of guns, and such a strain on the eyes as there always is, the job required experienced hands. I may be wrong, but it seemed to me that neither the refereeing nor the scoring was quite all that it might have been. Fit men for these positions are hard to get, and with three squads of men shooting at the same time mistakes are liable to occur, particularly as these posts are onerous and monotonous to a degree. In all other respects the management was excellent and the Knoxville Gun Club is to be congratulated on the way in which it handled its crowd of visitors. The catering was capital, while the squad hustling of Frank McCartney would be hard to beat.

There are many features of the shoot, some humorous, some otherwise, that I would like to notice in this comparatively brief account. The trap columns of FOREST AND STREAM are expansive, but "there are others" and we must remember those others. The figures in the tables which are given below must finish my story for me, so far as the details of the shoot are concerned. There is one feature, however, neither statistical nor strictly pertaining to the tournament, which must not be passed over. This was Keller's side show, which was held in the E. C. Powder Company's tent on the third and last days of the shoot. Among his "freaks" were: Frank Parmalee—"the split-tongued wonder from Omaha, who talks seven distinct languages at one and the same time;" Harry Troutman—"the bearded lady;" Noel Money—"the human clothespin;" Fred Van Dyke—"the living skeleton, who can pass with ease through a 3in. gaspipe;" "Des-Chree-Shos-Ka Jack, the snake charmer;" Capt. Money—"the bungalow sahib, the patron of the buckree wallaho;" Ed Rike—"the fat boy, sixteen years of age, weighs 415lbs., born in Dayton, O., of poor but dishonest parents;" U. M. C. Thomas, Elmer Shaner's understudy, as the "human billiard ball;" Charlie Ross—"the human torch, from whose cranial covering, without the aid of matches, cigars can be lighted with perfect ease and safety." (This feat Keller never failed to accomplish!) With a list of attractions such as the above it is no wonder that the side show was decidedly popular with the boys. It is promised that other attractions will be added at Memphis, where the "freaks" will all meet again.

It is, however, to the following tables that all trap-shooters will turn. The arrangement of the scores has been carried out with a view to making reference to any shooter's score an easy matter. Such tables take considerable time to prepare and occupy considerable space in the trap columns. Still, as stated above, they tell the story.

As regards guns, shells and powders used, it has always seemed to me that a table of that character is not only unsatisfactory, but also misleading. It is almost impossible to arrive accurately at the powder used; some men will tell you one powder while they shoot another. The most essential part of such a talk would be the wadding; in many instances this could not be given, as certain shooters would not want to give away that which they have obtained at the cost of much time and thought. Hence, I will give, as far as possible, the guns, shells and powder used by the average winners on the first, second and third days. The average on the fourth day was not made out until too late for me to obtain the necessary particulars.

Name.	Gun.	Shell.	Powder.
Glover	Greener	Smokeless	DuPont.
Parmalee	Greener	Smokeless	E. C.
Budd	Smith	Rapid and Smokeless	E. C.
Heikes	Winchester	Leader	American Wood.
McMurchy	Smith	Rapid	E. C., Wood, DuPont.
Grimm	Smith	Smokeless	E. C.
Noel Money	Parker / Smith	Smokeless	E. C.
Trimble	Parker	Smokeless	DuPont.
Livingston	Smith	Smokeless	DuPont.
Ruble	Lefever	Nitro	DuPont.
Jenks	Smith	Trap	E. C.
Woodworth	Smith	Smokeless	DuPont.
LeRoy	Scott	Leader	Wood.
Bartlett	Burgess	Smokeless	DuPont, Wood.
Loomis	Parker	Smokeless	E. C.
Upson	Greener	Smokeless	E. C.
Redwing	Greener	Smokeless	E. C.
Stewart	Lefever	Smokeless	Wood.

THE SCORES.

With 100 entries in the first event, and with an average of over sixty shooters in all the events on the fourth and last day, it would be an impossibility to give the scores in detail. It is true that in some instances that is the most satisfactory way, both to shooters and to those who are interested in the minor details of the scores. When a man makes 19 straight and misses his 20th target, it is worth noting. FOREST AND STREAM'S columns are, however, too valuable to permit of such a use; hence tables are given showing the scores made by each shooter in the events they took part in. Two tables are necessary, owing to the number of events. The first table shows the scores made during the first two days of the shoot; the second gives the scores of the last two days. When the letter w occurs it signifies that the shooter retired in that event, having shot himself out of a place and being unwilling to continue shooting. The tables run as follows, the names of the shooters, for ready reference, being run in alphabetical order:

	First Day.								*Second Day.*

Young	19	20	21	16	16	20	20	15	16	14	22	15	17	18	18	15

The third and fourth days' scores are given below. It will be noticed that there is in the majority of cases a big improvement in the totals made during the two last days of the shoot. This was due to the fact that the wind was not blowing as strongly as during the first two days, and it seemed to me also that the targets were thrown somewhat easier.

In the above tables events 3 and 6 on each day were 25 target races; the others were all 20 target runs. The shooting in all events was at unknown angles.

THE AVERAGES.

The averages made will be found to be extremely low. That fact speaks better than any other as to the manner in which the targets were thrown. When Heikes cannot average better than 90⅓ at unknown angles the shooting must be hard. McMurchy, with 90 per cent., did great work, as he was decidedly under the weather on the second day. Glover 89⅛, Budd, LeRoy and Ruble 88, Buker, Jenks, N. E. Money, Parmalee, Redwing, Trimble and Upson 87, all shot well on the whole, but at times each man took a tumble that was almost unaccountable. Grimm, with 86 per cent. lost 34 targets on the last day. The percentages, together with the totals broken each day, the total number broken and the number shot at are given below, the names of the shooters being run in alphabetical order:

	1st Day.	2d Day.	3d Day.	4th Day.	Total.	Shot at.	Per cent.

Baltimore Shooting Association.

THE Baltimore Shooting Association, a new organization, though one already having an active membership of over eighty, opened its shooting grounds on Saturday, May 18, under very auspicious circumstances, with about fifty shooters in attendance.

The Association's grounds are conveniently and accessibly located on the Pimlico Drive, just outside the corporate limits of the city, on a beautiful elevated plateau. Electric cars pass within a stone's throw, and it would appear that nature, hand in hand with the ingenuity of man, had exerted herself to present the sport to its Baltimore votaries in its most seductive garb.

A handsome two-story club house has been erected, provided with gun racks, lockers and all the other paraphernalia necessary to the comfort, convenience and pleasure of the members. Large and commodious piazzas grace the front of the club house, where, reclining in comfortable ease, the members may watch the work of the men at the traps, discuss their various shooting qualities, etc. The club house faces the east, and is situated at the southern or lower portion of the grounds. To the left of the club house and connected with it by a board-walk is the shooters' platform, 65ft. long by 10ft. wide. In front of this platform, and at a distance of 16yds., is located the screen, covering five traps.

Within this screen is a trench 3ft. in depth and 3ft. in width, in which stand the trap loaders. Directly in the rear of each trap is an electric button connecting with a large electric bell, located exactly in the center of the screen. When a trap happens to throw a bird at a wrong angle or breaks a bird, there is no calling back and forth between referee and trap-loader to find out if trap is ready. The shooter stands in his position. As soon as the trap is ready, the trap-loader touches the electric button behind him, ringing the bell, which notifies the shooter that he can say "pull;" and the bird will be on the wing. The screen is provided with doors and locks, and within it there is room for a car-load of targets.

The shooting background is clear sky. This is very desirable for the men who can point straight, but a terrible handicap to those who do most of their killing when sitting on the piazza, talking remit is cently with their friends.

A very noticeable feature of the opening day's shoot was the absence of all noise other than the report of the guns, with the exception, of course, of once in a while an expression of disgust from a shooter who had "led a little too far" and had not even "dusted" his bird. Instead of the usual cry from the referee of "dead bird," "lost bird," there was brought into requisition a product of the ingenuity of Mr. H. A. Penrose, president of the Association, in the shape of a horn and bell. When the bird was "dead" there was a squawk of the horn; when "lost" a ring of the bell. The sound produced is a cross between the *honk-konk* of a wild goose and the braying of a wind-broken mule. Nevertheless the scorer is never at a loss as to whether or not it is a "lost" or "dead" bird, and the rapidity with which events are run off under this system precludes the possibility of a return to the old methods.

The officers of the Association are: H. A. Penrose, President; John Williar, Vice-President; Dr. S. J. Fort, Secretary; Jas R. Malone, Treasurer. The ground officials are: H. A. Penrose, General Manager; Bert Claridge, Assistant General Manager; Jas. R. Malone, Captain; Wm. A. Field, Assistant Captain.

Mr. Penrose was in charge on the opening day and had everything on the move in his usual aggressive and business-like manner.

The shooting began about 3 o'clock. There were two events shot off, one of 10 birds and one of 15 birds, prior to the regular club event of 25 birds. There were twenty-nine entries in the club shoot. This event is to be shot every Saturday afternoon at 4 o'clock during the season, twelve scores being necessary for an average. Below is appended the score of the men, together with their respective handicaps. After the club shoot there were several other events shot off, in all about 2,200 targets being used during the afternoon. The occasion was a very enjoyable one in every respect. Among the members of the Association are numbered not only our best shots in Baltimore and vicinity, but our best citizens as well. I do not mean to intimate that all of our good citizens are good shots, as I do not believe I myself could break more than a possible 12 out of 25 if I should shoot; but all of our good shots, as well as those not so good, are first-class citizens and ardent lovers of the gun.

Applications for membership are coming in rapidly, and we anticipate having an Association in the near future that will be second to none in the country. The scores:

Ten-bird event: Brown 10, Hall 9, Thomas 8, Hartner 10, Claridge 8, White 9, Evans 8, Coe 7, Hawkins 7, Woodward 8, Lupus 6, Tracey 4, Jack 9, Thomas 4, Malone 8, Storr 6, Field 6, Vance 6.

Fifteen bird event: Brown 10, Hall 12, Thomas 12, Hartner 13, Claridge 14, White 12, Cox 10, Lupus 13, Hawkins 13, Evans 11, Field 9, Stewart 13, Coe 14, Storr 10, Woodward 8, Vance 13, Thomas 5, Jack 14, Thomas 7, Jackson 7, Williams 12, Hawkins 11, Parker 11, Hamilton 10.

Ten-bird event: Goldsboro 8, Harrison 5, Thomas 8, Bird 10, Hall 9, Baker 2.

STANLEY.

Lake Erie Rod and Gun Club.

THE Lake Erie Rod and Gun Club, of Dunkirk, N. Y., recently organized, and conducted their second weekly field day shoot at the Driving Park of this city to-day under the most favorable circumstances. The weather was excellent; the turnout large, including many crack shots from Chautauqua and neighboring counties. The facilities for shooting were designed and modeled after the most modern methods of trap-shooting appliances, under the direct supervision of Seth Clover, whose model traps gave excellent satisfaction. We had, on the whole, all that could be desired for a day's outing.

The grounds being so favorably located and giving a clear sky background for all flying targets was permanently chosen as the permanent site for our regular meets was necessary on account of the considerable expense required to properly fit it up. There are a 60ft. rotating barricade, 60ft. stayed and supported trench, weather sheds for the shooters and five Clover traps.

Though enjoying all the pastimes of field shooting, the prime object of the club is the preservation of fish and game in western New York.

We enjoy the pleasure of having a most enthusiastic field captain in the person of Seth Clover, our celebrated American crack shot. Two thousand targets were shot at.

The following appended are some of the scores of the day:

Possible 100: Ware 92, Clover 88.

Possible 50: Pond 30, Dr. Dodds 24, Shelly 24, Omack 18, Breslin 17.

Possible 25: Green 22, Cochran 15, Johnson 12, Onarsh 8, Clark 7, Allen 6.

D. W. BRISTOL.

New Gun Club.

HACKENSACK, N. J., May 21.—A gun club has been organized on Oritani Field Club grounds, at Hackensack, N. J. The committee consists of Messrs. Holberton, Curry and Bell. The first regular shoot will be on Thursday, May 30, at 10 o'clock.

A MEMBER.

Emerald Gun Club.

DEXTER PARK, L. I., May 21.—Thirty members of the Emerald Gun Club entered for the club's monthly shoot at 10 live birds. No less than eleven killed all their birds, while nine others lost but one of the 10 shot at by each of them. The scores were as follows:

New Utrecht Gun Club.

BROOKLYN, N. Y., May 13.—This afternoon several members of the New Utrecht Gun Club went to the club's grounds at Woodlawn, L. I., to take part in the club shoot. Phister and Schortemeier (the latter with an allowance) killed 10. Score:

W F Sykes (B).....1101222200 — 7
R E Gray (B).....2000122222 — 7
Dr Littlefield (B).....2211210001+1— 8
L H Schortemeier (B).....1212212012+1—10
J Pennington (B).....2021011010+1— 7
R Phister (A).....2121122222 —10
G W Coulston (A).....1211122102 — 9
C Furgueson, Jr (A).....2202022222 — 8

Sweepstakes, 5 birds, $2 entrance, were shot as follows:

No. 1: Phister 5, Coulston 4. Furgueson 4, Schortemeier 4, Pennington 4, Littlefield 3, Gray 3, W. F. Sykes (withdrew) 2.

No. 2: Coulston 5, Furgueson 5, Schortemeier 5, Littlefield 2, Pennington 3. Tie shot off in No. 3 after Schortemeier had dropped his second bird in the ties.

No. 3: Coulston 5, Chris. Meyer 5, Furgueson 4, Cord Meyer 4, J. N. Meyer 3, Littlefield (withdrew) 1.

No. 4: Furgueson 5, Chris. Meyer 4, Cord Meyer 4, J. N. Meyer 3, Dr. Littlefield (withdrew) 0. In the shoot-off for second money it took 15 birds to decide the tie, although it was shot as a miss-and-out. Both men missed their 2d, 3d, 12th and 14th birds; Cord Meyer then missed his 15th, and Chris. Meyer won, having killed his bird.

May 25.—This afternoon was the date set for the ninth contest for the E C. Powder cup. Coulston, of class A, and C. Wash. Floyd, class B, killed 10, Floyd using his allowance. On the shoot off Floyd won on the first round, Coulston missing his bird. Score:

E. C. Powder Cup contest, 10 live birds, with allowance:

R Phister (A).....2111122210 — 9

Lake Erie Rod and Gun Club.

DUNKIRK, N. Y., May 25.—The regular weekly shoot of the Lake Erie Rod and Gun Club took place at the Driving Park to-day. The weather was the most excellent of the season, registering not over 75° in the shade. The records in target work are advancing with the regular practice. The attendance is increasing beyond all expectations, and a number of prominent wing shots are added to our club list each week. The popularity of trap-shooting is shown by the organization of two new gun clubs in Chautauqua county within ten days. Prospects for field and stream pastimes have not looked brighter in this vicinity within fifteen years.

Some of the scores made to-day were as follows:

Ware 51 out of 75; Green 44 out of 75; Schumacher 26 out of 50; Clark, Porter and Breslin broke 24, 23 and 21 respectively out of 50 shot at. Out of 25 targets shot at, Sisson broke 14, Barnum 10, Johnson 9, Sackett 9, Cochran 6. Five pairs: Green 7, Ware 8, Schumacher 5.

D. W. B.

The fourth annual tournament of the Silver Lake Gun Club will be held on their grounds, Point House Road and Pennsylvania Railroad, on May 30. Bluerock expert traps, rapid-fire system. Purses divided, five and seven-bird events, three moneys; ten birds or more, four moneys. Lunch and loaded shells on the grounds. There are ten events on the programme, but extra events will be made to suit the shooters.

Trap-Shooting at Milwaukee.

MILWAUKEE, Wis., May 25.—A match was shot recently between teams of five from the South Side and Waukesha gun clubs on the grounds of the first named club. After an exciting race, the home team came out winners by two targets. Scores in the team race and in the sweepstakes which followed are given below:

South Side Gun Club—A. W. Friese 22, G. L Deiter 22, H. Hobbs 22, J. H. Johnson 22, H. F. Bosworth 21; total 109.

Waukesha Gun Club—J. W. Foster 22, E. Estberg 22, G. T. Anderson 24, R. Greengo 22, Ed Foster 17; total 107.

No. 1, 15 targets: Anderson 15, Friese 14, Seefeld 13, Thomas 13, Lewis 12, Meixner 12, Greengo 10, Schuchardt 11, Carmichael 11, Hobbs 10, Williams 9, I. Meunier 9.

No. 2, 15 targets: Deiter 15, Johnson 14, J. Foster 14, Greengo 14, Friese 13, Lewis 13, Harland 13, Schuchardt 13, Anderson 12, Burnham 12, Estberg 12, Seefeld 11, Drought 11, Meixner 11, Carmichael 10, E. Foster 9. Thomas 9, Bosworth 9, Jones 7, Willliams 7.

No. 3, 15 targets: Estberg 15, Johnson 15, Greengo 15, Williams 15, Thomas 15, J. Meunier 14, J. Foster 14, Friese 13, Carmichael 18, Anderson 13, Schuchardt 13, Ed Foster 13, Drought 13, Seefeld 12, Deiter 11, Jones 11, Harland 11, Bosworth 10, Burnham 10.

No. 4, 15 targets: Johnson 15, Estberg 14, Anderson 14, J. Foster 13, Greengo 13, Schuchardt 13, Deiter 13, Thomas 12, Williams 12, E. Foster 12, Burnham 11, Harland 11, Bosworth 9.

No. 5, 20 targets: Deiter 20, Thomas 19, Estberg 19, Austin 19, J. Foster 18, Schuchardt 18, Greengo 18, Johnson 18, Anderson 17, Burnham 17, Jones 17, Harland 17, Morrison 17, Seefeld 16, Mirgler 16, Carmichael 15.

Regular score, 30 targets: Johnson 29, Ormsby 28, Seefeld 28, Morrison 27, Bosworth 26, Deiter 26, Burnham 25, Anderson 25, Lewis 24, Friese 23, Mirgler 23, Meunier 22, W. Dickens 21, Dawson 20.

No. 6, 15 targets: Thomas 15, Johnson 15, Harland 15, Anderson 15, Carmichael 15, Bosworth 14, J. Foster 14, Schuchardt 14, Ormsby 14, Greengo 14, Estberg 13, Drought 12, Mirgler 11, E. Foster 10.

No. 7, 15 targets: Seefeld 15, Thomas 15, Harland 25, Johnson 15, Estberg 14. Schuchardt 13, Greengo 13, Burnham 13, J. Foster 12, Anderson 12, Mirgler 11, E. Foster 10, Bosworth 9, Drought 9.

No. 8, 15 targets: Johnson 15, J Foster 15, Thomas 14, Bosworth 12, Harland 13, Schuchardt 13, Mirgler 12, E. Foster 12, Drought 12, J. Dickens 10, W. Dickens 7.

THEO. A. THOMAS.

Lynchburg Gun Club.

LYNCHBURG, Va., May 25.—The same old rain put off the weekly shoot of the gun club to yesterday, Friday. The boys are still in the rut in which they shot during the Interstate shoot. Guess they will pull up to standard when the weather clears up to stay. Below find scores:

No. 1, 15 targets, unknown angles:

H. H. STEVENS.

Stroudsburg Won Easily.

STROUDSBURG, Pa., May 23.—A team race took place to-day on the grounds of the home club between nine men from the Delaware Water Gap Gun Club and a like number of members from the Stroudsburg Gun Club. The home team won by 19 targets. The shoot was at 15 targets per man, everything known. Although the day was a beautiful one for shooting, a strong wind swept across the traps, making high scores an impossibility. During the day a number of sweeps were also decided. Scores in the team race were as follows:

Stroudsburg Gun Club.		Delaware Water Gap Gun Club.	
Brownell	111001011111011—11	Smith	010011101101010— 8
Hagerty	110111111011111—13	Shaw	111010111101111—12

M. E. MILLER.

The Binghamton Tournament.

Editor Forest and Stream:

It will not take a great deal of space to report the Binghamton Gun Club's second annual tournament, which took place May 15 and 16

The management made just one mistake and that was a conflicting of dates. Our dates conflicted very seriously with the weather. There was a constant downpour all the previous day, and rain threatened on the opening day, which was not very propitious for visiting shooters. Nearly 600 shots in two days per man is keeping the popper pretty hot.

Among our visitors were O. R. Dickey, Boston; Neaf Apgar, New York; Carr and Tuttle, of Auburn; Mayhew, of Utica; Stroh and Williamson, of Pittston, and Wheeler, of Syracuse. Appended are the scores. They are very good considering the high wind each day. The traps were strung up to highest tension. All shooting was at known traps, unknown angles.

First Day's Scores.

No. 1, 15 birds, $2.30: Dickey 13, Apgar 15, Kendall 12, Brown 13, Sanders 9, Waldron 13, Boss 11, Wheeler 12, Stroh 12, Hobbie 13.

No. 2, 15 birds: Dickey 14, Apgar 15, Kendall 14, Brown 13, Sanders 15, Waldron 8, Hobbie 11, Wheeler 12, Boss 13, Stroh 13, McHenry 10.

No. 3: Dickey 11, Apgar 13, Kendall 15, Brown 12 Sanders 9, Waldron 8, Hobbie 15, Boss 9, Wheeler 7, Stroh 11.

No. 4: Dickey 14, Apgar 11, Kendall 11, Brown 12, Sanders 13, Waldron 13, Hobbie 12, Boss 11, Mayhew 14.

No. 5, 20 birds, $3.40: Dickey 18, Apgar 16, Kendall 19, Brown 18, Sanders 14, Mayhew 13, Hobbie 20, Boss 13, Wheeler 16.

No. 6, 20 birds: Dickey 16, Apgar 20, Kendall 17, Brown 18, Sanders 16, Mayhew 17, Hobbie 17, Schnell 18.

No. 7, 20 birds, entry $3 40: Dickey 20, Apgar 19, Kendall 15, Brown 18, Sanders 17, Mayhew 17, Hobbie 18, Schnell 10, Boss 16, Williamson 14, Waldron 18, Stroh 12

No. 8, 20 birds: Dickey 17, Apgar 19, Kendall 17, Brown 18, Sanders 14, Hobbie 16, Mayhew 17, Schnell 15, Waldron 15.

Extra No. 1, 10 birds: Apgar 7, Williamson 7, Sanders 7, Stroh 9, Boss 9, Waldron 8, Dickey 9, Brown 9, Wheeler 8.

Extra No. 2, 10 birds: Apgar 10, Williamson 6, Brown 7, Stroh 6, Boss 9, Waldron 7, Hobbie 7, Dickey 8, Wheeler 7, Kendall 9.

Extra No. 3, 10 birds: Apgar 10, Kendall 9, Mayhew 8, Dickey 7, Waldron 5, Williamson 6, Brown 9, Wheeler 6, Boss 7, Hobbie 8.

Extra No. 4, 10 birds: Hobbie 8, Kendall 9, Mayhew 10, Dickey 8, Apgar 10, Brown 9, Tuttle 9, Carr 6, Waldron 8, Williamson 7, Stroh 8, Wheeler 9.

Extra No 5, entry $3.40, 20 birds: Apgar 18, Kendall 17, Dickey 17, Hobbie 18, Brown 16, Mayhew 14, Carr 7, Tuttle 18

Extra No. 6: Schnell 6, Boss 8, Wheeler 9, Brown 9, Hobbie 10, Stroh 7, Apgar 10, Kendall 9, Mayhew 8, Dickey 7, Waldron 8, Williamson 6.

Extra No. 7, entry $1 20, 10 birds: Apgar 9, Mayhew 8, Rose 8, Dickey 10, Hobbie 8, Stroh 9, Brown 10, Kendall 7, Waldron 9, Carr 6, Tuttle 9, Boss 9.

Extra No. 8, 15 targets: Kendall 15, Tuttle 14, Carr 10, Brown 11, Hobbie 11, Mayhew 14.

Extra No 9, 10 targets: Waldron 8, Kendall 8, Williamson 7, Stroh 6, McHenry 8, Mayhew 9, Rose 6, Hobbie 9, Brown 9, Tuttle 9, Carr 7, Mayhew 9.

Extra No. 10, expert rules: Kendall 8, Stroh 6, Tuttle 5, Williamson 8, Mayhew 8, Carr 8, Rose 7, Hobbie 8, Brown 6.

Extra No. 11, 20 targets: Kendall 16, Tuttle 17, Carr 12, Mayhew 17, Rose 13, Brown 19, Hobbie 18.

Extra No. 12, 15 targets: Kendall 11, Tuttle 14, Carr 12, Rose 7, Brown 12, Hobbie 13, Mayhew 12.

Second Day.

No. 1, 10 targets, entry $1.20: Apgar 10, Dickey 9, Brown 8, Kendall 7, Mayhew 8 Waldron 6, Boss 9, Wheeler 8, McHenry 6.

No. 2, 15 targets, $2 30: Apgar 12, Dickey 12, Brown 12, Kendall 11, Tuttle 8, Carr 7, Mayhew 11, Boss 14, Wheeler 12, Stroh 10, Waldron 13, Williamson 13

No 3, 10 targets, entry $1.20: Apgar 8, Dickey 10, Brown 10, Kendall 7, Tuttle 8, Carr 7, Mayhew 7, Wheeler 7, Boss 6, Waldron 9, Williamson 7, Stroh 10.

No. 4, 15 targets: Apgar 14, Dickey 12, Brown 13, Kendall 14, Tuttle 13, Carr 12, Hobbie 11, Waldron 12, Boss 9, Wheeler 13, McHenry 11.

No. 5, 15 targets, entry $2 30: Apgar 14, Dickey 13, Brown 15, Kendall 14, Tuttle 14, Carr 12, Hobbie 10

No. 6, 10 targets: Apgar 8, Dickey 9, Brown 8, Kendall 10, Tuttle 9, Carr 8, Waldron 9, Wheeler 9, Boss 8, Hobbie 9, Schnell 8, McHenry 8.

No. 7, 15 targets, entry $2 30: Apgar 14, Dickey 12, Brown 13, Kendall 13, Tuttle 15, Carr 10, Hobbie 14, Schnell 13, Wheeler 11, Waldron 14.

No. 8, 10 targets: Apgar 9, Dickey 10, Brown 9, Kendall 9, Tuttle 8, Carr 6, Boss 5, Hobbie 9, Schnell 8, Wheeler 4, Williams 4, Waldron 8.

No. 9, 20 targets, entry $3.40: Apgar 19, Dickey 16, Brown 15, Kendall 16, Tuttle 18, Carr 17, Hobbie 18.

No. 10, 10 targets: Apgar 8, Dickey 9, Brown 9, Kendall 9, Tuttle 10, Carr 8, Waldron 9, Schnell 10, Hobbie 5, Boss 5, Vance 3, McHenry 6.

No. 11, 20 targets: Apgar 18, Dickey 17, Brown 17, Kendall 16, Tuttle 16, Carr 16, Hobbie 16, Schnell 16.

No. 12: Apgar 8, Dickey 9, Brown 7, Kendall 10, Tuttle 6, Carr 4, Vance 5, Hobbie 4, Waldron 8, Schnell 7, Wheeler 5, Boss 5.

No. 13, 20 targets: Apgar 15, Dickey 20, Brown 18, Kendall 17, Tuttle 16, Carr 15, Hobbie 17.

No. 14: Apgar 8, Dickey 8, Brown 8, Kendall 10, Tuttle 7, Carr 7, Vance 8, Wheeler 6, Stroh 9, Schnell 8, Waldron 7, Boss 6, Hobbie 8.

No. 15, 20 targets: Apgar 18, Dickey 17, Hobbie 15, Kendall 16, Tuttle 15, Carr 16, Vance 10.

Extra No 1, 15 targets: Hobbie 15, Apgar 14, Tuttle 12, Waldron 11, Dickey 14, Carr 11, Kendall 11, Vance 14.

Extra No. 2, entry $2.30, 15 targets: Hobbie 12, Apgar 14, Dickey 10, Kendall 11, Vance 12, Tuttle 8.

Extra No. 3: Stroh 9, Hobbie 8, Apgar 9, Dickey 9, Kendall 6, Vance 7, Waldron 7, Boss 5, Wheeler 6, McHenry 8, Williamson 6.

Extra No. 4, entry $2.30, 15 targets: Kendall 10, Dickey 13, Apgar 14, Hobbie 13, Waldron 11, Vance 8.

Extra No. 5, 5 pair doubles:

Dickey	11 10 00 10 10—5	Hobbie	10 10 10 10 10—5

WINFIELD.

Forest Gun Club.

PHILADELPHIA, Pa., May 21.—On May 18 the Wilmington Rod and Gun Club, Wilmington, Del., shot a friendly match with the Forest Gun Club on the grounds of the latter, Twenty-seventh street and Lehigh avenue, Philadelphia. The shoot was 25 targets each, known trap and angle, rapid-fire, fourteen men on each side. The Forest Club won by the score of 242 to 218.

This is the first of a series of three matches, and on Saturday, June 8, the Forest Club go to Wilmington to shoot the return match. Following are the scores:

Forest—Febiger 16, McDaniel 18, Bender 19, Woolcott 15, Van Nort 14, Hancock 8, Irvin 17, Landis 21, Buckwalter 22, Rowcroft 22, Thurman 20, Morrison 19, Hothersall 14, Whitcomb 17; total, 242.

Wilmington Rod and Gun Club—Clark 9, Creedon 16, Bilderback 14, Burroughs 20, Williamson 5, Grubb 14, Gaughen 20, Hartlove 16, F. Henry 13, Cleaver 22, Evans 19, Felis 20, Marshall 20, Jersey 10: total, 218.

WM. MORISON, Sec'y.

Lake City Gun Club.

MADISON, Wis., May 20.—At the Pleasure Park, two 30-bird matches were shot with the following results: First, Fauerbach; second, Conver and Ford tied; third, Morris; fourth, Curtiss. Mayer and Mayers tied; fifth, Klauber; sixth, Hurd, Becker and Stoltze and Nootten tied; seventh, Buergin; eighth, Hurd and ninth Basett. On the second 30-bird match, Conover took first; Morris and Frauerbach tied for second; Hurd, third; Hurd, fourth; Curtiss, Wotten, Ford, Mayer Stolze and Mayers tied for fifth: Bassett sixth; Buergin, seventh and Klauber eighth. In the sweepstakes of 10 singles, Conover and Curtiss tied for first place; Wootten took second and Ford third.

Multnomah Rod and Gun Club.

PORTLAND, Ore., May 15.—I inclose score and particulars of a live bird match shot on the 12th inst. The day was clear and windy. The birds were an extra good lot, made more so by the 5yds. boundary start and the brisk breeze blowing during the shoot. Mr. Monteith shot a strange gun, which punished him severely at every shot. His score of 20 is a very good one, and only for some very hard luck on the birds that dropped dead out of bounds, he would have put up an almost perfect score. He is a new shooter at the trap, having only shot 10 birds before in his life. However, he is an adept in the field and on the marsh, and with very little practice could give the American Handicap a hard rattle. Mr. Thorn shot in his usual good form, but lost quite a few birds out of bounds, his friends think, through using too light a load in his first barrel. His second bird was lost through want of proper judgment. Mr. Malcom did a great deal better than his friend Bills had been giving him credit for doing. Bills has the reputation of being an A1 sky-scraping duck shot, and was taking bets with odds on himself, but the score would seem to indicate that his forte is not on low-flying birds. Malcom had the satisfaction of asking him before the crowd "how he felt, missing birds before a large crowd," etc. Bills has been consoling himself with the idea that his lot of birds were particularly harder than those that fell to the lot of the others, but we think that if he will discard his sawed-off 10-gauge and take up an 8lbs. or less 12-gauge he may be able to make a better show at pigeons.

Conditions of live-bird shoot near Portland, Ore., May 12: 25 pigeons per man; 5 ground traps; 5yds. circle around trap—all birds falling inside of same lost; 50yds. boundary; handicap score; otherwise American Association Rules to govern.

CHOKE BORE.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

THE NEW IDEAL RIFLE.

THE ONLY PERFECT FISHING LINE IS THE

Natchaug Braided Silk Lines

Made from the choicest stock braided 16-strand three-cord silk. They will outwear three ordinary lines. Spool perfectly when in use.

Never flatten or become water soaked.

NATCHAUG WATERPROOF BAIT & FLY LINES

on the water. The finish cannot be broken. Those who have used them will have no others. cents for samples and prices and pamphlet containing our awards of prizes for last season and for 1895. For sale by all dealers.

$225 in Gold Given Away!

WE offer the following Prizes for the Season of 1895, $225 in Gold for the largest fish caught on the

NATCHAUG SILK LINES

From April 1st to November 1st, 1895.

First Prize—$25 in Gold for the heaviest Muskallonge.
Second Prize—$25 in Gold for the heaviest small-mouthed Bass.
Third Prize—$25 in Gold for the heaviest large-mouthed Bass.
Fourth Prize—$25 in Gold for the heaviest Lake Trout.
Fifth Prize—$25 in Gold for the heaviest Mountain Trout caught west of the Mississippi River.
Sixth Prize.—$25 in Gold for the heaviest Brook Trout caught in Maine or Canada.
Seventh Prize—$25 in Gold for the heaviest Brook Trout caught in the United States, east of the Mississippi River, outside of Maine and Canada.
Eighth Prize—$25 in Gold for the heaviest Pickerel, Pike or Salmon.
Ninth Prize—$25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.

CONDITIONS:

All of these fish must be caught with the Natchaug Silk Fishing Line, and by fair angling.

Competitors must forward to us their full name, P. O. address, together with description and weight of fish caught, and name of dealer from whom line was purchased, within thirty days after such catch is made, together with the name of one reputable witness affixed. On November 7, 1895, the award will be made and the list of successful competitors announced in the FOREST AND STREAM and the *American Field.*

All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.

If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

So beautiful in illustration that you will preserve it for its pictures.

Game Laws in Brief

UNITED STATES AND CANADA.

Gives the sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for *the practical guidance* of sportsmen and anglers. Carefully compiled, and shorn of verbiage, by CHAS. B. REYNOLDS of *Forest and Stream.* The *Brief* is a standard work of reference. Handsomely illustrated with twenty-five half-tone engravings from *Forest and Stream.*

Price 25 Cents. We send it postpaid. All Sportsmen's Goods dealers sell it.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

Canoe and Camp Cookery.

BY "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 98 pages. Price $1.00.

FOREST AND STREAM PUBLISHING CO.

FOREST AND STREAM BOOK LIST.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JUNE 8, 1895.

VOL. XLIV.—No. 23 No. 318 BROADWAY NEW YORK.

For Prospectus and Advertising Rates see Page vii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, $5.
Forest and Stream *6 months and any two of the pictures*, $3.
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

THE SECRET DEGREE OF THE SLAGLE.

THE Slagle Trout Club is a Michigan institution, with a membership list representing other States as well. It has a club house on Slagle Creek, a well-known trouting water near Henrietta, Mich., where the members resort for camping, fishing and working the degree of the Slagle. A copy of the by-laws has been received in this office. It is embellished with illustrations, one of which shows a Slagler photographed in the act of taking in a two-pounder; and another gives us a morning catch of something like 150 fish to ten rods, good and sizeable trout they are, too.

No picture is given of the degree of the Slagle. This is not wanting because the club photographer is inexpert with flash-light photography, but because the degree is a hidden mystery, a secret not to be divulged to the public eye. Of it we are informed with vagueness in Section XIII. of the by-laws, which reads as follows:

SEC. XIII. The secret order or degree of "The Slagle" shall be conferred upon all members who join this club on and after May 1, 1894, also upon all visitors; but the same shall not be conferred at any other time or place than at the camp or cottage of the club on the Slagle Creek, between the setting of the sun and midnight. The directors of the club shall compose "The Grand Conference" during the ceremonies of the initiation of new members into the mysteries of the order of "The Slagle," who will be assisted by all the members present.

Section XIV. provides that one who has received the degree of the Slagle and who incautiously or deliberately reveals it shall be expelled from the club. Further than this, the printed matter sent us affords no light on what manner of things this Slagle mystery, done betwixt sunset and midnight, may be. The only two ways to learn more about it are to join the club or to get one's self invited to visit the scene of the nocturnal rites. But if the leaflet gives no inkling of the nature of the secret doings of the Slagles, it does afford a hint of their purpose, which, as here revealed, is seen to be not less crafty than commendable.

Note, in the first place, that Section XIII. is mandatory and provides that "the secret order or degree of the Slagle shall be conferred upon * * * all visitors." Then take into account the resolution which is printed as a postscript to the leaflet:

At the annual meeting for 1895 it was unanimously resolved that the last week in June (23d to 30th inclusive) and the last week in July (24th to 31st inclusive) be designated as "Family Weeks," and that each member be requested to observe the same by taking his family to the club cottage during those weeks.

There you have it as clearly revealed as if the search-light of Farmer Dunn's tower on Broadway were turned full-beam upon the Slagle mystery makers at their work.

For just consider.

It is easy enough to adopt a resolution. This company of men get together and resolve to take each his wife and family into the woods in June and July. Quite simple. But it is one thing to resolve, and another to do. How shall the brave resolvers make good their resolution? By what persuasive art shall they induce their womenkind to pack off to the club house in the wilderness? Happy thought—and he deserves to be Serene and Worshipful High King-pin of the Slagles all his life who suggested it—tell them there is a secret up there, and that if they will go it shall be told to them, and they must not tell it to anybody else. Will they go? Every mother and wife and sister and daughter of them, so that on Slagle degree nights the club cottage shall not suffice to contain them, and the stream shall be lined on either side with tents to contain the overflow.

So has come about the secret order of the Slagle. What its practical workings will be no man can tell. He might be a truthful, if ungallant, prophet who should prognosticate that by mid-summer the mystery of the Slagle would be mystery no longer. But what of that? The genius who invented the secrets of 1895 can assuredly get up a new batch of secrets for allurement in 1896. After that no more mystery will be required; for having been twice in camp these Michigan families will have fallen so completely under the spell of the woodland that thereafter annually they will long to go to the Slagle for its own sake, contemning as unworthy impulse their early motive of finding out the secret.

We trust that the Slagle Trout Club may attain the high degree of success it is entitled to for its ingenious and praiseworthy device to extend the enjoyments and compensations of woods life to all the participants of its Family Weeks.

HEALTH VS. BUSINESS.

APART from all considerations of sport, it is an essential part of a man's nature that he spend part of the time out of doors every year, if he would live up to the best capabilities of his being. It is a physical and mental necessity for him to do so.

The life of many a busy man attests how unconsciously, yet thoroughly, one can become a drudge from long-continued habit. He becomes so habituated to his work that he grows to be a part of it. It blends with his being. He imagines that without him the work could not go on; that if he went away for a day or a week, everything would go wrong, and that loss or ruin would follow.

He forgets that life at the best has limits, and that the natural limit may be shortened more or less by living under conditions which are too artificial and exacting for his well being.

He forgets that if he takes a week or more this year for an outing in the woods he may be adding one year or ten years to his life. If he loses a week from business he may be with his business much longer at the finish, not to mention the better health, spirits and capabilities gained from a rest in the open air.

That one can unconsciously become merely an animated machine, from the force of habit established by following a fixed routine day after day and week after week, there are incidents connected with the life of every dweller in a city which testify. At some time, after a long stay penned within the walls of bricks, one goes into the country. At sight of the woods and the flowers and the green fields his spirits rise. He is delighted. He sniffs the fresh air with a sense of relief. He feels an independence which is new to him. The music of the song birds has a sweetness unrivaled by any instrumental music.

Those who have had the good fortune to have lived a camp life for a while in the woods, mountains or on the prairies, know what wonderful constitutional vigor is gained; what sound and sweet sleep has been theirs; what labors they could endure without fatigue, and what little sauce the coarsest food required, other than the sauce of hunger. It was all due to living nearer to nature's laws.

After living in camp and having returned to town, how stuffy and close the rooms seemed; how hard it was to get steadied to business again; how easy it seemed for the business to go on while you were absent in the woods, and how you could remember a wider and better horizon than you had thought of before.

But after days and weeks of routine, the force of habit begins to assert itself, life again blends with business, cares grow and are cumulatively carried along; business cannot get along without you—and it is then time to go to the woods again.

That is an extremely interesting subject discussed by Mr. Horace Kephart, the food roots and herbs and nuts and berries. We trust that his notes may be supplemented out of the experience of others.

GUIDES AND ACTORS.

"YOU may talk about your Indian woodcraft," said an actor, who is also an angler and does credit to both arts "but I know better. The last Indian guide I had in Canada was a specimen. He was near-sighted, partially deaf, and blessed with a gift of forever getting himself lost in the woods. It took all my time to see for him, hear for him, and show him the way back to camp. He had just one redeeming quality—he could cook."

Guides are like actors. Some are good and others poor. There are more of the poor than the good. They are all human. This is something we often forget when making up the balance sheet.

An Indian or white man, near-sighted, deaf and helpless in the woods, has no business to claim to be a guide, nor to take pay for his inefficiency from the sportsmen he has deceived into employing him, no more than an actor who cannot do his part deserves toleration on the boards. The incompetent guide often makes shift to play his little game of imposition and deceit successfully, since in the woods there is slight chance of recourse for the victim he has imposed upon. Once in the wilderness with a dishonest guide, the employer usually resolves to make the best of it; and grumble as he may, he probably in the end pays the dishonest fellow the wages of a good man. The case of a poor actor is quite different. He is hissed off the stage, or the public holds aloof when he is billed to play, and his salary stops.

Guides and actors, as has been said, are both human, and in their ways differ not essentially from the rest of men in merit and shortcoming. One may know next to nothing of the human body and still less of medicine, and be a doctor; little of the law, and have a string of clients; a pinch of theology, and preach; a fine presence and make a brief strut on the stage. But probably there is no other occupation on earth in which so little knowledge is demanded, or experience, or natural aptitude, or acquired ability, as in the business of guiding, as that calling is followed by some self-breveted guides. And on the other hand, as there are physicians to whom the human frame is an open book and whose blessed skill brings back the sick from the grasp of death, as there are lawyers whose wisdom in counsel and resource in debate are the admiration of their clients, as there are learned divines and enthralling players, so are there guides wise in the hard learned craft of the woods, skilled in all wilderness ways, simple hearted, honest, true, manly men. If in your outing you have been so fortunate as to have tramped or paddled or packed with such a woodsman, though it were in years long gone, the memory of his companionship and comradeship is among the most lasting and cherished of all your wilderness reminiscenses.

SNAP SHOTS.

Senators Chandler of New Hampshire, Platt of Connecticut and Proctor of Vermont have been off fishing together. If we are not mistaken, some of the members of this party were of the little band who used to gather in Washington, when the FOREST AND STREAM reached that city, to listen to the reading of Mr. Robinson's "Uncle Lisha's Shop" chapters. That, we are bound to say, was a sensible way to spend a Washington evening; and to go fishing together is the most sensible way of spending the days of June.

The most interesting bit of fishing news received this season comes from the Rangeleys; and records the taking of four trout aggregating twenty-four pounds, hooked and landed by Mrs. Charles W. Dunham, of Brattleboro, Vt. The largest fish weighed nine pounds, and its capture consumed two hours and twenty minutes. The Brattleboro correspondent of the Springfield *Republican* says: "It is understood that FOREST AND STREAM will illustrate the day's catch with a picture of Mrs. Dunham." Need we add that it would be a privilege and an honor to do so?

Governor Morton has not yet (Tuesday, June 4) signed nor vetoed the Donaldson game-dealers' bill. His action in the matter is awaited with much interest by all friends of game protection, and it should have not less interest for every citizen of New York jealous of his own State's honor and its honorable dealing with other States. For this measure become a law will mean incitement to illicit game traffic not only in New York, but in every State tributary to New York cold storage houses,

The Sportsman Tourist.

NOTES FROM CAMP NESSMUK.—IV.

"Roots and Yarbs."

As there was very little game around Mincke, and I was in no mood for killing at any rate, I took to studying the vegetation, and especially the trees and plants that are useful to us amateur barbarians. First among these are the esculent plants, which were important items in the Indian's and frontiersman's dietary, but the knowledge of which seems to have become almost a lost art. Narratives of wild life are full of instances where hunters or explorers have been driven to subsist for a time upon "roots and yarbs," and even the occasional camper can profit by a little study in this direction. Vegetables are hard to transport, and you all know how toothsome is a mess of fresh greens after a surfeit of game, or perchance of fat pork and frying-pan bread. Likewise when a man is lost and supperless, he will find even such unpromising material as cat-tail flag or Indian turnip (cooked) "a long way ahead of nothing."

Yet, on thinking it over, I could not recall a single instance where books or papers on outdoor life afforded anything like a list of the edible plants of the wilderness. Many of them tell us that every hunter ought to know such things, but none of them show how the knowledge is to be acquired, nor do the botanists offer us much help. Believing that such a list would be useful I have compiled one, partly from my own experience, but mostly from that of others whom I believe to be competent authorities. It is here offered to the readers of FOREST AND STREAM merely as a starter, in the hope that others, who know more about such things than I, will add to it or will correct any blunders that may have been made.

My list is limited to plants growing wild within the Northern, Eastern and Central States, including Virginia on the South and Kansas on the West. It has seemed necessary to add the scientific names of most of the plants, in spite of their looks, for popular names are often misleading. Some edibles have been omitted purposely because I could not identify them.

A few of the plants here cited are not very savory to civilized palates, but would be found good enough in a pinch. The poorest of them can be recommended in place of dog, skunk, or rattlesnake, which some of my friends have been constrained to live upon at times, and all of which they declare to be "not bad eating." Of course everybody knows that wild plants, like cultivated ones, have their seasons, and some which are good when young and tender become uneatable or even poisonous when mature, while many which are noxious in a raw state become nutritious when cooked. I have taken pains to mark such in the following list, and believe that nobody will suffer from eating anything herein mentioned.

We will begin with substantial food plants, yielding starch or other positive nutriment:

ROOTS.—Every schoolboy has been tricked with the Indian turnip (*Arisæma triphyllum*), but its acridity is destroyed by heating. When the root is roasted or boiled, peeled, and then dried and pulverized, it becomes a well-flavored and nutritious flour resembling arrowroot. Similarly, the roots of crowfoot (*Ranunculus*), golden club (*Orontium aquaticum*), water arum (*Calla palustris*) and arrowhead (*Sagittaria variabilis*), though acrid or bitter when fresh, are converted by roasting or boiling into sweet and palatable material, which may be eaten in these forms, or ground and made into bread. The roots of the silverweed (*Potentilla anserina*) may be eaten raw or roasted, being starchy and wholesome. Those of the common sow-thistle (*Sonchus oleraceus*) are not so good, but have occasionally been converted into bread. The root of the great bulrush (*Scirpus lacustris*) may be eaten raw, or pounded and made into bread, the flour being white and good. The prairie potato or *pomme blanche* of the voyageurs (*Psoralea esculenta*), and the wild hyacinth roots or eastern camass (*Camassia fraseri*), are excellent and quite nutritious. There is another wild potato called man-of-the-earth (*Ipomœa pandurata*) that was roasted and eaten by the Indians in times of scarcity, but is poor food. Other edible roots are those of the spatterdock (*Nuphar advena*), lily of the valley (*Convallaria majalis*), China brier (*Smilax pseudo-china*), meadow parsnip (*Thaspium aureum*), hog peanut (*Amphicarpæa monoica*), ground nut or mild bean (*Apios tuberosa*), Jerusalem artichoke (*Helianthus tuberosus*), and the common brake (*Pteris aquilina*) as well as other ferns. The roots of the bellwort (*Uvularia*) and pleurisy root (*Asclepias tuberosa*) are edible when cooked.

GRAINS AND SEEDS.—Wild rice (*Zizania aquatica*) was a staple food of the Indians, who removed the husk by slightly parching the grains over a slow fire. It is palatable when roasted and eaten dry, and also makes good bread. Gruel, mush or bread may be made from the ground seeds of panic grass (*Panicum*), drop-seed grass (*Sporobolus cryptandrus*), manna grass (*Glyceria*), or indeed of almost any grass seeds that are large enough, but the bearded darnel is said to be unwholesome. There is a weed locally known as "wild buckwheat," though not a buckwheat, which is reputed to be poisonous, but I have not identified it. The seeds of the golden club (*Orontium aquaticum*), dock (*Rumex*), lamb's quarters (*Chenopodium album*), purslane (*Portulaca oleracea*), and sunflower (*Helianthus*) may be eaten parched, or in gruels. Those of corn spurrey (*Spergula arvensis*) and tansy mustard (*Sisymbrium canescens*) may be mixed with other grain, or used by themselves if need be.

LEGUMES.—The wild lupine (*Lupinus perennis*), wild kidney-bean (*Phaseolus perennis*) and milk vetch (*Astragalus canadensis*) may be cooked like domestic beans and peas—in fact, nearly all the wild legumes may be eaten with impunity.

ASPARAGINOUS PLANTS.—In spring, the young and tender shoots of several wild plants make excellent substitutes for asparagus, being prepared in the same way. Among these are the China brier (*Smilax pseudo-china*), bellwort (*Uvularia*), common milkweed (*Asclepias cornuti*), pleurisy root (*Asclepias tuberosa*) and pokeweed (*Phytolacca decandra*—the root of which is poisonous, and the raw juice of the old plant is an acrid purgative). The young stems of ferns, before the down appears on them, may also be employed, and even the tender shoots of blackberry and raspberry.

SALADS AND GREENS.—The name of these is legion, but as most of them are good only in the spring months they are not well known to sportsmen. Some are common weeds, growing only about cultivated places or abandoned clearings, and are not properly plants of the wilderness. The root of the cat-tail flag (*Typha latifolia*) makes a good salad. So does chicory or succory (*Cichorium intybus*), water cress (*Nasturtium*), sheep sorrel (*Rumex acetosella*), mountain sorrel (*Oxyria digyna*), deer grass (*Rhexia*), wood sorrel (*Oxalis*—it should be eaten in moderation), wild lettuce (*Lactuca canadensis*), young sprigs and roots of the evening primrose (*Œnothera biennis*), Jamestown weed or thorn apple (*Datura stramonium*—but when mature it becomes narcotic and poisonous), and the tender stalks and roots of the angelica. Wild peppergrass (*Lepidium virginicum*) is fair to middling. Several of the docks are good, such as yellow dock (*Rumex crispus*) and red dock (*R. venosus*), but I cannot say whether all of them are. Celadine (*Chelidonium majus*), sow thistle (*Sonchus oleraceus*), dandelion (*Taraxacum off.*), chickweed (*Stellaria*), purslane (*Portulaca oleracea*), turkey pea or goat's rue (*Tephrosia virginiana*), stork's bill (*Erodium cicutarium*), lamb's quarter (*Chenopodium album*), and several other plants of the latter family, known as pigweed, goosefoot, "keerless," etc., make good greens when young, and so do nettles (*Urtica*) when the leaves are still perfectly tender, as boiling renders them quite harmless. The young tops of nettles, the flowering ends of cat-tail flag and the common blue violet make good pot herbs, either in soups or with meat. The wild onion, wild leek and wild garlic (*Allium*) are efficient substitutes for the domesticated varieties.

MAST.—Acorns of the sweet-mast variety, such as white oak, post oak and overcup, are eatable raw, but are much better and wholesomer when roasted or parched like popcorn. Even the bitter-mast red oak, black oak and water oak acorns will sustain life, but they are not toothsome. The nuts of the region mentioned above are walnut, butternut, hickory, hazel, chestnut, beach, pecan and yonquapin (seed of the spatterdock or yellow pond-lily). Acorns, chestnuts and yonquapins may be ground to flour and made into heavy bread or cakes, which are nourishing, but somewhat difficult to digest until you get used to them.

FRUIT.—Within the limits indicated we have crab apple, wild plum, wild cherry, persimmon, pawpaw, may apple (the roots and leaves are purgative), wild strawberry, raspberry, blackberry, dewberry, salmon berry, cloudberry, buffalo berry, snowberry, crowberry, twinberry or fly honeysuckle, service berry or shadberry, bearberry or "larb," wild currant, wild gooseberry, cranberry, blueberry or huckleberry, elderberry, mulberry, haws and wild grapes. It would take too much space to name the varieties. Some of the berries which are unpalatable when raw are savory in stews, or when dried and mixed with meat. The ripe fruit of the prickly pear is eaten raw; the unripe fruit, when boiled ten or twelve hours, becomes soft and resembles apple-sauce; even the inner pulp of the leaves is succulent when they are roasted on the hot ashes. The fruit of the passion flower (*Passiflora incarnata*) is a large berry which turns yellow when mature, and is sometimes eaten in the South, where it goes under the name of "maypops."

MUSHROOMS AND TOADSTOOLS.—There are over a hundred species of edible fungi, ranging from delicate little relishes to "beefsteaks" that would "furnish four or five men with a good dinner." Very few of the toadstools are poisonous. I have no space here to do more than advise every camper to procure a copy of *Harper's Magazine* for August, 1894, remove from it the article on "Edible Toadstools and Mushrooms," by the well-known artist and writer William Hamilton Gibson, and put this admirable little essay in his knapsack. It weighs only an ounce, and will return many a pound of delicious nutriment. The directions for identifying the commoner fungi are plain to anyone, and are helped out by capital engravings. A book by Mr. Gibson on this subject is announced, which he will illustrate in colors.

BROWSE.—The asparaginous shoots already mentioned may be eaten raw. So may the buds and young leaf stems of hickory (remove the bark), tendrils of grape vines, etc. They are not "filling," but delude a ravenous man into the notion that he is eating something, and that is a point gained. The same may be said of black birch bark, sassafras bark and buds, wintergreen, etc., etc. The tender branches of the staff tree or climbing bittersweet (*Celastrus scandens*) have a thick bark, and are palatable when boiled. Slippery elm you are well acquainted with, and probably know that the mucilaginous inner bark is nutritious. I have heard of it being fried in lard. The bark is said to have the quality of preserving fatty substances from rancidity, and will keep butter, lard, or any fat perfectly sweet for a long time by mixing about one part of it with a hundred parts of the grease, keeping them melted together for a minute or so, and then straining. The buds are also mucilaginous. The flowers and beans of the yellow locust are eatable, and are said to furnish a palatable dish when fried. The *tripe de roche* of the far north is a bitter and only slightly nutritious lichen, or rather a variety of lichens of the genera *Gyrophora* and *Umbilicaria*.

SWEETS.—The sugar maple is known to everyone. Birch molasses, made from the sap of birch by boiling it down, is bitter-sweet, but makes a fair substitute for sugar in tea or coffee. Good syrup may be made from the roots of the great bulrush (*Scirpus lacustris*) by bruising them, mixing with water and boiling down. Poplar blossoms contain honey, which can be dissolved out in water and boiled down to syrup.

YEAST.—The hop plant (*Humulus lupulus*) is no rarity in a wild state. An efficient substitute for yeast is furnished by the liverworts (*Hepaticæ*), which grow on the bark of maples and beeches in the North. A little of the liverwort is steeped in warm water for a few hours, and the infusion is then mixed with dough to form a "sponge."

TEA, COFFEE AND TOBACCO.—Substitutes for tea can be made from various wild mints, from the flowers of the linden or basswood, blackberry and raspberry leaves, wintergreen, holly leaves, the New Jersey tea shrub (*Ceanothus Americanus*), and from the dried flowers of the goldenrod. The best substitute for coffee (none of them amount to much) is chicory root, dried, roasted and ground. Others are the seeds of the fever-wort (*Triosteum perfoliatum*), and roasted and ground acorns. Kinnikinick is made from certain barks or leaves, either alone or mixed with tobacco. The "red willow" commonly employed is not a willow at all, but a dogwood, known as the red-osier dogwood (*Cornus stolonifera*). The alternate-leaved cornel (*Cornus alternifolia*), and the silky cornel (*Cornus sericea*), may also be used in the same way. The outer bark is removed with a knife, the inner bark is then scraped up into little frills, which are roasted by holding the stick near the fire, and these are then pulverized in the hand and are ready for smoking. The bark is milder and better in the fall, when the sap is going down, than in the summer. The red leaf of the sumach, and the leaves of the bearberry and wild rose, are also used for kinnikinick.

This list might easily be extended by including the edible wild plants that grow only in the Southern or Western States—the palmetto, palm and yam, the cacti, aloe, Spanish bayonet, mesquite, wild sago, tuckahoe, tule plant, camass, kouse root, coontie root, bread root, sand food, screw bean, pimple mallow, manzañita, pinoñs, juniper nuts, pine seeds, squaw berry, Lycium berry and a great variety of other roots, seeds and fruits peculiar to those regions. But I have made a fair start, and will leave the development of this interesting subject to others better qualified than myself. No one can speak of all our wild food-plants from personal experience, but if our woodsmen, plainsmen and mountaineers would tell us about the edible plants with which they are acquainted, the proper season for gathering and the best methods of cooking them, the result would be an important contribution to wildcraft—the recovery of a lost art.

HORACE KEPHART.

ST. LOUIS, May 29.

THE MUSEUM CARIBOU.

[*Concluded from page 439*].

EVERYTHING was now made for our preparations for tomorrow morning. At supper Nuel said, "Doc'or, we goin' to be ready for 'morrow morning. Have two toboggan—one for me, one for you. Me show you how me carry canoe an' t'ings to village. We wan' to leabe 'morrow morning berry early. Me hate to leabe dat nice wigwam an' warm hearth, you call um. Not smoke much eder, did it? Yes, it berry nice—warm, not freeze. Don't want to pull um ober. You mus' have you call tent cover?"

"Well, I will give you the cotton tent."

"Me glad. Me keep it. Gabr'el, he come an' me an' him hunt, an' we get um more calleboo. We sleep um much, too. P'raps catch um more martin an' otter. But me like dat wigmam much. Be so comfortable. Me like to bab you too, all time. You stop um ticulum. He! he! made me twis' up my mouf an' rattle up my head, so me could not hear meself. Dat was not drunk, you say?"

"No, Nuel. I would not give enough to make you drunk."

"Me like to try um more. Me know drunk not same as med'cin'. Drunks make Injin not t'ink much; med'cin' t'ink mose all de time. But me like drunk mose."

About 4 o'clock we started. There was a half-moon shining well toward the west. It gave considerable light, however, but weird and solemn, in an indescribable way, and there was a chill about my body that seemed to strike to the marrow. I imagine a waning moon is more cold and freezing than a new one.

But we were glad of what we had. We could pick along pretty well. Of course in some places the frozen hummocks were trying, and the twigs and little trees hindered me, and it was hard for me to distinguish what was smooth and what was rough, and my toboggan would bring me up all standing. Of course there was nothing to be seen but fields of ice and snow until Venus grew dim, and the moon, far in the west, paled into whiteness.

But now we are at the canoe, and I can see a very crooked way between the lifeless trees. Hardly had we reached the canoe when Nuel began: "Now, Doc'or, worst over. Can slide along now. Dat snow ice make good run. We watch for hole. Get 'fool house' by af'ernoon. We eat all we can for breckfas' and den have feas w'en we get home. Take good rest now. Coffee, calleboo, pancake (you have pan), and den pipes. He! he! we have good time. Goin' to be fine."

Nuel quite inspired me after this, and I did my best. I judged Nuel did his, too. I was astonished at what he could hold. It seemed to me we would want another leg before we started.

The extemporé canoe camp was quite unique of its kind, and we rested a good hour here. Nuel had topped off some large branches and braced up a good many more. Of course, the earth was bare near the trunk; the snow piled up, as though it was a rampart. This rampart, covered with branches, made a good seat, and the air was just cold enough to enjoy it. We could hear in the distance several squirrels chattering to themselves, and three meat hawks, with a dozen or more crossbills, came along early, just to see what was going on.

I could see that the weather had commenced to moderate. Nuel saw that; his remark was, "Me 'fraid rain dis even. White fros'. No win'. Berry still."

But we had our second breakfast, and a good one, too. When we were through with our smoking, Nuel said: "Doc'or, me goin' to put toboggan on ice, an' canoe on 'em. Lash 'em on, as you say, bow an' stern. Me put t'ings each end. No weight on middle. Toboggan can turn roun' an' slew, an' not twis' canoe; same as you call bob-sled. Goin' to have sof' place for canoe. Put comfor'ble un'er ends. It not rub back."

When Nuel had everything adjusted to his liking, he said: "Doc'or, you steady um canoe stern, jus' leetle. Keep um from slew. Me pull. An' you help um me w'en me say. He! he! Make um good road, good sleigh.' Now we go. Not fas', Doc'or. No need."

Everything went aloug very nicely, except in a few places, where the loose ice had crowded down the rifts and made the snow rough, and when we had to avoid open water.

From time to time Nuel would remark: "Dat otter hole. See w'ere he ate um fish. Me comin' for him nex' mont' wid Grabul. See dat, t'ree calleboo pass yesserday, I s'pose. Blenty rabbit fill. No small t'ing show any track on crus'."

"But Nuel, where are all the partridges? I have only seen two budding."

"Oh no, he not many now. He buried in snow. Crus' under him. He sleep till he get out. Fox an' martin fine out sometime. Dig down, find out. Eat him."

Before noon I could see that the crust was softening. Of course it softened quicker than the hard ice and we

felt the greater weight of the toboggan. There were several bends that we cut across, but I question whether it helped us. We had to get up the bank and the crust was the heavier. But before 2 o'clock I saw the gap in the woods and the house. Just as we came up Nuel said: "You stay for a moment, Doc'or. Want to go quiet. Skunk might be home. Me make p'etend dog there. Youp! Youp! He fright him maybe, if he chance."

So, as Nuel suggested, I heard the noise of a dog, then a pounding against the house. Finally Nuel called out, "No one home Doc'or."

We did not arrive any too soon. The rain commenced shortly after the skin was housed. We had only time to secure some fresh twigs and plenty of wood, before a drizzling rain began and it did not stop until evening.

But meanwhile Nuel was happy. "Now," he said, "me glad me here. If river open we hab canoe. Got house too. If frose in, all same, we have toboggan. Me berry happy. We mus' hang up skin so mouse can't eat it. Me hang it up."

But I saw myself that the skin was hung up from one of the rafters by a good strong cord.

Night soon set in. It seemed as dark as ink by 7 o'clock, but the fire looked cheerful and Nuel beamed on his wreath of smoke. He did not seem at all tired, but appeared as though he wanted to talk to me. One of his suggestions was. "Doc'or, s'pose wees go some time for bear, if we lib. You wan' cacajou—Indian devil an' wolf. W'at you say? Me tell you lots; eberyt'ing 'bout de wood, bir's nes' an' fish. Nice time togeder. Eat pancake much. He! he! Me like to lib wid you."

"Thank you, Nuel. I like to hunt with you too. But if we ever go hunting again we must have another Indian with us. There is danger in having only one. You might have been sick or I might have been as sick as the Englishman that once lived in this house. How then?"

"Yees, sart'in. Me understan' you. Dat bes' Gabrel, he good man. Good hunter too—mose so good as me. Den you not fear, eh?"

"Well, well, we will see sometime. I am getting old and stiff, Nuel."

"Well, if you eber go, take me, Doc'or. Me take good care ob you. Me like you much. You don't 'plain w'en big moose won't come an' turn cou'se behine me by lake. An' now w'en ticulum spoil my hunt you not say cuss words. You alway' say: 'Nev' mind, Nuel, bettie luck nex' time.' You nice an' you beat squaw an' white cook. Make almose so good as calleboo. Gabrel, he eat much, w'en eberyt'ing so nice. Me like um some, too. He! he! w'at you t'ink, Doc'or?"

"All right, Nuel. We only have provisions for three days now. What do you say to that? Coffee and sugar most gone."

"Nev' mind, we be home 'fore t'ree days. Blenty calleboo. But hark! W'at dat? Ke-yo-ke-e. Dat a lying bird. Me don't belebe him no more. He say no luck. He a bankee debil. Me did fix wigwam dat Paul tore down, an' did get ober ticulum. An' we see skin an' horn hangin' up dare. He! he, makes my belly an' heart glad. I no hate nobody. No, not Paul."

"But we are not home yet, Nuel; we must go a good distance."

"You 'larmed, Doc'or. (Nuel's face looked grave at once.) You t'ink me dround, get sick, starbe?"

"Oh, no, I am not alarmed if I have you and you take care."

"Den I be careful an' me not be 'fraid wid you. You shut up you mouf, you, Ke-yo-ke-e. Doc'or roun' an' me go 'sleep. Doc'or, me 'wake firs'. Skunk hole stop. You warm? Me feel good."

From time to time I heard the shishing of the frothy sap, and the pushing of the green wood and the snapping of the spruce, and occasionally the drip, drip, drip beneath our eves.

Next morning found the snow soft and I could see a little water above the ice. There was no rain, but the mist was thick enough to satisfy any one and we could hear the dripping of the trees. Such a muggy morning I never saw, and there was a peculiar smell of woods and spruce trees that was indescribable to me. Perhaps a decoction of birch bark, dying leaves and old hay would describe this smell most.

After peering through the foggy trees for a few moments, Nuel said: "Guess goin' to be cold af'er dinnie. Feel dat smell. See dat leetle dim line? Goin' kort. Yes, goin' to be cold an' only snow squall. See too dat skunk track, goin' out an' comin' in. Don't know w'at he libs on now, but he wants to come to his home, all same. He knows. He likes to run out on snow rainy night. But you see, fros' enight."

And sure enough by afternoon a light was seen toward the west. At a distance you could hear the wind blowing and soon we had squalls of white hail, and flurries of snow found their way through the rear of our home, and some of it sifted into our faces. However, the real gust was soon over, and we made ourselves very comfortable before 6 o'clock.

Nuel found the foggy day exceedingly irksome. There was only one thing that amused him, and that was a wish that I expressed for partridges, because I liked them better than caribou. Then I said to him, "Nuel, you cannot get any partridges for me, can you? I want to eat some."

"Better dan calleboo?"

"Yes, I like them."

"Engleseman funny, Doc'or, isn't he? Same as likin' Ingin corn cakes better dan wheat."

"Why, Nuel, don't yo like corn meal?"

"Like um? No. Hate um! Just fit for nigger."

But Nuel secured the partridges—four—big and fat. When I asked where he got them and how he got them his reply was: "Well, Doc'or, you said las' mornin', 'not many partridges on tree.' You wan' to know how? Me tole you. Birds buried in snow an' crus' ober dem. Now crus' gone off. Not so much snow. He fly on birch an' fill he belly—he crop—wid buds.

"You mus' 'member, Doc'or, w'en you hang up partsie, don't you eber hang head up, but feet up an' head down; an' cut out crop. If he hang up crop up an' buds stay in it, and it gets sof', goes all t'rough de nice white meat bird juice. May be poison laurel. I tole white man 'bout poison an' udders. You un'erstan', Doc'or? Me heard such men."

"Oh, yes; and I think freezing and thawing and especially the crops hanging above the breast might be injurious."

"Yes, Doc'or, in-u-re-us. Mus'n't do it, Me un'erstan' eberyt'ing yo say. Me 'edicated,' you call. Can't read book, Ingin can't. Ingin read in w'at you call nater. I don't alway say 'me' an' udder t'ings. Only say as me see udder Ingin do an' common white man say so, teach me."

"Well, how does it happen, Nuel, you are so well educated?"

"Don't happen at all. When I a boy, 'bout 12 year, an' white boy too, same time, we go hunting—partsie, muskquash, mink, rabbit—hunt much. Den do we grow older, hunt big t'ings. My wigwam not far from his house. Me tell you, I like to go to his house! I like um eat! Better eat dan my place.

"We talk great deal. Hunt too. He like um me. Me like him too, much. He almose cry w'en we hab to leave. We went to wood an' have a good hug an' han' shake an' kiss him (me not 'shame to tell it). You 'minds me, what me t'ink he would be, Doc'or, had he lib."

"Did he die, Nuel?"

"Oh yees. Die in Canada. He mose grow up. Logs jam, drown him. [In a vacant way, as though Nuel was trying to think.] He was good. Make me better Ingin. He used to show me how me speak. Laugh at me much. Say me can't talk at all. I tongue tie. Don't I try berry much. Now you see me talk jus' like white man. He tell me I can't speak 'brudder' an I spell letter, b-r-o-(little sound) e-r. An I say brudder. Isn't dat right?"

"Oh yes. I answers just as well."

"But isn't it de same. I wan' to go to same place as Foce w'en me die. Dat I knows will be a good place. Jesu be dare. Ah, ah, me forgib you, Paul. Jesu said I mus'. It hard sometime, ain't it, Doc'or? But me like to hear eberyt'ing in de win', except w'en I t'ink cuss word. T'o't me was goin' to sleep, Doc'or, but can't. Do me tire you?"

"No, no. Tell me more about Foce."

CHUCKOR PARTRIDGE.

"Oh, my! Can't talk sometime 'bout Foce. Only t'ink ob him an' Jesu. Day seem as dough day like dat nice boy—I guess he was like Jesu. He like to be in wil'neress, same as Foce. He like to be in mountain; so Force. He like to cross de lake; so Foce, too. An' me, too. Me wan' to be wid Jesu an' Foce. We bofe be berry still. Not say a bad t'ing. An' Jesu was kick 'bout city worse 'an Ingin ever had. Me of'en t'ink 'bout Him w'en de win' blow an' de t'under roll, an' de bird sing in de f'esh green bud, an' de sunshine, an' de bright sky, an' de big white cloud roll up. Oh! so sof'. Make me lie on fedders an' sleep in Paridee. Better 'an huntin' place. You know, Doc'or. Yes, me want to be like Foce. Dat my pet name, you call it. Putty name! He was so funny. When me caught otter or moose or udder nice t'ing, he slap um me on my back an' say, 'Good for Ingin.' (Don't mean anyt'ing.) An' w'en Foce catch um fox or bear or any good t'ing, den me would grab roun' his rib an' squees him, an' say, 'Good for white face.' (Don't mean anyt'ing.) An' he say me great worse dan big she old bear. An' we laugh. Oh! it seem berry of'en to me me see Foce. W'en me hunt um me t'ink me hear somefin' say, 'Now be careful, Nuel. Keep um still. Watch um.' Same as me hunt for bogislan. You 'member. Big bush before me, an' me move berry slow an' move from side to side. Den it seem Foce jus' behine me. Leetle branch an' twig jus' tap my back, and it seem to say, 'You wise hunter. Putty hard, Nuel.' An' all kine good t'ings make me careful an' talk of all good t'ings. But I mus' go sleep now. Maybe some time me tell you more of Foce. Good night, Doc'or."

As Nuel prophesied, the air was cool and crisp, with just enough roughness over the ice to give a good hold on the feet. We did not start until broad light. Nuel said: "Mus' see de ice. No t'in place; no spring hole; no air hole. Don't want horn an' skin wet, he! he!"

I agreed with him, and when we started everything was in the sunshine. For several miles we journeyed along very nicely. Then came an air hole and we had to hug the bank. Then came in a spring brook and that made a large hole; then a rift that had piled up the ice and snow and made the sledding uncertain. We had to leave the stream quite often, and I found it pretty hard in some places.

There was not much to be seen, only quite a school of large trout and suckers at several springs, and an owl flew across; and high up three crows and a few bluejays appeared in one place, with from time to time a nuthatch and a chickadee. But before noon we had to leave our high road; there were signs of a clearing, and soon we hailed the stumps and a shanty. But, oh, what a forlorn home! What a life for any poor woman to have to live, though she seemed to be satisfied with her husband and her baby. Finally Nuel and myself before dark walked into the inn, and seating ourselves in the dining-room ordered our tea and lodgings.

When we were alone I gave Nuel his money and the cloth. I also gave him his comforter and mine, too. I said, "Nuel, this is for Gabrel, remember, when you go hunting."

"My!" exclaimed Nuel. "My! I rich! I great man. Money in bank, more dan fifty crown. Some to eat, too. I glad for Gabrel. He poor. Not much pork; not much beef. He squaw hab to eat rabbit mose.

"Good-by, Doc'or. Me hope you come again. Shake um han' Me lub you much. Me take good care ob you."

As we left the inn I heard him saying to himself, "He, he! Me got um calleboo. Doc'or all well, too. So me. I berry glad." S.

Natural History.

Illinois Wolves.

JERSEYVILLE, Ill., May 27.—*Editor Forest and Stream:* About a week ago Harry Ely discovered a litter of six young wolves in a hollow cottonwood on Dr. Joe Enos's farm, about two miles southeast of town.

Mr. Ely took out the pups and brought them to town, and they have been on exhibition ever since at Scheffe's shoe store, where they have attracted much attention, being the first native-born wolves seen in this county for several years.

As soon as the news of the wolves spread over town there was an immediate start for the old wolf. In the next two days several parties were hunting for wolf scalps, and although they had several exciting chases and a number of shots were fired, there has been no blood shed, and the old wolf has taken herself to parts unknown, where the climate is better suited to her health.

This wolf is supposed to be the same one that has been seen for several years past about five miles east of town. Several hunts have been had there for her, but the dogs were never able to get her up, although her tracks have been seen frequently, and several farmers in that vicinity have seen her on several different occasions.

There has been no other wolf seen nor heard of near this section, and some are inclined to think that the puppies are half dog.

They certainly do resemble shepherd pups very much, but as we are not an expert on wolves we must leave the matter to FOREST AND STREAM. Did any of the readers ever know of such a cross? L. S. HANSELL.

[Such crosses have been recorded in these columns before, and are not at all uncommon.]

India Arrow-Proof Armor.

IN our issue of May 4 we printed a portrait and sketch of the Wintun chief Colchoolooloo. The photo was by Master C. E. Stone, a son of Mr. Livingston Stone, of the Baird salmon station. In a number of the McCloud River *Salmon Fly* just received we note the death of another old chief, of whom the young editor writes: "The McCloud River Indian chief, commonly known by the prosaic name of Jim Mitchell, died Wednesday, the 8th inst., in his cabin, on the east bank of the river, about half a mile below the U. S. Fishery. He had been an almost blind and helpless paralytic for several years, but when he was in his prime he was a decidedly remarkable man. He had the brains as well as the hereditary authority to rule his tribe, and he had the gifts which enabled him to do it with ease. When he was buried an arrow-proof elk skin armor was placed in his coffin with him, which the Smithsonian Institution wanted to get for the Centennial Exhibition at Philadelphia in 1876, but the Chief refused $40 for it—he said he wanted to keep it to be buried with him—and it was not purchased. The writer knows that the armor was arrow-proof, for the Chief, after putting it on, allowed the writer to shoot arrows at him at a distance of 10ft. till he was tired. The arrows were shot from one of the very powerful bows of the tribe, which like Robin Hood's were made from the yew tree, but they all glanced harmlessly off the armor and the man was perfectly safe inside. Indians are growing scarcer every year on the McCloud, and now that Jim Mitchell is gone, Alexander is the only chief left of the good old times when white men coming to the river either left it within twenty-four hours or never left it alive."

How the Mother Goose Does it.

OROVILLE, Wash., May 15.—I had to make a trip from our claim on the Columbia to Spokane Falls. It was much nearer to go through the mountains on a cayuse than around by Davenport on the stage. I started quite early one morning and was riding along up the Spokane River when, as I came over a small rocky point, I noticed a very large bird soar down from a tree and carry something in its mouth. At first I thought it was an eagle, but as soon as I climbed a little higher I could see it was an old gray goose, and that it had deposited its burden in the water, where I could see several small ones swimming around.

I stopped, got off from my cayuse and watched the performance. I had waited but a few moments when one of the geese rose out of the water and flew straight to a cottonwood tree, alighted on a limb near a big nest, then took a few steps toward the nest, and reaching over into the nest took a young gosling out and sailed down to her companions. When she let the youngster touch the water it cut all kinds of capers.

She again returned to the nest and got another, which was the last.

After watching them for quite a while I mounted my cayuse and rode on. When I came into plain view of the family the old ones fluttered away and the youngsters disappeared. There were seven little ones, as near as I could count. I have watched the wood duck carry her young from a tree, but this was the only time I ever saw a goose make the transfer. LEW WILMOT.

Foreign Birds in America.

SPRINGFIELD, O., May 28.—*Editor Forest and Stream:* I heartily agree with Kate R. Styer in her article on foreign birds in America, which appeared in the FOREST AND STREAM of April 27.

If the foreign gentlemen who advocate the introduction of the starling to this country, to remind them of their boyhood days, would cultivate the acquaintance of our native birds, they would find them fully as worthy of love and admiration as the feathered youngsters of their own country, and if the surplus enthusiasm for their home birds were spent in cultivating means and ways for the protection of the native birds of this country, it would be of far greater benefit to the bird life of our land than introducing a bird which to my notion is in no way superior to our common crow and red-winged blackbird.

I beg to differ with Mr. Armin Tenner in his assertion that our songsters are outclassed by those of Europe.

Of all birds our mocking bird is beyond compare the most proficient songster. He can imitate the song of all birds and is a perfect orchestra in himself. The brown thrush is the American rival of the nightingale. The red bird will compare with the best European songsters. The bobolink is a most charming songster. Finches, of which there are not less than forty-two species in America, are as pretty songsters as anyone would wish to hear. After the nesting season the catbird pours forth a melodious song. What is the matter with the song warblers, of which there are fifty-seven species, with the Western meadow lark, with the numerous song sparrows, with the robin or others too numerons to mention? Don't tell me American birds can't hold up their end of the string when compared with those of Europe. They not only excel in song, but also in the gayness of their plumage. I do not think I would change my mind if I were in a German grove, field or forest.

If Mr. Armin Tenner will read the article entitled "Expensive Robins," on page 409 of the May 25 issue of your excellent paper, he will see who the real destroyers of our birds are and that they are not "Young America."

HUGH L. FORD.

Chuckor Partridge.

DR. W. O. BLAISDELL, of Macomb, Ill., sends us a photograph of a chuckor partridge bred by him. The stock was imported from India. The Illinois Legislature has passed a law to protect the birds; but we are not advised whether Gov. Altgeld has vetoed it. A previous measure to this effect was incontinently squashed by the Governor.

Cattle Killed by Snakes.

NEWBERN, May 25.—A bull and steer belonging to Will. Foy, six miles up the Trent River, died on Tuesday from snake bites received while ranging in the bush. This is unusual.

CHARLES HALLOCK.

Game Bag and Gun.

CONCERNING PHEASANTS.

Editor Forest and Stream:

Who has been practising on the credulity of the *Star* that beams on Oneonta, N. Y.? According to your extract from its columns in your issue of May 18, the light it tries to throw on "Mongolian Pheasants" is eminently misleading, a very will-o'-the-wisp to bring unsuspecting readers of those remarks into a morass of error. Allow me to copy the following sentence: "They" [*i. e*, the Mongolian pheasants] "pair off and brood two settings" [*sic*] "of eggs every year, and usually hatch about twenty-five young ones to each setting." To "brood a setting" of eggs is quite an innovation, and I would advise the *Star* of Oneonta to add a lexicon and grammar to its library; elementary works will suffice.

Now, in the above sentence every remark is absolutely and egregiously erroneous. Pheasants do not pair off, they do not have two sittings (I prefer to return to the correct term) in a year, and they never, never, never hatch about twenty-five young ones from each sitting. Really, Mr. Editor, it is not right to promulgate such a tissue of pure imagination. It is extremely unfair to people in search of the real facts about these birds to be crammed with any rubbish that an inventive brain, seething in ignorance, can produce and utter authoritatively as gospel truth. With such blind leaders of the blind, no wonder that knowledge concerning these splendid game birds is but sparse and errors rampant.

Now, pheasants do not pair off, but are as polygamous as a Mormon. No matter how seductive the members of his own harem may be, every cock's motto is, "The more the merrier," till the stronger than he cometh, and not content with thrashing him, robs him of his lady loves.

They never have two sittings of eggs in a year in a wild state. It is a physical impossibility. From the time that a hen lays her first egg till the day her fledgelings can leave the maternal wing is close on four months. Say she lays her first egg about the middle of April, it is August before her nursery duties are over. She is then in full molt, and everyone knows that a hen cannot drain her strength by forming fresh feathers and laying eggs at the same time. Is it necessary to say that a pheasant does not lay in the winter? Then when is this second brood to be produced? If pheasants are deprived of their first nestful of eggs or lose their brood at an early stage in their existence, they will often, as a rule, I may say, generally begin afresh their task of reproduction. But this was evidently not the point alluded to by the *Star* and which was most probably unknown to it.

Some people, when they have a pen in their hand, seem to think it better to write utter nonsense than nothing at all, never heeding the mischief this *cacocthes scribendi* may create.

But I have not finished with this wonderful rigmarole from the *Star* yet. It says, "and usually hatch about twenty-five young ones to a sitting." Now a pheasant's nest containing over twenty eggs laid by a single hen is not frequently found, though two hens have been known to lay in the same nest. Fourteen to eighteen eggs are the usual numbers; twenty-five is absolutely abnormal, though I do not state that such a nestful from one hen is either an impossibility or unknown. At any rate I have never heard of any instance of such productiveness, nor am I referring to *Ursus naturæ*. Therefore, all this statement of the *Star* is the sheerest of sheer romance, and it is very unfair to enthusiastic beginners to publish such misleading information, which if listened to can only lead to disappointment.

I notice that this article in your paper was headed "Mongolian Pheasants." Permit me to say that such a term is incorrect. Doubtless the "Chinese pheasant" is alluded to, the *Phasianus torquatus*, which being interpreted means, the pheasant with a collar. The "Mongolian pheasant" is *Phasianus mongolicus*, and I greatly question if there are any of them in the States. Now that pheasants are becoming so common here, do let us use the right name for each variety. If any appellation is more incorrect and puzzling than another, it is that of "Oregon pheasant." If a person wrote about a New York sheep, he would be asked if it was a Merino, or Southdown, or Cheviot, etc. There are some dozens of pheasants and their allies, none of them indigenous to Oregon, so which of them is meant when an "Oregon pheasant" is spoken of? For example, a gentleman wrote me lately about "Oregon pheasants." I thought he was referring to the Chinese variety, and then found it was quite a different bird that he was discussing. Tegetmeier states that the Mongolian pheasant is unknown in a living state in Europe, and it seems to me unlikely that it should be common in America. There is no object to be gained in searching for new and confusing names for well-known species. No one would talk of an Oregon cow without mentioning its breed more particularly. Why should pheasants not receive the same treatment? The old and distinctive names by which they have been known for so many years, before one was even seen in this country, are quite good enough, therefore what is the advantage expected from inventing others, to the confusion of everything and everyone? Why talk of a "green" or "copper" pheasant when the Japanese and Scemmering pheasants are better distinguished by their ancient titles to fame? Several pheasants have green or copper colors in their plumage, so that anything but their correct names will only lead to mistakes of all kinds.

But now that I am discoursing about Chinese pheasants, erroneously called Mongolian, let me state again in your columns how unsatisfactory they are as denizens of a game preserve. About the only paragraph I can agree with thoroughly in the *Star's* lubrication on this subject is that it "can run very rapidly." Indeed it can, a very "beast of a bird" in this respect, here to-day and miles off by to-morrow, all covered on foot. It is ruination to a good dog or temper. I have had several samples of this bird from Oregon, and have talked about them with many sportsmen who have bred and shot them, and all opinions coincide that it is the puniest of all the game varieties of pheasants. No one ever dreams of having it in their coverts in Europe, where it is utterly barred in its purity, and many game preservers there even object to the slightest trace of its cross with the dark-necked pheasant (*Phasianus colchicus*), thereby forming the hybrid known as the English ring-necked pheasant. However, my Chinese pheasants which I imported from England are half again the size of the Oregon productions, though I would never dream of comparing them with the English pheasant as a perfect game bird. Unfortunately the latter, *Phasianus colchicus*, has the reputation of not being quite so hardy as the Chinese, which weakness is counteracted by the cross between them, whereby a large, prolific, hardy bird is produced, quicker on the wing, less fond of its legs and not such a rambler as the Chinese. I have stocked many large preserves with the English ring-necked pheasant in various States, and in many cases they have increased so rapidly that they now give an abundance of sport for a minimum of care and expense. I have never supplied the pure Chinese bird to any one who shoots on a large scale, and strongly deprecate their introduction for such a purpose. They ought only to be seen and admired as the inmates of an aviary, where their shortcomings are not apparent. Some people are to be found, of course, who will persist in saying that "the Oregon pheasant is good enough for them," and as far as this nondescript expression refers to the Chinese bird, contend that it has none of the characteristics that every authority attributes to them. Needless to say, in such cases a little knowledge proves itself to be a very dangerous thing, and were it not that they utter so freely their opinions based on such scanty experience, they would be best left to wallow in their self-conceit. Unfortunately they blazon abroad their praise of the Chinese pheasant with such an authoritative air that seekers after truth are beguiled thereby to believe in the super-excellence of this breed. I am sure the partisans of the Chinese pheasant are quite sincere in their opinions, but having had no knowledge of the other sporting breeds, they fancy that none can rival the fascinations of their first and only love. When these gentlemen have seen as much of the English ring-necked pheasant as they have of the Chinese, their verdict will have weight and be worth serious attention. Till then their opinions lack importance, as they can but give a very one-sided view, unfair to the English ring-necked bird of which they are in perfect ignorance, and of no utility to prospective breeders. I would therefore appeal to them to restrain their desire to rush into print till they have become competent judges, and then I will be the very first to bow to their decision if their arguments can reverse the hitherto universal sentence of taboo pronounced for ages back in all lands against the Chinese pheasant for all sporting purposes.

This year I am experimenting with the cross between the Japanese and English pheasant, which has been strongly recommended to me from several quarters as making a first-rate game bird, with no propensity for wandering, and quick on the wing. Being very hardy they seem likely to be a valuable addition to our preserves.

MAHWAH, N. J. VERNER DE GUISE.

HOLLAND, Mich., May 31.—*Editor Forest and Stream:* We have just had two splendid hatches of English ring-neck pheasants, with which the Rod and Gun Club is stocking this vicinity. Out of thirty eggs set under two hens, twenty-two strong, lively chicks were hatched. Owing to the extremely cold weather here this spring our hens have laid less than one-half the usual number of eggs, but from these we are having excellent results.

We receive weekly reports from the owner of the land on which we liberated a number of the pheasants this spring. He says that the birds have paired off, and one pair has left his farm and gone to another patch of timber about a mile away. He hears the males crowing every day. We consider these reasonable indications that they will breed this year if nothing happens to them. All the farmers in the vicinity have been told about our liberating pheasants and say they will do all they can to protect them. They know a suitable reward is awaiting them if they furnish proof of any shooting.

Sportsmen all over the United States are investigating the pheasant, and I believe that another year will see a general move in the direction of stocking with these beautiful birds. I have letters inquiring about them from most of the Northern and from some of the Southern States. Our club has shipped the few eggs we have had to spare to different places in our State, and have sent one setting to Arkansas.

I believe that if the money we expend in stocking with Southern quail were used in introducing the pheasant, more good would result. A severe winter will kill nearly all the quail and nothing is gained.

Our only hope now for future sport is to stock our coverts with pheasants; for these birds will thrive where the others will not. No matter how well grouse and quail are protected, from the very nature of things they are bound to grow scarcer every year, as the number of sportsmen increases.

In almost any town or village there are sportsmen enough who could, by clubbing together, raise sufficient money to purchase a dozen or two eggs or a few birds, and in a few years I will warrant fair shooting could be had.

ARTHUR G. BAUMGARTEL,
Sec'y Holland Rod and Gun Club.

The New York Fish Commission has appropriated $250 for ring-necked pheasant breeding at Caledonia.

CHICAGO AND THE WEST.

[By a Staff Correspondent.]

CHICAGO, Ill, May 29.—Three days more and the season on bass and muskallonge will be open for Wisconsin, and a vast crowd of waiting anglers will join those who have not waited along the fruitful lakes and streams of one of the loveliest fishing States of the Union. From all appearances the sport will be good this year along some of the most popular chains of water. Abe Lafave writes from Manitowish that the logging drive commenced a month earlier this year than usual, so that the fishing should be good by June 1 on the Manitowish chain. The water is 3ft. lower than it was last year on Manitowish waters. Mr. J. DeLong and party, from Brooklyn, N. Y., leave next week for the Turtle Waters, above Manitowish. The next two weeks will see a tremendous traffic from Chicago north to the cooler regions of the woods and streams.

Singular Snakes.

Dr. W. D. Taylor, of Brownsville, Tenn., writes very interestingly in regard to certain singular snakes of his neighborhood, and one may but quote his letter entire:

"The question of snakes having feet I believe has now been settled, and scientists say there is nothing of the kind. I send you by to-day's mail part of a blue racer with two feet which was killed near here a few days ago. There was also a snake with a horn on the end of its tail killed on the same farm and I sent after it, but it had been destroyed; nothing but the bones were left, and tail entirely gone. But the negro says they kill five or six every summer, and the next one they kill he will be sure and send it to me, and I will send it to you.

"I think we have more quail than we have had in years, and if we have a dry summer will have them in great numbers next fall, and we hope to have fine sport with you. We expect you and friends with us next season, so please make your arrangements accordingly. We enjoyed your "Sunny South" very much and are glad you had such good sport. I hope you may have as pleasant a trip next fall, and you know you will always find the ever-open door."

Dr. Taylor's section of snake arrived duly, preserved in alcohol. The section is 4 or 5in. long, and shows the bluish color commonly known in the "blue racer" snake. The "feet" are imperfect projections of some sort or other, sure enough, and unlike anything of the sort I ever saw. I could not examine the specimen well without taking it from the alcohol, and preferred to send it to the Natural History Department of FOREST AND STREAM for a more conclusive examination. We shall no doubt hear from it there in due time, and I shall be delighted if science is obliged to admit that snakes do have legs.

FOREST AND STREAM has always been skeptical about the "horn snake," but I feel that we are at last upon the way of showing FOREST AND STREAM one of these much mooted Tennessee reptiles. In all these things I am a devout believer, just as I believe also that William Tell shot the apple. Science would leave nothing in life but sawdust if we let it alone, and this must not be.

The Fantail Deer Again.

Another belief to suffer at the hands of science is the legend of the "fantail deer." Science says nay, old hunters say yes. Mr. W. S. Phillips ("El Comancho"), of Seattle, Wash., who is in Chicago this week, is one of the real Westerners who write good stuff sometimes for FOREST AND STREAM. "El Comancho" was raised in a game country, and has always lived in one. Bringing up the subject himself, he mentioned that Custer Peak, near the Bear Lodge Mountains of the Black Hills system, is a range famous among local hunters for what they call the "fantail deer." He says furthermore that he himself saw on Inyan Kara Mountain, down toward the southwest corner of the Black Hills, a live wild specimen of the fantail. He says it was about two-thirds the size of the whitetail deer, and had horns flat and knife-edge shape, instead of round in beam. The tail was not whisked and waved in running, as is done by the whitetail. "This may be a freak whitetail," said he, "but it was not like any whitetail I ever saw. Moreover, I found a number of the shed antlers in that country, and they are not like the whitetail or blacktail horns. The hunters at Sun Dance said they got fantails."

Well aday! for science, if the time shall come when I can send in alcohol at one shipment a horned snake and a fantail deer.

Mr. Phillips was looking at a big gray wolf skin in the FOREST AND STREAM office, and we spoke of the destructiveness of that animal on cattle. He told me he had

seen two wolves pull down a mare and colt, and kill them both. He said that in attacking, the lead wolf sprang at the throat of the horse, catching the throat on the lower side as it sprang. This it did by turning down its jaws as it went on over the top of the horse's neck. The wolf sprang on over the neck in the same leap in which it caught the throat, and the weight of its body and the force of the spring, as it went on across the neck on to the other side of the horse, pulled the latter right over on its back. As quick as it fell the other wolf sprang in and caught it by the throat, and then it was all over. Mr. Phillips says he has seen the cougar (mountain lion) seize a heifer the same way, only sometimes the cougar, instead of jumping on over and so turning its quarry on its back, will squat low down and tug at the throat, throwing its victim in that way.

From the Far North.

The letter-box—that most useful adjunct for one seeking news of the sporting country—brings this morning word all the way from the Far North, the writer, Mr. J. H. McIlree, of the Northwest mounted police, dating his communication from Regina, N. W. Territory, up in the British possessions. He speaks in regard to the game of that region as below:

"I notice in FOREST AND STREAM of April 20 a notice from you about Mr. Munn's trip to the far North for musk ox. Mention is made of some legislation to protect the wild animals in the regions partly traversed by him. You will observe that this act is not yet in force. No doubt, as Mr. Munn states, it will be pretty hard to enforce the provisions of this act, but yet a good deal can be done. People coming from the far North must come to certain points to ship their trophies and that is where we will get them. The natives if left alone will not exterminate the game. They have lived in the country for how long we do not know and the game still survives in large numbers—that is, the species really indigenous to that region. The buffalo I think are comparative strangers. The skin and the trophy hunters are the ones that do the harm, and the ones that can and will be caught. I came to this country, Northwest Territory, twenty-one years ago and have seen many changes in the wild game supply. I still read FOREST AND STREAM religiously. I started taking it in its infancy, when Mr. Hallock was at the helm, and always find it full of interest. It grieves me to see the slaughter of ducks recorded in FOREST AND STREAM. They are very scarce up this way this spring. With kind regards, J. H. McILLREE."

And still our laws hang fire. And still the spring shooters say there are as many ducks as ever. And still. And then—.

Elk Catching and Indians.

Again the letter-box, and this time something of interest from "Guide," who lives at Cameron, Mont., and writes as follows:

"I see an account in FOREST AND STREAM written to you from Cora, Wyo., by 'Mountaineer,' about the Indians killing the elk for the hides. If he will do as we did here in Montana and Idaho the Indians will be kept out. We were bothered with the Indians for a long time till forbearance ceased to be a virtue, and then we wrote to the agent to keep his Indians at home. He paid no attention to us until he got a letter signed by nearly all of the settlers in the country, stating if he did not take care of his Indians we would for him. I am happy to say we are not bothered any more with Indians.

"We have had a very easy winter here for the big game, no snow in the mountains to speak of, and if it wasn't for the elk catchers the game would be on the increase. This last winter there were forty-five elk caught in the Madison Basin, with five killed for every one caught, and the same kind of work has been going on for the last six years, but with a larger percentage killed heretofore. The same party has killed over fifty moose in the same time without saving any.

"The sportsmen of the East are kicking that the game is being killed off at a terrible rate in the mountains, and still they will buy the captured game and encourage the slaughter. Five years ago this spring I counted seventy-two dead elk in the Madison River, inside of two miles, that had been run to death by the slaughterer and not even the tongue or hide taken. It is safe to say that there have been over 2,000 head of elk run to death in the last six years by this same party, and mostly cows and calves.

"I have been a guide for the last twenty-three years and you can bet I hate to see the game slaughtered this way."

There certainly seems to be justice in the conclusions of the writer of the above, and no reasons appear for believing him mistaken in his facts.

Dangerous Game in Chicago.

Mr. W. A. Hillis is visiting in Indiana, and he wants to know, you know. He says:

"I have been a reader of FOREST AND STREAM for many years. What I write you for is this: I live in Montana, and I have bearded the grizzly in his den with the rifle, and I sometimes use a smooth-bore. Having read so much about John Watson's hard pigeons in FOREST AND STREAM, I thought if an outsider could get a try at them during the Illinois State shoot I would come up. Please send or have sent a programme when issued."

I beg to assure Mr. Hillis that he can have a try next week, but would caution him that he will find the J. Watson birds harder and more dangerous game than the grizzlies.

Bachelor and the Market Reports.

Again the letter-box, and this time something curious, no less than a clipping from the market reports of a daily newspaper, although I think we shall find it pertinent. Mr. A. H. Chapman, of Pewaukee, Wis., writes in regard ta it:

"I inclose a clipping from the market report of the *Times-Herald* of this date. It simply confirms your views as to the open-heartedness of the Southern sportsmen as a class, as set forth in your recent articles in the FOREST AND STREAM.

"Having been confined to my room for the past thirteen months with rheumatism, the arrival of the FOREST AND STREAM at my house each week is the one important event."

The clipping in question has to do with a plain business question, but it is curious in some of its phases. It speaks best for itself:

"Commission men, as a rule, will not accept discretionary orders. Their risk is great enough when directions are explicit. The following is the eloquent plea made, in a letter to a private-wire house, by a Southerner:

"'Gentlemen: Herein I hand you a draft for $—— to be used according to your best judgment. I am aware that this is not your usual way of doing business, but being so remote from the markets, receiving reports two or three days after they are sent out, makes it impossible for me to instruct you intelligently.

"'In order to help you out I make a suggestion. In your large establishment you doubtless have some responsible, level-headed man who is fond of a dog and a gun. Select him and call him my man, place this $—— in his hands and tell him to use it as he would if it were his own; if he loses, well and good; but if he makes good money for me I want it understood that he is to have a vacation some time in November, December, January or February, and that he is to come to ——— and spend at least ten days with me in the woods, his expenses to be borne by the writer. I will promise to let him kill as many quail, deer and turkey as he cares to shoot at. This, I feel sure, will be an inspiration to him to keep my interests before his mind. I have the dogs, guns and ammunition, so he need not trouble about bringing anything with him. Now, what do you say?

"'If it should happen that you haven't a man who is fond of field sports, then select the man possessing the greatest musical talent, and when he makes his visit to ——— I will show him one of the handsomest, sweetest and best little sopranos that he ever saw or heard, and if he is not married I will promise to do all in my power to help him secure her as his prize in case his fancy should lead him in that direction.'"

After reading the above, who could blame any bachelor man for going into the commission business! And where has more unique literature ever crept into the dull market page?

Who's Going to Pardon Altgeld?

A statistician has learned that John Peter Altgeld, the Governor of Illinois, who vetoed the Mongolian pheasant law, and who "doesn't believe in game laws, anyhow," has in the course of the last two years pardoned out of the penitentiary 121 criminals of all sorts of crimes and sentences. This is a little more than one a week. Last week some Illinois citizens lynched a couple of criminals, and said they did so because Altgeld would pardon them out if they were sent to Joliet. It is probably fair and just to state that a Governor who "doesn't believe in game laws, anyhow," is not apt to be a good Governor. For anarchism and ignorance such as he has shown, who is going to pardon Altgeld?

Happenings.

Ground squirrels are reported to be eating up the State of Washington in some sections, and farmers are using all sorts of means for exterminating them.

Horicon Shooting Club of Wisconsin elected as officers: President, A. R. Keating; Vice-President, R. Rom; Manager, William Kleifoth; Treasurer, Dr. J. W. Burns; Secretary, P. F. Stone.

Mr. Frank Mason, advertising manager of the *Mayflower*, New York city, has spent the past week in Chicago on business connected with his paper, incidentally meeting many old friends in this city.

Mr. E. H. Short, of Van Wert, O., is among those calling at the FOREST AND STREAM office this week.

The Hunter Arms Co., of Fulton, N. Y., has put out a handsome new catalogue, of which they speak with pardonable pride. "We have spent," they say, "a good deal of money and time to get out something that we think will please the eye of the average sportsman. It is our aim in putting out a catalogue to have it so attractive that, even if anyone should happen to get hold of it who is not particularly interested in guns, he will not throw it away, but will lay it aside where it may prove beneficial. You will also find in the catalogue a little booklet which we are distributing promiscuously among the trade.

"We are pleased to state that the New York Exposition was a decided success so far as the Smith gun was concerned."

June 1.—Mr. H. R. Wills, of Alton, Ill., a shooter from Shootersville, paid this office a visit during my absence from the city. He takes this method of getting away with a challenge, knowing he has to shoot when I am home.

Col. A. G. Courtney, of the Lefever gun, called this week in company with a handsome Lefever ejector. He will probably attend the Illinois tournament next week.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

FEVER AND AGUE.

Editor Forest and Stream:

Buck fever or buck ague, the effect is all the same. I'm inclined to think that both names are appropriate for the hunter's sickness when he sees big and sometimes small game. The blood rushes to his face hot as a desert wind, then his muscles twitch and jerk in a way to shake the front sight all over a big maple treetop at 30yds. He bangs away, and then when the game gets out of sight, or down, he wilts with a sickly grin on his face, or jumps up and down with whoops for guides or companions to come, or just to let out his feelings. When shooting he goes under high pressure, but after the safety valve couldn't be weighted enough to keep his mouth shut. At least that is the way I felt when I was killing or trying to kill game.

I don't believe anyone ever gets entirely over having the buck fever, that being the expression I was brought up to here, in northern Herkimer county. I've seen a man who has killed deer, bears, rabbits and partridges in profusion shake like a running brook when his gun missed fire at a partridge. I never saw a deer yet that didn't give me a thrill, and it takes about two shots to steady my nerves, usually.

I shot at a deer once when it was 10 rods away, and hit it hard, but missed the same beast when it wasn't more that 15ft. from me. I had a rifle. I've missed a partridge with the first barrel when it was sitting still, but brought the same bird down from among the second growth spruces.

I don't get all the game that I shoot at, but just the same I wouldn't take a heap for that same buck fever. There isn't anything equal to a good strong attack to my mind. It's a pleasure. Then, too, if you bring down your game it is worth a good deal more just because of the association. A man don't seem so much like a cold-blooded butcher to himself or to the rest of the region. Of course some people would—and do—kick themselves for having lost control of themselves at the decisive moment, and thus not getting so many pounds of meat worth so much per pound.

I have a four-point deer head down stairs hanging over the dining-room mantle. It is worth just seventeen times as much to me as it would have been had I not run and needlessly danced about while I was shooting, and after the beast was down, wading across Moose River when it was cold.

Buck fever, or what you will, has a good many strong points. It preserves the game, first of all. Then, too, it makes the old young again for a time, and brings color to pale cheeks, and is about the best restorer of tired and sickly persons there ever was. It never needs doctors to cure it.

RAYMOND S. SPEARS.

NORTHWOOD, N. Y.

A THIEVING LION TAKEN IN.

ABOUT three weeks ago I saw in the San Francisco dailies an account of the killing of a large mountain lion (*Felis concoles*) near Campo, in San Diego county. The item stated that after destroying considerable stock, including several valuable Angora goats belonging to Mr. Silas Gaskill, he was finally killed in the night by a couple of charges of fine shot, and that he measured 9ft. in length.

The last three statements particularly attracted my attention. Darkness and bird shot are not usually selected for enterprises of this description, and the length of the animal, as given, was at least a foot longer than that of any authentic account with which I was familiar.

Mr. Gaskill is an old friend of mine, and more than twenty-five years ago we hunted together in the mountains about El Campo. I knew him to be perfectly reliable, and that a line dropped to him would settle, to my satisfaction at least, a few points about which, from the newspaper accounts, I was naturally a little skeptical.

His reply reached me on the 16th inst., and the portion referring to the incident in question I send you, transcribed exactly as it was written. He says:

"In reply will say, as to the lion, it is correct. He killed fifteen fine Angora goats for me. Some of them cost me $250 apiece; they were thoroughbreds and very fine. They were running around loose here in the mountains, and I did not notice that the lion was killing them until he had them nearly all. He did not get any after I found out he was killing them. He was a very large, powerful animal, quite old and very fat. Mr. Hubs got 25lbs. of fat out of him.

"The way Mr. Hubs came to kill him was this: He had three good dogs, and in the night his little boy heard the dogs after something, and got up and went out. The dogs had the lion up a tree, but the boy could not see what it was, so he went back and called his father, who got up, took his double-barreled shotgun and went out. Looking up into the tree, he saw what he took to be a lynx or wildcat and blazed away with a charge of No. 8 shot, which hit the lion in the face and knocked him out of the tree, putting out both of his eyes. When he struck the ground the dogs bounced him, and he reached out and grabbed one and killed it. While he was doing that Mr. Hubs ran up, placed the muzzle of the gun against his side back of the shoulder, and killed him with the other barrel. The other two dogs were also badly hurt in the fight.

"They stretched him out while he was warm and measured him with a pole. He measured 8ft. 11¾in., so near 9ft. that they called it that."

Some of your older readers may remember that in the number commemorating the tenth anniversary of the FOREST AND STREAM I gave an account of a desperate battle that took place in Campo between the two Gaskill boys, Silas and Henry, and six Mexican outlaws, who attempted to rob their store, in which the former, although taken completely by surprise, made such a gallant defense that they not only frustrated the ruffians, but killed three and badly wounded a fourth. Henry Gaskill also was so seriously wounded that for many days his life was despaired of, but Silas escaped without a scratch.

It may be of interest to add that the trees in the immediate vicinity of Campo are mostly a low growth of large-limbed oaks, and it is probable that the panther had sought refuge in one of these.

FORKED DEER.

OAKLAND, Cal.

Commissioner Collins, Please Take Notice.

PRESTON, Conn., May 30.—Recently W. Virwes, a blacksmith, living within the city limits, shot in the meadow back of his shop what is supposed to be a clapper rail (*Rallus crepitans*). The bird measured from tip of bill to end of tail about 15in. and weighed over 1lb.; it was in spring plumage, the olive brown sides having lighter and darker stripes. Fifty years ago rail shooting in the lower Connecticut valley was a very enjoyable sport, the birds being very plenty. The larger varieties are now very scarce, but the smaller kinds still furnish good shooting.

E. M. BROWN.

Michigan Reform Not Reached.

SAGINAW, Mich., May 31.—I understand our Legislature has adjourned without passing either the general fish or game law. Thus we will still have spring shooting, still have selling of game, and will have to struggle along for two years more, at least, with everyone doing all they can to exterminate the few game birds left in our State.

W. B. MERSHON.

North Dakota Game Abundant.

GALESBURG, N. D.—Game prospects are very fine for this year. I never saw bird life more abundant in the twelve years I have been here. Chickens are especially numerous. More geese here this spring than in many years; gone north to breed now. Water is very scarce in the sloughs, and ducks are not as plenty as other game.

J. P. W.

THE Page Woven Wire Fence Company, of Adrian, Mich., have closed a contract with Mr. Edward H. Litchfield for fencing Litchfield Park, in the Adirondacks. Last fall they put in 2¼ miles of fencing as a game enclosure. The new fence will be independent of this and will enclose the entire tract of 9,300 acres. It will be 93in. high and will contain twenty horizontal strands, varying in space from 3in. at the bottom to 8in. at the top. The vertical tie wires will be 12in. apart.

The fence has proved extremely satisfactory for game preserves. It is extremely elastic and tough, and where trees have fallen on it has straightened up at once when they were removed. The top wires will resist a breaking strain of 3,300lbs. Another advantage of its elasticity is the fact that growing trees can be used for posts, thus doing away with one great item of expense in the construction of such fences.

Sea and River Fishing.

AN OLD STORY.

DEDICATED TO A FOUR-POUND TROUT.

THE waters slip 'neath the willows green
Which lightly stoop to kiss,
Then away they dance in the sunbeam's glance
To smile in a ripple of bliss,
And hurry on in a silvery sheen
To swirl in the pool so near,
While the breezes play and softly say,
"There's a big fellow lurking here."

The swallows sport in the blue above,
And the meadow lark sings below,
While the clouds float by in the summer sky,
And the robins come and go.
A warbler whistles his notes of love
To the mate he holds so dear,
And over the pool he calls, "Oh, fool!
There's a big fellow lurking here."

I take the hint, and lightly throw
Till my hackles and ibis bright
Can just be seen 'mid the water's sheen
On the edge of the foam so white.
Then out from the foam there seems to go
A shadow, as if in fear;
And past I feel a whisper steal,
"There's a big fellow lurking here."

Once more I throw, then wait to feel
The thrill I love so well;
To hear the quick and blithesome click
Of the reel its story tell.
Ah, quiet now! Was that the reel?
It was; and loud and clear
It sings to me in merry glee,
"There's a big fellow lurking here."

Oh, nobly doth the lancewood bend,
To check each desperate lunge;
Each rushing whirl and mighty swirl,
Each sudden rapid plunge.
The while each move I watchful tend
Until with a feeling queer,
As if but a boy, I shout with joy,
"There's a big fellow lurking here."

And now I stand with victory's flush,
I know that I surely win.
The fight is fought, the net is brought
And I stoop to take him in.
But what means that sudden backward rush?
That snap there in my rear?
The line in twain bears this refrain,
"There's a big fellow lurking here."

WALDO.

TROUTING ON CAPE COD.

"I GO a-fishing," said Peter, nearly twenty centuries ago; and he went, and when he had cast his net on the right side of the ship he and they that were with him "were not able to draw it for the multitude of fishes."

Since that memorable day, so long ago, what a vast army of men have, like Peter, been a-fishing; but how very, very few have like them been unable to draw their nets for the multitude of fishes. However, is not, after all, the multitude of fishes (providing we can catch them) a very small part of the object of a fishing trip? Is it not rather the pleasure of being out of doors; of communing freely with nature; of revisiting old haunts or perchance exploring new ones; of once more wading and splashing in the water or of stealing cautiously, noiselessly along by some deep pool, momentarily expecting to hook a "big one;" of watching the swallows sporting high above; of listening to the melodies of the songsters in the hedges; of taking long, deep breaths of clear, pure air; of feeling that you are far from the heat and strife of the city, and once more enjoying the happy freedom of boyhood's day. Is not all this, I say, what constitutes the real true enjoyment of a fishing trip?

At least so thought I, as some three weeks ago I boarded a train bound for old Cape Cod, and in reply to the question of a friend quoted Peter's own words, "I go a fishing."

With what pleasant memories I whiled away the tedium of the railway journey. Once more in imagination the brown hackle was lightly floating over the big hole above the railroad, or the white miller was circling in the eddy below; once more the fat, luscious worm was wriggling in the most alluring manner beneath the old half sunken log; and once more the silver-bellied minnow was vainly trying to avoid some unseen danger in the little pool at the foot of the falls. And so on, never once stopping to think that probably those old familiar haunts had long since been either fished out or else leased by the city sportsman with plenty of money.

The conductor's cry of "Sandwich! Sandwich!" brought me from my reverie to a realization of the fact that this was my stopping place, and that I must collect my traps and "hustle" to get off. My! how quiet the dear old town did seem, and how dark it was to me, coming, as I had, from the electric lights of the city.

But the air! How good it was—so clear, so pure, and with just a hint of the salt marshes and the deep, blue sea beyond.

"Why ar'n't you fishing?" from the first person I meet the next morning, as I sally forth to make some early morning calls; and "What! not fishing this morning?" from the next, and so on, until it is clear that to hold my reputation I must go a fishing at once. So be it. A change of garb, my trusty little lancewood in hand, and a trout basket swinging from shoulder (basket to carry the bait, don't you know), and though late in the afternoon I head for the town brook. "Not a trout there," they say, but then what do I care. It is a pleasant brook, winding under the willows, and finally out on to the marshes, where "time and tide" have made deep, dark-looking holes; and I can fish there all I please; and was not that what I came down for?

"Easy! That was a nibble;" and that is the first trout I have caught for three years, and though he is but a little fellow, he is a "trout," and big enough to keep; and I am as elated as if he were a veritable giant of the race. Two more of the same size between the bridges and then for the big holes.

Nothing in the first or the second or the third, until—Ah, that's more like it! See how the limber rod bows and bends and checks each frantic rush. Landed at last, and if not large (he weighs ¾lb.) he is certainly a beauty; with his silvery sides, so beautifully spotted, he causes almost a pang of regret as I slip him in to join the other three.

That will do for the morning and home I hie me, with mouth already watering for the luscious dish of smoking, well-browned trout that will furnish such a treat.

And what trout!

Go through the Boston market; look at the fish displayed there and wonder, if you please, why those from Cape Cod bring nearly double the price of those from New Hampshire and elsewhere. Then come with me, sit down to a dinner of both kinds, taste first of one, then of the other, and wonder no longer at the difference in price. The Cape trout, running occasionally up to 5lbs. in weight, have, unless confined in bogs or ponds, free access to salt water, and as a rule the big ones are caught in or near the marshes. With sides and belly of a beautiful silver hue, with the spots deeply and clearly marked, the back fairly light and the flesh as pink as the pinkest salmon, he is to my mind the king of fishes. But to return to my tale.

The days go by, the trout are few and rather small, until at length George (never mind who George is. I know, he knows and a great many fish might know if they had not already gone the way that good fresh-caught fish are apt to go) announces that he knows of a hole where I have never been, and where he has caught this year several that weighed more than a pound each, one that weighed 3¼lbs. and lost one that would go 4lbs. Do I want to go? Of course I want to go! So the next morning sees me up at 3 o'clock with a three-mile tramp before me. Half way there we are joined by Fred, whom I may call our "colored guide," as it was he who first showed George the place. At 4 o'clock we are there, and a more unlikely place for trout I never saw. Away down on the marsh, almost to the beach, and standing in mud and water up to my knees, I throw my line with very much the feelings of a "doubting Thomas," and all the time those two fellows are telling such marvelous stories about what they have caught and what they have lost, that in spite of myself I find I am muttering something about the proverbial fish story. Splash! That was a trout, and a big one too. Another splash and still another, "Boys, I believe you both to be apostles of truth, but why, oh, why don't they bite?"

But they didn't, save one little fellow to Fred's scarlet-ibis, and then the tide drove us away.

Down again in the afternoon, with the same result, a smaller one to Fred's scarlet-ibis. Up at 3 A. M. the next day, with the result that George gets only a ½-pounder, and the rest nothing. The boys are muttering something about a Jonah, but I don't hear them. Up at 3 the next day, and a repetition of the previous days, save that it is I who catch the little fellow.

However, both of the others hook some big fellows that after a few moments play break away, and as I have seen several jump I am forced to believe that they are there. This is my last day, and as I slowly reel in my line I think ruefully of the big stories I told when I left the city and the very small trout I have to take back.

But those were very pleasant hours spent on the marsh, with the green hills circling in the distance and the village spires just visible through the trees.

And oh, the birds! Yellowlegs, grass birds, and plover of all kinds, for the spring flight is now on and they are protected by law. And the way Fred could call them. One could sit for hours and listen to him.

There would be a faint whistle and we would make out a flock of birds just visible over the marsh, then Fred would send them a long-drawn plaintive note, then another, and the birds would hesitate; still another, and they would head our way. A few short coaxing notes and the flock would sail (with wings set) over us as we stood without cover of any sort. Then they would circle around whistling in reply to Fred, as only plover can.

I have never heard anything like it, and don't expect to again until I go down in the fall, and with Fred to call for me, try to bring back a better bag of birds than I have basket of fish.

Home in the city once more, and momentarily expecting the postman to bring me a letter from George, with a description of that 4-pounder, I feel as I pen these words that I have indeed had a good time.

I have been a-fishing! I have waded the brooks, visited old haunts, breathed pure air, listened to the birds, torn my clothes on a barbed wire fence, scratched my hands in the brambles, wet my feet, regretfully watched the circles made by a "big one" that broke away, enjoyed to the utmost the little fellows that I caught, filled my mind with the pleasantest of recollections, and now, as I settle down to work, look eagerly forward to the time when I can once more say, "I go a-fishing." WALDO.

Adirondack Fishing Notes.

NORTHWOOD, N. Y., June 1.—There are hordes of fishermen coming to and going from this region. Some have caught all they cared for, others have caught none. The good fisherman can usually get all the fish he ought to have. The greenhorns have caught only a few.

The fish caught do not run large. A 1¾-pounder was the largest that I have seen. Of ½ and ¾-pounders there are a plenty, and not a few pounders.

The fish are quick when they touch a fly, and it takes a sudden arm to strike them. Slappers, trout that knock the fly under the water before taking it in their mouths, are frequently seen. RAYMOND S. SPEARS.

Of Course Pompano take the Hook.

Editor Forest and Stream:

In your last issue R. P. Bell, writing from St. Petersburg, Fla., says (referring to pompano): "They do not bite at a hook." Well, perhaps they don't; but they do bite at a baited hook and afford fine sport with rod and reel, using what is called at Jupiter Inlet, Fla., sea fleas for bait. In confirmation of this statement I refer you to the following well-known gentlemen, viz.: Major H. C. McDowell, John H. McFerran, C. Lewis Diehl and "Joe" Davis, of Kentucky, who have caught pompano with rod and reel, using bait as above. NORMAN FLETCHER.

ANGLING NOTES.

Alfred C. Harmsworth.

READERS of FOREST AND STREAM will recall the series of papers which appeared in this journal last January under the caption "An Englishman's Experience of Florida Fishing," written by Mr. Alfred C. Harmsworth, who came to this country especially for the fishing at a season when Northern waters were closed to anglers by law as well as by the ice.

The papers in question gave ample evidence of the writer's innate desire to do full justice to the country, the people and the fishing; and that he was more than pleased generally with what he found is proof of his discriminating mind and excellent judgment.

The current issue of *Vanity Fair*, London, has for its colored supplement a full-length portrait of Mr. Harmsworth as the Conservative candidate for Parliament from Portsmouth, and under the head "Men of the Day" says: "For a boy Mr. Alfred Charles Harmsworth has already made quite a noise in the world; for though he was born only nine and twenty years ago he has achieved much wealth, some fame, considerable popularity and a reputation for succeeding in what he attempts. His father being the late Alfred Harmsworth, of the Middle Temple, he was meant for the bar; but when he saw that briefs were few and found that journalism was less fatiguing (and more profitable) he altered his ways and started *Answers*. They made him, and he is now interested in no fewer than fifteen journals, and also in the navy, of which he knows things that will prove useful when he is fairly launched on the sea of politics.

"He is full of sanguine enterprises, for his mother, who was a Miss Maffett, of County Dublin, gave him Irish virtues. He is therefore married, and last year he despatched an expedition, under Mr. Jackson, in search of the North Pole. * * *

"He is a successful fisherman, who has fished in most civilized waters and some others, and he is the writer of the tarpon department in the forthcoming Badminton book on angling.

"Journalistically it remains for him to found a daily newspaper, which he will presently do. He is a good-looking, fair-haired boy who will do Portsmouth credit."

It seems scarcely the proper term to describe one as a boy who has successfully engineered so many great enterprises as Mr. Harmsworth, and whose operations extend well over the globe. During his visit to this country he was so pleased with one of the houses that he saw in the South that he took model and plans home with him and had its counterpart erected on his estate in Kent as an office or studio.

Salmon in Lake George.

Dr. D. S. Sanford, of Long Island City, who has a country house on Sanford Island, Lake George, tells me that he thinks a landlocked salmon weighing over 10lbs. was caught in Lake George this spring. The fish was caught by Walter Brayton, and was a new fish to Brayton and other professional fishermen. Dr. Sanford saw the fish, and while he is not familiar with the appearance of landlocked salmon, from what he has been told he is quite of the opinion that that is what the fish was, and he will endeavor to have any future specimen secured for examination. I planted 5,000 salmon fry in the lake in 1887 and 5,000 more in 1890, and this is not the first time that I have heard of new fish being taken that were suspected of being salmon.

Salmon in the Delaware.

In a personal letter from Mr. Henry C. Ford, President of the Pennsylvania Fish Commission, he incidentally mentions the salmon in the Delaware as the result of planting fry in that stream as follows: "We deposited 60,000 Atlantic salmon fry in the headwaters of the Delaware in 1890, and the smolts were quite numerous in the upper river for two years afterward.

"This year there is quite a run of Atlantic salmon in the river. They have been taken in nearly every shad fishery from Fort Delaware to the Water Gap. They run from 9 to 12lbs. I cannot help thinking that they are the fry liberated in 1890 which are now coming up—fine, fresh-run salmon.

"Though the Delaware is southerly for a salmon river, we feel encouraged to hope that the 300,000 fry liberated in 1891 will making a still better showing next year."

It is probable that the salmon taken this year are partly from the planting of 1891, as they would be due to return as adult fish in the spring of '95, after spending two years in fresh water and two years in salt water, as was the case in the Hudson.

It would likewise seem that there is no run of grilse in the Delaware, which is one of the peculiarities of the Hudson. The first salmon to return from the sea weighed from 9 to 15lbs. It is to be hoped that now the salmon have shown that they will return to the river, everything needful will be done to establish them permanently.

Pangora and Steelwood.

A correspondent asks where the new rod woods I recently mentioned, pangora and steelwood, could be obtained. The types made me say pangord instead of pangora, which is correct.

I do not know as either wood can be obtained, certainly not in this country, as two English dealers appear to have a cinch on the two woods under the names given. The pangora rods are made by Dunhill, 125 Euston Road, London, N. W., England, and the steelwood by James Ogden, 28 Winchcomb street, Cheltenham, England.

Since my note was written the following claim has been made for the pangora wood by its chief advocate:

"Pangora being similar to hickory, that hickory of a suitable growth is better than greenheart, and that pangora, owing to its lightness, is more suitable for the purpose intended." My correspondent is an amateur rod maker, who has had considerable experience with various rod woods, and if he succeeds in getting the woods at the addresses given will he not give his opinion of them in FOREST AND STREAM? I advise him first to try the steelwood.

Kilburne's Trout.

It is but a few weeks since I mentioned the sale of a copy of Goode's "Game Fishes of the United States," at auction, for more than four times the publishers' price, and referred to S. A. Kilburne's brook trout, painted for that work, as perhaps the best painting of our brook trout that ever came from the brush of any artist.

At the Sportsmen's Exposition in Madison Square Garden I noticed what I assumed to be the original painting, as it was in the exhibit of Chas. Scribner's Sons, the publishers of the work; but the attendant told me it was only a copy. There was another copy, I discovered later, in another exhibit. Both bore the artist's signature, and there was nothing to indicate that they were copies of the original. If nothing more, it was an evidence of the popularity of this particular picture. Scribner's agent told me that he did not know who owned the original painting.

There was another exhibit at the Exposition which interested me, as it was a mounted trout said to have been a native brook trout, and its weight was given at 13½lbs. I had no opportunity to examine the mounted fish, but I would be glad to know where the fish was caught, who caught it, etc., if any of the readers of FOREST AND STREAM can furnish the information. A. N. CHENEY.

A BUDGET OF BOSTON NEWS.

BOSTON, June 1.—The Chapman party, which lately returned from a salmon fishing trip to Weld Pond and Sebago Lake, met again the other evening for a dinner at the Boston Exchange Club as the guests of Charles A. Kilham. It proved to be a festive occasion and was thoroughly enjoyed by all present. Anecdote and jest never lag when Harberger and Littleton are present, and these gentlemen were at their best on that particular evening. Arrangements to make an annual trip were talked over, and Grand Lake Stream was the place selected for next year. The following gentlemen were present: Dr. W. G. Kendall, Albert Bevuard, L. Dana Chapman, J. A. Littleton, J. L. Harberger, Geo. R. Hall, Chas. A. Kilham, Commissioner H. O. Stanley, W. C. Gregory and J. E. Meigs.

A 21-pound lake trout in one of Dame, Stoddard & Kendall's show windows one afternoon last week attracted the attention of very many passers-by. The fish measured just one yard, and was taken at Moosehead Lake by Dr. J. C. French, of Boston. It was caught in trolling on a 4 0 Carlisle round hook, and took fully one-half hour to land. I believe it to be one of the largest lakers taken from these waters, at least I can find no record of a larger fish, and I think it tops the list. The Doctor had only been there a couple of days, and was out fishing with Orin Templeton for guide. He is to be congratulated on his great luck.

Boston sportsmen had an opportunity during the past week to visit for a short time with that ever-popular Maine guide, Ed. Grant. It is not often that this gentleman finds time to leave his native heath, but he has been on to New York as one of the party in charge of the Maine Central exhibit at the Sportsmen's Exposition. He could not pass through the Hub without stopping to see his old friends, and was well cared for during his short stay.

The Duck Lake Club have just returned from the Schoodie Lakes, where they have been for the past two weeks. They had a glorious time and report very fair fishing. The largest salmon taken weighed 5½lbs. The largest togue 10½lbs. This club has a home camp on the shores of Duck Lake, with a branch camp at the head of Grand Lake, and another at Pleasant Lake. An invitation to join the club on one of their pleasant outings is considered a great piece of luck, as their pleasant quarters and genial companionship are well known to all. The gentlemen and guests who made up the party just returned are H. O. Underwood, William B. Lambert, H. L. Harding, Edward Read, C. W. Shaw, E. C. Johnson, G. W. Wheeler, and H. K. Brown.

Pine Point Camps, Weld Pond, Me., is the destination of a party of Boston men who left on Saturday last, intending to spend two weeks in fishing the waters of this beautiful lake. C. A. Woodward, business manager of the Oliver Ditson Co.; Leon Keach, of the same concern, and H. F. Morse, Junior Grand Warden of Massachusetts Masons, make up the party who left on Saturday. They will be joined in a few days by Myron W. Whitney, the well-known singer, who is about returning from an extended trip over the Megantic Preserve. Mr. Keach is a great lover of photography, and may be called an expert at the art. Last year this party made a trip over the King and Bartlett preserve, and the pictures taken of the crowd while there were both instructive and amusing.

Dr. F. E. Greene, of Boston, leaves on Monday for his summer home on Long Island, Lake Winnepesaukee, N. H. He will be there during the entire season, only coming to the city about once a month to look after his business interests. The Doctor is a fisherman through and through, and has made some great catches of bass at the lake. Being near the White Mountain district, he also fishes the streams of that region for trout, and is well acquainted with all the best localities to enjoy his pet pastime.

There are not many sportsmen better acquainted with the waters of the Upper Dam, Rangeley Lakes, than J. M. Niles, of Boston. He has visited this point many times, and always manages to get his share of rewards. With a friend he will leave in a few days on his second trip of this season, having returned but a short time ago from a trolling excursion to the same region. This time it is fly-fishing, and may good luck attend his efforts.

Decoration Day was ladies' day on Sebago Lake. So remarked a Portland friend of mine, a member of a fishing club with the Indian name of Ancocisco, meaning, I believe, "place of rest." T. P. R. Cartland and wife, Henry Whitman and wife and H. A. Clay and wife, all of Portland, made up the Memorial Day party, and as the ladies had all the luck, my friend very appropriately named the day as their own. Mrs. Cartland landed a 5½lbs. salmon, hooked and lost two nice fish. Mrs. Clay landed a 4½lbs. salmon and lost one. The fishing was excellent all over the lake, and there were many parties out. A new club has just been organized, with camps at Spider Island. The membership at present consists of five each Boston and Portland men, all high-grade anglers.

The L. D. Chapman party to the Megantic preserve left on Wednesday last for a ten days' trip. They will go in at the club house, and come down through the preserve to Eustis, stopping at all the principal camps, and fishing every good place where there is a chance to drop a line. Most of the party are old campaigners, there being, I think, but one member who has not been over the ground before. J. J. Henry, Horace S. Dame, L. D. Chapman and Myron L. Whetherbee, of Boston, and Geo. P. Kimball, of Nashua, are the men who make up the list.

B. F. Wild and wife, J. F. Wellington and wife (the gentlemen well known in the coal trade in Boston), Geo. Macomber and wife, J. B. Viall and wife, and J. A. Faulkner and wife, of Lowell, have just left for a ten days' trip to Moosehead Lake. They will stop at the Kineo House, and the gentlemen at least will devote almost the entire time to fishing, endeavoring to land some of the big lakers, similar to those which have been so freely caught at Moosehead this season.

J. A. Littleton and Geo. R. Hall, of Boston, returned a few days ago from the King and Bartlett preserve. Mr. Littleton says he will know again when to go there after big trout. His trip this year was the earliest he has made, and he found the minnows crowding up into shoal water at the mouth of Bear Brook, the trout following after to feed on them. On June 2, Dr. F. M. Johnson and three others will leave for the King and Bartlett camps. June 6, Chas. W. and W. J. Epting leave Philadelphia for a trip through the fishing resorts of the Dead River region, ending up with a long stay at King and Bartlett. These gentlemen have visited the Dead River country several times, and are well known to most of the guides and many other sportsmen. They are cordially welcomed everywhere, and it may truthfully be said that no one can be more popular than the "Eptings." Mr. and Mrs. J. A. Littleton leave Boston on June 8 with a small party of friends, bound for King and Bartlett. To the same place later in the season Dr. and Miss Mary E. Van Zandt, Dr. T. D. Myers and party, and A. J. Wermelsdorf and family, all from Philadelphia. On June 15, from Boston, T. H. Rollinson and wife, E. L. Barry and wife, Geo. L. Tracy and S. Y. Nash.

The Katahdin Iron Works, Maine, is the destination of a party of good fellows who left Boston a few days ago to fish this celebrated region. James S. Richards, Wm. F. Kimball, Jasper M. Keller, Frank N. Sleeper, and Wm. J. Follett, of Boston, and Wm. B. Tobey, of North Berwick, Me., are the men who compose the party, and the trout will have a chance to be hooked with skilled hands this time. HACKLE.

CANADIAN ANGLING NOTES.

Editor Forest and Stream:

Most of the members of the Metabetchouan Fish and Game Club, whose arrival here on their way to their preserves at Kiskisink was recently noted in FOREST AND STREAM, have returned home after a most successful fishing trip, despite the steady rain that prevailed during most of the time that they spent upon their waters. The fish ran large and rose freely. Among others who joined the party at Kiskisink was the Hon. T. B. Reed, of Maine, ex-Speaker of the House of Representatives.

Messrs. Geo. E. Hart, Irving Atwood and Chas. Turner, of Waterbury, and Wallace Durand, of Newark, N. J., are having great sport at the somewhat newly formed Nomantum Club, whose limits are thirty miles south of Lake St. John. Despite the rain I spent four happy days there with them in the early part of the week, enjoying to the full the best and wittiest of camping society and the grandest of fly-fishing. Mr. Durand topped the score with a four-pounder, while I remained in camp; but even better sport has been had since I left the limits. My friends expect to leave the woods on Wednesday next and to return in September. This club owns probably the finest trout waters in the province, and includes in its membership Mr. Bennett, the president, and Mr. Hooper, the vice-president of the Winchester Arms Company. It controls some thirty or forty lakes in which no white man has yet wet a line, and its main club house is beautifully situated upon a point jutting out into Lac des Commissaires, a handsome body of water 15 miles long, surrounded for the most part by lofty hills, the shores of the lake being wooded to the water's edge. The sportsmen now encamped in this ideal anglers' paradise are all adepts at the gentle art and familiar with all the famous fishing resorts of the Northern and Eastern States. Their sporting outfit is the most complete and certainly the most unique that comes into Canada, and ought to have had a place at the late Sportsmen's Exhibition.

Lake Edward has yielded some capital fishing this spring, and at least a couple of 5-pounders formed part of the catch of a party of friends which went home via Montreal on Thursday last, and included Fred Remington, the artist, of New York; J. W. Burdick, General Freight and Passenger Agent of the Delaware and Hudson Railroad; C. S. Weston, C. R. Manville and David Zieley. The number of American visitors to Lake Edward is increasing every year.

Ouananiche fishing in Lake St. John is something marvelous this year. A week ago a handsome 7-pound specimen was sent here by Mr. A. W. Patterson, and a day or two later Colonel Montizambert, commandant of Quebec, and Colonel George R. White killed forty-two fish in one day in Ouellet's Pool at the mouth of the Ouiatchouan, where they were guests of the owner of the riparian rights, Mr. F. Ross, of Quebec. Another day Col. Montizambert went out alone and killed eighteen fish before luncheon, running from 2 to 5lbs. each, though he made splint-wood of one of his rods. Col. White is an old-time trout fisherman, but has now made up his mind that trout are not in it with ouananiche.

Owing to the immense amount of rain that has fallen here of late, it will be some time yet before there is any appreciable fall in the waters of Lake St. John, and until then the fishing for ouananiche will be good both in the lake itself and also in the mouths of the Ouiatchouan and Metabetchouan rivers. I look for good fishing in the Grande Décharge to commence about the end of next week. Certainly by June 10 there will be no question of it. It will be at its best until about July 10.

E. T. D. CHAMBERS.

QUEBEC, June 1.

Tarpon in Florida Waters.

JACKSONVILLE, Fla., May 25.—While at Fort Myers, Florida, the first part of the month, Joseph N. Patterson, of Philadelphia, caught twenty tarpon, including one of 182lbs., which is the largest of the season. The same day he landed three others, which scored 154, 142 and 116lbs., equal to nearly 600lbs., in one inning, and beating the season's record in size and aggregate weight. H. C.

Ontario Black Bass Season.

THE Ontario black bass season will open the year at midnight of June 15.

SOME FISHING NOTES.

BLAKESLEY CAMP, June 1.—I am enjoying some very lively fishing at Blakesley Camp (Douglass & Emery, proprietors), about eighteen miles from Eustis, Me., on the Spencer stream. The stream affords the finest kind of fishing at this time. The fish are small, but voracious and full of fight. They can be caught as fast as one can cast and take off. At Blakesley Pond the water has receded so that trout rise in the liveliest fashion. About one-half hour's fishing this evening resulted in eighteen beauties, running from one-half to one pound, and the rises would have pleased the most exacting. Anybody in search of a comfortable place to catch trout will do well to write Messrs. Douglass & Emery, Eustis, Me.

CHARLES H. MEIGS.

LIBERTY FALLS, Sullivan County, N. Y., May 28.—Trout fishing in the central branch of the Mongaup, from the old Kilbourne mill down, is good now this cloudy weather. Also pickerel fishing. In Stevens Lake, 1½ miles from here, one of our boys caught 46 pickerel yesterday that weighed 19¾lbs. Prospects are good.

E. A. GREGORY.

SEBEC, Me., May 27.—Parties that I have had with me the four days I have been up the lake since Sunday, May 19, have saved 43 landlocked salmon. More than half of them would weigh 3lbs. or better each. None were killed of less than 1lb. I call this good fishing.

FRANK A. JORDAN.

LONG ISLAND.—Babylon, N. Y., May 30.—We caught between four of us 175lbs. of fish. Flounders, sea bass and blackfish in profusion; and three weakfish weighing on an average of 4lbs. JACOB EIDT, JR.

ST. LAWRENCE RIVER.—Clayton, N. Y., June 1.—Bass fishing opened magnificently here. About a dozen boats have been out for two days, average catches being from 20 to 40 fish per boat; size and quality of fish the best I have ever seen among the Thousand Islands, the tackle being used is very light; 4½ or 5oz. rods, G or H lines, with Skinner No. 2, casting spoon in front of a minnow. Prospects most favorable for good fishing from now forward. JAMES CHURCHWARD.

CLAYTON, N. Y., June 1.—The Minister of Marine and Fisheries has sanctioned a change in the fisheries regulations which will be welcomed by anglers. Heretofore the regulations have prohibited fishing for bass until June 30. The amended regulations will permit the catching of bass on June 15 in the Provinces of Ontario and Quebec. Our season is opening big, bass and pickerel biting freely. I have reliable reports of this, and of the taking of 2½ to 3-pound bass. This noon I saw a fine string of pickerel and bass that were caught in a few minutes from the dock here. YOUR COMRADE IN ARMS.

CANANDAIGUA, N. Y., May 28.—The sixth annual fishing contest of the Canandaigua Rod and Gun Club will be held Thursday, June 20. It has been the custom among fishing tackle and other sporting goods houses to contribute prizes to be contested for by members of the club. Our organization has about three hundred members. S.

ANGLESEA, N. J., June 1.—Sea fishing here is excellent now; large catches of sea bass have been made. The season is wide open and there are bigger fish in the sea than ever came out of it. S.

Parasites in Fishes.

Editor Forest and Stream:

Last summer, in Lake Champlain, I caught at various times some good-sized perch, which I thought would be good eating, but was informed by the people living there that they were not good to eat in the summer, as they had worms under the back or caudal fin. Then others would say that if they were caught out in the deep water, where it was colder, they did not have these worms and were good to eat. While at Lake George I caught a great many fair-sized perch, but not so large as the Lake Champlain perch; but at Lake George they know nothing of the worms being in perch, and eat them of all sizes and at all times. But I must confess that my desire to eat perch had been a thing of the past, after I heard of the Lake Champlain worm theory.

I expect to catch more perch of course in due time, and am very desirous of knowing if they do have the worms as herein referred to, for it seems strange to me that a fine, healthy-looking and active fish can be so affected. If you can enlighten me on the subject I would fully appreciate it, and sincerely hope to hear from you in your next number if possible. APROPOS.

[Such parasites are not uncommon in perch, bass and other game fishes. They are believed to be quite harmless, and the fish may be eaten with impunity.]

The Sum and Substance of a Fishing Trip.

BOREAS RIVER, Adirondacks, N. Y., May 26.—As I went a-fishing yesterday for the first time in years, I thought I would write and tell you about it. Two of us started at about 2 o'clock, went about two miles up the Boreas River, came to a place where the water seemed to be alive with fish. There were a dozen at a time, or more I think, bobbing their heads out of the water. I could catch them just as fast as I could bait my hook and haul them in for quite a few minutes, but when the sun would shine very bright they seemed to go away for a few minutes, but would soon return. We caught ninety-one nice ones. On our way we saw some deer runways, where the deer run to the river when chased by dogs and hunters in the fall of the year; also some noted watches, where the hunters sit and watch for the deer to be driven to them to kill. The place was also pointed out to me where Dell LaBier killed his first deer, a nice large buck; also where Hermie Brace (one of the best guides) killed his large deer. We arrived at our starting place between 5 and 6 tired, but with such a nice mess of fish tiredness was soon forgotten when our friends began to admire our trout. MYRA J. LABIER.

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable*

ANGLING WITHOUT HOOKS.

Some Fellow Fishers.

THE earnest painstaking angler, who noiselessly wades the stream in May, during the quiet interval when his feathered tempters flutter unfollowed across pool and ripple, observes much of interest in the animal life around him. His figure, corduroy-clad, moving so warily, with never a plashing footfall or clatter of dislodged stones, does not alarm the birds and beasts and he may draw very near and watch them at work or play. Soon he will find that others beside himself are busily fishing, others whose simple outfits of beady black eyes, quick sharp claws or bills can land as many and as large trout as ever he can, cast he his coachman and brown hackle never so cunningly, never so well. Their patience far exceeds his, and their knowledge of the habits and haunts of the fish, though he may refer to it as mere instinct, he must in all truth confess to be wonderful and unfailing.

The birds will be more noticeable than the other fishers because of less shyness on their part. Most familiar of all stream-side acquaintances may be reckoned the belted kingfisher, he of the flickering flight and hoarse rattling cry. His white collar gleams against his coat of slaty blue as he wrings past heading down stream. Shortly afterward as you turn some sudden bend you perceive him perched on a dry overhanging bough that droops near the stream. Motionless as the dead wood itself he eyes the shoal water beneath and suddenly darts swifter than thought to the surface. With a splash he strikes and amid the spray he rises bearing a slender silver victim. One less baby trout, you reflect, but you cannot fail to admire the skill and dash of this successful rival as he circles away with his prize in rancorous triumph.

A few rods below, where the river slides over rocky shelves, beneath arching water beeches and alders, you stumble upon a solitary green heron. Still as any statue, he stands on one slender foot and the calm surface of the little shallow cove reflects the lustrous dark green of his crest and wings. Though you cannot see them, he has descried a shoal of yearling trout aimlessly floating in away from the troubled waters of the main creek. With serpent-like movement the neck curves outward and the bill descends unerringly into the pool. Before he can swallow the dainty tid-bit in peace, a big trout has plunged from the foam-embroidered basin under the hemlock stump, and the alluring but revengeful green drake has gripped him with its steel-barbed sting. The frightened fish thrashes the surface, and the silent bird, stretching its long legs wasp-like behind it, rises and flits from view. In the old deserted mill pond whither he now flies he will have to content himself with the more plebeian dace and shiners, but there no human marauder will intrude.

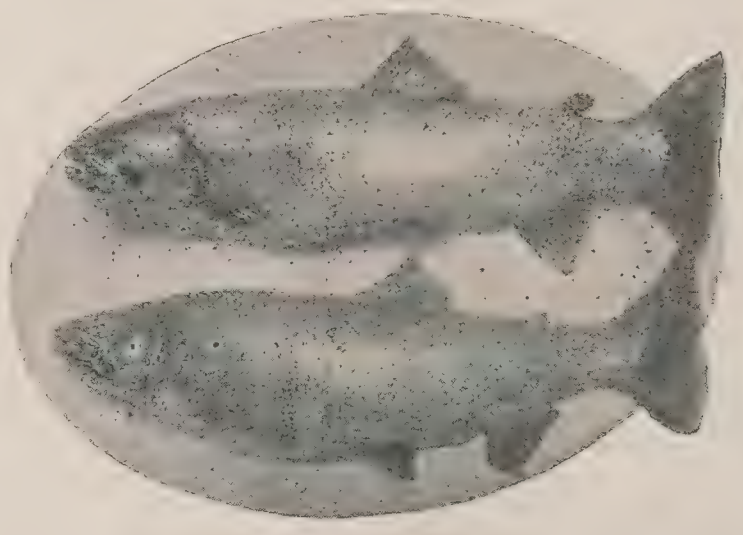
Where the brook broadened out under overshadowing pines and hemlocks the angler comes upon a beautiful sight—a pair of wood ducks feeding. These smallest of our ducks are also the most gorgeous in color. Green, purple, orange, white and black flash on the eye as the alarmed birds skim away into the cover. They, too, are expert fishers, as are the commoner and homely black or dusky duck, and in a season both will destroy hundreds of young fry. Haunting the more secluded and bush-grown water courses, they suffer comparatively little danger of attack. Human anglers occasionally alarm and hawks now and then pursue, but among the rank swamp growth Sir Falcon is at a disadvantage.

Now the way leads through the deep woods. Giant oaks and chestnuts shadow the rifts and deep holes. Big trout hide in the black recesses behind roots and fallen trees. Only here and there an unwary one rises to his death. Mostly they are too old and wise. After nightfall they will stir out and begin to feed. High overhead sails an osprey on wings wide-spreading and strong. Though he is full an hundred feet above the creek, he sees every movement in its depths. Lower and lower he settles, and then, after hanging poised in midair a second, he makes a plunge. Dripping, he slowly rises, holding in his cruel talons a good half-pound trout. Enraged, the human rival draws a revolver and fires again and again at the fast disappearing fish hawk. As he returns his unavailing weapon to its resting place he relents, for some baby ospreys probably are watching for that mother and her burden of trout with hungry little eyes.

In the unsheltered meadow stretches the angler finds on the moist sandbars the innumerable prints of birds' feet. Here the spotted sandpipers (commonly called "tip-ups") have run along the water edge. "*Peet-weet! peet-weet!*" There is a shrill-voiced pair of them settling on yonder shingle. How daintily they trip over the pebbles, poking those slender bills far into the sand in search of food. Yet if in a tiny puddle left by the receding creek they find a few belated landlocked minnows or trout, they will speedily catch and devour the hapless fish. They like, too, the young of the fresh-water clam, but on the whole cannot be called professional anglers. Nevertheless they are fellow workers, in that they haunt and feed along the fisherman's dearest streams.

A keen eye soon reveals to the man of rod and reel, however, the presence of other than bird anglers. Here, on the brown, dry crest of a rock in mid-stream he finds the moist footprints of a water rat. The cunning rascal slipped out of sight when he heard the approach of the stranger. Ha! In the dark shadow of yon thick, drooping ferns on the bank is a broad, flat rock. On it sits a slender, dark creature, smaller than a house cat, and far more subtle. It is an old, old mink. He is so ancient that his fur is tinged with gray and his whiskers are long and white. For fifteen summers he has dwelt in the hollow bank behind that ledge, and in the wisdom of his old age he strays not far from his doorway. Each season the man in corduroys has seen the knowing old mink, and that shifty hermit has been none the wiser. To-day while he stands, rod in hand, screened by a leafy willow, he sees the hoary mink slyly bend over the brook and with thievish celerity extract therefrom a plump, rosy-bellied fish, one that would weigh a full ¾lb. Noiselessly laughing at the old chap, he has seen him feast on his captive and after the meal wash his wrinkled face and paws with greatest care. Then the willow shakes, the rod moves, and the gay flies light near the ledge, empty now, but still tracked by damp feet. From his stronghold the mink is peering out, and while he rejoices in his secure hiding-place, who shall say a flash of envy does not burn in him when a 1lb. trout snatches the orange feather, foams and frets to break away from the web-like silken strand, and at last is lifted by the man into the now heavy creel?

A family of muskrats that live under the bank hard by are all out fishing when the human angler draws nigh. One is perched on a partially submerged log opening a fresh-water clam, of which these creatures are passionately fond. His two brothers are watching for a trout. Simultaneously they spy a victim and one captures it. Then a rough and tumble fight ensues, during which the fish escapes. Some sound or motion gives a signal of alarm, and all three with small, shrill cries slide into the creek, and one ploughing his way up stream almost runs against the boot leg of the corduroy-clad man. An old raccoon who was also fishing takes to his nimble heels and vanishes in the cleft of a decaying chestnut. The last settlement of otters appears deserted. The big brown fellows who have fished from the hemlock log for so many years do not show themselves any more. "Some miserable trapper's work," reflects he of the whip-like rod and slender whispering line, and a feeling of regret comes over him. All the others he has silently greeted as old friends, and he misses these, the only absent ones.



Older than all the other fishers, older than the mink or the wrinkled lynx that will creep down to fish by starlight, or the man in brown who is moving so stealthily, is the loggerhead. Probably a hundred summers have painted the green banks of that winding river and a hundred winters imprisoned its restless waters since that old mud turtle first crept into the sunlight. He is a wonderful fisher, too. Many a toothsome trout—no tiny ones either—has he seized and held in his grim jaws. How slow, how clumsy he seems as he paddles out of the man's way, but he is no idler, and one who outlives a century has no need to hasten.

The sun is low now. As its red light flares upon the trunks of the birches the man is making his last cast. A plunge in the rosy shallows and the faithful rod bends double. A foaming dash and the line comes dancing idly to the rod-tip. A leader has proved treacherous (as human leaders often have) and the grandest fish of the day is lost. Slowly the tackle is being put away when the man sees his last rival make a successful effort. From the washed-out tangled roots of a big black birch a water moccasin had crawled down to the edge. Gripping the roots behind with lightning coil he had entered the stream with flattened, eager head. A sudden dart, a writhing of the powerful gray-scaled folds and the head is drawn back. In its mouth quivers a beautiful fish. All the colors of the sunset gleam from the helpless victim's sides as he gives one desperate shake. Quicker than light a crimson streak strikes the stream; the trout has escaped, and with a light-hearted laugh he of the corduroys flings a pebble at the disappointed serpent and strikes the homeward trail.

H. PRESCOTT BEACH.

BLACK BASS NEAR BOSTON.

FOREST AND STREAM'S celebrated picture "Chained to Business" is well-known in Boston, and many unfortunate anglers of this city, when compelled to listen to the rosy yarns of friends just returned from the woods and lakes, murmur sighs of discontent as they think of their inability to get away from work to spend a few happy weeks with rod and reel. Finally, becoming convinced that it is impossible to get a long vacation, those who are most devoted to the sport begin to cast about them to find a way to cheat the "business grind" out of a few hours or a day now and then in fishing near at home. Black bass is the noble game most in mind, and very fortunately there are some places near to Boston where this fine fish can yet be found. June 1 ushers in the open season on bass, and from that time on parties are leaving the city daily to fish surrounding waters while the open

BLACK SPOTTED TROUT OF THE STILLWATER.

season lasts. As if realizing the unfortunate condition of many of her best citizens, the city of Boston (through the Water Board) has made it possible for a limited number to enjoy good fishing almost within her borders. Permits for fishing in Chestnut Hill reservoir are given to applicants by the Water Board. One permit is good for two persons, and only one is allowed each day. The fishing must be done between the hours of 4 and 7 A. M. and the city furnishes the boat. The fishing last year was very good and promises to be the same this year. Many applications are received for the necessary papers far in advance, and those who are lucky enough to get them are fortunate indeed. Not to be outdone by Boston, the City of Cambridge, just across the Charles River, follows the same general plan and issues permits to fish in Fresh Pond, the Cambridge water supply. These permits allow fishing from 4 to 8 A. M. and are only issued once in two months to same parties. Boats are furnished by the city, and bass, pickerel and large perch are the game to be had. Ten miles out at Wakefield Center there is a pond from which bass weighing as high as 4lbs. were taken last year. It is a very good place to go and is easily reached in a few moments from the city by steam and electric lines. There is another pond at Wakefield Junction, but I believe very few, if any, bass are found there. The Winchester Pond has lately been taken in by the Metropolitan Park system and I am told that all fishing in this water has been stopped. Fairhaven Bay, a sheet of water making in from the Sudbury River, is a banner place for bass and is easy to reach from the city. A friend who fished there last season captured one which tipped the scales at 6lbs. 5oz. A good way to reach this water is to take the train for Concord and then a boat three miles up the river to the bay. There is good pickerel fishing all along the Sudbury, but rather difficult to fish owing to the lilypads, which are very plentiful.

The ponds lying near Plymouth, on the Cape, are an ancient resort for Boston bass fishermen, and Nat. Hoxies's place at Chiltonville, near Plymouth, is frequented during the season by many lovers of the sport. Another place to which many bass fishermen go is the chain of lakes located near Lakeville, about thirty-four miles out on the Plymouth division of the Old Colony R. R. The first of these lakes, Assawampsett (eight or nine miles long), is the largest body of fresh water in Massachusetts. Long Pond, Elders's Pond and Little and Big Quitticus are the names of the other ponds of the system. The City of Taunton gets its water from Elders's, and it is said the fishing there is excellent. At Assawampsett there is a very good hotel, and good boats can be had at the same place. Massapoag Lake, at Sharon, twenty miles out, and Cochituate Lake, about fifteen miles out, are two more points which furnish very fair fishing. Thirty-eight miles from the city, in the town of Uxbridge, there is a pond called Nipmuck, in which are found both the large and small-mouth varieties of bass. This pond was formerly controlled by the Nipmuck Club, who controlled it for quite twenty years. Their lease expired three years ago and it is now open to all comers. Other waters accessible to Boston fishermen are Wenham and Chebacco lakes, near Salem; Singletary Pond, Sutton, Mass.; Waushaken Lake, at Sterling; Chancy Pond, Westboro; Whitinsville Pond, Whitinsville, and Podunk Pond, East Brookfield.

HACKLE.

Connecticut Trout of Size.

PRESTON, Conn., May 30.—Yesterday a Goliath of a trout was brought to the city by a Voluntown man. One of his farm hands captured the fish in a brook adjoining his property. The beauty tipped the scales at exactly 3¾lbs., the largest caught in this vicinity for several years. The man sold it for $1. Another Voluntown man brought in one weighing 1lb. 9oz.

Robert Staub made a visit to the trout pools last week and returned with 26 trout, weighing from ½lb. to 1½lbs. apiece. Robert knows where the trout hide and how to capture them.

E. M. BROWN.

The Leap of the Hooked Fish.

HERE is what Oppian (who lived in the second century) has to say about it:

"The crafty bass, whene'er they conscious feel
Deep in their jaws infix'd the barbed steel,
Writhing with restive fury, backwards bound,
The hook dismissing through the widen'd wound."

Two Stillwater Trout.

MR. JOHN D. LOZEKAMP sends us a photograph of two trout taken in the Stillwater River, Mont. The upper one is a male caught by O. E. Finklenberg, and the lower a female caught by Mr. Lozekamp. They are remarkably uniform in size. The platter upon which they were photographed is 23½in. in length. The fish were taken with the black gnat.

HOT WEATHER AND FISHING GO TOGETHER.—Ask George H. Heafford, G. P. A. of the Chicago, Milwaukee & St. Paul Railway, for the little book "About Fishing." It says where to go.—*Adv.*

Game and Fish Protection.

SOME MAINE FACTS.

Editor Forest and Stream:

I see in your issue of May 11 that Mr. H. O. Stanley criticises your editorial indorsing an article by me in your paper of March 23, entitled "Those Ninety Deer." As I am the cause of this criticism, and as he denies the correctness of several of my statements, I think it but fair to you and myself that I should prove the truth of what I then said.

As Mr. Stanley in his article says that it was not an answer to me, but "addressed strictly to yourself," I propose in this to ignore Mr. Stanley entirely and write to you personally. As he has said that if I have "any grievances or suggestions to make I shall be treated with proper respect if I will apply to the Commissioners of Fish and Game," so I will extend the same courtesy to him when he applies personally to me.

I find no fault with Mr. Stanley's first complaint, that you have overrated my knowledge of game protection. I thank you sincerely for your good opinion of me in this respect, but am rather inclined to agree with Mr. Stanley, and am not aware of ever claiming to be a walking encyclopædia on game matters.

His second grievance is that I wrote I saw trout on the bill of fare at the Augusta House. He admits that the word "trout" was on the bill of fare, but insists that they were not trout, and proves it by telling a story of how he helped impose on the guests at a hotel by feeding them on suckers under the name of perch. The only point I can see in this story is that he helped deceive people. This I do not question. He does not deny that for years trout have in close time been on the bill of fare at the Augusta House, and that he, a Commissioner appointed and sworn to see that the game laws were not violated, has allowed this to pass unrebuked. It makes very little odds what kind of fish were offered under the name of trout; the fact remains that the public have for years been led to believe that trout were freely eaten by Senators and Representatives right under the eyes of the Commissioners; and the many hotel keepers from other places, having such an object lesson given them, might be expected to do the same.

Now, as to what these fish were. I did not taste of them myself, but in appearance they were lake trout, or, as we usually call them, togue; and several of my friends, who are good judges of fish and who ate them on different days, pronounced them togue.

If Mr. Stanley has examined these fish and knows what they are, why does he not give the public the benefit of his knowledge by stating plainly what they are, so that the whole State may enjoy them in close time when other fish are forbidden?

Mr. Stanley also quotes me as writing that I saw large quantities of trout openly displayed at Augusta for sale.

This is what he says, but not what I wrote. If he will refer to my article he will see that I wrote lake trout, and not trout. His omission of this one word, which probably was not by accident, alters the force of the whole. Now, as to this, I say squarely that I did see lake trout openly displayed for sale in close time. There are a great many things which I have yet to learn, but I believe that I know a togue when I see one. I stopped and examined these, and they were togue. Just such togue are caught in some of our Maine lakes. I cannot say that these were taken in Maine, but I can say that they were for sale, fresh, on one of Augusta's principal streets. Mr. Stanley's or Mr. Chandler's seeing any other kind of fish in Augusta does not prove that I did not see lake trout just as I stated. When I asked Mr. Stilwell to look this matter up I expressly stated to him that they were lake trout. In his answer to me he said that there had been no trout in the market.

He well knew that I told him "lake trout," but he dodged the question in the same way which Mr. Stanley does when he leaves out the word "lake" in quoting from my article. I not only say that these were lake trout, but I say that at the time I first saw them he admitted this himself. Mr. R. G. Leonard, now a merchant at Passadumkeag, Me., but then a teacher in the Commercial College at Augusta, wrote Mr. Stanley about these togue. Here is what he states in a letter lately received:

PASSADUMKEAG, Me., May 16.—*Mr. Manly Hardy:* DEAR SIR—In reply to your letter of the 15th inst., will say that I did write Mr. Stanley about the togue on sale in Augusta that winter. He wrote me that he knew of no arrests being made there for the illegal sale of such fish, and said that they were not caught in this State, but came from Lake Ontario. Yours truly, R. G. LEONARD.

To which may be added the following affidavit:

This certifies that I, the undersigned, saw Commissioner Stanley's official reply to Mr. Leonard's complaint above mentioned, and the same was seen and examined by others interested in game matters; also that the Commissioner's letter admitted the justice of the complaint, stating that lake trout had been sold in Augusta in close time as affirmed, but examination showed that the fish were taken in Lake Ontario; therefore the matter had been dropped.

This further certifies that at that date the law absolutely forbade the sale of lake trout in close time; that Mr. Stanley's colleague had prosecuted the proprietor of the Bangor House in Bangor, for serving on his hotel table trout taken in a pond exempted by special law from the usual close time; and that the Supreme Bench, to whom the case was carried, decided that the law forbade selling in close time fish taken legally—as may be seen by reference to the Maine Law Court decisions, case of the State vs. Flavius O. Beal, Maine Reports, vol. 75, p. 289. FANNIE HARDY ECKSTORM.

PENOBSCOT, *ss.*—BREWER, May 24, 1895.—Personally appeared Fannie Hardy Eckstorm and took oath that the foregoing statement is correct according to her best knowledge and belief.

FRANK H. WICKERSON, Justice of the Peace.

These statements prove that Mr. Stanley either was ignorant of the laws relating to the sale of togue at the season or that he knowingly allowed them to be violated with impunity.

Mr. Stanley next states that the man arrested for selling salted Newfoundland trout was not fined. Mr. Eben C. Morse—a warden who told me that he was paid $200 a year by Mr. Wentworth specially to look after game matters—told me that he went on the market, bought two trout, arrested the man, brought him before Judge Vose, and that the man was fined $10. Now Mr. Stanley says he was convicted, but not fined. Why? Because he appealed! This does not disprove my statement that he was fined. What are they prosecuting the case for now? Why—for the fine the man refused to pay. I am prepared to prove that salted trout had been openly exposed for sale on Broad street in Bangor for weeks previous to this, but the warden arrested the peddler and not the merchant.

Mr. Stanley states that the charge that the rich man has been allowed to kill to waste, while the poor man who kills to feed his family is arrested, is ridiculous, and that I know better. I simply stated what I know to be true, and few respectable men who know me will say that I ever knowingly make a false statement. I will ask how it happened that the warden who went to Chesuncook when Col. Seigler's party of some forty or more persons were encamped within a few miles of there—and as one of the party afterwards wrote in a newspaper article were "living on the best of fish and game," though it was summer—did not trouble this large party, but arrested Charles Smith and Thomas Gero, of Chesuncook, for killing meat for their families and lodged them in Bangor jail; and collected a heavy fine of Geo. C. Luce, of Northeast Carry, for having meat on his table; and arrested Mr. Scribner and took him down the lake for killing a deer for his family, leaving his wife and her babe nine miles from the nearest neighbor, as a guide wrote me at the time? This to me looks a little like favoring the rich.

In regard to my statement that a prominent Bangor merchant offered to testify that he paid money to a warden not to see a deer he was shipping a friend, and that he gave the name of the warden to whom he paid it, Mr. Stanley says: "All I can say is that I think he is making an assertion that he cannot back up and I believe is untrue." * * * "Can you believe a merchant can be found who is fool enough, even if he had done what Mr. Hardy says, to testify to anything of that kind?" "I challenge Mr. Hardy to produce the proof."

Well, I accept the challenge, and if it is damaging to the commissioners or any warden, it is the fault of Mr. Stanley, as I give the proof at his request.

BANGOR, Me., May 14, 1895.—This certifies that the undersigned, C. M. Conant, of Bangor, Me., and A. C. Tyler, of Boston, Mass., with Jefferson Nealley, of Monroe, Me., killed several deer in the fall of 1891, and wished to send one to Boston for Mr. Tyler. We went to the office of Warden George W. Harriman, of Bangor, and asked if he could arrange it so that the deer could be shipped. He replied that he could. One of the party paid him $2 and he agreed to meet us at the depot when the noon train left. Mr. Harriman came according to agreement, and the deer, which was marked for Mr. A. C. Tyler, of Boston, was shipped and was duly received in Boston.

C. M. CONANT,
ALFRED C. TYLER.

COMMONWEALTH OF MASSACHUSETTS, SUFFOLK, *ss.*—BOSTON, May 16, 1895.—There personally appeared the above-named Alfred C. Tyler, and made oath that the foregoing statement by him subscribed is true. Before me, EDGAR R. CHAMPLIN, Justice of the Peace.

STATE OF MAINE, COUNTY OF PENOBSCOT, *ss.*—BANGOR, Me., May 22, 1895.—There personally appeared the above-named Charles M. Conant, and made oath that the foregoing statement by him subscribed is true. Before me, CHARLES DAVIS, Notary Public.

Mr. Stanley further says: "If it is true the Commissioners will be very glad to know it." If the Commissioners did not know this long ago it is their own fault. Mr. Conant tells me that he told Mr. Wentworth of this last fall, and I will testify under oath that I told Warden Eben C. Morse of it and offered to prove it by Mr. Conant if Mr. Morse would go to Mr. Conant's store with me, and t was Mr. Morse who advised me to have the man arrested if I could prove it. This looks a good deal as if the Commissioners wanted to know of such things!

Now as to the last question: "If Mr. Hardy knows so much about the illegal shipping of deer from Bangor, why don't he inform the Commissioners, *which he has not done?*" (The italics are mine.)

My answer to this is that, after having in vain tried to call the attention of wardens to it, finally at the meeting of the Fish and Game Association in Bangor a year ago last winter, when both Commissioners and many wardens were present, I not only made the same statements of which he here speaks, but stated on the authority of a member of the Association that at least 200 deer had been sold to market men that season, and I gave proof that only about twenty were skinned here, showing that only these were cut up to sell in Bangor. I also stated how the wardens pocketed fines belonging to the State, and gave an instance of one who sold me over $100 worth of seized hides and who, Mr. Stilwell said, kept the whole part of the proceeds belonging to the State; and I said that the warden I referred to was then sitting in front of me, and I called on him to rise and deny it if he could. I ask Mr. Stanley if that is not being interested in game protection and "informing the Commissioners?" Does Mr. Stanley remember talking in a friendly way with me after the meeting and not disputing a word I said? Or has he forgotten stating in the store of S. L. Crosby before he left Bangor that "nine-tenths of what Mr. Hardy said was true?" And I could have proved to him that the other one-tenth was also true if he had spoken to me about it.

I am certainly surprised at one of the statements made by Mr. Stanley: "There is no law on our statutes to prevent every deer, moose and caribou brought into Bangor being bought, sold and shipped to Boston legally. You can go into Bangor in open time, buy two deer, one moose and one caribou and ship them to Boston or elsewhere. Any man going to Boston can do the same. There is no law to prevent it." I do not question his word on the construction he puts on the law; but I wonder that a commissioner should in so public a manner and in such unmistakable terms inform the public that there is really no restraint on the shipment of game from Maine. As it now is, every master of a vessel can carry twice as many deer as he has persons on board; any employee on any railroad or steamer can carry two at every trip. Previous to this it has been understood that the person killing must accompany the game, but now it seems that any one can carry it. It looks as if market-hunting would again be in fashion.

Having differed from Mr. Stanley on so many points, I take great pleasure in agreeing with him in one of his statements: "Throwing mud may be all right for boys, but not for gentlemen, even if you have the most ammunition on your side." I do not think that any gentleman will do this, and I freely concede his claim to having the most of that kind of ammunition on his side, even after the liberal expenditure he has made in his article.

MANLY HARDY.

BREWER, Maine, May 24.

To Protect Niagara River Fish.

BUFFALO, N. Y., June 1.—At the Broezel House yesterday the preliminary arrangements looking toward the organization of a branch of the New York State Association for the Protection of Fish and Game were taken, and there is reason to believe that the matter will be pushed from now on. The meeting was called by Frank J. Amsden, of Rochester, the president of the Association, and the call was responded to by some fifty men, including the rich man and those in the humbler walks of life. All recognized a common issue in the protection of the Niagara River fish. Mayor Edgar B. Jewett was made president of the meeting and the case was stated plainly by Mr. Amsden. He said that the State Association included over one hundred clubs, representing every county in the State with the exception of Erie, and he thought it was about time that this section of the country woke up. The object of the Association was to secure good laws and build up a sentiment in favor of the protection of the fish under them. The waters of the Niagara were the natural home of the bass, muscallonge and perch, and would today be thickly populated with the fish if it were not for the excessive illegal fishing. Mr. Amsden said that the local Association would have the support and encouragement of the Association and would have the interest of the State Commission. Under the law which has just been passed, and which it is expected that the Governor will sign without delay, the Commission has the appointment of thirty-one protectors, and Erie county should have one of these protectors. Niagara county, well organized, had secured the appointment of a capable man in Pomroy, who looks after the local end of the matter until another man shall be selected. Mr. Amsden called attention to the planting of fish fry which is practised by the State Commission and showed why the Commission would be more likely to recognize a well-organized section in the distribution of this fry than to pay attention to a careless community. The breeding of muscallonge and black bass would thus be encouraged and the population of the waters of the upper Niagara increased.

J. A. Dingens was appointed to select a committee on organization, to be composed of nineteen people, and was given power to call a meeting.

The Pennsylvania Grouse Bill Veto.

GOVERNOR HASTINGS'S veto of the bill prohibiting the sale of ruffed grouse in market in the State of Pennsylvania is probably one of the most atrocious acts ever perpetrated by a governor of the State. It is not only a direct slap at, but also an insult to the 75,000 sportsmen in Pennsylvania who agreed upon and constructed the bill (conservative estimate places the number of sportsmen in the State at 75,000). Furthermore, it means the total extinction and extermination of the most noble bird that God has ever made (the ruffed grouse). Every man who is a man, whether he is sportsman or not, should remember this veto of the governor; remember that he signed away the life of the game birds of Pennsylvania to please a syndicate of cold storage men of Philadelphia, who called upon him while he had the bill under consideration and left Harrisburg, knowing that they had won their victory over the sportsmen. What a victory it was, the life of our few remaining game birds. We number at least 75,000. Why could not the bond of good-fellowship which holds us together firmly now unite us politically and make us a power, not only in this State, but in every State in the Union? The bill which the governor vetoed was adopted unanimously by the sportsmen of the State, after which it was shown to a number of the best legal minds and pronounced constitutional by them all. After the bill had been approved and pronounced constitutional money was collected to help it through the House and Senate. Sportsmen all realized that this would be their last opportunity to protect, and if the bill was defeated the few remaining game birds would be exterminated within the next five years. We have in Luzerne county a number of miners and laborers who are gunners and true sportsmen. They realized the importance of this bill and did all in their power to help it through, some contributed 25 cents and others 50, all unsolicited. A committee was sent to interview the governor personally. He gave them to understand that he was a sportsman himself and that any bill for the protection of game would meet with his approval. The slaughter of the game birds will now go on as it has heretofore and the work of extermination will be thoroughly done. In a few years the grouse, like the buffalo, will be a thing of history, thanks to Governor Hastings.—*H. M. Beck, in the Wilkes-Barre Record.*

SETTERS VS. POINTERS.

CHATTANOOGA, Tenn.—*Editor Forest and Stream:* The years are not many since when to speak of a pointer was to flout him as a field dog. The number who did not do so were few, very few. A small band, fewer still, dared to breed pointers. Their efforts were often derided, and oftener looked upon as wasted. The day of the setter was then at its highest. The fancy of the admirers of the pointer was amicably conceded to be a harmless illusion which could be indulged by the few whose minds could not appreciate the nobler and greater setter. Writers did not hesitate to publish their contempt for the short-haired bird dog. Handlers were reluctant to run him in the trials. There seemed to be a certain stigma for owning a pointer; not that it was far-reaching or weighty, but only so far as it stamped one as it were with an inferiority in sportsmanship. It denoted then that the owner of the pointer was in a lower stratum of sport. But times have changed.

A few years have brought forth new history. The setter no longer stands on a higher plane of ability than does the pointer. And all this has been brought about in a few years. So quietly has the change been made that but few have been conscious of it. It has come without the tooting of horns and tumultuous bustle which has marked the improvement of the setter. It is better so. Real merit is sure to triumph in the end. The pointer has that merit. He has triumphed.

So common was the support of the English setter a few years ago that the pointer always competed against great odds. There was a lively public prejudice against him, which was not a small matter. If two dogs are against each other in a race, the more popular one has the advantage even though all else be equal. Through such prejudice the pointer was struggling through many years. His honors when won were his without sympathy; they were on nothing else but merit. To be beaten by a pointer, even though the beaten setter was a good one, carried with it more than mere defeat; it was disgrace. There was no praise for the pointer. The pointers were in popular opinion all on the same dead level of inferiority. A victory over a good setter did not raise the pointer up to the high position such won him of right, nor did it win the generous praise which was his due, but rather it lowered beyond pardon the standing of the setter, for by common consent the whole race of pointers was inferior, and a dog beaten by a pointer must plainly be still more inferior.

The higher merit of the setter was and is claimed with a steadfastness which never lessened. Owners of setters have held forth his high claims incessantly. The setter's victories were grand and adorable, his defeats were smothered in excuses or had everything to condone them. There was everything to explain the setter's defeat except one thing—the pointer's superiority. The setter's victories have been paraded; they have been enumerated and many times painted; they have been admired and made much of; they have been used as a mark of merit for the sale of puppies and the multiplication of stud fees. It has been held that the setter's long coat was good in serving to keep him warm in winter and cool in summer, and that it was not out of place in burrs which stuck to it nor in mud which grossly soiled it.

But how great now is the change! The pointer has risen to a point of merit which no one can deny him. He reached it by hard work. He reached it against great odds. He reached it by a courage which could not be shaken.

In the American world, where is there to-day a setter which has such brilliant and numerous victories as Rip Rap? Where is one which ran with such honors as a puppy, and added new honors in his old age? Each of his competitions but confirmed, added to and graced his victories which had gone before. What setter ever held such form? or what one ever ran without

making bad and good runs? The great Gladstone had no such record. Nor yet had the great Count Noble. But then they lived in a different age, when the opportunities to make records were fewer.

Then there is the great Strideaway. The best setters, the cream of the land, went down before him like the autumn leaves before the storm. He furnished quick records while the setters were busy with quick excuses. But are there many setters of his age with such records? I say no.

Then there was the great and noble Kent Elgin. His sad ending can never be enough deplored. A great dog, a grand dog, a loss to the pointer breeders which cannot soon be filled. No setter could meet him as a superior. He was of the best and equal to the best. Though his life was short, it was brilliant. He was a field dog, a great dog; not a great dog as compared to a breed, but great as compared to all breeds.

Considering the odds in numbers, the records prove that the pointers are beating the setters. New lines of breeding and more plucky competition are bringing forth the inevitable results. The tide is on the turning point, and it will not be long before the pointer is the dog of fashion as he is now in fact the dog of merit. He is better and more carefully bred than the setters. His intelligence is greater. Ignorant or reckless inbreeding has not weakened his constitution nor shrunk his brain. His interests have been in the hands of a few. They were a skillful few. Their skill and patience have brought them reward.

Many other pointers of fame could be mentioned. They are all dogs of great merit. I started with no intention to name all the good dogs. I mean to call attention to a fact. The pointer is no longer the clown of the field. He is near to being the master. POINTER.

A Champion Stake.

WAVERLY, Miss.—*Editor Forest and Stream:* I inclose you for publication a letter from Capt. McMurdo. I have not received the encouragement I expected, but have some nice letters from some on the proposed stake. I am not easily disappointed, and shall try to stir up the handlers a while longer. I have no dogs to run myself, and am only interested to the extent of a breeder and handler.

CHARLOTTESVILLE, Va., May 19.—*Mr. Titus:* In reply to your letter calling upon the members of the Association of F. T. Handlers to write you on the subject of getting up a Champion stake as you propose, I can only say that I think it is a very good idea, and hope that it may be successfully carried out. For breeders who are capable of appreciating the immense value it would be to them to have such a good opportunity of judging for themselves what stud dogs are the most desirable to breed their bitches to, it would be a great boon.

No dog can run for four hours in a good bird country without showing what he amounts to, and whether he wins or not he will have the chance of establishing a reputation for himself.

I cannot think of anything in particular to suggest except that, as the trial must (owing to the necessity of having long heats) be a protracted one, it will be desirable to make such rules as will prevent any unnecessary loss of time; for instance, in case any duffers should be started, that as soon as all the judges are agreed that they are such, they should be ordered up and out.

Separate trials for pointers and setters would of course be satisfactory, but if they protract the trial considerably I think it would be well to have the question considered.

If the competition is composed of nothing but really high class dogs, it will be intensely interesting; but if any number of them should be ordinary the spectators will get sick of it and quit.

You see my idea is that it will be most important to prevent what must be a long business, being necessarily so.—C. E. MCMURDO. W. W. TITUS.

Working Beagles.

GEORGETOWN, N. Y.—*Editor Forest and Stream:* Since writing for your interesting paper two or three months ago, beagle items have seemed scarce, so perhaps it would not be intruding to again venture an opinion or two concerning working beagles.

Now in regard to a hunter, a broken beagle, give me one that I can take to the brush, sit down on a log, and the dog knows enough to start and follow a rabbit and stick to it without my following him up to keep him going.

I am too lazy to run the hound in order to have the hound run the rabbit. This applies to a broken dog, not a puppy, as a young dog is apt to be timid, and must have the assurance of the master's presence, or a broken dog to run with.

I call no beagle a good hunter that does not go to work as soon as freed from restraint, if it is to run nothing more than a mouse; for if he has the requisite propensities he will not follow, a perfect picture of docility, at your heel and wait for you to start the rabbit. Just one hour of such work as that, considering my excitable disposition, would retire him to his kennel or his grave forever.

Now, allowing we have a worker, we patiently await, after reaching the brush, the starting of the rabbit. His presence is soon made known by the silver-tongued voice of the hound. Then, if his scent is not at fault and he has hunting sense and a level head to guide him, Bunny must soon be on foot for parts unknown. Two to one he makes one or two turns to get his bearings, and to throw off the hound if possible, which, finding impossible, he flies to the farthest end of the brush, and there makes turn after turn while you are working and puffing to get up to the hunt. But stop a moment! If the dog is a true, strong scented, resolute hunter, and can follow without fault, the rabbit will probably soon be back near his starting point, so you might as well stay where you are and listen to the music. If the dog is a quitter, or if his nose is at fault, or if he is unable to run a double circle, you had surely better stand still and save your strength, as the dog will soon come and the hunt be up.

Oh, by the way, somebody spoke about speed. Well, if the dog isn't a sticker or hasn't the best of scent, the faster he runs the sooner he'll be back to you without the rabbit. Allowing he is a sticker, and has the best of scent, combined with a good deal of intelligence, he will not run faster than, by his sense of smell, he knows he is right.

Give me a strong, resolute, active, intelligent, sure-scented dog, who loves the chase and runs steady and true, and sticks till the hunt is over. I have no objections to the speed of any beagle under 15in., provided none of the above-named requisites are sacrificed to obtain it. As any animal will redouble its efforts to escape the more scared it becomes, it stands to reason it will get as far from the danger as possible. So the rabbit will make larger circles ahead of a fast sure dog than a slower one. Take the fox for example,—he will simply play with a pair of beagles, thus giving the foot hunter every opportunity of catching up and getting a shot, while ahead of a fast running fox hound he very often is not seen after the start is made. The faster the dog the larger the circle, and the less shots for the hunter. J. F. STODDARD.

COURSING INCIDENTS.

Amateur Fox Hunter.

SYRACUSE, N. Y.—*Editor Forest and Stream:* In a well-known sportsman's house in central New York, where the sportsmen are wont to gather in the inclement days of winter and shoot partridges up among the pink and black

COURSING INCIDENTS.

wads on the upper shelves, or flush a woodcock down among the shot bags back of the counter, or run a fox around the stove, on a Saturday night during one of our violent snowstorms a couple of veteran fox hunters were running a fox around the stove to the great amusement of the other sportsmen. They were also making arrangements for a hunt the following day, when one of the listeners, an amateur hunter who was very much interested, asked permission to accompany them. The old veteran replied that he did not wish to take any one who did not understand the business, as it was impossible to keep them where they should be and it was also impossible to shoot a fox when a man was along that did not understand the business.

But Mr. Amateur did not wish to be put off in that way; he promised that if the veterans would let him go he would do just what they said and stay just where they put him; so it was arranged in that way.

The next day opened clear and fair, a model day for a fox hunt. So Mr. Haywood (as I may call him) took his horse and sleigh, put in his two dogs, drove to the amateur's house, jumped in and drove to the old veteran's home. In company with him and his fox dog, we started for the Indian land, the south part of Onondaga county.

Mr. Haywood stationed himself on a point of a hill where he could overlook the surrounding country. The old veteran put Mr. Amateur in the valley by the side of an old stump, and cautioned him to remain quiet and watch him. The amateur promised in good faith he would do so. The old veteran took his station by the side of an old road-way, about twenty rods from Mr. Amateur. It was not long before the dogs had a fox running, and soon the old veteran saw the fox coming up the valley. Looking over toward the amateur, he saw him stamping his feet and slapping his arms around his body to keep warm. Giving a warning whistle, he motioned him to be quiet, but Mr. Amateur, taking it for a sign to come over, started that way; but the old veteran was up and exclaimed in a loud voice, "You charge, get down!" The amateur lost no time, but fell flat in the deep snow. The fox heard the noise and turned at right angle towards a piece of timber. The old veteran ran across the valley to intercept him, but was too late; and, forgetting Mr. Amateur, walked up the valley. Mr. Haywood saw the amateur fox hunter fall in the snow, and after the fox had passed walked down the hill, found him lying flat in the snow, nearly out of sight. He asked, "What is the trouble?"

"Hush!" said he, "Gilbert told me to charge and keep quiet, and I am going to do so."

"Come! come! get up! The fox is ten miles from here." But of no use were his commands. The amateur was a second Casabianaca. He would obey orders if it took his life. Mr. Haywood was obliged to walk nearly a mile to get Gilbert to call Amateur out of the snow, where he had melted it, and was lying on the cold wet ground. In answer to Gilbert's question why he did not get up when the fox had passed, he said, "Did you not tell me to charge and keep quiet? and I only obeyed orders, as I promised." And the result was that Mr. Amateur was laid up with a bad attack of rheumatism and sore throat. A. R. K.

Northwestern Beagle Club of America.

A MEETING of the Executive Committee of the Northwestern Beagle Club was held at Milwaukee on Tuesday, May 28, at 2 P. M. The members present were F. F. Merrill, Chas. Niss, Jr., Edward Bender, R. Engelmann, Louis Steffen. Vice-President Merrill in the chair. It was voted that the field trials be held at Columbus, Wis., beginning on Tuesday, October 22, 1895. The following classes were made for the coming field trials:

Open Class A—For dogs, all ages, 15in. and over 13in., that have not been placed first in any all-age class at field trials held in America.

Open Class B—For bitches (same conditions as Class A).

Open Class C—For dogs and bitches, all ages, 13in. and under, that have not been placed first in any all-age class at field trials held in America.

Derby Class D—For dogs and bitches, 15in. and over 13in., whelped on or after January 1, 1894.

Derby Class E—For dogs and bitches, 13in. and under, whelped on or after January 1, 1894.

Champion Class F—For dogs and bitches, all ages, 15in. and over 13in., having won a first prize at any field trial held in America.

Champion Class G—For dogs and bitches, all ages, 13in. and under, having won a first prize in any field trial held in America.

Entries for Classes A, B, C, D, E, close October 5. Fee to start $5, of which $2 forfeit must accompany entry, and balance to be paid prior to starting of class.

The prizes for these classes are 35 per cent. of entry money to first, 25 per cent. to second, 15 per cent. to third.

Entries for Classes F and G close immediately before

COURSING INCIDENTS.

starting of class. Fee to start $5, which must be paid before class is started. First prize, 30 per cent.; second prize, 20 per cent. The title of Field Trial Champion will be awarded to the winners in Classes F and G. The secretary was authorized to correspond with different judges for terms, etc.

Mr. Chas. B. Rice, of Highland Park, Illinois, was admitted as a member.

Resolutions of regret at the death of the late E. Bardoe Elliott were passed. Meeting adjourned.

LOUIS STEFFEN, Secretary.

Attention is called to the closing of the U. S. F. T. Club's Derby entries on June 10. Field trial patrons should keep this in mind.

The E. Bardoe Elliott Fund.

Editor Forest and Stream:

We take pleasure in acknowledging receipt of the following subscriptions to the above fund: The subscription list is still open.—James L. Little $10, F. W. Gilbert $1, W. J. Higginson $5, F. C. Nims $10, A. W. Smith $5, Wesley Mills $1, Robert Leslie $5, B. F. Lewis $10, F. P. Kirby $1, J. A. Long $25, Basil Hayman $5, James Mortimer $10, E. M. Oldham $10, Dr. Sherwood $5, W. E. Warner $5, FOREST AND STREAM $10, John Finlayson $5, James Robinson $5, Henry Pape $5, John Read $5, *Mail and Express* Editorial Rooms by James Watson $25, Ethel and Hubert 68 cents, Dr. Foote $5, H. Clay Glover $5, H. H. Hunnewell $5, L. A. Burrits $5, Edward Brooks $5, C. F. R. Drake $5, G. W. H. Ritchie $5, a Friend $1, J. P. Willey $5, George Bell $5, Mrs. F. Smyth $10, W. Tallman $1, W. C. Ehrmann $3, Mike Murphy $1, C. A. Pratt $20, A. Trickett $5, E. W. Fiske $5, a Friend from Winnipeg $3. The following amounts have been promised: Westminster Kennel Club $25, H. W. Lacy $5, J. T. Johnson $2, Adrian C. Pickhardt $25.

JAMES MORTIMER,
Hempstead, Long Island.
EDWARD M. OLDHAM,
245 E. 56th street, New York.

Bull Terrier Club.

PITTSBURG, Pa., June 1.—Bull terrier fanciers will please notice that the description and relative valuation of points of bull terriers as set forth in the pamphlet containing by-laws were not adopted by the club, but were simply set forth as a basis upon which to reach a final settlement by the fanciers interested. The whole matter is still open for suggestions, and is not to be considered as finally settled.

W. D. BRERETON, Secretary,
66 Third avenue, Pittsburg, Pa.

DOG CHAT.

The Bardoe Elliott fund now amounts to $314.68, as per statement in another column. It is for a good cause, and well worthy of the support of all.

From an exchange we clip the following: "The greatest dog owner in the world is Gustav Jovanovitch, the cattle king of the Russian steppes. For the protection of his 1,500,000 sheep he employs no less than 35,000 shepherd dogs of various breeds." What a grand opportunity Mr. Jovanovitch would have in this country to win a kennel prize for the handler making the largest number of entries.

Dr. R. I. Hampton, Athens, Ga., who was active in field trial matters a few years since, and ran some very superior dogs, writes us that he will soon take a three weeks' fishing trip on the Brunswick coast.

In a letter of recent date Mr. Thos. Johnson writes as follows: "Our old friend, Mr. Brailsford, will be at the trials this fall. He has entered two pointers in the Continental Derby, but I have no particulars from him as yet as to what he will run in the other stakes. We often hear of American enterprise and pluck. I think Mr. Lonsdale is endowed liberally and, you can add, generously." It is indeed most welcome news which Mr. Johnson writes. Mr. Brailsford won the esteem of everyone while visiting and competing in the trials a few years ago. His many friends on this side will give him a most hearty welcome. No doubt he will find great improvement in the manner of conducting the competition as compared with the manner of it a few years since.

We are indebted to the *Oakes Weekly Republican* for the spirited illustrations of coursing scenes which we publish this week. They vividly and realistically portray interesting features of a coursing meeting, but, more important still, they are an index to the hearty good will and friendly intention of the home journals where coursing has action.

Mr. H. W. Lacy has now completed arrangements for the sale of the mezzotint engravings of "Crack Dogs of the Day," and circulars will be mailed on application to 164 West 79th street, New York. These engravings represent several of the most noted prize winners in England.

In our business columns Mr. E. E. Boynton, Camden, Me., offers fox terriers and coon kittens; Mr. P. Anderson, Gleckler, Texas, offers retriever; Ideal Portrait Co., New Haven, Conn., offers trick dog; fox hounds are offered by J. G. Albee, Athol, Mass., and H. R. Wood, New York, offers a cocker spaniel.

29. Dorchester open, Boston Harbor.
29. Squantum first cham., Squantum, Mass.

THAT truth is indeed stranger than fiction is again proven by the way in which the modern newspaper writer outdoes in reality, in his special field, the marvelous but imaginary work of the late Sherlock Holmes in the line of criminal detection. Wonderful as were the deductions of Mr. Holmes, they are cast quite into the shade by the everyday achievements of a yachting writer who, from two or three unverified dimensions and an unlimited supply of wild guesses, can construct the complete design of a new yacht.

There is no study more interesting and instructive to the experienced yachtsman than the comparison of the work of the different designers from year to year, noting the origin of new ideas and their influence on design. Such a course of study, if carried out regularly, is in every way beneficial; but it has its limitations, and they are far exceeded when calculations that are based on mere guesses or assumptions are carried out to the third place of decimals; and when attemps are made to compare the future performances of unknown boats by the carefully calculated location of the centers in purely fictitious designs.

If the accounts thus far received of the latest ocean horror are at all true, this "accident" is not far removed from manslaughter, for which some one should be held rigidly responsible. The steamer Colima sailed from San Francisco on May 18 with a total of 216 persons on board; she was heavily loaded, drawing 23 feet, and carried a deckload of lumber. She called last at Manzanillo, Mexico, sailing on May 25. She met heavy weather, and when off the Apisa River, at 11 A. M. on May 27, she was struck by a very heavy sea, her forward deck houses carried away, and the vessel thrown on her beam ends. The cargo shifted and she never righted, but went down, stern foremost, her captain standing by his ship and sounding the whistle as she disappeared. There was no time to launch the boats, but thirty-four persons were saved on the life rafts. The accounts say that many were injured by the timbers washed from the deck and tossed about in the heavy sea. Two small Mexican schooners were in company with the Colima, but weathered the storm safely.

So far as has thus far appeared, the cause of the disaster was the overloading and the bad stowage of the cargo, for which the stevedores in San Francisco are blamed. The overloading of a passenger steamer by freight, and badly stowed at that, is a deliberate crime, for which there can be no excuse at the present time, whatever the case may have been when the laws of stability were less thoroughly understood than they now are. The blame, if any exist in this case, lies not with the stevedores, but must be placed somewhere higher up. Every company which carries passengers on the sea should be in the possession of such expert technical knowledge as will insure that no vessel shall leave port either overloaded or with her cargo so stowed that it can under any possible circumstances shift to a serious extent; and no man is competent to command a passenger vessel on the sea until he is thoroughly informed as to her stability under all possible conditions. Ignorance of the laws of stability can never be urged as an excuse for the designer, owner or captain of a ost vessel.

The lost Colima is noteworthy as one of the first iron coasting steamers built in this country, she and her sister ship, the Colon, having been built for the Pacific Mail by the late John Roach in 1872 just after the purchase of the Chester yard from the firm of Reaney, Son & Archbald. A compound marine engine was imported from England for one of the vessels, we believe the Colon, and was used as a model from which the engine for the other was built at the Morgan Iron Works, John Roach's New York establishment.

Valkyrie.

A great deal has been published within the past two weeks about the new Valkyrie, but nearly every statement is contradicted by others quite as reliable or else is manifestly absurd, the ballast being given at 100 long tons and the sail area at 20,000 sq. ft. The hull dimensions as given by various alleged authorities are: length over all, 128 to 130 ft; lwl, 89 ft; beam, 26 to 27 ft; draft, 18ft. to 18ft. 6in. These figures are unverified, and the exact dimensions are still unknown. The yacht was quietly launched on the spring tides in the early morning of May 27, in the presence of Mr. Watson and a few newspaper men. She had already been struck over onto a railway, the shed under which she was built having been removed; and at 1:45 A. M. the cradle was started slowly down the ways to meet the rising tide. When the tide was well up, at 1:45, the cradle was released with a run, and at 2:15 the cradle and poppet had been cleared away, and Valkyrie III. was finally afloat. There was no christening and no cheering, everything being carried out quietly by starlight aided by the electric lights. She was at once towed to the sheers, for her mast. It is stated that the first mast proved defective, and that a second one had to be made, occasioning a little delay. Captain Cranfield and his fellow skipper Capt. Sycamore have been in Glasgow for some time, and are in charge of the fitting out, with a crew of forty men under them. It is stated that the bottom will not be coppered, except the lead keel, but that the wood will be covered with a new preparation which will give a hard smooth surface, superior to that of copper. It is very doubtful whether this is possible, as both planking and seams must swell for some time; what is more likely is that the bottom has been painted temporarily and that after the planking and seams have swelled, the hull will be planed off anew and then coppered; in fact, as the yacht will sail but few races at home, the coppering might even be deferred until she is in New York.

Britannia and Ailsa.

THE regatta of the Royal Harwich Y. C. was sailed on June 3, Britannia, Ailsa, Niagara, Audrey II. and Dragon III. being among the starters. The race was sailed in smooth water with a moderate south wind. Britannia led at the line and held first place all day, the finish being timed: Britannia 2:59:42, Ailsa 3:02:14. To this must be added Britannia's allowance.

In the 20-rating class there were seven starters, Dragon III., Niagara, Stephanie, Audrey II., Luna and Mimosa. Niagara led at the start, but at one time she was fifth. At the finish, however, she was within 10s. of the winner, the times being:

Andrey II	4 07 55	Luna	4 09 54
Niagara	4 08 05	Inyoni	Withdrew
Stephanie	4 08 07	Mimosa	Withdrew
Dragon III.	4 09 34		

There has been some mystery as to whether Lord Dunraven's 20-rater is really to be called Audrey I. or Audrey II., one story current through the winter being to the effect that the unsuccessful Audrey I., designed by Lord Dunraven last year, was being altered by Summers & Payne. We understand, however, that the present Audrey is an entirely new boat in model, designed by Lord Dunraven and built by Summers & Payne. The old boat was destroyed, and the lead and such parts as were available were used in constructing the new one.

Niagara.

THE Gould 20 rater Niagara sailed her first race on May 30, in the Lowestoft regatta on the East Coast, her only opponent being Lord Dudley's Inyoni, a fin keel designed by Chas. Nicholson last year. Inyoni led all day in a light wind and won easily. Niagara was finally becalmed in a foul tide and lost much time. It is said that her new sails were in a very bad condition.

Valiant.

THE steam yacht Valiant, W. K. Vanderbilt, reached New York on June 1 after a voyage of 12 days from Marseilles and 10 days from Gibraltar. Mr. Vanderbilt was accompanied by Messrs. Winfield Scott Hoyt, F. O. Beach, J. L. Webb, and Center Hitchcock. The yacht has been in the Mediterranean for over a year, having left New York on Nov. 23, 1893.

Ray, schr., has been sold to R. B. Carpenter, who will change her name to Wodmansee. The change of name is to be regretted, as it obliterates a historic boat, she having been built by George Steers in 1853 and carried the one name for 42 years.

THE VOYAGE OF THE TYRANT.

"TYRANT:" that was her name.

I do not think she came off the stocks with this singularly well adapted appellation painted in broad gold letters on her stern; *au contraire*, I think the original owner decided on the name after he had made several trips in and discovered the nature of the craft.

A 20ft. cabin sloop with a 50ft. rig, with about 500lbs. less ballast in her than she required, and consequently as cranky as a washtub. This was the Tyrant, and we went all the way from Boston to Newburyport to purchase her—that is, Dick did. I accompanied him in the capacity of Crew.

There seemed to be a rather suspicious anxiety on the part of the Yankee fisherman from whom the purchase was made to get rid of the boat, for when we had stowed our few traps and handed him his check, he pushed us off from the landing place with the remark, "Thar ye air—she's your'n," and she was—until we became hers.

Now, as a skipper Dick has no equal, and I know I am a good crew because I can wear a yachting cap with ease and grace, and can walk with that rolling motion peculiar to the stage sailor. Jealous people who pretend they are friends of mine say that this eccentricity is caused by a superabundance of adipose tissue; but, believe me, it is simply because I am so used to the sea.

As I said before, as a skipper Dick is *par excellence*. You had only to see him bring the Tyrant into a wharf to realize the truth of this statement. Ah! there was a feat of seamanship that caused even the old salts to open their eyes. This is the way it was generally brought about:

When about half a mile from his objective point the Skipper began to get excited, then he would shout, "Stand by, we're going in at the Corinthian; stand by with the boat hook," whereupon the Crew would become visibly agitated—knowing from a previous experience what this meant—and would "stand by" by going aft into the standing room and holding on to the cabin.

The Tyrant is running with the wind directly abeam, consequently the sheets are close-hauled and the board is down. By a series of short reaches she is at last brought within reasonable distance of the landing place, whereat the people on the wharf, who have been speculating as to what our intentions might be, suddenly realize what we are trying to do and rush frantically about getting boat hooks, life preservers and fenders. We are coming in very nicely when over goes the wheel, the Tyrant luffs, then hangs in stays for a few minutes, during which time she drops gradually down toward the dock stern formost, then takes the bit in her mouth and goes splurging away with her washboard under, much to the relief of the people ashore. This operation is repeated two or three times, and at last with a free sheet, which is eased off to check her way, and a fair wind, she plunges madly at the dock, jams her nose pole in between two piles and, as the sails come down with a run, swings gently around and permits herself to be made fast. The Skipper, with a very pardonable pride glowing in his russet countenance, slaps himself on the back, saying, "Well done, well done;" but an ancient mariner looking down from the stringpiece remarks to his neighbor in an audible whisper:

"Two more d— fools."

Pardon the digression.

Well, on this particular morning, with a good breeze and favoring tide, the little craft ran down the river and out into the bay. A 10ft. dory waltzed and courtesied at the end of a small cable astern, and the musical gurgle under the cutwater sounded most sweetly to our ears.

The Skipper now suggested that the centerboard be lowered, and after an exhausting effort on the part of the crew it was discovered that not more than 2ft. of the board would consent to be lowered, by reason of a gentle bulge in the middle of it. Fortunately, however, we did not need it, though we of course thought we did; so the sails were trimmed pretty near the way they should be, and with the wind dead astern we headed for where we thought Hull should be.

Yachtsmen will no doubt remember the sudden squalls of some two years ago that did so much damage to pleasure craft down East one Sunday in August. Well, that storm found the Tyrant about two or three miles off Rockport, Mass.

The Crew was the first to notice it approaching from the N.E. in the shape of a big, ragged, black, cloud and he called the Skipper's attention to it. "Pshaw!" exclaimed that gentleman, looking very knowing. "It's only a thunder shower; they are frequent occurrences in these parts," and the Crew with his usual confidence heaved a sigh of relief; but after two or three hard squalls had kept the Tyrant half way under water for a few moments, it was decided that the mainsail should be double-reefed.

After some persuasion the Tyrant condescended to come around—when we didn't expect her to, and under the direction of the Skipper, the Crew fastened the points around the boom. As there was no leech line the Crew was compelled to go astern in the dory to clew down the leech of the sail, and in order to make this task easier for him the Skipper let go the "toppin' lift." Down came the end of the boom on the run, making a savage "swipe" at the Crew; then as it landed with a solid thump on the cabin it jumped and dislocated the goose neck.

The joint efforts of the Skipper and Crew failed to get it in place again, and it was while we were fussing with it that the squall struck us.

Wind, rain and salt water all at once, and so thick that we could not see to the other end of the boat, where the jib was thrashing around like a freshly-caught flounder. After lashing the boom steady, the Skipper, with the intention of finding shelter under the lee of Thatcher's Island, ordered the Crew to hoist the jib. Forgetting in the excitement of the moment his Sandow-like strength, the Crew grasped the halyards and with one savage jerk parted them close to the sail, which immediately plunged over the bows into the water.

Two hundred pounds of Crew scrambled out on the stick to recover it; 200lbs. of Crew were ducked down under the green surges until the Skipper thought he was lost; 200lbs. of Crew came scampering back, looking for all the world like a terrier that had taken his first swim, and then with a prayer that they would reach bottom—which they didn't—both anchors were dropped overboard, and the Tyrant went bounding along, with the Salvages, over which the white spume was flying as high as the beacon, directly under her lee bow.

I must confess I thought of my creditors for a moment and was sorry for them. I even promised I would settle all my bills if I ever reached shore alive, and that ever after I should lead such a good life that when I died they would erect a monument to me—and then the anchor clutched the rocky bottom, and I made up my mind that if my creditors could afford to trust me, they were rich enough to wait until I could pay. So we dived down into the cabin and sought the consolation of the weedy bowl.

We rather expected, however, that the Tyrant would spring some new surprise on us presently—and she did; in one of her wildest plunges we felt a shock and then we were swung around like an apple on a string; one of the hawsers had parted and a moment later we noticed that the tender, 10ft. of dory, at $1 per foot, was sailing away in the mist and making very good weather of it, too. It had been made fast all right, for the Crew had tied that knot—the line had parted, but the knot remained, and in fact it took a week's hard study to unravel the mysteries of it.

The remaining anchor was not enough to hold us, and we were rapidly approaching the Salvages when one of the flukes evidently caught beneath a rock, and with a sharp jerk the Tyrant snubbed sharply and came about, head on to the surges.

Then came a towering comber with an angry edge of froth curling on its crest, down it came upon the trembling Tyrant, straddling her bows like a big green devil, and as the waters went hissing and boiling by the washboard, the cable parted and we started to drift rapidly toward the ledges, nearer, nearer, until at last we were within a stone's throw of the breakers that made constant war on the ragged rocks.

Just as we were preparing for a swim, she suddenly sheered off, bowing politely, and in another moment we were to leeward, drifting about between a number of piles, evidently the frame work for a new breakwater. How we ever escaped I can never tell, for I do not know.

Through a great tear in a purple cloud came a shaft of sunlight, gilding the tumbled waters and awakening the rainbows in the flying spray, and out from under the lee of Thatcher's Island came a black sloop with her jib in ribbons staggering under a closely reefed mainsail. Presently they came within hailing distance; we explained our position and after some difficulty succeeded in catching the line they threw us, and it took that big sloop from 2 o'clock to 7 to tow us into Rockport Harbor. Not a cent would they accept, not even our offer of a new jib, and I shall always hold a warm place in my heart for the little town of Newburyport, where these "good people" hailed from.

We slept in a hotel that night, and the following morning, leaving the Tyrant in the hands of a boatman to be repaired, we returned to Boston.

A week later, when Dick and I arrived at Rockport, we found the Tyrant high and dry in a little basin formed by the junction of two stone piers; and after settling the charges for repairs, our mutual exchequer consisted of just seventy-five cents. However, the Skipper had thoughtfully provided some pilot bread and "Don't need any pilot" cheese, which, together with a jug of water, we intended should last until we reached Hull—it lasted.

An attempt was made by a conscientious native, who had learned we had money left, to deprive us of the last seventy-five cents in exchange for a broken oar, and we promised to pay another who presented a $3 claim for wharfage; then we managed somehow or other to get the Tyrant into open water and headed for Hull with a free sheet, a good breeze and a pretty feather under the cutwater.

Once the Skipper intrusted the wheel to me, and shortly afterward we were lying becalmed, without a breath of air in the sails.

"Where in earth has all the wind gone?" I asked; and the Skipper, casting a knowing eye around and observing several white sails heeling over to a good breeze all around us, answered, "Nowhere, you wooden-headed lunkhead, you've got her headed dead into it," and so I had.

The Tyrant seemed to be up to new tricks now, refusing to answer her helm readily, rolling sluggishly and heavily on the undulating ground swell. Presently we heard a knocking sound in the cabin, and a glance through the hatch revealed all the stanchions floating gayly about in a cabin full of water; this in the middle of Massachusetts Bay. Each time the boat heeled over tiny Niagaras would start at every seam above the waterline.

Hard work on the part of the Crew with a pail, however, kept her afloat, and just off the Coffins or the Graveyard, or Gibbet Island, or some other cheerfully named ledge of rocks near Hull, the wind really did die completely out, and there we were left, rolling in the hot sun, with no water in the jug. Toward sunset a fresh breeze sprang up from another quarter, and how we did fly through the golden waters into Hull Gut.

The Skipper "knew the channel, he had sailed a catboat in and out there all last summer" (he showed me the ribs of the same catboat where she went ashore), and though we were nearly swamped by a steamer which was coming out, we managed to get through somehow and reach a wharf.

The Skipper has often spoken with pride of the skillful way in which he navigated the Gut, and I have heard old and experienced sailors express themselves as being very much surprised how we ever escaped the numerous rocks with which that portion of the channel is infested; why, even the natives take a shorter and much easier way when coming or going through the tide-crossed waters. But the Skipper scorns "easy ways."

We moored the Tyrant beside a long wharf.

"Shall we trim her up a bit, Captain?" I asked.

"Trim nothing," answered he, gruffly, with a string of unnecessary adjectives, "and if she's gone in the morning I don't give a ——!"

Half an hour later two bronzed and wearied mariners lined up before the hotel bar, and four bottles of beer went gurgling and sizzling down two red hot throats. Oh how good it tasted!

There was plenty of crackers and cheese left on the Tyrant, enough to last an ocean steamer for one voyage; but we created a famine in the hotel that night. For the benefit of those who go down to the sea in ships, so they may know what to avoid doing, I have given this most truthful account of the eventful voyage of the good sloop Tyrant.

THE GENERAL.

MEMORIAL DAY, 1895.

THE last week in May was marked by the formal opening of most of the club houses and yacht stations, Memorial Day, May 30, in particular being duly celebrated by receptions and flag raising, and in many cases by good racing as well. Though the actual racing will hardly begin for another week, the season of 1895 is now formally inaugurated. The outlook, on the whole, is an encouraging one; there have been few large yachts built, and the established classes of the large yacht clubs are likely to show but few boats in the main; on the other hand, there has been added to the racing fleet a good number of the smaller boats, and there is every prospect of plenty of racing in the many clubs which are devoted to these craft. This means a growing and widespread interest in yachting and yacht racing in the smaller classes, which may in time offset the deplorable tendency in the largest classes toward a very few syndicate yachts of costly construction. The largest class of single-stickers is by no means as well filled or as near to preparation as is to be desired, and but little racing is to be looked for before the New York Y. C. cruise; but from the first of August to the end of September there should be many good races in the class.

So far as local and general interests are concerned, in the yachts of smaller size, of moderate cost and general utility, the outlook is better than for several years. The many yacht clubs throughout the country, the number rapidly increasing, are as a rule in a flourishing and prosperous condition, with growing membership rolls and increased fleets. One of the few very good results that may be attributed to the rapid course of out-building of late years is the introduction in distant localities of yachts of the latest model and construction; the passing away of the Boston 21-footers and the New York 25-footers, by which Alpha has been transferred to a Western lake, and El Chico and Nemadgy to the interior of New York State, with many similar changes in other classes, has led to very great improvements on the older local models. With favorable sailing weather and the improvement of business conditions which now seem probable, the season of 1895 should materially strengthen American yachting.

Atlantic Y. C. Opening.

BAY RIDGE—NEW YORK BAY.

Thursday, May 30.

It is quite a long time since the Atlantic Y. C. originated the custom, now so generally observed by most clubs, of celebrating the then "Decoration Day" by an opening sail of the club fleet; in the meanwhile the club has grown quite beyond the expectations of its older members. This year special efforts were made to open the season in a suitable manner, and the following programme was arranged:

1. The regular excursion of the fleet of the Atlantic Y. C., provided for in section 1 of chapter 10 of the by-laws, will take place on Decoration Day, Thursday, May 30, 1895.

2. The fleet will assemble off the club house, foot Fifty-fifth street, Brooklyn, promptly at 9:30 o'clock A. M., anchoring in two lines, 100yds. apart and parallel to the shore. All steamers, schooners and Classes 1, 2, 3 and 4 of the sloops will form the off-shore line, the schooner Sachem, Vice-Commodore Adams, on the right; all the other classes the in-shore line, the Fenella, Rear-Commodore Hazard, on the right. The southerly end of each line shall be the right of line, and shall be W.S.W. from the Atlantic Y. C. flagstaff. The flag officers designated shall take position promptly at 9:30 A. M. Yachts will take position in their respectives lines without delay, regardless of size, and without interfering with yachts already in position.

3. At 10:30 A. M. a gun will be fired from the flagship and the club signal will be hoisted at the club house. The fleet will then salute the flag as follows: Commencing on the right of the off-shore line, each yacht in line in quick succession, and in the order of its position, shall fire a gun, the in-shore line firing in like order after the off-shore line.

4. After the salute a gun will be fired from the club house at such time as the regatta committee may direct, which will be the signal for the fleet to weigh anchor and start.

5. All yachts shall cross an imaginary line between the steamboat dock at Sixty-fifth street and a stakeboat moored about 400yds. northwest of same, and the time of each yacht so crossing will be taken. A handicap gun will be fired from the club house 30 minutes after the signal gun to weigh anchor.

All schooners and Classes 1, 2, 3, 4 and 5 of sloops will sail to and around Buoy No. 12 in the Southwest Spit, keeping the same on the port hand; thence home to club anchorage. All other classes will sail to and around Swash Channel Buoy, keeping same on port hand; thence home to club anchorage. Yachts must pass to the westward of Fort Lafayette and Romer Beacon, and to the eastward of buoys in the west bank both going and returning.

6. The finishing line will be between the club house flagstaff and a stakeboat moored about 200yds. northward of same. The racing rules of the club will be in force, except as above specified.

7. It is the request of the Regatta Committee that all yachts entering in the races of this club shall at such times display their racing number as it appears in the club book, and that they should race under such number in every event, unless otherwise directed by the Regatta Committee. All yachts crossing the line in races under the charge of the Regatta Committee of this club will be expected to display their regular racing number. Any yacht crossing the line without a number will be timed, but the committee will not be responsible for any errors or omissions that may arise from the failure to display such racing number.

8. A prize of $25, or its equivalent in silver, will be awarded the winning yacht in each class.

9. Yachts will sail in cruising trim, with anchors, chains, deck fitting, cabin furniture, and fixings in their usual places, boats on davits, on deck, or towing astern, as they are carried in cruising. Promptness in taking position is particularly requested.

This programme was carried out, the only drawback being a light wind that made but a slow race against a foul tide. The wind was very light in the morning, but after the saluting there came a breeze from southeast and the start was made at 11:30. The race was a beat out and run in, and the times were:

	Finish.	Elapsed.
SCHOONERS—CLASS 1.		
Columbia, J. T. Perkins	Withdrew.	
SCHOONERS—CLASS 3.		
Emerald, J. Roger Maxwell	3 46 15	3 56 21
Sachem, F. T. Adams	Withdrew.	
Cavalier, Jefferson Hogan	Withdrew.	
SCHOONERS—CLASS 5.		
Fenella, W. A. Hayward	Withdrew.	
Lydia, H. W. Banks	Withdrew.	
Fearless, David Hunt	Withdrew.	
Flossie, F. Beames	Withdrew.	
SLOOPS AND CUTTERS—CLASS 1.		
Vigilant, George Gould	3 28 52	3 30 44
Hildegarde, C. Bergen	4 16 35	4 40 07
SLOOPS AND CUTTERS—CLASS 4.		
Swannanoa, Stephen Loines	5 15 51	5 42 07
Nautilus, W. D. Dickey	3 54 54	4 20 39
Eclipse, L. J. Callanan	4 36 42	5 00 02
Vixen, J. C. Richardson	5 43 19	6 04 41
Eleanor, A. S. Williams	6 02 28	6 21 23
SLOOPS AND CUTTERS—CLASS 5.		
Moccasin, S. H. Mason	Withdrew.	
Alice, O. D. Dike	Withdrew.	
Awa, A. De Witt Cochrane	5 41 45	6 07 15
Lotowana, A. E. White	4 50 31	5 15 32
Choctaw, T. L. Arnold	4 25 32	4 40 14
Wenonah, J. G. Meehan	6 03 52	6 27 30
SLOOPS AND CUTTERS—CLASS 6.		
Tigress, James Weir, Jr.	3 37 30	3 59 51
SLOOPS AND CUTTERS—CLASS 7.		
Wabossa, H. B. Shaen	5 45 03	6 08 52
Cygnet, J. F. Hitchcock	6 45 03	6 51 18
Feydeh, E. D. Cowman	Sailed wrong course.	
SLOOPS AND CUTTERS—CLASS 8.		
Badger, A. F. Hogan	5 53 30	6 21 41
Allegro, F. M. Randall	4 11 04	4 33 23
CABIN CATBOATS—CLASS 1.		
Almira, Wilmer Hanan	5 13 53	5 40 23
Acorn, J. Blank	Withdrew.	

The winners were Emerald, Vigilant, Nautilus, Choctaw, Tigress, Wabossa, Allegro and Almira.

Wataugua, yawl, tried to cross the bows of Flossie, schooner, when on port tack, and a collision ensued, Wataugua withdrawing.

Harlem Y. C. Open Regatta.

CITY ISLAND—LONG ISLAND SOUND.

Thursday, May 30.

THE Harlem Y. C. sailed its twelfth annual regatta, an open race, on Memorial Day with a big fleet of starters, the result being very satisfactory. The first four classes sailed from off Belden's Point up to Throggs Neck, then around Matinnicock Buoy and home; the smaller classes sailing direct to Matinnicock Buoy and home. The wind was light to moderate from the south. The times were:

	Length.	Elapsed.	Corrected.

Emily, J. Wimmer	22.2	3 36 03	3 33 08
Bubble, L. P. Bradley	20.4	3 35 49	3 27 37
OPEN CAT CLASS—17 TO 20FT			
Regina, W. Scardefield	19.7	3 32 00	3 29 51
Starling, E. F. De Levante	19.1	3 39 00	3 35 20
OPEN CAT CLASS—17FT. AND UNDER			
Lottie K., W. A. Potter	18.0	3 54 00	3 54 00
Bell, G. J. Oakes	17.5	3 50 00	3 48 33
Clara C., P. Bischoff	16.2	4 02 00	3 56 30
Little Willie, J. J. Proctor	15.6	4 31 25	4 23 52
Whiz, H. Huper	16.6	3 34 00	3 41 48

The winners were: Class E, Sasqua; Class F, Dragoon; Class G, Theresa; Class H, Nomad; Class I, St. Elmo; Class J, Ramona; Class K, Mary; Class L, Kittie; Class M, Delphine; Class N, Bubble; Class O, Regina; Class P, Whiz.

Irex was dismasted in a collision with the club steamer Cygnus. The new Webber 34-footer, Dragoon, sailed her first race with great success. The Cygnus carried a very large number of members and their friends.

South Boston Y. C. Opening Race.

SOUTH BOSTON—BOSTON HARBOR.

Thursday, May 30.

THE open race of the South Boston Y. C. on Decoration Day called out a good portion of the local fleet and furnished plenty of sport, the wind, which was light east at the start, freshening to a good sailing breeze from southeast. The times were:

Fall River Y. C. Opening Race.

FALL RIVER—MOUNT HOPE BAY.

Thursday, May 30.

THE presence of the new Dyer boat Salmon, the new Hanley boat Ashumet, and the well-known Hanley boat Chapoquoit, made the first race of the Fall River Y. C. especially interesting. The course was 8¼ miles to windward and return, with a single-reef breeze for some of the boats. Chapoquoit led for a time, with Ashumet second and Salmon dropping astern, but Ashumet took the lead long before the weather mark was reached, and turned over 5m. ahead of Chapoquoit and about 8m. ahead of Salmon. Ashumet held her lead down wind, but Salmon gained on Chapoquoit. Kismet and Vixen fouled and withdrew. The times were:

The winners were: Class A, cabin sloops—Bundahr; Class B, open sloops—Clara S.; Class C, open sloops—Mosquito; Class D, cabin cats Marguerite; Class E, open cats—Pauline B., Class F, open cats—Mercedes; Class G, open cats—Adele Rae.

Kill von Kull Y. C. Open Regatta.

PORT RICHMOND—NEWARK BAY.

Thursday, May 30.

THE Kill von Kull Y. C., of Port Richmond, S. I., is now firmly established, with a good membership and excellent quarters. The club has been busy with bowling and other winter sports through the off season, but on Memorial Day it started in anew on the water with a very good race in spite of the light and variable southerly wind. The times were:

	Elapsed.	Corrected.
CLASS A—CABIN CATBOATS.		
Elvira, George Shermer	2 12 58	2 05 21
CLASS B—OPEN SLOOPS, OVER 25FT.

CLASS H—CATBOATS UNDER 16FT.		
May Lee, Wood & Asche	Did not finish.	
Imp, R. Thomas	1 53 20	1 35 40
Irving, Irving Housman	1 49 15	1 32 06
Wide Awake, Harry Fisher	2 06 00	1 47 45

Minnie H, won the prize for best elapsed time.

Seawanhaka Corinthian Y. C.

ON Memorial Day the Oyster Bay club house of the Seawanhaka Corinthian Y. C. was formally opened for the season, the colors being hoisted in the presence of the flag officers and members and many guests. The Hungarian Band furnished music during the day and for dancing in the evening. A special meeting was held during the day, at which a 60 per cent. time scale was adopted.

New Rochelle Y. C. Opening.

THE formal opening of the new club house of the New Rochelle Y. C. took place on May 25. The colors were hoisted, refreshments were served to the many guests and there was dancing in the evening. A race was arranged over a six-mile course during the afternoon, resulting as follows:

	Length.	Start.	Finish.
CABIN CATS.			
Mary, W. E Ellsworth	25.05	4 31 30	5 59 50
Twilight, Eugene Lambden	24.10	4 31 50	6 04 25
OPEN CATS.			
Ondawa, Howard Lambden	19.11	4 30 35	5 54 12
Ida K., Chas. W. Voltz	19.11	4 30 30	5 59 40

Regatta Committee—C. Towns, W. E. Moore and H. A. Gough.

The Yacht Racing Association.

THE idea of a national association of yacht clubs, or at least of a union of the clubs of the Atlantic coast, has long found favor with a certain portion of the yachting fraternity, and attempts without number to attain such an end have been made without success. The causes of failure have been two, the great variance in measurement and other important details between neighboring clubs and the lack of interest in the subject on the part of the average yachtsman. The good work that has been done at times, apparently without result, was all due to a small number of enthusiasts who were well in advance of the great body of yachtsmen. Of late, however, two important changes have taken place; first, the clubs, acting independently, have sought to improve their rules, and have thus approached closely a common standard; and secondly, yachtsmen at large, irrespective of club affiliations, have awakened to the desirability of uniform as well as better rules. The gradual disappearance of the old club regattas and closed races in favor of open events and special races for the prominent classes has also tended greatly toward unity and harmony between yacht clubs. So far has this movement progressed that an important union of local clubs has been formed this spring about New York, and in a way that promises to lead to something even more permanent and extensive than was hoped for by its originators.

The discussion of the whole subject of the union of American clubs, in part or as a whole, has naturally attracted attention to the similar body which has been in successful existence in Great Britain for twenty years under the name of the Yacht Racing Association, or briefly, the Y. R. A. While American yachtsmen are aware of the existence of this association, and to a certain extent of its details, there are many points in its rules which are not understood here, and which, we believe, will be of interest to our readers, especially in view of the constant inquiries which come to us as to the term "rating," originated and used by the Y. R. A. The following transcript of the rules is from the book issued yearly by the Association, and which takes the place of the numerous yacht club books in this country in establishing one recognized standard for all racing rules. The "Y. R. A. Book" is a small volume, bound in blue cloth, containing the general rules of the Association, the rules of the council, the sailing rules, a list of recognized clubs, the table of allowances, the official measurements of yachts (rig, l.w.l., sail area and rating), the fees of measurers and directions for measuring, the list of official measurers, of members of the council, club representatives, members and the minutes of meetings. The latter are interesting in that they contain the official decisions on all points of sailing submitted during the year. The sailing rules and allowance tables are also printed separately in a small pamphlet.

In British racing, the usual library of club books, from which is invariably missing the one which governs the particular club in which a race is about to start, is not necessary, the one small Y. R. A. book supplying all possible information save as to courses and time of starting.

The Yacht Racing Association was founded in 1875 by a few British yachtsmen, led by Count Edmund Batthyany, owner of the cutter Kriemhilda (now Prince Batthyany-Strattman), Capt. J. W. Hughes and Mr. Dixon Kemp. The general plan of organization was based on that of the Jockey Club. Of course many difficulties have been encountered in the course of twenty years, and even now the organization of the association is imperfect in some respects, as must always be the case in any union composed both of clubs and individuals; but at the same time it has exerted a powerful influence for good, not only within its special sphere, but on yachting the world over. The power of the Association has been largely nominal, it has never attempted to exercise supreme control over the British yacht clubs, but its rules and decisions have been recognized and accepted, almost without exception; and it has exerted a strong and very beneficial influence on yachting and yacht racing.

GENERAL RULES.

1. The objects of the Yacht Racing Association shall be the promotion of the interests of yacht racing.

2. The Association shall consist of former and present owners of racing yachts, and such other persons interested in yacht racing as the Council may elect; and of representative members, appointed by Royal or recognized yacht clubs, in accordance with the provisions of Rule 3.

3. Every Royal or recognized yacht club of the United Kingdom shall have the power to appoint representative members of the Association in the following proportion to the number of members on the club's books, viz.: Not exceeding 300 members, one representative; above 300 members, two representatives; each representative shall be a member of the club making the appointment, and shall not be selected from the elected members of the Association. Every club exercising the right of appointment shall pay a subscription of two guineas for each representative member it is entitled to appoint. The representative members shall have the full privileges of elected members. Each club desiring to exercise the right of appointment shall, during the month of January in each year, communicate to the secretary of the Yacht Racing Association the name or names of its representative or representatives.

4. A lady, *bona fide* owner, or part owner of a yacht, shall be eligible as a candidate for membership, but shall not be entitled to attend any of the Association's meetings or take any part in its management. The subscription for a lady member shall be one guinea per annum.

5. The Council is empowered to elect honorary members, but such members shall not be entitled to attend any meetings, or to take any part in the management of the Association.

6. The affairs of the Association shall be managed by a president, two vice-presidents, an honorary treasurer, and a council of twenty-four members. The president, the two vice-presidents, and the honorary treasurer, to be *ex officio* members of the council. One-sixth of the council shall retire annually, but shall be eligible for re-election. Vacancies occurring between the annual meetings shall be filled by the council.

7. The election of members to fill the annual vacancies in the council shall be conducted by balloting papers, to be sent to each member at least fourteen days before the annual general meeting, when the members of the council thus elected shall be declared. Candidates to fill the annual vacancies shall be proposed and seconded on or before Jan. 14 in each year by members of the Association, and their names, together with their proposer and seconder, shall be stated in the balloting papers. Any member of the council who has failed to attend a meeting of the council for a period of one year, reckoned from Jan. 1 to Dec. 31, shall cease to be a member of the council, and shall not be eligible to serve on it unless the council recommend his re-election, and in that case his name shall be inserted in the list of candidates, and he shall be balloted for in the usual manner.

8. There shall be a general meeting of the Association in London in February of each year, on such day as the council may appoint; fourteen days' notice of the meeting to be given to each member.

9. The council may call general meetings of the Association whenever they consider such a course necessary. They shall also call a general meeting upon the requisition in writing of ten members of the Association, to consider such matters as shall be stated in the requisition.

10. The subscription to the Association shall be 2 guineas for a member and 1 guinea for a lady member, annually, due on Jan. 1 of each year. The subscription of any member elected after Sept. 30 in any year shall cover that for the following year. A member of the Yacht Racing Association who has not paid his subscription for the current year shall not be entitled to vote or take part in the proceedings at general meetings. A member whose subscription is two years in arrears shall be named, with the amount in arrears, in the annual statement of accounts. The council shall have power, after due notice has been given, to remove from the list of members the name of any member whose subscription is more than one year in arrears.

11. Any member intending to be absent from the United Kingdom for the whole period for which the annual subscription is due (Jan. 1 to Dec. 31) may, on his giving prior notice in writing to the secretary, be exempted from payment of his annual subscription, and in lieu thereof shall pay 10s. 6d. per annum until his return.

12. The owner of a yacht shall pay all fees and expenses for measuring such yacht to the secretary or measurer previous to the yacht being measured. A yacht shall not be measured until all arrears of subscription and fees due from the owner to the Yacht Racing Association have been paid.

13. The council shall meet at such times and places as they consider expedient and appoint.

14. It shall be the duty of the council to elect members of the Association, to appoint officers, to frame rules, and to determine and settle all questions and disputes relating to yacht racing which may be referred to them for decision, which decision shall be final. And further, the council may take such other steps as they shall consider necessary and expedient to carry into effect the objects of the Association.

15. The council shall consider all amendments and additions to the rules, and provided they are approved by a majority of two-thirds of the members of the council present at the meeting at which the same are considered, they shall be submitted for adoption to a general meeting, and shall be carried by a majority of two-thirds at such general meeting. Nevertheless, at the request of any ten members of the Association, the votes of all its members shall be taken by voting papers upon such proposed amendments or additions, which shall be carried by a majority of two-thirds of those voting. If the council report unfavorably of any proposed amendments or additions, such amendments or additions shall, if so desired by the member proposing the same, be submitted to a general meeting; but they shall not be adopted unless carried by three-fourths of the members present at such general meeting; or of three-fourths of those voting if any ten members request that the sense of all the members of the Association be taken by voting papers. Notice of any alteration in the rules intended to be proposed by a member of the Association shall be given to the secretary at least one month before the general meeting at which the same is to be brought forward; and notices of any proposed alteration in the rules intended to be proposed at the annual general meeting must be sent to the secretary on or before Jan. 14 in each year.

RULES FOR THE GUIDANCE OF THE COUNCIL.

1. The council shall be called together at such times as the president or vice-presidents shall consider necessary, or upon the requisition of three members of the council, addressed to the secretary. The notice convening the meeting shall state, as far as practicable, the business to be transacted.

2. Five members shall form a quorum, and in case of an equality of votes upon any question, the chairman of the meeting shall have a casting vote.

3. In the absence of the president and vice-presidents, the members present at any meeting shall nominate the member who is to take the chair.

4. A proper record of the proceedings of the council shall be kept by the secretary.

5. Any three members of the council may be called together at any time, and upon any notice, to decide such disputed points in the measurement of yachts as the official measurer may require to be directed upon.

6. A member elected to fill any vacancy in the council which may occur between the annual general meetings, under Rule 4 of the general rules, shall be chosen by ballot, the member having the largest number of votes to be the one elected.

7. Members of the Association (except the representative members appointed by the clubs) shall be elected by ballot papers sent to each member of the council; one adverse vote in eight to exclude, and no ballot to be valid unless nine members of the council shall have voted.

SAILING RULES, 1895.

1. All races, and all yachts sailing therein, shall be under the direction of the flag officers or sailing committee of the club under whose auspices the races are being sailed. All matters shall be subject to their approval and control; and all doubts, questions and disputes which may arise shall be subject to their decision. Their decisions shall be based upon these rules, so far as they will apply, but as no rules can be devised capable of meeting every incident and accident of sailing, the sailing committee should keep in view the ordinary customs of the sea, and discourage all attempts to win a race by other means than fair sailing and superior speed and skill. The decisions of the sailing committee shall be final, unless they think fit, on the application of the parties interested, or otherwise, to refer the questions at issue for the decision of the council of the Yacht Racing Association, whose decision shall be final. No member of the sailing committee or council shall take part in the discussion or decision upon any disputed question in which he is directly interested. The sailing committee, or any officer appointed to take charge for the day, shall award the prizes, subject to Rule 29. If any yacht be disqualified, the next in order shall be awarded the prize.

2. The sailing committee, or officer in charge for the day, shall have power to postpone any race, should unfavorable weather render such course desirable. Letter N of the commercial code, hoisted over the flag denoting the race, shall be the signal that the race has been postponed.

3. The rating of every yacht entered to sail in a race shall be ascertained by multiplying the sail area in square feet (as found in the manner hereafter enjoined) by the rating length in feet, and dividing the product by 6,000; the quotient shall be the rating. In ratings above 10, a fraction of or exceeding .01 shall count as 1.0; but in ratings from 1 to 10, a fraction smaller than 0.1 shall count as 0.1; and in ratings below 1.0 fractions from 0.01 to 0.99 inclusive shall be reckoned at their proper values (see Rule 4). The length shall be taken between the outer edges of the official marks of the Y. R. A., as placed by the owner at the bow and stern of the yacht, this length to be termed the "rating length," and to represent the extreme length for immersion, provided always that if any part of the stem or sternpost or other part of the vessel below the marks for rating length project beyond the length taken as mentioned, such projections shall, for the purposes of the rule, be added to the rating length taken as stated, and pieces of any form cut out of the stem, sternpost or fair line of the ridge of the counter, with the intention of shortening the rating length, shall not be allowed for in measurement of length, if at or immediately below the marks for the rating length, nor above if within 6in. of the water level. Owners shall mark the rating length of their yachts on both sides at the bow and stern in such manner as the council may direct, with the official marks supplied by the Y. R. A., which marks shall at all times represent the extreme length for immersion when the yacht is lying in smooth water in her usual racing trim, including racing crew on board at and about the mid-overall length.

(TO BE CONCLUDED NEXT WEEK.)

The Cup Defender.

WHILE every effort is being made to hurry the work on the new cup defender, the yacht is not yet ready for launching, and will probably be on the ways until the middle of the month, or even later. The spring tides of June 7 have been lost, the highest during the month. The plating is not yet completed, and the plates that are on are not fully riveted. The deck planking has not been laid. Work is well advanced on the spars, sails, gear and fittings.

YACHTING NEWS NOTES.

The steam yacht Huntress was launched at the yards of her builders, Charles L. Seabury & Co., Nyack-on-Hudson, on May 28, at 20 minutes past midnight. Mrs. Charles L. Seabury christened the vessel by breaking a bottle of wine on the bow as the boat glided into the water. Many residents of Nyack were present to witness the novel sight of a midnight launch, as the yards and yacht were brilliantly illuminated with electric lights and Japanese lanterns. In less than one minute from the time of knocking out the last blocking the yacht glided swiftly down the ways gracefully into the stream, making a beautiful picture, and was loudly cheered by the crowd. Huntress was built for Mr. F. C. Fowler of Moodus, Conn., and is 120ft. over all, 97ft. lwl, 16ft. beam, 9ft. depth, 6ft. 6in. draft. She has excellent accomodations, large saloon, owner's stateroom, guests' staterooms, officers' room, galley, toilet and bath rooms, fine crew quarters, and elegant saloon on deck. The machinery consists of a very powerful Seabury design triple expansion engine, and a Seabury safety water tube boiler of latest type. The guaranteed speed in contract is 16 miles per hour for 3 consecutive hours, and there is not the slightest doubt but what she will run much faster. She is schooner rigged, flush deck. Capt. Wm. A. Miller is in command.

The only work at Roach's shipyard, Chester, is the steam yacht designed by Gardner & Cox for an unknown owner. The yacht is a very good piece of flush plating in steel. The model, previously described, is very peculiar—an almost plumb stem, with a very slight round, and a high side and straight sheer. The stern is of a shape that can hardly be described without a drawing. The engines are now nearly ready in the Chester shops, the three throw crankshaft is bored in all parts and every effort has been made to save weight. The hull is plated and riveted, but not fully decked, and some time must elapse before the yacht is ready for use.

Amorita, schr., is now all plated and riveted at Harlan & Hollingsworth's yard; the ways are in place and she is about ready for launching. The decks are laid, but the interior is still bare of joiner work. The yacht is lap-plated, like Emerald, a rather unusual form of steel construction. Her bar stem is very long, continuing down well below the water-line, and rabbeted all the way for the plating. Below this stem piece the keel widens quite abruptly, being very wide abreast the trunk.

Medusa, cutter, has been presented by Mrs. Mary Center Ludlow, mother of the late Robert Center, to the United States Government, for the use of the naval cadets at Annapolis. The yacht will probably be renamed "Robert Center". Mrs. Ludlow has presented to the Seawanhaka Cor. Y. C. two oil paintings of Vindex and Medusa.

Dragoon, the new 34 footer designed and built by Thos. Webber for F. M. Freeman, was launched at New Rochelle on May 25, being put overboard in the morning and sailing around to Larchmont the same afternoon.

The spring regatta of the Brooklyn Y. C. will be sailed on June 10, from off the club station, Gravesend Bay. The steamer Laura M. Starin will carry the members of the club.

Kathleen, cutter, has been sold by Schuyler Merritt to Le Grand L. Clark, of the Sea Cliff Y. C.

Ruth, schr., has been sold by H. G. Marquand to Elias F. Morgan.

New York Y. C.

THE regatta committee of the New York Y. C., Messrs. S. Nicholson Kane, Chester Griswold and Irving Grinnell, have issued the following programme for the season:

June 13, the fiftieth annual regatta will be sailed. The prizes in each regular class will be a $200 cup for the first, if two or more start, and a $75 cup for the second, if four or more start. For yachts in cruising trim the prizes will be a $75 cup for the first in each class, if two or more start, and a $50 cup for the second, if four or more start. The classification is as follows by racing length.

Schooners.—Class 1, all over 95 ft; class 2, not over 95 ft and over 85 ft; class 3, not over 85ft and over 75ft; class 4, not over 75ft and over 65ft; class 5, not over 65ft.

Single Masted Vessels and Yawls.—Class 1, all over 80ft; class 2, not over 80 and over 70 ft; class 3, not over 70 and over 60ft; class 4, not over 60 and over 55ft; class 5, not over 55 and over 50ft; class 6, not over 50ft.

Entries must be made in writing to the Regatta Committee, and will be received at the club house up to eleven o'clock A. M. on June 11, when the list will be closed in accordance with the rules of the club.

Yachts alone in their classes will sail in a mixed class with the provided allowance for rig. The course will be the same as heretofore.

The iron steamboat Taurus, provided for members and guests of the club, will leave Pier No. 1, Iron Steamboat Company's Pier, Hudson River, at fifteen minutes past ten o'clock punctually, and will touch at the same point after the regatta.

New York, July 10.—Cup offered by the club for the 90 foot class of single-masted vessels.

Glen Cove, L. I., July 29.—Rendezvous for the cruise. On the same day cups offered by the Commodore will be sailed for. The course will finish off Huntington Bay, at which port, as will be stated in general orders, the squadron will anchor for the night.

Newport, R. I., Aug. 2.—The Goelet cups.

Newport, R. I.—On the day before the squadron disbands, cups offered by Capt. John R. Drexel, N. Y. Y. C., will be sailed for. There will be the customary club prizes for the runs from port to port. An extra prize for the schooner winning the greatest number of runs will be offered by the fleet Captain. An extra prize for the single-master winning the greatest number of runs will be offered by the Secretary of the club. The date for the "owl" and 'gamecock" colors will be fixed by the commodore

New York.—The trial races, under the management of the Club Committee, will be sailed during the latter part of August. Capt. John J. Astor, N. Y. Y. C., will offer a cup for the winner, and a cup for the second if three or more enter.

New York, Sept. 7.—As at present arranged with the Royal Yacht Squadron, the first race in the match for the America's Cup, best three out of five, will be started on this date.

New York, Sept. 19.—The Autumn Sweepstakes.

Indian Harbor Y. C.

THE regatta committee of the Indian Harbor Y. C. announces that it is the intention of the club to especially encourage and promote the building and racing of yachts in the new 20ft. racing length class (corresponding to the English one raters). The Tyson cup will be offered in this class to be sailed for at the special regatta of the club, on Monday, July 1, and special prizes will also be offered at the annual regatta, Saturday, July 27, and for a race to be called on Thursday, Aug. 29 The rules governing the class are as follows:

CLASS LIMITS.—Open sloops over 15ft. racing length and not over 20 ft. racing length. The measurement shall be of length and sail area according to the formula $L.W.L.+\sqrt{S.A.}\div 2=R.L.$ The load waterline shall be taken from the point of immersion forward to the point of immersion aft. In cases where any portion of the rudder or rudder stock projects above the surface of the water, such portion shall not be included in the waterline length. The measurer, at the time of taking the measurement, shall place a distinctive mark at each end of the water line. Any persons who may be aboard at the time the measurement is taken must be stationed amidships. The sail area is to be ascertained by taking a perpendicular line along the after side of the mainmast, from the under side of the sheave of the uppermost halyard block or sheave in mast to the upper side of boom, when resting on the saddle or on the lowest part of the gooseneck. The base line shall be taken from tack of jib when set to the after end of the main boom. The distance between the under side of sheave of the uppermost halyard block or sheave in mast to the under side of sheave of throat halyard block shall be measured, and 80 per cent. of this length shall be taken from the length of main gaff, measured from inside of jaws to the after end, the remainder being added to the base line. In all cases where the length of spinnaker boom exceeds the distance from the forward side of mainmast to the jib tack, such excess shall be added to the base line. When, in any case, owing to other than ordinary rig being carried, the sail area cannot, in the opinion of the measurer, be fairly measured in the customary way, he may, with the sanction of the regatta committee, instead, take such measurements as will enable him to compute the area of sail carried or that may be carried on spars used.

Time shall be allowed for difference of racing lengths, according to the time allowance of the club, which is calculated at 60 per cent. of the theoretical allowance.

The number of crew, including the helmsman, who must be a Corinthian, shall be limited to three. Each yacht shall have as one of the crew a member of this club or of the club from which the yacht is entered. Sails shall be restricted to mainsail, jibs and spinnaker. All ballast shall be fixed, and trimming by dead weight will not be allowed. The regatta committee will be glad to give any further information about this class and particulars about the race. Frank Bowne Jones, Chairman, Room 240, 38 Park Row, N. Y.; Richard Outwater, D. W. Merritt, Edw. H. Burtis, and Chas. E. McManus, Regatta Committee.

Steam Launches.

MARINE IRON WORKS, Chicago, have just issued their 1895 catalogue, mailed free.—*Adv.*

FIXTURES.

JUNE.

15. Red Dragon spring regatta, Delaware River.
15. New York spring regatta, Bensonhurst.
22. New York chal. cup, first trial race.
29. New York chal. cup, second trial race.
29. Marine and Field club annual, Bath Beach.

AMERICAN CANOE ASSOCIATION, 1895.

Commodore, Walter C. Witherbee, Port Henry, N. Y.
Sec'y-Treas., Chas. E. Cragg, Port Henry, New York.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, Thomas Hale, Jr., Yonkers, N. Y.
Central Division, W. S. Hackett, Albany, N. Y.
Eastern Division, R. W. Cutler, Winchester, Mass.
Northern Division, E. F. Burritt, Ottawa, Canada.

Annual dues, $1; initiation fee, $1. Applications for membership must be made to the Purser of applicant's division, from whom blanks for the purpose may be obtained.

The Royal C. C. Cup.

As our readers are aware, Mr. W. W. Howard, of New York, has again challenged for the so-called challenge cup of the Royal C. C., and will sail his canoe Yankee, which is now being altered by her builder, Mr. Fry, at Clayton, New York. The *Field* discusses Mr. Howard's new challenge as follows:

"Movements in relation to sailing canoe racing are not as yet of a lively nature—that is, in connection with the fact that the American visitor of last season is again a challenger for the cup of the Royal C. C. Last season this gentleman, having challenged and put thereby several canoe men, who would not otherwise have raced, to the trouble and expense of fitting out or building canoes for the pure purpose of defending the cup, at the last moment declined to start in the cup race; consequently we find this year that a poor state of things arises.

The best canoe sailors in the R. C. C., with one exception, are not intending to race, so far as is given out at present to the executive of the club. Several men, however, from other British clubs have intimated their intention to compete and attempt at least to hold the cup under the English flag; and we highly applaud their sporting action, and we cannot deny but that it would be an extremely good tonic to the R. C. C. if one of our English clubs should hold the cup away from the R. C. C. for a season. But when it comes to the other point—the international question—we believe firmly that the leading canoe sailors of America will, at least before the event, share the opinion that neither the Yankee nor her owner are typical of canoeing up to date in America, and that last season's contemptuous action of the challenger has robbed the competition of the probability of the entry of several of the leading English spirits of canoe sailing.

When we look at the challenge received for this season we only feel more and more doubtful whether it ought ever to have been accepted. The canoe is apparently the same craft—Yankee—which last year only obtained fame as a revolving machine; such a revolver that on one occasion her owner claimed that she turned bottom up and stuck her masts in the mud, but that he dived down and prized them out and continued the race. She is now entered as "16ft. by 30in., name Yankee, racing flag Stars and Stripes." The classes allowed this year in the cup race are two; first comes the racing class, with 36in. of beam and any depth, shallow or deep; then comes the "cruiser class," with 42in. of beam, but with enforced largeness of body depth and consequent weight. Both classes are limited to 16ft. overall length and to 0 3 Y. R. A. rating.

Hence we have a visitor challenging with a boat of no reputation at racing and not up to limit size. She may have been altered in form and rig during the winter, so as to be able to tack without making a stern board; she may have been improved in stability, but seeing the nature of the course, viz, open and possibly rough tidal water, is she the exact canoe which scientific America, through its leading club, the New York Club, would put forward as their up-to-date typical challenger under the R. C. C. conditions? We doubt it very much. The whole and sole question will be the direction and force of the wind on the cup day. A capsize in Erith Rands with a fresh westerly wind and flood tide will not be favorable to monkey tricks of righting the craft and proceeding with the race. On the other hand, a light air day or a reaching wind may see the narrow machine walk away on the straight from all the more all-round types. Hence those in the know see that there is little in the question worthy of the term "international."

The older hands have in several cases been approached as to coming forward in defense of the old club and of the country. Practically there is little difference in the ideas they hold; anyway, we can answer for "Nautilus" that in his opinion the circumstances of the present challenge, coupled with the experience of last year, do not warrant the expenditure of time and money necessary in building, fitting and practising a really up-to-date canoe for a possible contest against such a craft as Yankee, especially when the old flag may be in very good keeping at the hands of the several challengers from other English clubs.

The question of the racing flag of the American challenger is peculiar, viz., the Stars and Stripes. We do not think that either in America or England any yacht has flown as her racing colors the ensign of her country. The eagle might be flown on the American craft as typical, or the St. George's cross on the English boat; but an ensign! not much. However, the true etiquette of flag flying is not to be expected of those who are inexperienced in yachting or sea-going affairs. Only last week on the Thames, on Teddington Reach, we saw a canoe-yawl flying the burgees of two different clubs at the same time; the one clearly insulted by the other, as if the former were not sufficiently good record of the respectability of itself without the support of its inferior brother club. This is only one case out of many to be seen every Saturday on the river, and it is but time that notice be drawn to such shortcoming. When on the station of a club to which her owner belongs, the boat should fly the burgee of that club only, even though it be inferior in rank to many burgees he may otherwise be entitled to hoist; but on the station of some club to which the boat's owner does not belong, he may hoist any one of his burgees Flags are far too often thought to be mere ornaments, a touch of color to set off a shady mainsail; but in fact they are, and ought to be, the true certificate of the respectability of the craft carrying them.

Reports from building yards are not always quite to be relied on where racing boats are in question; but the march of the times is often to be gleaned by noting the movement in the building line. We have frequently said that the bulb-keel has only to be tried by a canoe man to be adopted forthwith; but these men move so slowly. Last year it was evident to all that the only canoe which did not capsize or fool about was fitted with a bulb-weighted center-plate; she won the challenge cup in smooth water and moderate weather. Can it be doubted but that the bulb, in a breeze, would win in the coming matches on the Lower Thames? and is it at all certain that the bulb would not also win in light breeze and smooth water? Anyway, we are glad to hear that some of the best experts are now going for the bulb-ballasted keel.

We hear that bulbs are being fitted to Mr. Lynam's Shuttlecock, to Mr. de Quincey's Vanessa, and to Dr. Hayward's canoe; The Dragon. Mr. de Quincey's racing canoe has been already so fitted. These boats are all, except Dragon, of the 30in. beam type, that is, the old style, but where would they be if someone brought out a 42in. cruiser, with bulb drop keel, lifting rudder and sloop rig? The necessity or the advisability of a bulb keel in boats of large beam, such as may be created in yacht racing classes, is doubtful from a racing point of view, but where the beam is limited, as in the canoe classes, there can be no doubt that the bulb keel is effective all round, both for sail carrying and comfort, hence for speed and safety.

The bulb plate can easily be so fitted as to be detachable when housing or portaging is intended, and the bulb, when close up, need not increase the draught more than some 3in., or, say, a total draught of about 9in. for an estuary cruiser, yet coupled with safety so long as the boat's hull holds together.

CANOE NEWS NOTES.

VICE-COM. QUICK, Atlantic Division, has appointed the following members as a special transportation committee, as per resolutions passed at the executive meeting held in Trenton: J. K. Hand, chairman; M. D. Wilt, Philadelphia; Edmund C. Hill, Trenton; George P. Douglas, Newark; D. B. Goodsell, Yonkers.

A. C. A. Membership.

ATLANTIC DIVISION: Arthur B. Griffin, Clinton R. Griffin.

Rifle Range and Gallery.

Rapid Rifle Shooting.

THE recent suggestions by Mr. William Lyman on his rapid-fire system of rifle shooting have been received with so much interest that the FOREST AND STREAM has prepared a set of targets for use in such work. The targets show a manilla paper, colored bullseye on a black ground. They are for 25yds. and 50yds.; and having been tested by Mr. Lyman are indorsed by him as filling admirably the conditions named by him in his notes. The targets will be sent postpaid, the 25yds. size at 15 cents a dozen, and the 50yds. size at 25 cents a dozen

To stimulate interest in the Lyman rapid-fire system the FOREST AND STREAM will give for the best 50yds. target received before Nov. 1, 1895, a Winchester '92 model repeater, extra finished, with checked butt and forearm and matted barrel, using the .32-20 W. C. F. cartridge, and rigged with Lyman's combination rear sight and jack front sight.

The merits of the targets submitted will be determined in accordance with the rules of scoring prescribed in Mr. Lyman's original articles in these columns, and noted below in the extracts from those communications here printed. The authenticity of the winning score must be attested before a notary, as a condition precedent to awarding the prize rifle. Here are Mr. Lyman's directions for his system:

THE LYMAN TIME LIMITATION SYSTEM.

For my system of rapid-firing I use a 12-ring target. For 100yd. practice these rings are 1in. apart. Ring 12 is 2in. in diameter in the center of the bullseye; each succeeding ring has 2in. increase of diameter, so that the outer ring, which scores 1, is 24in. in diameter. The bullseye is 8in. in diameter, and consequently contains the rings 9, 10, 11 and 12. When shooting at 50yds. the target should be half size, and at 25yds. quarter size. As compared with ordinary targets this one has a large bullseye, but in rapid-firing better scores can be made than if the bullseye is small. I may add that the same thing applies to the sight. It should not be small nor hard to see. The eye of the shooter has enough to do in bringing the muzzle-sight and bullseye together without being strained to discover either. With this target I allow 20 seconds for 10 shots. Any shots fired after 20 seconds do not count. For any shots fired within the time allowed that do not score on the target, the shooter forfeits 5 points.

The following table gives the time scoring:

10 shots in 20 seconds, time limit.						10 shots in 14 seconds, 20 points.					
10	"	"	19	"	2 points.	10	"	"	13	"	25 "
10	"	"	18	"	4 "	10	"	"	12	"	30 "
10	"	"	17	"	8 "	10	"	"	11	"	35 "
10	"	"	16	"	12 "	10	"	"	10	"	40 "
10	"	"	15	"	16 "						

Thus it will be seen that if the 10 shots are fired in 10 seconds or less the time score is 40 points, which, added to the 120 points possible to make on the target, give 160 as the possible score to be made by this system of shooting.

The forfeit of 5 points for every shot (within the limit of 20 seconds) that does not count on the target, I consider a very important requirement, for it will counteract a tendency to careless holding and not allow anything to be made by the time scoring unless something is scored on the target.

Any repeating rifle allowed, sighted with any sights.

When ready the shooter should stand with the butt of the rifle below the elbow. He then communicates by means of an electric button or other signal with the target tender, who instantly throws the target into position for just 20 seconds. By using paper targets on a light frame with a canvas backing, one target can be quickly replaced by another. The targets should be numbered for each shooter, as the scores must be made up from them afterward. It will be readily seen that this system of shooting will allow a large number of shooters to use one stand and fire a great many shots in a short time.

Revolver Shooting in England.

AT the North London Rifle Club, on May 11, it was a splendid day for revolver shooting, no wind, but only three members took advantage of it, two of them getting good scores toward the revolver championship of the club. Below are the details:

May 11, 20yds., stationary target:

Walter Winans	777677—41	Comber	787776—37
Major H. Munday	767776—40		

On May 15 there was a lot of wind, which prevented any high scores being made. Mr. Winans not thinking it worth while to shoot, as it was impossible to make scores good enough for the championship.

May 15, 20yds., stationary target:

Major H Munday	767577—39	Knapp	654767—35
Major Palmer	757767—39	Lieut Richardson	653776—34
Clementi-Smith	776757—39	Gould	757663—34
Frost	777765—39	Carter	575565—33
Comber	567576—36	Hore	563476—31
Lieut Chitty	765747—36	Franzmann	444756—30
Capt Evans	656567—35		

At the South London Rifle Club Mr. Rand has the honor of making the first highest possible score (at 20yds.) of the season toward the revolver championship, but Mr. Winans leads him at the two distances (20 and 50yds.) by three points, Mr. Rand falling off at the longer range.

Twenty yards, stationary target:

F Rand	777777—42	E Howe	575775—36
Walter Winans	677777—41	Lieut J Howard	775747—36
Capt T W Heath	676767—39		

Mr. Winans's score at 50yds is the best of the season so far.

Fifty yards, stationary target:

Walter Winans	747777—39	F Rand	765665—35
Capt T W Heath	575676—36		

On May 22, at the North London Rifle Club, a novelty, in the form of a competition for shooting with the right and left hand alternately, took place in the revolver competitions.

Mr. Knapp, who has not heretofore made any good scores, headed the list with a 41, which puts him a good score toward the revolver championship; but his other scores take away from any advantage that gives him, as they are too low to be of any account. Lieut. C. Chitty, said to be the revolver champion of India, shot in this competition. Below are the details.

Revolver series No. 2, alternate hands, 20yds.:

C Knapp	777677—41	B Comber	575666—35
Walter Winans	676776—39	F H Frost	665746—34
Maj Munday	777675—39	A W Carter	657637—34
Maj J H Cowan	774777—39	Maj R T Jones	576555—33
H Andrews	774767—38	Capt W Evans	346667—32
Lieut C Chitty	746766—36	Clementi-Smith	555547—31
Maj H Palmer	477774—36		

There was a gale of wind on May 16, which prevented any scores of any account being made at the South London Rifle Club revolver competitions, in fact, the longer range shooting was not attempted. Below are details of shooting.

Revolver, 20yds.:

Clementi-Smith	777474 36	E Howe	764575—30
Lieut J Howard	661567—34	Lieut F E Varley	335567—29

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

June 3–8.—CHICAGO, Ill.—Illinois State Sportsmen's Association annual tournament. Convention at Sherman House, June 4.

June 11, 12.—UTICA, N. Y.—Two days tournament; live birds and targets.

June 11–13.—MEMPHIS, Tenn.—Memphis Gun Club's annual tournament; $2,000 added money.

June 12–13.—JANESVILLE, Wis.—Fifth annual shoot of the Janesville Shooting Club; live birds and targets. H. H. McKenney, Sec'y.

June 13–14.—FARGO, N. D.—First annual tournament of the North Dakota State Sportsmen's Association; targets. Programmes ready May 15. W. W. Smith, Sec'y.

June 13–15.—OMAHA, Neb.—Annual tournament of the Nebraska State Sportsmen's Association; $500 added money. F. S. Parmelee, Sec'y.

June 13–15.—PORTLAND, Ore.—Eleventh annual tournament of the Sportsmen's Association of the Northwest, under the auspices of the Multnomah Rod and Gun Club. D. L. Williams, Sec'y, Portland, Ore.

June 14.—WORCESTER, Mass.—Seventh and closing tournament of the New England Shooting Association, under the auspices of the Worcester Gun Club.

June 15.—WILMERDING, Pa.—Tournament of the Wilmerding Gun Club. A. A. Mackert, Sec'y.

June 19–21.—CLEVELAND, O.—Chamberlin Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 20–22.—PORTLAND, Ore.—Multnomah Rod and Gun Club's eleventh annual tournament. D. L. Williams, Sec'y.

June 24–28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec'y.

June 26–27.—VICKSBURG, Miss.—Tournament of the Interstate Association, under the auspices of the Vicksburg Gun Club.

June 29.—MARION, N. J.—Fifth tournament of the New Jersey Trap-Shooters' League, under the auspices of the Endeavor Gun Club.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

The Pacific Coast Trap-Shooters' Association announces that it will guarantee $500 to the three high guns in a 25 live-bird handicap called the "Grand Pacific Coast Handicap." The above is "conditional on twenty-five or more entries on or before June 8." The entrance money is $20, birds extra; $10 forfeit on or before June 8, balance any time up to the last shot on the second round. The conditions governing the handicap are as follows: "Twenty-five live birds, 5 traps, 5 birds down, using indicator; handicaps ranging from 25 to 33yds.; 50yds. boundary with a dead line at 33yds. mark; 5yds. circle to be placed around each trap; any birds killed inside of this circle to be scored 'lost bird;' three highest scores to take the purse. Revised 'Dick Swiveler live bird shooting rules' scoring system, to wit: 20, 35 and 50yds. circles to be placed around all traps, using No. 3 trap as the center of the circles. All birds killed inside of the 20yds. circle and without the 5yds. circle to be scored 10 points when killed with the first barrel and 9 points when killed with the second barrel. All birds killed inside of the 35yds. circle and without the 20yds. circle.

and within the outside boundary to be scored 8 points when killed with the first barrel and 7 points when killed with the second barrel. All birds killed inside of the outside boundary and without the 35yds. circle to be scored 6 points when killed with the first barrel and 5 points when killed with the second barrel. Any shooter who intentionally misses a bird in order to obtain a certain place shall forfeit all his interest in the purse, and will be debarred from taking part in any future tournament given under this management." Further particulars may be obtained from D. L. Williams, secretary and manager, 417 Abington Building, Portland, Ore.

Notwithstanding the intensely hot weather which prevailed on Saturday afternoon, June 1, a large number of local shooters went to West Farms, N. Y., to witness a four-handed match at 25 live birds per man, between A. D. Knapp and H. Cathbard on one side, and H. Senderer and T. J. Byrnes on the other. The result was an easy win for the first-named pair, as the following scores show: Knapp 24, Cathbard 22, total 46; Senderer 21, Byrnes 9, total 30.

Mr. Royal Robinson, secretary of the Limited Gun Club of Indianapolis, writes that his club claims the second week of September for its first tournament.

Dr. Samuel J. Fort, of Baltimore, Md., secretary of the Baltimore Shooting Association, was in this city last week. While here he found time to indulge in a few friendly revolver contests with Petty, and also to call on FOREST AND STREAM. The Doctor was enthusiastic over trap-shooting prospects around Baltimore, and states that his Association contemplates holding a large live-bird handicap, on the lines of the Grand American Handicap, some time this fall, the Association guaranteeing $1,000 in cash to the winners in the main event. The dates for the target tournament of the Association have not yet been fixed.

Prof. Zeth, of Altoona, Pa., writes that "Wopsy" is looking her best and that everything will be in capital shape for the Altoona Rod and Gun Club's tournament, July 10–12.

June 11 and 12, July 4, Sept. 2 and 3 are dates claimed by J. W. Fulford for tournaments at Utica, N. Y. At these tournaments both live birds and targets will be used.

A new club has been organized at South Weymouth, Mass., under the title of "The Wessagusset Fish and Gun Club." The club was organized May 22 with the following sportsmen as its officers: F. C. Blanchard, President; W. T. Simpson, Vice-President; C. H. Tinkham, Secretary; G. W. Conant, Treasurer. Directors: E. H. Belcher and B. B. Burbank. Mr. Tinkham writes me that capital grounds have been secured, and that the same were opened on May 30.

The programme of the Interstate tournament at Vicksburg, Miss., June 26, 27, is referred to elsewhere. The Vicksburg Gun Club will add $200 to the purses.

The American E. C. Powder Company will give a four days' tournament on May 5–8 next year. The tournament will be held in the immediate vicinity of New York city, and the E. C. Powder Company will add $2,000 to the purses. These two items are important factors, insuring as they do a large attendance of the best shots in the country.

The management of the Vernon Rod and Gun Club, of Brooklyn, N. Y., has recently made some important alterations on the club's grounds at City Line. Chief among the alterations is the change in the direction of throwing the targets, the screen having been moved round to the left of the score, the background being considerably improved by this move. I understand that the scores made at the last two shoots show a corresponding improvement. It used to be a hard matter to make ten straight under the old system.

It looks as if Brewer and Duffy, of Brooklyn, N. Y., had come to terms, and Mr. Brewer will try to kill 95 out of 100 of Duffy's "ironclad" birds. The stake is said to be $250 aside, and the place and date—Parkway, L. I., June 10. As Brewer's two recent matches against birds were kept very quiet, I cannot vouch for the accuracy of any portion of the above; it is only hearsay and common talk, and is given as such.

Pigeon-shooting, as is only right at this season of the year, is very quiet in this section. Why shouldn't May 1—September 1 be a close time for pigeons?

In a letter which I received on May 29, Mr. Verner de Guise, of Mahwah, N. Y., mentions that his young pheasants (English, Mongolian, Gold, Silver, Amherst, etc.) are hatching out fast. He has over 5,000 eggs under sitting hens at the present time!

Scores made at the following shoots were received too late for insertion this week, and have consequently had to be held over: Canajoharie, N. Y.; Dunkirk, N. Y.; Boiling Springs Gun Club, Rutherford, N. J., (scores made on Decoration Day and June 1.)

With the mercury steadily going up into the nineties, and after four days of record-breaking weather for the last of May and the beginning of June, it may be imagined how pleased I was with the avalanche of trap scores that piled into this office on Monday morning. Secretaries of gun clubs would confer a favor if they would send in scores as soon as possible after they're made. Of course, it's a case of "better late than never," but this weekly Monday hustle, especially during the hot weather, shortens the life of even a trap editor.

Next week will be a big one in Memphis. Mr. Hough will see to it that the trap department of FOREST AND STREAM does not get left. Other shoots during the week will be: June 12–13, Janesville, Wis.; 13–14, Fargo, N. D.; 13–15, Omaha, Neb. (with Frank Parmalee as the presiding genius); 13–15, Portland, Oregon; 14, Worcester, Mass., and 15, Wilmerding, Pa.

Capt. A. W. Money, of the American E. C. Powder Company, sails early next week for England. Capt. Money's trip is one of business and pleasure combined. During his stay across the Atlantic he will take part in the international contests which will be brought off at Hurlingham and the Gun Club.

EDWARD BANKS.

Trap at Chicago.

CHICAGO, Ill., May 25.—The following are the recent live-bird scores made at John Watson's grounds:

May 18.—Practice shoot:

RAVELRIGG.

New Utrecht Gun Club.

BROOKLYN, N. Y., May 30.—To-day being Decoration Day, the Holiday Cup contest attracted 15 members of the New Utrecht Gun Club to the club's grounds at Woodlawn, L. I. Capt. Money, Class AA, and C. W. Floyd, Class B, both killed straight, Floyd not using his allowance. Dr. Littlefield, Louis Schortemeier and Conny Furgueson killed 9 out of 10, and using their allowance of an extra bird, killed it, and scored 10. The five shooters above named then shot off for the cup, miss and out. Schortemeier dropped his first bird and retired, Dr. Littlefield dropping out on the fifth round. Conny Furgueson killed five straight, but slipped up on his sixth, leaving Floyd and Money to shoot it out. After each had killed eleven straight, Floyd dropped a bird; Capt. Money, however, also missed his twelfth. Floyd again missed his bird, the thirteenth in the ties, and Money killing, took the cup, and within the outside boundary to be scored 8 points when killed with the first barrel and 7 points when killed with the second barrel. All birds killed inside of the outside boundary and without the 35yds. circle to be scored 6 points when killed with the first barrel and 5 points when killed with the second barrel. Any shooter who intentionally misses a bird in order to obtain a certain place shall forfeit all his interest in the purse, and will be debarred from taking part in any future tournament given under this management." Further particulars may be obtained from D. L. Williams, secretary and manager, 417 Abington Building, Portland, Ore.

THE RECORD BREAKERS.

Several sweeps were also shot during the day. Scores in the various events are as follows:

Holiday Cup, 10 live birds, handicap allowance:

Capt Money (AA)	1112111211 —10	R E Gray (B)	1•12112120+0— 8
C W Floyd (B)	1221121111 —10	Pennington (B)	2020212100+2— 7
Furgueson, 3d (B)	0222222222+2—10	G W Coulston (A)	01122•••11 — 6
Dr Littlefield (B)	2•22111221+2—10	*D C Bennett (B)	1211121112 —10
Schortemeier (B)	1212210222+2—10	*J Lott (C)	0021012111 — 7

Wm Lair	.....	.....	.....	1•2— 2

No. 1 was 5 birds, $1, class shooting; No 2, $2, three high guns; No. 3, class shooting, $2 entrance; No. 4, $2 entrance, 3 birds, then miss and out. Among the other events decided was a match at 15 birds, for the price of the birds, between Capt. Money and C. Furgueson, Jr. C pt. Money won by 2 birds, killing 14 to his opponent's 12. C Furgueson, Jr., defeated Coulston in a 10-bird match for the birds, killing 10 to Coulston's 7.

Boston Shooting Association.

BOSTON, Mass., May 30.—The Boston Shooting Association held an all-day shoot to-day on their grounds at Wellington. Although the attendance was small, owing to all the local clubs holding shoots on this date, there were twenty-one events shot off. The birds being thrown as hard as possible accounts for the low scores made. Caterer J. A. Dill furnished one of his dinners; all who have been at the Boston Shooting Association's shoots know what that means. Scores in the events decided were as follows:

No. 1, 10 targets: Howe 7, Puck 6, Lyman 9, Herbert 8, Bennett 9, Allison 7, Breen 7, Clark 6, Peabody 4.

No. 2, 10 targets, unknown angles: Howe 8, Puck 6, Lyman 7, Herbert 10, Bennett 10, Allison 6, Breen 7, Clark 5.

No. 3, 10 targets, reversed order: Howe 7, Puck 7, Lyman 6, Herbert 8, Bennett 9, Allison 5, Breen 7, Clark 3, Nye 6, Pray 9.

No. 4, 10 targets: Howe 7, Puck 7, Lyman 6, Herbert 10, Bennett 10, Allison 7, Breen 6, Clark 3, Nye 7, Peabody 5.

No. 5, 10 targets, unknown angles: Howe 9, Puck 8, Lyman 6, Herbert 8, Bennett 7, Allison 9, Breen 10, Nye 8, Peabody 8.

No. 6, 10 targets, reversed order: Howe 9, Puck 8, Lyman 7, Herbert 8, Bennett 7, Allison 6, Breen 9, Sanborn 7, Edgarton 6, Pray 5, Peabody 6.

No. 7, 10 targets: Howe 8, Puck 8, Lyman 7, Herbert 8, Bennett 8, Allison 9, Breen 10, Nye 7, Sanborn 6, Edgarton 4, Pray 6, Clark 0, Peabody 5.

No. 8, 25 targets:

Howe	1011111011110110011100001—16
Puck	1110110011111110111111100—19

Puck	10 00 11 00 01— 4	Clark	00 11 10 00 10— 4

Shooting at Willard Park.

PATERSON, N. J., May 30.—The scores given below were made to-day at Boyle Brothers' Willard Park grounds. It was originally intended that there should be a sweep at 25 pigeons per man; owing to the scarcity of birds, however, the event was changed to 15 birds, $10. Considering the intensely hot weather, the birds were a good lot, scarcely a duffer among them. In the main event Smith acted as referee and Dutcher as scorer. The scores were:

Sweep, 15 birds, handicap rise, $10:

Trap score type—Copyright 1894, by Forest and Stream Publishing Co.

Abbott (27)	..	...	.....	1110—3

No. 1 was a $1 miss and out; No. 2, 3 and 4, $2 miss and out.

In a match, shot during the morning, Donelly beat Stewart by 3 birds. The terms of the match were 10 birds, $25 a side, Long Island rules.

After the live birds had been disposed of an adjournment was made to the bluerock traps, where the following scores were made:

No 1, 15 targets, unknown angles, $1: Morfey 12, Money 14, Wright 11, Doty 12, Ed Berry 10, Abbott 11, J. Doty 11, Lenone 7, Jones 12, Morgan 13.

No. 2, same: Morfey 11, Money 11, Lenone 11, A. Doty 9, Berry 8, Morgan 13, Abbott 12, J. Doty 10, Wright 11.

No. 3, 10 targets, unknown angles, $1: Morfey 9, Money 10, Lenone 8, Morgan 7, Abbott 9.

DUTCHER.

Maplewood Gun Club.

MAPLEWOOD, N. J., May 30.—Notwithstanding the intense heat there was a good attendance of shooters at the grounds of the Maplewood Gun Club to-day. A large number of spectators was also present. The scores made were as follows:

No. 1, 10 targets, unknown angles, $1: L. Thomas 9, Yeomans 9, Parry 8, Van Idestine 8.

No. 2, same: Addison 10, Yeomans 9, Sickley 9, Van Ide 9, Miller 9, Jackson 9, Sopher 9, Geoffry 9, Thomas 8, Smith 7, Dunican 4.

No. 3, 10 targets, expert rules, $1: Yeomans 9, Smith 8, Thomas 9, Geoffry 9, Addison 8, Sickley 10, Miller 8, Dunican 6.

No. 4, 15 targets, unknown angles, $1.50:

Geoffry	101111111111111—14	Jackson	1110111101111111—13
Smith	111111111111111—15	Dunican	0001101100101101— 7

O. L. YEOMANS, Sec'y.

The Record Breakers.

A SCORE of 119 out of a possible 120 in a 20-target event is something so much out of the ordinary run of things, being a record, that we have reproduced a photograph of the squad of six men who performed that feat on bluerocks, together with their score as it appeared on the blackboard. The occasion on which this score was made was the recent DuPont tournament at Cincinnati, O., and the squad, No. 3 in event No. 6 on May 7, was made up as follows: J. W. Conner, Knoxville, O.; E. D. Fulford, Utica, N. Y.; Ferd. Van Dyke, Dayton, N. J.; Sim Glover, Rochester, N. Y.; H. Dando, Dayton, O., and C. A. Young, Springfield, O. Event No. 6 was a "DuPont event," it being a *sine qua non* that all contestants in this event must use DuPont's Smokeless powder. So far as we are aware, Van Dyke was the only member of the squad who had used DuPont Smokeless to any extent prior to this event.

National Gun Club of Milwaukee.

MILWAUKEE, Wis., May 30.—The newly organized National Gun Club of Milwaukee held its first tournament to-day, and although it evidently confined its efforts to a one-day affair, its results show it might well have been more ambitious, for the shoot was very pleasant and successful. Indeed, in very many ways it had an interest far beyond that ordinarily attaching to a one-day shoot. The club is young, but its forty members are full of enterprise and ambition, and its management set out to make the event of its first tournament noteworthy. Mr. G. L. Kurts, a Milwaukee shooter of some experience, has been pestering for some time back with burly Dr. Williamson, one of the Milwaukee stand-bys, and the latter being willin', the two agreed to shoot at 100 live birds each at this tournament, Decoration Day. Not content with one good attraction, the club committee sent down to Chicago and got Dr. W. F. Carver, the noted shooter, to come up and show the Cream City boys a few lines of shooting, putting in against him as trotting mate Mr. Howard Bosworth, who pluckily consented to entertain the champion all he could. Thus two very interesting features were assured, the Kurts-Williamson race having attracted much attention, though Dr. Williamson adhered to his invariable rule of shooting for nothing more than the price of the birds. In addition to these events plenty of birds were provided for sweepstake shooting, and an able and active set of bluerock traps were put in commission to engage the attention of those so disposed.

The National Gun Club holds its meetings in the well-known grounds at National Park, which is still under the fostering care of old Pa Brand, who seems not to age or change as the years pass by. These grounds are very pleasant and accessible, and to-day the arrangements were very good. Several tents furnished shelter, and a good lunch was served. The shelter was in good stead, for at about half past two o'clock the lowering heavens opened, and let fall a terrific gust of wind and rain, which, for a time, threatened to do even more serious damage than blowing down sections of the Park fence and ruining ladies' dresses. The sky cleared, however, and allowed the shooting to go on, though the air remained close and muggy, so that it was not to be expected the birds would fly well. The last fifteen birds of the Carver-Bosworth match were shot off after the rain.

Dr. Carver made a very favorable impression with the National Club people, and so did his gun. Dr. Williamson borrowed this gun for a time in his race with Mr. Kurts, and made a run of 30 straight with it, until his opponent objected. After this event Dr. Williamson used the gun in sweeps, and out of 60 birds shot at scored 59, then going to 71 with only two misses in all. This was a case of love at first sight, and it is likely that the gun will go to live in Milwaukee now. Dr. Carver is one of the modern exponents of heavy nitro loads. He uses 4 drms. of E. C., but he has a half inch soft white felt, a 3/8 n. U. M. C., and a salmon and black soft "field" wad on top of the powder (no card wads at all), so that with this soft wadding the recoil is no worse—so say those who tried it—than with the ordinary target load.

The secretary of the National Club, Mr. Splitt, and the tireless and efficient field hustler, Jake Muehl, assisted by Messrs. Thomas, Cox, etc., had their hands full to-day, but each man did his duty, and the result was a very satisfactory little tournament.

Following are the principal scores of the day. In the Kurts-Williamson race Mr. Kurts used black powder in his left barrel, but loaded only 2¾drs. of it. This proved a handicap, and though he shot pluckily he lost. Score, 100 live birds:

NOTE.—There seems to have been no official scorer for this match. The flights, etc., were kept by a gentleman who kindly gave them to the FOREST AND STREAM representative, who arrrived when the race was nearly finished.

A sweep, 25 live birds, price of birds, was shot by Messrs. George Dieter, Richard Merrill and Dr. J. L. Williamson. At 25 they were tied and so remained at 30, each man having scored 29. Each then paid for his own birds.

A sweep at 10 live birds was shot by Messrs. Theo. Thomas, Richard Merrill, P. Schuchardt, Geo. Dieter and H. Bosworth, each of the four latter killing 10 straight, Mr. Thomas 8.

A sweep at 10 live birds was shot in which Mr. Thomas scored 8, Mr. Bush 10, Mr. Brant 6, Mr. Mirgler 5.

Other sweeps filled in the available time of the day.

Following are winners in some of the leading target scores:

No. 3, 10 bluerocks: Richard Merrill, Dr. Morrison, George Dieter, 10 each; Theodore Thomas, J. L. Cox, 9 each.

No. 4, 15 bluerocks: George Dieter, 15; Theodore Thomas and Dr. Morrison, 14 each.

No. 5, 15 bluerocks: Theodore Thomas and J. L. Cox, 15 each; Richard Merrill 14.

No. 6, 10 bluerocks: Theodore Thomas and P. Schuchardt, 10 each.

No. 7, 10 bluerocks: D. Miller, J. E. Farcher, J. Fisher and P. Schuchardt, 9 each.

No. 8, 20 bluerocks: J. Haertel and J. E. Farcher, 19 each; Theodore Thomas, J. Bush, J. Fisher, 18 each.

No. 9, 10 bluerocks: D. Miller and F. Meixner 10 each, Theodore Thomas, P. Schuchardt, George Deiter, P. Himmelstein 9 each.

No. 10, 10 bluerocks: J. Bush 10, Theodore Thomas, George Deiter, J. Fisher and P. Hammerschmidt 9 each.

No. 11, 15 birds: J. Bush, D. Miller and J. Haertel 14 each, Theodore Thomas, J. L. Cox and William Mirgeler 13 each.

No. 12, 10 bluerocks: Richard Merrill, J. L. Cox and Theodore Thomas 9 each, D. Miller 8.

No. 13, 20 bluerocks: J. Bush 20, S. Meunier 18.

About 800 live birds and 3,000 targets were shot, which in view of the rain was a good day's work. This young club should be congratulated on its first public entertainment. In shooting material it is very strong, and a promising future seems before it. E. HOUGH.

Stroudsburg Gun Club.

STROUDSBURG, Pa., May 30.—The following scores were made to-day by members of the Stroudsburg Gun Club:

No. 1, 15 targets:

M E Miller	111111011111111—14	M Lash	0000010100w
W Lash	011111011101101—11	Rutt	1011001101011 10— 9

J. A. CREVELING, Sec'y.

Weir City, Kansas.

WEIR CITY, Kansas, May 25.—A very interesting live-bird contest was shot to-day at the grounds of the Business Men's Gun Club between B. C. Best and Henry Pierce. The race was at 25 birds for $50 a side and gate money. The result was a tie, and as Pierce positively refused to shoot off the tie under any circumstances, Referee Calhoun declared the match a draw. The birds were an uneven lot and Best had by far the worst of it in drawing hard ones. Score:

Best	12111221122212111121021 12—23
Pierce	11112111111101111111201 12—23

MAMALUKE.

The Grand Rapids Tournament.

GRAND RAPIDS, Mich., June 1.—Whether the crackajacks got tired at Knoxville or Rolla Heikes's fishing expedition had too great attraction is yet to be seen, but the fact remains that they did not put in an appearance at the Grand Rapids tournament of May 29, 30, 31. To the "man in the moon" it looks as if the report from Little Rock will show where the fish pond was, and whether the fishermen outnumbered the fish. A good number of prominent Michigan shooters showed up at the opening. B. O. Bush, of Kalamazoo, was there to look after the empire trap; John Parker in the interest of the bluerocks; T. J. Graham, of Sault St. Marie; Livenguth, of Lafayette, Ind.; Elkerton, of Alaska; N. W. Holt, of Manchester; J. R. Preston, Coldwater; H. C. Holt, Cleveland, shooting under name of "Clay;" J. P. Easton, Monroeville, O.; H. H. Karstens; Zulaad, a Jackson man, as "Redwing."

These men stayed like old campaigners, but the lone professional most of the first day was John Parker, of Des-Chree Shos-Ka, representing the Winchester Arms Co. and E. C. Powder Co. Simon Glover, Rochester, got to the grounds in time to get in the last regular events, and seemed to have a string tied to his entrance money. The Grand Rapids handicap, giving the amateurs one bird more in 15 and 20-bird events, and two in 25-bird events, than the professional and 90 per cent. amateurs, worked like a charm, not only in keeping things moving without a break, but in evening up the scores in a manner satisfactory to both classes.

Two sets of traps, one bluerock expert and one empire, were in place, a distance of 75ft. apart, but the limited attendance rendered the use of both unnecessary, and it was found to expedite matters by using only the first named. Mr. M. C. Byers, one of the club members, acted as general manager and filled the place as if to the manor born. Without any nonsense, but uniformly courteous, he was everywhere and alert to the needs of everyone. He was ably assisted by W. D. Pugh in getting the men in position, making up the squads with discretion, so that if a man was notorious as a laggard he did not shoot near the head of the squad. Mr. C. L. Carpenter as referee, Mr. William Geer as official scorer, and Messrs. C. F. Rood and W. H. Neahr in the cashier's tent, filling the same positions as last year, left nothing to be desired in those places. Special mention should be made of the café. Mr. Hansen, steward of the Peninsula Club, the leading social organization of this city, is a member of the gun club and took personal charge of that essential department; his fragrant coffee, salads, etc., were an agreeable change from the customary lunch. Two tents, 24×50, were spread for shooters and spectators, besides another specially reserved for ladies; one tent, 20×40, was used as the café, and there were also the usual number of smaller tents. Foster, Stevens & Co., the leading sporting goods dealers of Michigan, had their own tent in charge of Mr. Wm. H. Calkins with a large stock of ammunition.

No rain interfered with the shoot and the roof over the shooting station was a grateful protection from the hot sun.

The scores of the opening day are given below. The amount of money divided in programme events was $421.85.

Among the new arrivals on the second day were J. A. R. Elliott, representing the Winchester Repeating Arms Co.; Wm. Thompson, Jackson; F. C. and W. M. Marantette, Meadon; C. H. Rich, Greenville; D. Carpenter, Battle Creek; H. M. DeBree, Greenville; Wm. Watts, Jackson; A. B. Webber, Ionia; Sam Howes, Battle Creek; R. L. Soule, Plainwell. The fine weather and the holiday brought out a large crowd of spectators, and the ranks of the local shooters were largely increased by members of the club unable to leave their business the day before, or doing jury duty, like the "old reliable" George Gould.

The State championship team race for three diamond buttons was shot to-day, and was won by a miscellaneous team entered at the last moment. Under the regulations of the Michigan League, the Board of Control have the right to fill out a vacancy in a club team by assigning to it a man from some other locality, and with this arbitrary authority the Des-Chree-Shos-Ka team was made up with one man from Grand Rapids, one from Sault Ste. Marie and one from Detroit. This event interfered with the programme events, and except for this the record for number of targets thrown from one set of traps would have been reached. As it was, 5,455 were thrown during the day. The number of entries ranged from 21 in event No. 1 to 33 in event No. 10, and the total value of purses divided was $627.50.

On the third day the only new arrival was C. Schelling, of Lansing, and the early departure of a number of visitors showed that a three-days shoot is rather too much for a town of this size. The number of targets thrown was better than the first day, the larger amount of added money having kept the successful ones and called out a few new aspirants. The amount of money divided was $521.10, entries ranging from sixteen to twenty-two. A new magazine trap in operation was on exhibition on the grounds in the afternoon, the invention of a local printer, Mr. A. H. Davis. The features of the trap are that it uses any make of targets, and is set and loaded at one motion by hydraulic pressure, pipes leading from one pump to as many traps as desired, enabling one man to operate five traps as rapidly as the pump handle can be worked. Also the angle changing device is such that even the operator cannot tell what the flight will be without seeing the traps.

Much interest was taken in Mr. Davis's invention, and as practical a man as Benj. O. Bush remarked, "Gentlemen, you have said magazine traps were no good, but I tell you there is the coming trap; the right idea is there and it is worked out correctly." C. F. R.

First Day.

Knoxville in 1895.

THE excellence of the work of McCrary & Branson, photographers, Knoxville, Tenn., is attested by the accompanying cut, which is made from a photograph taken during the morning of the first day by the above-named firm. As shooting was being proceeded with while the negative was being made, several prominent shooters are necessarily missing. It was unfortunate that a group of all who took part in the great shoot was not secured; it would have been a more valuable souvenir of Knoxville in '95 even than the one that was obtained. Realizing that the features of a large number of those present are unfamiliar to the majority of trap-shooters, although their names are "household words," numbers have been affixed wherever possible, in order that identification might be easy.

Altoona Rod and Gun Club.

ALTOONA, Pa., May 30.—The Altoona Rod and Gun Club's tournament at Wopsononock Park to-day was quite a success. The attendance was not so large, but all came prepared to shoot, and as a result fourteen events were shot off. A large crowd of spectators were present. A notable feature of the day was the perfection to which the traps worked. There was not a jar nor a halt during the entire day. Scores:

Opening event, "just to get your eye on them," price of targets only: Clark 6, Clover 8, Shifu 2, Killitts 6, Holsinger 6, W. E. Bell 8, House 2, Sands 9, Robin 3, Shifu (2) 6.

No. 1, 10 targets, known angles, $1: Clark 7, Killitts 9, Sands 9, W. E. Bell 9, Clover 9, Holsinger 9, Adams 6, Shifu 6, Bookwalter 8, House 2, Robin 2, Beesey 6.

No. 2, 15 targets, known traps and unknown angles, $1.50: Clark 14, Killitts 13, Sands 12, W. E. Bell 12, Clover 12, Holsinger 10, Adams 11, Bookwalter 13, Shifu 6, Beesey 8.

No 3, 10 targets, unknown angles, $1: Clark 8, Killitts 8, Sands 7, Bell 6, Clover 9, Adams 6, Bookwalter 6

No. 4, 15 targets, unknown angles, $1 50: Clark 11, Killitts 12, Sands 12, Bell 10, Clover 10, Adams 10, Bookwalter 7, House 5.

No. 5, 10 targets and 5 pairs, $1.50: Clark 12, Killitts 13, Sands 15, Bell 12, Clover 18, Adams 12, Bookwalter 10.

No. 6, 20 targets, unknown angles, $2:

Clark	11011111111111111111—19	House	01000010100100000000— 4
Killitts	11111010111110110111—17	Adams	11001111110011101111—15
Bell	10010111111111111110—16	Shifu	01010100101100010001— 8
Sands	11101111001111010110—14	Curtis	01111000111101001101—12
Clover	01110111111111111111—18	Beesey	01001111101000101111—12

No. 7. 10 targets, unknown angles, $1: Clark 7, Killitts 8, Bell 4, Sands 8, Clover 10, House 3, Adams 9, Curtis 7, Shifu 4.

No. 8, 10 targets, walking match, $1: Clark 8, Killitts 8, Sands 7, Clover 7, Beesey 9, Adams 7, House 2, Robin 4, Bell 6, Curtis 9.

No. 9, 10 targets, unknown angles, $1: Clark 7, Killitts 7, Bell 10, Sands 9, Clover 8, Forney 3, Simon 2, Bookwalter 6, Adams 8, Curtis 4, Doer 2.

No. 10, 15 targets, unknown angles, $1.50: Clark 10, Killitts 14, Bell 13, Sands 11, Clover 11, Shenk 8, Simon 8, Forney 4, Sure Shot 5, Curtis 10, House 0, Beesey 7.

No. 11, Club Members' Medal Contest, 25 targets:

Sands	1111111111011101001101111—20
Clark	0111011111010101011101111—18
Clover	0101110111111101111110111—20
Killitts	1111110011111111111111111—23
Bell	1111010111101111111111111—22
Bookwalter	1110111101011011111111011—20
Shifu	1100001010011111100000000—10
Doer	0000010000000010100000001— 4
Sure Shot	1100110111100000100100111—13
Curtis	0111101101011010001100010—13
Robin	0111011110110110011011001—16
Adams	1110111111111010111111110—21
House	1000100000000000000101000 — 4
Beesey	1001111001011111001111111—18
Patterson	1101111011111000110010111—17
Forney	0010101101000100111101010—12

Killitts won the gold medal, Bell the silver medal and Doer in the shoot-off won the leather.

No. 12, 10 targets, unknown angles, $1: Clover 9, Sure Shot 2, Killitts 6, Adams 9, Bell 6, Sands 5.

No. 13, same: Clark 7, Killitts 7, Sands 6, Bell 6, Clover 9, Forney 6, Adams 7.

No. 14, same: Killitts 7, Sands 9, Clover 8, Adams 6, Clark 7, Forney 4.

All purses were divided according to the "jack rabbit" system, surplus being in three moneys.

GRANT.

Missoula Rod and Gun Club.

MISSOULA, Montana, May 26.—Owing to the fact that the greater number of the members were attending the State tournament, held in Butte on May 16, 17 and 18, the weekly meeting of the Missoula Club was dispensed with last week. Though the boys did not cover themselves with any extraordinary amount of glory at the State event, a dozen of them came up as smiling to-day as if they were duly accredited champions, and succeeded in making the following scores:

Weekly medal contest, 20 targets, unknown angles:

Class A.

C A Searles	10100001100000110110— 8	W Brayton	11111011111111111110—18
W H Mace	11001111111111010111—16	F P Kern	11110001101000111101—12
Andrews	00110110011001101110—11	LieutDevol	00110111101100110000— 9
J P Menard	10101101010110110111—13		

Class B.

Thompson	00000000011001000111— 6	F Allinson	11001010100111110001—11
C J Lemley	11111111111011111111—19	L L Hunt	11011100111111111100—15
A Sterling	01110111100101111111—15		

With this shoot the club is again classified for the coming four weeks. The following is the reclassification:

A Class.

	Broken.	Shot at.	Percentage.
W P Brayton	45	60	75
Frank Woody	26	40	65
J P Menard	55	80	68⅔
L L Hunt	36	60	60
A M Sterling	41	60	68⅓
C J Lemley	51	80	63⅞
Robert Rogers	15	20	75

B Class.

W H Mace	46	80	57½
F P Kern	42	80	52½
Lieut Devol	31	60	51⅔
Capt Andrews	34	60	56⅔
A M Stevens	15	40	37½
H W Thompson	8	40	20
J M Evans	18	40	45
C A Searles	21	40	52½
F Allinson	11	20	55
J K Wood	Old classification.		
T E Evans	Old classification.		

WILL CAVE.

Where Is the Difference?

THIS week the great Chicago bicycle road race, an annual event enlisting the energies of several hundred competing bicyclers, was run over its nine miles and return of pavements, dirt and sand. It is announced that it has been discovered that a number of the contestants did not ride the full course, but dishonestly stopped by the roadside on the way up, and then cut in ahead of their competitors on the way back, thus coming in ahead, though not having run the race at all. Some prizes were awarded certain of these gentlemen, which now will be taken away from them.

They dropped for place.

The prominent manufacturer who inaugurated the Chicago annual road race has published his chagrin at learning of this state of things. He says the disgrace of it all will probably kill the fixture for another year.

Because they dropped for place.

The newspapers of Chicago say that another such disgraceful affair will reduce the sport of bicycling to one practised only by those who ride alone for individual pleasure, and that dishonesty of the kind proved here will kill the growth of the sport even in an amateur way, as tainting it in a fashion not to be relished by the public.

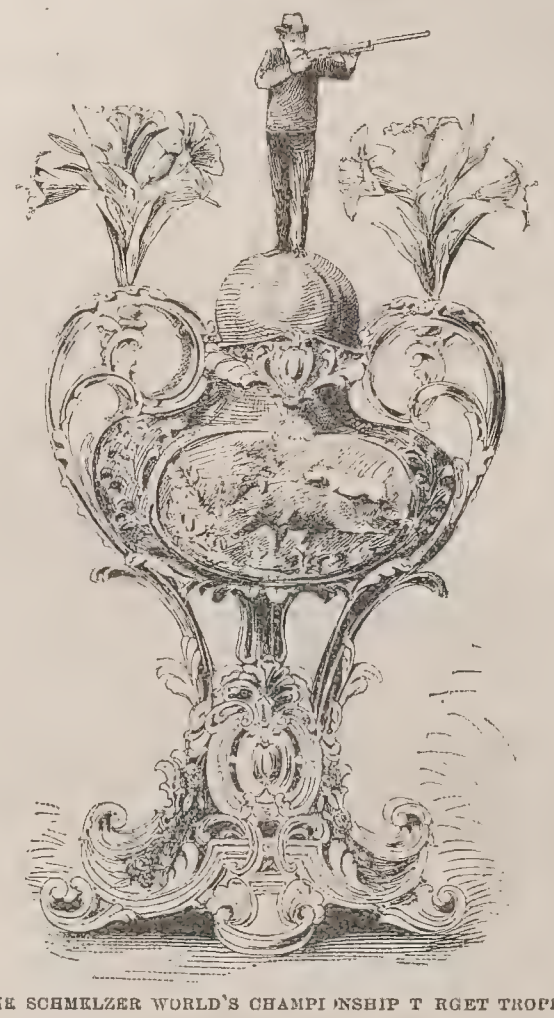
This is dropping for place, as shown in bicycling. Now, will anyone be good enough to tell me just where and what is the difference in dropping for place in shooting at the trap? And will anyone be further kind enough to point out to me how the predictable consequences of the one sort of dropping differ from those of the other?

The bicycling droppers will be branded and barred. The trap-shooting droppers, what shall be done with them? If there is a difference here, where is it, and why?

E. HOUGH.

509 SECURITY BUILDING, Chicago.

The Vicksburg Programme.



AS ANNOUNCED in the "Fixtures" column, the Interstate Association will give a tournament at Vicksburg, Miss., the tournament being held under the auspices of the Vicksburg Gun Club. The dates chosen are June 26 and 27. Trap-shooting is not a new sport in Vicksburg, several successful tournaments having been held there; the attendance at these tournaments having always been satisfactory, the $200 added to the purses by the Vicksburg Gun Club ought to insure the entire success of this the fifth of the 1895 series of tournaments given by the Interstate Association. The graduating handicap adopted by the Association will of course be the system under which the programme events will be decided. This system suited the tastes of those who took part in the tournaments at Pittsburg, Pa., Wilmington, N. C., and Lynchburg, Va., and should be equally popular at Vicksburg. The programme is a lengthy one—ten events of 20 targets each. The entrance money is also uniform—$2 in each event; $10 is added to every purse. The tournament will be held at the Fair Grounds, a mile from the city. Carriages and omnibuses will convey shooters to the grounds at the fare of 25 cents. Shooting commences at 9:30 A. M. each day. The Carroll, Clay street, between Washington and Walnut, will be headquarters for shooters during the tournament. Mr. J. W. Hayes, secretary of the gun club, will answer all inquiries regarding further particulars.

The Schmelzer Tournament.

WE have received from the J. F. Schmelzer Arms Co., of Kansas City, Mo., the programme of a "midsummer shooting tournament, to be held at Fairmount Park, Kansas City, Mo.," July 16-19. After reviewing the situation in trap shooting circles, and referring to the result of last year's shoot, the introduction proceeds: "As in the past, the only charge in any event will be the simple charge for targets, and we hope we have made sufficient inducements in our prize list to bring out the shooters and insure a large attendance." Mention is also made of a "world's championship on inanimate targets" trophy. Reference will be made to this trophy further on. Jack Parker will manage the shoot, a fact which, as the introduction states, "in itself insures perfect service in every department." The rules and conditions of the tournament are as follows:

"Shoot will commence promptly at 9:30 A. M. Latest revised American Association rules (rapid fire) to govern. Bluerock traps and targets and Paul North's electric pulls will be used. Loaded shells of all kinds can be obtained on the grounds at reasonable rates. No shooter will be permitted to win more than one first prize during the day, excepting shoots Nos. 1, 6, 11 and 16, and shoots Nos. 15 and 18, these will be open to all. All merchandise shoots are open to amateurs only, and all paid agents of manufacturers and professionals will be barred. Four sets of five traps each will be used, one set of which has been placed at the disposal of all shooters, professionals, amateurs or manufacturers' agents, at which sweepstake shooting will be done to suit the pleasure of every one, as we wish to give all a pleasant and a good time. We would request all contestants to enter for all day the first thing in the morning, and as far as possible to make up squads and shoot together during the day, as this greatly facilitates the running of the tournament. If, for any reason, any one desires to drop out, entrance money for all uncontested events will be refunded. All ties must be shot off."

The special events are the "Fairmount Park event" and the "J. F. Schmelzer & Sons' world championship trophy event." In the first

THE SCHMELZER WORLD'S CHAMPIONSHIP TARGET TROPHY.

of these two events, both open to the world, the prizes are three valuable clocks. The other, the championship event, the trophy is a very valuable cup, its value being placed at $500. The conditions of this contest, which is at 100 targets, $2 50 entrance, are as follows: "The targets in this event will be thrown from known traps and at known angles, *i. e.*, shooters will go from trap 1 to 5, and shooter No. 1 will receive target from trap No. 5, shooter No. 2 from trap No. 4, shooter No. 3 from trap No. 3, shooter No. 4 from trap No. 2, shooter No. 5 from trap No. 1 The winner of this trophy will give a bond for the safe-keeping and delivery of the trophy to conform with the requirements of the shoot. This trophy represents the world's championship, and in order for it to become the permanent property of any one it will be necessary for the champion to successfully defend it three times in succession. All matches for the trophy are to be shot under the rules governing this, the first, shoot, and any one wishing to challenge the winner must send a deposit of $50 with his challenge to Mr. James A. Whitfield, sporting editor of the Kansas City *Star*, who will at once notify the winner to hold himself in readiness to defend the trophy at his convenience any time within sixty days from the date of the challenge; the $50 so deposited to go to the winner of the match. Should the holder of the trophy for any reason (save sickness) fail to be on hand at the time and place set for the match he shall forfeit the trophy to the challenger. The winner shall name the grounds upon which the contest is to be shot."

The conditions governing this contest are hardly satisfactory. Beyond winning the cup, which is subject to challenge, as stated above, there is nothing to recompense the winner for his expenses in attending the shoot. For that reason we fear that a really representative championship contest can scarcely be expected. It may be worth the while of manufacturing concerns to send their representatives to Kansas City to shoot for this fine trophy—it would be a great card for their wares; but it is unlikely that any other class of shooters would travel several hundred miles on the chance of winning the title of champion. The idea of a championship at targets is a good one, but it seems as if there should be some inducement, outside of the trophy, that would gather together the representative shots of this country.

As a typographical work of art the programme is as good a specimen as any that has come into our hands. The list of events, premiums, and other information usually found in such publications, can best be ascertained by sending for a programme itself; address J. F. Schmelzer & Sons, Kansas City, Mo.

Lynchburg Gun Club.

LYNCHBURG, Va., May 31.—The members of the Lynchburg Gun Club held their weekly shoot to-day; following are the scores made:

No. 1, 10 targets, unknown angles: Empie 9, Scott 7, Dornin 8, Moorman 7.

No. 2. 15 targets, unknown angles:

Nelson	111111111111101—14	Empie	11111110111011—13

F. M. D.

Garden City Gun Club.

THE Garden City Gun Club is one of the junior gun clubs of Long Island. Probably there are few gun clubs that are officially aware of its existence. An exception to that rule is the Yantacaw Gun Club, of Nutley, N. J., two cups, now in possession of the Garden City shooters, telling the tale of a like number of victories in five-men team contests between those two clubs. A little more than a year ago, the Garden City Gun Club was not in existence. Messrs. Nicoll Floyd and A. B. Purdey at that time owned a single trap and amused themselves by indulging in trap-shooting on a very modest scale. The paraphernalia consisted of the trap above mentioned, a barrel of targets, and a wheelbarrow in which the trap and targets for immediate use were conveyed to an open space near the Garden City waterworks. At first one, and then another, of the residents was introduced to the sport, interest in trap-shooting began to grow and the idea of forming a permanent organization was conceived. Messrs. Floyd and Purdey were the moving spirits and to their energy Garden City now owes a thriving gun club, which boasts of a very complete club house and grounds within ten minutes' walk of either Garden City or Hempstead Crossing stations. Right back of the club house are the buildings of the waterworks above referred to.

On May 30, 1894, a formal opening of the club house and grounds took place. Since then the club has grown rapidly in popularity, and is now one of the recognized institutions of Garden City. Decoration Day this year was the occasion of the first annual reunion of the club. A large number of ladies were present, the reunion being in the nature of a picnic. West of the club house a tent had been erected, under the shade of which were placed tables covered with all the good things usually to be found at picnics. The programme contained, among other events, three prize shoots; in each of these events the president of the club, Mr. Nicoll Floyd, carried off the honors. The style of shooting is severe, but sportsmanlike—one man up, five unknown traps. All the prize events were handicaps, allowances of misses as breaks being conceded by the scratch men. That the handicapping was about right may be judged by the fact that Floyd had to shoot off ties in each of the events before becoming the winner of the respective trophies.

The club house, though small, is very complete. Its interior, finished in yellow pine, is decorated in a unique way. Empty shells—Blue Rival, Smokeless and Rapid—are used to mark the panelings very effectively, while the frieze is relieved by an arrangement of what looks like wheels without felloes or tires, targets representing the hubs and shells the spokes. This idea of decoration is credited to Mr. Purdey. Lockers for the members' clothes line one side of the house. So rapidly is the membership of the club increasing that it has been found necessary to arrange for an addition to the club house—a sure sign of prosperity and energy. Among the members are: Nicoll Floyd, President; A. B. Purdey, Secretary; G. L. Hubbell, Treasurer; D. Fuller, Dudley Winthrop, F. R. Sheppard, T. Hollister, D. D. Breck, A. D. Lewis, J. P. Fuller, Richard H. Hunt, J. L. Lawrence, A. R. Hopkins, J. Rushmore Wood, Horace Porter, Jr., Sydney Harris, etc., etc.

EDWARD BANKS.

Paducah Gun Club.

May 24.—The members of the Paducah Gun Club had a shoot this afternoon. Two events, 25 bluerocks each, and $1 and $2 entrance, respectively, were decided, with the result as follows:

No. 1:

R A Brudas	01111110111111111011101110—20
H E Craft	11111110101011111110110110—19
Geo Rawleigh	10110110101101111111011101—18
Jas Lang	01011110011101111111111111—20
Chas Robertson	11110010111111111111111101—21
C K Wheeler	11110110111010111101110110—18
M Ingram	11011101111110111111101111—21
Geo Robertson	11111110101011111110010111—20

Charles Robertson and M. Ingram shot off tie for first money at 5 birds each: Ingram 5, Robertson 4. Brudas, Lang and Geo. Robertson shot off tie for second money at 5 birds each: Robertson 5, Lang 4, Brudas 4.

No. 2:

R A Brudas	11011111100111101111111110—20
I Young	00111111010111101111100111—18
M Ingram	11111110111011111111110111—22
C L Robertson	11111101110111101111111010—20
H E Craft	11011011101111101111111101—20
Jas Lang	01011111001101111111111111—20
Geo Rawleigh	11101110111011111111111111—22
Geo Robertson	11111110101111111110111111—22

Ingram, Geo Robertson and Rawleigh shot off tie for first money at 5 birds each. The first shoot resulted: Ingram 5, Robertson 5, Rawleigh 4 Ingram and Robertson then shot at 5 birds each: Robertson 5, Ingram 4. Owing to the lateness of the hour second money was divided.

PADUCAH, Ky., May 27.—The following scores were made to-day by members of the Paducah Gun Club:

No. 1, 25 targets, $1:

W E Cochran	11110111110111101111101111—21

No. 12, 10 targets, $1: Hotchkiss 9, Johnson 9, Hayes 8, Reisinger 7, Affantranger 6, Harvey 6, Nye 7, Mathews 9, Dunn 7, Barackman 6.

No. 13, 10 targets, unknown angles, $1: Hotchkiss 10, Reisinger 9, Johnson 8, Dunn 9, Mathews 7, Nye 9.

CHOKE BORE.

Squires Beat Benner.

PLAINFIELD, N. J., May 30.—George Squires and John Benner, both members of the Climax Gun Club, shot a match at live birds to-day on the club's grounds near Fanwood, N. J. The match was at 25 pigeons each, $50 a side; Squires won by one bird, killing 18 to Benner's 17. Following is the score:

Squires	10102011101011112011211102—18
Benner	22121210022210•1100021101—17

Kansas State Sportsmen's Association.

KANSAS CITY, Kan., May 25.—The sixth annual tournament of the Kansas State Sportsmen's Association, which was held at Kansas City, Kan., on May 21, was a complete success from every standpoint. The weather was ideal, neither too hot nor too cold; the attendance was large and enthusiastic and comprised all of the best target shots in the State of Kansas, as is evidenced by the scores. The shoot was given under the auspices of the Metropolis Gun Club, of Kansas City, Kan., and was held at Kerr's Park, the traps being located in the race track enclosure with an excellent background and on a level with the score. In all the events Empire targets were used The management was ably assisted by Mr. Al Bennett, of Emporia, Kan. The events were run off and the targets pulverized with the regularity and precision of clock work.

The annual business meeting and election of officers was held on Tuesday evening, May 21, and it was decided to hold the seventh annual tournament at Frankfort, Kan., 1896. The following gentlemen were elected officers for the ensuing year. Pres., Dr. M. A. Brawley, of Frankfort; First Vice-Pres., W. W. McIlhany, of Weir City; Second Vice-Pres., C. J. Weis, of Frankfort; Third Vice-Pres., N. Smook, of Kansas City; Fourth Vice-Pres., D. W. Edwards, of Severance; Fifth Vice-Pres , E. L. Deibert, of Topeka; Sec'y, W. J. Gregg, of Frankfort; and Treas., Geo. W. Jenkins, of Wamego.

An amendment to the by-laws, relative to membership and dues in the Association, was adopted and is as follows:

"Any regularly organized club in the State of Kansas may become a member of this Association by paying a membership fee of $5, and any sportsman residing in the State by paying a membership fee of $1, if there be no club in or near the city where he resides or the same be not a member of this Association. Each club which is a member of this Association shall pay as its annual dues hereto the sum of $1 per annum, and in addition to such amount shall pay the further sum of 10 cents per capita for each of its individual members; no club, however, shall be subject to the payment of any dues for the year in which it becomes a member of this Association. The dues of individual members of this Association shall be 50 cents per annum. All such moneys shall be used to defray the expenses of this Association and all members of clubs in arrears for dues will be debarred from the privileges thereof."

A partial list of the out-of-town shooters follows, and may well be headed with Louis Erhardt, of Atchison, Kan., without whose genial presence what Kansas shoot could be called an entire success? E. Brewer, W. H. Martin, R. F. Mason, W. L Beardsley, J. Elwell, W. M. Shiras, M Floyd, J. R. Ingle and G Gilgas, of Ottawa, Kan.; J. J. Gray, of Severance, Kan.; M. M. Detar, of La Crosse, Kan.; J. W. Sexton, S. H. McElroy and George W. Goff, of Leavenworth, Kan ; W W. McIlhany, Dr. D. W. King, Ben. C. Best and S. W. Marshall, of Weir City, Kan.; C. F. Reust, J. M. Rhodes and C. J. Weis, of Frankfort, Kan.; J C. Clark (Canfield), L. O S Clary, E. L. Deibert and H. Hindmarsh, of Topeka, Kan.; James Stevenson, of Bonita, Kan.; W. S. Ferguson, of Atchison, Kan.; George W. Jenkins, of Wamego, Kan.; Dr. J. F Lesh (Lone Jack), of Seneca, Kan.; Rogers, of Hiawatha, Kan.; Bailey, of Valley Falls, Kan.; A. L Bennett, of Emporia, Kan.; W. R. Rhoades, of Slater, Mo ; T. H. Cohron, of Pleasant Hill, Mo.; W. W. Menafee, of Richmond, Mo., and D. W. Edwards, of Troy, Kan. A goodly number of Kansas City, Mo., shooters were also constantly on hand, and helped to make the targets go, as well as some Sedalia shooters, whose names I neglected to secure. The home shooters nobly supported the management and stayed in like veterans.

The events of principal interest were the contest for the handsome gold medal emblematic of the individual championship of the State of Kansas, and the team shoot for the Kansas City *Times* cup, emblematic of the team championship of the Association for 1895. The *Times* cup was won by the Weir City team on a creditable score, in a contest with teams representing the Leavenworth Gun Club, the Ottawa Gun Club, the Frankfort Gun Club, and the Metropolis Gun Club, of Kansas City, Kan. The individual championship contest was spirited, and resulted in a tie between W. W. McIlhany, of Weir City, and George W. Jenkins, of Wamego, on clean scores of 30 targets. Ten more targets per man were then shot, resulting in a second tie, when another 10 targets per man were shot, Jenkins losing one bird and McIlhany breaking out straight and taking the medal on a clean score of 50 targets, which, taken together with scores in preceding events, made a run of something over 100 targets. Reust, of Frankfort, captured first money all alone in the $100 guaranteed event on the first day on a clean score of 40 targets.

After each day's programme was shot out, extra events were run off until darkness put an end to the sport. Here are the scores:

First Day.

No. 1, 15 singles, known angles, entrance $1.50: Shiras 12, Sexton 12, Edwards 10, Soward 9, Erhart 13, Menifee 15, O'Rear 13, Martin 12, Lail 12, Detar 14, Elwell 7, Brewer 13, Floyd 12, Rhodes 15, Reust 13, Weis 7, Rhoades 14, Stevens 11, Gray 13, Cosby 15, Jenkins 13, Best 15, King 11, McIlhany 13, Pugh 12. First money was divided among Rhoades, Cosby and Best.

No. 2, 20 singles, known angles, entrance $2: Shiras 17, Sexton 18, Soward 19, Erhart 17, Menifee 19, Pugh 18, Brewer 15, Martin 20, Detar 18, Edwards 17, Jenkins 19, King 16, Cosby 18, Rhoades 18, Reust 20, McIlhany 17, Weis 17, Best 20, Gray 17, Rhoades 19, Stevens 12. First money was divided among Martin, Reust, McIlhany and Best.

No. 3, "jack rabbit," 15 singles, known angles, entrance $1.95: Shiras 12, Sexton 15, Erhart 14, Menifee 13, Elwell 7, Pugh 13, O'Rear 14, Lail 11, Elliott 14, Soward 12, Hewitt 8, Cohron 9, Brewer 9, Edwards 12, King 11, Martin 15, Rhoades 13, Gray 14, Reust 15. Rhoades 12, McIlhany 12, Weis 11, Stevens 9, Cosby 14, Canfield 11, Deibert 14. Sexton, Martin and Reust divided first money.

No. 4, 20 singles, unknown angles, entrance $2: Sexton 19, Pugh 16, Menifee 19, Erhart 19, McIlhany 19, Jenkins 18, Rhodes 18, Reust 19, Soward 10, Cosby 18, Brewer 15, Detar 19, Edwards 18, Gray 17, Martin 18, Rhoades 17, Lail 14, Best 15, Wells 16. First money was divided among Sexton, Menifee, Erhart, McIlhany, Reust and Detar.

No. 5, 25 singles, known angles, purse $25, entrance 75 cents: Shiras 18, Sexton 23, Erhart 23, Pugh 23, Menifee 22, Hewitt 12, Cosby 23, Gilgas 17, Bowen 13, Floyd 22, Elwell 21, Elliott 23. Estep 7, Jenkins 23, McIlhany 24, Stevens 13, Norton 22, Edwards 23, Martin 19, Watson 15, Schmidt 21, Laidlaw 13, Canfield 20, King 20, Gray 24, Diebert 19. Detar 23, Rhodes 25, Ruest 22, Weis 21, Cohron 16, Soward 23, Best 24, Bennett 25, Horton 22, Jones 17. First money was divided between Rhodes and Bennett.

No. 6, 20 singles, "jack rabbit," entrance $2 60: Shiras 17, Sexton 17, Pugh 18, Erhart 19, Menifee 19, McIlhany 19, Diebert 19, Laidlaw 10, Rhoades 19, Reust 20, Weis 15, O'Rear 20, Jenkins 19. Stevenson 16, Elliott 15, Cosby 19, Edwards 16, Canfield 14, Martin 16, Rickmers 18, Parsons 15, Rhodes 16, Soward 17, Best 20, Horton 20, Lail 19, Gray 20, Elwell 15, Brewer 18, Bennett 19 First money was divided among Best, Gray, Horton and Reust.

No. 7, for cup, 25 known angles and 25 unknown angles, team shoot: Entries, Weir City, Leavenworth, Ottawa, Frankfort and Metropolis. Weir City won. This team was composed of McIlhany, Best and Marshall. They killed 137 birds out of 150.

No. 8, 20 singles, unknown angles, entrance $2: Sexton 18, Pugh 18, McIlhany 18, Erhart 15, Menifee 15, Cosby 19, Martin 18, Jenkins 16, Best 14, Horton 20, Weis 16, Soward 16, Rickmers 18, Detar 17, King 16, Norton 17, Brewer 15, Laidlaw 16, Rhoades 18, Stevenson 18, Diebert 18, Gray 15, "Lone Jack" 17. Horton took down first money.

No. 9, $50 donated, 30 singles, known angles, entrance 90 cents: Shiras 25, Sexton 28, Erhart 30, Scott 23, McIlhany 28, Menifee 28, Cosby 29, Rooney 28, Canfield 26, Debert 26, Edwards 28, Parsons 15, Jenkins 29, Laidlaw 6, King 22, McElroy 25, Weis 21, Cohron 20, Elwell 24, Best 28, Martin 22, Pugh 30, Norton 27, Seymore 22, Brewer 27, Ratkin 23, Reust 28, Rhodes 28, Estep 11, Mount 26, Soward 27, Marshall 29, Floyd 27, Mills 27, Detar 25, Arends 19, Hickman 21, Horton 26, Elliott 26, Herman 23, Rickmers 25, Fernkas 29, Peck 24, Goff 25, Ferguson 13, Gray 27, Masan 21, Jack 26, Stevenson 28, Bennett 29, Gruenінger 23, Schmidt 29, Smock 18, Wright 20. First money was divided between Erhart and Pugh.

No. 10, 20 singles, known angles, entrance $2: Shiras 16, Sexton 20, Pugh 18, Erhart 20, McIlhany 17, Menifee 18, Cosby 15, Jenkins 20, Detar 20, Weis 15, W. Rickmers 19, Fernks 18. Sexton, Erhart, Jenkins and Detar divided first money.

Second Day.

No. 1, 15 birds, entrance $1.50: Erhart 15, Sexton 14, Jenkins 15, Best 13, McIlhany 15, Clary 15, Edwards 15, North 14, Pugh 15, Reust 14, Ingle 13, Rodgers 10, Cosby 13, Mount 10, Norton 13, Canfield 13, Johnson 11, Gray 13. First money was divided among Erhart, Jenkins, McIlhany, Clary, Edwards and Pugh.

No. 2, 20 singles, entrance $2: Pugh 15, Sexton 17, Jenkins 15, Erhart 18, Best 17, McIlhany 18, Cosby 17, Rodgers 19, Canfield 16, Reust 20, Clary 19, Horton 20. Horton and Reust divided first money.

No. 3, "jack rabbit," 15 birds, entrance $1.95: Erhart 14, Sexton 12, Jenkins 15, Best 12, McIlhany 13, Diebert 11, Cosby 13, Horton 14, Mount 9, Laidlaw 8, Edwards 15, Canfield 12, Reust 15, Elliott 12, Norton 12, Cohron 12. First money was divided between Reust, Jenkins and Edwards.

No. 4, 20 singles, entrance $2: Clary 18, Sexton 19, Jenkins 20, Erhart 19, Best 18, McIlhany 17, Pugh 19, Rodgers 17, Rickmers 16, Reust 20, Horton 18, Fernkas 14, Cosby 20, Rhodes 15. First money was divided among Jenkins, Reust and Cosby.

No. 5, 25 singles, entrance 75 cents: Erhart 22, Sexton 22, Jenkins 21, Best 21, McIlhany 23, Clary 23, Cosby 25, Seymore 17, Estep 12, Rodgers 24, Peck 19, Laidlaw 12, Elliott 22, Weis 22, Diebert 16, Mount 13, Rhodes 24, Edwards 21, Gray 23, Hubbard 18, Johnson 23, Norton 22, Stevenson 22, Bennett 23, Kerr 14, Pugh 21, Reust 22, Rooney 23, Horton 25, Fernkas 22, Ingle 25, Rickmers 21, Mills 22, Cohron 10, Bailey 20, Schmidt 24, Wing 19. First money was divided between Ingle and Cosby.

No. 6, 15 singles, entrance $1.50: Cosby 13, Sexton 14, Jenkins 14, Erhart 12, Best 13, McIlhany 15, Hubbard 13, Rodgers 12, Rhoades 13, Weis 14, Clary 14, Bennett 14 Rickmers 11, Pugh 12, Reust 14, Lindebery 7, Bailey 14, Fernkas 14. McIlhany took first money.

No. 7, 15 singles, entrance $1.50: Erhart 14, Sexton 12, Jenkins 15, McIlhany 14, Best 14, Clary 13, Cosby 15, Rodgers 14. Pugh 14, Reust 13, Hubbard 9, Scott 12, Weis 8, Rhodes 10, Horton 14, Bennett 12, Rickmers 10. Jenkins and Cosby divided first money.

No. 8, "jack rabbit," 20 singles, entrance $2 60: Van Wyck 14, Sexton 17, Jenkins 20, Erhart 18, Best 19, McIlhany 18, Horton 18, Cosby 18, Laidlaw 10, Scott 10, Norton 17, Bailey 15, Edwards 14. Jenkins took first money.

No. 9, 30 singles, entrance 90 cents: Erhart 26, Sexton 29, Jenkins 29, Best 28, McIlhany 30, Clary 25, Cosby 27, Estep 14. Rodgers 24, Seymore 16, Laidlaw 15, Rooney 2, Wing 20, Edwards 26, Reust 28, Pugh 27, Bailey 25, Johnson 23, Stevenson 25, Gray 27, Ingle 27, Norton 28, Mills 29, McClure 21, Diebert 27, Herron 22, Marshall 25, Trower 23, Schmidt 24, Tucker 26, Rickmers 26, Fernkas 22, Horton 24, Peck 26, Hubbard 12. Rhoades 28, Thomas 21, Weis 23, Hart 21, Elliott 24, Schmelzer 24, Bennett 29, Scott 28, Bailey 28, Lee 11. McIlhany took first money.

No. 10, 15 singles, entrance $1 50: Cosby 13, Sexton 14, Jenkins 14, Erhart 15, Best 15, McIlhany 14, Scott 14, Rodgers 13. Horton 13, Pugh 10, Clary 8, Rooney 13, Thomas 10, Trower 12, Ingle 15, Rhodes 13, Reust 15, Bailey 13, Norton 14. First money was divided among Erhart, Best, Ingle and Reust.

Third Day.

No. 1, 15 singles, entrance $1.50: Cosby 12, King 12, Jenkins 12, Brewer 13, McIlhany 15. Sexton 13, Clary 13, Horton 14, Edwards 13, Reust 14, Ferguson 10, Norton 14. Best 12, Pugh 10, Bennett 19, Weis 14. Rhoades 14. McIlhany took first money.

No. 2, 15 singles, entrance $1 50: Cosby 15, Jenkins 14, Sexton 13, King 10, McIlhany 13, Brewer 11. Horton 12, Rickmers 13, Rhoades 10. Ferguson 10, Best 12, Clary 12, Reust 12, Pugh 13, Rodgers 13, Norton 14, Weis 14 First money was taken by Cosby.

No. 3, "jack rabbit," 15 singles, entrance $1 95: Cosby 11, Ferguson 12, Jenkins 15, Rhoades 14, McIlhany 15, Sexton 14, Edwards 14, Reust 14, Horton 12, Weis 10, Stevenson 10, Brewer 14, Rickmers 11, King 11, Norton 11, Bailey 10, Scott 14, Rooney 9, Diebert 12, Elwell 10. Hindmarsh 12. First money was divided between Jenkins and McIlhany.

No. 4, 20 singles, entrance $2: Cosby 16 Jenkins 17, Sexton 15, Rhoades 17, McIlhany 19, Pugh 15, Horton 18, Scott 18, Best 16, Ferguson 17, Rodgers 19, Reust 20. Reust took the money.

No. 5, 30 singles, entrance 90 cents, purse $50: Cosby 27, Seymour 26, Jenkins 27, Rhoades 28, McIlhany 29, Sexton 28, Rees 21, Reust 26, Rooney 23, Bailey 23, Laidlaw 13, Edwards 28, Mills 27, King 27, Weis 27, Ferguson 25, Brewer 20, Ritter 13, Ratkin 27, Herron 21, Marshall 24, Winz 20, Clary 24 Best 28, Horton 30, Willis 23, Orvell 19, Diebert 19, Hindmarsh 18, Rodgers 29, Smith 27, Pugh 29, Norton 28, Rickmers 26, Peck 22, Scott 11, Arends 26, Jones 26, Beardsley 20, Elliott 22, Watson 17, Bennett 25, Johnson 26. Horton took first money.

No. 6, 20 singles, entrance $2: Cosby 18, Jenkins 17, Sexton 16, Horton 20, McIhany 17, Ferguson 15, Reust 17, Rhoades 18. Horton took first money.

No. 7, 15 singles, "jack rabbit," entrance $1.95: Cosby 14, Wing 9, Jenkins 11, Horton 11, McIlhany 15, Sexton 14, Edwards 14, Rhoades 14, Reust 14, Brewer 13, Bailey 13, King 7, Ferguson 15, Johnson 14, Scott 13, Hindmarsh 12, Weis 13, Diebert 10, Rickmers 13. The first money was divided between McIlhany and Ferguson.

No. 8, medal shoot, 30 singles, known angles, entrance $3: Laidlaw 13, Jenkins 30, Rooney 26, McIlhany 30, Best 28, Scott 27. Mills 23, Edwards 27, Horton 28, King 24, Reust 27, Rhoades 26, Hindmarsh 29, Arends 23, Smock 17, Trower 23, Brewer 26, Estep 16, Bennett 19, Cosby 27, Thomas 18, Peck 24, Johnson 26. The tie for first was shot off between McIlhany and Jenkins and resulted in McIlhany winning the medal.

No. 9, 40 singles, entrance $1.20, purse $100: Cosby 34, Rooney 35, Bailey 36, Jenkins 37, McIlhany 39, Sexton 37, Horton 38, Laidlaw 24, Mills 28, Seymore 30, Ratekin 37, Johnson 36. Edwards 36. Clary 34, Best 33, Norton 34, Rodgers 35, Reust 40, Rhoades 36, Trower 35, Arends 33, Smock 22, Brewer 29, Weis 35, Strand 35, Bennett 36, Pugh 31, Smith 36. Reust took the money.

No. 10, 15 singles, entrance $1.50: Cosby 11, Jenkins 12, Ferguson 13, Hindmarsh 12, McIlhany 15, Horton 12, Rodgers 15. The money was divided between McIlhany and Rodgers.

The total number of targets scored was 21,000. When night's curtain fell on the last day of the big shoot the boys voted the tournament a grand success, put their guns in cases and departed to meet again at Frankfort in 1896, the Weir City crowd sighing that there were no more cups or medals to be won. A. W. P.

Independent Gun Club.

READING, Pa., May 30.—The following scores were made at the two-days' tournament of the Independent Gun Club, of this city, which was brought to a close this afternoon:

First Day.

No. 1, 10 targets, $1: Schmeck 9, Buckwalter 10, Landis 9, Shaaber 10, Melot 4, Cleaver 9, Krueger 8, Ritter 9.

No. 2, 15 targets, $1.50: Schmeck 13, Landis 14, Cleaver 12, Shaaber 12, Melot 10, Buckwalter 13, Krueger 13, Ritter 13.

No. 3, 20 targets, $2:

Schmeck	11101111111111011111—17	Melot	00110110111101101011—13

South Side, Milwaukee, Eleventh Annual.

MILWAUKEE, Wis., May 31.—The eleventh annual tournament of the South Side Gun Club, Milwaukee's oldest body of lovers of the shotgun, began yesterday morning at the grounds of the club at Lake station, in the environs of the city of Milwaukee. To-day closes with entries approaching 30, and to-morrow will show perhaps even a larger attendance, as a very interesting and varied programme, including a citizens' purse with 50 valuable merchandise prizes, is offered for the closing day. The three days' tournament can only be pronounced a success. It was purely an amateur event, professionals being invited to be absent. The gentlemen present were nearly all acquainted personally, and in social as well as shooting features the occasion was a highly enjoyable one. Several visiting shooters were on hand from neighboring cities, and some of these took away substantial honors from the Milwaukee boys, though not without a struggle.

The grounds of the South Side Gun Club, which are about 7 miles south of the Union depot at Milwaukee, are very spacious and pleasant, and of a nature to suggest an ownership prosperous and solid financially. There is a good comfortable house where the keeper lives, with barns, coops, etc , also a dining hall large enough to seat 100 men, and a very well arranged, roomy and neatly kept club house, in front of whose veranda lies the shooting score. There are about fifteen acres of ground belonging to the club, all apparently carved out of the original forest, which grows down to the roadway on the left. The entire plot is covered with heavy blue grass turf, and the surroundings are thus always fresh and pleasant in the summer season The railway station is within gunshot of the club house. Only one objection is urged against these grounds by the club members, and that is that the green trees back of the score make a difficult background for the target shooting. Still the scores seemed to show that this objection was more fanciful than real. The arrangement of the traps is very good. Each trap has a semi-cylindrical cover of galvanized iron, which protects the trap when not in use. When shooting is in progress the cover is swung backward upright on its hinges, thus forming a protection for the trapper. The electrical pulls are under the cover of the club house balcony. Bluerock traps and targets and North pulls were used. Every arrangement of these grounds, even the serving of the lunch in the club pavilion, is of a sort to enhance the comfort and satisfaction of the shooters and their visitors.

The carefulness and system shown in the conduct of the South Side tournament redound much to the credit of secretary C. W. Milbrath and his able corps of assistants. The cash system was very prompt and satisfactory, and a great and well-kept manifold score book robbed the shoot of many of its terrors for the reporters. The South Side Gun Club run a shoot as though they had been giving such entertainments for a hundred years, and the grounds and appliances of the club would indicate that they intend to continue doing so for the next hundred years in comfort. The club should receive nothing but compliments on the neatness of its eleventh annual.

Thursday's Scores.

The weather was good for shooting, except that the rainstorm of the afternoon interfered somewhat with the programme. Scores:

No. 1, 15 bluerocks: Johnson 15, Lemm 14. Heilman 13, Reed 12, Carmichael 11, Burnham 10, Ford 10, Wooton 9, Mack 14, Hobbs 13, Campbell 13. Drought 11. Wood 11, Apel 10, G. W. Drought 10.

No 2, 20 bluerocks $30 guaranteed: Johnson 20, Heilman 19, Hobbs 18, Reed 18, Burnham 16, Drought 14, Wooton 12, Wood 9. T B. Carmichael 19, Foster 19, Mack 17, Lemm 16, G. W. Drought 15, Campbell 12. Ford 11.

No. 3, 15 bluerocks: Johnson 15, Lemm 14, Hobbs 14, Carmichael 13, Reed 12, Apel 10, Foster 15, Campbell 14, Mack 13, G. W. Drought 11, Heilman 10.

No. 4 15 singles and 5 pairs of bluerocks, "jack rabbit" system: Mack 23, Reed 20, Heilman 19 Lemm 17, G. W Drought 16, Burnham 16, Wood 13, Johnson 28, Carmichael 19, T. Drought 18, Rodwell 17, Wooton 16, Campbell 14, Ford 10.

No. 5, 10 pairs of bluerocks: Eitberg 14, Burnham 12, Reed 12, Dawson 11, Mack 13, G. W. Drought 12, Marling 11, Apel 9.

No. 6 10 live birds: G. W. Drought 10, Lemm 9, Foster 9, Eitberg 9, Mack 8, Dickens 8, Bunker 7, Burnham 7, Anderson 5. Wood 10, Hanson 9. Dawson 9, Heilman 8, Johnson 8, Carmichael 7, Ford 7, Dietrich 6.

No. 7, 20 bluerocks: Gault 16, Mack 19, Lemm 18, Drought 18. Hobbs 17, Campbell 15, Burnham 15, Heilman 20, Marling 19, Carmichael 18, Johnson 18, Harland 16, Foster 15, Meunier 12.

Friday's Scores.

The weather continued warm, with a scanty shower in the afternoon. Scores:

No. 8, 10 pairs of bluerocks: Meixner 16, Burnham 10, Dering 13, J. E. Bush 1, Meixner 0, P. Schuchardt 12, Dering 1, J. W. Foster 2, J. W. Foster 12, J. H. Johnson 15, Henry 11, Johnson 13, Rockwell 5, Hobbs 0, Henry 7, Burnham 0.

No. 9, miss and out: Lemm 15, Mirgler 16, Heilman 20, Meixner 18, J. W Foster 19, Henry 18, Maxwell 18, Schuchardt 18, Dering 18. J. E. Bush 17, Burnham 16, Hobbs 20, G. W. Draught 19, Johnson 19. George 18, Remington 17, J. P. Michael 15, Deiter 18.

No. 10, 20 bluerocks: Heilman 18, Lemm 15, Henry 18, Mirgler 17, Maxwell 17, G. W. Draught 17, Schuchardt 14, Rockwell 18, Burnham 17, J. W. Foster 17, Johnson 19, Hoffman 11, Dering 18, Hobbs 19, Meunier 15. T. Draught 18, Dieter 17, Meixner 18, George 19, Michael 18.

No. 11. 10 bluerocks: Deiter 10, T. M. Draught 8, Schuchardt 8, Heilmann 7, Lemm 9, Mirgler 9, Burnham 6, Hoffmann 5, H. E. Campbell 10, Remington 9, J. W. Foster 10, Rockwell 10, Windau 7, Henry 8, J E. Bush 9, McQueen 10, Dirk 10, Geo. Draught 9, Johnson 9, Kettner 8, Meixner 9, Hobbs 10, J. Meunier 7, T. George 9, Thompson 7, St. Meunier 9, E. Jahr 9, Roesler 8, Michael 6, Maxwell 10.

No. 12, 20 bluerocks: Mariner 17, J. W. Foster 18, Rockwell 18, Heilmann 16. Lemm 14, Mirgler 9, Dick 15, Remington 14, Dering 17. T. George 15, Deiter 17, Johnson 20, H. E. Campbell 14, Burnham 11, Henry 13, Thompson 17. J. Meunier 14, J. A. Dickens 13, Hobbs 17, Michael 17, Geo. W. Draught 17, McQueen 20, St. Meunier 18, E Jahr 17, Roesler 14, Windau 14, Kettner 13, Maxwell (birds only) 17.

No. 13, 20 bluerocks: T. George 17, Meixner 18, Lemm 15, Heilmann 18, Deiter 19, St. Meunier 17, Kettner 14, E. Jahr 18, Mirgler 19, Remington 16, Geo. W. 909 SECURITY BUILDING, Chicago, Ill.

Texas State Shoot.

SAN ANTONIO, Texas, May 20.—The nineteenth annual meeting of the Texas Sportsmen's Association has glided into history as one of the most successful and enjoyable meetings within the recollection of the oldest trap-shooters in the State. While the management was not provided with the latest mechanical devices that prevail at the Northern shoots, still there was no cause to complain.

The shooting was "red hot," and while the tournament was open to the world and was visited by men who stand in the front row of trap-shooting, still the men from Texas acquitted themselves very well, as the scores will show. To the astonishment of everybody, Mr. J. A. R. Elliott, who was thought to be in attendance on the Sportsmen's Exhibition in New York, arrived in time to participate from first to last. This is the first time that we, of Texas, ever met the gentleman, and I know that I but echo the wishes of the sportsmen of Texas when I say, "Come again, Jimmie."

Speaking of visitors from other States, I will also mention the name of Mr. Cornett, who ably handled a Smith gun under the pseudonym of "Smith." Some wag said that he used that name, so that when he missed he would have plenty to lay it to. Mr. A. W. Adams, of Chicago, was also seen to advantage.

If the gentleman from North Texas who distinguished himself by writing that an 80 per cent. man was barred from the Texas State tournament takes the pains to examine the scores he will find that the squads of the San Antonio shoot of '95 were pretty hot sort of stuff. Jim Elliott told me on the grounds that this was the hardest shooting crowd that he had ever struck, and he was surprised to see the good shooting that was done with the 20 and 16 bores. Critzer, McCormack and George, of San Antonio, particularly distinguished themselves by their remarkable shooting—especially that of Critzer (who shoots under the soubriquet of "24-gauge") Holzapfel, of Cuero, was as usual near the front, while Hope, of Farmersville, distinguished himself by winning the diamond medal by the handsome score of 14 in the contest at 10 singles and 2 pairs of live pigeons. Elliott, not being an active participant in the medal shoot, was chosen as referee. He acquitted himself very creditably, especially in the double bird part of the match, where his prompt decisions of "no birds" cost the management 38 extra birds. Said he: "I know it's rough on Oscar, but it is strictly according to the rules." E. Brown, of Burton, he of the many challenges, was also here, and he shot well, too. There was blood in his eye for a couple of days and the air was laden with challenge talk, but the whole thing disappeared and melted, as it were beneath the rays of the sun of conviviality.

On the whole everybody seemed well pleased, and the general opinion was that this meeting was one of the most enjoyable tournaments ever held in the State.

At the meeting of the Association Mr. Benj. S. Rogers, of Brenham, was elected President; A. B. Critzer, of San Antonio, Vice-President, and Mr. A. T. Saunders, of Houston, was chosen Secretary-Treasurer. Houston was unanimously chosen as the next place of meeting.

Scores:

No. 1, 15 targets, $2 entry, $20 added: Texas Field 13, McGinty 11, Holz 15, Miller 15, Fritz 11, 24-guage 12, Morgan 12, Hope 11, St. Hubert 11, Smith 14, Sparks 12, Moore 14, Adams 14, Brown 10, McCormack 13, Elliott 15, Dietz 15, Shaw 13, Fosgard 14, Ellis 12, Piety 13, Barron 14, Saunders 15.

O. C. GUESSAZ.

Michigan City Gun Club.

MICHIGAN CITY, Mich., May 23.—The regular weekly shoot of the Michigan City Gun Club took place on the club grounds Thursday, and was well attended. Messrs. Brown and McCarley, of Jackson, Tenn, were present, and Master Richard Love was elected a member of the club. To make the medal shoot more interesting we have arranged the shooters into four classes. Below find scores in detail:

Medal shoot, 25 singles:

Class A.

Tway (0) ..... 0101111111111011111010111—20

Class B.

Hardaway (3) ..... 1000111000111000100100101—14

Class C.

Brewer (5) ..... 0011111001011101101100011—20
Aldrich (5) ..... 1101101111000111110101110—22
Dr Phillips (5) ..... 1000000001100100110000000—11

Class D.

McCarley (7) ..... 0001101011110010101110111—22
Brown (7) ..... 1110000000001010010010000—14
Mason (7) ..... 1000100100000001011000100—14
H W Hardaway (7) ..... 0010000011001100111000001—15
Love (7) ..... 0000000000000000000000000— 7

May 31.—The regular weekly shoot of the Michigan City Gun Club took place yesterday. Messrs. Brewer, Wheeler and Kilpatrick, of Lamar, and McCusley, of Jackson, all members of the club, were present. The feature of the day was the regular club handicap at 25 birds, Tway proving the winner. The shooting was hard on account of a high wind. Shooting at unknown angles. Appended are the scores:

Tway (0) ..... 1111111111111110011111111—23
Wheeler (7) ..... 1101111101011111000010010—22
Robinson (10) ..... 0110001100111011010100001—22
Brewer (5) ..... 1011101111011011101010010—21
McCusley (7) ..... 1010110000101011001100101—19
Hardaway (5) ..... 0011010110001011101110100—18
Kilpatrick (10) ..... 0001000111010000001000010—17
Aldrich (5) ..... 0000101111011001000100101—16

CHAS. W. TWAY, Sec'y.

Neponset Gun Club.

KEWANEE, Ill., May 24.—By request of the secretary of the Neponset (Ill.) Gun Club, I inclose the following scores, made at that club's tournament, May 21, 22:

First Day.

No. 1, 10 targets, $1: Crain 5, Studley 9, Norton 9, Stuart 8, Williams 4, W. A. Bowen 5, Livingston 8, Baker 7, Miller 6. Huckins 9, LaFeinier 7, Faull 6, Lyle 8, Robinson 7, Kopp 9, Irwin 8, White 6, Snow 9.

No. 2, 12 singles, $1.25: W. A. Bowen 4, Norton 10, Huckins 12, Crain 9, Snow 11, McClure 7, Miller 10, Baker 11, F. Bowen 6, Williams 7, Irwin 11, Lyle 9, Faull 11, Robinson 9, White 5, W. Humphrey 10, Stuart 8, Studley 9, P. Battey 11, Kopp 12, Livingston 11, Alexander 10.

No. 3, 15 targets, unknown angles, $1.50:

W A Bowen	101111001110111—11	Lyle	111111111011111—14
McClure	011101111101111—12	Snow	010111111101111—12

L. C. HUCKINS.

Answers to Correspondents.

No notice taken of anonymous communications.

F. L. D.—Will you kindly inform me where there is good woodchuck shooting near New York city, say within twenty-five miles? Ans. Around Turner's, in Orange county.

G. E. S.—As a reader of your journal since its first publication by Mr. Hallock, may I ask you to enlighten me regarding the assertion that the eagle can catch readily on the wing such swift flyers as the wild goose and ducks? I also believed that the wild goose could just make away from the eagle. I have noticed an eagle in pursuit of a fish hawk some distance before overtaken; have also noticed the readiness with which a little king bird can overtake an eagle and easily keep up to him notwithstanding his frantic efforts to escape. Will you kindly give the speed an hour of the Canada goose, mallard, duck, wild pigeon, eagle and falcon hawk? Has the flight of the kingbird ever been computed? Ans. We have not the figures for the several rates of speed. We do not doubt the eagle's ability to outfly the wild goose and duck when it means business.

Change in Pier Number.

THE Fall River Line wharf in New York will, commencing June 1, be known as Pier 18 instead of 28, North River, foot of Murray street. Double service (two boats each way daily) between New York and Fall River will be operated, commencing June 17.—*Adv.*

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

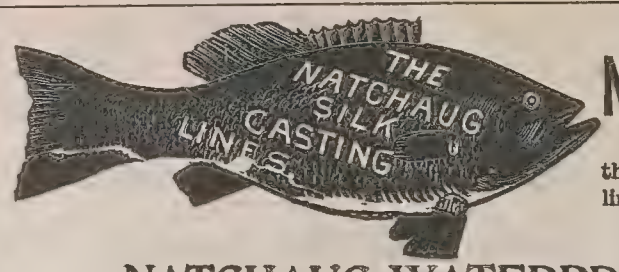
WANTED—TO CORRESPOND WITH PARTIES who want good camping grounds and black bass fishing. Thorne Grant, Litchfield, Conn. 23

So simple in text that you may know the law at a glance.
So beautiful in illustration that you will preserve it for its pictures.

Game Laws in Brief



UNITED STATES AND CANADA.

Gives the sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for *the practical guidance* of sportsmen and anglers. Carefully compiled, and shorn of verbiage, by CHAS. B. REYNOLDS of *Forest and Stream*. The *Brief* is a standard work of reference. Handsomely illustrated with twenty-five half-tone engravings from *Forest and Stream*.

Price 25 Cents. We send it postpaid. All Sportsmen's Goods dealers sell it.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

THE ONLY PERFECT FISHING LINE IS THE

Natchaug Braided Silk Line.

Made from the choicest stock braided 16-strand three-cord silk. They will outwear three ordinary lines. Spool perfectly when in use.
Never flatten or become water soaked.

NATCHAUG WATERPROOF BAIT & FLY LINES

on the water. The finish cannot be broken. Those who have used them will have no others. cents for samples and prices and pamphlet containing our awards of prizes for last season and for 1895. For sale by all dealers.

$225 in Gold Given Away!

WE offer the following Prizes for the Season of 1895, $225 in Gold for the largest fish caught on the

NATCHAUG SILK LINES

From April 1st to November 1st, 1895.

First Prize—$25 in Gold for the heaviest Muskallonge.
Second Prize—$25 in Gold for the heaviest small-mouthed Bass.
Third Prize—$25 in Gold for the heaviest large-mouthed Bass.
Fourth Prize—$25 in Gold for the heaviest Lake Trout.
Fifth Prize—$25 in Gold for the heaviest Mountain Trout caught west of the Mississippi River.
Sixth Prize.—$25 in Gold for the heaviest Brook Trout caught in Maine or Canada.
Seventh Prize—$25 in Gold for the heaviest Brook Trout caught in the United States, east of the Mississippi River, outside of Maine and Canada.
Eighth Prize—$25 in Gold for the heaviest Pickerel, Pike or Salmon.
Ninth Prize—$25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.

CONDITIONS:

All of these fish must be caught with the Natchaug Silk Fishing Line, and by fair angling.

Competitors must forward to us their full name, P. O. address, together with description and weight of fish caught, and name of dealer from whom line was purchased, within thirty days after such catch is made, together with the name of one reputable witness affixed. On November 7, 1895, the award will be made and the list of successful competitors announced in the FOREST AND STREAM and the *American Field*.

All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.

If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

Forest and Stream's Outdoor Scenes.

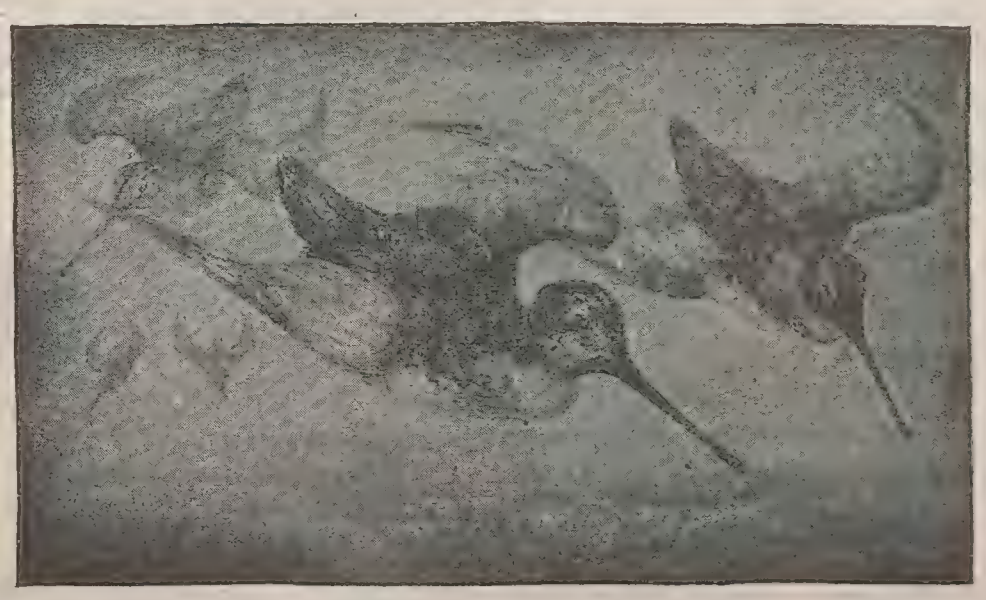
FROM ORIGINALS IN WATER COLOR AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

AS PREMIUMS.

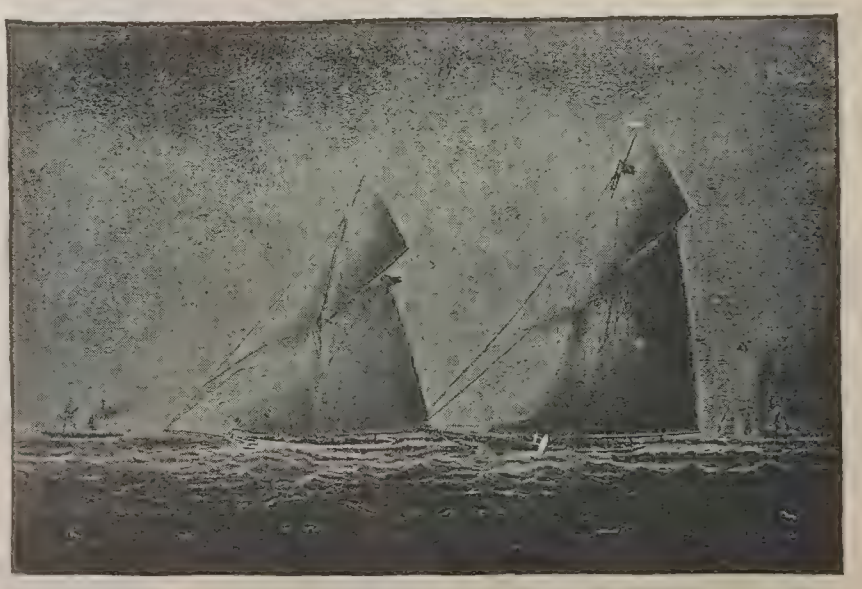
We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

Forest and Stream *one year and the four pictures*, **$5.**
Forest and Stream *6 months and any two pictures*, **$3.**



If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.



Copies of them may be seen at this office, and inspection is invited.

BASS FISHING AT BLOCK ISLAND.

JACKSNIPE COMING IN.

VIGILANT AND VALKYRIE.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JUNE 15, 1895.

VOL. XLIV.—No. 24 No. 318 BROADWAY NEW YORK.

For Prospectus and Advertising Rates see Page vii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, **$5.**
Forest and Stream *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

THE DONALDSON REFRIGERATOR LAW.

THE game bill passed by the Legislature of New York was signed by Gov. Morton last Saturday. Its general provisions as to seasons are given on another page.

The measure has many good points, among others an abrogation of the absurd supervisors' laws. But all the good there is in it cannot counterbalance the positive evil contained in the section which formerly constituted the Wilks bill, and which was in the closing days of the session incorporated in the Donaldson bill at the instance of agents of the game dealers of this city. This new section reads:

Section 249. No person or persons shall be deemed to have violated any law or ordinance by reason of his or their selling, exposing for sale, transporting or possessing, or attempting so to do, the body or a part of the body of any wild animal or bird in the close season for such animal or bird, provided it be proved by him or them, by production of proper invoices and freight or express receipts, that such wild animal or bird was shipped from a point at least three hundred miles distant from the State of New York. For the purpose of the proper enforcement of this section the package containing this wild animal or bird shall be marked plainly "game," and the place of shipment and destination shall also be plainly marked. All transportation companies which shall transport the same shall keep books plainly showing the receipt and delivery of such packages of game, and dealers in the same shall keep books of account showing the number of birds or animals received, sold or delivered by them, and shall, at all times, permit any authorized agent of the commissioners of fisheries, game and forest to examine their books of record for purpose of establishing the right of such possession or transportation in close season.

This section makes a farce of all other parts of the law relative to the sale of game out of season; it gives New York city a game market not quite wide open, but open wide enough to take in all the game that can be shipped to it in any month of the year. The first and immediate effect of this legislation will be to bring out for sale the oversupply of last season's refrigerated game now in cold storage, and to stimulate the traffic in immature woodcock and grouse to be killed here and in neighboring States by market-hunters as soon as they may be taken. The next step will be the unloading upon New York of refrigerated game from other markets where it is now held in cold storage and dealt in clandestinely. When the legitimate open season comes around, the receipts of game at this point will be enormously increased; for, as there is no longer any limit to the period of open traffic, there will be no necessity of restricting the supply as heretofore. Prior to this year the dealers have been obliged to reckon that for a part of the year—that portion when the law declared that game should not be sold at all—they could only carry on their trade secretly, selling on the sly, not openly and above board. The free traffic now provided for will far exceed in volume this illicit sale of former years. To meet the increased demand there will be renewed activity among those who kill for market.

The New York market will now take its place with that of Boston as a dumping ground for the game of the country. The game sold here the year around will come from New York State, as well as from all other sources of supply. That provision of the statute which says that dealers must show papers to prove that the game they sell has come from points three hundred miles from New York is moonshine. The dealers know this perfectly well. They can have no objection to the little formality of showing papers. It will not conflict with their trade in the least.

For the plain fact is that in dealing with game commission merchants we are as a rule not dealing with men who let the game laws trouble them, beyond keeping within actual safety from their penalties. Burke said that it was impossible to indict a whole people. It would not be just to declare that all game dealers are dishonest in respect to the game laws; but so many of them are that the class is open to the indictment. There has never been a time when illicit game traffic was not carried on in this city. Now that the Donaldson refrigerator bill has become a law that illicit trade will be increased a thousandfold. The law is a disgrace to New York, a rank injustice to other States, a menace to the game supply, and a statute which should be rescinded. In the name of the sportsmen of the country at large the FOREST AND STREAM declares war upon the Donaldson refrigerator law; and it will not give up the campaign until the law shall have been repealed.

Let no one be so simple as to imagine that the market men will surrender without a strong fight the advantage they have gained in their demand for an unrestricted game traffic. To remove a wicked statute from the books is more difficult than to prevent its being put on them. If the game protective forces of this State have been inefficient in 1895 to thwart the scheming of this man Donaldson and his fellows, they will require increased energy and activity to undo his work in 1896.

DEBAUCHED JOURNALISM.

THE Florida Legislature of 1895 failed to provide better protection for birds of plume, but it did two things worthy of unstinted commendation. It abolished prize-fighting, and made away with the Honduras Lottery, which was the old Louisiana Lottery in new guise. The Supreme Court of Louisiana has given a ruling which will prevent prize-fighting in that State. These developments mark the practical end of legalized lottery robbery and ring ruffianism in the United States.

It would be interesting to determine what actually has been the part taken by the press with respect to the prize ring and the lottery, their survival and end.

The newspapers of New Orleans were notoriously the debauched slaves of the Louisiana Lottery thieves, until at last the power of the ring was broken by an uprising so mighty that the boasted influence of the press arrayed in opposition to the uprising was as of soap bubbles to cannon balls. There was, we recollect, a deal of fine scorn for these New Orleans journals on the part of their contemporaries in other States; but it must be remembered that the daily press of this country was ready to back up the lottery against all attacks so long as the laws allowed the managers of the press to print and receive pay for printing the lottery's advertisements. If in the end the press was outspoken against the lottery, this attitude was assumed only when the newspaper proprietors were no longer permitted by the laws of the land to draw a revenue from the lottery ring. The lottery curse has, then, really been ended in this country in spite of the "power of the press."

As much may be said of the passing of the prize ring. The action of the Florida Legislature and the decision of the Louisiana court have been received with positive disgust in the editorial offices, that is to say, the counting rooms, of the "great dailies." There is not one of them—where the rule holds that anything is good news that sells papers—but has heard of the Florida legislation with a disgust quite as deep and sincere as is that of the toughs and sluggers in the dives. The genius of the representative daily journalism of the times is shown by the record to have upheld the lottery and the prize ring, and to have given over its encouragement of the lottery thieves reluctantly, and then only when the laws of the land rendered their further support fruitless.

How persistently the great dailies are making the most of what little is left of the prize ring in this country was exemplified by a ridiculous piece of journalistic enterprise the other day, when throughout the length and breadth of the land rival news purveyors wired their competitive specials, to appear the next day in columns of type under the scare head "Corbett was Mad." And what was it all about? Two blatant bullies, whose wordy quarrels had been reported day by day and week by week in those papers, had finally come together to arrange the preliminaries of a fight, and during the negotiations one of them had lost his temper. This was the petty event that Modern Journalism recognized as fit material for specials north and east and south and west. The vulgar brawling of two prize-fighters was considered to be of national importance. Thus was windy pugilism outdone by windier journalism. Great prize-fighters and great newspaper editors should thank their stars that, come the worst, legislatures can never make laws to abate wind.

CANADIAN ANGLING LICENSES.

A WASHINGTON letter in the daily press last week reported that a certain New York politician had given out that as for him he would not go fishing in Canadian waters so long as the Dominion exacted a five-dollar license fee of American anglers. The letter went on to say that the politician had a wife who was worth a million dollars in her own name. This was added presumably to show that this particular citizen of the United States could afford to fish in Canada, license or no license, and that so deserved all the more credit for thus resolving to stay home and wave the American flag.

As to one specific section of Canadian waters such self-denial is no longer demanded, not even from the most patriotic fisherman, with or without a million-dollar wife. Minister of Marine and Fisheries Costigan advises us that the non-resident license fee will not be exacted during this season in those parts of the St. Lawrence River which lie between Kingston and Prescott. This is a concession that will afford much satisfaction to St. Lawrence River visitors, and we trust that the exemption may be made permanent. A wish might be expressed also that all restrictions on American anglers in Canada should be removed; but that would be too much to expect in these days of protecting fish and game by the Yorkshire device of heaving rocks at strangers. Citizens of the United States cannot decently ask Canada to open its arms to receive them as friends and brothers, when one State after another is imposing non-resident taxes upon visiting sportsmen from other States. If we cannot be brotherly to one another, we should not look for brotherhood across the border.

DOES A DEER CHALLENGE?

AMONG the pieces of taxidermy shown in the Sportsmen's Exposition was a deer head in the FOREST AND STREAM'S exhibit, entitled "The Challenge." It showed the deer with head raised and stretched forward, and the mouth open, as if to bellow for battle; and being a work of art the subject was much admired.

But does the Virginia or white-tailed deer challenge? In his very interesting paper on the habits of this species, found in another column, Mr. A. Y. Walton says that of all wild animals familiar to him the deer is the most silent; and he tells us that in an experience extending over forty years he has but once heard a deer make use of the voice in seeking a lost mate, and the sound was then a low, muttering noise. They do also, as he says, sometimes cry out in pain. But does a buck ever give voice to a note of challenge? If such a cry has ever been heard by any reader of this paragraph he is invited to send us a note of the occurrence.

IN camp or on the trail it is wise to provide that some one member of the party shall be in authority, and shall on occasion have the responsibility of deciding what should be done. The whole pleasure and satisfaction of an outing may be marred by wrangling, indecision, pulling at cross purposes and bitterness of heart, because there are too many in command. An officer of the day is quite as important on an outing as in military life. And then, when the whole outfit is stuck in the mud, there is rich satisfaction in having some one officially to bear the blame.

President David S. Jordan, of Leland Stanford, Jr., University, is preparing a large work on the fishes of North America. Having come to the ouananiche he recognizes it as a new sub-species of the salmon worthy of recognition by a distinct varietal name; he proposes to call it in honor of Mr. Eugene McCarthy, and in recognition of his exploitation of the fish, *Salmo salar ouananiche McCarthy, var. nov.*

The Sportsman Tourist.

IN PENNSYLVANIA FORESTS.

ALTHOUGH the old Keystone is one among the oldest States in the Union, yet it is less than two score years since a portion of the unsettled part of the State was mostly an unsettled region. The elk remained there up to a later date than in other of the Middle or Northern States, except perhaps that a very few might have been left on Cass River, in Michigan. It was supposed that this elk disappeared in both of those regions at nearly or about the same time—which, if my memory is correct, was in the early fifties.

In those days, while living in New York and near the Pennsylvania line, I frequently made long trips, tramping and camping in those extensive forest lands. It did not offend nor move me in the least that my friends often pronounced me an inveterate woods crank.

It was on one of my forest rambles in Elk county, in the latter part of the month of August, that I brought up at the cabin of an old German by the name of Keeffer, who was then living on the old State road, near the headwaters of the Little Toby, one of the northern tributaries of the Clarion River. This road was made by appropriation from the State at a very early date, beginning somewhere in the vicinity of Ridgeway and running a northern course through the wilderness to the northern boundary line of the State. There had been but little travel on the road up to the time of which I write, and the settlers were few and far between. Mr. Keeffer said that his nearest neighbors were from four to eight miles distant. Mr. Keeffer and his wife pleased me much with their genuine social and pleasant way, which won my respect at once. The conversation and general appearance of the old couple showed too plainly that they had not always lived in that isolated region, and so I frankly told the old man that I was curious to know the cause of their isolation and he just as frankly told me. He came from Pittsburg, where he had kept a hotel for several years; he had suffered heavy losses in some business enterprise, had been done up once by sharpers and had become so disgusted with business and men that he had stepped down and out, barely saving a small bank account, which he thought with strict economy might serve to keep the wolf from the door during their natural lives. Moreover they had enjoyed much better health since they came there.

I had often heard reports of the old man Rowley, the hunter, hermit and wolf trapper of Elk county, and I inquired of Mr. K. if he knew the man. He said yes, he knew him well, and if I would stay another day I might see the old hermit, as he had previously promised to stop there on that day while on some business trip to Ridgeway.

Mr. K. further stated that his first appearance in that region had been some eight years before, and that he had been camping, summer and winter, in different places, mostly on the headwaters of the Clarion; but during the last two years had located his camp over on the Sweetwater, another one of the numerous branches of the Clarion.

The man arrived the next day, as predicted, and I was introduced by Mr. K. as one of the craft and was greeted with a cordial reception. His appearance indicated that he was about sixty years of age. As he stood tall, lank and lean, he seemed a fairly good representation of Cooper's "Leather Stocking," as shown in the Pioneers. He said that he could stop only an hour or so and was sorry that his business called him away just then. He was a good talker and communicative, and I flooded him with questions. He mentioned the scarcity of wolves and the scant bounty allowed by the State, also the plentifulness of deer and bears, and the very near extinction of elk in that State.

I had mapped out in my mind a circuitous route eastward from this place toward the Divide. This I mentioned to Mr. Rowley, to which he replied that I couldn't do better than to take the trail to his camp, which was situated nearly on a direct line toward the Divide, that I would need a halt and a rest by the time I arrived, and although he would be away the latchstring of his cabin door was out, and I might find something in the way of a lunch if needed. At the end of the hour the old man gave me a hearty handshake and started off on a gait that if kept up would soon leave a common walker far in the rear.

It was early on the following morning when I started and soon struck the trail as directed, which led through a region that was rough and smooth, but principally rough—a description that would apply to a large portion of that country. It was a plain trail and a long one, and I followed it to the end, where I found the camp located in a little nook up near the head of the Sweetwater. It seemed to be well protected from the northern winter blasts and somewhat protected from the rays of a July sun. However, there was a small spot cleared and open to the sunshine, where was a very small patch of potatoes, turnips, cucumbers, etc. The cabin was a small 8×10 affair, built of birch poles and covered with split slabs. The door was made of split slabs and had no latchstring, but was hung so as to swing outward and a small stick was set up against it to keep it shut. The inside wall was mostly lined with dried deer skins in the red coat, a small fireplace without a chimney, in place of which were hung on pegs large strips of dried venison, and in one corner were three or four wolf traps hanging on pegs, and on a slab table lay a large pocket compass having set-up sights.

And this was the residence and temporary home of the recluse hunter and trapper of Elk county, Pa.

Doubtless solitude has its charms, though comparatively few they are who find them. Selkirk didn't seem to find them during his solitary abode on the island, although he inquired where they were.

Probably those old sages which he mentions were differently constituted and differently circumstanced.

I had made the halt and taken the rest as the old man had directed; had sampled his dried venison, eaten a green cucumber, drank a long and deep draught of the sweet water and started, on a southeasterly course, over the mountain.

That night I camped on the western rim of the Divide, and under the shelter of a shelving rock, where I was awakened the next morning by the distant but well-known trumpet-like call of a bull elk. He might have been a mile or possibly two miles distant, as that particular sound can be heard a long way on a clear, still morning.

It was big game, but I made no effort to find it, as the killing of an elk when there was no possible chance of saving the meat was not to be thought of. Moreover, I did not crave the credit of shooting the last or one of the last elk left in the State; for I believed then, and have had good reason to believe since, that there were less than a half dozen wild elk in the State at that time. During the following winter one doe elk was captured alive, and another one was killed, and if old Rowley could have been interviewed most likely it would have settled the question what became of the last remaining elk.

That morning I started on a southerly course which led over a rough and broken but heavily timbered country, interspersed, as usual, with any amount of hemlock. I believe there were, and are yet, more hemlock trees, bigger laurel thickets and more of them in Pennsylvania than in any other State.

It was chronicled in the long-ago Crayon papers that Mr. Buttcut fell through some of the laurel thickets while on a fishing excursion to the Black-Water. Now, some of those thickets which I encountered here were so dense that I could neither walk, crawl nor fall through, consequently I made long detours to get around them. Deer tracks were more than plenty, and white flags were seen often; and once, while I sat on a log for a short rest, I saw a large doe get up very deliberately from her bed about thirty feet distant and start off down the hill.

Did I shoot? No. Nothing short of prospective starvation would justify a man in shooting a deer where he would have to leave four-fifths of the meat for wolves and wild cats to devour.

After traveling zig-zag courses for a long distance, I came into more open woods, where the Divide seemed to slope off on a gentle descent for several miles, ending in a great sag or basin, where also ended that day's tramp.

Here was a small trout brook, a crooked little stream, which seemed to be running in nearly every direction, and I could not determine whether it was a feeder to one of the upper branches of the Clarion or a tributary branch of the Susquehanna. It was a cosy little camping place, and so remote, with not a blazed tree, nor old camp-fire brands, nor a lopped bush, nor any indications that any hunter or fisherman had ever raided that little trout brook. That night, as I lay on a bed of hemlock, I rather flattered myself that I had made my little camp fire about as far toward the center of the Big Woods as possible, so I decided to stop over during the next day and night. I outlined a programme in my mind for the next day, which was about as follows: First, I would breakfast on some of those brook trout, then make a leisurely circuit around the basin in order to learn how much territory it contained. As a matter of course, I would shoot some young partridges to broil for supper, as the woods were full of them. While this programme was running through my head I dropped off into the land of dreams, to be awakened in the morning by one of the most unexpected sounds that could be thought of. It was not the howl of the wolf, nor the scream of a panther. Sad to relate, it was the crowing of a rooster. The sound came from some distance to the eastward, but it was too plain to be mistaken. I never learned how that rooster came there, because I didn't go there, but I supposed that some adventurous pioneer or hunter had pushed his way up from the driftwood branch of the Susquehanna. Anyhow, my exploring ardor had dropped down to a low ebb, and instead of staying over another day and night, as I had intended, I started on a westerly course over the mountain.

Now, the ordinary incidents attending the remainder of that trip, are they not written in memory which may appear on paper in the near future, or may not.

ANTLER.

JUNGLE LIFE IN SUMATRA.

I understand that a prominent New York newspaper has recently sent out a party, under competent scientific leadership, to explore the wilds of Sumatra. I commend the enterprise and predict very interesting results. A two years' sojourn in the jungles of that island introduced me to some of the strangest sights and most novel experiences of my life. In no other place have I ever found collected together so many odd and eccentric species of bird, beast and tree. Sumatra is a veritable dime museum of nature.

I had not been long on the island before I became deeply interested in the study of the picturesque flora and fauna in which it abounds. When it became known to the coolies that I was ready to purchase curious animals and plants, I was soon barricaded with an assortment of wild creatures, winged, legged and legless, of all sorts, shapes and sizes. Unfortunately, however, these coolies were not quite posted on the requirements of the market, and it took me some time to convince them that maimed monkeys, mashed lizards and broken-legged spiders were not what I wanted.

One of my earliest acquisitions was a sun bear, truly the drollest creature of its kind I ever had anything to do with. He was not directly from his native wilds, but had been captured when a small cub. "Jock," as he was called, was now about a year old. He measured 3ft. in length and some 20in. in height. Jock was one of nature's mountebanks. Wholly untaught, he could perform tricks that if told would stagger human credulity. It was no effort for him to assume the bipedal attitude, indeed he preferred it, and spent the greater part of his time strolling about with a rolling lurching gait that resembled in a most laughable degree a jolly little mariner in an overcoat of black fur, with rather more liquor aboard than he could steadily carry.

One of his favorite toys was a wooden sphere a trifle smaller than a Rugby football, and with this he would perform a series of feats that were truly astonishing. After a few preliminary movements, Jock would stand on his head for several minutes, the ball neatly balanced on his extended hindfeet. When this was accomplished to his satisfaction, he would proceed to something more difficult; usually it was to climb onto the veranda rail, only about two inches wide, and there balance himself on his back, and keep the ball rolling backward and forward between his extended paws. The wind-up of his ball feats was invariably this: He would clasp the sphere in both arms and slowly turn somersault after somersault along the entire length of the veranda. Then away would fly the ball into a corner, and seizing an old cane, Jock would go through a series of evolutions calculated to turn the cleverest drum major green with envy.

Jock's inquisitive nature often led him into mischief. He destroyed many valuable articles during my ownership of him, and when one night he suddenly disappeared I can't say that I felt very sorry.

Among the curious animals brought me by the coolies was a kukang (*Loris tardigradus*). This was a thick-set creature about the size of a small cat. It was brown in color, had a fox-like head, and used its paws after the manner of a monkey. But its eyes are the most remarkable feature about the kukang; large yellow circular orbs, whose unwinking glare is believed by many natives to possess something of the power of the fabled basilisk. For this reason the Javanese dread the kukang and avoid its gaze, which they claim will bring sure disaster. It is nocturnal in its habits, and its natural prey is small birds and insects.

Of the numerous kinds of monkeys to be found in these jungles, it would require many columns to give an adequate description. The commonest species is the black macaque, but almost as plentiful is the pig-tailed macaque. This monkey is about the size of a bull-terrier, and at a little distance might easily be taken for one. It is thought to be the most artful and intelligent of the monkey tribe, and is frequently trained by the Malays to gather cocoanuts and durians.

Speaking of monkeys, I witnessed a rather comical incident one time, and this incidentally will bring another odd denizen of these parts into my story, viz., the hornbill. One morning, hearing the greatest sort of a hubbub back of my bungalow, I rushed out to see what the matter was. On reaching the spot I found a crowd of coolies looking up into a lofty tree, in the branches of which about two dozen black macaque monkeys were leaping about in great excitement. A little way down the trunk was a single monkey, who appeared to be in some mysterious manner fixed to the tree. The unfortunate creature was uttering the most doleful cries, and his companions above were screaming uproariously in sympathy. It appeared that the prisoner had espied a tempting cavity in the tree, which he guessed to contain eggs or nestlings, and into this he had thrust a burglarious paw. Unluckily for him, Lady Hornbill was at home, and she undertook to detain the burglar until her lord should arrive.

This latter occurred shortly after I got there. Taking in the situation at a glance, the outraged husband swooped down upon the culprit, seized him by the hindleg in his huge mandibles, gave a vicious tug, and then, letting go at the proper moment, sent the unfortunate monkey hurtling to the ground, where he lay stunned by the fall.

A moment later a Chinaman, on monkey stew intent, rushed up to the prostrate animal and seized him, whereupon he suddenly came to and fastened his teeth in the leg of his captor, who instantly dropped everything and busied himself adding yells to the pandemonium already in progress. As for the hornbill, he stood guard outside his nest until the uproar had subsided, and then quietly retired.

The commonest species of hornbill is the "rhinoceros bird," so called, I presume, from its habit of alighting on the back of the rhinoceros in search of parasites. This uncouth creature is about the size of a small turkey, but has a beak 1ft. long, and where it joins the skull 2½in. deep. Over this is another beak reversed, forming a sort of casque or helmet. In this species both beak and helmet, though strong, are thin and hollow, but in the "great hornbill," a bird equally large, they are of solid bone, hard as ivory, and shaped something like a miner's pick.

The Malay name for the great hornbill is "tebang mentuah" (feller of mother-in-law). To account for this extraordinary appellation we must look to the following legend: A man who had a grudge against that much-abused relative went one night to her house and chopped down the piles which supported it, causing it to fall and kill her. Seeing this he stood off and laughed, whereupon he was instantly changed into this bird, and to this day you may hear him repeating the "chop, chop," followed by his impious laughter.

How these people do weave their superstitious fancies around the simplest facts. Watching the great hornbill I have seen it alight on a lofty tree, strike several resounding blows against the trunk with its bony helmet, and then burst into a shout of wierd laughter. Presently the sound would be repeated in the distance and in a minute or two the mate would sail slowly along and pitch on the same tree.

Snakes of all sorts abound in these jungles, also lizards. Monitor lizards there are measuring 6 and 7ft. in length. Then again there is the "chichak" or house lizard. This little reptile, which is about 1ft. long, lets the householder know of his presence by emitting a series of "yap! yaps" not unlike the short snappy bark of the toy terrier. I remember once being awakened by one which somehow had gotten into my bedchamber. Striking a light I endeavored to locate the little scamp. He evaded my search a long time, however, owing to a peculiar quality of his voice, which he seems to throw about with all the ease of a born ventriloquist. And indeed that is precisely what the chichak is.

Among the peculiar insects to be seen here are the carpenter bee and the mason wasp. The former, about double the size of our bumble-bee and jet black, will bore as neat a hole through a wooden upright as a yachtsman could wish to reeve a rope through, while the latter constructs strong clay storehouses on the trunks of trees, stocks them with preserved spiders and seals them up, afterward so tinting and streaking the finished structure that it is impossible to distinguish it from a knot in the bark. It is a pity to spoil so pretty a story of natural instinct, but the truth is that this wasp is often known to build in precisely the same manner on a whitewashed wall, not omitting the exterior decorations, which, in this case of course, only serve to point out the more conspicuously the handiwork nature originally taught it so cunningly to conceal.

Besides the scorpion, the centipede and the tarantula, that delightful trio, there is an enormous spider frequently to be found here. It is a black spider, three inches long in body and with a stride of legs that could almost cover a dinner plate. Quite accidentally one day I walked underneath the web of one of these spiders and my light pith hat coming against it was knocked clean off my head. I have seen the web of one of these spiders extended between trees eighteen yards apart, and braced by a system of guys and stays that for economy and

utility would delight the heart of the cleverest bridge builder on earth.

On the tobacco estates here one may observe several large trees standing solitary in the fields. These are the trees wherein the common Indian bees have their vast settlements. I once witnessed the looting of one of these bee trees, which is accomplished in this fashion: Choosing a night on which a strong breeze is blowing, the natives creep cautiously up and start a big brush fire underneath the branches. The great heat drives the victims from their nest, and as they emerge the wind carries them away to leeward, leaving the coast comparatively clear for the looters, who now ascend the tree and toss the nests down to the ground helter skelter, pell mell. The booty is then gathered up, the worst looking mess of honey, wax, dead bees and dirt you can possibly imagine, and carried away for further treatment.

Speaking of trees brings me to the mention of one fabled in song and story. Who has not heard of it—the deadly upas tree? The upas is a fairly large tree, with a dark, thick bark, from which, when cut, oozes a viscid milky juice. This liquid has for a long time formed the arrow poison most generally used in Malaysia. I have heard it claimed that even the atmosphere about this tree is poisonous, but my personal experience does not bear this idea out, for while I lingered some time in the vicinity I felt no deleterious effects whatever.

But the terror tree of the jungle cutters is the "ringgus." The flow of juice from the bark of this tree is much more abundant than from the upas, and the result of an axe stroke is a shower of creamy liquid, which falling on the bare skin causes the most agonizing suffering. I have reason to remember this, for one of my coolies received a dash of the frightful stuff over his head and chest. When, on hearing his cries, I rushed up to him, I found the unfortunate fellow rolling on the ground in intense pain and endeavoring to rub the burning liquid from his quivering flesh.

Instantly I had him conveyed to the hospital, where he lay for many hours between life and death, the upper part of his body swollen out of all semblace to humanity. Finally his terrible malady succumbed to our constant applications of oil and laudanum, and he was soon able to go about his usual work. This ringgus closely resembles the upas tree, and it is thought to be the real upas of romance.

TWO MONTHS ON THE ST. JOHN'S.

IT was some time in the summer of 1883 that Tom and I made up our minds to spend a winter in Florida. We had been talking it up for some time before we finally came to this conclusion.

We were both young fellows, Tom being a short, stout young man, twenty-four years of age, while I was a long-geared six-footer, nineteen years of age.

We concluded that the first thing we would need would be a boat; and as we were not rich by any means it would have to be a cheap, handy, serviceable craft.

We made inquiries at all the boat houses and everywhere else where we were likely to find what we wanted, and were about to give up in despair, when through a friend we heard of a sharpie that he thought would just suit us. So one afternoon Tom and I went to look at her.

We found that she was a Fair Haven oyster sharpie, 22ft. in length, 4ft. beam and 4in. draft. She had a small decked airtight compartment forward that extended 4ft. 6in. back from her stern. There was a small hatchway fitted with a tight cover 2ft. from the bows, making a very handy place to store provisions, etc. Aft, a foot from the hatchway, was the mast, a regular sharpie pole mast, the sail being a leg of mutton.

There was also about 3ft. of her stern decked over, making a nice place to store different articles. Besides there was a narrow strip of deck 6in. wide on either side, and inside and attached to this strip of deck was a washboard or coaming 4in. in height.

She was built of yellow pine, cedar and oak. She was only two years old, and was so strong and well built that we very quickly paid the $65 asked for her.

Well, we had our boat, but we concluded that she would be more comfortable if she had a cabin; and as we had lots of spare time before November—when we intended to start—we decided to put one on her ourselves. We worked an hour or two each night for about a month and finally had a very fair cabin. The length of the cabin was 9ft., with 2ft. 10in. head room.

After we finished the cabin time hung very heavy on our hands. November we thought would never come. But as "the longest day has an ending," after an age as it seemed the final day of our departure rolled around, and at the close of a fine day early in November we found ourselves, boat, baggage, and one pointer dog named Rake (who had never been broken), on the New Haven steamboat bound for New York.

We reached New York at 5 A. M. Friday morning. Upon going to see about our baggage we found to our dismay that they were going to put the Rambler (our boat) in the freight house on the wharf, and that we would have to get her in the water as best we could ourselves.

How to launch that 1,500lb. boat off the wharf, if they put her in the freight house, was a conundrum we didn't hanker to solve. Finally, after a great deal of expostulation and persuasion, we got the mate to agree to put her in the water for us. Just as the deck hands were about to slide her overboard out of the gangway, trusting to luck whether she broke in half or landed bottom side up, either of which would not have made a particle of difference to them, we spied an East River sloop making for the slip in which the steamer lay.

The mate hailed them and asked if they wanted a job. They immediately replied in the affirmative, so we engaged them without any more talk.

They came alongside, and with the aid of her powerful derrick they very soon had the Rambler floating in the water. All they asked for their service was $1, which we thought was very reasonable. It would probably have cost us ten times as much by the time we would have succeeded in floating her out of the freight house.

By this time we discovered that a good breakfast wouldn't be out of order, so putting the dog in the cabin of the Rambler we closed the doors securely, and after making her fast to a Down East schooner, the cook of which very kindly offered to look after her until we got back, we started out in search of breakfast, which we soon found in a near-by restaurant.

After satisfying the cravings of the inner man, we started for Ray's office on South street to see if any of their schooners would sail that day. We had been to see them the week previous, and they told us that one of their schooners would sail in a week; and we asked if we could take passage for ourselves, dog and boat, and they had told us that we could. So we considered the bargain closed. Our surprise and chagrin can be better imagined than told when we were told that none of their boats would sail for at least ten days.

We were in a nice fix and no mistake. What to do we didn't know. To say that we were mad would be putting it mildly.

We went back to where we had left the boat and found everything all shipshape. We sat on the wharf and held a meeting, in which plans were discussed only to be rejected. We had about concluded to take a cruise up the Hudson until Ray's schooner was ready to sail, when we noticed a steamship three or four slips away getting up steam.

More out of curiosity than anything else we asked a man who was working on the wharf what line she belonged to, and he said the Mallory Line. He also said that she was the State of Texas, and that she was bound for Fernandina, Fla.

Great Scott! We could hardly believe our ears. Here we were moping about bewailing our luck because we couldn't get to our destination, and a large ocean steamer within a stone's throw of us, bound exactly to where we had been dreaming and planning to go for three months back, and she would sail in an hour. Would it be too late to get passages; to get our boat around to her and aboard? We feared so. But there was no time for surmising. What was to be done must be done immediately. Leaving Tom to watch the boat, I hurried to the Mallory office as fast as my legs would carry me. I found just two cabin passages left. The agent told me if we would hurry that they would take the dog, boat, and all.

It didn't take long to pay for those two tickets, then to hurry back to Tom. Tom wouldn't believe we were passengers to be on that steamship until I showed him the two tickets.

We soon got aboard the Rambler, cast off, and after some of the most ungraceful, frantic hustling with one 14ft. oar ever seen on the East River or anywhere else, after nearly being run down by numerous tugs and ferryboats, we managed finally to reach the slip in which the State of Texas lay.

They had the middle port open, waiting to receive the Rambler, as we could see before we came alongside. As soon as we did get alongside it didn't take long to attach a stout hawser to her bow and with the help of fourteen stout arms to haul her bow straight up the side of the ship. The owners of these arms were urged to their utmost by the yells and cuss words of the most wicked, red-faced, red-moustached, red-headed stevedore, who could manipulate more Bible vocabulary in two minutes than any four other men I ever saw. The Rambler was finally hauled through the port on to the main deck of State of Texas, and we had the extreme satisfaction of knowing that when she floated again it would be on the waters of Florida. We also knew by the sundry bumps, thumps and rumblings in her cabin when they were hauling her aboard that our baggage must have suffered considerably, as we had it all stowed away in her in two valises and a small trunk, which we had no time to get out of her before she was hauled aboard. We were very well satisfied, however, as we knew everything was there anyhow, no matter what the condition.

The dog we put in the steward's charge as soon as we got aboard. After going ashore and telegraphing home that we were on our journey, and just getting aboard again as they were hauling in the gang plank, there was nothing to do but look around and take things easy. After such an eventful day it seemed good to do so.

While Tom and I stood talking over the experiences of the day, and were congratulating ourselves on our good luck, a tall, well-made, good-looking young fellow, with short black side whiskers and gazelle-like eyes, who, if it hadn't been for the bronzed cheek which rather suggested a sea calling might have been taken for a minister or a Sunday-school teacher anyhow, sauntered up to us and asked if we were the owners of that Fair Haven sharpie. Upon being answered in the affirmative, he said he was from Connecticut too. That he was on his way to Florida, there to spend the winter. He said that he was Samuel C——, of G——. We introduced ourselves and soon became quite intimate and friendly—in fact, so much so that we were together the whole trip down. We had the very finest of weather on the trip. The sea was as smooth as was possible for it to be, while the sun shone every day. We made one stop at Port Royal, S. C., where we all went ashore. I mailed letters home from there, and we took a stroll in the woods for about a mile. It was so warm that we were glad to take off coats and go in shirt sleeves.

In about two hours the ship's bell called us aboard. We were soon under way steaming for Fernandina, and at 8 o'clock next morning we were lying off the bar, waiting for high water to cross. After waiting about an hour the ship was headed for the bar, which we crossed all right, passing as we crossed the wreck of a vessel which had gone on the bar two or three years before. Nothing was visible of her but her funnels, all other parts having gradually sunk into the sand, and in all probability they too have long since followed.

After crossing the bar we had our first view of Florida. We were greatly pleased with the fine chalk-white beach, with the waves of the ocean breaking and roaring on it in a way that was simply grand. I had often heard and read of the magnificent beaches of Florida, but after seeing them I found that no written or verbal description can for one minute do them justice.

After passing Fort Clinch, with the black muzzles of its many cannon frowning on us, which are harmless enough in these days of 100-ton guns, and the great and extensive improvements that are being made every day in heavy ordnance, it was not long before we were at the Mallory dock, in the fine harbor of Fernandina, after a delightful passage of four sunny days from New York.

After the gang plank had been run ashore the first thing we did was to go to the Mallory office to pay the charges on our boat and telegraph home of our arrival. The boat charges were $18. Then we found a place to get stores and provisions. I regret that the name of the proprietor of this store has slipped my mind, as he and his clerks were exceedingly kind and considerate. They gave us quite a lot of valuable information in the selection of our stores, which (the stores) consisted of cans of Boston baked beans, canned corned beef, prepared flour, sugar, tea, coffee, salt, pepper, onions, yams, etc. Besides, we got a ten-gallon cask for holding water, which they allowed us to fill from their cistern, which was very kind of them, inasmuch as water was a scarce article in Fernandina at that time, on account of the exceedingly dry weather they had been having.

Then we hurried down to the wharf to see about getting the Rambler put in the water, as it was nearing the middle of the afternoon, and we wanted to get away from the town before dark. When we reached the wharf what did we see but the Rambler stored snugly away on one end of the wharf, just 9ft. above the water, and looking as if she enjoyed it too, if a boat could enjoy anything. We went and had a talk with the first mate, who, by the way, although rather gruff, was as nice a gentleman as I could wish to meet, being, as near as I could judge, a fine specimen of a thoroughbred sailor, who understood his business to the letter.

He said he would do what he could for us, however. So, going on the wharf, he collected all hands, and after considerable trouble the Rambler was finally got over the edge of the wharf and was being lowered into the water. When about half down, however, she got the best of them, and went the rest of the way of her own accord, striking the water with a report like a small cannon, at the same time throwing the spray all over everybody. Luckily nothing was broken.

We soon stepped the mast and had her single sail rigged, when we thought it about time to devise some way by which to transport our provisions to the wharf. As we were passing through the storage house whom should we notice but our friend Sam C., sitting on one end of a monstrous black valise, looking about as forlorn and lonesome as mortal man could look. We stopped and spoke to him, and upon telling him where we were going he said he would go along and help us carry our provisions to the boat.

On our way to the store we asked him what his intentions were while in Florida. He said that he had nothing definite in view—that he simply intended to pass the winter in Florida. While on the way to the store Tom and I decided to ask Sam if he would like to go with us. We each loaded ourselves with as much as we could carry, Sam staggering along with the ten-gallon water cask on his back.

When we got our loads safely stowed aboard, Sam was asked if he would like to go with us. Would he? Well, he guessed he would, only he didn't want to intrude. So it was settled then and there that Sam would be one of our party.

After getting everything stored aboard, including the immense black valise of Sam's, and tying Rake to the foot of the mast, we hoisted our single sail for the first time in Florida, when after shaking hands with the mate of the State of Texas, who wished us luck and said he would like to be going with us, just as the sun was setting, we cast off the painter, and the sail of the Rambler filling with the mild west wind, our much-talked-of, much-dreamed-of and much-longed-for Florida trip had begun.

Our intentions when we started from Fernandina were to go through the Three Sisters to the St. John's River, follow the river to the nearest place, where we could have our boat transported to the Indian River, and stay on the Indian River until spring. But on account of the serious sickness of Tom we didn't get any further than Sanford, when the doctor told Tom that he would have to get away from Florida. So I will try and give as accurate a description of the trip to that point as my memory, which I have to depend on altogether, will allow.

After leaving the pier the Rambler, under the influence of the light favorable breeze that was blowing, moved along at a fair rate of speed, as the tide was in our favor. It was not a great time before we were out of sight of the town; and after sailing for about an hour we began to feel as though a little attention paid to the inner man would be in order.

Sam volunteered to turn cook, and soon the appetizing odor of baked beans and hot coffee made us hungry mortals all the more ravenous.

We used a small two-wicked oil stove for cooking purposes while under way or when we could find no favorable place ashore to build a fire. The latter was the more satisfactory and was the way we always did when we could, it being a great deal handier and quicker way. But for all that our little oil stove came in very handy time and again, and was really indispensable.

The night being fine moonlight we kept sailing until 10 o'clock, when there being no place to land, the banks being regular salt marsh mud banks, we came to anchor for the night.

Sam and Tom stowed themselves away in the cabin somehow, but how has always been a conundrum to me, as there were a trunk and three large valises in there. As for myself I preferred the top of the cabin to the inside; so putting the dog in the cockpit I rigged a small shelter tent over the boom, and wrapping up in the sail lay down to get what sleep I could, which wasn't much, as between the hoarse croaks of birds of different kinds, which were in the salt grass that lined either bank, and sudden splashes in the water of birds or other animals, and other strange noises too numerous to mention—strange because they were new—it was hard to go to sleep. However, I finally did drop off, but how long I slept I didn't know. I woke up some time before morning and found one side of the tent down, pulled down by the dog, I think.

The part of the sail that covered me was nearly soaked with dew. If there is anything in the dew line that can begin to compare with a good soaking Florida dew, I have got to live to see it.

After fixing the tent across the boom again I lay down and tried to go to sleep, but it was of no use. It wasn't a great while before the darkness began to take on a grayish hue in the east, however, which gradually turned to purple and red. Then, as objects began to be distinguishable, numerous mudhens, snipe and plover could be seen feeding in the salt grass and along the muddy banks, while flock after flock of cranes of all descriptions and sizes, mostly gray or white, some of the white ones adorned with beautiful long plumes, kept passing overhead.

I soon had Tom and Sam stirring. Sam volunteered to get breakfast, while Tom and I went ashore to see if we could get a few snipe or ducks. Now, be it understood, we expected, because the snipe and ducks were so plentiful, to get back to the boat as soon as breakfast was ready,

just loaded down with game. But there is where we made a mistake, for after walking through the mud for nearly half an hour, we gave up in disgust and went back to the boat again. We found snipe and ducks just as hard to get at that morning in Florida as we would have found them in Connecticut. Although there were thousands of them, we didn't get any, as they were very wild.

After cleaning the mud off of us we got out our tin plates and cups, and just as the sun was beginning to shed his rays over our part of this earth again, we began to store away self-rising flour flapjacks, coffee, boiled yams and corned beef hash in a way that threatened to lessen our stores in a surprising manner.

Breakfast over and dishes washed, sail was hoisted, the small 6lb. grapple hauled aboard, and the Rambler began to make very slow headway in a light breeze against the tide, which was on the ebb. It wasn't long before the tide turned, and although there wasn't a great quantity of wind, we made pretty fair headway. We kept on in this manner until 10 o'clock, when the wind all died out. Then the sun took its innings, and the hot way in which it streamed down on us was a caution.

We would have gone ashore and waited for wind if there had been a decent place to land, but there was nothing but mud and marsh in every direction, so we had to make the most of the situation and "grin and bear it."

Pretty soon we had the tide against us. We had to take to the 14ft. oar and do some sculling. This is where Sam came in handy, as he was just in his element with that oar. Being an oysterman by occupation, he thoroughly understood how to get the most speed possible out of the Rambler by the use of one oar. This mode of navigation was kept up until 2 or 3 o'clock P.M., when a nice breeze sprung up from the west. It did not make a particle of difference which direction the wind was from, as the river sometimes turned to the west, making a dead beat to windward for us. At other times we would be going south, and still other times east and even north, so crooked was the stream.

About 4 o'clock we came to quite a wide stretch of water, and about half a mile ahead, on the left bank, a point of land jutted out into the river. The point was covered with pine and cypress trees, from which hung long festoons of gray moss, which, streaming out in the wind, made quite a weird-looking sight.

As we came up with the point, we were agreeably surprised to find a nice, firm, hard beach of white sand instead of the mud banks we had seen all day. It was such a nice place to camp that we decided to stop there that night.

The bow of the Rambler was run up on the beach, when, after taking in sail, we made her fast to a stake which we drove in the sand. We got out the small shelter tent, and while Sam and I hunted a suitable place to erect it, Tom tried his hand at getting supper.

After erecting the tent we collected a number of armfuls of the long gray moss, and piling it in the tent, we spread our heavy blankets over it, and our bed was ready whenever we were.

After supper, about sundown, large flocks of snipe and plover began to fly over the camp, a few lighting on the beach. Tom and I got out our guns, and it wasn't a great while before we secured a number of snipe. Sam found some flat shells, and taking some sticks, he split them at one end. Fixing the shells in the split end, he stuck the sticks in the sand. It was surprising to see how the snipe and plover would come to these rude decoys. Flock after flock would fly among them, and in fifteen minutes' time we shot all and really more than we could use. We stopped firing at them, as it would have been useless and unnecessary slaughter to have continued.

Not long after sundown the mosquitoes found us out, and we had a gay time fighting them until bedtime. After straightening things for the night, we crawled under the tent and stretched our bodies on one of the softest beds imaginable. After our hard day's work, it didn't take long for us to drop off to sleep. We slept until quite late next morning, so that when we did finally get up we concluded to stay there that day and overhaul and fix things up a little shipshape. WM. H. AVIS.

Natural History.

ABOUT STARLINGS.

PHILADELPHIA, Pa., June.—*Editor Forest and Stream:* In reading the letter of Mr. Hugh M. Ford in last issue of your most valuable paper, I fully agree with him "to cultivate the acquaintance of our native bird," but beg to say not only "foreign gentlemen," but born Americans also, any who know the starling and its habits will surely not compare the bird with our common crow or red-winged blackbird. I presume Mr. Ford has had opportunity to observe and study European birds in different localities and stages (not in cages in this country, but in freedom in their own) or he would not speak so sure of the quality of song about the different birds. It is not more than right to stick up for the good things we have here as far as right goes.

I am a true lover of entomology and botany, and whenever I have time to spare I devote it in the woods and fields, where I best observe and collect, and that's just where I fell in with ornithology. I only have had the chance to enjoy New Jersey and Pennsylvania woods, where I have seen a great variety of birds; yes, birds enough to let the starling stay where he is now. But I have met on several occasions "young America" with slingshots and crippled birds. Collecting beetles one forenoon not far away from Philadelphia I have found three dead robins and one thrush. Such finds are distressing for any one who wants to see and hear the woods alive. It is not an easy task to arrest single-handed two bird-killers with double-barreled guns or a whole gang of boys; I have tried it once, but not more.

Mr. Tenner is right in saying that love for nature must be planted in the child's heart, then the law will be obeyed.

I happened to be in Bassano, northern Italy, in 1879 during the fall, when one morning an unusual excitement made me curious to know what had happened. Going with a crowd of men and boys, we left the city and after marching about a half-hour I found that thousands of quail and finches, among hundreds of fringilla (*Cælebs*) on their migration trip had been completely tired out by a snowstorm in the Alps. Men and boys with sticks gathered those poor birds in bags or tied their legs together to carry them home. The ground had been covered with birds, small limbs of trees and grapevines had been broken down in some instances by the weight of so many birds, who, storm-beaten, tired, unable to fly any further, had sought refuge on *terra firma*. Next day they could be bought at Bassano a hatful for the small sum of 20 cents.

As a "foreign gentleman" I love this country as well as any American, and the surplus enthusiasm for European birds and love of home have been given to this country long ago. I am sure the starling would never be, if introduced, a nuisance like sparrow or German carp. Hoping to hear some more of the excellent "Roots and Yarbs," I remain your faithful reader. HERMANN HORNIG.

THE ROAD-RUNNER.

Geococcyx californianus (LESSON).

BY MAJOR CHAS. BENDIRE.

From advance sheets of "Life Histories of N. A. Birds, with especial Reference to their Breeding Habits and Eggs."

Saurothera californiana, Lesson, Complement des Œuvres de Buffon VI., 1829 (?), 420.
Geococcyx californianus, Baird, Birds of North America, 1858, 73.
(B 68, C 289, R 385, C 427, U 385.)

GEOGRAPHICAL RANGE: Central and northern Mexico and adjoining portions of the United States; east through the western half of Texas, and extreme western Indian Territory; north to southwestern Kansas, southern Colorado, southern Utah, southern Nevada, and southwestern Oregon (?); Lower California.

The road-runner, equally well known as the "chaparral cock," and occasionally called "snake-killer," "ground cuckoo," "lizard bird," and by the Spanish-speaking population of our southern border *Paisano* and *Correcamino*, is generally a resident and breeds wherever found, excepting perhaps in the extreme northern portions of its range. This it reaches in Shasta county, California, on the western slopes of the Sierra Nevada, in about latitude 40° N., while on the east side of these mountains it has as yet not been observed north of Inyo county, California, about latitude 36° N. In southwestern Kansas it is undoubtedly quite rare and can only be considered as a straggler.*

Its general habits are far more terrestrial than arboreal, spending most of its time on the ground in search of food, and frequenting the drier desert tracts adjacent to river valleys, and the lower foot hills, covered by cactus, yuccas and thorny undergrowth. It rarely ventures into the higher mountain ranges among the conifers, but breeds occasionally among the oaks bordering the pine belt. It is most abundant at altitudes ranging from 2,000 to 3,500ft., and is seldom seen within the United States above 5,000ft.; but in the San Pedro Martir range, in Lower California, Mr. A. W. Anthony has met with the road-runner at an altitude of 7,000ft. above sea level, and at Glorietta, New Mexico, it has recently been reported as breeding at a height of 8,000ft.

The chaparral cock is rather unsocial in its habits, and it is rare to see more than a couple together excepting after the breeding season, when the young still follow one of the parents. Its food consists almost entirely of animal matter, such as grasshoppers, beetles, lizards, small snakes, land snails, the smaller rodents, and not unfrequently of young birds. On the whole, these birds do far more good than harm. When the fig-like fruit of the giant cactus is ripe they also feed on this; in fact, many mammals and birds seem to be very partial to it. It is astonishing how large an animal can be swallowed by one of these birds. I have found a species of garter snake fully 20in. long in the crop of one shot in Arizona.

Mr. Anthony writes me on this subject as follows: "A half-grown bird which I shot at San Quentin, Lower California, presented an unusually bunchy appearance about the throat and neck, a fullness which was accounted for upon dissection by the discovery of an immense lizard which had been swallowed entire but a few moments before the bird was shot. I know of several instances of road-runners making a meal of a nest of young house-finches (*Carpodacus mexicanus frontalis*) and other small birds."

I am aware that there is a pretty general belief in localities where the road-runner is common, and where the rattlesnake is usually more so, that these birds are more than a match for even the largest of these reptiles, and attack and kill them wherever found, an assertion I very much question. It is said that when one of these birds, when rambling about, meets a rattlesnake coiled up and asleep after a good meal, it quietly hedges the reptile in with a ring or fence of the joints of the *Cholla cactus*, and after having done so, drops a similar joint from above on the sleeping reptile, which, being enraged thereby, thrashes around and soon becomes covered with the sharp spines, and then falls an easy victim to the bird, after becoming exhausted in vain attempts to free itself. The bird is said to first pick its eyes out and so render it entirely helpless. This is a very plausible story, and while I am only too well aware of the sharpness of the spines of the *Cholla cactus*, I know that such a hedge proves no barrier to these snakes, and that they do not mind such obstructions in the least, passing over without touching them. I consider this story on a par with the generally accepted belief of hunters and frontiersmen in the West, that rattlesnakes will not cross over horsehair ropes when laid around one's bed while camping out. I admit that, having heard this frequently from persons I had no reason to doubt, I was a firm believer in the statement, and made use of this snake protector for a number of years; but at last my faith was rudely shattered by seeing a medium-sized rattlesnake deliberately crawling over such a rope which I had stretched around my tent, The snake paid no attention to the hair rope, but slightly curved its body where about to come in contact with it, gliding over without touching it, and, finding a sunny spot at the side of the tent, coiled up to take a rest, part of its body lying directly on the rope. Since witnessing this performance I have naturally lost faith in this belief, and have wished many times since that it had not been so rudely shaken, especially when in sections of the country where these reptiles are abundant and where one is liable to find his blankets occupied by one or more rattlers.

Road-runners are ordinarily rather shy and suspicious birds, and not so often seen as one would think, even where comparatively common. Within the United States they are most abundant along the southern borders of Texas and Arizona, and in southern California. I found them quite common in the vicinity of my camp on Rillito Creek, near Tucson, Arizona, and also near Anaheim, Orange county, California, and I have examined about twenty of their nests. Notwithstanding their natural shyness, they are inquisitive birds, and where they are not constantly chased and molested will soon become used to man. One of these birds paid frequent visits to my camp, often perching on a mesquite stump for half an hour at a time, within 20yds. of my tent. While so perched it would usually keep up a continuous cooing, not unlike that of the mourning dove, varied now and then by a cackle resembling that of a domestic hen when calling her brood's attention to some choice morsel of food. This call sounded like "dack, dack, dack," a number of times repeated. Another peculiar sound was produced by snapping its mandibles rapidly together. While uttering these notes its long tail was almost constantly in motion and partly expanded, and its short wings slightly drooped. In walking about at ease, the tail is somewhat raised and the neck partly contracted. When suddenly alarmed the feathers of the body are compressed and it trusts almost entirely to its legs for escape, running surprisingly fast. While running it can readily keep out of the way of a horse on a fair gallop on comparatively open ground, and should the pursuer gain too much on the bird, it suddenly doubles on its course and takes advantage of any thickets or broken ground in the vicinity, and is soon lost to sight. Its flight is apparently easy and, considering its short wings, is rather swift.

In southern Arizona the breeding season begins sometimes as early as the middle of March, but the majority of the birds there, as well as throughout the remainder of their range, do not commence nesting before April, and nidification lasts through the summer months, two and occasionally three broods being raised in a season. While the first set of eggs laid by such species as rear more than one brood in a season is usually larger in number than subsequent ones, it seems to me that with the road-runner the reverse is the case.

During the month of April, 1872, I found several nests, none of which contained more than three eggs, all well incubated when found; similar small sets were found during the first half of May, while in June and July the sets numbered from four to six eggs, the latter the largest sets observed by me in Arizona. The following explanation may account for this:

In southern Arizona, during the spring months, insects and reptiles, which form the bulk of the food of these birds, are rather scarce, while in June, as soon as the rains commence, and later through the summer, suitable food is far more abundant and a larger family can be much more readily cared for, and I am of the opinion that these birds know this and act accordingly. Occasionally a large number of eggs is found, however, and Lieut. H. C. Benson, Fourth Cavalry, United States Army, writes me that he saw a nest of this species, near Fort Huachuca, containing six young birds, all of different sizes, and two eggs; the largest of the young was about ready to leave the nest, and the smallest only a day or two old.

Their nesting sites are quite variable. In southern Arizona the majority of nests found by me were placed in low mesquite trees or thick bushes, and in different species of cacti, such as the prickly pear, cholla and others. Occasionally one of their nests is placed on top of a mesquite stump, surrounded by green sprouts, or in a hackberry or barberry bush. I found one nest in a palo verde tree, and another in a willow thicket; in the latter case the birds did not build their own nest, but appropriated one of the crissal thrasher (*Harporhynchus crissalis*). Mr. F. H. Fowler writes me from Fort Bowie that he saw a nest near there, placed in the hollow of a dead stump.

In Texas the road-runner sometimes nests in ebony bushes, and in California it has been known to use the nest of the California jay (*Aphelocoma californica*) in oak trees, sometimes fully 16ft. from the ground. Usually the nests are placed from 3 to 8ft. from the ground, and only in rare instances higher. Sometimes they are found in quite open situations, but generally they are well concealed from view.

A typical nest of the road-runner may be described as a rather flat and shallow but compactly built structure, about 12in. in diameter and varying in thickness from 4 to 6in., with but little depression interiorly. The ground work consists of sticks from 5 to 10in. long, lined more or less regularly with finer material of the same kind, and finished off with dry grasses. Occasionally bits of dry cow or horse dung, a few feathers, the inner bark of the cottonwood, dry mesquite seed pods, bits of snake skin and small grass roots are used, and now and then no lining is found, the eggs lying on a simple platform of twigs.

The number of eggs to a set varies in different localities from two to nine, and occasionally as many as twelve have been found in a nest, possibly the product of two birds. Sets ranging from four to six eggs are the rule. In large sets several sterile eggs are nearly always found, and I believe that rarely more than five young are hatched at one time. Incubation begins sometimes with the first two eggs laid, especially when the set is to be a large one, and again I have taken apparently full sets of four eggs in which there was no perceptible difference in the size of the embryos. Occasionally an egg is deposited daily, usually only every other day, and sometimes the intervals are still greater. Incubation lasts about eighteen days, and both sexes assist in this labor.

The parents are devoted to their young, and when incubation is well advanced the bird will sometimes allow itself to be caught on the nest rather than abandon its eggs. The nestlings, when disturbed, make a clicking noise with their bills. When taken young they are readily tamed, soon becoming attached to their captor, showing a great deal of sagacity and making amusing and interesting pets.

The eggs of the road-runner are white in color and unspotted, mostly ovate and short ovate, and rarely elliptical ovate in shape. The shell consists of two layers, the lower one close and fine grained, always pure white, without gloss; the upper, a mere film similar to that covering the

* In a letter received from Mr. A. W. Anthony, written on Aug. 5, 1888, and overlooked by me when this article was written, he informs me that a road-runner, accompanied by three young, was seen by a traveling companion of his, who knew these birds well, on the line of railroad between Albany and Ashland, Oregon, about 50 miles south of Albany, some time in August, 1887. This extends its range considerably northward.

ground color of the anis, but more firm and not so easily scratched or rubbed off. This overlaying film gives these eggs sometimes a very pale yellow tint and a moderately glossy appearance.

The average measurement of 101 eggs in the United States National Museum collection is 39.12×29.97 millimeters, or 1.54×1.18in. The largest egg of the series measures 44.45×29.97 millimeters, or 1.75×1.18in.; the smallest, 36.07×28.19 millimeters, or 1.42×1.11in.

THE DEER OF WESTERN TEXAS.

Habits and Peculiarities, and the Best Means of Preservation and Protection.

BY A. Y. WALTON.

THE object of this paper is to treat of the habits and peculiarities of the two species of deer found in western Texas; to touch upon the interesting differences in form, size and color occurring among the more common of the two species, and to discuss the means for their better preservation and protection.

The deer of western Texas consist of two species—the *Cervus macrotis*, commonly but erroneously called black-tailed deer, and the *Cervus virginianus*, or common deer of America.

A third species, once to be found in the northern and northwestern parts of the State, along the Red River and its tributaries—the most stately and noblest of all the deer tribe—the *Cervus canadensis*, commonly known as elk, is now extinct and no longer to be found within the limits of the State.

We have never been able to find out by inquiry how far south in Texas this species once ranged. We are inclined to doubt whether it ever at any time affected the open plains of the State; but as it still survives in small numbers in the Sacramento Mountains just across the Texas line in Southern New Mexico, we think it safe to conclude that it was formerly found in localities similar and near by within the borders of this State.

At present we know of none within the State. Some few were killed in the year 1864 or 1865 in what is called the "Big Thicket" in eastern Texas, and it may be that some few still survive in its more remote and little known depths of cane-brakes and hammocks.

Going back to the first two species spoken of, we will treat first of the *Cervus macrotis*, the large-eared deer, properly mule deer—erroneously called black-tailed deer. (The true black-tailed deer is the *Cervus columbianus*, which is found in a narrow belt along the Pacific coast of America, in the temperate zone, and has never been known east of the Rocky Mountains.)

Our knowledge of the mule deer has been acquired more from inquiry among hunters and stockmen, and observation of individuals—in domestication as well as examination of those offered in market—than from any extended or close acquaintance with the species in a wild state.

We quote the following description: "Larger than the common deer, and coarser in build. Color, dark gray. Antlers only on the male. They are once or twice, and sometimes thrice, bifurcated. Tail short, small, round, white, terminating with a tuft of long black hairs; naked on the under side. Metatarsal gland very large and long. Tarsal gland present. Hoofs black. No white hairs about the feet or the metatarsal gland. A white section opposite and below the tail."

"This deer was first discovered by Lewis and Clarke on the 18th of September, 1804, on the Missouri River, in north latitude 42°, and was called by them black-tailed deer. By this name they often mention it, until the 31st day of May, 1805, when Captain Clarke, in enumerating the animals found on the Columbia River below the falls, calls it the mule deer. On the 30th of August, 1806, near where they first saw this deer in 1804, they procured a specimen to bring home, and called it the mule deer. The excessive development of the ears well justified them in the name which they gave it."

We think we are safe in saying that we can take the Pecos River as the eastern limit of this species in western Texas. Some instances have occurred where they have been killed to the east of that stream, as on Devil's River; but the general opinion seems to be that their main habitat in the State lies along the Pecos and to the west of it.

Southward, in Mexico, we have been able to trace them in Chihuahua, Coahuila, Durango and Zacatecas. How much further south they exist we are unable to say, and it remains an interesting question, yet to be solved, whether or not in their extreme southern limit in Mexico they merge into and become identical with the type found on the Peninsula of Lower California—possessing all the *indicia* of mule deer, but very dwarfed in size, and with spike antlers of an average length of about only 6in. It is interesting to note here that by the Mexicans they are called bourri, from their resemblance to the bourro.

The marked differences between this species and the common one are: superior size and coarser build, much larger ears, darker gray color, the persistent tuft of black hairs on the end of the tail, and the tendency of the antlers to a more lofty growth, and to be more bifurcated. There is also a very marked difference in the running gait of the two species. The *Cervus macrotis* does not possess the long, bounding, graceful leap of the other species. "They do not run, in a proper sense, but when in haste they bound along, all the feet striking and leaving the ground at once, very much after the manner of a frightened sheep." These differences, with the very marked inequality in the length and size of the metatarsal gland, very clearly indicate the distinctions between the two species.

In Texas this animal seems to be a mountain haunting and loving creature, preferring to keep more to the rough, broken foothills and higher ranges than to the open country. There is apparently no difference in the excellence of the venison of the two, and we are even inclined to believe that the flesh of the mule deer is, if anything, preferable to that of the other, as they are more inclined to become excessively fat in the early fall.

They are not so timid and inclined to conceal themselves as the other species, and under fire are more apt to become confused, when they do not immediately locate whence danger comes.

Unfortunately all this aid in their destruction, and conduces the more strongly to their extermination, and unless some more effective means of protection is soon found than is given by the laws now in force, the species is doomed to speedy extinction.

As exemplifying what has been done within the State, and what is still going on in the way of deer butchery, let me note that some two years ago I met and conversed with a man in San Antonio who informed me that he was one of a company organized for the purpose of killing and shipping deer to maket. Up to the time when I talked with him, he said the concern had killed and shipped more than 2,000 deer, mostly of this species; and he remarked that they were more easily found and killed than the other kind.

The other species of deer of which we shall treat is the *Cervus virginianus*, or common deer of America, found more or less abundantly all over North America, and ranging from far north in Canada to far south in Mexico.

Description: "Smaller than *Cervus macrotis*, about the size of *Cervus columbianus*, with longer legs and longer body; head lean and slim; nose pointed and naked; eyes large and lustrous; ears small and trim; antlers have a spreading posterior projection, and then curve anteriorly, with posterior tines; neck long and slender; body long for size; tail long and lanceolate in form; legs straight and long. Metatarsal gland small and below middle of leg. Tarsal gland present. Summer coat from bay red to buff yellow. Winter coat a leaden gray, greatly variant. Deciduous antlers, and confined to males."

In former years—up to 1856, if we are not mistaken—the species was extremely abundant all over southern and western Texas, and seemed then to partake more of the gregarious habit of antelope, in going in more or less large bands—a habit which they have apparently greatly abandoned in late years. This can easily be accounted for when we take into consideration the presence of cattle men on their open ranges. They naturally would become wilder, more prone to seek hiding places in the brush and timbered bottoms and to be broken up and scattered into smaller bands.

In early days, owing to the yearly burning off of the prairies, all the country around San Antonio was an open plain, devoid of brush, and was a famous deer range. Old Mexicans, born and raised at the missions and now passed away, have told us of the thousands of deer to be seen in very early times between San Antonio and the Medina River. They continued to be very abundant in all the country more southward toward the coast until 1856, when an epizootic distemper called "black tongue" broke out among them and killed them by the thousand. We have ourselves known this disease to occur, both in Louisiana and Texas, and have examined subjects affected by it. The most marked symptoms seemed to be a general emaciation and wasting away of the system, a mucus discharge from the nostrils and a sloughing of the hoofs, all evidently accompanied with fever and thirst, for the dead were found mostly at or near water.

All the *Ruminantia* are subject to affections more or less similar, and African explorers and hunters—Harris, Cumming, Anderson, Livingston and Moffat—all mention a similar distemper as fearfully fatal among the antelope of South Africa.

When this disease passed, the deer almost disappeared with it, and all of our old citizens agree that the game has never been so abundant since; yet in some localities they are still quite plentiful, and under proper laws, wisely framed for their protection and thoroughly enforced, they would again increase, and soon be abundant.

We have known the deer to be almost exterminated by the overflowing of the lowlands in the State of Louisiana, and yet by the return of those few which had made their way to the highlands and the survival of those which had sought refuge on the large trunks of fallen and floating trees, they would in a few years be as numerous as ever.

Under such conditions more of them perish, we are inclined to believe, from starvation than by drowning, for the deer is one of the most powerful and swiftest of swimmers. Unfortunately, owing to their extreme local attachments, many cling to the places where they were reared, and during the months when the land is submerged take refuge on the trunks of large floating trees anchored fast in the dense woods where there is no current, and subsist by eating the leaves, and when these fail by gnawing the bark from all the bushes within reach. Nevertheless, as may well be supposed, many die from starvation under these conditions. We have seen and examined many of these "poor prison houses," and the sight was well calculated to move the human heart to pity.

It is gratifying to know that quite a number, when the overflow comes, strike out and reach by swimming the high lands, which may be many miles away. I was present on one occasion when just as we came out of church in the town of Rodney, Miss.; two deer emerged from the bank-full river close by, evidently having come from the lowlands of Louisiana, which were all under water, and leisurely galloped up a street and found refuge in the hill forest beyond. It affords us pleasure to say that they were not molested in any way, and were followed by the openly expressed pity and sympathy of the whole congregation.

The Fawns.

Let us go back now and trace this interesting animal from infancy to the adult state, remarking that the habits of birth and growth are about the same in both species.

The does, as near as we have been able to determine, carry their young about six months. In this latitude the fawns are dropped in the month of May, and in localities further south many in the month of June. At this time the color of the fawns of the mule deer is of a dirty yellowish ground, covered with white spots. The young of these are not so handsome as are those of the other deer, for, as Judge Caton remarks, "By far the most beautiful of all is the ornamental coat of the fawn of the Virginia deer." For some time after coming into life, the young lie very close, hidden almost always in some secluded spot among the bushes and herbage.

We have never known them to lie at this stage of their life as the young of sheep and goats do, almost touching one another, but they lie with more or less distance separating them, never very far apart and never very close together.

The doe, as a rule, produces two young at a birth, almost always a male and a female.

For some time after they are dropped, probably for a month or more, the doe never goes near them except to nurse them, but lies at some distance off with ears and nose alert for any danger that may befall, or feeds around, never going very far from them.

Their enemies at this time, in this State, are chiefly the short-tailed lynx and the coyote, and should one of these come near we are satisfied that the mother attacks and drives it away, that is when the enemy comes singly. We are led to this conclusion from having observed in domestication how readily the doe falls upon any single dog which may come too near her fawns, attacking by springing upon and striking him with her forefeet, and sometimes even butting with her head after the manner of a sheep.

Some tribes of Indians have availed themselves of the solicitude of the deer at this time for the safety of their young by the use of an instrument, fashioned from a short piece of the small hollow end of a cow's horn, and which is almost an exact counterpart of the mouthpiece and a short section of a clarionet. This device, when blown, makes a sound almost exactly like the cry of the fawn when in distress, and the Indian, or we should say hunter—for we have seen the device used by white men—has only to conceal himself near where he thinks the young lie, and to make the sound, to lure the dam to her sure destruction. Should the enemy prove too strong for the dam, or the young be suddenly aroused by some intruder, the fawns instantly rush off in flight followed by the dam, and it is an astonishing thing to see what a great degree of speed the little ones are capable of showing even when very young.

Some think that a fawn three or four months old is swifter than a grown deer. It is a fact well known to stockmen, that the calf of the same age is much swifter than the cow, and the faculty may have been given to each, at this tender age, for their more complete protection.

This habit of concealing the fawns is kept up for a month or more, and is gradually abandoned as the young increase in size and follow the dam more, and afterward by degrees they assume the habits of the grown deer.

Of all wild animals with which we are acquainted, the young of this species is the easiest to domesticate. We know of no others showing this trait in such a marked degree. We have seen the young deer brought out of the woods carried upon the hunter's saddle before him, having been picked up from its hiding place almost without resistance—probably not twenty-four hours old—and being put down in the yard it would follow the first passer-by with the dolicity of a dog.

Markings.

The spots appear on the coats of the young of all the American *cervidæ*, less marked and more faded, seemingly pointing to a gradual disappearance in the case of the moose and reindeer. For a long time I was puzzled to reconcile the gaudy and apparently conspicuous decking of these inoffensive young animals with the general care and wisdom of nature in closely assimilating the colors of nearly all creatures to their surroundings; but happening to read one day the published letter of an officer of the British army, a sportsman in India, the matter was placed before me in a new light. His statement was, that of all the wild animals hunted in India the tiger and leopard were the most difficult to detect in the jungle when lying still, and especially so when the sun was shining. The checkered spots of sunlight and shade, falling down through the leaves and bushes, harmonized and blended with the colors of the animals so as to confuse the eyesight and cause one to overlook the object sought for. May not nature have given the young of these animals these spots as a means for their protection?

It is curious to note that the spots are sometimes found upon the adult animals, not white in color, but of some shades lighter than the rest of the body. We have never seen them upon the stags, but only upon does. Judge Caton inclines to the opinion that all the American deer have had one common origin, and were once spotted like the fallow deer of Europe.

The fawns carry the spots until the shedding and changing of the coat in the early fall, when the young animal assumes the coat and color of the adult.

The fawns are weaned at about four months of age, but continue to follow the dam—the males for one year and the females for two years.

These two species of deer shed and renew their coats twice a year—once in the early fall, just before the commencement of the rutting season, and again in the spring of the year, when the warm weather has asserted itself. The coat of *Cervus virginianus* in the fall is of a dark bluish gray at first, gradually changing to a lighter gray as the season advances. In the spring he assumes a coat which in color varies, in different individuals, from a bay red to a buff yellow.

The coat of *Cervus macrotis* in the fall is of a darker gray color, but also becomes in time lighter; and in the spring is of a pale, dull yellow.

Food.

The food of deer in western Texas is very varied, and embraces the leaves of nearly all the shrubs indigenous to this locality and the nutritious seed pods of the various leguminous trees and shrubs so numerous here. They are especially fond of and become very fat by feeding upon the pods of the mesquite tree, and are also very partial to all varieties of acorns. Grass we do not think they affect much, unless it is young, tender and succulent, when they seek it with avidity. When they can have access to such places, they will go miles away to raid melon and sweet potato fields.

In some parts of the State there are localities where, thank heaven, the skin-hunter can never exterminate them. The vast and almost impenetrable cactus thickets offer a refuge where, although no water is to be found, the ripened fruit and tender shoots of this remarkable plant supply both food and drink. Here they are perfectly independent of water, and here they will survive longer than anywhere else.

The common species, according to our observation, breed freely under domestication, where the range is not too much restricted and where they have an abundance of proper food. Under favorable conditions, as far as we have experienced, they seem to be almost as hardy, as prolific and as omnivorous as goats, and when allowed to run in a yard often display the same depraved taste for out-of-the-way articles of diet.

Among the deer owned by my family in Mississippi there was one which never failed to chew up and spoil all

articles of leather, such as shoes and gloves, as well as towels and table linen, whenever she could get at them. Another, a most interesting and affectionate doe, was allowed to run at large in the yard, partly from attachment to the family and perforce because no reasonable fence could confine her. When the bell rang for meals, if at a distance she would come at a gallop, and if allowed to enter the room would go all around the table begging some favor from each one. If the doors were not closed carefully she would go all over the house, upstairs and down, seeking for what was to her the greatest of all delicacies, hand soap, and when she found it she would proceed to devour it with avidity, and as far as we could see without any ill effects. Of course, it was too expensive an article for us to allow her to resort to it as an ordinary diet, and if taken in any quantity no doubt it would have proved harmful. But her pilferings were frequent and persistent.

On one occasion she was found by the indignant servant maid in one of the second-story rooms, regaling herself as usual; and thinking the opportunity a favorable one for a settlement, the girl closed the door and went at her with a riding whip. The punishment was brief and unsatisfactory, as about the second circuit of the room the deer went at a bound out of the window, taking a large portion of the glass and sash with her. She reached the ground on her feet, and, excepting some cuts on the hide from the glass, did not appear to have been injured.

One not alive to the real facts would be induced to believe that, from their frail and delicate appearance, the legs of a deer were not capable of sustaining the shock accompanying a leap from any considerable height. The usual custom of this deer in running, when not closely pressed, is to take three or four bounds, and then a long, high leap. Any one who has seen them make one of these leaps and alight with impunity, even upon a solid rocky surface, could well see how they could survive uninjured a leap from quite a height. The leg bones of the deer are exceedingly dense and hard, and they are braced up by sinews equally tough and strong.

Running.

The rutting season of these two species begins in western Texas generally in the month of October, if the weather is cool and bracing, or rainy or cloudy; but if the weather should prove close and warm, as it has been mostly during the last month, it does not begin until cooler weather prevails.

As a general rule the height of the season does not come on here until about the last week in November or the first week in D cember, and continues through the last-named month. But all this depends more or less on season and latitude, as further south the running season continues even after the new year begins, and of course begins later there. These remarks are in allusion to the habits of the *Cervus virginianus*, as the facts attending the habits of the other species at this time are not so well known.

Hunters have aptly named this period in the deer's life and history "the running season," as "the pursuit of the doe by the stag commences before her season has arrived, and hence for two or three weeks she remains as secluded as possible. He follows her track with his nose to the ground, and when started from her bed the race is very spirited, but she manages to elude the pursuit by concealing herself or by mingling with other deer, and again slipping away." Should any one, hunting at this time in a good deer range, observe a doe by herself galloping along with her tail down, ever and anon looking back as if looking for something in pursuit and acting as if she were endeavoring to secrete herself, he should lose no time in availing himself of the situation.

Let him hide himself on her track or within gunshot of it, and if the conditions of the wind are favorable the chances will be that he will not have long to wait before the stag will make his appearance following the track with the certainty of a hound.

After the rutting season is over, which in the latitude of San Antonio is generally about the end of the year, the stags become lean and tough—in fact, unfit for food—and lead sometimes a solitary life, but oftener collect in bands larger than at any other time of the year. They thus remain apart from the females until the rutting season comes around again in the following fall.

Of all times of the year the commencement of the "running season" is the most favorable for hunting these animals. They are then in the prime of condition, and to the hunter who loves to "camp out" and seek for them, living and sleeping in his tent in the remote wilderness, the weather in western Texas has then a charm which no other portion of the year offers.

We have seen in the description given that the *Cervus virginianus*, or common deer, varies greatly in size, color, shape and weight. It is not so large in Texas as it is in the East and North, and some naturalists are of the opinion that the small variety of deer found in Mexico and in some few localities in Texas is a permanent variety, and have called it *Cervus mexicanus*.

The deer of the coast islands of Georgia, South Carolina and the Florida coasts and keys is much smaller than the animal of the mainland near by, and differs also in shape, being described to the writer by an intelligent friend who has hunted them much as small, round-bodied, stockily built, and with low, crumpled antlers.

We have ourselves killed deer in the mountains of the upper Nueces with a very much darker general color of the body than the common variety, and this color running into a broad black band along the back of the neck, the top of the back and the upper part of the tail. We are told that these deer are not uncommon in the mountains of western Texas. When we first met with them we were inclined to think that they might be crosses and estrays from the habitat of the mule deer, but upon examination there was no increase in the size of the ear to warrant such a belief.

We are of the opinion, from all we can gather upon the subject, that these varieties are not permanent, but are properly accidental variations produced by local causes, such as aliment, climate and altitude, and which very likely would disappear in a few years were the habitats of the animals changed.

Both these two species of deer are provided with glands in all the feet. These are situated between the clefts of the hoofs running backward and upward, with a small aperture leading into them of something more than an inch in depth. These glands secrete a waxy, dark-colored substance of a disagreeable, strong, musky odor, and are less developed in the mule deer than in the other species. We are satisfied that it is by the scent emitted from these glands that deer are enabled to follow up and find each other when separated. No dog possesses a keener sense of smell than the deer, and they will follow each other when lost or when seeking a companion of the other sex hours after the first one has passed by. We have read in the effusions of incipient poetasters and tale writers of the gentle fawn bleating for its dam, and of the voices of does calling for their young. This is all the purest nonsense. Of all the wild animals with which we are acquainted deer are the most silent. They go and come like shadows, and even in thick brush, provided they are not alarmed, will pass very near one and make no sound. They cry out only when in pain, either when caught by some carnivorous enemy or sometimes when shot and badly wounded.

In all our experience, extending over about forty years, we have never but once heard a deer make use of the voice when seeking a lost mate. This occurred when upon one occasion, having shot at and scattered a band of stags, one of the number, not having seen or scented us, turned back, evidently seeking his leader, and passed close by, making a low, muttering noise like that sometimes uttered by the domestic ram.

[TO BE CONCLUDED IN THE NEXT ISSUE.]

THE ABSENCE OF BIRD SONG.

FERRISBURGH, Vt., June 8.—The coming of the birds is only made known to me by hearsay, or by their own voices, for the most part by the latter means, which is really the surer. What I have heard tallies with the reports from other parts of the North.

There were never so few notes of the first spring comers—bluebirds, robins and song sparrows—and it is they who seem to have suffered most from the severity of the Southern winter.

I have heard but two bluebirds, and that is more than some observers report. There seems to be but one pair of robins nesting near our house, where there are ordinarily at least a dozen pairs. The absence of their jubilant morning chorus is very noticeable.

There is as marked a scarcity of song sparrows, and I have heard but one white-throated sparrow calling Mr. Peabody or telling Peverly to sow wheat. The barn swallows came a week earlier than usual, but in small force.

The later comers appear to have fared better. The bobolinks came on time, May 8, not the throng that forty years ago filled the meadow air with musical medley, but perhaps not fewer than last year.

There is the usual quota of orioles in our elms and those of our neighbors, where every day I hear them fill the air with melody sad or gay, as the listener's mood interprets it. There is a goodly number of vireos and I have heard several summer yellow birds, a few thistle birds and two wood pewees, and a catbird has apparently taken it upon himself to do the singing of all the birds after his fashion.

I have missed a good deal of our jolliest spring sound, the cackle of the high-hole, yet hear it occasionally.

On the whole, it is evident that the past winter has dealt very hardly with the migrant birds, and to make amends for the unkindness of nature we must be very good to the survivors. Let collecting be honored, this year at least, in the breach more than in the observance, and a bird in the bush be counted worth two in hand.

Dr. Webb's pheasants must have become pretty widely scattered in this part on the State. We are at least 10 miles from Shelburne Farms, yet I often hear of the birds being seen about here. My son has frequently seen a pair this spring near a thicket of pines in our pasture, and several others have been seen in the neighborhood. A man living at least 4 miles further from Shelburne fed a flock of seven near his house during the winter. This looks as if they were breeding at large.

I am told that many dead fish, principally bullheads, are seen afloat in Little Otter Creek. Some think the dynamiters are at their knavish tricks, but would they not be likely to pick up cleaner after themselves?

AWAHSOOSE.

Size of Moose Heads.

CALAIS, Maine.—*Editor Forest and Stream*: In answer to yours about moose horns, would say that the 72in. set belonged to Mr. Andrew Downes, of Halifax, N. S. I wanted to purchase them, but was not able to get them, as he wanted them for his own museum. He promised to get me if possible as good a set, but I never got them. When the Prince of Wales came to Halifax thirty years ago, he gave the horns to him; but the officer who had charge of the Prince sent Mr. Downes $125. I send you a photo of a head taken in Halifax, the horns very wide, with a spread of 66in.; also a photo of set of horns, 60in. spread, that have nice points, 14in. wide blade, 18 points on each side. A friend at Frederickton, N. B., has a set of about 66in. but the blades are very narrow and not many points.

There is quite a variety of shapes to make the spread; some very cheap looking narrow horns have more spread than wide heavy ones. I think a moose when in his prime, say eight to ten years old, has the best horns. Then the points on the upper blades get less every year, and I have had some that show no points on the upper blade and the animals had very poor teeth.

GEO. A. BOARDMAN.

Camp-Fire Flickerings.

VINTON, Ia.—We have a man in our town of more than average talents and ability. He has been sheriff of the county and now holds a lucrative position as traveling agent for an important company. He is an all-round good fellow, but he can outdo Mrs. Partington in the use of words. At one time a tramp was arrested as a vagrant. When registering him he said, "I don't believe he gave his right name. I have no doubt but he is traveling under a consumed name."

When the income tax law was under discussion some one said it was "class legislation." He said it was "unconstitutional, as it was classical legislation, that was just what it was."

A book agent tried to sell him a cyclopædia. He said he did not want it, would not have it about the place. If he caught one of his boys riding one he would lick him.

K.

Game Bag and Gun.

STRATEGY WITH THE ANTELOPE.

ONE fine day in October, running short in our meat supply, I was delegated by the foreman just after dinner to take a run over toward the river, some six miles distant, and see if I couldn't down a couple of antelope as a temporary relief for our meat-craving appetites, or if possible perhaps enough to last the outfit until some of the boys had the time for a chase after elk in the mountains.

Appreciating the opportunity, I at once brought in Brownie, one of our cow ponies that had been grazing at the end of a stake rope near by, and soon had her as well as myself ready for the afternoon's sport. With cowboy delight I made a bound for the saddle, accompanying it with a yell that started us on a Nancy Hanks gait for nearly two miles, when a slow-down was in order on nearing Flat Creek, which we forded quietly, emerging from the willows on the opposite bank somewhat slowly, as I feverishly glanced over the broad flat ahead of me for any stray pronghorn that might possibly be so near our headquarters. Not seeing anything we again resumed our journey, allowing the cayuse to take up a dog trot, while I kept a sharp lookout along the base of a broad bench or plateau that extended in a northerly direction to our right.

A salt spring exists not very far along the bottom of this bench in a little hollow which is covered nearly all summer with a thick growth of luxuriant grass and attracts the antelope very much during the early months; but the Indians, who do considerable hunting around here when they come into the hole in the fall, cause those timid creatures to be very shy, and consequently only now and then can a few be seen feeding near the place at this time of the year.

However, I was not going to overlook this particular spot at any rate, whether its allurements had enticed any of the fleet-footed game prior to my arrival or not, and if nothing should be there at present a passing glance at its surroundings on my return this evening would not be very much out of the way either, especially if luck had been against me.

Approaching the neighborhood we soon came to the accustomed halting place by the side of another soft-water spring near the lick, when Brownie seemed to take in the situation by stopping about where she generally had stopped before when I wished to dismount. Taking her advice I slipped from the saddle gun in hand, and began the same old tactics that I was wont to assume in days agone, by stooping over, or crawling, if necessary, as the case might be, and advancing as near as I could without being seen. Having obtained this much of an advantage I slowly, very slowly, raised my uncovered head and peeped over the intervening rise in the ground ahead, expecting to see, as I did so, a tail or two disappearing over another ridge beyond, or a little bunch of antelope calmly feeding, perchance basking in the noonday sun, unconscious of an approaching fiend.

Not being able to discern anything though at the first good look, I continued the process of elevation until I stood erect, when a view of the whole place failed to show up any signs of life, barring a few songsters that flitted by among the willows. Going over to the lick, an examination of the ground thereabout revealed no tracks that could have been made since early morning, if as late as that; so I returned, straddled my pony and started back for the cow trail again, which I followed through the gap as far as trapper Jack's cabin on the bench, near the head of Spring Gulch. He himself was now in the mountains for the winter, and the man who occupied the shack during his absence had evidently gone off somewhere for the day, as no one responded to my friendly "halloo" on coming up.

Riding around to the corral, a circular affair, which helped to improve the appearance of this lonely horse ranch, with its low white sheds and deserted aspect, I took a stand that gave me a grand view of the flat as it stretched on toward the river, nearly three miles away to the west, and a corresponding scope of double the distance both right and left.

I can't very well remember ever looking over this level plain without having seen at least a few of the nimble cabree as they calmly wended their way to and fro between the river bottom and the big buttes, or perhaps going in the direction of the rolling hills to the northeast for a change of habitat. Though presently none seemed to materialize before my searching gaze upon this broad expanse of prairie splendor, I nevertheless called to mind how often it had appeared to me the same on previous occasions, and directly after, as the shadow of a passing cloud in the blue heavens above softly glided by, o'er the waving grass and dusty sagebrush, a whole band of antelope, heretofore unnoticed, would come within my range of vision, as they fed along their oft-frequented trails in silent content.

So I continued feasting my eyes on the great panorama in front of me for about half an hour longer, when the scene itself became one of monotony for the time being, as no game hove in sight, and the afternoon wore on, telling me I had better be on the move if success was to be obtained. Considering which course might prove the best, I finally decided to cross the flat on a line with some horses that I discovered about a mile off to the left, and, should nothing turn up, enter the river bottom near the foot of a tall butte, where a big bunch of cattle appeared to be grazing. Acting on the impulse, I immediately gave rein to my pony, but not deeming it advisable to go faster than a walk at present, we took it easy, while I threw my eyes about in anticipation of making out a form or two of the *Antilocapra americana* on the horizon. This was apparently a hard thing to do, so I allowed my attention to be directed toward a great string of wild geese which were forming all kinds of imaginable figures as they sailed back and forth over the immense cottonwoods that flanked the river on both sides. They also soon disappeared, leaving me to resume the thoughts of my mission.

After covering some distance, we made a short halt while I turned round in my saddle to scan the rear, especially taking a good look among the young quaking asp timber that grew in patches here and there, and formed many pretty little parks o'er the face of the hills, wherein during the hot days of summer a cool and refreshing shade, with some protection from the great fly pest, was afforded the antelope.

My reward was about the same, however, after a critical inspection. So I again pushed forward, and soon came within a quarter of a mile of the aforementioned horses, whereupon I began to study them more closely, for the wily pronghorn loves to associate with domestic stock, if for no other reason than to be sure of a show of escape if suddenly surprised by hunters.

Approximating closer, I notice that the bronchos are aware of our coming, and seem to take considerable interest in us as we advance toward them. Their antics, too, cause me to smile, as they bunch up and come forward a "wee bit" at a time, and this as if being pushed by one another, so close do they huddle together in their inquisitive desire to know who we are and the meaning of our invasion upon their domain.

Suddenly, as if having discovered our identity, and perhaps thinking of the distant corral, where they might be wanted, they wheel around and dash at a gallop in high glee, kicking and snorting for some 300yds., and again face us in a defying attitude, when all at once my attention is called away from these frisky "critters" to something more interesting just now.

Though watching the horses and admiring their wavy outlines as they sported in the light breeze that swept down from the north, a spare optic was nevertheless on the *qui vive* for any unusual move that was not on the programme of the immediate vicinity. So when a small bunch of antelope came jumping out from a gully to the right and were making for my erstwhile entertainers in the distance, you can bet I then and there promulgated plans for their destruction. As it were, the space between us was too great for a sure shot, so I began to think of the most propitious way of getting at them. I could try stalking, but they were already scared and started on the run by the horses, and a doubt as to the success of such a plan arose in my mind; though it might be a sure thing, it was also sure to me that it would consume the better part of the afternoon with everything against me, for they were going away from me all the time, and in the end would certainly have the wind in their favor, thereby deciding the result.

I at once dropped all thoughts of stalking on perceiving the action of the game just as the horses made another dash for the bottoms. Would not the little band eventually cross the trail left by the cayuses if forced to continue their course. To me it occurred that such would prove to be the case if the antelope could be kept on the move, for they would make for the spot where I first discovered the horses every time those animals started on the run. Until now they had evidently not caught sight of me, because we stood in the channel of some former stream, or washout, and the thick and high chaparral ahead formed a sort of screen behind which ample protection from their sharp eyes could be had, though I had to stoop over the horn of the saddle quite a bit at that.

The idea that struck me was to hang over the left side of my pony in Indian fashion and make a dive in the direction taken by the horses, and watching the game from under the neck of the cayuse I was riding, take advantage of the first little gully that lay in their line of approach, if approach they did. Whether I was to be successful I did not know, but certain it was that I was willing to run chances on a scheme that appeared to me had some show of an auspicious ending; especially so with this one, as it would take up very little time should it prove a failure.

Getting ready for the charge, I slowly started my pony out of the hollow, intending to give the game a chance to size us up first, rather than surprise them with a too sudden appearance by dashing right into view. They at first did not notice us, but as I kept the pony at a walk, I very soon distracted their attention from the good grass they were constantly nibbling along the trail and had them inspect me critically, as I allowed the cayuse to come to a standstill, lowering its head as it did so, to feed. Finally after some time, I became a chestnut in their eyes and they resumed their browsing, seemingly indifferent to my presence on the flat. This was my opportunity and I gave my pony a thump in the bread basket with my left that sent us flying over the prairie.

Imagine my delight to see those creatures take up the same course, but always coming nearer the trail over which I sped. We went much faster than they did, however, and before long I was neatly ensconced behind a small hillock directly in their path, with my pony not far off over a little ridge. I watched them as they came, one by one, the buck in the lead; there were exactly eleven, three being young fawns. They had ceased running, but continued in my direction slowly, but surely, feeding on the way. When about 200yds. off they changed their course a little, which if followed would bring them exactly to where I lay in the brush. Somehow I did not approve of this move, so I sneaked around to my pony and awaited them there, relying on the sagacity of the animal for proper shelter when they came within shooting range. This was a fortunate move on my part, for the wary things again altered their line of progress and started in a southerly direction, perhaps the way they were previously going when first disturbed by the horses.

It did not matter much with my present position, as they would pass me about 60yds. off; but had I remained where I was at first the chances are I would have missed them entirely on account of the lay of the ground; yes, the ridge is somewhat higher than my former site, so you see it would have obscured them from my view. Ah, but don't they look neat and trim with their red necks in contrast to the snowy whiteness of their bodies underneath and the fleet and nimble extremities that look like stakes driven into the ground, as they stand still now and then to reconnoiter. Those big, glassy eyes, too, which inform you of their owner's inoffensive dispositition; how cruel to destroy their being.

All these, however, cannot stay the appetites of a hungry cow outfit unless put before them in juicy steaks, so as soon as those creatures come near enough I mean to make a couple at least "gone coons."

Standing behind my pony I watched them closely over the saddle bow, while the Winchester I carried rested on one foot, muzzle skyward and ready for action. On they came, unconscious of the fate that awaits them. How the little ones romp among the chicos on their way to destruction. Did I say it? Well, no; I will preserve their little lives and confine my shooting to those that have enjoyed life somewhat longer.

My cayuse begins to exhibit some signs of uneasiness as she sees me fumbling with the gun; being a little kittish she is perhaps preparing herself for the shock that may follow the first shot I fire across her spinal column, for that I mean to do when the time comes. She is used to the business though, and will, I hope, not mind a little familiarity of that sort when a whole camp depends on our very actions.

The game does not suspect anything wrong in our direction, not even casting an inquisitive glance at my four-footed friend, who stands in full view. To them she appears harmless, like all other range stock, but a foe is concealed behind her that will show little mercy very shortly. As they come along their close proximity affects me a little too, as I get ready by shoving the gun barrel across the seat of my saddle; about the right distance intervenes between us now, so I draw back the hammer and await the first good broadside that the fellow in front, with the big horns, may favor me with. Some moments elapse before the desired target appears, keeping tab on him though, I soon catch him napping as he drops his head to one side and brings his stern around.

Just what I want, says I, as an eye runs along the sights. Pulling the trigger I am gratified to see, 'neath the rising smoke, the buck in the act of taking his final jump and landing all in a heap in the brush. His companions are suddenly taken by surprise and shudder as they listen to the faint echoes in the distance of the shot that slew their leader. Another, followed by a third shot, rings out on the balmy air when the demoralized creatures seek refuge in flight and scamper off helter-skelter for the thick river bottoms to the west. Their white sterns are soon lost to view as I look after them, so I hop into the saddle once more and ride over to the carcasses, three in all, and locate them. This done, it takes but a movement of the arm to draw the keen-edged steel, and presently I begin to dress the buck, who, though pretty big, is rather lean. The males are very nigh all alike just now, so there isn't much difference; the does, on the other hand, were plump, and as luck would have it, neither of the kids belonged to them, a fact which pleased me more than anything else.

The ball received by the buck entered back of the shoulder and pierced its heart, while one doe was struck amidships, breaking its back, and the other through the paunch. This last one ran a short distance after being hit, and came close to receiving another leaden missile had it held out a bit longer, for I had already brought up my gun, when down it went, like the others. After consuming nearly an hour or so in gutting the animals and preparing them for the saddle, I proceeded to get the mare in trim for her heavy load. Cinching her well, I led her alongside one of the does. Short ropes were fastened to the legs of both of the female carcasses, extending around the shoulders and hips, and having two loops, which were made respectively for the horn and cantle of the saddle. These were fixed so that the heavy portion of each doe rested snugly an either side of the pony's back, and when I lifted the first one in place was very well satisfied with the result, though I do not know how the mare felt when fully packed; somewhat heavy, I guess. Placing the other where it belonged, I now came to the buck, who was a little the heavier. Grunting considerably beneath his weight, I finally got the carcass lengthwise over the saddle and well up on the shoulders of the mustang. This accomplished, it took very little time to lash it securely above the others, and when finished, a better appearance could not be wished for. Inspecting the load, I felt sure that the pony would experience no inconvenience on the way, so I picked up my Winchester and started for home, not, however, without a parting glance of appreciation in the direction of my equine friends, as I thought of the part they played in my little game of strategy with the wily pronghorn. GROS VENTRE.

A DAY ON THE MARSHES.

"BE down at the mouth of the old harbor at 4 o'clock tomorrow morning, and I will meet you with a boat and take you across."

Accordingly, the next morning at the appointed hour, together with my gun and decoys, I was taken aboard, and in the gray of the early dawn George and I pulled across the creek that wound up through the marshes, and landing on the other side we waded to the stand where we hoped to do mighty execution among the yellow-legs, grass-birds, and plover ere the sun was many hours high. Seating myself upon the bench in our comfortable blind, I proceeded to sort and arrange my shells, and to make myself as comfortable as possible, while George splashed around in the inch or two of water that covered the flats

"TO OUR RIGHT LAY THE VILLAGE."

and placed a dozen or so decoys in as life-like positions as their clumsiness would allow.

Suddenly, from away over the other side of the creek came the clear far-reaching whistle of a yellow-leg, and George comes tumbling into the blind as if shot. Now though George is not such an expert as a colored guide of ours, of whom I have written before, he is by no means behindhand in the art of calling marsh birds, and the way in which he answers that particular bird is most pleasing to hear, to say the least.

And evidently the bird thinks so too, for each reply is a little nearer, and now he is just visible—a tiny speck in the distance; and now he heads directly for us; and now he sees the decoys; and with set wings and whistling clear and loud he prepares to drop among them. But it is ow my turn to take a hand in the proceedings, and at the short, sharp report of the powder the bird lands among the decoys in a way that he had not intended; and I—well, have I not opened the season with a good, plump, winter yellow-leg? And so through that beautiful August morning we sat and enjoyed nature to the utmost, gathering in an occasional bird, for it was too early in the season for the heavy flights, and occasionally—and a little shamefacedly, I must confess—listening to the derisive whistle of one who had learned to dodge shot.

I have said that it was a beautiful morning; and indeed it was, for although at intervals of an hour or so there would come a smart shower, it only contributed to the beauty of the effect, for at the same time the sun would be shining but a little way from us.

To our left wound the creek with just beyond the sand banks fringed with long beach-grass, and affording through numerous breaks and gaps glimpses of the deep blue bay, flecked here and there with the white sails of the mackerel fishers. To our right some three-quarters of a mile distant lay the village, with the church spires just visible through the waving elms, and the tall chimneys and long brick buildings of the deserted plant of the once famous Boston and Sandwich Glass Co. skirting the marsh and standing in bold relief against the dark green of the village trees.

Before us and behind us stretched the marsh, and away in the distance brown pastures stretched up to the edge of forests of pine and oak. But the marshes themselves! Could anything be more beautiful? You may smile if you please, but would that there could be put on canvas the glories of that August day.

Ever and anon great fleecy clouds would float across the sky, making wierd fantastic shadows on the green below; and the shades of green that were there! Certainly a score or more, according as the sunlight fell upon the waving grass of the salt meadows, all glistening from the passing shower.

Dotted here and there were great stacks of salt hay, placed on stilts to protect them from the tides, and look-

"DOTTED HERE AND THERE WERE GREAT STACKS."

ing picturesque in the extreme, as, like mounds of a race of gigantic ants, they loomed up close at hand, or appeared as mere specks in the distance on the level expanse. High overhead a gull sails by, and George wagers the cigars that I can't touch it. He is right, for in spite of the rapid bang, bang, from my 12-bore, the gull sails serenely on until a charge of No. 6 from George's trusty Parker brings him to the ground with a broken wing.

Ah, well, I am just from the city, and—but why make excuses? I confess that I never could point a gun as George can, and I don't expect to.

So, though I miss a few, I do not complain, for I also bag a few, and then it is enough for me that I am far from the hot, stifling city, and with such clear, delicious air to breathe as the sojourner in the city knows not of, and with my old togs on, I am once again on the marshes I love so well:

A level stretch of waving grass
In changing shades of green,
With shadows from the clouds above;
And there, but dimly seen,
The long, uncertain line that marks
The winding of the creek,
Where plover pipe, and grass-birds
Feed, or play at hide and seek.

And so, as all things, both good and bad, must have an ending, one of the pleasantest (if not the most successful) mornings that I ever enjoyed passed all too swiftly, and I hied me home to a dinner of broiled plover, and to cherish for years the memory of a day on the marshes, with which I fear I have somewhat wearied you. WALDO.

Small-Bore Bullets.

PORTLAND, Ind.—*Editor Forest and Stream:* I trust some one will answer "Aztec's" question in last week's number regarding small-bore bullets. The five deer shown in the photo I send you were killed with a .32-40 Winchester. None of these deer "dropped as if struck by lightning," but had the spine of either been broken the drop would have been like something very sudden.

Last October I shot a twelve-point buck through the upper part of the heart with a .38 and he ran eight jumps, covering 35yds. over logs two and three deep. The upper part of his heart was riddled.

Of the deer shown in the photo, the first .32 ball went into the left shoulder and out through the right. He was a yearling buck. He whirled half round and received my second ball in the right and out at the left; he dropped. The distance was full 150yds. My next deer, a doe, ran across in front of me about 75yds. distant. My first shot went through her body about midway; she ran about 50ft. and turned a somersault over a log.

You can see where the buck was hit at the point of the shoulder; the ball ranged back and he fell headlong inside 40yds. He was about 100yds. from me when shot and in heavy forest. The does on either side of the buck in the picture ran in a semi-circle around me, one after the other, and in the same order they each got a .32 ball through back of the shoulders as they passed through a small opening; then a broken leg each, and finally were laid low near each other by a ball through the shoulders.

I have often seen the question asked: "What sized gun is preferable for deer hunting?" My answer would be a .38 or .45 of the calibers now in use. But whether a .30-cal. will kill depends upon where the deer is hit; and the same rule will apply in a measure with any sized gun. C.

Why Is there Not More Forest Hunting?

PORTLAND, Ind.—*Editor Forest and Stream:* I was in a measure ignorant about the lynx, and yet I am of the opinion that while it may be easily dispatched with a blow, yet if wounded (not mortally) and not hampered by

trap or dogs, it would be a bad customer in a hand-to-hand fight.

I have wondered why there is not more published on forest hunting, while so much space is given to fishing and bird shooting. The forests from Maine to the Pacific could tell tales that would be interesting to every son of the pioneers who followed the red men from the East to the West—not only interesting but instructive, for the best informed may learn something. Not long since I saw the question asked by a man who claimed he had tramped the forests for twenty years, what becomes of deers' horns after they are shed? He had never seen one in all his experience. I could have told him. The porcupines eat every one of them.

I have caught 3lb. brook trout with a common tackle and venison for bait. A woodsman told me he was in the forest with his axe. He saw in a stream some fine trout. He had a fish hook with him, but no bait. He looked about and espied a porcupine on a tree, cut the tree down, killed and skinned the animal, baited his hook with some of the flesh and caught a fine string of trout. This was in northern Wisconsin. Did you know there are brown bear in Wisconsin? I did not until last October. C.

CHICAGO AND THE WEST.

[From our Staff Correspondent.]

Faithfulness of a Goose.

Another Manitoba paper, the Pilot Mound *Sentinel*, this week prints the following story of an affectionate goose whose mate was snatched away to the land o' the leal a little in advance:

"The history of Mr. P. Cram's wild geese forms a little romance, where adventure, danger, attachment, tragedy and bereavement appear strongly developed. About four years ago Mr. Cram captured in the woods a forlorn and forsaken little wild gosling, that had probably escaped the jaws of a wolf when the others were destroyed. The little waif grew to be the finest goose in Manitoba, and last spring proved to be so attractive that a wild gander gave up a contemplated journey to the polar sea, abandoned the flock to which he was attached, ran the risk of being shot, and became the mate of the tame wild goose. A very fine flock of goslings were raised, wild-looking, but quite domestic. In the fall a wolf captured the mother goose, and the gander, guided by a natural instinct, migrated, and would have taken his family with him had his designs not been anticipated. This spring the gander returned and alighted in Mr. Cram's stable yard, claiming kindred with his descendants; he proceeded to look for his mate; not finding her, he continued the search for a number of days, visiting the pond and places frequented in other days, and at last in despair gave up the search, and bidding his family farewell, he started for the distant north, Mr. Cram refusing to add to the sorrows and misfortunes of his strange visitor by firing at him."

Big Year for Texas Game.

Mr. Guessaz writes me personally from San Antonio, Texas, regarding the game prospects in that region this year:

"Speaking of seasons, we have struck a 'corker.' It has rained water and fishes for three months, and every water hole is full. Mitchell's Lake is three miles long and one and one-half miles wide, nine miles south of city, and full of ducks now. That's astonishing, isn't it? The quail are coming back (can't imagine where they have been). In a twenty-mile run on the Gulf Shore Railway a friend of mine counted twenty-one coveys. I hear the same from the West. The tarpon fishing is at its height, and anybody catches from one to a dozen. This is a fact. You wouldn't know Texas now. It is a garden, and this winter will be one of our greatest seasons. There is something strange about the migration of game in this section. When it (the section) suffers from drought the game vanishes, and when it rains the whole magnificent panorama reappears. This is the season of all seasons. There is no spot on earth that contains more game to the square inch than southwest Texas does this year. It will astonish even you when you see it. So don't head yourself in any other direction."

E. HOUGH.

909 SECURITY BUILDING, Chicago.

New York Game Law.

THE game bill was signed June 8 and is now a law. It repeals all supervisors' ordinances. The close seasons throughout the State are as follows:

DEER.—Except August 16 to October 31 inclusive. One person may take only two deer in a season. Protected at all seasons in Ulster, Greene, Sullivan and Delaware counties. Hounding forbidden except September 10 to October 10 inclusive. Forbidden always in St. Lawrence county. Transportation of venison forbidden, except that one carcass may be carried accompanied by owner.

BLACK AND GRAY SQUIRRELS, HARES, RABBITS, except in months of September, October, November. But in St. Lawrence, Franklin, Essex, Clinton, Lewis, Warren, Herkimer, Hamilton, Saratoga, Washington, Onondaga, Oswego, Dutchess, Steuben, Orange, Richmond, Delaware, rabbit season, except October 1 to March 1. Ferrets forbidden.

WILDFOWL.—Web-footed wildfowl, except geese and brant, April 30 to Sept. 1.

QUAIL, except months of November and December. Protected at all times in Genesee, Wyoming, Orleans, Livingston, Monroe, Cayuga, Seneca, Wayne, Tompkins, Tioga, Onondaga, Ontario, Steuben, Cortland, Otsego. Transportation forbidden unless accompanied by owner.

WOODCOCK, RUFFED GROUSE, PARTRIDGE, except Aug. 16 to Jan. 31 inclusive. Transportation forbidden unless accompanied by owner.

WILSON'S SNIPE, ENGLISH SNIPE, PLOVER, RAIL, MUD-HEN, GALLINULE, GREBE, BITTERN, SURF BIRD, CURLEW, WATER CHICKEN, BAY SNIPE, SHORE BIRD, May, June, July, August.

MEADOW LARK, ROBIN, all other birds not named in this act (except English sparrow, crow, hawk, crane, raven, crow blackbird, common blackbird, kingfisher) protected always.

MONGOLIAN, RING-NECKED PHEASANT protected to 1897.

FISH.—"Trout of any kind," except April 16 to August 31. Lawful length, six inches. Transportation forbidden unless accompanied by owner. Salmon trout, landlocked salmon, except May 1 to September 30. Transportation forbidden unless accompanied by owner. Black bass, Oswego bass, except May 30 to December 31 inclusive (in Lake George except August 1 to December 31 inclusive). Lawful length, eight inches. Pickerel, pike, wall-eyed pike, except May 1 to January 31. Muskallonge, except May 30 to February 28 inclusive. Salmon, August 15 to March 1. Lawful length, eighteen inches. Salt-water striped bass; lawful length, eight inches.

LONG ISLAND CLOSE SEASON.

WILDFOWL, May 1 to September 30. Plover, snipe, etc., except July 1 to December 31. Ruffed grouse, meadow lark, January 1 to October 1. Woodcock, January 1 to July 31.

TROUT, except March 29 to August 3, inclusive. Landlocked salmon, salmon trout, except April 1 to September 30. Black bass, except May 30 to December 31.

HARE, RABBIT, except November 1 to December 31. Deer protected for two years. Black and gray squirrels, except November 1 to December 31 inclusive.

MEADOW-HEN, MUD-HEN, GALLINULE, WATER CHICKEN, GREBE, August to December 31.

Sea and River Fishing.

MORE ABOUT LEAPING BASS.

Editor Forest and Stream:

I have been on a recent visit to my old Virginia home, where I had three successful days casting the fly for small-mouth bass. Looking over the papers which came while I was away, I find that several of your correspondents have "jumped on me" concerning what I had to say about bass. As Pat said when he got kicked out, "Faith, but a man can't help what's done behind his back." I have paid due and respectful attention to all my friends have to say, but as my opinions are founded on very long experience and many careful observations, I find no reason to modify them.

Each of these gentlemen seems to think that I differ from his way of thinking because I have had very little experience with game fish. They are mistaken. If I have failed to understand the habits of bass and trout, it has been for want of capacity to form correct opinions, and not from lack of opportunity. My experience of bass and trout, on an extensive scale, dates back to the '50s. In '56, I think it was, I spent an entire season in the mountains about Clifton Forge for the benefit of my health. The numerous magnificent trout streams I had access to had then been but little fished, and as I devoted nearly my whole time to them, I caught great numbers; and learned much of their habits. Since then I have spent many summers on the very banks of some of the finest trout streams in Virginia and West Virginia, and until within the past two years I owned a fine trout stream which was wholly within the limits of my own property; another, to which I had free access, was within less than half a mile of my house, and there were two others within three miles. I had previously lived nearly eight years in southwest Virginia, with easy access to both trout and bass waters; and I was resident physician for seven years at Rawley Springs, immediately on the banks of Dry River, which is, all things considered, as fine a trout stream as there is south of the Potomac.

With black bass I have had fully thirty-five years' experience, extending over many waters, from Pennsylvania to Louisiana. Gentlemen will not be able to convict me of beginning to talk about game fish without having had any opportunity to know what I am talking about. My good friend out in "de ole Kaintuck" thinks his knowledge of bass is "a condition, not a theory." What in the name of wonder he means by that I am sure I don't know; but if it has led him to think that he has seen bass when hooked, after trying without success to go to the bottom, come to the top, and standing on the tip of their tails poke up their heads out of the water and shake them like a terrier shaking a rat, trying to shake the hook out of their mouths, it must be a strange "condition" in which his knowledge has placed him.

I offer gentlemen no offense in suggesting that their eyes deceive them. The eye is the most defective of our organs, and eyesight the most deceptive of our senses. A leaping bass is not often above the water during one-quarter of a second; generally he is not in the air above one-tenth of a second, and I take it to be a physical impossibility for anybody to see whether his mouth is wide open or not, or whether he shakes his head or not. I repeat what I formerly said: I do not pretend to doubt that gentlemen believe they have so seen, but I am quite certain they are mistaken.

A hooked bass in leaping generally describes a rather low curve, extending horizontally from 18in. to about 3ft., and its summit from 9 to 15in. above the water. Many will insist on multiplying these figures by 3 or 4. I have heard men say they believe they have seen bass leap out of the water 6 or 7 and even 8ft. high. I am sure I have never seen one leap 3ft. high. I once saw a very large bass make what seemed an astonishing leap; I supposed it to be 4ft. high. I saw that it was exactly as high as an overhanging birch bough very close to the spot; actual measurement proved it to be 28in. above the water. I do not believe any man ever saw a black bass leap 4ft. high. I have seen a great many of them jump into boats; I never saw one jump over a boat. In some places boats are regularly used to catch them.

On one occasion, when I was one of the Fish Commissioners of Virginia, I sent Mr. William F. Page, then my pupil, now the distinguished fishculturist in charge of the U. S. Hatchery at Neosho, to Holston River to get some bass for stocking New River. The local fishermen he employed to catch them used a canoe about 30ft. long by 30in. wide, and about 9in. deep. Placing one end of this canoe against the shore, the outer end was pushed rapidly in, so as to include the bass in the angle between the boat and the shore, and as the bottom of the boat was within an inch or two of the bottom of the water, the fish rushing in headlong fright toward deep water and meeting the boat coming in, which they could not pass under, would attempt to jump over it, and almost or quite invariably jumped into it instead of over it, and in no great while Mr. Page had as many as he wanted. If these fish are easily able to leap from 5 to 7ft. high, which would imply a horizontal leap of from 9 to 12ft., how comes it to pass that they failed so constantly to jump over a canoe the side of which was 9in. high and the width of it 30in.?

Obviously in this case it is fright which causes the fish to leap. I believe the same is true of the hooked fish. I have found that whether the hooked fish leaps depends much on the way he is handled. If he is allowed his own way with a slack line he will seek bottom and stay below the surface until he gives up the fight. If held well in hand and kept peremptorily near the surface, and especially if the water is not deep, he is very apt to leap out of the water, which he will often do two or three times before he quits. It is not a deep strategic plan and purpose to go up in the air that he may have ample room and scope enough to open his mouth "wide open" and "shake his head savagely," and so shake out the hook. In my opinion it is a mere headlong rush inspired by fright.

I have certainly had several hundred bass on my own hook leap clear of the water, in playing them, and have not lost half a dozen which parted with the hook in the air. Very few ever get away from me at all by leaping; and such as do escape do so far more frequently by leaving the hook behind them under the water or getting off after they fall back into the water.

My word for it, gentlemen, where one bass gets rid of the hook by leaping in the air, one hundred escape by fouling the leader with rocks or snags under water. Play your fish on the surface and you will see them leap very often, but very few will get away. The fish is not out of the water during more than $\frac{1}{10}$ second, and whatever you might want to do you can't do it for lack of time. If you hold just as you were holding, you can do nothing more, and the fish will rarely gain anything by his leap. Nevertheless if you want him to stay under water play him with a low tip and a light hand and he will be nearly certain to accommodate you.

Good friends, we have no quarrel. Right or wrong, such are my opinions and some of the reasons for the faith that in me. Let it be that your knowledge is a "condition;" mine not a "condition, but a theory." Farewell, then, with my blessing; for I purpose to trouble you no more.

CUMBERSTONE, Md. M. G. ELLZEY, M. D.

ANGLING NOTES.

Black Bass Spawning.

FOR more than ten years FOREST AND STREAM has been hammering away at the fishermen of this State to have them understand that it is entirely wrong to catch black bass during the month of June, as that is the month in which most of the black bass spawn, no matter in what part of the State they may be found; that black bass are the one species of so-called game fishes that require protection after the young are hatched because the parent fish brood and guard the young, and that June fishing would result in the certain depletion of our black bass waters, requiring them to be restocked to afford decent fishing. During all these ten or more years FOREST AND STREAM has made the fight for a close season for black bass in June practically alone, and to-day the season opens, as it has, on May 30, and the bill now in the Governor's hands awaiting his signature provides the same open season as that in force. During these years, too, not an attempt has been made to justify the present early opening of the bass season, nor has any one denied the fact that June was a spawning month. To the best of my knowledge, not a single protest has been printed in the daily newspapers against the June slaughter until now.

The New York *Sun* appears to be the first of the great daily newspapers to realize that the fishermen of the State are burning the candle at both ends by fishing for black bass in June. It says: "It is a matter of universal regret among all true sportsmen that our New York State laws afford such poor protection to this gamest of all fresh-water fishes. Time and again female black bass are captured all through the month of June laden with eggs. The male bass, too, are easier victims during the spawning season, and so each season damage is done that is fast undoing the good work of the Fish Commission. Restocking can never be accomplished under these circumstances. In our sister State—Connecticut—under the act of 1893, the killing of black bass between May 1 and July 1 is forbidden under penalty of a heavy fine. This affords protection to the fish during the most critical time of the whole year."

If those who favor June fishing, when the bass are on their spawning beds and caring for their young, could get no bass for restocking the waters after they are caught out by such murderous fishing, then there would be hope of a close season to cover the spawning period.

A Novel Idea.

A gentleman in Canada sends me the following letter: "What would you think of a plan like the following for favoring the breeding of trout? I will premise by saying that I have all the needed facilities for artificially hatching, cage for breeding fish, etc., etc., but the hatchery is some eight or ten minutes' walk from my camp, and it is also inconvenient to get to the cage with the live trout when we come in from an evening's fishing with them after dark.

"Moreover, the only lake I much care for is already very well stocked, and the necessity for further supplying it is not urgent enough to demand the expense of either buying eggs or having my guardian spend his time looking after them. I merely wish to be certain that the stock is well kept up.

"My plan is to make what I may call a box or cage, say 12, 15 or 20ft. long, 5ft. wide and 5ft. deep. The top to be (substantially) a raft of squared cedars say 8in. square, so as to have considerable floating capacity. The sides and ends of wire netting of suitable mesh and the bottom of any suitable wood, and on it I would place 4 or 5in. of sand.

"Then anchor the cage in sufficient water quite close to the camp and put in trout whenever we have any to spare, keeping alive for the purpose all that we do not need immediately to eat. Then I would let them alone, only having them sufficiently fed. They would thus be protected from the heat of the sun in summer, and I presume that the winds and waves would cause sufficient change of water. I of course do not know whether the fish would make spawning beds and spawn naturally in the sand provided. I would like your opinion.

"In winter, of course, the raft would be completely fixed in the ice and covered with snow 2 or 3ft. deep; but then so are all the spawning beds, and this would not be worse.

"I suppose that by watching we could know whether the fish spawned or not, and if they did I would let out the old fish when the spawning season was over, to avoid the necessity of feeding them in winter.

"In this lake the fish spawn very late, seldom before the ice tubes, and probably the fry would be out before the ice was gone. Probably so great success could not be expected as from a lot of eggs in a hatchery, but as the expense would be to me only for the wire net, I thought I would ask your views as to whether even that would be of any advantage."

This idea is so novel that it fascinated me as I read it; and in spite of fatal objections to the scheme as laid down I am not at all sure but it might not be worked out and made a success by changing the lines a little. Some of the objections to the proposed plan are, that while the trout would spawn in the cage, other trout would eat the eggs—that is, while some spawned others would eat.

The fish, if crowded into a cage, would fight and injure themselves at spawning time, and the injured parts would grow fungus, which might do more or less injury to all; but without reciting all the objections, I will give what I believe to be suggestions that may insure success.

Go back to the idea of Ainsworth's spawning race; make the bottom of the cage double; provide gravel—not sand—for spawning beds, and have the first bottom of slats, so that when the trout prepare their beds and deposit their eggs the eggs fall through into the false bottom, which must be of coarse meshed wire, coarse enough to admit of free circulation of water and not coarse enough to let the eggs through. All parts of the cedar that will come in contact with the eggs must be charred and the cage must be anchored where there is a current. With all these precautions the eggs might smarten or fungus might form. I assume the cage can be anchored at an inlet where the current would be not unlike that in a hatching trough, or it might be possible to anchor it over springs that would give the necessary motion to the water to produce similar effect. It would certainly afford pleasure to those interested to work the thing out to success or failure, depending upon conditions to be obtained. Success would not produce the results that can be obtained in a hatchery where the eggs are constantly under observation and the dead ones removed daily. I imagine, too, that the per cent. of impregnation even in a carefully constructed race will be far below that obtained in a hatchery. If the facilities were at hand I would like to try the experiment of going back to Ainsworth's invention in such a cage as my friend suggests.

May Flies.

For a year or two I have mentioned in this column the date on which I have seen the first May flies on the screens at my library window. This year the first discovered were on the morning of May 9. This is scarcely a fair test of the season, whether it be early or late, as it requires a south wind to bring the flies to the window, and the south wind may not be blowing when the first flies rise. It will be noticed, however, that this year the flies appeared just after the "warm spell" set in which hatched out all insect life and melted humanity. The date alone would indicate that the season was earlier than last, but this, in a general way, is not so.

Lake Edward.

The morning that the fishing party consisting of Mr. J. W. Burdick, Supt. Manville, Mr. C. S. Webster, Mr. David Zieley, all of the D. & H. R. R., and Frederic Remington, returned from Lake Edward, I was in Albany, and I noticed that the general passenger agent lacked the usual bronzed face of an outing. I questioned him about the matter, and he admitted that he got well browned the first day or two, and that afterward sixty hours of continuous rain washed the color from his face and the courage from his system. The fish caught were not many in numbers, but they were all large fish. Mr. Burdick and Mr. Manville each caught a trout of 5lbs., and Mr. Remington one nearly as large, and half a dozen or so of other fish from 2½ to 3lbs. each were taken by members of the party. Mr. Burdick tells me that from June 1 the fishing will be good at Lake Edward and vicinity.

A Record Breaker.

I have just learned from a gentleman returning from Lake St. John that Lieut.-Col. Montizambert caught and killed seventy-seven ouananiche in two days' fishing below the falls of the Metabetchouan, and that when the gallant Colonel left to return to garrison duty in Quebec he was given a vote of thanks. My informant did not say whether the thanks were for killing so many fish or because he stopped fishing after two days of rare, red rare sport, for I suppose that was what it was called.

Prospects of Salmon Fishing.

Mr. John Mowat writes me from Dee Side, Metapedia, under date of May 27:

"You see that I date from a new place, twenty miles up the river from Campellton, where I have a couple of salmon pools which I have been trying to-day, but drew blank, I think owing to so much lumber; but the water was right, perhaps a little early, but I am sure there were some bright sea fish running. I also went down to Mr. Mitchell's pool this afternoon, and it drew blank for the same reason. Our weather has been very dry so far, but I am sure of good fishing by June 10. I still fancy we had fish in the river ten or twelve days ago, although not in numbers. I go up to the Kedgwick to-morrow, fifty miles, to test the pool one of my sons holds, and which Mr. Ayer is coming to fish about the 8th of June."

It is rather foreign to fishing for salmon in Canada, but I have recently heard from the Adirondacks through several sources that there are plenty of trout, but they will not bite as yet. A. N. CHENEY.

Even There.

CAÑON CITY, Col., May 26.—*Editor Forest and Stream:* Of those who read FOREST AND STREAM I think those who most appreciate your interesting publication are the unfortunate disciples of Izaak Walton who are confined inside prison walls. As one of such said, "The next best thing to a pardon is FOREST AND STREAM." It seems to carry us back to the old home in the East and to the banks of the river where the black bass and pickerel are wont to disport themselves. Again we stand upon its banks preparing our rods and reels for a few hours' battle with the black bass. After stowing our lunch and can of tea in convenient locker prepared for them in the boat, we push out in the gently flowing current and in a moment we are whipping its waters.

I have never seen this river (which is called Grand River in the State of Michigan) mentioned in FOREST AND STREAM, and have often wondered at it, for it is one of the best bass and pickerel streams in Michigan.

X. Y. Z.

Good Luck Stories are Common.

CHICAGO, Ill., June 10.—Chicago anglers who have returned from short trips to the fishing regions of Wisconsin and Michigan report the most excellent sport. Two well-known Chicago gentlemen caught in two half days 158 black bass in Black Oak, Mamie and Big lakes, their headquarters during their stay being at Bent's resort, near State Line, Wis. Other parties returning from Pelican Lake, Manitowish and the trout lake district brought with them some very fine specimens of muskallonge and black bass. The experience of these fishermen seems to indicate that the amended laws prohibiting fishing before June 1 are highly beneficial, as "good luck stories" are more universal than ever before. W. B. KNISKERN.

CHICAGO AND THE WEST.

[By a Staff Correspondent.]

Fishing Grounds.

CHICAGO, Ill., June 8.—The fishing season is now in full swing, and the reports coming in from all our adjacent angling waters are of a sort to seriously disturb one's piece of mind. When trout and bass begin to act this way it always becomes perfectly evident to me that no man on a sportsmen's paper ought to work over one week in the year at the outside. This "Chained to Business" idea is awful tough when you come to apply it right at home.

Most of our anglers go to Wisconsin and Michigan for their fishing. Comparatively few Chicago anglers go to Minnesota, yet probably that is to-day even better as an angling region. Though personally I know very little of that country, I hear the most enthusiastic stories from friends who go there. This spring a local St. Paul paper got up a sort of list of the good fishing waters—or part of them; for the name of such is legion—and as a possible help to inquirers I append the cutting, which says:

"Among the desirable resorts for fishing within reach of St. Paul citizens are White Bear Lake, Lake Minnetoka, Bald Eagle Lake, Dalles of the St. Croix, Snake River, near Pine City, the two Chisago Lakes that extend for thirty miles in connection with a chain of lakes, Lake Superior with its many tributary streams. The thousands of lakes in the northern part of the State, numerous lakes near Osakis, 130 miles from St. Paul. Lake Itasca, in the northern part of the State, is one of a large group of lakes. Park Rapids is adjacent to another cluster of lakes. Lakes are also adjacent to the towns of Carlton, Aitkin, Sandy Lake, Deerwood, Grand Rapids, Brainerd, Wadena, Paynesville, Sauk Centre, Atwood, Milaca, St. Bonifacius, Waverly, St. Joseph, Murdock, Big Lake, Roscoe, Tintah, New London, Clearwater, Spicer, Freeport, Dassel, Cold Springs, Pelican Rapids, Maple Plain, Itaska, Fosston, Melrose, Evansville, Grove City, Erdahl, Elbow Lake, Delano, Long Lake, Dalton, Appleton, Cottonwood, Hawick, Garfield, Elizabeth, Avon, Thornsburg, Browns Valley, Princeton, Hereford."

There is something up in that Park Rapids chain of lakes worth investigating. Some say there are no muscallonge in those waters, and some say there are. It seems certain that the fish, be it 'lunge or great Northern pike, runs very large, and I have gruesome tales of stout tackle snapped like thread. When I get rich in the newspaper business, and cease to be chained to business, I am going up to Park Rapids in the interest of sport. Meantime, somebody else would better not wait, but go right on up there and see what those big fish are and how they act. Minnesota is bound to be the next field for the far-reaching Chicago angler.

A party consisting of J. M. Pease, sheriff of Cook county; W. D. Boyce, of the *Saturday Blade;* Henry Hertz, deputy county clerk of Cook county; Dr. E. R. Bennett, Dr. F. D. Porter, R. Henselman, A. Larson, E. L. Mason, T. Wisshuck, R. Schmid and Robert Hayes left this week for upper Michigan, where they will spend two weeks fishing.

Speaking of 'Lunge.

Speaking of 'lunge, the following from the daily press in regard to the Thousand Islands waters may be of interest:

"OTTAWA, Ont., June 4.—Chicago people who frequent the Thousand Islands in summer will be glad to learn that this season they will not be subject to the annoyance of having to take out $5 angling licenses, Minister of Marine Costigan having decided to set apart the St. Lawrence in the Thousand Island district on both sides as a common fishing resort for the people of both countries. When the Anglers' Association meets next week 1,500 strong at Alexandria Bay the Canadian Fishing Commission will attend to arrange uniform regulations."

They Met by the Yazoo.

Last week Percy Stone, of Chicago, who buys hardwood lumber, was down in the Yazoo Dell country of Mississippi after some lumber. When he started North he found his railway car was not much crowded, and next to him was a brown and rugged looking man who got on at one of the little way stations.

"I looked at this fellow," says Percy, "and I noticed that when he paid his fare to the conductor he pulled out a roll of bills about as thick as my leg, and took off a $20 bill. Thinks I, that must be some other timber buyer, or he wouldn't have so much money; so I thought I'd speak to him to pass away the time. He told me he wasn't buying timber, but was 'collecting feathers.' I asked him what sort, and he said plumage feathers, and showed me a bunch of egret plumes, thick as my thumb, which he said was worth over a hundred dollars. Of course, I read FOREST AND STREAM, and I had heard elsewhere that Billy Griggs, the big market-hunter, shot plumage each spring in the South somewhere. So I says to him:

"'Did you ever hear of a fellow by name of Billy Griggs, that shoots down in this country somewhere?'

"'What's your name?' he says, looking at me hard.

"'My name's Stone, of Chicago,' I said. Then he looked at me again and said:

"'Mr. Stone, I m Griggs!'

"Well, I was tickled to death to meet him, and he was to meet me, and as he knew most of my friends among the shooters in Chicago, we had a long talk, and the result was we got off at a little station somewhere down there and spent the day just visiting. Billy told me there that he had cleaned up about a thousand dollars on egrets this season, and had shot out one or two roosts and was then on his way to another that he knew of. He had been down there in the swamps alone for so long that he was mighty glad to see some one he knew.

"I stopped at Bobo Station for a little while, and talked with the relative of your bear-hunting friend, Mr. Bobo. I may go down there to buy some lumber some day."

The San Mateos.

It is my personal misfortune to have lost a bear (or at least I think now that I have), a large bear about 12ft. long, with whiskers along his back and a foot the size of a ham. Whenever a Western man comes into the office I ask him for news about my bear, and sometimes I think I have got track of him, now in the Black Hills, now in the Salmon River range, now in the Saw-tooths, or again in Washington or Alaska. But to-day I think I have learned about where my bear is, and if I didn't have to work once in a while I would go there next fall and get him. Enter to the FOREST AND STREAM this morning Dr. L. W. Cock, late of San Marcos, Tex., but now located in Chicago with the Acme Fumigator Co. Dr. Cock's friend, Mr. T. H. Glover, of San Marcos, reads FOREST AND STREAM and wrote Dr. Cock telling him to call and to fix up at once an arrangement for a big hunt in southern Texas next October, with an adjourned session to the ranch of a friend away out in the San Mateo Mountains of New Mexico, where last fall the silver-tips were a common nuisance on the range, and where cats and mountain lions abound the year round. Dr. Cock drew a picture of this lovely wild mountain country—camp outfit, plenty of good horses, two Mexicans to cook, good wood and water, silver-tips, lions and cats, antelope and deer, maybe a mountain sheep or so—till I begged him to be silent. He certifies me that my lost bear is living down in that country now, and asks me if I am going to allow property of the sort to remain unclaimed. Very alluring indeed is such a picture, for I once lived down in that region, and any name with a "San" ahead of it has a fascination for me to-day, so that I am afraid if I went I would stay there. Dr. Cock says he likes the North, but doesn't like the cookery.

"I'd give $5 for one good square Mexican meal with plenty of *chile* dishes in it!" he said. Very well. When we revisit the old "San" country of dreams and delights we can, thank fortune, get plenty of *chile* once more. And, at last, may not we meet his long-lost bear?

A Great Beaver Dam.

"The surveying party engaged in locating the line of the Winnipeg and Great Northern Railway," says the Winnipeg *Free Press*, "came across a remarkable beaver dam some distance north of Gladstone a few days ago. It extends across a slight depression and is fully 1,000ft. long and from 4 to 5ft. wide at the top, with sloping sides. The dam is built of chips, sticks, stones, clay, etc., and the work so cleverly executed that it seems incredible that it could have been done by animals. A skillful engineer could not have planned the work better, and modern mechanics could not build a more substantial structure. It is evidently very old, but has withstood the ravages of time with almost as much resistance as if it were a solid wall of rock. The dam at one time must have held back quite a large body of water." E. HOUGH.

909 SECURITY BUILDING, Chicago, Ill.

NOTES FROM FISHING WATERS.

CAPE VINCENT, N. Y., June 3.—Messrs. A. H. Raymond, S. J. Raymond, W. H. Nash, G. H. Greenia, of the South Brooklyn Wheelmen, guests at the Union House, took fifty-five bass, weighing 66lbs., as the first catch of the season.

June 4.—The fishing is remarkable for this time of the year here. The same party was out this morning and captured twenty fine bass and one 4-pounder.

J. A. FRISBIE.

FORKED RIVER, N. J., June 5.—Bluefishing for the past week has been very good here, and at the present time continues so. J. B. TILTON.

DULUTH, Minn.—Black bass fishing is good in Serpent Lake, at Deerwood. W. P. Parks, F. A. Patrick, and J. A. Ferguson brought home a catch of fine black bass weighing nearly 100lbs., and A. W. Knehnow, H. E. Hinton and Marvin brought back an excellent catch.

Canadian Boatmen.

NIAGARA FALLS, N. Y., June 7.—The Niagara County Anglers' Club held its annual tournament at Niagara-on-the-Lake to-day. Canadian boatmen and Canadian boats were employed. The war which the club and its officers has been waging on illegal fishermen has enraged them to such an extent that the fishermen endeavored to retaliate to-day by having the entire club arrested by the Immigrant Commissioner. The cause of this was the claim of the fishermen that the club men hire Canadian boats and boatmen and fish in United States waters, thus violating the alien contract labor law. The club was ready for this move. The members had interviewed the United States Attorney's office in Buffalo, and had in their possession the following letters:

UNITED STATES ATTORNEY'S OFFICE, Northern Division of New York, Buffolo, June 5.—Messrs. John F. Little and Hiram K. Wicker, Committee of the Niagara County Anglers' Club, Lockport, N. Y.: Gentlemen—Replying to your inquiry whether or not it will be a violation of any statute of the United States for the members of your club on the occasion of the club's annual excursion and tournament to employ for the occasion Canadian boatmen to row their boats for the members of the club in United States waters, I have to say: That I have carefully examined this question and am unable to find any statute of the United States which prohibits such employment. Such employment would not be the importation of foreigners or aliens under contract or agreement to perform labor in the United States within the meaning of the statute to prohibit such importation, etc., and I can therefore say to you that none of the members of your club who employ such Canadian boatmen will be subject to arrest in this district for so doing. Yours, etc., W. F. MACKAY, Assistant U. S. Attorney.

Maurice F. O'Brien, Immigrant Inspector: My Dear Sir—The Niagara County Anglers' Club have their annual excursion and tournament at Youngstown on Friday of this week. They are somewhat alarmed over the prospect of your arresting the whole outfit if they employ any Canadian boatmen to row them on that day. I have just advised a committee of that club that their employment of Canadian boatmen on that day will not be a violation of any statute of the United States, and in this opinion Mr. De Barry, with whom I talked about the matter some weeks ago, concurs. While it would perhaps be desirable to retaliate upon our Canadian neighbors in this matter, I do not see how it can be done under the present state of the law, and therefore advise you that nothing be done to interfere with the pleasure of these gentlemen on the 7th instant. Yours very truly, W. F. MACKAY, Assistant U. S. Attorney.

It was one of the qualifications that Xenophon bestowed on Cyrus, that he was a hunter of wild beasts.—*Izaak Walton.*

NEWS OF BOSTON FISHERMEN.

BOSTON, June 8.—There are very few places in the East which furnish such good bass fishing as the ponds lying near Belgrade Mills, Maine. They are large bodies of water, and seem to contain an inexhaustible supply of bass. A few years ago the fishing was but little known to Boston men, and the few who went there were careful to say but little about it. Even now there is some attempt to keep it quiet, but the fishing public have gradually become acquainted with the facts, and in the future the locality promises to be well frequented by hopeful anglers each season. John J. Ray, A. G. Weeks, Jr., Dr. Harry Hamilton and M. C. Greaves are some of the men who go there each season.

The bass do not run to very heavy weights, 3½lbs. being quite large size, but there are any quantity from 2½ to 3 lbs., and they are all good fighters. Dr. Hamilton will soon leave for the Rangeley Lakes, and will stop on his way home for a few days at a farm which he owns near Belgrade, driving over to the ponds to enjoy the fishing. This gentleman has dropped his line into the waters of all sections of the country, and is about as devoted to the rod as one can be. About three years ago he took an extended fishing trip through the Yellowstone country. He has also had great sport with the salmon on the Pacific coast, and has made two trips into the Lake St. John country, fishing for salmon at the Grande Décharge, and going far to the north of the lake in the woods with guides, where he found plenty of large trout. Speaking of Western fishing, it has become quite a fad with some Boston parties to take a camping trip of six or eight weeks through the Western mountains, and even up into British Columbia. They generally start toward the last of the summer, extending the trip into the fall in order to get both fishing and shooting. All who have tried it are enthusiastic to the highest degree, and speak of it as exceedingly reasonable in the matter of expense.

Mr. A. A. Merrifield and a few friends have just returned from a bass fishing trip to the Cape. They have been fishing Hog, Spectacle and other ponds near South Sandwich, and succeeded in getting many bass and a number of pickerel. Mr. Merrifield spent last season fishing the streams of Colorado, and has some stories to tell of his experiences in that country which are extremely interesting.

One of the largest parties which have visited Moosehead Lake this season has just returned to Boston, after a week spent at the lake. They are the members of the New England Guild of Gas Managers and their friends. They left Boston on June 1, and the party consisted of C. H. Dickey, Baltimore; A. B. Slater, Providence; H. B. Leach, Taunton; W. H. Curtis, Haverhill; F. W. Norton, Nashua; F. M. Hammond, W. H. Spaulding and W. H. Gibbs, of Clinton; J. H. Bledsoe, Waltham; C. S. Spaulding, Wakefield; J. A. Leonard, Lynn; G. F. McMun, Marlboro; H. A. Norton, Frank Lawrence, F. J. Davis, C. W. Hinman, F. J. Rabbeth and F. W. Thomas, all of Boston. The party made their headquarters at the Kineo House, going from there in steamers to different parts of the lake and fishing from canoes taken with them. Most of the fishing was trolling, but they caught some with the fly. Three hundred and eighty-three fish made the sum total of trout taken, about equally divided between square tails and lakers. The largest laker weighed 14¼lbs., and was taken by Edward Leonard. The largest speckled trout was 3lbs. and 9oz. The weather was cold, and too windy for much fly fishing, but all hands were well satisfied with results, and had a grand good time.

Mr. G. N. Talbot, C. D. Sias and W. W. Sias are members of a club who have a large preserve near Willimantic, Conn. Being so near Boston, it is convenient to run over there quite often, and last week five of the club members who made a short trip over captured 225 trout of good size. Pretty good this for a few hours' ride from Boston. The club have a nice house and a well kept farm on the preserve, and enjoy every comfort while there.

The express companies are catching it right and left from returning fishermen just now, and there seems to be some justice in the many complaints that are made. The railroad companies will not check the fish, and there is no resource left but the express company, unless one wishes to take upon himself the task of lugging along the heavy package in the hand. The complaints made seem to arise from two causes: first, the matter of overcharge; and secondly, the difficulty of getting the package after reaching Boston.

Two gentlemen of my acquaintance, who have just returned from the Rangeleys, were obliged to pay $3 charges for 50lbs. of fish to Boston. This seems to me very exorbitant, but, as I am not thoroughly conversant with express rates, I do not feel like criticising the price. I do know that it is the general impression that the express companies are taking advantage of the people who are using them as carriers, and all seem to agree that it is impossible to get any rebate or satisfaction of any kind. In regard to the second complaint, nearly all returning fishermen who arive at the Union station in Boston get there at night, and practically all of them have long distances to go to get to their homes. Naturally, they wish to take their fish with them at once, and it is decidedly unpleasant to wait around for two and even three hours at the depot, as some parties have had to do, before the packages were delivered. This is so plainly wrong that I cannot believe the companies would intentionally do it, and the matter should receive the prompt attention of those in authority for correction. Judging from the indignation displayed by those who have had this experience, I think they will conclude to change the rules in this respect very soon, as they are bound to hear of it quite forcibly.

Mr. G. W. Pitcher, of Providence, has gone to Cape Breton, where he fishes the Baddeck, St. Denis and other streams. He will be away from home the entire season, and later on will go to Newfoundland to enjoy some of the great fishing to be had on that island. Florida in the winter and the far North in the summer time is the motto of Mr. Pitcher, and his rod and tackle box accompany him everywhere.

Messrs. Swain, Grover and Hixon, of the Swain-Grover party of Lynn, have returned from the Rangeleys. They had a splendid time and were well satisfied with the fishing. They stopped at Camp Bemis for two weeks. It was Mr. Hixon's first extended fishing trip, but surely will not be the last, as he was very much taken up with the sport and gives fair promise of becoming a confirmed disciple of Walton. His score for the trip was 32 trout, the largest 6lbs., then 4½lbs., the rest grading down to 1lb. in weight. Mr. Grover was high line for the party, getting 47 fish, the largest weighing 5lbs. Mr. Swain's score reached 42 nice fish. Their best fishing was had near Toothaker Island, although Mr. Grover's largest fish was taken right off from the camp.

C. F. Dowse has just returned from the Rangeleys. He has been stopping at Billy Soule's and also at Student's Island. His companion (a brother, I believe, and a novice at fishing) broke his rod so badly almost the first day out as to give up all hope of fishing with it again on that trip in its complete form. Being of an ingenious nature, he rigged up the butt piece with a ring lashed to the ferule, and in that condition took the largest trout of the trip. Accidents evidently do not overcome this gentleman.

Mr. John Reding, of Boston, and Arthur B. Waring, of Yonkers, N. Y., are on their annual trip at Moosehead Lake. These gentlemen have gone at about this time every season for some years and are generally very successful. Jacob Gray Estey, of Brattleboro, Vt., and Boston, is at Moosehead to try the fishing. He will stay at the Kineo House for about two weeks. Dr. Eliott, William Lee and Joseph Brown, all of Lawrence, are stopping with Wilson at the outlet and are having good fishing. E. F. Coburn and Judge Stone, also of Lawrence, have just returned from Wilson's. Their largest fish weighed 4lbs., the smallest 1¾lbs. They also had good fishing at Indian Pond until the lumber company let the logs down, which spoiled the sport. A great many people are coming and going in the Moosehead region this year, and everybody speaks well of their luck.

J. H. Hoyt and P. B. Mansfield, of Lynn, and W. E. Beggs, of Woburn, have arrived home from Grand Lake. They had warm weather and only fair fishing. There is considerable criticism of the Maine Commissioners among sportsmen in regard to their failure to provide a fishway in the dams on Grand Lake stream. It does seem a crowning neglect. Why is it?

HACKLE.

BOSTON AND MAINE.

BOSTON, June 5.—The trout fishermen are returning, the first grand rush for the lakes and streams being over. Most of them bring back bronzed cheeks and some of them sun-burned noses. The last week has been very hot, with a glaring sun and little wind. This has made very poor fishing at many of Maine's best resorts. Such is not the tone of the reports in the papers, the only object of which is to boom the fishing resorts, however. To read these papers one hears only of the successes; the many failures are never mentioned. The lovers of the angle should read these papers with the above idea in view, and look to the FOREST AND STREAM for the facts.

Mr. C. Z. Bassett, of Appleton & Bassett, with Mr. G. N. Smalley, have returned from their spring fishing trip. They went first to Billy Soule's, where they had fair fishing. They then came down the lake and over to the Middle Dam. The fishing at the Middle Dam has been as good as at any point in the Rangeley region. Mr. J. R. Stewart has caught there a trout 29in. long and weighing 8lbs. This fish was forwarded to Boston and shown in Appleton & Bassett's window, where it attracted a good deal of attention.

But the most peculiar piece of trout fishing luck of the season also has happened at the Middle Dam. The good fortune has fallen to a lady, Mrs. C. W. Dunham, of Brattleboro, Vt. Mr. C. Z. Bassett gives me the account for the FOREST AND STREAM, and it is doubtless correct, for Mr. Bassett was there at the time. It seems that Mrs. Dunham was trolling from a boat with her husband, and George Thomas as guide. They were moving along in front of the Sandbank, when Mrs. Dunham felt a tremendous strike and hooked her fish. This was late in the afternoon, and the fun immediately began. Mrs. Dunham clung to the rod, following the directions of the guide and Mr. Dunham. But not an inch could she gain on the vicious fighter, and nearly all her line was out. One hour passed, and it was after sunset, when Mr. Dunham offered to take the rod, but the plucky lady declined. Her hands became numb from the effects of the strain in holding the rod. The guide would rub them and pound them and encourage her, when the fight would be renewed. Two whole hours had passed, and still the trout had scarcely yielded an inch that had not been quickly taken again. Darkness was coming on, and a lantern was sent out by another boat from the Middle Dam Hotel. The fight was continued for two hours and twenty minutes, when the fish finally came up to where the guide could reach him with the net. Curiously enough, the big fellow did not come up head foremost, as is almost always the case, and the guide found some difficulty in getting him into the net. He finally succeeded, and the trout was in the boat, when—behold! he was hooked securely through the dorsal fin. His weight was exactly 9lbs., one of the largest of Rangeley brook trout. Such a hooking and such a battle with a big trout by a lady must go down into the annals of angling as a most remarkable instance.

Mr. Bassett and Mr. Smalley went on to B. Pond in company with Mr. Edgar W. Curtis, one of the proprietors of the new camp at the Pond in the River. There they had fine sport fly-fishing. Mr. Bassett caught eighty trout on the fly, nearly all of which were returned to the water uninjured.

June 6.—Another trouble has struck the trout and salmon fishermen, coming upon them unusually early. The hot weather of last week turned out millions of black flies and mosquitoes. These pests were not due for a week, at the very shortest time; but the hot week in May seems to have warmed the water in the pools, a condition favorable to the early development of insects. The Camp Stewart party at Richardson Lake was actually driven out by mosquitoes and black flies several days earlier than the members intended breaking camp. The fishing was poor enough to magnify other troubles. Mrs. George T. Freeman made the best catch of any one in the party. She took twelve trout in one day, none less than half a pound and up to 2lbs. in weight. This was her best catch. The next day she took a 4lb. trout, however. Dr. Wood got a trout weighing 3½lbs., and Mr. Freeman one of 4lbs. No catches were being made in that region when the party left on Monday. Many fishermen are very sorry that a public camp has been established at Big Richardson Pond. Mr. John Chadwick, who has charge of the camp hotel at the Upper Dam, built a camp at Richardson Pond last winter and has put in boats there. Heretofore there have been no boats to be had there, except private property. Parties can hire this camp of him, with boats, and he will provision them. The result is that the pond is being pretty rapidly fished out. Mr. Harry Dutton has a camp also at Borie Beach. Such is the march of improvement.

The last Boston party for the Katahdin Iron Works reached that celebrated trout section last week. They struck the hot weather, and with it such a swarm of mosquitoes and black flies that they were almost driven from the woods. In the party were Messrs. J. S. Richards, Wm. F. Keeler, F. N. Sleeper, of Boston, and Wm. B. Tobie, of North Berwick, Maine. Mr. Wm. J. Follett, of Boston, did not go, for the reason that he was delayed a day or two after the party had gone, and the others wrote him of the flies and mosquitoes, and he did not start.

Mr. Follett will go to the Inglewood later, of which association he is a member. He hopes to have a large party that will go for fly-fishing altogether. His wife and boys will accompany him. Mr. Henry E. Cobb left for the Inglewood to-day. He is to be accompanied by a friend or two, I understand. They will fish for several days. Col. C. A. Hopkins has been down to the Inglewood with a party of friends. They had very fair fishing, but were troubled somewhat by mosquitoes and flies. They are at loss to account for the very early appearance of these pests of the angler.

Mr. Edward L. Pickard, for many years a prominent member of the Oquossoc Anglers' Association, is just back to business from his annual visit to Indian Rock. He had fair fishing only, but was much delighted with the capture of a landlocked salmon weighing 4 or 5lbs. He also got a 3½lbs. trout.

Dr. T. Jefferson Scales, of New York, has been having his share of the good fishing at Middle Dam. He struck that resort about the right time. There are still more glowing accounts of fly-fishing at B. Pond. It is reported that anglers are getting 20lbs. a day there, returning all the small trout to the water. Well, if we must fish for count and to beat, then it is better that the small trout all be returned to the water. But how would it do to cultivate the habit of getting our enjoyment out of catching the few trout actually needed for the table? Senator Simpkins, of the Cape, has been at B. Pond with a friend. He fully expected Mr. J. Otis Wetherbee, of Boston, to join him, but at last accounts that gentleman was being kept at home.

June 7.—Codfishing parties down the harbor begin to be in order. Yesterday Com. Ned Dixon, of the Atlantic Yacht Club, with Tom Herbert, William D. Finley and Arthur F. Winslow, of the Boston *Globe;* M. J. Desmond, of the Chamber of Commerce, Mr. Thomas Brophe and others, were treated to a fine sail down to the Light on the clipper catboat Pilgrim. The boat was in charge of Capt. Emil Saxon. He took the party through Hull Gut and out into Quincy Bay after the fishing was over. The codfishing, as well as the sail and the rest of the outing, was thoroughly enjoyed by the newspaper men and the others. About 100 rock cod were taken in two hours' fishing between the Light and the Red Buoy. Such fishing is rare, and all speak in the highest terms of it.

Mr. David H. Blanchard, with Mr. Richard O. Harding, for so many years secretary of the Massachusetts Fish and Game Protective Association, hope to start for Mr. Blanchard's salmon river about June 19. Later they expect to be joined by Mr. E. Rolins Morse. Mr. Blanchard will spend several weeks at his salmon preserve, and Mr. Harding will stay as long as business will permit. Mr. Blanchard has lately returned from a trouting trip to some of the Monson, Me., ponds, which ponds he has fished on former seasons. He found that the ponds were being excessively fished even before his arrival.

It is out at last. A paper, published at Rangeley, Me., and called *Rangeley Lakes.* The initial number is well put together, as a newspaper; to be devoted exclusively to booming the Rangeley region, and first, last and forever, the fishing there. Every good catch since the ice went out is recorded in the first issue, but not a single failure is noted. Give us the whole truth, boys, or don't tell all the favorable side and leave the hundred and one disappointments unmentioned. Such a bright, little sheet as you show yourselves to be capable of making deserves to succeed. But it cannot succeed upon misrepresentation. Dare to tell us how Jones or Smith fished for several days with scarcely a trout; how their faces were burned; how the mosquitoes and black flies did bite. Tell the truth, the whole truth, and shame the man who wants you to lie about that fishing resort. This will inspire confidence in your paper, and confidence begets success.

The Col. Rockwell Party is back in Boston again. They found very poor fishing and a great plenty of hot weather, glaring sun and mosquitoes and black flies. They fished from Allerton Lodge and from the home of the Oquossoc Angling Association, but with little success. Some of the party caught absolutely nothing, while others got very few. The party generally feels that they were too late.

Fishing has really been better, even during the hot weather at Moosehead than at the Rangeleys. Please excuse me, ye Rangeley boomers, for daring to say such a thing. Mr. J. F. Dwinell, of Boston, who has visited Moosehead for a great many years, is there at the present writing. But this time he is accompanied by his grandson, J. F. Dwinell, Jr., and it is plain that the young man is of as much consequence as the fishing. He is 15 years old and is enjoying the sport as only a boy can enjoy it. He has caught some fine trout trolling, and writes his father that he wishes his grandfather would teach him to throw the fly. Mr. Dwinell is having very good success, taking several 2lb. and 3lb. trout on the fly. A cousin of the young fisherman is also there, but so far the boy has beaten him.

SPECIAL.

The Shrinkage of Fish Out of Water.

GENEVA, N. Y., May 25.—*Editor Forest and Stream:* One of our local fishermen took a lake trout from our lake here (Seneca) last night that ten hours after taken from the water weighed nearly 22lbs. We have gotten into a little controversy over the amount of shrinkage there is in a fish, and wish you would state in your paper about what is generally considered a fair estimate in say from ten to fifteen hours after being out of the water.

E. HOWELL HOWELL.

American Fisheries Society.

THE American Fisheries Society met on Tuesday of this week in the New York Aquarium. A report of the meeting will appear in our next issue.

A PISCATORIAL EPISODE.

Editor Forest and Stream:

Once upon a time (you may see at once that this is a fairy story) a fellow of my acquaintance was possessed of the silly craze of loving to wet his legs in a mountain stream—temperature in July 33°, minus probably, or perhaps plus, I forget which—in the vain hope of catching, say twice a day, a 7in. trout, measured with liberal eye or weighed in a scale somewhat out of plumb—though these little details are of no consequence whatever.

In the yearly excursions made by this accomplished fisherman he usually had the companionship of three friends, each of whom was able, when conversing with strangers or in the bosom of his innocent and unsophisticated family, to transform, without great stress of conscience, a fingerling into a 1lb. trout, and to describe without quaver of voice the frantic struggles and gyrations of this powerful fish before yielding to the superior prowess of his captor. And I am ashamed to confess that I formed one of this quartette and was imbued with all the imaginative powers of my companions—in other words, could lie with the best of them; but I was young then, and God forgive me.

I didn't intend, however, to talk about myself; but these reminiscences take me back many, many years, to one glorious June morning, when, after a five-mile tramp and profuse perspiration, we struck the stream. The flowing waters were throwing out their sparkling diamonds beneath the morning sun, and the brook as it sped on its downward way laughed and gurgled and talked to us, while the trees that bent over the bank softly moved in the light breeze, offering us the sweet cover of their umbrageous foliage.

I stood for the first time rod in hand and line extended, with trembling hand and thumping heart, awaiting my new venture in unknown waters. We were four then, as now, and the elder, if not the better fisherman, stood beside the neophyte, instructing him and watching his first cast.

Ah! how well it comes back to me, that glorious day in early summer, as I cast my bait upon the waters, and watched it riding the riffle to the pool below. The birds were singing, the lullaby of the waters was fast casting a glamour over me, when all of a sudden a little tug on my line, a second's gleaming of a shiny form, a disappearance beneath the wave, and a taut line. "Strike him, you blamed fool," cried at once three voices (and have you ever noticed at critical moments how many different octaves and inflections are compassed in the voice of man?). "Easy now; raise the tip of your rod, you idiot, and you have him." I caught on at once, taught by the lore that I had absorbed from my companions, who had persistently talked fish to me all the way up from New York; and with my little 10oz. rod and a line positively not over ⅛in. in thickness, with a big gob of a worm at the end thereof (I had not then arrived at the dignity of a fly), I led that fellow a pretty dance. This monster of the deep I dragged hither and thither, through the still waters of the pool below up through the riffle of the dancing waves above, against pebbles on shore and rock amidst, with my reel clicking in unison with my heart, until by a dexterous though perhaps somewhat too emphatic motion I sprang my rod, and the poor fish was tossed high in air, to descend and hang pendent from one of my sighing trees. I quickly though perhaps nervously disengaged him—but shall I ever forget to my dying day the reproachful and contemptuous look on the face of that poor little *Salvelinus fontinalis*?

He weighed 7oz. I scaled him myself, and I know, though I told my friends that he weighed 11½—and they answered me with nothing but a sickening smile.

As for my line, it was wound fourteen times around a limb of the tree, and I was compelled to cut the Gordian knot with my new jack-knife, bought for just these special occasions. But that experience made me the expert fisherman that, away from the stream, I imagine and claim myself to be.

But this is all nonsense and just wasting time. I didn't intend to go into all this foolishness, but visions of my credulous youth, with flowing, laughing waters and flitting clouds and bending trees, have carried me off my feet and for a moment drowned my sober sense.

But to come to business. This friend of mine, of whom I started to tell—a good fellow too, barring some piscatorial eccentricities—became worried one spring because his friends did not come up to the scratch as promptly as usual and settle the question as to when and where they should invest five dollars a pound in brook trout, which might be bought in Fulton market—elegant specimens, too, and tamed to order—for 75 cents.

One of the foremost of these four was a great Latin scholar—at least he said he was—and to his credit be it told that, aside from some little thoughtless exaggerations now and then in the matter of his catch, he had been found, well, fairly truthful. Be that as it may, he quoted Latin volubly, swore profusely when occasion demanded in choice Etruscan, and had adopted as his pseudonym the classic name of Flucus Venum.

Now I don't know who the original Flucus was, and neither did he, but the name went; and as he was an important member of the party, to him an appeal was made, clothed in the choice language calculated to act on his sensitive and classic soul.

I have no patience myself with this sort of people, understand, and if the letter that I am about to give you has any moral at all it is in the line of teaching us that the pursuit of piscatorial impossibilities may put an immense quantity of "meagles" in the "think-box" of a city fisherman, who goeth forth in a carefully prepared Knickerbocker suit, a 6oz. rod with Scotch tackle, and impossible insects at the business end of the same, to seek for antediluvian fish. As for myself, I don't see what use we have for any foreign language at all. Anglo-Saxon is good enough for me, especially when I lose a large fish at my very feet. True, there have been a few occasions when in polite society I have needed to use some strong and emphatic phrases under cover, so to speak; but this seldom occurs, as most of our strong words are spoken on the stream at critical moments.

I give the letter verbatim, however, just as it was sent. It will show to what depths of inanity an otherwise austere and sensible man may be brought when led astray by the vain hope of finding during his summer vacation an 18in. trout in a 6in. stream.

NEW YORK, May 8, 1894.

My Dear Flucus Venum: In delaying our symposium for another week, I greatly fear you are doing *vulnus immediacabilis*. Do not forget, my dear boy, that *tempus fugit* very rapidly as the warm weather approaches, and we should be *ut quocunque paratus*, whatever our decision as to place may be.

I had hoped that before this we should have determined on some *point d'appui*, but *che sarà, sarà*, I suppose—and it is no use hurrying matters. Yet to delay longer is to go *de mal en pis*, and we should remember *ex nihilo, nihil fit*, or we will find ourselves when the time comes *non paratus*.

I long, *pour même*, to go somewhere where I can catch some *sox doligerios*, and have inscribed on my tombstone, after I have succumbed to the shock, "*hic jacet*" (as usual), a successful fisherman. With this feeling, naturally, *je suis prêt* to go to the Adirondacks, and may we be as ever *tout ensemble*. *A gute Zeit kommt.*

Convey these few plain sentiments, my dear boy, to our other friends *s'il vous voulez*, and tell them *mihi cura futuri*, and this alone, makes me so *exigeant*. They will understand and appreciate the purity of my motives, and finally *le bon temps viendra.*

A vuestra salud, W. C. R.

Now you've got the letter, use it as you please. Were I not, as stated above, opposed to the use of foreign terms, I should subscribe myself VERBUM SAP(HEAD.)

NEW YORK, June, 1895.

HAUNTS OF THE SEA BASS.

Trying Conclusions with a Gamy Fish.

SANTA CATALINA ISLAND, June 1.—"Listen to that!" said my companion as he gave a big silver reel a twist, and from it came a long silvery note—the kind of music that most men prefer to the opera or oratorio.

"To produce the right chords," continued the fisherman, "you must have a big sea bass, a 30 or 40-pounder, and then if I can't promise you some music never mind."

I had a music maker myself which I brought out, and we agreed to go in search of the musician the following day. My friend told me such stories of the fishing he had had during the past month that I woke up every hour during the night, and at daylight I made my way out to the beach and watched the Italian fishermen catching our bait.

It was a morning to invoke the gods. The little bay of Avalon was as smooth as a sea of glass. The hills rising on all sides were still in their winter greens, with here

STERLING LAKE TRUUT.

and there patches of white, yellow and lavender which grew in intensity as it became lighter. Away to the east great beams of light pierced the sky, and the scarlet glow was fading to gray.

As I stood watching the men and listening to the gentle music of the pebbles in the sand, my companion hove in sight; then Billy, the oarsman, with a bundle of rods. A few minutes later we were bounding over the little bay, with the flying fishes scaring away on either side of us and the big gulls that had been following the Italian seamen hovering overhead, looking wistfully down into the boat, where Billy was picking out a particularly shiny sardine as a first inducement.

It may interest fishermen in the East to know the equipment. The Colonel had a rod of split bamboo with two tips, weighing in all about 16oz. and very much like the tarpon rod used in Florida. On this he had his famous singing reel, an old-fashioned affair with a silver throat. The line was an eighteen strand cuttyhunk; my rod was longer and lighter, with four tips; the smallest being the end of a split bamboo trout rod, so that it was very supple, yet stiff enough for a 50lb. fish; in fact, I had tested it in a thirty-minute fight with 65lb. fish. The line was the same as the Colonel's, and I had 350ft. on a reel which Billy said could talk four languages.

The hooks were soon baited with sardines not half an hour out of the water, and as bright and gleaming as though molten silver had been poured over them as an illustration of the free silver gospel. These alluring bait we dropped astern 50ft. or so, and with rods on either side settled back on the cushioned seats and waited while the boat glided along down the rocky shore of the romantic island.

"Do you know," said the Colonel, "I take upon myself some credit in educating the sportsmen down here up to the sportsmanlike method. Five years ago you couldn't find a rod in Avalon, and I remember when I came over with my first rod Vincenti told me that a rock bass would play with it and carry it off to pick his teeth with, and when I said I was going to take a 30lb. yellowtail on it he thought I was raving mad. But when I did he changed his mind, and gradually the hand-lines have been dropped except for fast trolling on the launches, and almost every one uses a rod. Why, once—"

But the Colonel got no further; he was interrupted by a tuneful note, a zee-zee-ee! then ze-e-e-e-e! and the rod showed a disposition to tie itself in knots and dive into the blue water.

"It's a big fish, sir," whispered Billy. The Colonel evidently knew that, and was handling the rod with a delicacy of manipulation that was a study.

The Colonel was something of a mathematician, and the proposition was, "Given a fish of unknown weight and undoubted agility, and a line little larger than a thread, what will be the result?" The odds were on the Colonel, though at the start it must be confessed that it was a matter of doubt. The fish made a clean rush of nearly 200ft., literally tearing the line from the reel to a hornpipe that made the pulse quicken and the red of the Colonel's face take on a deeper tint.

"He's a line eater," said the sportsman, as he gently applied the brake, and then after a struggle succeeded in turning the fish that now was racing around the boat, making the water hiss where the line cut it, while the sheet of bubbles could be seen far down in the blue depths. Now it was coming in like an arrow, overrunning the line, until the Colonel was almost in dispair; then the fish turned and made a burst directly away, the reel singing in high notes and then ranging into a hoarse scream as the maddened animal swam for its life. But deftly the Colonel touched the brake and gently turned the rod, so that the strain of 200ft. of line was felt by the fish, adding to its burden.

For fifteen minutes the gamy creature fought with all the fury of perfect strength, bringing into play all the tactics, ruses and schemes that it knew—a never-ending variety; then the skillful wielder of the bamboo began to gain the supremacy and play with his game; and it was evident that, as light as the line was, it was quite enough for the big fish. Slowly it came in, and twenty times he reeled the fish almost within reach of the boat; as many times Billy fingered his gaff, and just so many times the gamy creature rushed away blindly in a mad attempt to break the line. Now its rushes were not so fierce, the rod was bending by its mere weight, and the Colonel was turning it from side to side, reeling when he could, touching the brake gently and caressingly. Finally, like a flash of golden bronze, a great fish dashed into the line of vision; for a moment it lay, dazzling us by its beauty, then Billy gaffed it, and, as though it was the proudest moment of his life, held the struggling monster up to our admiring gaze, then folding it away, as he would a treasure, in a cloth.

"And yet," remarked the Colonel, lighting his cigar and rubbing his wrists and hands, which trembled like an aspen after their twenty-five minutes' work, "they will tell you that the sea bass is not a fighter. He was game enough for a better fate."

The line was baited again, and the other which I had hauled in to prevent complications was unreeled, and on we went over the water with its depth of color, by high cliffs where white-headed eagles mocked us, and across the mouths of deep cañons faced with green. Here the mountain was cut down as with a knife; a little further on a little beach had found a foothold where the waves made melody with the flattened ribbles. On we went, until the roar of the sea lions caught the ear, and seal rock came in view with the big rollers coming in like tidal messengers. Here the water suddenly changed in color to a delicate green; patches of kelp covered the surface, and flocks of flying fish dashed into the air—the Santa Catalina birds of the sea.

Zeee—z-e-e-ee! interrupted the joy of it all, and in one quick second I was transported from the land of dreams to the stern reality of a hand-to-hand struggle. I lost 250ft. of line before I dared try the brake, and then it was only the pressure of the thumb that could be adjusted delicately to stem the enthusiasm of this game fish. One false motion, a kink in the line, a little too much resistance, and the game would be up; but nothing of the kind occurred. The Colonel breathed hard as the reel spoke, and at times grew asthmatic as he watched the rushes of the fish that fought me inch by inch, foot by foot. Finding all games at fault it made a final dash to the bottom and sulked there, 150ft. deep, and pounded on the line. Slowly it was lifted and reeled in, but when near the surface and it caught a glimpse of the boat, away it went with a rush that threatened disaster. But finally, after it had fought and tried the tricks of its tribe, it lay upon its side at our mercy—a magnificent fish in iridescent blue and pure silver, with golden yellow trimmings—the yellowtail, the amber fish, the white salmon, for it is all these to the Santa Catalinian; but we knew him simply as one of two of the gamiest fish we have caught, and Billy soon had him rolled with his mate, the sea bass.

Out beyond Church Rock we rowed, now in the sea way, and here had several strikes and took some gamy fish. From here we followed the island shore north, passing the strange painted cliffs. Here the rock bass were rising and lighter rods were taken out and much sport had with the 5 and 6-pound fish. But the sea bass and amber fish had much of our attention.

The sea bass of California is known to science and those fishermen who fish scientifically as *Cynoscion nobile*, and a noble fish it is. It resembles the sea trout of Virginia, or the squeteague of Massachusetts, or the famous weakfish of New York, and belongs to the same genus; but the California member of the family is the thunderer and ranges up to 80lbs., such a fish having been hooked in Avalon Bay last year, and captured by a lady after towing her all around the bay. PISCATOR.

Bass Fishing Near Syracuse.

MR. C. W. SMITH writes in the Syracuse *Standard* of bass fishing points reached from that city:

Oneida Lake—At Brewerton, South Bay, Shackleton's, Bridgeport, Lakeport, Messenger's, Fish Creek, North Bay, Cleveland, Bernhard's Bay and Constantia.

Oneida River—Brewerton, Caughdenoy, Oak Orchard and Three River Point.

Seneca River—Montezuma, Howland's Island, Weedsport, Jordan (in the river and in Cross Lake), Jack's Reef, Baldwinsville (above or below the dam), Red Bank, Mud Lock and Three River Point.

Oswego River—Phœnix, Hinmanville, Fulton, Minetto and Oswego; and these lakes: Onondaga, Otisco, Tully, Skaneateles, Owasco, Crooked and Cayuga.

Lake trout are now biting freely in Skaneateles, Owasco and Crooked lakes.

Sterling Lake Trout.

STERLING LAKE is in Rockland county, N. Y., not far from this city. Its waters were stocked some years ago with lake trout, and fishermen who are so fortunate as to gain permission to fish there nowadays have capital sport. Messrs. J. B. Staples and O. L. Marvin, of the Erie Railway, Jersey City, send us a photograph of two fish taken by them in Sterling Lake on May 15. One measured 36in. and weighed 14lbs., the other 35¼in. and weighed 11¼lbs. This record of the lucky and skillful fishermen has been the envy of their friends ever since.

Onondaga Anglers' Annual.

IF there are fish left in Oneida Lake to-day they are so nearly scared to death that the most consummate wiles of the fisherman's art will be of no effect for weeks to come in luring them from their hiding places to snap at tempting bait. A whirlwind of irresistible proportions struck those popular fishing waters yesterday, in the shape of a delegation of sixty members of the Anglers' Association, who with a few invited guests went out for their annual fishing contest. The finest summer morning this popular sportsmen's organization has ever met with on a similar occasion gave bright promises which were more than fulfilled in the delightful weather experienced during the whole day. Shortly after 6 A. M. the fishermen gathered on the Washburn House landing at Brewerton, and sides were chosen for the day's contest. G. W. Ingalls and O. G. Jones were selected as captains, and from the crowd of piscatorial fanatics present they picked their teams. Promptly at 7 o'clock, according to custom, a giant firecracker announced to the teams seated in their boats that the battle was on. Then there was a struggle between the boatmen of the rival crews to get up the outlet to the lake ahead of everyone else, and secure a mortgage on the best fishing grounds. Inside of an hour the small fleet of boats was scattered here and there over the surface of the lake, and was finally lost in innumerable black specks here and there in the distance. Fishing went on without a break until noon, when some of the anglers went to Frenchman's Island for luncheon, others supplied the wants of the inner man from well-filled baskets in their boats, while still others went ashore and ate a dinner in camp style in some woods, the oarsman acting as chef and frying "really the finest mess of fish I ever ate in my life." After dinner the fishing continued without interruption until 7:30 P. M. About 6 o'clock the boats came straggling back to Brewerton, one by one, and at 7:30 the boom of the firecracker announcing the end of the contest found the boats again at the hotel dock ready for the weigh-up. It was found that Capt. O. G Jones's side had scored 2,523 points, and Capt. Ingalls's 2,452. Many fine catches were displayed on the pier. The best of the day and one which is remarkable in these waters was the string of Warren Tallman and Eugene Eastman. They brought in 15 black bass aggregating in weight 34 pounds. Not one of the fish weighed less than two pounds, and three of them tipped the scales at three and one-half. Charles Mowry had landed 22 pike averaging nearly two pounds apiece. O. G. Jones caught 33½ pounds of pike and bass near South Bay. The catches were nearly all far larger than those of last year, and when the total weight has been calculated it is certain that the total of 218 pounds caught last year will be thrown far in the shade. As soon as the fish were weighed they were photographed, suspended on a screen in the ballroom of the Wasburn House. Before taking the train for home the fishermen sat down to supper, part going to the Washburn House and part to "Nett" Wood's.

SUMMARY OF POINTS.

	Points.		Points.
1. C. H. Mowry	448	21. F. B Putnam	99
2. G. C. Corcoran	374	22. J. E. Coon	93
3. W. D. Tallman	362	23. W. H. Schilley	92
4. E. Eastman	312	24. I. Schwartz	89
5. Joseph Baker	200	25. A. F. Stinard	85
6. M. J. French	179	26. L. A. Stevenson	84
7. E. W. Houser	166	27. M. H. Schwartz	83
8. Louis Will	165	28. D. V. Ferris	82
9. W. S. Morey	151	29. Amos Padgham	76
10. George B. Wood	147	30. C. G. Miller	70
11. L. F. Ormsbee	145	31. R. A. Molyneux	58
12. J. C. Melligan	132	32. A. Hahn	58
13. W. A. Hill	128	33. B. Klapetzsky	56
14. W. B Tifft	127	34. F. H. Hale	52
15. J. E. Bierhardt	123	35. C. H. Barnes	38
16. W. K. Squire	121	36. E. J. Page	38
17. F. C. Brower	117	37. F. B. Garrett	37
18. F. H. Stinard	116	38. W. H. Larrabee	27
19. F. B. Scott	106	39. A. M. Strong	23
20. C. W. Coleman	105	40. F. E. Howell	11

Canandaigua Fishing Tournament.

THE Canandaigua (N. Y.) Rod and Gun Club will have its annual fishing tournament on Thursday, June 20. The captains of the two contesting teams will be Lewis H. Adams and Walter H. Knapp. The rules of the contest have been changed somewhat for this year, and are as follows:

Rule 1. Only members in good standing are eligible to contest.

2. Fishing is restricted to Canandaigua Lake, its inlets and outlets.

3. All fish must be caught between the hours of 12 o'clock midnight of the 19th and 9:30 p. m. the 20th. All fishermen contesting must report with their catch at the town house on or before 9:30 p.m. All fish presented later will be barred and will not be counted.

4. Each and every fish must be caught by hook and line or rod and line—the line or rod and line to be handled and every fish landed by contestant.

5. No set line or other devices than those mentioned above will be permitted.

6. A supper will be provided on the night of contest which must be paid for by the team scoring the lowest number of points.

7. No contestant will be allowed more than one prize.

8. All fish must be displayed at town hall till 10:30 p.m.

The kinds of fish with the points allowed are here given: German trout, 8 inches, 40 points; lake trout, 14 inches, 40 points; black bass, 8 inches, 35; pike, 14 inches, 40; chub, 8 inches, 9 points; pickerel, 12 inches, 8 points; perch, 6 inches, 5 points; bullheads 8 inches, 5; rock bass, 6 inches, 5; sunfish, 6 inches, 4; suckers, 10 inches, 3; carp, 8 inches, 3 points.

How to Kipper Trout and Salmon.

TO KIPPER after the old Highland fashion will insure the salmon or trout keeping, and eating well. Split the fish up the back, remove the back bone, and sprinkle the flesh freely with salt and pepper. Use one or two twigs for cross stretches, inserted across the back, some 3in. or 4in. apart, according to size. The fish is now ready for drying, and herein lies the secret of success, and the point where most curers break down. To prevent the fish becoming sodden or damp is the aim to be kept in view. If the weather be breezy and dry a few days' exposure in the sun will suffice; if wet or moist, hang the fish near the fire, and always do so over night. If dried too hastily the flesh will sweat, and go wrong in a few weeks' time; but, if carefully sun dried in a breezy exposure, it will keep for six months.—*London Field.*

St. Lawrence River Canadian Tax.

OTTAWA, Ont., June 10.—*Editor Forest and Stream:* The Canadian fee from American anglers will not be exacted this season on the St. Lawrence River between Kingston and Prescott.

JOHN COSTIGAN, Minister Marine and Fisheries.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 3 to 6.—Kingston Kennel Club, Kingston, Ont. H. C. Bates, Sec'y.

Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.

Sept. 17-20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Sept. 24 to 27.—New England Kennel Club's second annual terrier show, Boston, Mass. D. E. Loveland, Sec'y.

Oct. 8-11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at Morris, Man. P. T. Madison, Sec'y, Indianapolis, Ind.

Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.

Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 29.—New England Field Trial Club, at Assonet, Mass. S. R. Sharp, Sec'y.

EXPERIENCES IN SEARCH OF A DOG.

Editor Forest and Stream:

This recounts a man's endeavor to get a good dog. I told a dog-dealer that I would write of my endeavors to get one.

Some twenty years back the writer was endeavoring to obtain a good rabbit dog. Not knowing of a paper at that time such as the FOREST AND STREAM, I was directed to write to Mr. Elmore, of Connecticut, but he informed me he had no good beagles for sale. I bought a hound on Staten Island, a good-looking dog, but he would run and tongue both ways, so you knew not if he was following the rabbit or going away from it. Well, some one, fortunately, stole that dog. Next I obtained one from a dealer in the city. Next day I exchanged him for another dog. This one was shot, having treed a cat in the woods. A man endeavored to shoot the cat; the dog rushed in and received the charge. Next I bought a dog that was raised and broken in Sullivan county. Well, this one was a grand dog in all respects; height 20in., good-looking—a true hunter. Had there been a rabbit feeding at night, and had it gone to its bed, he would give a bark or two. If he could talk he would have said, "One is around, look out!" And then no more tongue until the game was running. I have shot a rabbit ahead of this dog, and he would be off again giving tongue. I have thus shot four or five in succession. But this dog was taken sick. I know very little of dogs, so thought if sick they ought to get well again; so my dog died. I had him three years. I thought, shall I ever get his like again? I had a puppy which was sired by him. I sent him into the country to be kept and trained. As the folks were looking at him one day he began to run. They thought he was mad and one of the girls climbed a tree in her fright, and the dog was shot. I guess it was worms, but I knew nothing of a remedy.

I now concluded I would try English beagles, but I was afraid of dog dealers and breeders. I thought they wanted exorbitant prices. I was ignorant of the facts, and did not know where or how to get a good beagle My son told me of a stray dog at a shop, and described the dog as having crooked legs. I thought that it was a beagle such as I wanted, so I obtained this waif of a dog, thinking I had one of the right kind. I took him in the field and found he would chase a bird, but not a rabbit would he hunt. I was fixing a gate and this dog started to cross the road to me. A locomotive cut his head clean off, so this beagle's days were over.

About this time I found a paper called FOREST AND STREAM. I was at once interested in it and have been so up to the present time. I thought, this is just the paper I have been after. Well, now for the advertisements of dogs. I communicated with a Philadelphia company, now extinct (FOREST AND STREAM refused their advertisement), and was informed they had what I wanted. They sent me a book with recommendations from parties who had bought dogs of them. I bargained with them for two broken English beagles, black, white and tan, for $40. I sent them a check for the amount, when they promised to send two beauties. I waited two weeks, but no dogs came. I found the check had been collected. I sent on about the dogs and got in reply that the weather was so dry they could not test the dogs, but were waiting to pick out two that would work together. I waited till late in October, and then I informed them I wanted the dogs so that they might know me, as hunting commenced in November. So I received the two mated beagles, and oh! what a pair for a good-looking man to take into the fields. One of them was a little black and tan, a white streak on breast, a lively dog, but no trailer. The other dog was a short, chunky black and tan, a little white on him. Well, I guess that filled the contract as to black, white and tan. The short, chunky beagle, on being taken for a trial hunt would take an old trail in the field and work and tongue that old trail for two hours. He certainly filled the bill as a worker. I put up a rabbit and put him on the trail, but he did not want to work on that rabbit. I called my companion to take aim and we would shoot the dog, but he persuaded me to send him back and have him exchanged. So I gave my friend $5 to box and express the dog off. I wrote the company and in due time received a red dog about 20in. high, a strange match for the little dog; but he was a pretty fair hunter. Well, I gave these dogs away and thus ended my vision of a nice pair of beagles. I did not scold or fret, but I took it philosophically.

And now I concluded to have two young beagles and break and work them myself. I agreed with Mr. Krueger, of Pennsylvania, and bought two. He gave me a satisfactory deal. I was well satisfied. But one died, the other I gave to a friend. It made a good dog.

I bought a beagle bitch for $15. She was as agreed upon—a good hunter; but if shut in a room at night, a new door casing was required next morning. The man forgot to tell me of that trick. I sold her, but before selling told the man of this vice.

I am yet in search of a pair of beagles. I saw advertised a nice pedigreed beagle, warranted. I do not intend to give any person's name. I saw him about the dog. It was advertised at $30. I went home with him to see the dog, and then found he had another, which he intended to exhibit in a few days at a fair. So the dogs were turned loose. An elderly man who owned the grounds was with us. We had not got far from the house. I thought the dogs did not take hold as they should. The elderly man said, "Mr. So and So's bull had broken into the field," and said bull was very dangerous; so we scud off for the house, dogs also. I then, on this man's representation, bought that dog, to be delivered to me in two weeks. I wanted to fumigate and clean my dog place. I want to say this man was holding a responsible position in a large association, and yet would cheat in selling a dog. Well, I paid him for the dog then and there. And blame that bull! The dog that was sent to the fair got vhc., but he called it the third prize, and then he wanted me to buy this dog (I must not write the dog's name), price $100—$100! I said "No." But he extolled this dog as a hunter and an all-day dog. Why, "he would hunt a fox." I closed with him for $40, to be paid after I had a trial and was satisfied with the dog. This pair of dogs was sent to me, and following them by post was a letter about the dogs, and asking as a great favor if I would pay for this last dog, as another dog dealer (one well known to most dog men) had let his note be protested, and it had been discounted at the bank, and he was short of funds just at present. I said certainly I would help him out if such was the case, so I paid the $40. And now I say blame that dog man for letting his note go to protest. Well, the dog would not hunt only at times, and that time was not often. When a gun was fired off it was legs, do your duty, and dog, get home as soon as you can.

I took the vhc. beagle to a relative in the country to try him. This relative has a first-class rabbit dog which would drive a rabbit. I saw a rabbit come close up to my new dog, and the dog seemed more scared than the rabbit. I think that was the first rabbit he had seen. I was thinking again, "Darn that dog man that let his note go to protest" (I belong to a church, I may not swear).

My late friend, Judge Gubner, of Bay Ridge, wanted me to show the man up to the other dealers. I had his letters and advertisements, and there were the dogs that could be tried, but I let the matter drop. I gave these dogs away. One can be seen at any time. He is gun scared.

Later, I purchased of the late Judge Gubner, of New Utrecht, five days before his death—he knew death was near—his two beagles; they need no comment as being good. One since died.

I purchased one of C. S. Wixom, of Covert, N. Y. Mr. Wixom thought I was over cautious and kept the dog a long time before I paid for him. If he reads these trials and tribulations I underwent I think he will change his view of me. His dog far excels the guarantee he made to me, and there are many honest, square, fair-dealing men engaged in this business, some of whom I find it a pleasure to associate with.

And, Mr. Editor, some may say, what a simple fellow; but I had the fever and wanted to get two good dogs. May my experience or folly be a benefit to others. In this communication I have given you the facts with very little embellishments. I am not buying dogs, and when I do, only on the terms, try before you buy. But darn that bull, and darn that dog man that let his note go to protest.

JOHN BATEMAN.

POINTS AND FLUSHES.

I HAVE heard betimes some unfavorable remarks as to the propriety of club members being in charge of club affairs which are closely related to the competition, such as appointing the judges, managing the competition, selecting grounds, etc. The implication is not always that there is any culpable act or intention; it is oftener advanced that there is an impropriety in it. As to why it is so, no one has yet ventured to go beyond an expression of opinion which often was founded on self-interest. Any common belief or usage should be founded on good sense, though this is not a concession that the subject under consideration is at all established as a matter of common belief. It is often though a matter of some annoyance. Gentlemen who as club members have taken all the trouble and responsibility of arranging a competition find at a certain point that if they have dogs entered in the competition there may be a bugaboo raised as to the propriety of their selecting the judges, etc. It has always impressed me as being a very trivial and unnecessary question. The club member is seldom a professional dogman; he does not enter into field trial competition for profit; he has an established business or revenue; his reputation as an honorable gentleman is already established; he is known to be above chicanery or dishonesty. Then as a club member, why should he not fearlessly exercise all the privileges of a club member? It is all a matter of mere incident to him, not a means of livelihood. Club members have conceded too much in these matters; so much, indeed, that they had little left that they could call their own save the privilege of paying dues, a responsibility for deficits, or a privilege of nominal authority. But that members, for the reason alone that they have dogs entered, should have no voice in selecting the judges, etc., is absurd according to any fair principle. The sooner clubs learn to manage their own affairs with some firmness and independence, the better for field trials and all concerned.

This feeling seems to have some collateral outshoots. For instance, if it can be shown that the judge owned a stud dog which was the sire of one of the competing dogs, or owned the grandsire or grandam, or some other ancestor, narrow minds were not slow in hatching suspicions and mutterings. They of course implied that the judge must have an undue liking for blood of his breeding and a prejudice against all others. I earnestly believe that a judge who withdraws temporarily while such dogs are running, or recuses himself, as the lawyers say, does himself an injustice and in a way indorses the soundness of the false assumption. I believe that a judge who is worthy of the invitation to judge is worthy of filling the

position from start to finish of the competition. Of course in the event that the judge owns one of the dogs in the competitions, it is eminently proper that he retire; but it is better, if it can possibly be so arranged, that the judge does not act in a stake in which he is a competitor. Judging directly and competing directly are two different matters and should be sharply distinct.

It was intimated in a recent report of a meeting of the U. S. F. T. Club, that the trials of the Southern Field Trial Club would be run on the grounds of the club first mentioned. If so, handlers will have the advantage of the two trials running in conjuntion, the expense then being much less. Never have field trials been arranged so nicely for the convenience of competitors, prior to the present year.

The Southern Field Trial Club deserves much praise for its steadfast persistence in holding its trials year after year, through good or hard times, unostentatiously, quietly and skillfully. In reference to conducting the affairs of a field trial club, it struck the correct policy from the beginning. A peculiar feature in the club's policy is that while the club welcomes gentlemen into its membership it never solicits anyone to join. If a sportsman desires to join and he is acceptable, their doors are open. This lends a certain dignity and independence possessed by no other club, so far as I know of such matters. A professional handler is not eligible to its membership, the reason therefor being that the professional competitor and the management should be distinct and separate. The consequence has been that the club's affairs have progressed harmoniously and successfully, and there has been no element within it of a disintegrating nature. The club is sound financially and has quite a good balance on the credit side of its ledger. It is an object lesson of what good management and good membership can accomplish. With so many good sportsmen in the South, I feel sure that were the foregoing facts more generally known, many would honor themselves by joining its membership.

Concerning Field Trial Dates.

In respect to the dates of holding the chicken trials, Mr. J. B. Stoddard writes as follows:

"The trials should be held as late as possible, to give trainers time with their puppies. The last ten days are worth more than the previous twenty. I made a strong plea last fall to have the date set ahead. The club decided on the last of August. I think other trainers also urged the selection of a later date."

It is extremely difficult to select a date which has not some good objections against it. If the latter part of September is chosen the weather probably would be unfavorable, and in bad weather the chickens soon become wild and begin to pack. An early date limits the time of training. The chicken trials have won great popularity with owners and handlers. Of the latter, many from the States will compete. B. WATERS.

E. F. T. C. Derby Entries.

THE seventeenth Derby of the Eastern Field Trials Club closed with 39 entries, of which 28 are setters and 11 pointers. All were whelped in 1894:

POINTERS.

KENT B.—Dr. J. S. Brown's black and white dog (Rip Rap—Croxie Kent), June.

NABOB—Charlottesville Kennels' black and white ticked dog (Rip Rap—Dolly D.), May.

DOWLAH—Charlottesville Kennels' lemon and white dog (Rip Rap—Dolly D.), May.

INDIA—Charlottesville Kennels' orange and white bitch (Rip Rap—Dolly D.), May.

AMEN—Charlottesville Kennels' liver and white dog (Wrecker—Selah), March.

WRESTLER—Charlottesville Kennels' lemon and white dog (Wrecker—Selah), March.

TOXIC—Charlottesville Kennels' liver and white ticked bitch (Dogwood—Maid of Kent), June.

SIDMONT—P. T. Madison's liver and white dog (Strideaway—Hops II.), January.

SISTER SUE—N. D. Nesbitt's liver and white ticked bitch (Jingo—Roomey Croxtelle), June.

COINAGE—C. G. Stoddard's liver and white dog (Trinket's Coin—Ightfield Blythe), February.

VIRGINIA—H. K. Devereux's liver and white bitch (Little Ned—Pearl's Dot), May.

SETTERS.

SENATOR ZEB—Joe Meares's black and white dog (Dion C.—Thompson's Nora), March.

BRIGHTON DICK—T. G. Davey's black and white dog (Brighton Tobe—Lady Brighton), January.

BRIGHTON TOM—T. G. Davey's black and white dog (Brighton Tobe—Lady Brighton), January.

BRIGHTON MAUD—T. G. Davey's black, white and tan bitch (Brighton Tobe—Lady Brighton), January.

TROUBADOUR—Eldred Kennels' blue belton dog (Gladstone's Boy—Rill Ray), May.

MIGNON—Eldred Kennels' orange and black bitch (Gladstone's Boy—Rill Ray), May.

RANEE—Irving Hoagland's black, white and tan bitch (Gladstone's Boy—Buena Vista), July.

ROD'S TOPSY—W. A. Hinsley's black, white and tan bitch (Topsy's Rod—Lulu Hill), January.

ROD'S BOY—King Graphic Kennels' black, white and tan dog (Roderigo—Lany Gladstone), April.

JOE GRAHAM—L. D. Hargrave's lemon and white dog (Gladstone's Boy—Buena Vista), July.

DOMINO—Blue Ridge Kennels' black, white and tan dog (Antonio—Ruby's Girl), February.

GLEAM'S DART—Manchester Kennels' black, white and tan bitch (Count Gladstone—Gleam's Maid), April.

GLEAM'S RUTH—Manchester Kennels' black, white and tan bitch (Count Gladstone—Gleam's Maid), April.

CLAUDE—P. Lorillard, Jr.'s, black, white and tan dog (Eugene T.—Maiden Mine), February.

ARAPAHOE—P. Lorillard, Jr.'s, black, white and tan dog (Eugene T.—Maiden Mine), February.

FANNIE L.—P. Lorillard, Jr.'s, black, white and tan bitch (Eugene T.—Maiden Mine), February.

FRED—P. Lorillard, Jr.'s, black, white and tan dog (Eugene T.—Ightfield Rosalie), May.

TOUCHSTONE—Avent & Thayer Kennels' black, white and tan dog (Orlando—Dollie Wilson), January.

PATRICIAN—Avent & Thayer Kennels' black, white and tan dog (Chevalier—Patsy), May.

FEN FOLLET—Avent & Thayer Kennels' black, white and tan bitch (Count Gladstone IV.—Folley), May.

LOULANIER—Avent & Thayer Kennels' black, white and tan bitch (Topsy's Rod—Lulu Hill), January.

FLEET'S PET—Avent & Thayer Kennels' lemon and white bitch (Count Gladstone IV.—Feely Avent), March.

FLIRTY LIT—Avent & Thayer Kennels' black and white bitch (Topsy's Rod—Gody Lit), May.

HARWICK—H. R. Edward's black, white and tan dog (Topsy's Rod—Opal), June.

MAZEPPA—T. H. Gibbes's lemon and white dog (Dod's Dan—Bondhu Nellie), February.

TORY CELIA—F. R. Hitchcock's black, white and tan bitch (Roderigo—Norah II.), June.

TORY FASHION—F. R. Hitchcock's black, white and tan dog (Count Gladstone IV.—Fleety Avent), March.

CLARK—S. Murray Mitchell's orange and white dog (Antonio—Gladstone's Norah), January.

MARIE'S SPORT—Hart B. Ledbetter's dog.

DOG CHAT.

Concerning Mr. Taylor's charge, made after his return to England, that his awards made at the New York show had been altered, *Our Dogs*, referring to the large amount of writing bestowed on it, says: "Hence it has for some time been difficult to understand on this side why so much ink, paper and effort in the American press should have been bestowed upon such a trivial incident." It has for some time been difficult to understand on this side why the matter was ever begun. Moreover, a charge of dishonesty on this side, even though it be false, is not considered a "trivial incident."

Under date of June 6, Mr. H. C. Bates, the secretary, writes us as follows:

"KINGSTON, Ont.—The Kingston Kennel Club claims September 3 to 6 next for the holding of its kennel show."

Mr. John G. Barker, San Francisco, Cal., writes us concerning an article which appeared in the *Breeder and Sportsman* of June 1, which calls attention to the alleged injustice done to his dog, California Bernardo, in the report by a contemporary. The matter in question seems to be a difference of statement in respect to the height, which was given as 27.56in. in the report mentioned. Mr. Barker claims the height of his dog is 30½in., according to his measurement, while the editor, in a foot note, indecisively says: "Mr. Barker is modest in his claim. Bernardo would be called by most breeders 31½in. at least." The matter being so important, why could not a committee be appointed to measure the dog, and his height would then be authoritatively determined and all differences set at rest.

Champion Sam (4,448), owned by Mr. J. A. Nickerson, Boston, is dead. He was a famous winning Newfoundland dog in the days when he competed at the bench shows in the years of his life prior to 1886. He was whelped May 2, 1882, so that, measured by the years allotted to good old age in the dog, he had lived nearly up to the full time. His pedigree ran far back into grandsires and grandams, and individually he was a good representative of his breed.

Mr. P. T. Madison, secretary-treasurer of the Continental Field Trials Club, writes us that Mr. Geo. W. Ewing, New Islip, N. Y., has donated a silver cup, a prize to the winner of the chicken Derby, providing said winner is a setter; and also a cup to the winner of the setter Derby, which will be run on quails, at Newton, N. C. The value of each cup is $25. The chicken Derby, Mr. Madison adds, is a success.

We have many inquiries concerning the addresses of dog breeders, a sure indication that there is a revival of interest in dogs. Those who desire to keep up with the times should not neglect the advantages of advertising in FOREST AND STREAM. The purchaser cannot know that you have something to sell if you do not inform him of it.

In our business columns this week Mr. Lou. Key, Cincinnati, offers broken dogs. Mr. W. W. McCain, Stevensville, Pa., offers English setters. Mr. G. G. Williams, Muncie, Ind., offers setter bitch. Mr. C. T. Brownell, New Bedford, Mass., offers Gordon setters; and Standard Kennel, Georgetown, N. Y., offers beagles.

At the meeting of the Canadian Kennel Club it was decided to postpone action on the cropping question till the next annual meeting. The proposition of the A. K. C. to recognize mutually each other's suspensions and disqualifications was declined. The wins at shows held up to December 31, 1895, under the rules of the Canadian Kennel Club or American Kennel Club, will be recognized.

The *British Fancier* says: "A remarkable instance of canine intelligence may be witnessed in Rochdale every day but Sunday. Stand on the footbridge leading to The Walk at a given time in the afternoon, and you will see a well-built broken dog coming along with a bundle suspended from his collar. He has come alone this afternoon, as he has done for many months past, all the way from Norden, three miles away, to the railway station, in order to fetch a consignment of evening papers. He is now on his way home again, unaccompanied by anyone."

The mutations of time bring some sad changes. The following, clipped from an exchange, is not without a certain pathos:

"Samuel Stratton, Brooklyn's octogenarian dog catcher, is out of a job, the Legislature having put the licensing and disposition of dogs in the charge of the Society for the Prevention of Cruelty to Animals. Mr. Stratton has been one of the official dog catchers for more than a quarter of a century. When he was threatened with displacement in 1886 this letter, sent by Henry Ward Beecher to Mayor Whitney, saved him: 'BROOKLYN, April 20, 1886.—MY DEAR MR. MAYOR: The present bishop of dogs (Samuel Stratton) has most worthily cared for his diocese for several years. He came to my knowledge from a visit I made to him years ago seeking a good dog. He is honest, temperate and skillful. He is thoroughly acquainted with dogs and men, and I hope, for the sake of both men and dogs, that you will reappoint him. The best men are like dogs, and the best dogs are nearly as good as men. Now, my friend Stratton is as good as a good man and a good dog put together. Such men are rare to find. There are other candidates; some not worth the shake of a dog's tail; but my honest Episcopalian friend Stratton is worth a whole bench show of the best bred dogs, from the smallest black and tan terrier up to the largest mastiff. Do not refuse me this one the very tail of offices—for my dogmatic friend Stratton.

"'HENRY WARD BEECHER.'"

A New Produce Stake.

BOSTON, Mass., June 10.—*Editor Forest and Stream:* A new feature of the New England Kennel Club will be the introduction of Produce Stakes under the auspices of the club, and to be decided at their annual bench shows. Arrangements have just been completed for the first Irish terrier Produce Stakes, of $15 each, with $100 added by friends of the breed. Irish terrier brood bitches to be entered, and their produce, born after entry, to be shown uncropped, and as explained in the rules and regulations. Entries close Jan. 1, 1896, the stakes to be decided at the thirteenth annual show of the New England Kennel Club, 1897.

All bitches must be entered prior to the birth of their produce, and shall only be eligible for entry in respect of produce to be born on or after July 1, 1895. Entries may be made at any time before the closing of the stake, $5 to be paid on entering the bitch, the only liability in case of forfeit; the remaining $10 to become due and to be paid if, and when, the owner nominates one or more of her pups. The rules and conditions governing this stake, as well as other particulars, will be sent to you as soon as received from the printers. The club has appointed the following committee to manage the stakes: Mr. Edward Brooks, Mr. George A. Fletcher, Mr. Samuel D. Parker, Mr. Ed. K. Butler, Jr., Mr. Oscar W. Donner. All communications relating to these Produce Stakes should be addressed as follows: To the Committee "Irish Terrier Produce Stakes," P. O. Box 5144, Boston, Mass., and "Conditions and Rules," as well as forms of entry and certificates, will be sent to any address on application. We have reason to believe that the stakes will be a great success, and the committee would be glad to receive the names and addresses of all parties interested in Irish terriers, and will gladly supply all applicants with full particulars regarding the stakes.

I hope soon to be able to report the launching of Produce Stakes for other breeds also.

DAVID E. LOVELAND.

National Fox Hunters' Association.

THE executive committee of the National Fox Hunters' Association met at Lexington, Ky., June 1, and selected Owingsville, Ky., for next meet, Nov. 18, 1895. In addition to All-Age and Derby stake, they decided to open a local stake for hounds otherwise barred by the fifteen-mile limit.

ROGER D. WILLIAMS, Chairman of Committee.

Manitoba Matters.

I LEARN that there is a movement toward healing some ancient differences between the Manitoba Field Trials Club and the Northwestern Field Trials Club—a matter for general rejoicing. It is sincerely to be hoped that the differences of years ago will be wiped out unconditionally.

Pennsylvania Railroad Company's Summer Excursion Route Book.

THE MOST COMPLETE PUBLICATION OF ITS KIND.

The Passenger Department of the Pennsylvania Railroad Company will, on June 1, publish its annual Summer Excursion Route Book. This work, which is compiled with the utmost care and exactness, is designed to provide the public with short descriptive notes of the principal Summer resorts of Eastern America, with the routes for reaching them and the rates of fare. There are over four hundred resorts in the book, to which rates are quoted, and over fifteen hundred different ways of reaching them, or combinations of routes are set out in detail. The book is the most complete and comprehensive handbook of Summer travel ever offered to the public.

Its 210 pages are inclosed in a handsome and striking cover, in colors. Several maps, presenting the exact routes over which tickets are sold, are bound in the book. It is also profusely illustrated with fine half-tone cuts of scenery along the lines of the Pennsylvania Railroad and elsewhere.

Any doubt as to where the Summer should be passed will be dispelled after a careful examination of the contents of this publication.

On and after June 1 it may be procured at any Pennsylvania Railroad ticket office at the nominal price of ten cents, or, upon application to the general office, Broad Street Station, by mail for twenty cents.—*Adv.*

Yachting.

FIXTURES.

*Dates marked thus are unofficial.

JUNE.

13. New York annual, New York Bay.
15. Atlantic special, New York Bay.
15. Royal St. Lawrence, 18ft. skiff and steam yacht classes, Montreal.
15-16. San Francisco cruise to St. Quentin, San Francisco Bay.
15. Larchmont spring regatta, Sound.
15. Philadelphia annual, Tinicum-Delaware River.
17. Massachusetts open, Nahant-Massachusetts Bay.
17. Cor., Atlantic City special cup, first race, Atlantic City.
2. Yankee Doodle-Norwood race, Hudson River.
2. Douglaston annual, Douglaston Sound.
22. Atlantic special, New York Bay.
22. Royal St. Lawrence, A, 30ft., 25ft. and 21ft. classes, Montreal
22. Rhode Island, annual.
22-23. San Francisco cruise, San Francisco Bay.
23. California regatta, San Francisco Bay.
24. Seawanhaka Cor. annual, Oyster Bay, Sound.
24. Pavonia annual, Communipaw, New York Bay.
25-26. Seawanhaka Cor. annual race to New London, Sound.
29. Atlantic special, New York Bay.
29. Yankee Doodle-Vamoose-Rex race, Sound.
29-30. San Francisco cruise to Mare Island, San Francisco Bay.
29. New Rochelle annual, New Rochelle, Sound.
29. Dorchester open, Boston Harbor.
29. Squantum first cham., Squantum, Mass.

JULY.

1. Royal St. Lawrence fourth annual, Sir Donald A. Smith Cup Montreal.
1. Cor., Atlantic City record, Atlantic City.
1. Indian Harbor special, Greenwich, Sound.
2. San Francisco club sail, San Francisco Bay.
3. Seawanhaka Cor. race to Larchmont, Oyster Bay, Sound.
4. Larchmont annual, Larchmont, Sound.
4. Boston City open, Boston Harbor.

4. Lake Michigan Y. R. A. annual, Milwaukee.
4. Cor. Marblehead Club, Marblehead (Mass.) Bay.
4. Northwestern International Y. R. A. race, Seattle, Puget's Sound.
4. Cleveland regatta, Cleveland, Lake Erie.
4-7. San Francisco cruise, up river, San Francisco.
5. American annual, Milton Point, Sound.
6. Royal St. Lawrence Commodore's Cup, Montreal.
6. Riverside annual, Sound.
6. Duxbury Club, Duxbury, Mass.
8. Seawanhaka Cor. special, Oyster Bay, Sound.
9. Horseshoe Harbor special, Larchmont, Sound.
10. Huguenot special, New Rochelle, Sound.
11. New York Athletic Club annual, Travers Island, Sound.
12. Larchmont, 1st class, special schooners, and 34 and 21ft. classes, Sound.
12. Larchmont-Atlantic combined annual cruise, rendezvous at Larchmont.
13. Larchmont to Block Rock.
14. Block Rock to Morris Cove.
15. Morris Cove to New London.
16. Special race, New London.
17. New London to Shelter Island.
13. Royal St. Lawrence cruising race to Beauharnois, Montreal.
13. Cor., Marblehead first cham., Marblehead (Mass.) Bay.
13. Hempstead Harbor annual, Sound.
13. Squantum second cham., Squantum, Mass.
14. San Francisco open race, San Francisco Bay.
15. Savin Hill open, Savin Hill, Boston Harbor.
15. Riverside annual cruise, Sound.
15. Rhode Island annual.
17. Cor., Atlantic City Special Cup, second race, Atlantic City.
17. Cor., Marblehead cruising and knock-about classes, Marblehead.

THE principal dimensions and the general form of the new defender and of Valkyrie III. are known in an approximate way, but the exact dimensions and the many important details of form are still the secret of the designers. Out of the immense mass of statements and "designs" which have ornamented the daily papers for three months, and which are increasing faster and faster each week, some few details are doubtless true; but it is impossible to say which. A great many statements and sketches bear the marks of their falsity plainly on their face, but there are some which are at least possible, and may or may not be correct.

As long as designers and owners continue their silence, there is absolutely no restriction on the "fake" reporter and artist, and a strong competition between the daily papers has carried this phase of modern journalism to a very mischievous extreme.

The Boston *Herald* still holds the world's record for the greatest number of contradictory fakes in the shortest time, but the New York *Herald* is holding second honors. On May 20 the latter paper published an alleged midship section of Valkyrie III., of large size and carefully drawn, showing both the alleged form and construction, with a lengthy description of the details. Assuming the draft of 18ft., as given, the drawing shows a beam of 34ft.; or, assuming the beam to be correct as given, 26ft. 4in., the draft would be but 14ft. The accuracy of the accompanying details may be judged by the fact that the material for the main keel bolts is stated to be 1¼in. iron. Accompanying the article were two smaller sections alleged to represent Valkyrie III. and Britannia to scale; the grossest caricatures.

On June 2 the New York *Herald* published, in connection with its Boston rival, an "approximate design" of Valkyrie III., showing an entirely different design; and also the alleged sheer plan and midship section of the defender. Accompanying these valuable "designs" were some three columns of intensely scientific description, every detail of the form and elements being closely composed, and deductions made as to the merits and demerits of the boat. Starting on no better basis than utter guess work, the author of this quasi-scientific fake proceeds to compare seriously the metacentric height, the area of wetted surface and the positions of the various centers of two yachts which he has never seen, and of whose true lines he is profoundly ignorant.

On May 26, the New York *Herald* provided another treat for yachtsmen, in a picture of Valkyrie III. under full sail, "Sketched for the New York *Herald* by an assistant naval constructor at the Brooklyn Navy Yard, from measurements received from Scotland." This picture, covering nearly half a page, is supposed to be to scale. Assuming the overall length as 128 to 130ft., the details scale off as follows: Mast, deck to hounds, 110ft.; deck to topmast halyard block, 165ft.; hoist of mainsail, 100ft.; boom 105ft.; gaff 68ft. The sail area by Seawanhaka rule is 15,900sq. ft.

It is quite evident that the study and observation of the assistant naval constructor at the Brooklyn Navy Yard has never included anything of the nature of a yacht, in fact the details of his drawing would indicate that he had never seen even a photograph of one. The mast is shown as a single pole, in one piece from deck to truck, the staysail is carried out on the bowsprit, well clear of the stemhead; the bowsprit is braced by a bowstay which starts from the stemhead, runs down under a dolphin striker beneath the middle of the bowsprit, and is continued out to the end of the spar. The details of the peak halliards are equally original, but the crowning triump of genius is reached in the topsail. This sail hoists to the truck and is sheeted out to the gaff end, but is neither a club nor a sprit topsail nor yet a jib-header. It has a high peak, extended by a gaff extending far above the topmast with absolutely no visible means of support.

The many smaller papers throughout the country are not slow in following the bad example of the larger ones, and our exchanges from West to East, bring all varieties of false reports and "fake" designs, showing not only a total lack of conscience, but a deplorable ignorance of yachting.

The assumption of the average editor and reporter, that the American yachtsman is an utter fool, who will cheerfully pay his money for faked news and false stories without finding out that he is cheated, is entirely erroneous. The average yachtsman, even in the more remote localities, is sufficiently well posted to appreciate the utter worthlessness of the stuff offered to him by his daily paper. It is probable that the quasi-scientific fraud, as well as his less pretentious and hardly less ignorant brother, who is contented with a plain every-day lie ungarnished by columns of figures and sage deductions, have already exhausted the possibilities of this sort of advertising, and that before the season is over there will be a change for the better.

THE letter of Mr. Baden Powell, which we print this week, has brought out in the following issue of the *Field* a curious suggestion by way of remedy, *i. e.*, that the owners of small craft should, so to speak, burn their boats, and seek safety by organizing themselves into syndicates of sufficient size to run much larger craft. This very practical suggestion savors much of the homely wisdom of Mother Goose, of the "Mother, may I go out to swim" order; certainly, if a man does his yachting in a 60ft. schooner, he stands little chance of being drowned from a 20ft. canoe yawl. At the same time it completely misses the true point of the question, that there are hundreds of keen sailormen to whom the sole ownership of a craft, however small, offers the greatest of pleasures, and for whose use, either in sailing single-handed or with a comrade, the 18ft. canoe yawl or the half-rater is excellently adapted. True, they might breathe the salt air in greater safety from a larger yacht, as in fact they might do from a ferryboat or a passenger steamer with less risk; but neither of these boats would answer their special purpose. Long experience with the better class of canoe yawls has shown the type to be both safe and serviceable for cruising and racing; the trouble only begins when all other considerations are sacrificed to speed. A vessel is not necessarily unsafe, even for sea-going, on account of her small size; in fact, where it is a question of cost the boat sailor will do better to put a given sum into a thoroughly good and well-equipped boat of small size rather than to attempt, with several others, the vastly greater expense of running a larger yacht, probably a second-hand craft of greatly inferior quality.

THE question of superiority between Ailsa and Britannia, which to many seemed finally settled in the Mediterranean, is still an open one, and to all appearances with the chances in favor of the older and smaller boat. No doubt Ailsa will make a better showing as the racing continues, and will defeat Britannia in very light weather; but she will have to be very much improved to make her equal to the other as an all-around racing boat. Their meetings thus far only tend to confirm an opinion which we expressed last year, that Britannia and Dragon III. are the best yachts floated for several years, and far better than anything likely to be produced in the near future. Though now in her third season, Dragon III. continues to hold a place near the top with the '94 and even '95 boats of the 20-rating class. Both Britannia and Dragon are practicable and *bona fide* yachts; and in no sense sailing machines.

VALKYRIE III. is now nearly ready; she left Partick for Gourock on June 8, and will bend her sails at the latter place, making a trial trip on June 15. She will then be ready for racing and it is said that she will join the fleet in the South, racing with Ailsa and Brittania. Lord Dunraven will charter the big schooner yacht Selene for a tender for the cutter, to accommodate the crew. The statement is made that the new 60-rater Hester, designed by Fife and built by C. Hansen for Mr. John Gretton, launched on June 8, will visit America this year. She is 93ft. over all, 67ft. lwl., 18ft. beam and 12ft. draft.

THE statements are constantly repeated that Ailsa will accompany Valkyrie III. to this country next month, and also that the Prince of Wales will visit New York for the races. There is no means of verifying either report, but we hope that they are both true, and that Britania may make a third boat in the fleet.

IN the Cinque Port's regatta of June 10, off Dover, in smooth water and a moderate breeze, the race of the big boats resulted: Ailsa, 4:37:50; Britannia, 4:39:20. This makes Britannia a winner by about a minute. Niagara beat Luna by 5:22 and Stephanie by 6:38.

MR. C. J. FIELD, of New York, has ordered a new 1-rater from Lib. bick, and she is expected by the end of the month. Eithelwynn, as she will be named, is practically a 1-rater in size of hull, but will be canvassed for winning on this side in the 20-foot sailing length class in the Sound, where she will be raced.

WITHIN the past few days it has been announced that Volunteer will be refitted for racing, her mast being moved forward and her rig improved, and that she will take part in the races of the 90ft. class. Lawley will begin the alterations at once.

JUBILEE is once more in bad luck. In launching her n June 10 the ways broke under, and at last reports she had not been floated.

Ailsa.

One of the surprises of yacht racing is the defeat of Ailsa by Britannia in the Thames races after the excellent showing made by the new Fife cutter in the Mediterranean. In the former races she was evidently at a disadvantage, being just off the stocks and hurried into the racing after a hard winter passage across the Bay, with new sails and gear and no time for trial. Since then she has made the return passage to England and there has been time and opportunity for the many small changes needed on every new boat. So far as is known, no material changes have been made, though it is said that her lead was slightly changed and her spars lightened in the Tilbury docks, just before the Thames races. The first race, the New Thames, on May 17, from the Lower Hope around the Mouse and back, was sailed in a strong breeze, Ailsa housing her topmast and then begging, though Britannia carried her jibheader all day. There was plenty of windward work, in which Britannia showed to great advantage, winning by 2m. 44s. elapsed and 4m. 55s. corrected.

Two days later the pair met in the Royal Thames regatta, from the Lower Hope around the Mouse and back to Gravesend, in a light and variable breeze, both carrying club topsails, the course being practically a reach both ways. As on the first day, Ailsa got the best of the start, but, after some fluking in the light airs and calms, Britannia got by her and held the lead, winning by 39s. elapsed and 2m. 55s. corrected. The latter part of the race was sailed in quite a strong puffy wind, Britannia doing the better work.

The next race, the Southend to Harwich, of the New Thames Y. C., found Ailsa at the line with a couple of tons more of lead inside. The wind was light and again she made a good start, having a lead of Britannia, but soon after crossing the line her bobstay parted and she was forced to withdraw. The next meeting of the two was in the Royal Harwich Y. C. regatta of June 3, a bright day with smooth water and a moderate southerly wind. This time Captain Carter put Britannia over the line first, and she held her lead all day, winning by 2m. 32s. elapsed time with over 2m. allowance to be added. The second day of the Royal Harwich Y. C. found a light S. W. wind and cloudy weather. Both boats were over the line before the gun, and on the recall Britannia got away first at 10h. 02m. 35s., Ailsa close astern. She passed Britannia, both being on a close reach with club and jibtopsails set, and was ahead when the bell buoy was passed, about a mile from the start. The next leg was some 14 miles before the wind, to the Shipwash Light, where Ailsa was timed at 12h. 32m. and Britannia at 12h. 48m. It is to be inferred from the very brief accounts that Ailsa had outsailed Britannia 16m. in the run, but no details are given.

In running down the Shipwash sands, for the next mark, the Sunk Light, Ailsa took the ground, and was not floated until 5h. 14m., Britannia meanwhile having finished at 4h. 45m. The sea was fortunately smooth and the committee boat laid by Ailsa, and she was finally towed in by a steam yacht with no serious damage. From the account of the 20-rater race at the same time, in which Stephanie won, beating Niagara by 47m., the others giving up, the wind was very light indeed at times. A diver was sent down next day, but found no injury to the bottom.

On June 7 the pair met again off the Thames mouth for a race from the Nore around the Mouse. The day was clear and bright, with a choppy sea and strong N. N. E. wind. Just before the start, Ailsa tore the head of her mainsail and gave up, leaving Britannia to sail over. Only two 20-raters started, Niagara and the Fife boat Luna. Niagara won very easily.

The Thames races have been lacking in interest this year, being strung out over a long period, but six races from May 17 to June 8, the date of the Nore to Dover race. The racing has also been dull, the largest class had but Britannia and Ailsa; the next class, the 40-rating, had three boats, Caress, Isolde and Carina, besides which were half a dozen twenties, including Niagara. The latter yacht was not ready for the first races, and altogether has not made a brilliant showing thus far, the honors going to Lord Dunraven's Audrey II.

The Nore to Dover race was sailed on June 8, in clear weather, with a smooth sea and light to moderate wind in the morning from N. E., but shifting to S. E. at the start, 10h. 30m. Ailsa led over the line by 30s. and held her lead through the race, passing North Foreland at 3h. 10m. 30s. with Britannia at 3h. 12m. 10s. Ailsa finished at 5h. 29m. 31s. and Britannia at 5h. 29m. 44s., the latter having gained just 17 seconds in 60 miles. Britannia won by 2m. 44s. corrected time. Niagara won in her class.

The *Yachtsman* comments as follows on the performances of Ailsa:

"The chief feature of the racing on the Thames last week was, undoubtedly, the very disappointing show made by the Ailsa. Those who saw the two yachts racing together at the Riviera regattas, and also those who have carefully studied the best reports of the Mediterranean races, were quite prepared to find some faults in Mr. Walker's new ship; but all expected her to beat Britannia on the Thames, despite those faults. Yet, instead of showing, as might have been reasonably expected, a decidedly improved form, Ailsa proved herself far less than a match for the Prince of Wales's yacht in her first two races of the British season. In fairness to the new cutter, these races should not be taken as an index of her future; for, although Britannia won in each essentially on her merits, there is many a mile between the Thames and the Clyde, and before Ailsa meets Valkyrie we may hope to see her at her best. That she was not up to her Riviera form was admitted by all who had seen her in the Mediterranean and witnessed the matches last week, and their opinion gains weight when one has a yacht of such consistent sailing as Britannia for a test.

"As we said, there are points about Ailsa that few like. She is obviously overspanned, and owing to her small freeboard she buries her lee decks badly at even a moderate angle of heel. This, of course, must detract from her speed and weather lines, no matter how great they may be, and a reduction in spars and sails naturally suggests itself as an improvement. Of course, as we said, these remarks might have applied with equal force to her during her brilliant series of Mediterranean victories, and we are far from making them simply because she has been beaten twice by Britannia. Those in charge of the yacht know best what to do with her, and we have no doubt whatever that Mr. Walker's big ship will ere long be better than the Ailsa of Riviera fame.

"But while one naturally refuses to be convinced by the two Thames races as to the merits of Ailsa, no praise is good enough for the uniformity with which Britannia sails. She is undoubtedly one of Mr. Watson's masterpieces, and if the new Valkyrie should turn out a marked improvement on her it will certainly go hard with Lord Dunraven if he once more fails to win the America's Cup. And although it is premature to judge of the 40-raters, it seems probable that in Caress we have a very much faster boat than Carina, so that if Mr. Watson can beat his last year's boat in the 40 class, how much more likely is he to turn out a Valkyrie infinitely faster than his two-year-old Britannia, particularly in view of the fact that the new yacht will be a larger boat."

The *Yachting World* says:

"In the large class there was something of a surprise in store for those who had followed the course of events in the recent Mediterranean regattas, and had therefore drawn conclusions. This was Ailsa's performance. Her defeat on the first day in the match of the New Thames Yacht Club might have been explained away by the fact that a British northwester of reefsail strength is obviously too much for her tender stability; but then Saturday's light weather brought no change in her speed. It is extremely difficult to explain so extraordinary a falling off in form, for although there may be a slight improvement in Britannia's speed, owing to a thorough overhaul of her copper, this would scarcely account for all. More likely appears the suggestion that some alteration has been made in Ailsa's trim; if so, the change is certainly no improvement."

New Eastern Yachts.

Yacht racing in the classes over 30ft. lwl. has practically disappeared in the East, in fact Jubilee is the only racing boat now fitting out, and she will have nothing to sail with to the eastward of Newport, as Volunteer will not race. Mayflower and Marguerite will be in commission and take part in the New York cruise, but there will be little competition for them at home. The purely local races of the many smaller clubs offer good promise of sport, however, and some fast boats have been added in the 30ft. and smaller classes. The new Dyer boat Salmon, owned by W. E. C. Eustis, is a centerboarder of 44ft. over all, 33ft. lwl., 10ft. 6in. beam and about 1ft. draft, of light construction and with a small sail plan. She will race mostly in Buzzard's Bay, where she will meet the new Hanley boat Ashumet, owned by Mr. C. H. Jones, former owner of the Chapoquoit. Ashumet is 44ft. over all, 14ft. 6in. beam and about 2ft. draft, sloop rigged, like Chapoquoit, and of light construction, very different in model and build from the older Hanley boats. In the 30ft. class about Boston will be the new Herreshoff fin-keel Anoatok, owed by Mr. Geo. Ownes, Jr., about 45ft. over all, 8ft. 6in. beam and 8ft. draft, a very handsomely built boat of the usual Herreshoff construction.

One of the most promising boats of the 21ft. class is the new Satanic, built by Sheldon & Co. for Capt. Wm. Daly, Jr., former owner of Harbinger. She is described as follows by the Boston *Globe*: "She is probably the most expensive of the new boats. Everything, even to the smallest detail, is the very best that could be procured. Although built strongly, her construction is as light as possible. The hull, without the centerboard, will weigh less than 1,000 pounds.

"Her dimensions are: 31ft. over all, 20ft. 9in. lwl., and 8ft. 2in. beam. Her body under water resembles very closely the well-known jib and mainsail boat Gleaner, and she has not the jog in her keel at the water line that will be seen in nearly all the new boats. She will have no deadwoods, and her greatest draft will be amidships, where she will draw about 10in. Satanic will be practically an improved Gleaner. Both boats were designed by the Fore River Engine Company of Weymouth Landing. Gleaner won nine prizes out of eleven starts last season.

"Satanic's sail plan will be small—about 650ft. in jib and mainsail. Her spars, which will be hollow, are of the following dimensions: Mast, 25ft. above deck; boom, 26ft. 3in.; gaff, 20ft. 9in. She will have 14ft. of hoist to her mainsail, jib 15ft. 10in. on the foot, 20ft. 9in. on the leech, and about 27ft. hoist. Her spars are being made by the Fore River Company, and as an experiment her blocks and other metal fittings will be made of aluminum. The largest blocks will weigh about seven ounces, and the smaller ones considerably less. Her main frames are of white oak, spaced about 14in. and between these are thin oak frames 3x¼in. Her keel is of white oak, 1½x5½ in., and the main frames are sided ¾in., and moulded 1½in. at the heel. They are dovetailed into the keel. The planking is ½in. cedar, tongued and grooved, and this is fastened to the main frames by bronze screws, and riveted to the flat ones with copper. The deck frames are of oak, 1½x1½in., and the deck of cedar, ⅜in. thick by 2¼in. wide. The centerboard, instead of dropping through the keel in the usual way, will drop alongside the keel. It will be of composite build, with about 300 lbs. of lead on the bottom.

"The lines of the boat are very easy, and she will probably be the lightest powered of the fleet. Her bow has an easy curve, and her forward and aft overhangs just clear the water. Her sails will be made of Union silk.

"There will be no trouble in picking out Capt. Daly's racer among a large fleet, as she will be painted a bright red above the water line and bronze below.

"Capt. Daly is well known among local yachtsmen. The fact that the 28ft. Cape cat Harbinger was the top boat of her class for the last two seasons is largely due to his efforts and his able Corinthian crew. A pretty effect on the new boat will be the uniforms worn by the crew. They will consist of white sweaters, with a large red letter S on the left breast, blue knee breeches and red caps."

Messrs. C. F. and G. C. Adams will sail this year on the new catboat Rooster, designed by Arthur Binney and built by Lawley & Co. She is 24ft. 6in. over all, 18ft. 6in., lwl., 7ft. beam and 9in. draft, with no deadwood, a straight rising floor and hard bilge, and the centerboard will weigh 800 lbs.; a Tobin bronze plate. The construction is very light, the oak frames ¾x¾in. spaced 10in., planking ⅝in. white cedar and deck ⅝in. white pine. There will be two watertight bulkheads of Tobin bronze. The mast will be stepped far forward and supported by shrouds and a forestay. The sails will be made by Wilson & Silsby, of a special twilled duck. The ordinary balance rudder, of Tobin bronze, will be used.

Another interesting new boat was built by Arthur Dyer for Mr. A. H. Higginson, of Manchester, after the type of Onawa. Exit, as she is named, is 27ft. 9in. over all, 20ft. 1in. lwl., 6ft. 5in. beam and about 6in. draft. The greatest overhang is forward, over 5ft., with about 2ft. 6in. aft. Her ballast will be a Tobin bronze plate of 250lbs. The hull is of very light construction, keel 1½x6in., frames ⅞x¾in. spaced 10in., planking ¼in. white cedar and ⅜in. Spanish cedar, fastened with brass screws, deck beam of oak ¾in. square, deck of light cedar covered with canvas. Her mast is 21ft. deck to truck, boom 23ft., gaff 15ft. The sails were made by Wilson & Silsby, of Union silk.

Some members of the Old Colony Y. C. are building a keel cutter from the designs of Mr. Franklin Bassford, the marine artist; she will be 40ft. over all, 28ft. lwl., 10ft. beam and 9ft. draft, with a lead keel of about 4 tons. The design is in general of the Gloriana type, with long ends and a very hollow section. The boat will have a very good cabin with over 6ft. headroom. She will be rigged as a pole-masted cutter.

Jubilee.

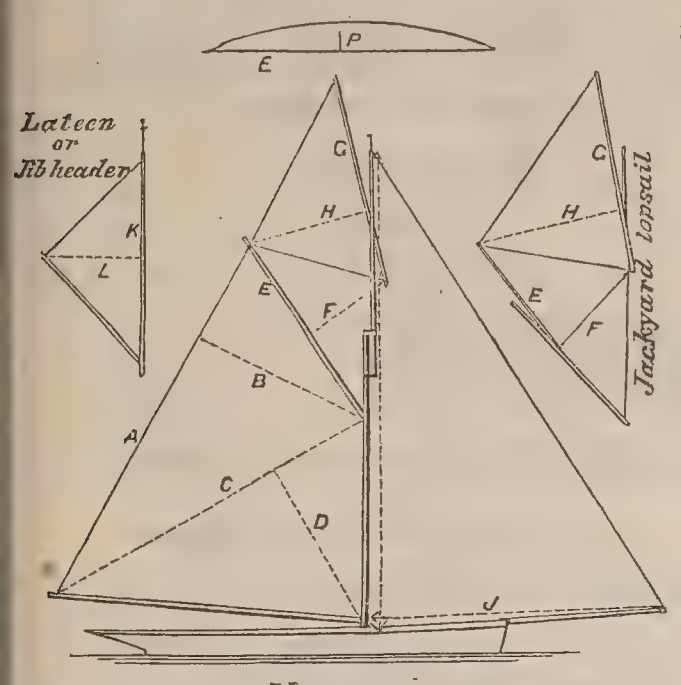
THE alterations to the hull of Jubilee are now completed, and she is about 3ft. 6in. longer on the waterline forward. In the course of the lengthening, the small auxiliary centerboard and trunk under the forefoot has been removed, as was done after trial in Pilgrim. After two seasons of rusting and scraping, the scale is all off the steel bottom, and she will be better in this respect than in her first season. Capt. Henry Newcomb, so long in Fortuna, is now in command, and his crew have scraped and polished the hull from keel to rail, the topsides being again painted white. Wilson & Silsby have overhauled all the sails, those of 1893 being used again; and the rigging has been thoroughly fitted by Mr. Billman, the Boston rigger. The yacht, while not widely different from her original model or sail plan, will be in very much better condition than in her first unfortunate season.

Atalanta, steam yacht, has been fitted out at Southampton, and Mr. Gould will join her at Havre, after which she will proceed to Kiel for the opening of the Baltic Canal, on June 21. Capt. Shakford has been seriously ill in Southampton for some time with pneumonia, but is much better. First officer Todd, of the American liner Berlin, will take his place for the present.

The Yacht Racing Association.

[*Concluded from page 471.*]

MEASUREMENT OF SAIL AREA.



Mainsail.—A—Measured from the top of the boom (under the pin for the outhaul shackle on traveler or clew slide when hauled chock out) to the gaff under the pin of the sheave of the topsail sheet, provided the peak cringle of the mainsail does not extend beyond the pin; in the case of the yacht having no topsail, or of the peak cringle extending beyond the pin of the topsail sheet sheave, then the measurement to be taken to the peak lacing-hole.

B—Perpendicular to A, measured to under side of gaff close in to mast.

C—Measured from top of boom over the pin of the sheave for outhaul or end of clew slide to under side of gaff close in to the mast.

17

Sail area.

MAINSAIL.

D—Perpendicular to C, measured in to the mast, in a line with the top of the boom, or to tack cringle of mainsail if below top of boom.

Yard Topsail.—E—Measured from upper side of gaff close in to the mast to pin of sheave for topsail sheet, or to lacing-hole in jackyard.

F—Perpendicular to E, measured to lacing-hole in jackyard.

G—From lacing-hole to lacing-hole in yard.

H—Perpendicular to G, measured to pin of sheave for topsail sheet in gaff, or to lacing-hole in jackyard.

Jibheader.—K—Measured from top of gaff close in to mast, to pin of halliard sheave in topmast.

L—Perpendicular to K, measured to pin of topsail sheet sheave in gaff, or to lacing-hole in jackyard.

Head Sails.—I—The perpendicular I to be measured from the deck at the foreside of the mast to where the line of the luff of the foremost headsail when extended cuts such perpendicular; in case a schooner has no foretopmast, but a maintopmast and main spinaker, the perpendicular for the fore triangle shall be measured from the deck to where the line of the luff of such spinaker when extened cuts the maintopmast.

J—To be measured from the foreside of the mast to where the line of the luff of the foremost headsail when extended cuts the bowsprit, other spar, hull, etc., where the case may be. In all cases, if the distance from the center fore and aft line of the mast to the outer end of spinaker boom (when shipped in its place and square to the keel) exceeds the distance from the foreside of the mast to the bowsprit end (where cut by the line of the luff of the foremost headsail) the excess shall be added to the base of the triangle formed by the headsails; and the area of the headsail to be computed accordingly. In the case of a yacht having no headsail, but carrying a spinaker, the area for headsail shall be computed from the length of spinaker boom and the height from deck to where the line of the luff of the spinaker when extended cuts the mast. The length of headstick or headyard to spinaker shall not exceed one-twentieth the length of spinaker boom. Footyards not allowed on spinakers. In the case of a yacht carrying a square sail or square topsail or raffee (together or separately), the actual area of the same shall be computed; and if such area exceed the area of the fore triangle, the excess shall be used in the total area for determining the rating.

Foresail of Schooners.—A—Measured from foreside of mainmast (in a line with main boom goose-neck) to gaff under the pin of topsail sheet sheave

B—Perpendicular to A, measured to under side of gaff close in to mast.

C—Measured from foreside of mainmast (in a line with main boom goose-neck) to gaff close in to the mast.

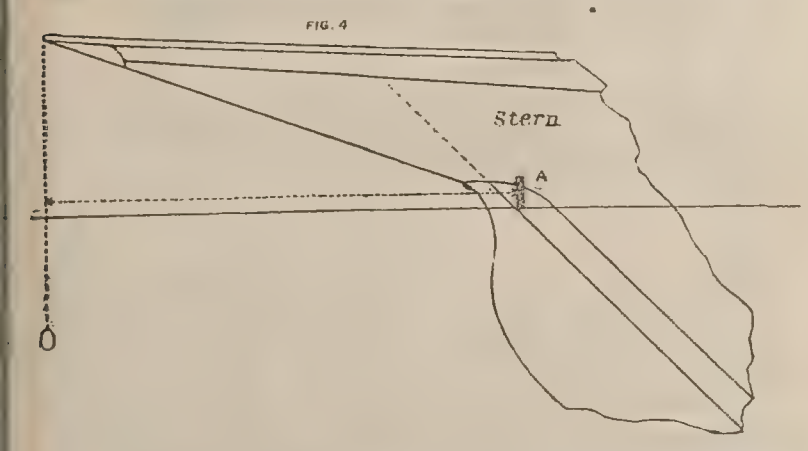
D—Perpendicular to C, measured in to the mast in a line with the top of the fore boom or tack cringle.

AREA OF MAINSAIL.

To Find the Area of the Mainsail —Multiply A by B and C by D, and add the two products together and divide by 2.

Area of Yard Topsail.—Multiply E by F and G by H, and add the two products together and divide by 2.

Area of Jibheader.—Multiply K by L and divide the product by 2.



Area of Head Sails.—To find the area of head sails, jibtopsail or spinaker, multiply I by J and divide by 2.

Area of Pole Mast Head Sails.—Multiply I by J and divide by 2.

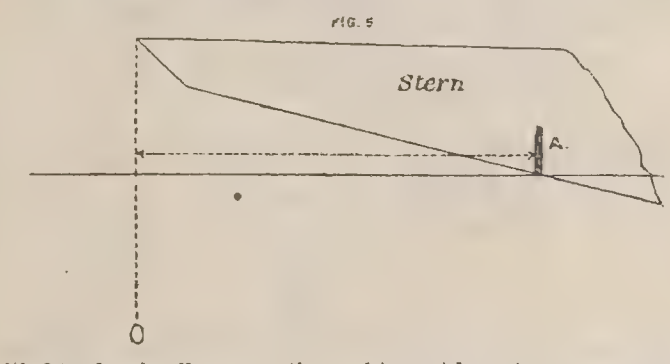
Area of Schooner's and Yawl's Sails.—Similarly found. In the case of a yawl having a lug mizen, the lacing-holes in the yard would be taken as the boundaries.

Areas of Lug Sails and Head Sails.—In the case of a lug sail, standing lug sail or balance lug sail being carried, the actual area of the same shall be carried, the measurements for computing the area of the same shall be taken from the foreside of the mast, etc., in accordance with the method provided in the rule for head sails.

FIG. 4

Area Bounded by Curved Edges of Sails—The area bound by the round in the foot, head, luff or leach of a sail, if at any time extended by battens or otherwise beyond the line between the points of measurement, shall be computed as follows:—multiply the base, E, by ⅜ the perpendicular, see small figure over sail plan.

In case of disputed measurement, or if the necessary measurements cannot be obtained from the sail maker, the sails can be measured in the manner following:—Take the length of boom from mast to pin of sheave for outhaul, and length of gaff from mast to pin of topsail sheet sheave, or lacing-hole, as the case may require; then hoist the sail with the tack fast, and set the peak and luff up taut, and let go the topping lifts so that the weight of the boom comes on the leach of the sail. With a line and tape measure the leach and luff and the diagonal C. For the head sail measure the height, I, and the distance, J, as provided for in the section dealing with headsail. For topsail, the sail would be hoisted and marked in the line with the gaff; then lowered and the other dimensions taken. From the measurements so taken, a sail plan would be made and the areas calculated as described.



In all calculations, whether relating to length, sail area or rating, any fraction beyond the second place of decimals shall be disregarded. As soon as a yacht has been measured by the official measurer a certificate of rating of the Yacht Racing Association shal be granted to her owner, unless from any peculiarity in the construc tion of the yacht or other cause the measurer shall be of the opinion that the rule will not rate the yacht fairly; in which case he shall report the circumstances of the case to the Council, who, after due inquiry, shall award such certificate of rating as they may consider equitable. The certificate of rating of the Yacht Racing Association shall only be valid as the yacht's rating for racing, so long as no increase is made in her rating length or in her spars or sail area. If any alterations be made by any means whatever, so that one or both of the marks at the bow and stern, as placed by the owner, come inside the length immersed when the yacht is lying in smooth water in her usual racing trim, with racing crew on board at and about the mid-over all length, or if any increase be made in the length of spars, or in the sail area of a yacht, or if any mark denoting her length is moved from its position, her certificate of rating ceases to be valid and must be immediately returned to the secretary of the Yacht Racing Association, with notice in writing of the alterations, in order that the yacht, or her spars or sails may, if necessary, be remeasured and a new certificate issued. Yachts which have been raced previously to 1893 shall be allowed to compete in the classes for which they were designed, by allowing time for any excess of rating arising from remeasurement with a racing crew on board, provided no alteration has been made in the hull by which the length of load waterline has been increased since 1892, or any increase made in the sail area since 1892.

A certificate of rating of the Yacht Racing Association shall be held by every yacht starting in a match, unless the sailing committee give special permission in writing, before the start, that the yacht may compete without it; but in the event of any dispute as to the rating of a yacht so exempted or otherwise, she or her sails shall be measured by the official measurer before she can be entitled to a prize.

The other sailing rules are interesting, but they are in the main in accord with American rules, so we omit them, as they occupy considerable space. The following is worth quoting as relating to a point that is much in doubt on both sides of the water: "A yacht club shall not be considered a recognized yacht club within the meaning of this rule unless it shall have been proposed and accepted by the council of the Yacht Racing Association, who shall have the power of cancelling such recognition should they deem it expedient to do so."

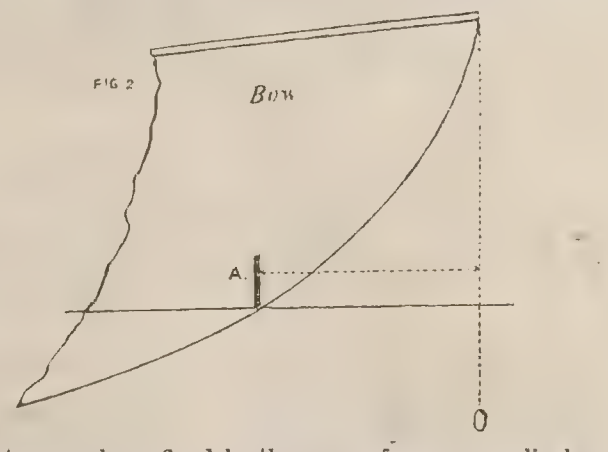
In the appendix the Association suggests: That as mixed rig races are no satisfactory test of the relative speeds of yachts, the different rigs should, whenever practicable, be kept separate; but when mixed races are unavoidable, the following rule shall be observed: The rating of schooners and yawls to be reckoned for time allowance as follows: Schooners at three-fifths and yawls at four-fifths their actual rating, provided that in case of a yawl her mainsail does not exceed .37 of her total sail area, and that her mizen is not less than 0.06 of her total sail area. In the case of a pole-masted yawl, her mainsail shall not exceed 0.46 of her total sail area, and her mizen shall not be less than 0.075 of her total sail area. In schooners, the foreside of the mainmast shall at the deck be not farther forward than the middle of the rating length Ketches and luggers shall be rated for time allowance at three-fifths their rating; provided that in a ketch the distance between the masts does not exceed half the rating length of the yacht, and that the smaller sail is carried aft. In the case of a lugger, to be

FIG. 5

entitled to the rig allowance, the yacht must have two or more masts, and the after, or the middle mast, at the deck, must not be forward of the middle of the rating length; and in the case of a two-masted lugger, if the area of the after lug be less than half the area of the main lug, she will be rated as a yawl.

The Association further recommends that the classification of yachts should, when practicable, be as follows: not over 2½ rating, 5, 10, 20, 40 and 60 rating, there being no limit above the 60 rating class.

INSTRUCTIONS FOR THE MEASURERS ISSUED BY DIRECTION OF THE COUNCIL.



1. The measurer shall not measure for the Yacht Racing Association a yacht or boat which he has designed or built, or which any firm he is interested in has designed or built; nor shall he measure any yacht in which he is interested, as owner or otherwise.

2. Before measuring a yacht the measurer should ascertain from the owner or his representative that she is in her correct racing trim, and that the fees for measuring have been paid. All sails, spars, gear, etc., as usually carried by the yacht when racing, must be on board when the marks for the rating length are being tested. The measurer may allow sails, spinaker gear, tackle, etc , to be put amidships while the marks for the rating length are being tested.

3. The measurements to be taken are the rating length, heights at bow and stern, and the lengths of the spars or dimensions of sails, in accordance with the Y. R. A. Rule 3 for the rating of yachts.

4. The rating length shall be obtained by measuring the length over all on deck, and deducting from this length the distances in to the

FIG 2

bow and stern marks as fixed by the owner, from perpendiculars let fall from the bow and taffrail, as shown in the diagrams. These perpendiculars are best obtained by a hand lead sunk 2 or 3 fathoms deep, so as to insure a steady line to measure from. The distances in from the line are to be taken by a rod placed parallel to the water surface, as shown in the diagrams.

5. The over all measurement must be taken parallel to the l.w.l. above the deck, starting from any convenient point forward on the rail, knee, etc., ahead of the fore end of the load waterline. When the length over all is taken with rods, a line should be stretched taut from the point forward to the taffrail to facilitate the accurate shifting of the rods.

6. After the over all length has been taken, the measurer must see that the crew are placed at and about the mid over all length (see Rule 14). He must then ascertain that the yacht is not immersed at the load waterline beyond the rating length, as represented by the owner's marks at the bow and stern. If a yacht is measured in a tideway, the measurer must view the marks in smooth and during slack water.

7. All measurements should be taken and recorded in the measurement book twice, and a third time if there is material disagreement. The mean should be adopted. A steel tape or rods supplied by the Yacht Racing Association must in all cases be used for taking the measurements.

8. The measurer must take and record in the measurement book such notes of a yacht's trim by measuring the height above water at the taffrail and stem, or by such other means as will enable him at any subsequent date easily to ascertain if the immersion at the waterline or the marks at the bow and stern have been altered since measurement.

9. If a yacht has movable ballast on board, the measurer should note its position.

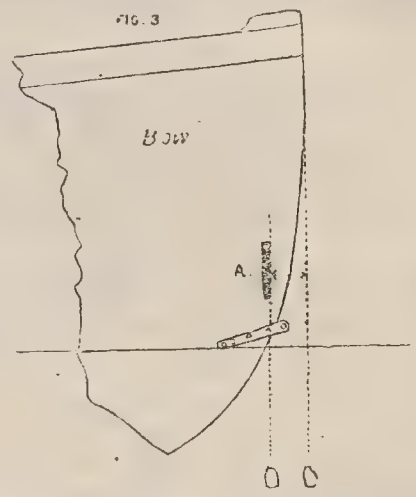
10. In measuring the main boom length, from mast to the pin of outhaul shackle, the measurer should see that the traveler, whether on a slide or around the boom, is chock out. For this purpose the clew of the mainsail should be unshackled and the traveler hauled out to the furthest point to which it can be taken.

11. The measurer should ascertain for himself the point on the mast or topmast, and on the bowsprit or cranse iron, to which the measurements for fore triangle must be taken.

12. In measuring the height for fore triangle, a piece of white linen should be attached to the string of the tape, and the tape can then be hoisted by the signal halliards, or by the jib or spinaker halliards, if no head sail be carried on the topmast stay or masthead pole stay.

13. Before measuring a jackyard the sail should be bent to it, or the foot laid parallel to the yard and fairly stretched; and as a check besides measuring the distance from the sheet to the outer lacing-hole, the number of cloths from sheet to clew should be counted.

14. In the event of any difficulty arising under Section 1 of these instructions, or otherwise, as to the measuring of any particular yacht, the secretary shall make arrangements for the measuring of the yacht.



MARKING THE RATING LENGTH.

I. The metal strips for marking the rating length must be those supplied by the Yacht Racing Association, and stamped Y. R. A. They can be obtained of the measurers free of cost.

II. The marks are to be placed vertically, and must be securely fixed to the yacht by the owner before measurement, one on each side of the bow, and one on each side of the stern, as shown in the diagrams. In the case of a yacht with very flat sections aft, the marks will be placed across the stern to represent the extreme point for immersion aft.

III. In case a bobstay plate or shackle or mooring chain would interfere with the placing and securing of the bow marks, they can be

FIG. 3

placed as shown in figures 1 and 3; but in no case may the immersed length extend beyond the marks, as ascertained by a plumb line dropped from the outer edges of the marks at bow and stern, with racing crew on board at and about the mid-over-all length.

IV. The marks must not be shifted nor removed without giving notice thereof to the secretary of the Y. R. A. (Rule 3).

The Y. R. A. has thirteen official measurers at various points in the United Kingdom. The fees for measuring are: Yachts exceeding 35ft. l.w.l., £2 12s. 6d.; of and under 35ft. l.w.l., £1 11s. 6d.; certificates of rating only, when the yacht does not require measuring, 5s.; for remeasuring hull or spars only, half fee.

Upon measuring days fixed by a yacht club, boats of 1-rating and under will be measured at a fee of £1, or 10s. if only for waterline, or if only for spars. The club in such cases must pay the measurer's traveling expenses. This scale applies only when not less than £4 is paid for measuring fees in one day.

In the case of yachts belonging to the members of the Y. R. A., the fees are reduced from £2 12s. 6d. and £1 11s. 6d. to £1 11s. 6d. and 15s. All fees must be paid to the secretary at the time when application for measurement is made.

The council now includes thirty-one members in all, and fourteen clubs send representatives to the Association. The list of recognized clubs includes sixty-six different organizations. The present membership of the Yacht Racing Association is 130, including one lady.

Winthrop Y. C. Opening.

WINTHROP—BOSTON HARBOR.

Saturday, June 1.

A LIGHT and falling wind made a slow race for the Winthrop Y. C., when it opened the season on Saturday. The times were:

	Start.	Finish.	Elapsed.	Corrected.
FIRST CLASS, 7½ MILES.				
Harold, A. J. Bliss	4 05 00	6 05 20	2 20 00	1 35 56
Wivern, Leighton	4 05 00	Withdrew.		
SECOND CLASS, 7½ MILES.				
Clara, G. Burgess	4 10 00	6 17 50	2 07 50	1 43 44
Savitor, Hutch	4 10 00	6 15 13	2 05 13	1 39 53
Harriet, L. J. Harrington	4 10 00	6 28 00	2 18 00	1 50 26
Alma, C. A. Henry	4 10 00	6 28 03	2 18 03	1 53 01
Eloise, J. S. and E. B. Partridge	4 10 00	6 30 15	2 20 15	1 51 36
Little Rogue, G W. Spencer	4 10 00	6 20 50	2 10 50	1 43 26
THIRD CLASS, 5 MILES.				
Magpie, H. G. Otis	4 15 00	5 24 40	1 09 40	0 40 27

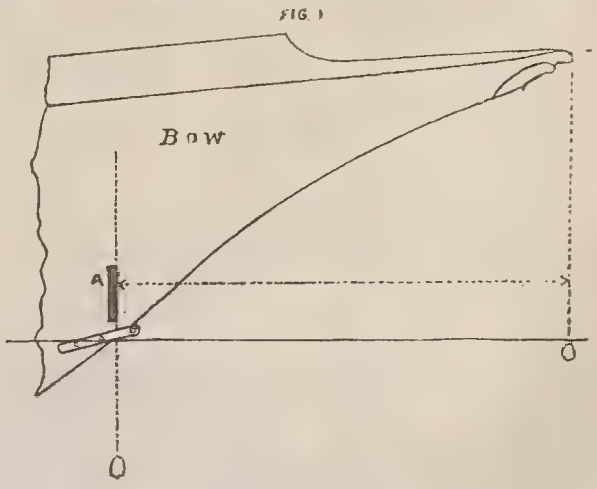
Quincy Y. C. First Championship.

QUINCY—BOSTON HARBOR.

Saturday, June 1.

ONLY six boats started in the first race of the Quincy Y. C. on June 1, the wind being very light and variable. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Gleaner, F. O. Wellington		2 58 58	
Adolphe, H. Moebs		2 59 28	
Moondyne, A. J. Shaw		Withdrew.	
SECOND CLASS.			
Swirl, H. M. Faxon	19.05	1 26 30	0 58 50
Opechee, W. P. Barker	19.08	1 31 25	1 04 06
Kayoshk, F. B. Rice		1 33 04	



Victoria Y. C. Opening Race.

VICTORIA B. C.—PUGET SOUND.

Monday, May 27.

The Victoria Y. C. of Victoria, B. C., is one of the growing yacht clubs of the northwest. Its fleet now numbers some fast modern boats, and is increasing every year. The club starts the present season in a new two-story club house. Com. G. A. Kirk has just imported

FIG. 1

the 1-rater Frou Frou, one of Mr. Linton Hope's boats, from England, and will race her against the very successful Daisy Bell, built last year at Victoria from Mr. Hope's designs. The Victoria yachtsmen are now interested in the half-rater class; two boats have been built from local designs and one from the Clyde "one-design" class by Mr. Hope. The fast Clapham boat Myth has had her board removed during the winter and replaced by a deep fixed keel.

The opening race of the club was set for May 23, but the wind was so light that but one boat, Defiance, finished within the time limit of 5 hours. On May 27 there was a good s.w. wind in the afternoon and a very fine race was made. The times were as follows:

Start 1:30.

	1st Round.	2d Round.	Elapsed.
CLASS A.			
Myth	2 44 12	3 42 49	1 59 49
Rainier	2 50 05	3 49 23	2 04 23
Xora	2 51 13	3 59 33	2 11 33
Volage	2 55 31	4 06 53	2 21 53
CLASS B.			
Hornet	2 53 24	3 57 58	2 12 58
White Star	2 56 43	4 03 42	2 18 42
Katie Thomas	3 02 57	4 16 25	2 31 25
Edw McKay	3 03 13	4 19 37	2 34 37

CLASS C.

Defiance			
Daisy Bell	2 58 58		1 08 58
O K	3 02 18		1 12 18
Garland	3 03 32		1 13 32
Frou Frou	3 09 21		1 19 21
Sea Lion	3 10 11		1 20 11
Evelyn May	3 13 38		1 23 38

The winners were: Class A—Myth, Rainier, Xora; Class B—Hornet, White Star, Katie Thomas; Class C—Daisy Bell, O. K.

Brooklyn Y. C. Annual Regatta.

BENSONHURST—NEW YORK BAY.

Monday, June 10.

THE annual regatta of the Brooklyn Y. C. was sailed on June 10 under most favorable conditions, there being a steady topsail breeze from S.E. all day, while the weather was clear and neither too hot nor too cool. The courses were:

OPEN YACHTS.

Mainsail—Class A, 21ft. racing length and under, to black buoy No. 9, to red bell buoy head of Swash Channel and return, ten miles. Class B, over 21ft. to 25ft. racing length, to black buoy No. 9, to red bell buoy head of Swash Channel and return, ten miles.

Jib and Mainsail.—Class 1, 25-ft. racing length and under, to black buoy No. 9, to red bell buoy, head of Swash Channel, and return; 10 miles. Class 2, over 25ft. racing length, to Old Orchard Shoal Light, to red bell buoy; head of Swash Channel, and return; 15 miles.

CABIN YACHTS.

Mainsail.—Class D, 24ft. racing length and under, to Old Orchard Shoal Light, to red bell buoy, head of Swash Channel, and return; 15 miles. Class E, over 24ft. racing length, to Old Orchard Shoal Light, to red bell buoy, head of Swash Channel, and return; 15 miles.

Sloops, Cutters and Yawls.—25ft. class; 25ft. racing length and under, to Old Orchard Shoal Light, to red bell buoy head of Swash Channel, and return, 15 miles; 30ft. class, over 25ft. to 30ft. racing length, to Old Orchard Shoal Light, to red buoy No. 12, perch and ball on top (S. W. Spit), and return, 18⅛ miles; 35ft. class, over 30ft. to 36ft. racing length, to Old Orchard Shoal Light, to red buoy No. 12, perch and ball on top (S. W. Spit), and return, 18⅛ miles.

The start was made at 12:28 for the larger boats, 12:33 for the next, and 12:43 for the smallest, thus taking almost half an hour before the last boat was timed. The judges' boat, the steam yacht Venture, loaned by a member of the club, and the club steamer, the Laura M. Starin, laid at the line until all but the smallest boats were out of sight; the consequence was that the spectators saw nothing but the start, and later on, the finish of a very interesting race. With good management the fleet of 26 yachts, and the largest only 35ft., might have been started within ten minutes, and the steamer might have been kept within sight of both start and first mark, giving a fine view of most of the race.

The start was enlivened by a foul between Aliris and Dragon, and by the loss of Nomad's topmast on the line, a hand aloft clearing away the sail while the yacht continued in the race. The best race of the day in the larger cabin cat class was spoiled, as Mary sprung her mast and finished with a reef in, while Almira sailed a wrong course. The times were:

CLASS A—OPEN CATS 21FT. RACING LENGTH AND UNDER.

	Length.	Finish.	Elapsed.
Edda D., R. W. Rummell	19.01	2 15 40	1 32 01
Vigilantia, T. Krombach		Withdrew.	
Ibis, F. M. Randall		2 10 60	1 25 30

CLASS B—OPEN CATS OVER 21 AND UNDER 25FT.

Rosamond, G. R. Wheeler	22.00	2 13 30	1 27 11
Madge, H. Lindemann	21.11	2 40 40	1 26 34
Lester, H. M. Ferguson	22.11	2 09 20	1 25 56
Nereid, Knapp & Houston		2 16 00	1 31 12

CLASS D—CABIN CATS 24FT. AND UNDER.

Kittie, Hazen Morse	22.05	3 13 20	2 38 15
Allegro, F. M. Randall	22.10	3 14 23	2 41 03

CLASS E—CABIN CATS OVER 24FT.

Ensign, C. D. McGieghan		3 42 50	3 07 56
Chief, Anthony Barrett		3 48 30	3 11 26
Mary, Wm. Ellsworth	28.09	3 12 50	2 35 20
Hector, C. Kimpton		3 22 25	2 45 54
Mabel, W. H. Ludlow	25.09	2 58 45	2 22 23
Almira, W. Hanan	28.07	Withdrew.	

SLOOPS, CUTTERS AND YAWLS—25FT. CLASS.

Adele, C. H. Humphreys	24.11	3 21 21	2 48 14
Paula, Theo. Crohen	24.05	3 35 58	3 01 39
Arrow (yawl), H. W. Brett	23.03	3 26 05	3 00 45
Grace E., W. A. Neidhault	23.09	3 34 35	3 01 03

SLOOPS, CUTTERS AND YAWLS—30FT. CLASS.

Feydeh, E. H. Cowman	28.00	3 39 45	3 14 45
Nomad, W. B. Grotage	26.07	3 23 27	2 57 58

SLOOPS, CUTTERS AND YAWLS—35FT. CLASS.

Aliris, J. A. Constant	35.04	Withdrew.	
Dragoon, F. M. Freeman	34.00	2 43 00	2 17 34
Forsyth, Alex. F. Roe	32.06	Withdrew.	
Heedless, L. Wunder	32.00	3 22 00	2 56 18
Wabasso, H. B. Shaen		4 02 10	3 35 55

The winners were; Class A, Ibis; Class B, Madge, subject to measurement; Class D, Kittie; Class E, Mabel; sloops and cutters, 25ft. class, Adele; sloops and cutters, 30ft. class, Nomad; sloops and cutters, 35ft. class, Dragoon.

Feydeh protests Nomad.

Safety in Small Craft.

WITHIN the past half dozen years a very great change has taken place in Great Britain in the small classes, of 20ft. l.w.l. and under. The use of such small craft, and especially for racing, has increased enormously, and the speed has been also very much increased, but at the expense of safety, and capsizes are becoming almost as frequent as in this country. The present season will see numerous additions to two dangerous classes—the shoal, light and unballasted boat, with small underwater body and large topsides, and the somewhat similar boat with considerable ballast in the form of a bulb and fin. Both of these have their dangers and disadvantages, as is very clearly pointed out in the following letter to the *Field* by that old canoe and boat sailor, W. Baden Powell. His comments and suggestions apply with equal force in our waters, and the letter is worth careful reading. On the day it appeared in the *Field* the noted racing 1-rater Challenge, designed and owned by Mr. Walter Stewart, capsized and sank in a race on the Thames, her crew of two being saved:

What is the exact quantity of loss of life which will be enough to revolt the feelings of a sufficient majority of small-rater patrons, both as to owners, crews and clubs, and to cause them to "Black List" each and every capsizeable or sinkable small rater? Are we to wait till a big drowning disaster has occurred in open water; or, on the other hand, is not the lamentable experience of three days in April amply sufficient sample of the possible, if not the probable, immediate future?

Let us first examine the types of small raters which are growing daily in favor, but which are absolutely dangerous in certain defined circumstances (and let me here state that I do not attack the inland up-river skimmer as dangerous, provided she confines her antics to her home waters, and never carries any person who is unable to swim in clothes). They stand thus: capsizeable but non-sinkable; capsizeable and sinkable; uncapsizeable but sinkable. In the first-named class the weight of a wetted crew, of spars and rigging, and of wet sails, must be supported above water in addition to any weights carried within the hull.

The capsizeable but non-sinkable boat may be sufficiently safe in some states of water and wind, and with, at the same time, expert men for crew; but even then circumstances may require prompt rescue by extraneous aid from other vessels. Take the case of the Daireen in Dublin Bay on April 13, only 300yds. outside Poolebeg Lighthouse; I believe she is fitted with dagger centerplate and has no ballast, and that she has a self-draining watertight cockpit, a common fitting in American racing canoes. This form of cockpit, or in the same manner a canvas bucket well, will give to the boat ample floating power, providing no damage occurs to her flimsy, thin bottom in open rough water, unless she is immediately, by acrobatic balance of her crew, righted on to her bottom and her sail at once lowered, the mainsail is almost certain to get under water and the boat will turn bottom up; then the crew, with nothing but the keel slot to hold on to, cannot last long on her slippery bottom. Another boat of the non-sinkable type, the Nadeschda, 0.85-rater, capsized on April 20 in the narrow waters of Teddington Reach on the Thames; she was fitted under her decks with large air bags, and has also bulkheads; assistance was immediately alongside, after she was righted, but her deck was awash, and with the top weight of wet sails and her crew she would, from what I saw of her motion, I have no doubt, have been rolled over again and again had she been in rough open water and unaided. Open unballasted boats, such as the water-wag Laurrie, which capsized in Kingstown harbor on April 20, may be unsinkable, but they also are very apt to turn bottom up, and in any case need prompt assistance to the crew. The Mabel, 0.5-rater of sharpie type, also capsized in Teddington Reach on April 15, happily for her, not in open rough water; one report says she sank, but I doubt it, as she is said to be unballasted and properly bulkheaded.

In the capsizeable and sinkable type we have undoubtedly the most dangerous type of any; not enough ballast to prevent capsizing, but ample weight to sink them. Such a craft was the Corina, which capsized and sank in the river Yare on April 13, whereby her owner, the expert canoe sailor Mr. Alaric Tredwen, and Miss Barton were drowned, and four others had a very near call. It was only through the gallant exertions of poor Tredwen that a third life was not lost. Now this accident took place in smooth water on a river not 60yds. wide; is it not almost certain that, had the accident occurred in rough open water a mile or so from shore, all the six lives would have been lost? Boats of similar nature exist in considerable numbers, and, though probably in the first place they were constructed to sail in particularly narrow sheltered waters, they change owner's hands, and the new owner may be caught out in the open and very easily come to grief.

Now we come to the uncapsizeable but sinkable type. If it were not that criticism of this solemn subject may be and ought to be a warning against risks of death to the novice, or to the too confiding crews who assist the reckless owner in racing in a death trap, any experienced sailor might grin, as far as mouth can stretch, at the letter which Mr. Sibbick put forth recently in the *Field*. Many a boat is, as he says, "built and fitted to be unsinkable," but, with the present scantling, is there one in a dozen of successful racers which, after three months of racing, would pass an actual test afloat? "They float their own ballast and belongings, and at least half a dozen hands," says Mr. Sibbick. Do they? That is about 17cwt., without counting sails, spars, and gear, floated by the two end compartments, if they remain watertight, and if the bulkheads do not burst. But anyone who has sailed in a rough water race, and has crawled beneath the deck, and noted the working of the boat in some of the latest Solent raters, will not easily forget the springing of the sides and twists of shape at every heavy jump over a sea. Of course, a small rater can be so rigidly constructed as not to be likely to twist or spring her sides away from the bulkheads, the deck may be sufficiently stout and well laid not to warp up from the top of the bulkheads, and the bulkheads may be constructed of sufficient substance and strength to resist the weighty rush of water in the mid-compartment, but what chance has such a substantially constructed boat in racing against the "matchbox" build? For equal weight of ballast and gear she must rate on a longer l.w.l., or be of a greater displacement in any case.

The danger of the bulb-fin boat, where the hull is a mere shell, with not even the chances given by flimsy bulkheads, which may possibly hold out for a time, is, of course, well known. The hull may fill, not merely from a bad "knockdown" squall, but may strike a buoy or, at night, a floating plank or fish box, or she may, and some have done so, start a plank by heavy crunching of her lee bow in jumping a sea. Of course, these accidents are not so common as the capsizing of insufficiently ballasted boats, but they are none the less real, and would prove equally dangerous and fatal.

In yachts of over 5-rating it may be difficult, and possibly unnecessary, to attempt to make them unsinkable, and, so long as the lead keel does not drop off, or the side open out or collision happen, danger is remote; but in regard to all yachts of 5-rating and under, especially when we come to 1-raters and 0.5-raters, it is perfectly possible to build and fit the boat so as to be practically uncapsizeable and unsinkable; but the structure must be considerably heavier than is at present put into racing boats of these ratings. I own a 0.5-rater which is divided into four water-tight compartments by three extremely strongly constructed bulkheads; these bulkheads are packed all round with a caulking capable of expansion, so that, even if the wood of the skin or deck, by warping or otherwise, works away from the bulkhead, the caulking keeps it water-tight. Each compartment is fitted with drain pipe and pump leading into the steering well, so that each can be tested at any time, and drained to the pump well. Her bulb-keel, being of lifting type, can be dropped to a considerable draft sufficient to render her uncapsizeable, and yet it can be lifted for shallow water or for housing her on the yacht's deck or ashore. In addition to this, her beam and buoyancy is such that, if laid flat down in smooth water, the lee coamings of her two hatchways would be above water, and she could ship no water; but, even if the bulb were housed close up, this would only happen in a very sharp squall and in absence of proper lookout. In this type of boat, and with such extra fittings to carry, one must be content to only win a race occasionally, in a blow, for instance; but at all times one has the comfort of knowing that, though the boat is small and the land at a distance, risk is reduced to the obtainable minimum.

It may now be asked, how can the clubs and the crews and the owners of safe boats set about to prevent further loss of life in, and discredit to, the small-rater classes? Let me make a suggestion; the capsizeable boat, whether she be unsinkable or not, is a nuisance in racing, and is a danger to other competitors. All competitors near by are bound to go to her assistance when she capsizes, and may thereby be thrown out of all chances in the race. Also they immediately run great risk of being cut open by her pointed centerplate or by her rudder blade, which are lying horizontal in the water; and yet you are to save her so that she may outsail you next fine light day, or repeat the trouble to others if a breeze is on.

Therefore, if a boat is not so fitted as to be practically uncapsizeable and also unsinkable, judged by her construction, to the satisfaction of the sailing committee of the club, she should be required by the committee of such club to carry on deck during the race, and ready for immediate use, one full size and weight Board of Trade circular life buoy of cork for each man on board her.

The result of such a rule would be that the dangerous flimsy type of boats would have to carry, in a bad position, about the same weight of life-preserving appliances as the safely constructed craft carries in her extra construction and bulkheads. And, further, it would be well in the interests of the nursery of the sport that each club should faithfully record in public the capsizes or sinkings which occur. In this manner, while none would be barred, if they elect to risk them, the dangerous types would be steadily discouraged by penalty in racing and risk of loss of market. The lives already lost call for prompt action on the part of those yachtsmen who hold the interests of the sport to be above mere pot-hunting and who would prevent further loss of life.

W. BADEN-POWELL.

ROYAL THAMES Y. C.

YACHTING NEWS NOTES.

In a race of the Dublin Bay Sailing Club, on May 11, the 1-rater Spell lost her fin through the corrosion of the galvanized bolts by which the gunmetal fin was secured to the angle irons outside the keel. In spite of the loss the boat managed to sail safely back to the harbor.

Mr. A. K. S. Robertson, of Shirley, Southampton, has ordered a Herreshoff 1-rater for the Solent.

Messrs. John Wyley & Son, New York, have just issued a very practical and valuable work entitled "Screw Propellers and Marine Propulsion," by I. McKim Chase, M. E.

We have received from the Chicago Varnish Co., makers of the celebrated "Navalite" marine varnish, a very neat and attractive little book containing the portraits of yachts and other vassels on which Navalite is used, and of their captains. Among the former are Vigilant, Meteor, Nourmahal, Alicia, Corsair, Margarita, Sea Fox, and Helvetia; while among theskippers are Captains Haff, Jeffrey, Curtis, Bailey, and others. The little book is a very artistic and effective testimonial of the merits of Navalite.

An unusual case in marine insurance is that now being heard before Judge Gildersleeve, in the Superior Court, to recover damages upon the well-known steam yacht Feiseen. It will be remembered that the Feiseen was built by W. B. Cogswell, of Syracuse, who in April, 1893, insured her for $21,000 and paid $787 premium. On September 9, 1893, her machinery broke down in this harbor and while in tow of the yacht Vamoose she was damaged in collision with the steamer Guyandotte. The tug Ramsey rescued the Feiseen and claimed $10,000. The present case is defended by the underwriters on the ground that the insurance applied only to inland waters. Meantime the salvage case is also pending.—*Marine Journal.*

Amonta, Mr. W. G. Brakan's new schooner, was lauched on June 5, at Harlan & Hollingsworth's yard, Wilmington, Del. She will not be ready before the end of the month.

W. Haviland, of Tebo's yacht basin, has had plans made for a one-rater, which will be built at once, and will meet the imported boats Wave and Shrimp. She will be built after very much the same general style as the two well-known boats, excepting that she will be distinctively American and will have a centreboard instead of a fin. It is said that the board will be something entirely new and novel in this line, which, while the principle has been tried and found correct, is, nevertheless, somewhat of an experiment. Her lines, it is said, will be finer drawn in places and somewhat easier on the whole than either of the other boats, while both her displacement and wetted surface will be smaller.—*New York Times.*

The spring regatta of the Larchmont Y. C. will be sailed on Saturday, June 15. The start will be made at 11.30 a. m. sharp. The judges' steamer, C. P. Raymond, will leave the club house at 10.30, and will carry a limited number of members.

The Brooklyn Y. C. has arranged the following fixtures:

June 2—To Great Kills. June 16—Handicap scrub races. June 23—To Sandy Hook for maneuvering. June 30—To Elm Tree Light Beach for athletic games and luncheon together. July 4—Dress ship at anchor after 12 M. and illumination in evening. July 7—Horseshoe for maneuvering and luncheon. July 14—Handicap Scrub races. July 21—Prince's Bay. July 28—Shore House, Bergen Point, for club midsummer dinner. Aug. 4—Atlantic Highlands P. Y. C. Aug. 11—Handicap scrub races. Aug. 18—Ruffle Bar, meet C. Y. C. Aug. 25—Fleet maneuvering, single hand small boat racing, and gig races n Gravesend Bay. Aug. 31—To Great Kills to rendezvous and lie all night. Sept. 1—Leave Great Kills 5 A. M., breakfast at Keyport, and anchor for the night at Highlands of Navesink, Shrewsbury River. Sept. 2—Athletic games on shore and leave for club house at 2 P. M. Sept. 8—Parade aroundinternational racers and seamanship drill by signal on return to anchorage. Sept. 15—To Great Kills. Sept. 22—Final handicap scrub races. Sept. 29—Final parade and manœuvering.

We are indebted to the secretaries of the Corinthian Y. C., of Marblehead, and the Quincy Y. C., for copies of the club books for 1895.

The Roberts Safety Watertube Boiler Co. is finding each year a wider market for its standard boiler, whose merits are now fully recognized by steam yachtsmen and owners of other steam craft. The works, at Redbank, N. J., are now busy, and with a large and complete plant and a long experience in this line of work the company is steadily improving its large output of all sizes of boilers.

The hitherto unknown owner of the new Free Lance, steam yacht, designed by Mr. A. Cary Smith, is Mr. F. Augustus Schermerhorn, owner of the steam yacht Empress.

Steam Launches.

MARINE IRON WORKS, Chicago, have just issued their 1895 catalogue, mailed free.—*Adv.*

Canoeing.

FIXTURES.

JUNE.

15. Red Dragon spring regatta, Delaware River.
15. New York spring regatta, Bensonhurst.
22. New York chal. cup, first trial race.
29. New York chal. cup, second trial race.
29. Marine and Field club annual, Bath Beach.

JULY.

6-20. W. C. A., 10th annual meeting, Ballast Island, Lake Erie.
4. New York chal. cup, International races.

AUGUST.

9-23. A. C. A., 10th annual meeting, Bluff Point, Lake Champlain.

SEPTEMBER.

Red Dragon fall regatta, Delaware River.

AMERICAN CANOE ASSOCIATION, 1895.

Commodore, Walter C. Witherbee, Port Henry, N. Y.
Sec'y-Treas., Chas. E. Cragg, Port Henry, New York.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, Thomas Hale, Jr., Yonkers, N. Y.
Central Division, W. S. Hackett, Albany, N. Y.
Eastern Division, R. N. Cutter, Winchester, Mass.
Northern Division, E. F. Burritt, Ottawa, Canada.

Annual dues, $1; initiation fee, $1. Applications for membership must be made to the Purser of applicant's division, from whom blanks for the purpose may be obtained.

Eastern Division Meet.

It having been decided by the executive committee, and approved by the Commodore, the annual meet of the Eastern Division will be held on June 15, 16 and 17, at Tyng's Pond, about six miles from Lowell, and reached by electric cars leaving every fifteen minutes from Bridge, corner Merrimack street.

The camp is charmingly situated, easy of access, with a fine stretch of water for sailing and paddling courses. It is admirably adapted for camping and there is a good restaurant a short distance from camp, where meals can be obtained at reasonable cost for those who do not care to camp and cater for themselves.

All canoes and camp equipage shipped care of the Vesper Boat Club, Lowell, so as to arrive by Friday, June 14th, will be forwarded. Be sure and ship early and avoid delays.

The Regatta Committee are preparing a programme of races which, with other important information, will be issued later. The races will take place on Monday, June 17, as follows:

Paddling, one mile straightaway. (For E. D., A. C. A. Paddling Trophy.)
Tandem Paddling—Single blades; one-half mile straightaway.
Tandem Paddling—Decked canoes.
Paddling; one half mile—single blades.
Paddling; club fours.
Upset Paddling.
Combined Sailing and Paddling; three miles.
Sailing; unlimited; three miles.
Sailing; upset.
Visitors' Sailing Race.
War Canoe; one mile straightaway.
Extra Events: Tournament, hand paddling, hurry-scurry, standing paddling.

A. C. A. Membership.

EASTERN DIVISION: Geo. F. Gray, Boston, Mass.; Albert G. Smith, Lowell, Mass.; Edmund O. Thompson, Everett, Mass.; Andrew G. Swapp, Lowell, Mass.; George L. Churchill, Lowell, Mass.

CANOE NEWS NOTES.

The spring regatta of the Red Dragon C. C. will be held on June 15 at Wissinoming, on the Delaware River. The programme is as follows: 1. Yawl race, 3 miles. 2. Maneuvering upset sailing. 3. Single paddling, double blades for decked canoes, ½ mile. 4. Tandem paddling, decked canoes, ½ mile. 5. Tandem paddling, open canoes, single blades, ½ mile. 6. Swimming race, 100yds. 7. Hand paddling, 100yds. 8. Upset paddling, ¼ mile. 9. Tournament. Musical and minstrel entertainment by the Minstrels Mantique and the Kanoo Klub Kwartett at 8 o'clock, followed by dancing.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O., June 2.—The following scores were made by members of the Cincinnati Rifle Association at their range to-day. Conditions: 200yds., off-hand, at the standard target:

Gindele	9	7	8	7	8	9	9	8	9	8—82
	7	8	9	9	8	8	9	6	8	10—82
	7	10	9	10	8	7	9	8	6	7—81

Presque Island Rifle Club.

ERIE, Pa., May 30.—The members of the Presque Island Rifle Club held their first prize shoot to-day. The club has just built a handsome pavilion, and this, with the natural advantages of the range, make the property of the club something to be proud of. A large number of spectators were present to witness the shooting. The prize list and the names of the winners were as follows: Medal, won by J. Brown; repeating rifle, J. W. Paul; pair trousers, Joseph Thomas; meerschaum pipe, J. G. Germann; hanging hall lamp, F. L. Derby; sweater, W. F. Treiber; pair shoes, J. Stidham; pair bicycle shoes, C. Curry; sweater, J. Bacon; set reloading tools, F. G. Lynch; silver scarf pin, W. J. Leyer; pair shoes, J. F. Leyer; ink stand, W. Wilkins; silver mounted cane, Harry Thompson; pair bicycle shoes, Alfred Thompson; pair trousers, Fred Sharp; leading flask, O. S. Riblet; pocket knife, G. Schaffer; cartridge belt, A. Olvitt; box cigars, W. Wright; box candy, F. Semmence; jar pickles, Chas. Van Etten.

The scores were as follows:

John Brown	7	9	8	7	7	5	7	7	8	8—73
J W Paul	7	6	10	6	9	8	7	4	2	6—65
J Thomas	5	5	8	5	8	9	5	4	3	6—58
J G Germann	7	7	5	7	5	3	5	5	7	4—55
F L Derby	10	5	7	5	4	3	4	7	3	6—54
W F Treiber	8	2	8	7	5	3	3	6	7	5—54
J Stidham	7	3	6	6	3	9	3	5	5	4—51

W G Shepherd	0	0	0	0	8	2	2	2	4	2—20

Notes from San Francisco.

SAN FRANCISCO, Cal., June 3.—The local riflemen have been all agog for ten days in anticipation of a contest for a round-trip ticket to the great shooting festival next month in New York. One of our large daily papers offered a ticket to the contestant making the highest number of points on the regulation point target in 200 shots—the match to be shot on Decoration Day at Schuetzen Park, between 10 A. M. and 6 P. M. These terms, which were arranged by a strong partisan of the Schuetzen Club Park Range, were not satisfactory to several of our leading marksmen, whereupon the newspaper referred to offered to give another ticket to any marksman who might at a second contest, to be held at Shell Mound Range, make a score larger than the highest made at Schuetzen Park. In accordance with these propositions about a dozen riflemen competed at Schuetzen Park on May 30, and three at Shell Mound June 1. A. Strecker led at Schuetzen Park with 347 points, but was beaten by F. O. Young at Shell Mound Range on June 1 by the narrow margin of 2 points. Nearly all our best local shots competed at one or the other range, but the great exertion of lifting a heavy Schuetzen rifle so many hundred times in a few hours told heavily on many of the shooters.

The result: F. O. Young 349, A. Strecker 347, Dr. L. O. Rodgers 321, D. W. McLaughlin 320, J. Ulschig 306, D. Faktor 301, F. Schuster 298. The others ranged down to less than 200.

F. O. Young made the best 100-shot score—181 points in his first 100 shots, with only 2 shots (17s) out of the black. He and Strecker each made 44—3-inch bull's eyes: Dr. Rodgers 39 and McLaughlin 36

There will be quite a representation of California marksmen at the July shoot, notably Young, Strecker, Helm and probably McLaughlin. The S. F. Schuetzen Verein will be represented by several enthusiastic riflemen. While our best representatives east expect to run up against world-beaters, still the latter are hereby warned that they will not win first honors without working for them. We had hoped to organize a State team of eight or ten men and to have an interstate match arranged to take place after the close of the festival, but several of our best shots could not possibly get away. We envy our fortunate brethren who are going and unreservedly trust the honor of our guild to their keeping.

ROEEL.

Rifle at San Antonio.

SAN ANTONIO, Tex., June 3.—As is usually the case, the regular annual prize shoot of the San Antonio Rifle Club yesterday was a brilliant success. From all quarters of the Southwest riflemen came forth to pay tribute to the generosity and glory of the San Antonio organization. The utmost good feeling prevailed throughout, and the visitors were loud in their praises of the efficient management. Prominent among the visitors was Mr. Ed Steves, of Saltilla, Mexico. Mr. Steves is an old member of the San Antonio Club and cherishes his membership as dearly as any San Antonian. His shooting shows that he has not forgotten the art of holding the gun straight or of pulling the trigger at the proper time.

Prize shoot, 200yds., rest, 10 shots per man: Albert Uhl 103, E. Steves 101, G. Giesecke 98, Adolph Altman 98, C. Pape 97, O. Voyes 96, E. Seffel 96, G. Altman 95, H. L. Degener 95, H. Weidner 95, A. Herff 93, E. Teich 93, W. Tahs 92, F. W. Stuve 92, E. Serna 91, Texas Field 91, J. Hillert 90, H. Voghtlander 90, O. Forcke 88, W. Herpel 88, E. Dosch 87, G. Heye 87.

Prize shoot, off-hand, 150yds.: A. Guenther 83, G. Altman 81, E. Seffel 79, Ernest Steves 79, Texas Field 76, A. Steves 75, Chas. Hummel 74, A. Uhl 74.

TEXAS FIELD.

Ross is Shooting Well.

As Fred C. Ross, of Brooklyn, N. Y., is booked to meet A. J. Vandeusen of Winona, Minn., the following from the Brooklyn, N. Y., *Eagle* of May 30 will be read with interest:

"Champion Fred C Ross, of this city, still leads in the Zettler Rifle Club outdoor tournament and in the bi-monthly shoot, which took place yesterday at Cypress Hills park, he again carried off the honors. There were twenty-three competitors in the race yesterday, the largest number yet seen at the scores since the tournament began. All shots were made on the 200 yard range, off hand, each man shooting in three series of ten shots each, his highest series to count in the totals for the tournament prizes. Ross had 230 out of a possible 250. H. Holger scored 229 and Henry Melville 225, while Michael J. Dorrler and George W. Plaisted scored 222 points each. H. D. Mueller had 220, M. B. Engel 218 and John Bodenstab, Bernhard Walther and P. F. Schmidt made 213 each. John Kronsberg scored 211 points. Bernhard Zettler 209, R. Busse and Ignatz Martin 208 each, and Geb. Krauss 206. The scores of the other competitors were below the 200 mark.

"In the contest at the Wissell target of honor, George W. Plaisted made the remarkable score of 73 points out of a possible 75. Max Engel was second with 70."

A Shooting Gallery in London.

LONDON, ENGLAND, June 1.—A revolver and rifle shooting gallery has been started in London, England, at 19 Swallow street, Piccadilly. The revolver competition is at 20 yards, 2-inch bull's eye. Competitors may use their own revolvers provided they have a caliber of .45 and a trigger pull of 4lbs.; but they must shoot the ammunition provided at the gallery, a smokeless powder, the prize being a gold badge given by the makers of the powder. Mr. Walter Winans is leading at present with a score of 40 out of a possible 42.

There is also a rifle competition in progress which calls for six shots at 20 yards, at a bull's eye a little over half an inch in diameter. Three scores have been made of 28 out of a possible 30, Mr. Winans being one of the makers of a 28. The rifles and ammunition are supplied at the gallery, the rifles being .22 caliber.

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

June 13-15.—OMAHA, Neb.—Annual tournament of the Nebraska State Sportsmen's Association; $500 added money. F. S. Parmelee, Sec'y.

June 15.—WILMERDING, Pa.—Tournament of the Wilmerding Gun Club. A. A. Mackert, Sec'y.

June 19-21.—CLEVELAND, O.—Chamberlin Cartridge and Target Company's second annual tournament; $1,200 in cash added.

June 19-22.—PORTLAND, Ore.—Eleventh annual tournament of the Sportsmen's Association of the Northwest, under the auspices of the Multnomah Rod and Gun Club. D. L. Williams, Sec'y, Portland, Ore.

June 20-22.—PORTLAND, Ore.—Multnomah Rod and Gun Club's eleventh annual tournament. D. L. Williams, Sec'y.

June 24-28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec'y.

June 26-27.—VICKSBURG, Miss.—Tournament of the Interstate Association, under the auspices of the Vicksburg Gun Club.

June 29.—MARION, N. J.—Fifth tournament of the New Jersey Trap-Shooters' League, under the auspices of the Endeavor Gun Club.

July 4.—UTICA, N. Y.—All day shoot; live birds and targets.

July 4.—CHICAGO, Ill.—All day shoot of the Eureka Gun Club; targets.

July 4 5.—DULUTH, Minn.—Third annual tournament of the Central Gun Club. J. W. Nelson, Pres.

July 10-12.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec'y.

July 17-18.—MACON, Ga.—Tournament of the Interstate Association under the auspices of the Macon Gun Club; $200 added.

July 17-18.—BELFAST, Me.—Second annual tournament of the Belfast Gun Club; $125 in cash guaranteed.

Aug. 9-10.—NEW ORLEANS, La.—Tournament of the Inter-state Association, under the auspices of the Louisiana Gun Club; $200 added money.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankfort, Pa.

Aug. 27-29.—CHARLOTTE, N. C.—Tournament of the Interstate Association, under the auspices of the Charlotte Gun Club.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Sept. 2-3.—UTICA, N. Y.—Two days tournament; live birds and targets.

Sept. 2-3.—NEWARK, N. J.—Tournament of the South Side Gun Club; targets New Jersey Trap Shooters' League contest at 2 P. M. on the second day. W. R. Hobart, Sec'y.

Sept (second week).—INDIANAPOLIS, Ind.—First annual tournament of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. —.—FREDONIA, N. Y.—Tournament of the Clover Trap and Target Company. $1,000 added money.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

1896.

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2 000 added money.

May (second week) —MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2,000 added money.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

The tournament of the New York State Sportsmen's Association, which will be held at Saratoga June 24-28, is going to be a big affair. The set of traps for events "open to the world" will draw outside shooters, while the regular State events will as usual bring out an entry list that is bound to attract attention. These State shoots are an excellent idea, bringing together, as they do annually, all the better class of sportsmen. Men who go to these shoots do so in the main for the pleasure of meeting old friends and fellow sportsmen; they are not there solely for "what there is in it."

The White Plains (N. Y.) Gun Club will have an all-day shoot on the Fourth of July. Targets and live birds will be used.

The Flour City Gun Club, of Minneapolis, Minn., announces a three-days' tournament, to commence June 20. Owing to its central location in a district that boasts a large number of gun clubs, the club should have no difficulty in obtaining a large entry list.

The Cleveland Target Co.'s tournament next week promises to be as big an affair as usual. As it is the last of a series of important shoots, known popularly as "the circuit," Paul North can confidently look forward to the attendance of all the cracks.

The Syracuse Gun Club will hold shoots at its Croton street grounds every Saturday afternoon.

On Wednesday, June 5, Dr. Littlefield and John Schliemann, both of Brooklyn, N. Y., and both members of the Coney Island Rod and Gun Club, shot a match at 50 live birds each under Long Island rules. The match was brought off at Dexter Park, L. I., prior to the club shoot of the Coney Island Rod and Gun Club. Dr. Littlefield won easily, shooting his opponent out on the forty-first round. Of the 41 shot at the doctor had killed 38, a score hard to beat under any conditions.

The organization of the Montpelier (Vt.) Gun Club was completed a few days ago, thirty charter members being on the roll. Lawson C. Cummins was elected President; W. O. Lowe, Vice-President; J. G. Brown, Secretary; C. F. Lowe, Treasurer; F. R. Dawley and W. W. Brock, Executive Committee; C. O. Barrett, Captain.

Mr. F. A. Thompson, who, like his brother, W. H., is one of the best shots of the Vernon Rod and Gun Club, of Brooklyn, N. Y., leaves to-day for St. Clair Springs, Mich. While at the Springs Mr. Thompson will try and get the better of the rheumatism from which he has been suffering. I hear that there are trap-shooting grounds at St. Clair; that being the case, both local and visiting shooters will find Mr. Thompson ready, willing and able to hold up his own end.

Barring the Decoration Day shoots, affairs in trap-shooting circles around New York have been very quiet for three or four weeks past. The next event of importance in this vicinity, outside of the State shoot at Saratoga, will be the New Jersey Trap-Shooters' League tournament at Marion, N. J., on June 20. The shoot will be given under the auspices of the Endeavor Gun Club, of Jersey City.

Advices from Lynchburg, Va., show that the members of the home club are practising industriously with a view to exorcising the hoodoo that affects the scores. Hoodoo or no hodoo, I understand that there will be a solid delegation from that city at the Charlotte, N. C., interstate shoot on Aug. 27-29.

Although the "Fixtures" column in the Trap department of FOREST AND STREAM is one of the most important items of the department, it is often necessarily curtailed in order that news matter may not be crowded out. Secretaries of gun clubs and other interested parties will please remember this and be lenient.

It is a long time since any event of a similar nature has created as much talk as the match of Brewer vs. Birds. It was well advertised, the daily press giving plenty of notices. All the reports of big bets of ccurse added to the public's interest. It is just as well to state, however, that all those reports were received with incredulous smiles in such places where shooters "most do congregate." It is a fact, though, that a sum of $250 a side was actually placed in the temporary stakeholder's hands at the time of signing articles.

"U. M. C." Thomas tells a good story about a local gun club at Bridgeport, Conn. It appears that one afternoon, at a club shoot, where "U. M. C." was present, one of the shooters had a shell stick in his gun. The shooter retired to the rear of the club house and punched the shell out with a stick. The next job was to get the stick out; this he found he could not do, as it was jammed fast. This didn't bother him a bit; returning to score, he inserted a shell, called "Pull," and fired. The target was "lost," but everybody at the score wondered, "Where in thunder did that stick come from?" Probably there are several shooters who can call to mind the loss of ramrods in the old days of muzzleloaders and birds all around them!

The Memphis Tenn., Gun Club claims the second week in May (probably May 12-14) for its 1896 tournament. The club will add at least $2,000 in cash to the purses.

The South Side Gun Club, of Newark, N. J., will hold a two-days' tournament on Sept. 2, 3. New Jersey League events at 2 P. M. on Sept. 3.

The dates for the annual tournament of the Sportsmen's Association of the Northwest have been changed to June 19-22.

The Eureka Gun Club, of Chicago, Ill., will hold an all-day shoot on its grounds, Seventy-ninth street and Vincennes avenue, on July 4. The shooting will be at inanimate targets. Refreshments will be served all day, including a hot dinner at Schoerling's at noon. Visitors will be welcomed by the club.

The Central Gun Club, of Duluth, Minn., will hold its Third Annual tournament on July 4 and 5.

Mr. O. L. Yoemans, secretary of the Maplewood Gun Club, writes as follows: "The Maplewood Gun Club, of Maplewood, N. J., and the Peekskill Gun Club, of Peekskill, N. Y., have arranged to shoot a series of team matches. The teams will consist of six men from each club, each man to shoot at fifty single targets. The first match takes place on July 4 at Peekskill."

The scores of the Arkansas State Sportsmen's Association's tournament are given elsewhere, having arrived too late for insertion in our issue of June 8. Heikes led in the averages with a fraction over 93 per cent. The Sixth Annual tournament of the association will be held at Hot Springs some time in May, 1896.

EDWARD BANKS.

Trap at San Antonio.

JUDGING from the performances at the ground of the San Antonio Gun Club every Sunday, it strikes me as a good idea for the board of directors of the above club to meet and establish a good plethoric class, A 1, and put "old man" Piety, of Texas, in it. If some one would then lock the door and throw the key away, the rest of the No. 1 class in that club could scratch in some sleep for a few nights and might thereby be enabled to find the targets a little oftener. As a matter of fact, the shooting public of San Antonio is beginning to suffer from a tired feeling superinduced by reading in the morning papers every Monday that "Piety carried off the medal in the first class," to say nothing about the stereotyped phrase becoming threadbare. But he does it—just as regularly as the club shoots, Piety is on top with a large gap intervening between his score and that of the man next to him.

Following are the scores made by this club June 2. Regular medal shoot at 30 singles: Shields 19, Smith 21, McVicar 18, Piety 29, McCormack 22, France 20, Chabot 23, Simpson 18, Learn 16, Phillips 20, Epp 23, Thiele 20, Volbrecht 24, Grossman 14.

Piety 1st in Class A, Volbrecht 2d in Class B, Chabot 3d in Class C.

No. 2, 15 singles: Shields 9, France 8, Simpson 8, Learn 10, Volbrecht 7, McCormack 11, Thiele 13, Grosmann 9, Chabot 12, Piety 12.

No. 3, 15 singles: France 12, Volbrecht 9, Grossman 6, Simpson 8, Chabot 9, Thiele 14, Shields 8, McCormack 12, Phillips 9, McVicar 11.

POWDER HILL CLUB.

The attendance at the Powder Hill Club shoot was not very large on account of numerous other attractions in the city, but those present enjoyed some good sport and made the following scores:

Opening shoot at 10 singles: Critzer 9, Foster 7, Ohnesorge 8, Whitworth 6.

Regular shoot at 30 singles and 5 pairs, unknown traps: Critzer 30, Foster 28, Ohnesorge 35, Whitworth 27.

The next shoot was at 25 singles: Critzer 18, Foster 15, Ohnesorge 23, Whitworth 19.

TEXAS FIELD.

Cummings vs. Taylor.

LANCASTER, Pa., June 6.—The match between W. P. Cummings, of this city, and Dr. W. G. Taylor, of Columbia, Pa., came off this morning, Cummings winning easily. The conditions were 100 live birds, 28yds. rise, 50yds. boundary, $100 a side. The match was shot at Hambright's Three-Mile House, near this city. J. C. Wiley was referee; A. Anderson and Charles Murdock, judges; George Franklin and Howard Bush, official scorers. The score, showing flight of birds, is as follows:

MESINA SPRINGS, June 8.—A. A. rules:

C T Arno	2211122110 — 9
C H Mowry	1221121112222121120l2—20
H George	2221221122211221l2112—21
W Holden	2012211223210221121l2—19
W B Fuller	2222122122111211222l—21

The live-bird shooters of Syracuse were treated to a surprise Saturday afternoon at Mesina Springs. Mr. Fuller, who has not shot live birds for ten or eleven years, walked up to the traps and beat the best of the old war horses, killing 21 straight, tieing Mr. George for first place. All the shooters shot a rapid pace, dropping but very few birds. The birds were a fine lot and a good number first class.

A. R. K.

Endeavor Gun Club.

JERSEY CITY, N. J., June 8.—The Endeavor Gun Club held its weekly shoot to-day at Marion, N. J. The attendance was small and the scores low, the targets being thrown hard and at acute angles. Scores follow:

No. 1, 20 targets, unknown angles:

Strader	11111001010011000000— 9	Creveling	11110110110101101011—14

No. 6, miss and out, $2: C. Furgueson, Jr., and Dr. Littlefield (divided) 12, Dr. Wynn 5.

Why Not a Chicago Shoot?

CHICAGO, Ill., June 8.—There was some talk here this week among several outside men who are figuring on the project of coming to Chicago and giving a big Chicago tournament at targets some time the coming year. They think they can get up the biggest tournament ever held in the country. As yet this is mere conjecture. It would surely seem Chicago could hold as good a shoot as any city, with her central location and her reputation for hustling. Chicago excels at live birds, but has yet to see her first great modern target tournament. It would be at least interesting to see the experiment properly tried by the proper parties, and should these gentlemen go beyond mere speculating over it and actually claim a date, their project would no doubt attract much attention in the shooting world.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Arkansas State Sportsmen's Ass'n Tournament.

LITTLE ROCK, Ark., June 1,—The Little Rock shooters have reason to feel elated over the results of the fifth annual tournament of the Arkansas State Sportsmen's Association, which was held at West End Park, Little Rock, May 28 to 30. This tournament was originally intended to be held at Hot Springs, April 8-10, but owing to the smallpox scare which prevailed about that time it was deemed advisable to hold the tournament in Little Rock. This also necessitated a change of dates, and the above-mentioned dates were the ones that were chosen, as they were the only ones that did not conflict with some near-by tournament. This gave the local boys less than two months to prepare for the tournament, and its success is therefore all the more gratifying.

The shoot was well attended, as the appended list of visiting shooters will attest: R. O. Heikes and E. D. Rike, Dayton, O.; Charley Young, Springfield, O.; B. A. Bartlett, Buffalo, N. Y.; Ferd. Van Dyke, Dayton, N. J.; B. Leroy Woodward, Campello, Mass.; E. D. Fulford, Utica, N. Y.; W. N. Drake, South Orange, N. J.; J. W. Hoffman, German Valley, N. J.; J. J. Cornett, Lineus, Mo.; K. M. Moore, Farmersville, Tex.; J. Clausen, Santa Rosa Park, Fla.; William Lape, Coffyville, Kan.; Irby Bennett, Frank P. Poston, Fred. Schmidt, A. B. Duncan, Cockrell and Plummer, Memphis, Tenn.; G. W. Hughes, John J. Sumpter, Jr., Dr. A. U. Williams (Dobbins), Charles N. Rix, A. R. Smith, W. J. Little and the Hon. J. L. Wadley, of Hot Springs; J. T. Lloyd, W. A. Leach and Elmo Marsh, Pine Bluff; Joe P. Matthews, Fort Smith. The weather was not all that could be desired, as it was cloudy and threatening part of the time, and rained quite hard Wednesday morning, delaying the commencement of the shoot about an hour. The shooting was by no means easy, as the threatening weather made the light very bad, and the variegated background, a high baseball fence covered with signs of all colors, made the flight of the targets very deceiving. Regardless of these difficulties some very fine work was done, Rolla Heikes carrying off the honors, with Charley Young right after him. The following are the

AVERAGES MADE DURING THE TOURNAMENT.

	Shot.	Broke.	Average.
Heikes	465	433	93 1/9

(Extras and trophy contests are included in averages.)

The following were classed as professionals, and had to win first, second or third money or be put out of a place: Heikes, Van Dyke, Young, Fulford and Bartlett; all others shot for five moneys all the time.

Hot Springs won the Keeley cup with the fine score of 43 out of 45; the team was composed of Hughes, Sumpter and Williams. Little Rock won the club championship, scoring 87 out of 100, 60 unknown angles and 40 expert rules, 25 targets to each man; Dickinson, Duley, Pemberton and Alexander composed the winning team. J. B. Thibault won the individual championship, scoring 23 out of 25, 15 unknown angles and 10 expert rule.

The scores were as follows:

First Day.

No. 1. 15 targets: Heikes 14, Young 13, Bartlett 14, Leroy 11, Van Dyke 13, Rake 12, Poston 8, Duncan 6, Plummer 11, Schmidt 13, Cockrell 10, Bennett 11, Fulford 11, Dickinson 12, Duley 12, Pemberton 12, Alexander 14, Thibault 11, Moore 15, Hughes 14, Sumpter 12, Dabbins 11, Little 11, Rix 13, Smith 11, Wadley 12, Hoffmann 13, Fletcher 10, Drake 14, Clausen 14, Timberline 12.

PAUL R. LITZKE.

For Gate Money Only.

THE afternoon sun on Monday last was warm enough at the Parkway Driving Park, L. I., to make one appreciate fully the coolness with which the principals in the "Brewer versus Birds" match annexed the dollars of an easily gulled public. To charge $1 for the privilege of witnessing a shooting match of the sure-enough kind would be worthy of note. But to charge $1 per capita for the privilege of standing in a hayfield for more than two hours while the principals wrangled about a referee and a trap, to be rewarded finally with an exhibition that lasted nearly two hours more, is something that deserves special comment. There were several features connected with this affair that will be of interest.

In the first place, the daily papers were worked satisfactorily, the match receiving a good deal of attention at their hands. Phil Duffy, of Brooklyn, N. Y., and John L. Brewer were positively stated to have posted $250 a side to bind a match, Brewer betting that he could kill 95 out of 100 pigeons, Duffy to provide and trap the birds. It is a fact that $50 a side was deposited with a temporary stakeholder, but so far as anybody could make out that was every cent that was put up. Reports of big wagers, one made by Hank White, were passed around, and helped to create a little more interest. The judicious use of Mr. John S. Hoey's name as refereee gave an air of genuineness to the match that it otherwise would not have had; Mr. Hoey's reputation for honest, straightforward work on the race tracks or at the traps was a positive assurance that there would be a square deal. The answer to the question—"Who authorized the use of Mr. Hoey's name?"—would be interesting. The articles signed by the two principals were also nothing more than memoranda, jotted down as the different points were agreed upon. A special point in the articles was that the trap might be any that Duffy might choose, the only stipulation being that it should not stand, either open or shut, more than 12in. above the ground. Now Duffy's choice was a corker to look at, but an easy one to make. Order a zinc box, 2½ft. long, about 9in. wide and 11½in. high; also get a lid for this box so large that it projects about half an inch all around, and fasten this lid on to the box with a single hinge at one end; place this box with the lid downward, and with the hinged end toward the score; pass a rope over the top of it and fasten it to the front end of the box. That was Duffy's trap and pulling apparatus. Brewer and his backer (I believe that was Mr. Gibbons's position) objected to the trap. As a matter of fact, when open for the bird to go out it was over 12in. above the ground. Duffy told Brewer to choose a referee, and if the referee objected to the trap it would be all right. Brewer's backer wanted Frank Class to act as referee, but Duffy pleaded that he didn't know Class and would have none of him. So it went on for a couple of hours, while about 300 spectators stood around on the long grass or lay down on the newly-mown swaths cut by Billy Mills and his scythe, it being Billy's duty to clear a space for the score and the traps. As Brewer wouldn't shoot the race so long as Duffy's trap was to be used, and as Duffy wouldn't go ahead unless his invention was allowed to stand, things were at a deadlock. Somehow or other very few people were surprised at the state of affairs—they expected a wrangle of some sort. Finally Mr. W. Lair appeared with a couple of old King traps from the New Utrecht Gun Club's grounds at Woodlawn; the $50 a side was returned to the principals, and Brewer proceeded to show what he could do to Duffy's birds, not a cent of money being at stake so far as anybody could find out.

The birds were a very mixed lot and did not reflect much credit on Mr. Duffy's sagacity. They were not a patch on those which he has had the reputation of providing. They were really only a fair lot of summer birds, with a few good ones sandwiched in here and there. There were any amount of sitters, Brewer calling several "no birds." He started in by making some slobbering kills, missing his third bird, an incomer, clean with his right barrel. As a set-off, however, he showed what he could do by making some excellent quick kills on some of the fast birds. It must be remembered, in considering the score, that he was shooting a 10-gauge gun, a crown grade Greener, and that the birds were being liberated from only one trap. The first 23 were killed, but the 24th got away. The next to escape was his 38th. From that point he killed straight until the 63d round, when a fast driver escaped. Seventeen more kills were registered, leaving but 20 more to shoot at, the score standing 77 kills out of 80 birds shot at. It looked a moral certainty just then that 95 or better would be scored. Three misses out of his next five settled it, the score showing 79 out of 85—six misses. Brewer shot out his string, killing straight and scoring 94 out of 100.

Judging from the opinions freely expressed, it looks as if match shooting of this sort, gate-money affairs, had received a good sounding slap, so far as this part of the country is concerned. It was really about as cold a deal as any that has ever been attemped around New York. There were several well-known club men present, many of them excellent shots themselves; there were also a number of New Jersey shooters on the grounds, who had taken a day off to come over to Long Island. Out of consideration for their feelings all names of those present are suppressed. The score was as follows:

Trap score type—Copyright 1895, by Forest and Stream Publishing Co.

The Memphis Tournament.

MEMPHIS, Tenn., June 10.—*Special to Forest and Stream:* The practice shooting to-day shows that there are between fifty and sixty shooters present. They come from all over the South and a great tournament is assured. The entries to-morrow will probably reach the one hundred mark. All the arrangements for the comfort of the shooters and for the smooth running of the tournament are very good; the management exceptionally excellent. Weather is warm, but pleasant.

June 11.—At 11 A. M. to-day the books in the cashier's office show an entry list of 109 shooters, with another squad expected to fill. This is the greatest of great shoots. Twenty-three States are represented. Everything is working smoothly; perfect satisfaction prevails; everybody is pleased and the Memphis men are justly elated. E. HOUGH.

Illinois State Twenty-first Annual.

CHICAGO, Ill., June 8.—The Illinois State Sportsmen's Association was twenty-one years old this week, and celebrated the occasion by giving the best, if not the largest, tournament of its entire life. The entry of seventy-four in the Board of Trade badge shoot and forty-two in the Smith cup has often been surpassed, but the smoothness and system with which the shoot was run off have never been equalled here. For the first time in the history of the Association the manifold scoring book and a systematic method of handling events and affairs took the place of the old and awkward fashions long peculiar to this fixture. We still have the ten-gauge rules here, but we now manifold our scores. In general smoothness of running, the tournament would be hard to surpass, and it was a model in its way not to be easily equalled by other tournaments, because the live birds were as usual handled in John Watson's unapproachable way. The targets (empires) were thrown under Mr. Fred Quimby's personal direction and worked very nicely. Everybody got his money promptly and not a kick was heard anywhere on the grounds. Ike Watson served good meals as usual, and everybody else about the old park at Burnside was active and accommodating. All in all, the association and all concerned should feel happy and complacent this year. Even the weather, though it started in hot for two days, just to show what it could do, moderated Tuesday and was pleasant thereafter. President Shepard and Secretary Meyers should be complimented also on the quality of weather furnished. John Watson had for the retrieving of the birds the old reliable pointer Cyclone, also a lively younger one, Flipaway, a third pointer of less experience and a Gordon-Irish setter, all very good at their work, so that the shooting advanced very regularly and rapidly. The birds were very good indeed for the season, and on some of the windy days became puzzling to the best. The grounds were in good order. The Audubon Club as usual had their hospitable tent open, and Montgomery Ward & Co. had an inviting pavilion just back of the target score, Messrs. Bingham, Stannard and Grubbs being on hand for that firm to shoot and talk with shooters.

THE GRAND PRIZES.

The grand prize of the association, the Board of Trade badge, was carried off this time by Harry Dunnell, of Pistaqua Club, Fox Lake, Ill., one of a family of duck shooters who were raised on the edge of the Fox Lake duck marshes. Once again this trophy was won by a 10-gauge gun (a low grade L. C. Smith, with Schultze powder). The last tie man, Mr. Hicks, of Chicago Garfield Club, also used a 10-gauge (a Westley Richards). Mr. J. J. Smith won the badge last year with a 10-gauge. Henry Ehlers, the year previous, won it with a 10-gauge. In fact, the 10-gauge at the same score with the twelve is, as Dr. Carver put it, "a bad gun to go against." Dr. Carver, who was straight on the 10 birds, lost his first bird in the ties, Tuesday morning, and fell out. There was objection made to his shooting, but as he is a regular member of the Garfield Gun Club of the association, it is hard to see what justice there was in the objection. Carver used a 12-gauge weighing nearly 10lbs., a shell 4 or 5in. long, a cup full of E. C. powder and a copy of the Sunday *Tribune* for wadding. You want plenty of soft wadding in nitros. I always like to give the formula of loading used by eminent shooters.

In the target trophies very much of a surprise ensued. Dr. Frothingham was in great form and won the Smith cup and also the Montgomery Ward diamond medal target trophy. When it is remembered that last year it was he who won the Montgomery Ward diamond medal, the occurrence will appear all the more remarkable. Dr. Frothingham used a Greener gun and E. C. powder. It was suggested by Mr. W. C. Thorne, of the firm giving these trophies, that if Dr. Frothingham should now go on and win their live bird diamond trophy, he would probably come down town and ask for the safe. In the latter event, however, Dr. Frothingham was not so fortunate. As it was, out of his good fortune he generously contributed a handsome sum for the good of the Illinois Association. Outside of a few such notable wins no one made very much money. Charlie Budd (who claims that bicycle exercise has put him back in his old form) only lost two targets out of 110, but realized only $7 for the performance. Jim Elliott got 130 out of 140 targets (in a stiff wind), and was about $3 loser on it. Courtney, with his Lefever ejector, stood for a good thing on Tuesday and won out about $50. The heavy wind didn't trouble "Court" so much as light weights like Chan Powers and Dick Merrill, and he ground them a-plenty, losing only 7 out of 125.

NON-WINNER HANDICAP.

The tournament programme announced a non-winner handicap, to induce inexperienced shooters to attend, but no attention seems to have been paid to it in actual practice. The association should make it plain that it has nothing whatever to do with the open tournament, which really is given by John Watson. Even on this basis, no announcement should be made in this or any other programme, in regard to handicaps, which is not scrupulously lived up to in practice, as a charge of bad faith coming from even one discontented shooter would rest very ill against this association, its substitute management or indeed against any management. The association claims to have no control over any of the open shooting; yet the cash in the Montgomery Ward shoots at least, which are open events, is always handled by the association secretary. Next year this involved and obscure arrangement should be cleared up in the programme and in the practice. The association in convention disclaimed extending even its "auspices" to the open tournament, but in the past this has not been clear to the public by any means. In regard to the non-winner handicap, which has had some advertising in the sporting press in advance, one shooter said: "If we shooters don't want it we won't have it." That is very well, but if that is to be the case the programme should be very chary of making any announcements which look in another direction, and the association should be very jealous of leaving open any loop-hole to let in a criticism of its methods. Not that any serious damage was done, and not that this is a criticism, but simply to show that to others it may not all be plain.

VISITORS.

The trade was well represented by such men as McMurchy, of the Hunter Arms Co.; Courtney, of the Lefever Arms Co.; Quimby, of the Empire target; Keller, of the U. S. Cartride Co.; Sylvester, of the Winchester Co., etc., etc. Mr. W. C. Thorne, of Montgomery Ward & Co., and Mr. E. S. Rice, of the DuPont powders, were among the too unusual visitors. Mr. Francis DuPont, of the firm of E. I. DuPont de Nemours & Co., was in town this week, but unable to attend the tournament. Mr. Oliver Lippincott, a prominent shooter of Waco, Texas, came out with Mr. Rice. Another unusual feature at the shotgun tournament was the presence of no less than three Rocky Mountain guides—Elwood Hofer, of Gardiner, Mont.; J. W. Schultz, of Piegan, Mont., and Ira Dodge (now famous as the man eaten by the bear), from Cora, Wyo. All these riflemen are on their gradual way back West from the late Sportsmen's Exposition in New York. They looked on the curious doings of the tournament shooters with much interest, and many were interested in talking with them.

THE CONVENTION.

The wise plan was adopted of devoting two evenings to the annual convention, Monday and Tuesday. Sixteen clubs qualified. There was really not a great deal of news of general interest at the convention of Monday evening. The secretary read extended minutes equivalent to a report for the directors. The report of the law committee and the speeches of Messrs. Mott, Baird and Johnson, of the committee, and of Mr. Bortree, had mostly to do with the story of the defunct Blow bill, to which proper attention was given long ago in FOREST AND STREAM. It makes little difference now who killed Cock Robin, the main fact being that he is dead. FOREST AND STREAM, being a newspaper, cannot spend more time over straw already so thoroughly threshed. It was agreed by all that, though the Blow bill was dead, and good riddance to it, there could be no hope for legislative action this term on the sportsmen's bill, though a superfluous resolution by Mr. Strell was passed embodying the information that the association was in favor of its own bill and would like to have it passed. President Shepard told of the committee work at Springfield. A vote of thanks was extended the law and executive committees and Mr. Bortree for faithful labors. An assessment of $5 per club for all clubs members of the association was levied for the purpose of raising a game protective fund, this to be collected only in case the present sportsmen's bill did not pass. The latter is very unlikely to pass, though it has reached its third reading in the House. It was ordered that 5,000 copies of the game laws of Illinois be printed and 50 copies sent to each club for proper distribution.

Tuesday's convention fell on cooler weather. President Shepard pushed things along rapidly. The minutes of the last meeting were read and the treasurer's report of the secretary-treasurer followed. The association has $75.45 on hand. A vote of thanks was extended Messrs. C. S. Wilcox and L. M. Hamline for funds advanced in protective work last winter. Resolutions of respect were passed in memory of Mr. Wolfred N. Low, ex-president of the association, whose death occurred during the present year. By vote the Illinois State Sportsmen's Association became a member of the National Game Bird and Fish Protective Association, it to send five delegates and a $5 fee, the delegates to be appointed by the president, secretary and board of directors. By vote the rule governing order for shooting in association tournament events was changed, the clause on "drawing for place" in entry being cut out. Shooting hereafter will be "in order of entry," and any shooter must be ready to go to the score within five minutes after the calling of his name.

By vote it was determined to make next year's programme explicit in explaining that the association had anything whatever to do with running the open tournament which always follows the association's events.

It was decided on vote to begin next year's tournament on Tuesday and not on Monday, thus making only a five days' shoot. Chicago was chosen for the meeting place for 1896. Election of officers followed. W. L. Shepard was re-elected President; Wilson H. Doe, of Elgin, was elected First Vice-President; W. H. Harbaugh, of Geneseo, Second Vice-President; H. B. Meyers was re-elected Secretary-Treasurer. Votes of thanks were extended the law committee, the donors of prizes, and the proprietors of the Sherman House, in whose rooms the convention assembled. Adjournment was made after an hour and a quarter of brisk work at 10 o'clock—"The first time in the history of the association," as President Shepard remarked. Usually it is much later, but, as was mentioned earlier, the association reports progress this year.

Following are the scores of the tournament. The published target programme was run off the second day, and repeated from day to day. Additional sweeps, in some cases unimportant, were shot. The last two days naturally had small target entries and less important.

No. 1, Board of Trade diamond badge, emblematic of the individual championship of the State, the winner of the badge this year to receive the proceeds of next year's entries for the same prize, 10 live birds, entrance $10; First prize, the diamond badge, value $500; and 100 handloaded shells. Second prize, $75, and one trap-shooter's shell box. Third prize, $60, and one case of wine. Fourth prize, $40, and "The Big Game of North America." Fifth prize, $10, and one case of wine.

At 15, H. Dunnell and Hicks divided the money and merchandise; Dunnell winning the badge later.

In the ties on 9, Burt Dunnell, Thomas, Magruder, Eich and Crosby tied after shooting 5 birds. Ties on 8 shot 5 birds and Heilman, Lemon and Mott tied. Ties on 7 shot 5 birds and Ehlers, W. Dunnell, Dilg, Edbrooke, Fortier and Harbaugh tied. Ties on 6 shot 5 birds, and Woodworth won.

No. 2, L. C. Smith Cup, emblematic of the individual State championship at inanimate targets, the winner of the cup this year to receive 60 per cent. and the club of which he is a member 40 per cent. of the entries at next year's inanimate target event, the winner to execute a bond in the sum of $500 to guarantee the production of the cup next year. Twenty empire targets, entrance $5, Illinois State rules. First prize, the L. C. Smith cup, value $500, and 100 hand-loaded shells. Second prize, $60, and one case of wine. Third prize, $10, and two twenty-five pound bags of shot. Fourth prize, $25, and two bags of shot. Fifth prize, $10.

Ties on 15 shot at 8 birds, and Abe Kleinman won. He then shot the winner of this trophy for last year, J. J. Smith, of the Evanston Gun Club, for possession of the trophy. At the end of 15 birds they remained tied on 13. Shooting 5 more tie birds, Abe Kleinman lost his last bird; Smith killing his 5 straight retained the trophy, after the most exciting finish of the meeting. (Smith shoots a 10-gauge, and was winner of the Board of Trade badge last year.) Ties on 14 divided. Ties on 13 shot, and Bingham, Organ and Parker divided after 5 birds.

No. 2, the Montgomery Ward & Co. diamond target trophy contest, at 25 targets, entrance $5, four moneys, 40, 30, 20 and 10 per cent. In this contest members of the Association only are eligible to shoot for the trophy. Sweepstake open to the world. Any one desiring to enter for medal only can do so by paying for birds:

Dr. Frothingham won the diamond target trophy.

No. 4, 15 targets, $2, everything known: Skinner 15, Tate 11, Carver 13, Barto 14, White 15, Budd 15, J. A. R. E. 14, Courtney 14, Adams 12, Stannard 13, Grimm 13, Keller 14, Hale 10, Tramp 12, Lusson 13, Roll 15, Buker 14, Crosby 14, M. J. Eich 14, Dr. Frothingham 13, Lemm 14, Heilman 9, Powers 12.

No. 5, 15 targets, $2: 9 singles and 3 pairs, three men up three times, three targets, unknown traps; three pairs, one man up: Mott 14, W Palmer 13, Courtney 15, G. Kleinman 15, B. Dunnell 12, Stannard 14, M. G. Pitzner 13, Frothingham 11, T. H. Keller 13, W. Crosby 14, Tate 13, Bingham 13, Elliott 14, Budd 15, Grimm 14, Miller 12, Carver 15, Skinner 12, Buker 14, Eich 12, Adams 9, G. Crosby 5, Lemm 14, White 14, Hale 9, McBarnes 8, Powers 10.

No. 6, 10 live birds, $6: Dicks 7, Parker 10, Lippincott 8, Bingham 10, Tramp 7, Mott 7, Levi 2, Geo. Beck 9, Ehlers 9, Mason 7, Heath 6, Wilcox 8, Smith 10, Palmer 10, Powers 10, Knott 8, Welbourn 9, White 9, McMurchy 9, Hillis 8, Elliott 8, Wadsworth 10, Frothingham 9, Donnell 9, Pitzen 6, Dr. Carver 9, Hershey 8, Cummings 8, Thomas 10, A. Kleinman 7, G. Kleinman 7, Porter 9.

Ties on 10 shot off, the purse being divided by Bingham, Smith, Powers and Wadsworth. The 9s divided, but 8s shot off, Hershey winning. The 7s shot off; at the 14th bird A. Kleinman, G. Kleinman and Mott divided. The 6s divided.

No. 7, 15 targets, $2, unknown angles: Carver 14, Buker 14, Mosher 14, Smith 14, Kleinman 15, McBarnes 12, Powers 14, Lemm 13, Stannard 12, L. C. Willard 12, A. W. Reeves 17, Elliott 13, Grimm 15, Courtney 14, Keller 12, Budd 15, Frothingham 12.

No. 8, 10 targets, $1.50, same as No. 7: Elliott 10, Keller 10, Budd 10, Adams 6, Lemm 9, Magruder 10, Crosby 8, Courtney 9, Grimm 9, Pitzer 8, W. Dunnell 7, Tate 9, McBarnes 9, Stannard 7, Tunnicliff 5, H. Dunnell 7, Miller 6, Carver 7, Powers 8, R. B. Smith 9, G. Kleinman 10, B. White 8, Eich 9, Mosher 10, Buker 8, Frothingham 10, Fortier 9.

[Note.—The above was as near as the programme was shot. On Tuesday, Wednesday and Thursday the programme was practically abandoned. The more important of the scores of those days follow. On Friday and Saturday nothing of importance was done at targets.]

Sweep, 15 targets: Elliott 13, Frothingham 11, Budd 9, Keller 14, Grimm 13, Powers 13, W. Palmer 13, Morgan 8, Sperman 9, Essig 9, Bingham 12, Merrill 12, Dilg 11, Pitzen 10, Courtney 15, W. Dunnell 10, Bob White 14, Tate 10, McBarnes 10, G. Kleinman 13, Mosher 8, Fox 9, Buker 14, Einfeldt 4, Crosby 7, Barto 12, G. D. Tunnicliff 10, L. C. Willard 12, A. W. Reeves 10, W. H. Hale 12, Eich 9, Chester 10, Hennis 9, Ellicott 7, A. Smith 10, J. J. Smith 13.

Same as above: Elliott 12, Frothingham 13, Budd 15, Keller 11, Grimm 13, Powers 13, Bingham 13, Morgan 10, Adams 10, Stannard 14, T. Parker 10, Courtney 13, G. Kleinman 14, McBarnes 12, Merrill 13, Hale 10, B. White 13, Dr. Carver 15, W. Palmer 13, J. J. Smith 13, Ellicott 10, Crosby 12, Spencer 13, Valentine 7, Tate 11, Cluster 11, Skinner 11, E. Beck 10, A. Smith 14, Buker 15, Mosher 9, Clever 7, Matthews 12.

Same again: Elliott 13, Frothingham 12, Budd 15, Keller 10, Grimm 11, Powers 14, Morgan 14, Buker 14, Courtney 14, G. Kleinman 13, Essig 10, McBarnes 14, Merrill 12, Bingham 12, W. Palmer 9, J. J. Same: Bingham 13, Beck 11, Budd 12, Courtney 14, Carver 14, Orr 12, Adams 9, Stannard 13, Matthews 13, Keller 12, White 11, Geo. Kleinman 15, Powers 10, Merrill 13, Abe Kleinman 15, Lemm 14, J. M. Elliott 15, Pop Ellicott 11, Hale 12, McMurchy 15, Kolb 11, Buker 14, Grimm 12, B. Dunnell 11, Barto 15.

Same: McMurchy 14, W. Palmer 12, Powers 12, Budd 15, White 14, Xinger 13, Parker 11, Barto 12, Kleinman 15, Walbourne 9, Knott 12, Dwyer 12, Carver 15, Spear 13, Eich 15, Hillis 12, Merrill 13, Crosby 15.

Ten targets, unknown angles: Mott 6, W. Crosby 10, Carver 10, Steck 8, Wilcox 5, Pitzen 9, Merrill 10, Cummings 10, Frothingham 8, Parker 8, Powers 9, Spear 7, Searles 10, J. J. Smith 9.

Ten targets, unknown traps and angles: Merrill 7, Frothingham 7, W. Dunnell 8, Powers 7. Stanley 7, Budd 6, Cummings 9, W. Crosby 8, Kellar 4, Dunnell 8, Heath 5, Carver 6, McMurchy 8, Parker 8, G. Crosby 6, Wilcox 6.

Ten targets, unknown angles: Frothingham 8, McMurchy 10, Merrill 9, Carver 7, Powers 8, Stanley 8, Crosby 7, Cummings 8, Budd 8, G. Kleinman 8, Wilburn 6, Knott 4, Crosby 7, B. Dunnell 7, Spear 9.

Ten targets, unknown traps and angles: Stanley 10, Crosby 8, McMurchy 9, Frothingham 6, Merrill 9, Budd 10, Crosby 10, Bingham 7, Cummings 5, Dwyer 9, Hillis 6, Whiting 5, Spear 9, Carver 9, G. Kleinman 8, White 10, Powers 7.

By Thursday noon the entrances had dwindled to about a dozen, and all the news, if not all the shooting, was done by Wednesday. On Friday and Saturday shooting was continued at the live-bird traps. The scores follow:

No. 1, 12 live birds, $8:

A Kleinman	111211201101—10	G Kleinman	111112211220—11
S Palmer	021222210220— 9	Merrill	121102212012—10
Mott	220222210122—10	McMurchy	011111112212—11
Frothingham	122222122122—12	Cummings	121222202222—11
Hershey	222102201221—10	Dr Carver	222221222221—12
Powers	212101212022—10	J J Smith	111022221111—11
Heath	002101200002— 5	C H Porter	111111202011—10
Sperback	002112112012— 9	Lippincott	101101102121— 9
Bingham	212122122022—11		

Carver and Frothingham divide first with 12 each. Those with 11 divided second money. Ties for third money were shot off. Mott, Porter and Merrill dividing. Ties for fourth money were divided without a shoot-off.

No. 2, 5 birds, $3:

A S Kleinman	10211—4	Powers	22111—5
Bingham	20220—3	Dwyer	21122—5
Merrill	21221—5	Porter	11110—4
G Kleinman	11221—5	J J Smith	11102—4

No. 3, $2 miss and out:

Bingham	22220	Wadsworth	21122222
Dwyer	22110	G Kleinman	21112111
Merrill	20	Smith	1210
Powers	0	Hershey	1122110
A Kleinman	11111211	S Palmer	22120

(The ties in No. 2 were carried over to No. 3 Result: G. Kleinman won first money, A. Kleinman and Porter dividing second.)

909 SECURITY BUILDING, Chicago. E. HOUGH.

Decoration Day at Rochester.

ROCHESTER, N. Y., May 30.—The feature of to-day's sport at the Rochester Rod and Gun Club's grounds, Cobb's Hill, was a six-men team shoot between the home club and the Churchville Gun Club. The home team won easily by 17 breaks, scoring 98 to its opponent's 81. DeWitt, of Rochester, and Hughes, of Churchville, led with 18 each of a possible 20. The score in this match was as follows:

Rochester.		Churchville.	
Hadley	00000011111111111111—14	Mason	01101000011001110111—11
Mayer	10111001111111101111—16	Hughes	11111111111111111001—18
Beyer	10111111011011111111—17	Hall	11100101001101001111—12

Binghamton Gun Club.

BINGHAMTON, N. Y., June 5.—The Binghamton Gun Club held a practice shoot to-day. We had for a vistor Mr. Damon, of the Burgess Gun Co., who made a very favorable impression with his repeater. Brown used a Burgess in his first and last string; Hobbie and Vance used similar guns in their last strings. Following are the scores:

No 1, 25 singles, unknown angles:

Brown	11101111011110101100111111—18
Damon	11111111111111111101111—24
Kendall	01100011110000111111111111—17
Boss	11111111111111111101111—24
Hobbie	11111011011110000111111—19
Waldron	01111011101111111111011011—20

No. 2, same:

Brown	10011111111111111111111111—23
Kendall	11111111010111111111111—20
Boss	11011111111111011111110111—22
Hobbie	11111110111111111111111111—24
Damon	11111111111111111111110111—24
Waldron	11111110000111100011111110—17
Vance	00101111101111111111111101—20

No. 3, same:

Brown	00101110101110111111111111—19
Damon	11110111111111111011111111—23

No. 6, same: Damon 8, Brown 7, Kendall 7. H. W. B.

Meadville Gun Club.

MEADVILLE, Pa., June 5.—The following scores were made by the members of the Meadville Gun Club at the monthly badge shoot which took place to-day.

Badge contest, 25 targets, 15 everything known, 10 unknown angles:

Class A.

Ehrgott	11111111111111111111101101—23
H A Johnson	11111111011111111011111101—22
Haman	11011101111111111111011001—20
Lashells	11110110011110000101011110—15

Class B.

Hayes	11011111111111111111011000—20
Reisinger	11111111111111101100111010—20
E L Affantranger	01011110101111011111011110—18
Norris	11011010101110111001111111—18
Dr Johnson	00111101100110101011111101—17
Clark	10111110001010111111110010—16
Leberman	00101011010011011111110100—14
N Affantranger	01101011111100000011010000—12

Class C.

Stem	10011001001000000001110110—10
Crider	00000001100000011000010100— 6

The tie in the B class between Hayes and Reisinger was shot off. It took one string of 10 and two strings of 5 to settle it. Following is the shoot-off score:

Hayes	1111011111	11111	10111—18
Reisinger	1111101111	11111	11111—19

Class A badge was awarded to Ehrgott; Class B to Reisinger, and Class C to Stem. CHOKE BORE.

Canajoharie Rod and Gun Club.

CANAJOHARIE, N. Y., May 30.—The two days' tournament of the Canajoharie Rod and Gun Club, which was brought to a close this afternoon, was a very pleasant affair. On the first day we threw Nos. 1 and 5 as incomers, placing the traps 45yds. out in the field; No. 5 threw a target toward the No. 1 score, No. 1 throwing a target toward the No. 5 score. No. 2 trap threw a right-quarterer, No. 3 straightaway, and No. 4 a left-quarterer. Among our visitors on the first day were: H. M. Levengston, Saratoga; D. M. Lefever, Syracuse; W. H. Cruttenden ("Crutty"), Cazenovia, N. Y.; W. R. Hobart, Newark, N. J.; "Arnold" and Wadsworth, Albany; Roberts and Dr. Mosher, Rupert, Vt., and Conley and Brainard, Sherburn, N. Y. To-day we had an addition to the above list in H. L. Gates, Utica; Johnny Sanders, Albany; F. W. Partiss, Johnstown, and Charles Riemensnyder, Gloversville. The scores made each day were as follows:

First Day, May 29.

No. 1, 10 targets, $1.30: Levengston 8, Hobart 5, Arnold 7, Weeks 8, Crutty 4, Wadsworth 5, Wessels 5, Roberts 4, Mosher 4, Scharff 3.

No. 2, 15 targets, $1.50: Levengston 11, Hobart 8, Arnold 7, Weeks 9, Crutty 8, Wadsworth 7, Pegnim 5, Roberts 10, Mosher 7, Wessels 9.

No. 3, 20 targets, $2:

Levengst'n	01010111100111000110—11	Wadsw'rth	00100101001000010010— 6
Hobart	11111010101011111000—13	Pegnim	10110111010111000101—12
Arnold	10000300011010011110— 8	Roberts	01100111011110111110—14
Weeks	11001011101111001011—13	Mosher	01111101101010010101—12
Crutty	11110100110111000010—11	Wessels	01100001100111101011—11

No. 4, 10 targets, $1.30: Levengston 9, Hobart 6, Arnold 8, Weeks 5, Crutty 7, Wadsworth 6, Pegnim 5, Roberts 6, Mosher 2, Conley 7, Wessell 7.

No. 5, 15 targets, $1.50: Levengston 11, Hobart 7, Beck 10, Weeks 8, Crutty 11, Wadsworth 6, Roberts 12, Mosher 7, Conley 7, Wessell 6.

No. 6, 10 targets, $1.30: Levengston 7, Hobart 5, Arnold 4, Weeks 9, Crutty 6, Wadsworth 5, Roberts 8, Mosher 6, Conley 3, Wessell 5, Scharff 3, Pegnim 4.

No. 7, 15 targets, $1.50:

Levengston	111111111001101—12	Roberts	111001010111011—10
Hobart	110100101101010— 8	Mosher	110111100111110—11
Arnold	011111101001010— 9	Conley	001011010000110— 6
Weeks	101111011111110—12	Wessels	110100001100100— 6
Crutty	011011011111110—12	Pegnim	100111010000110— 7
Wadsworth	100110111001000— 7	Lefever	000110011110111— 9

No 8, 15 targets, $1.50: Levengston 12, Hobart 7, Arnold 12, Weeks 12, Crutty 8, Wadsworth 7, Roberts 10, Mosher 9, Conley 6, Pegnim 8, Lefever 8, Wessels, 9, Scharff 6.

No. 9, same: Levengston 11, Hobart 7, Arnold 8, Weeks 11, Crutty 10, Wadsworth 7, Conley 6, Wessels 10, Pegnim 6, Lefever 5, Roberts 9.

No. 10, 20 targets, $2:

Levengst'n	10111011110111111110—16	Wadsw'rth	10100111101010110100—11
Hobart	11100111100110101011—13	Roberts	00111100111011111111—15
Pegnim	00100000010100000110— 5	Mosher	00111100111101010111—13
Weeks	11101111111111110110—17	Conley	00110110111110010111—13
Crutty	00001001100000011000— 5	Wessels	11110010000101010101—10

Second Day, May 30.

No. 1, 10 targets, $1.30: Conley 7, Gates 7, Weeks 10, Levengston 6, Hobart 8, Lefever 9, Wessels 8, Mosher 8, Roberts 6, Bancroft 6, Wadsworth 5, Brainard 5, Crutty 6, Reimensnyder 4, Partiss 2, Sanders 8, Schariff 6, Arnold 7.

No. 2, 15 targets: Conley 13, Gates 12, Weeks 10, Levengston 12, Hobart 9, Lefever 9, Wessels 12, Mosher 10, Roberts 9, Bancroft 9, Wadsworth 12, Brainard 8, Crutty 10, Reimensnyder 6, Partiss 4, Sanders 11, Arnold 7, Pegnim 7.

No. 3, 20 targets, $2:

Gates	10110011101100110110—12	Wadsw'rth	11111111010100101100—13

W. H. HUCK.

Syracuse Scores.

SYRACUSE, N. Y., May 30.—The Syracuse Gun Club held a shoot to-day, part of the programme being the medal shoot. Harvey McMurchy won the class A medal with 43 out of 45; class B medal, as usual, went to Windsor Morris with 40 out of 46. The scores were as follows:

Class A.

McMurchy (45)	11111111111111111111111101111111111111101111 —43
Wilcox (46)	11101101011110111011110111111111111111111111 —39
Ginty (50)	10110110111000111111011111111111111111011100011100—37
Willard (50)	00111010101110100100101111111111111111100101101111111—35
Mowry (45)	11110011110011010111101111011111111111111011 —35
Mosher (50)	01111011101111110101001111101100000001101010111111—32

Class B.

Morris (46)	11111111101111111111101111111111101001110111111 —40
Hunter (48)	11110011110111111111110111101010111100011010010 —33
F Lefever (45)	11110011101011011010011111101111111011111101110 —32

June 2.—A series of live bird sweeps were decided to-day at Messina Springs. George led with a total of 24 out of 25, Mosher, Ayling and Mowry being close after him with 23. Scores:

	No. 1, 10 birds:	No. 2, same:
Ayling	2121221222—10	1221202122— 9
George	1121221212—10	2021211122— 9
Mosher	1102112211— 9	2221210222— 9
Kendall	1112111120— 9	2112012100— 7
Mowry	1212112102— 9	2111212222—10
Chase	1111211102— 9	2002112122— 8
Holden	1122120200— 7	1210011211— 8

No. 3, 5 birds: Mosher 5, Kendall 5, George 5, Ayling 4, Mowry 4, Chase 4.

Lake Erie Rod and Gun Club.

DUNKIRK, N. Y., June 1.—The members of the Lake Erie Rod and Gun Club had a field day on May 30, Decoration Day. The shoot was the most successful held here this season, several Buffalo sportsmen taking part in the events. The club shoot was delayed until 4:30 P. M. on account of some horse races. From that hour until dark we made up for the delay, throwing a great number of targets in that time. A large crowd of spectators was on hand to witness the shooting. The following are the records made:

	Shot at.	Broke.		Shot at.	Broke.
Clover	100	91	Sisson	50	37
Green	100	88	Shelby	50	32
Ware	100	88	Rathburn	25	19
Dr Dodd	100	81	Johnson	25	17
Clark	100	76	Beard	25	16
Pond	50	46	Bristol	25	16
Sackett	50	40	Schumacher	25	16

To-day was the regular club shoot day, ten members putting in an appearance notwithstanding the above recorded shoot which was held only two days previous. As a matter of fact our club is going ahead very fast, not only in point of number of members, but also in the matter of marksmanship. Records made to-day were:

	Shot at.	Broke.		Shot at.	Broke.
Clover	50	44	Sackett	25	21
Shelby	50	43	Reuther	25	18
Green	50	41	Bristol	25	16
Dr Dodd	50	38	Beard	25	14
Clark	50	37	Rathburn	25	12

Five pairs: Clover 8, Beard 6, Rathburn 5. D. W. B.

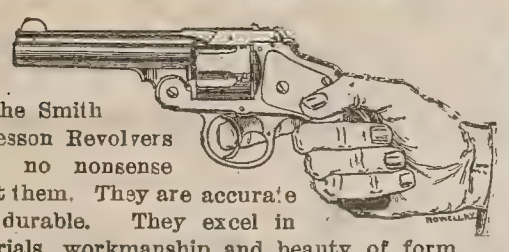
The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable*

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

Notice to Rod Makers.



PRICES FOR 1895.

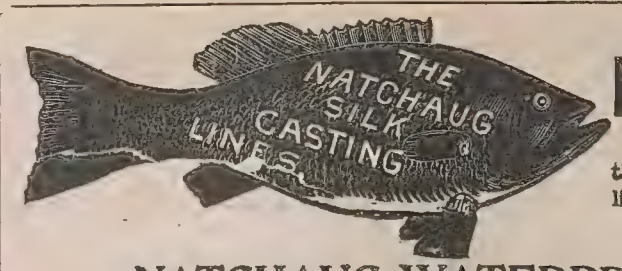
Favorite Flies and their Histories.

By MARY ORVIS MARBURY.

MRS. MARBURY is thoroughly enthusiastic over her subject, and after an introductory essay on "Insects, Natural and Artificial," etc., she gives the history of the various favorite flies, accompanied by letters from anglers relating to their use. Two or three years were spent in collecting information in this way. The kind interest shown by fellow-fishermen in cordial replies giving their knowledge and opinions was both surprising and delightful, and awakened warmest gratitude. These letters are records of actual experiences, and conclusions deduced from the same; and they cannot fail to be of great assistance to any one who may wish suggestions regarding new waters. The colored plates depict 17 hackles, 18 salmon flies, 48 lake flies, 185 trout flies and 58 bass flies, the comprehensive character of the collection, and the value of the detailed comments on each of its 291 flies, will be more apparent. . . "It is destined to remain for generations to come," says *Forest and Stream*, "a prominent landmark in angling literature. The fly-fisherman of to-day who does not possess it lives below his privileges."



Square octavo, 522 pages, 32 colored plates, 6 engravings and 8 reproductions of photographs. Price $5.00, postpaid.

ROWLAND E. ROBINSON'S DANVIS BOOKS.

CHRONICLES OF SPORTSMEN AND OTHER HUMAN BEINGS.

Uncle Lisha's Shop.

LIFE IN A CORNER OF YANKEELAND.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days, "to swap lies." The talk naturally ran much on hunting stories and wood lore, but although the stories told were generally good, their truthfulness was not always accepted without question, and the volume abounds as much in dialogue as in narrative. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself, and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact n all the other characters introduced.

Sam Lovel's Camps.

UNCLE LISHA'S FRIENDS UNDER BARK AND CANVAS.

When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living flesh and blood creatures drawn with such fidelity to life that the reader never doubts that he would recognize any one of them from the description, should it ever be his good or ill fortune to run against him.

Danvis Folks.

A SEQUEL TO THE SHOP AND THE CAMPS.

This volume is a collection into book form of the "Danvis Folks" chapters published in FOREST AND STREAM. It relates the further fortunes of Uncle Lisha, Sam Lovel, Granther Hill and other personages of the story whom we know so well. Mr. Robinson avers that his characters were of the old times and have passed away. That surely is a mistake. They are living to-day here in these three books, and the Vermont author has endowed them with qualities which will give them long life to come. If you already have on your shelves the Shop and the Camps, you have a place there for this third volume.

Sent postpaid, the Shop and the Camps, $1.00 each, the Danvis Folks, $1.25.

VOL. XLIV.—No. 25
No. 318 BROADWAY NEW YORK.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, $5.
Forest and Stream *6 months and any two of the pictures*, $3.
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

SNAP SHOTS.

WHEN the New York Aquarium authorities were looking for a superintendent, candidates for the place were required to undergo a civil service examination. Their information was tested on such points as the constituents of aquarium cement, the composition of sea water, the proper material for pipage, the strength of glass for tanks, the treatment of fish affected with fungus, and other like matters on which it was clear that a superintendent must be informed. But one question was this, "When and where was the first public aquarium opened?" Now, it may be conceived that a person might have knowledge on purely practical points of aquarium management, not know anything about the first established aquarium, and yet be perfectly competent for the post of superintendent. But if he does know that the first public aquarium was established at Regent's Park, London, in the year 1847, his possession of that knowledge would predicate on his part such an interest in aquaria that he had been led to give attention and study to the whole field; and a person thus shown to have had interest in the subject would be, other things equal, the best man for the place.

We were in error the other day in saying that Michigan had failed to adopt the non-resident license system. By the new law a deer-hunting permit is required of non-residents, and the fee for it is $25. It is good for one year. Residents also who go deer hunting must first buy from the county clerk a certificate of their citizenship, for which the charge is 50 cents. Any man encountered hunting deer must on demand of any person show either a non-resident permit or the paper vouching for him as a true Michigander. This law is like the new North Dakota system, although there the license system applies to all shooting.

Vast stretches of Kansas farm lands have been abandoned within the past twelve months, and the territory has reverted to game country, where quail are on the increase. The extent to which this change has progressed has had an appreciable effect upon the game supply of the State. As for the game law, it is as worthless as a mortgage on an abandoned farm. It is truly ridiculous in character, for it provides that no one but a land owner may shoot or trap at any time, and he may shoot at all times. Nobody pays any attention to it, except that once in a while it may be enforced as a spite measure, not to vindicate the law of the land, but to gratify personal pique.

An Englishwoman has written a book entitled "The Curse of Intellect." It is a story of a misanthrope who goes into the African jungle, learns the speech of monkeys and then sets in to educate one of the monkeys, which as it "learns sense" becomes discontented and then curses the man who has given it an intellect. It might have been different. If the man who went into the forest had been a sunny, healthy-minded person, instead of the sour-souled individual he was, the monkey might have found that life with intellect was after all a good thing. There is so much in the teacher. If "O. O S.," or "Kingfisher," or "Podgers," or "Jacobstaff" were intrusted with the development of a monkey's intellect, the odds are 100 to 1 that the creature would find his new life worth living.

Have you read anything better within the last fortnight than "Jacobstaff's" notes of his early shooting days?

THE GREAT DUCK EGG FAKE.

A Wild Goose (the old original "wild goose chase" bird) sat on a Mare's Nest and hatched out a Beautiful Fake. And when the National Game Protector (who had stopped shooting when there was nothing more in sight) saw it, he said: "It is a Good Thing; push it along."

But—you cannot protect Game by pushing a Fake.

FOR two or three years occasional articles have appeared in the weekly and monthly papers—and have been copied into the dailies—which told of a great destruction of wildfowl eggs in the Northwest for commercial purposes. The story is that millions of wildfowl eggs are annually gathered in Alaska and the British Possessions, and from there are shipped to points in the East, where they are manufactured into egg albumen cake.

These reports have been given out repeatedly by the National Game, Fish and Bird Protective Association, and on the strength of them the officials of that organization have strenuously demanded legislation to stop the alleged egging industry. In Congress the subject has been taken up by Senator John H. Mitchell, of Oregon, who in the last session made a speech on the Alaskan egg destruction, averred that millions of eggs were collected there for albumen, and asked for an appropriation of $5,000 to find out more about it.

Just how much truth is there in the story? What basis have these alarming statistics? Is the duck egg story true or is it a fake?

The FOREST AND STREAM has undertaken to answer these questions. It has made an exhaustive inquiry, and to-day we give the results of the investigation.

I.

The duck egg albumen story has had wide circulation. Is has extended liberally from Oregon in the northwest to Louisiana in the southeast. Here is a letter received this month from Louisiana:

Editor Forest and Stream:

Inclosed you will find a clipping from the St. Louis *Republic* which explains itself. Can't your influence with sportsmen help this cause a little? It is a cause that ought to be dear to the hearts of all sportsmen, and not to sportsmen alone, for all the people of this great country are interested in this subject. I know very little how this gathering of the eggs of waterfowls has affected the North and West, but in this country ten or twelve years back it was very little trouble for any darky or poor white man with his old muzzleloader and a few charges of powder and shot to secure in a few hours ducks enough to last his family for a week. Now it is a good hunter who can get half a dozen ducks in a day except under very favorable circumstances. Cannot you induce a few Senators and Representatives to join with Senator Mitchell in urging this on Congress? Surely the welfare of the mass of people is of more importance than that of a few engaged in destroying the water fowl by gathering the eggs.

J. D. USHER, M.D.

II.

The article inclosed by Dr. Usher was originally published in the New York *Tribune*, and as it embodies Senator Mitchell's speech in the Senate *verbatim*, it may be quoted here:

Senator John H. Mitchell, of Oregon, when in the city recently, told some things about the wildfowl in the Northwest and in Alaska that will be of interest to sportsmen generally, and also to those who are interested in preserving from absolute destruction the original wild birds of this continent. Senator Mitchell, though perhaps not so enthusiastic a sportsman as many other members of the Senate who go duck-hunting down the bay or tarpon fishing in Florida waters, is, nevertheless, deeply interested in the wildfowl of America, and as a student of existing conditions has come to realize that unless something is done to stop the indiscriminate slaughter and criminal waste attendant upon the hunt for these birds, it will not be long before the game birds of the Pacific Slope are extinct. Senator Mitchell, in speaking of the way in which these fowl are being destroyed, said:

"It is not at the door of the huntsman or legitimate sportsman that the blame for the wholesale destruction of these birds can be laid. The whole coast might resound to the echo of the sportsmen's fowling-piece, and but little impression would be made upon the millions and millions of wild birds that make this territory their home. The trouble comes from another source, and the legitimate hunter is as much interested in putting an end to the wanton slaughter as anyone else. I have taken the matter up in the Senate, and perhaps the following resolution offered by me will explain the way in which I am trying to protect the wild birds of our country:

"'Amendment to the sundry civil appropriation bill. Insert: For the purpose of paying the salary and defraying the necessary expenses of an agent of the Treasury Department to thoroughly investigate and report to said department as to the alleged destruction of eggs of game wildfowl in the Territory of Alaska, and the best means to be adopted to prevent such destruction in the future; such agent to be appointed by the Secretary of the Treasury at a salary not to exceed —— dollars per diem, and his necessary traveling expenses, the sum of $5,000.'

"The purpose of the legislation proposed by the amendment is to prepare the way for legislation looking to the protection from indiscriminate and reckless destruction of the eggs of toothsome wildfowl, such as wild duck, geese and swan, in their great breeding grounds in Alaska. This in the last few years has tended mostly to diminish the number of these valuable wildfowl in this country, particularly in the States and Territories west of the Rocky Mountains.

"The principal breeding grounds of these fowl, which in the winter months cover the rivers, lakes and ponds of the Northwest, and which are not only the delight of the sportsmen, but furnish a nutritious and wholesome food for many thousands of people, are in a series of small valleys and lakes in Southwestern Alaska. The largest of these is nearly opposite Kodiak Island, on the mainland. Another breeding ground where these migratory fowl deposit their eggs by the million and hatch their young is at or near the mouth of the Yukon River, while still another is near St. Michael, and still another near the mouth of Copper River.

"It is a fact perhaps not generally known that for the purpose of obtaining ova or egg albumen, which is largely used in commerce, certain corporations have been formed and large amounts of capital have been invested for the purpose of gathering in these breeding grounds and packing and shipping annually vast millions of the eggs of these ducks and geese. The shipments annually over the Canadian Pacific Railroad of these eggs are said to be enormous. Not infrequently as many as 1,000, 1,200 or 1,800 barrels of these eggs are taken, mainly from the breeding grounds in Alaska. A small proportion, perhaps, but very small, comes from Canadian breeding grounds in British Columbia.

"In taking these eggs innumerable numbers that are partly hatched are destroyed. Dried albumen is a valuable article of commerce, largely used in this and other countries. It is largely used in the testing and manufacture of pepsin and other chemicals, and in the clarification of liquids, which it effects by involving during its coagulation the undissolved particles, rising with them to the surface or subsiding. It is used as an antidote for corrosive sublimate and sulphate of copper. It is used in the manufacture of what is known as alum curd, a substance used between folds of gauze over the eye in certain stages of ophthalmia. It is also used largely in photography and in many chemical preparations, and put to varied uses.

"Egg-albumen cake sells usually for about 25 cents per pound. This albumen was formerly obtained exclusively from the eggs of the domestic hen, but these later years the demand is supplied chiefly from the eggs of these migratory wildfowl, mainly from the wild duck of Alaska. There is little doubt but this destruction of the eggs of the canvas and teal duck of the Pacific Coast, which by many are thought to be superior in flavor and other respects to those of the Potomac, has done more in the last few years to diminish their number on the Pacific coast, in the States of Oregon, Washington, Idaho, Montana and California, than all the guns and dogs of the sportsmen in that vast region. These wholesale robberies and destruction of eggs of these game wildfowl within our Territories, which are under the jurisdiction of Congress, should be prohibited by law under severe penalties; or at least their taking, if permitted at all, should be subjected to stringent regulations and safeguards. We legislate, and very properly too, for the protection of our salmon fisheries in the Territory of Alaska. Why not then for the protection of our game birds?

"This proposed amendment to the sundry civil appropriation bill provides for a thorough investigation of this whole business by an agent of the Treasury Department, and for a report which may serve as a basis for such legislation at the next session of Congress as may from such investigation and report be demanded.

"The amendment I offered," said Senator Mitchell, "is now in the hands of the Committee on Territories, and I hope for favorable legislation in the next Congress. I am not the pioneer in this work of trying to protect our game birds. M. R. Bortree, president of the National Game, Fish and Bird Protective Association, brought some valuable data to my attention through W. A. Storey, State secretary of the Association in Oregon. Mr. Bortree says that the Atlant flyway of the waterfowl still remains, but the flights of fow that use to come by the way of Calumet Valley have gone further west. At present the great nesting and breeding grounds are in Alaska and the Hudson Bay region. The slaughter, he says, is frightful, and unless something is done to make the laws more stringent game birds will be exterminated. Great Britain legislated on the subject many years ago. An act entitled 'The wild birds protection act' was passed in 1880, and recently it has been amended in many respects. The second section of the act reads: 'Prohibition of taking or destroying eggs—A Secretary of State may, after the passing of this act, upon application by the County Council of any administrative county, by order prohibit 1. Th taking or destroying of wild birds' eggs in any year or years, in any place or places, within that county. 2. The taking or destroying the eggs of any special kind of wild birds within that county or part or parts thereof, as recommended by the said County Council, and set forth in the said order. 3. The application by the County Council shall specify the limits of the place or places, or otherwise, the particular species of wild birds to which it is proposed that any prohibition in the order is to apply, and shall set forth th reason on account of which the application is made.'

"Of course, legislation in our country would be on somewhat different lines. Something should be done, and I hope to see my idea carried out by the next Congress."

One portion of Senator Mitchell's speech, which the *Tribune* reporter did not incorporate in this interview, was an extremely flowery description of the Alaskan wildfowl breeding grounds, written by a Mr. Middleton, whom the Senator declares to be an eminent authority on matters pertaining to the breeding of wildfowl. Mr. Middleton, as quoted by Senator Mitchell in his speech, says of the nesting country:

May comes, and the north wind dies, the south wind comes whispering from the south odorous with the scent of the soft ocean air. High in the heavens circles the sun. The snow disappears, grass and flowers spring up and cover the earth with bright and brilliant colors of the Arctic vegetation; where great fields of snow lay are now vast morasses. Through these vast tundras flow many sluggish streams, full of fishes that sport and splash without fear of angler or net. All they have to dread are the attack of their own finny tribes, the swoop of the white-headed eagle and the osprey, and the ivory claws of the shaggy brown bear, for in that land of loneliness the human foot but

rarely treads and human voice is seldom heard; yet that land is the birthplace of more game birds than is any other region on earth.

The solitude may be unbroken for months by any sound, but when the June days come and the snow is all melted, and the enlivening vegetation gives notice that the short Arctic summer is at hand, then come the summer dwellers of the land. A long dark line may be seen far away on the southern horizon; gradually it comes nearer and nearer, and at last when it comes within the range of vision it proves to be a myriad of Canada geese. They do not circle and swerve as they do in inhabited countries, but when they see the gleaming waters the many wings slant downward, and with a rushing sound the great flock splashes into the water and rides peacefully on the waves they have themselves created. Away on the further horizon appears another flock, and behind them another, that proves to be canvasback ducks. Soon they are joined by other flocks, and in three days from the coming of the first goose the tundra will be one mass of birdlife splashing in the water. Dashing in the air are clouds of birds—swan, geese, ducks and auks; all are represented, for between Norton Sound and that vast morass is the main breeding place of the wildfowl of the American continent.

And yet the flowers of these paragraphs are like the flowers that bloom in the spring—they have nothing to do with the case. For though Mr. Middleton tells us that this morass "is the main breeding place of the wildfowl of the American continent," he also assures us that "in that land of loneliness the human foot but rarely treads and the human voice is seldom heard." But in the work of gathering millions of eggs the human foot would have to tread "quite considerable," and silence of the human voice would not brood to any great extent amid the brooding birds.

Senator Mitchell seems to have derived his wild duck egg statistics from President Bortree, of the National Association, and the Oregon local secretary, Mr. W. A. Storey. President Bortree gives out to the Chicago *Record* the following quotation from a letter received from Mr. Storey:

"Another work that has been pushed by your Secretary for this State, and in which I am now prepared to ask your hearty co-operation, is the protection from egg hunters of our wildfowl breeding grounds in Alaska. A careful investigation shows that millions of eggs are gathered and shipped from these grounds annually and countless numbers of partly matured eggs destroyed. I have furnished our United States Senator, the Hon. John H. Mitchell, with the proper information relating to the above facts, and if the state secretaries of this Association will bring the matter before their several senators at Washington, asking them to co-operate with Senator Mitchell in this matter, I am sure the effect will be for the best. Oregon, Washington, California, Idaho, Montana and British Columbia depend largely, if not entirely, on these breeding grounds for their supply of wild duck, geese, swan, etc., and unless they are protected from such wanton destruction I fear we will, in a short time, be forced to enjoy our duck hunting in memories of the past."

And Mr. Bortree himself tells the *Record* man:

"The Atlantic flyway of the waterfowl still remains, but the flights of fowl which used to come by way of the Calumet Valley have gone further west. At present the great breeding and nesting grounds of the waterfowl found in this region are Alaska and the Hudson Bay region. The letter shows what is going on in Alaska. The proposition is to call on Congress to pass some game protective laws for the Territory of Alaska, and to secure an amendment to the interstate commerce law to prohibit the acceptance for transportation by common carriers of any game killed in violation of the game laws or in defiance of the export laws of any State.

"The slaughter of game is frightful. Something must be done to make the laws more stringent and more uniform, or game animals will be exterminated."

Mr. Bortree, when asked for specific information on this subject, confessed to a representative of FOREST AND STREAM that he had no facts to give; but he promised to try to get some for us.

III.

Now, if anything approaching the quantity of eggs mentioned were shipped each season from railroad points on the Northern Pacific coast, some one would know about it; there would be a great coastwise traffic in these eggs. Trains of merchandise are not loaded up at night and shipped off secretly to unknown consignees, nor are shiploads of eggs received from foreign countries without entry at the Custom House; a man does not start with an egg in his pocket from the shores of the Far North, come down to the border line and smuggle it across and then go back for another. We have given some time and trouble to the work of investigating this story, and can find no one who has any knowledge of such a trade. Nothing definite, so far as we know, has ever been written about the matter; no particle of evidence has been brought forward to show that such a trade exists. No names have been given of those who gather the eggs or ship them, nor of the consignees to whom they go, nor of the vessels by which they arrive in port, nor of the people who receive the eggs and manufacture them. Not a word of detail, not a scintilla of evidence, just a series of repetitions about millions and car loads of duck eggs, set in a glittering frame painted over with pictures of the far stretching tundra and the clouds of ducks, geese, swans and auks.

Those people who started the story, and who—for what purpose is best known to themselves—have delighted to keep it going, may have some evidence to produce. If they have, it is time it was brought out.

In our efforts to get information on this subject we have followed out three lines of inquiry, the first having to do with the transportation lines said to have carried the millions of eggs; the second with the customs ports of entry where the millions of eggs would have been received, and the third with the albumen industry itself in which the millions of eggs were said to be consumed.

IV.

We first inquired of the more northern lines of transportation and asked the Canadian Pacific and Northern Pacific railroads what they knew of shipments of wildfowl eggs. The general traffic managers of these roads most courteously had their books examined for our benefit with the result given below. Mr. George Olds, of the Canadian Pacific R. R., wrote us as follows:

CANADIAN PACIFIC RAILWAY CO., Office of General Traffic Manager. Montreal, Feb. 5, 1895.—*Editor Forest and Stream:* I am in receipt of your favor of the 29th ulto. In reply, I beg to say that so far as my knowledge goes, this line has not up to this time transported a single package, barrel or otherwise of wildfowl eggs from any station on its line in British Columbia, or from the coast to any eastern point. I have never heard of an inquiry for rates for the transportation of such property since our line was opened to the Pacific coast. To be quite certain I have submitted your inquiry to our Western agents, requesting them to examine their books and report their findings to me.

On receipt of their reply I will write you again. Yours truly, GEO. OLDS, General Traffic Manager.

A few weeks later, after the promised inquiry had been made, we received from him another letter with two inclosures from his agents in British Columbia. He says:

CANADIAN PACIFIC RAILWAY CO., Office of General Traffic Manager. Montreal, Feb. 28, 1895.—*Editor Forest and Stream:* Referring to your favor of the 29th ulto., and to my acknowledgment of the 2d inst., I now invite your attention to the correspondence inclosed from our Messrs. Brown and Forrest, Vancouver, B. C., on reading which I shall be much surprised if you do not ask yourself as I have, "What manner of man is Senator Mitchell, of Oregon?" Perhaps it will be charitable to conclude that his natural ignorance of the subject he dealt with laid him open to some practical joke. Yours truly, GEO. OLDS, General Traffic Manager.

CANADIAN PACIFIC RAILWAY COMPANY, Vancouver, B. C., Feb. 18, 1895.—Geo. Olds, Esq., General Traffic Manager, Montreal—Dear Sir: I herewith return correspondence in connection with shipment of wild birds' eggs from Pacific coast points via our line.

Although I was satisfied we had not handled any of these eggs, still, to be sure, I wrote to Mr. Forrest here, asking him if any shipments had at any time been made, and you will notice by his reply that there have not.

I wonder if, when Mr. Mitchell made the statement that is claimed he did, he considered how many of the wild birds' eggs it would take to fill 1,800 barrels, and how many years it would take to gather them; for, with the exception of gulls' eggs, which are gathered in larger quantities than those of any other wild birds, it would simply be an impossibility to gather the large quantity mentioned in a hundred years if any one did feel disposed to do so, and, so far as I know, I do not think any one on the coast would gather these eggs, as it certainly would not pay them to do so. Yours very truly, WM. BROWN.

CANADIAN PACIFIC RAILWAY COMPANY, Vancouver, Feb. 15, 1895.—William Brown, Esq., A. G. F. A., Vancouver—Dear Sir: Returning papers in connection with shipment of birds' eggs. No shipments of wild birds' eggs have ever been handled through this station. Yours truly, W. H. FORREST, Agent.

Of like tenor are the letters from Mr. J. M. Hannaford, General Traffic Manager of the Northern Pacific R. R., whose investigation of the subject on the Pacific coast appears to have been very thorough. Mr. Hannaford writes:

NORTHERN PACIFIC RAILROAD COMPANY.—Office of the General Traffic Manager. J. M. Hannaford, General Traffic Manager, St. Paul, Minn., Feb. 15, 1895.—*Editor Forest and Stream:* I have to acknowledge yours of the 11th in regard to statement made of shipments of wildfowl eggs supposed to be gathered in Alaska. Would say that, so far as my personal knowledge of this matter goes, I am inclined to take the view that the stories are more a matter of fake than founded on fact. In order to exhaust, however, the means of inquiry at our command in regard to the subject, I have sent your letter to our representatives on the coast, requesting that it have their prompt attention. On return of papers I will give you the benefit of their investigation. Yours truly, J. M. HANNAFORD, General Traffic Manager.

NORTHERN PACIFIC RAILROAD COMPANY.—Office of the General Traffic Manager. J. M. Hannaford, General Traffic Manager, St. Paul, Minn., March 23, 1895.—*Editor Forest and Stream:* Referring again to your communication of Feb. 11 in regard to shipment of wildfowl eggs from Alaska, I am just in receipt of letter from our Pacific coast representative advising that he has given the matter full investigation through parties intimately connected with the Alaska traffic, but is unable to learn of any such shipments being made. Our agent at Tacoma, where this business is generally delivered to our line, advises that no one there has ever seen or handled a shipment of this kind. Representatives of the Pacific Coast Steamship Co., the principal carriers in the trade, and other lines operating between Puget Sound and Alaska, say no eggs have ever been shipped to their knowledge. Representatives of this company at Vancouver and Victoria also say that no such shipments have ever been handled at those points. Yours truly, J. M. HANNAFORD, General Traffic Manager.

UNION PACIFIC SYSTEM, E. Dickinson, General Manager.—General Manager's Office. Omaha, Nebraska, June 1, 1895.—*Editor Forest and Stream:* Your letter of 28th ultimo has been referred to our freight traffic manager for reply direct. So far as I am aware there is no truth whatever in the statement, except that during the "corner" on eggs last spring several car loads that had been shipped West and were in cold storage were returned East. This is the only case I know of where eggs have been shipped from the Pacific coast to eastern points. Yours truly, E. DICKINSON.

V.

The transportation lines knowing nothing whatever about the thousand barrel shipments of which we have heard so much, we looked about for other sources of information. These eggs were supposed to come from the Northwest, and so would be entered at some Custom House. If they were shipped from Alaska through Canada by the Canadian Pacific R. R., they would be entered at the Victoria, B. C., Custom House. Shipments from British Columbia or from the Hudson's Bay country would be entered at Pacific coast ports or at some of the border line ports. In order to secure this information, we requested a correspondent, who is in the U. S. Custom service, to make inquiry for us, and the replies which he received are given below:

OFFICE OF THE COLLECTOR OF CUSTOMS, Port of Fort Benton, Mont., Feb. 19, 1895.—William W. Castle, Esq., Examiner, Boston, Mass.: Sir—I have the honor to acknowledge receipt your communication 12th inst. relative to importations of wildfowl eggs into this customs district. In reply to same I respectfully state that there are no importations of the above in this district. Very respectfully, DAVID G. BROWNE, Collector.

OFFICE OF THE COLLECTOR OF CUSTOMS, Port of Sitka, Alaska, March 9, 1895.—Mr. William W. Castle, Appraiser's Office, Boston, Mass.: Sir—In reply to your letter of the 12th ultimo, relative to the manufacture of albumen from wild sea fowl eggs, I would refer you to the U. S. Fish Commission steamer Albatross, now stationed at Mare Island, California, for the above information, as I fail to find any records for same in this office. Very respectfully, GEORGE MOORE, Special Deputy.

The inquiry to the Port of San Francisco is returned with the following indorsements:

SAN FRANCISCO, Cal., Feb. 20, 1895.—No importations of the within mentioned merchandise are received at this port; therefore no information can be given on the subject. JAMES EUNKER, Appraiser.

Respectfully returned with the above information. E. B. JEROME, Collector.

"INDIANS GATHERING DUCK EGGS FOR ALBUMEN IN ALASKA."

[Bag of 480 ducks, 11 geese, 7 grouse, 3 cranes. Shot in 5 hours by 6 shooters, in North Dakota.]

OFFICE OF THE COLLECTOR OF CUSTOMS, Port of Port Townsend, Wash., Feb. 21, 1895.—William W. Castle, Esq., Appraiser's office, Boston, Mass.—Sir: I beg leave to acknowledge receipt of your letter of the 12th instant, and to advise you that no albumen or wildfowl eggs for the manufacture of commercial albumen has been imported into this district. I regret that I am unable to give you any information on the subject. Very respectfully, J. C. SAUNDERS, Collector.

CONSULATE OF THE UNITED STATES, Victoria, British Columbia, March 20, 1895.—Hon. William W. Castle, Boston, Mass.—Dear Sir: Replying to your communication, dated Feb. 12, 1895, I have the honor to inclose herewith a letter from Hon. J. R. Anderson, Statistician of the Department of Agriculture, British Columbia; also a letter from Hon. A. R. Milne, collector at this port, from which the information you desire can be obtained. Owing to the delay in receiving the letters, it was impossible to answer your communication earlier. I am, sir, very respectfully, W. P ROBERTS, U. S. Consul.

DEPARTMENT OF AGRICULTURE, British Columbia, Victoria, Feb. 25, 1895.—General W. P. Roberts, U. S. Consul, Victoria.—Sir: In answer to your communication of the 23d instant, I beg to say I am not aware that the collection and manufacture of albumen of wildfowl eggs has ever been attempted in this province, and that in my belief none is sent from here. Possibly something may be known at the Custom House about the matter; they would certainly know if any was exported. I return your correspondent's letter. I have the honor to be your obedient servant, J. R. ANDERSON, Statistician.

CUSTOMS, CANADA, Victoria, B. C., March 19, 1895.—Hon. W. P. Roberts, U. S. Consul, Victoria, B. C.—Dear Sir: I have the honor to receive your letters of the 26th ultimo and the 18th inst., inclosing a letter from Mr. William W. Castle, examiner of the port of Boston, regarding the collection and manufacture of commercial albumen of wildfowl or sea birds' eggs.

have carefully looked into the matter, and I cannot find that the albumen of wildfowl or sea birds' eggs is collected for any purpose or manufacture in British Columbia. If such were the case I certainly should know something about it, and I can find nothing in our compiled exports with reference to that kind of albumen or such eggs. I have the honor to be, dear sir, your obedient servant, A. R. MILNE, Collector.

The whole matter is pretty well summed up in the letter given below, in which the gentleman who took the trouble to collect for us these reports from the various custom houses gives his own conclusions on the matter:

PORT OF BOSTON, Mass., Appraiser's Office, May 2, 1895.—*Editor Forest and Stream:* Inclosed find such replies as I have received on the egg question. I wrote to all the border line collectors, but have received no replies from some. I think, however, the reply from U. S. Consul at Victoria and inclosures will establish the fact that there can be no great traffic in that section. If I get anything more will forward it to you. I hope you have not thought me neglectful, but it takes quite a time to get replies sometimes, and I have been waiting for some that have not yet arrived.

My opinion is that more eggs are destroyed in the Mississippi Valley by the spring shooters, a thousand, or even ten thousand, to one, than

it would be possible to destroy in any collecting that could be carried out, even if eggs were worth $1 a dozen at the breeding grounds. Wildfowl, while gregarious in migration, are by no means so in breeding, and are not, as when tamed, polygamous. I have seen miles of country (barren) in the Northwest that to a superficial observer might seem to be a vast breeding ground, but would really hold but few birds in comparison to its apparent capabilities, and even those which were to be seen flying about were by no means all breeders; not "every drake has a duck" there.

With sea fowl it might be different, but my experience on the Pacific has been that with few exceptions there are no such breeding grounds accessible to anyone commercially disposed as there have been on the Atlantic, such as the Funks Bird Rock, etc., in Gulf of St. Lawrence and Labrador coast. I thought at the time that the matter of commercial egg destruction was opened up that it was simply a weak invention of those who are butchering spring birds to throw dust and endeavor to blind people as to the real cause of decrease, viz., spring shooting—else why did they not claim that the decrease in snipe, plover and shore birds was the result of some (to them) nefarious business? A marketed female snipe, plover or duck in the spring means and stands for from four to ten fall birds, whether they be killed in bayous or tanks in Texas, sloughs in Nebraska, or meadows in New Jersey. The Legislatures may clog up the statutes of their States as much as they please with half baked, half digested game laws; so long as it is permissible to have in possession any game in close season, just so long will the slaughter continue. It gives a sportsman cold chills down the spine to pass through Quincy market and see grouse, quail, snipe and venison exposed for sale at this time of the year, but what can be done about it no one seems to know or care.

By the way, I was amused to see in a recent FOREST AND STREAM an article from some one in the West who confesses that he used to shoot for the market to an extent of over 1,000 quail to two guns a day, 200 rabbits to one gun, etc., winding up with a plea to protect the few remaining. What for, pray? so he may keep up his market shooting?

WILLIAM W. CASTLE.

VI.

Concerning the commercial features of the albumen trade and the source of the supply, Mr. Klipstein, of the firm of A. Klipstein & Co., 122 Pearl street, New York, gives us the following information: Almost the whole of the albumen product used in this country is obtained in Russia, Germany and France, where eggs are very cheap. In warm weather, when eggs are cheap and abundant, the eggs are broken and the albumen is separated from the yolks. A little salt is mixed with it to preserve it, and it is then dried and otherwise prepared as a commercial article. The yolks are used in the manufacture of certain kinds of leather, and also as a food product. The albumen is used chiefly for food purposes, bakers and confectioners consuming the greater part of the product in the making of cakes and candies. One pound of albumen is worth from forty-eight to fifty cents and represents the product of 150 eggs so that, making no allowance for cost of shipment, the eggs would be approximately about four cents a dozen—a figure at which the American hen cannot compete. The product manufactured in this country is of no importance whatever from a commercial standpoint. But a few pounds have been made here in the past ten years. About 95 per cent. of the albumen of commerce is manufactured from the eggs of the hens of Russia Germany and France. A small quantity of the product is made from the eggs of wildfowl in Syria and Tuscany.

"If there was any albumen made in this country," said Mr. Klipstein, "we would most certainly know of it. It seems to us that eggs taken in Alaska or on the American coast would be too valuable as a food product, greater in value than when made into albumen. The cheapness of the foreign article, which is imported free of duty, prohibits American competition. We are the largest importers of albumen in America, if not in the world, and if there was any American product we would know of it. In our opinion, the report of the importation of eggs from Alaska and the Pacific coast, for the manufacture of albumen, has no foundation in fact. Eggs imported from Alaska would be likely to spoil or lose their freshness before arriving here, and would then be unfit for the manufacture of albumen."

Concerning the use of albumen in photography, an expert connected with the large house of G. Generet, No. 26 East Thirteenth street, dealer in photographic supplies, informs us that very little albumen is now used in photography compared with what was used five or six years ago, gelatine and other materials having almost entirely supplanted it, not one case of albumen paper to sixty of other kinds being sold. The bulk of the paper comes from Germany all prepared except sensitizing, which is done in this country. Some of the albumen comes from Canada. For photographic purposes albumen of hen's eggs is superior to that of duck eggs. The commercial supply of hen's eggs is so abundant that it is not necessary to go to the wildfowl for a supply.

VII.

This then is the result of our inquiry:

1. The duck egg alarmists who have raised this calamity cry show themselves unable to substantiate their tales of millions of wildfowl eggs gathered and shipped for the manufacture of albumen.

2. The transportation companies who would carry the thousands of barrels of duck eggs, if there were any barrels for carrying, have not carried them—not a barrel.

3. At the ports of entry where the eggs would have come in, none have come.

4. The albumen trade, said to consume the millions of eggs, knows nothing about them.

5. In the light of these facts, the duck egg story appears to be an unmitigated fake—the greatest fake ever perpetrated in this line.

VIII.

The invention and spreading abroad of this story has in the very nature of things accomplished no good whatever. In getting the sportsmen of the country worked up over imaginary nest robbing by imaginary Indians for imaginary purposes, the National Game, Bird and Fish Protective Association has actually not saved a single duck nor a single egg; nor could it ever. Its resolutions on the subject might quite as well have been directed against the dead Indian's pursuit of phantom fowl in the Red Man's Happy Hunting Grounds. The enlistment of United States Senators might as well be in behalf of national legislation against the robbing of mares' nests.

Meanwhile, let no one dream that because the Indians of the Northwest are not gathering millions of wild duck eggs, there is nothing to be done in the cause of game protection. There is a plenty, and it is nearer home than Alaska.

SOME "FOREST AND STREAM" CONTRIBUTORS.

"Jacobstaff."

YOU ask me for a few salient points in "Jacobstaff's" life, or how I came to be such a lover of the gun and became a crank as it were in the shooting field. Well, I hardly know how to commence or what to give you unless I dash away in my usual hasty pudding style and it may be not "as you like it," but here goes.

I am a Corncracker by birth, having seen the light, I am told, in Georgetown, Scott county, Ky., in the year 1832 (cholera year); but my father having been called to a professorship in the Hamilton Literary and Theological Institution (afterward, Madison University), settled in the village of Hamilton, Madison county, N. Y., in 1833-34

"JACOBSTAFF."

when I was about a year old; and there, among the then rugged and wooded hills of the Empire State, I spent twenty years of the happiest days of my life.

I must have been probably some seven or eight year of age, and my brother James (now professor in William Jewell College, Liberty, Mo.) some two years younger, when our father essayed to give us our first lessons in the shooting line. Having tacked a sheet of paper on a stump some twenty yards distant and placed the gun upon another stump, we were instructed how to aim and pull the trigger. I remember how my brother beat me badly at first, putting a number of shot in the paper near the center, while mine were but a few and away to one side of the mark. If I remember correctly, I must have shut the wrong eye. That was remedied afterwards and I passed my brother in marksmanship rapidly.

My first gun was a partnership affair with the son of our next neighbor, a brother professor of my father's—Samuel Stillman Conant. Conant was a little older than I, a very bright and rugged boy, almost an athlete. He was afterwards for a time city editor of the New York *Times* and later the able editor of *Harper's Weekly*.

The weapon was a Queen Anne flintlock musket. I fail to recall how we got it. It was about four feet in length of barrel, iron hooped, and provided with iron ramrod. We could neither of us do any execution at arm's length, but we used to lug it around and take turns in shooting. It took both hands to draw back the hammer. We were often put to our wits' ends to get ammunition, for ministers and professors were not burdened with lucre in those days.

There was a quarry near by, where stone was being blasted for building purposes, and by doing errands and odd favors for the men we would get now and then small quantities of blasting powder—great black chunks they were. I recollect we had to crush or pulverize some of it for the priming in the pan. We were troubled about good flints too. For shot we used the small dried peas from a farmer's bin or cut up lead pipe. The peas used to scatter a good deal and the lead slugs would tear or almost annihilate our squirrels or woodchucks when we hit them fairly.

How we roamed the hills with that heavy old piece; and with what a fizz and roar it went off, often doing as much execution at the butt as at the muzzle; and the dense black smoke, whew! "Early impressions are lasting," and after a half century I can smell it yet; but it was sweet incense in our nostrils then. And after the explosion we would often have to wait until the clouds rolled by before we could ascertain whether our shot had been successful.

Our next gun Conant got—a single barrel with beechwood stock and (I remember) no trigger guard. That gun did great execution with the robins and chipmunks. My first gun that was my very own was a smooth-bore rifle, long octagon barrel, curled maple stock the whole length of the barrel, brass mounted crotched butt, with a place in the stock for patches, grease, etc. It was a tremendous shooter. No tree was high enough for the safety of any squirrel. It was a percussion pill gun. We used to get those small black percussion pills by the gross, but only about half or two-thirds of them were of any good. Afterwards a gilded pill came into market, which was somewhat better, but a rainy or damp day had a very deleterious effect on their reliability.

This smooth-bore became famous throughout the county. It would carry a round ball (having rifle sights) with considerable accuracy, and many a hawk from the top of a dead tree during the fall fogs fell a victim, and crows and woodchucks without number. It was finally ruled out of our chicken shoots at 12 rods (we used to measure by rods then instead of yards) as altogether too reliable.

Then came the smooth thin copper cap—not much better than the gilded pill, but followed by the C D, then the ribbed G D cap; afterwards the thick Ely waterproof. Ah, how we used to cherish them, with a few in our vest-pocket handy for a hawk or a big gray squirrel, when we were anxious to have no failure in the go off. Let me see: powder, 9 cents per ¼lb.; shot, 2lbs., generally No. 4, at 5 cents per lb.; and caps, G D, 10 for a cent. That was equipment for a good day's shoot.

Ah, those were great days around on old Madison county hills. There was considerable game there of the small kind—squirrels, gray, black and red; ruffed grouse (partridge), a few duck, woodchucks, muskrats, with now and then a mink or fox; hawks, owls and crows, of course, and thousands and tens of thousands of pigeons. Some years they would come in the spring in clouds that darkened the air, and many stayed in our woods until fall; for I have shot pigeons in my boyhood days from May until October.

How distinctly I remember the bagging of my first woodcock. I had chased the fellow from place to place trying to get a shot "sittin'," as we boys would say. It was not very wild, but would rise almost from under my feet, fly a few yards and alight—and I felt sure I knew exactly where; but I could not see it until it was up and away again. It did this some eight or ten times, when in sheer desperation, as it topped the bushes, I let drive and, to my amazement, dropped it. A fall woodcock and a-flyin'. Wasn't I a proud boy.

At the age of twenty, having finished my Sophomore year in the fall of '52, I turned West for a year or two. Stopping at a pawnbroker's in Cleveland, I purchased for $8 a second-hand double barrel shotgun that was destined to bring to bag a large quantity of small game. I settled on a prairie not a hundred miles from Chicago, then quite a new country. My uncle, the Rev. Isaac Eaton, with his large family of ten grown children, was still living in his log cabin in the midst of a fine farm of rolling prairie. He had engaged for me the district school of the neighborhood, and I found myself domiciled in another log house, but of ample dimensions, as it answered for school during the week and a house of worship on Sundays. I soon discovered that I had struck a great game country. There were prairie chickens by the hundred, quail by the thousand, and ducks and geese in the sloughs in the fall by the million. What a paradise!

I had bargained with the trustees of the school that, instead of teaching a half day on Saturday, I would make that up at the end of the term. I wanted those days exclusively for my gun.

On my second day's schooling I discovered that many of the larger boys brought their guns with them. Some of these, coming six or eight miles across the prairie to school, of course bagged what they could coming and going. Good idea! I would do so too. I fixed up a place in the woodshed for their guns, out of the way of the smaller children and many a pinnated grouse, duck and quail did I take home to swell the pot of dear Aunt Phila. In the spring, wanting to kill a sandhill crane (and a mighty fine bird they are—equal to the wild turkey in eating quality) and a white or arctic owl, I traded off my double barrel shotgun for a rifle. There were many of these handsome snow white owls shot that winter from the rail fences, but, like the sandhill cranes, they were wary birds, and only by a long shot could they be reached.

After my second winter in this paradise I journeyed back to Madison University, of which my father, the Rev. Dr. Geo. W. Eaton, was the beloved president for a dozen years previous to his death. I finished my collegiate course in 1856, and, having another attack of the game fever, I again took my course westward, expecting to join Col. Noble in an exploring expedition across the plains; but, stopping to visit some friends on my old shooting grounds, I was too late to join the party. How inscrutable are the ways of providence. The entire party I learned, were annihilated by the Yankton Indians Cottonwood a few days later. Then, through Biron Kilboure, the railroad king of the west, I was placed on the roll with 21 others—a party to run the preliminary line of the northern division of the Milwaukee & La Crosse Railroad. We drove our first stake one rainy morning just out of Portage City, and ran through the woods to Hudson, opposite St. Paul, and here I had some genuine woods and camp experience; but I was more anxious with the company's gun (a double barrel) to explore on ahead with the chief than to run the level, or in fact to do any other part of the work; and it was during this trip that I was lost for two days in the wilderness, and scared out of a year's growth by laughing owls, as told long ago in FOREST AND STREAM.

Late in the '50s I was appointed by Hon. Hiram Barney one of the appraisers of the Fox and Wisconsin Land and Improvement Company. This company was organized for the purpose of connecting the Mississippi River with the lakes through the Fox and Wisconsin rivers, and it had been donated some 7,000,000 acres of land situ-

ated in twenty-eight counties of the State of Wisconsin. Some of this land was far from settlements, and we were obliged to camp out in order to visit each quarter section and report as to timber, soil, subsoil, etc., to place the land in market. Our headquarters were in Fond du Lac. My gun here was a double barrel, the right hand cylinder shot, the left rifle with a one and a half twist. We were often compelled to live on the production of this weapon, and it did good service. It was on these expeditions that my trapping experience was considerably enlarged, and under the instruction of my partner (we always went two together), Eben Pierce, an old woodsman, I obtained my practical education of how to build, and build quickly, brush and bark shanties, and even the construction of a log house for more permanent quarters. Sojourners in the wilderness were often called upon to use their best judgment and ingenuity in making themselves comfortable, and Eben was full of resources—a thorough woodsman, a successful trapper, a good shot and the best of companions. I wonder whether he is still in the land of the living.

The financial crash of 1857 reached us a little later and finished the Improvement Company and my speculation in the land business, and I drifted East again and went into Uncle Sam's employment.

Early in the '60's Mrs. Eaton, with the intuition of a sportsman's wife that would enter into and partake of the pleasures so dear to her husband's heart, presented me as a birthday gift with a Wesley Richards 14-gauge, 7lbs. gun, a darling for light shooting. Not satisfied with this, a year later she found and purchased for me a "Joe Manton," a very superior article. Both guns made good bags for the household and friends.

And now we jump to the '70's. One day upon passing a news stand my eye was attracted by a green colored paper, on which prominently displayed was a massive moose head, under which upon a knoll were two figures—a shooter and a fisherman. It was FOREST AND STREAM, Vol. I., No. 7. I purchased a copy, and oh! with what zest I devoured its contents. This was the paper for me; it filled the bill.

I then wrote my first article, giving my first interview with a wild Indian in the woods, followed by "Loose Leaves from a Surveyor's Journal," boyhood reminiscences, etc. Afterwards, from time to time, fugitive pieces on shooting trips, natural history, trapping experiences, etc. After my second article, which promptly appeared, I received a very kind letter from Charles Hallock, asking me to call at the office, 103 Fulton street. He spoke very flatteringly of my woodland articles and requested me to continue, which I have done to date. He proposed that I take a *nom de plume*, as that seemed to be the style then, and, as I was writing up "Loose Leaves from a Surveyor's Journal," I suggested "Jacobstaff"—an odd cognomen, but a reminder of my woods' experience; it (the staff) being a single iron shod stick upon which rested our compass—a very important part of our paraphernalia, or, as "Nessmuk" would say, I presume, our "duffage."

It was in 1877 that by accident, when looking for pastures new—that is, fresher hunting grounds, with my old boyhood hunting companion on Madison county hills, Major Beckwith—we stumbled on Recorder Hackett's ducking ground, which he had kept so mum about for years—Shinnecock Bay, Canoe Place and Pon Quogue. Here we found that prince of baymen, honest old Bill Lane, and we made big bags down there of ducks, geese and bay birds in their season, beyond all enumeration. Here I bagged my first black brant; I had killed the white brant or Mexican goose in the West.

I was always more of an enthusiast with the gun than the rod, though I believe I had considerable of a local reputation as a successful trout and pickerel fisher in those early days; for I knew where they lived, and there was hardly a rod of ground for twenty miles around dear old Hamilton hills that I had not trod. Lance Beckwith, afterwards a gallant major in the army, and I knew every cornfield and every butternut and sweet acorn tree in the county, where the drumming logs of the partridge were, and the best cedar swamps for the white rabbit (we had no little gray fellows or quail in that region, and no bass, large or small mouth), and we brought in the first hawks and crows' eggs of the season.

Ah, those were halcyon days. But I am getting garrulous. I have not visited the scenes of my boyhood for years, but I have heard from there, and I know my heart would be sad. The shriek of the locomotive is heard in the valley, and those glorious old hunting grounds, where the grouse drummed in the thick copse or the gray squirrel barked and with nimble gait skipped from limb to limb in the beech wood or maple sugar bush, are now only rotting stumps, with cattle or sheep feeding between. No! like gazing upon the face of a dear dead friend in his last narrow home, I want it not. Let my last remembrance of him and of those dear spots of my boyhood be pleasant. I wish not to look upon either after death and destruction have shown their work.

GEORGE BOARDMAN EATON.

The Root of the Evil is in Bangor.

LOWELL, Me., June 11.—*Editor Forest and Stream:* I have just returned from a trip up river. I went up to locate the spots to build camps. I saw plenty of signs of big game, and came on one big bull moose feeding in a stream. I gave him a good scare, hoping that he would leave that section, as I saw plenty of signs of bad hunters. I saw where some one had thrown two fawn deer into the water. They were full-grown and all ready to be dropped, and were still in the sac, just as they had been taken from the doe. This had not been done more than three days.

It doesn't look as if our big appropriation was going to do much good toward game protection. The efforts that our fish and game associations made and what they did accomplish are getting a set-back. The same wardens with whom so much fault was found for their unprincipled and illegal transactions have been put back into office, and I believe it will have bad results. I have been much interested and quite observing in our fish and game protective management, and from what I know and have seen for years past I believe that the whole evil has a deep root in the city of Bangor, and is nourished there, and it is hoped that our fish and game associations will not rest until they dig the roots up and burn them.

J. DARLING.

The Sportsman Tourist.

A FEW REMARKS ABOUT A LIVE WESTERN TOWN.—I.

BY HORACE KEPHART AND GEORGE KENNEDY.

I THINK this is the first article written for the FOREST AND STREAM by two foresters and streamers. It seems to mark a departure in the literature of the gun and his numerous offspring, and therefore to merit a passing notice. We have had histories and biographies written by joint authors, and several novels, but no true tales of the barb and the fulminate up to this moment. That is to say, we have had no joint authorships that were apparent. There may have been a few literary partnerships between the man out in the woods and the man who runs the paper, but this is the first one where neither fellow was ashamed of the other, and was willing to put his name down for what he said. The advantages of this method of literary composition are never so obvious as in such an instance as the present. What each fellow tells, he can prove by the other. It seems to open up to the literature of the fields a new era of faith and confidence. The proverbial skepticism of the times has nowhere been so marked as in the chronicles of the brothers of the angle, and those of us who sometimes chronicle have been scrupulous to remain well within the limits of modern credulity, often at the expense of the thing which really happened. As, for example, you all remember that story Kephart told about the snake sliding down a tree without ever moving a muscle. Well, the fact was he not only slid down without any apparent effort, but turned around, and just to show that he could do it every time, slid back up the tree in the same way. And yet, if Mr. Kephart had told the whole truth, nobody would have believed a word of it, and as a consequence he had to give a really remarkable serpent a very ordinary ending.

Another advantage of this style of literary composition is that it enables one to conceal little idiopathic defects of syntax and orthography. For example, when Mr. Kephart begins his part of this undertaking, he will say to himself, "If I don't get all the long words out of the dictionary, it won't matter so much this time because they will lay it to Kennedy."

Still another pleasant feature of this mode of brain labor is that it affords such a delightful surprise to one's colleague to get the front half of an article from a man he never did any business with before, coupled with a request that he get at and finish it. In the present case, Kephart don't know anything about this article. He never dreamed of it. The first thing he will say when it comes home to him in all its touching suggestiveness will be that he'd rather write the first part of it and then, for obvious reasons, have something to say about picking out the colleague himself. But there is no great force to this objection. In the first place, I am running a great deal more risk than he is. I am starting this thing with a lucid explanation of the advantages of its method of construction, and I have christened it "A Few Remarks about a Live Western Town," and yet I have not said a word about the town, its whereabouts, or what the remarks are to be. I leave that all to him. My reputation is in the hollow of his hand. Could he get anybody else to run such a risk as that with him? Does he even think I would do it myself if it were not for one circumstance—to wit, those turkeys? For I cannot but feel that the knowledge I possess with reference to them will make him as tender with my reputation in what he may say herein as if it were his own. He may treat the subject with some diffidence, especially when that part of it is reached which treats of diagrams; but I urge him to make a clean breast of it, in the full assurance that for once in his life, and perhaps for the first time in any sportsman's life, his words have attached to them, by way of prefix, the very imprint and apotheosis of the truth.

GEORGE KENNEDY.

[Mr. Kephart's continuation is promised for next week.]

TWO MONTHS ON THE ST. JOHN'S.

[*Continued from page 484.*]

WE made considerable of a mistake in not remaining here for a week or two, which we most assuredly would have done had we known how few good camping places there are in that section of the State. This proved to be one of the best places we saw on the whole trip; being quite high and dry, with plenty of fuel for the camp fire. Besides, there was a plenty of deliciously cool, shady places in which to lie down and take the world easy.

That afternoon, after overhauling, we did nothing but lie around, read, or write letters home. It was hard to realize that, while we were indolently lying around in our shirt sleeves, the people at home were dressed in their heavy winter clothing.

Sam upheld his reputation as a cook by making a most excellent potpie of some of the snipe and plover we had shot on the preceding evening. That afternoon about 4 o'clock we sat down to a regular banquet. The *menu* consisted of snipe and plover, broiled, fried, and the aforementioned potpie. Besides, we had yams baked in the coals, pickles mixed, baked beans, hot tea, hard tack and molasses. The sauce consisted of a voracious out-of-door appetite. We also found that Sam was not only a good sailor, but an excellent out-of-door cook; so it was then and there voted that he should fill that position when there was anything extra to cook.

Nocturnal Visitors.

We turned in early that night, so as to make an early start next morning. We soon dropped off into a sound sleep, from which we were suddenly awakened about midnight by the furious barking of the dog. On looking out of the tent to ascertain the cause, we perceived four men walking about on the beach. Sam went out to see what they were doing. He found that they were collecting wood to build a fire. They had a rowboat drawn up on the beach. They said that they had rowed from Jacksonville that day, and were on their way to Fernandina. They soon had their fire burning, over which they made a pot of coffee. Sam not knowing who they were, thought he might as well keep a watch on them while they stayed. They said they were going as soon as they had a cup of coffee, so he talked with them for quite a while, and upon being invited, he had a social cup with them. When they finally got ready to go, Sam bade them good-by and crawled back into the tent; and we soon went to sleep again, not being disturbed any more that night.

We arose with the sun, and while Sam started to make the fire, preparatory to getting breakfast, Tom and I took the tent down, and were rolling up the blankets, when Sam began to use some cuss words because he couldn't find the ax to cut wood for the fire. All hands turned to and we hunted high and low, but to no purpose, as that ax had undoubtedly gone to Fernandina with our nocturnal visitors; and if the dog hadn't awakened us, some of our other property would have gone in the same direction.

Breakfast was soon disposed of, and we were on our way again. It was slow, tedious work making headway, as the stream was so shallow in places that the Rambler would run on a mud bank every ten or fifteen minutes, or she would climb upon a bed of oysters.

While passing through the Three Sisters we came across a great number of these natural oyster beds, and, although the oysters were nice enough looking, upon opening and trying some, we found them so salty as to make them unpalatable.

About 1 o'clock that afternoon, after sculling, wading and pushing through the mud, and over the oyster bars, and even walking along the bank with a tow rope, thereby getting ourselves and the boat fairly plastered with mud, our eyes were gladdened by seeing Nassau Sound.

We found this sound an excellent place to establish a winter camp. Without any doubt, it was the very best place we saw the whole time we were in Florida. Being about eight miles in length by five or six miles wide, the shores were mostly fine white beaches, hard and firm as concrete, with miles of fine places to pitch a tent. I suppose, though, it would be inconvenient, on account of a scarcity of fresh water, although of that I am perfectly ignorant, as we did not stay long enough to find out.

We made very slow progress that afternoon, in the hot sun. In fact, we did not get across the sound until 3 o'clock, and had to resort to sculling to do that.

After hunting around nearly an hour for the stream that connects the sound with the St. John's River, our efforts were rewarded by discovering a stream that we concluded was the one we were in search of. A very light breeze having set in from the river, we sailed along between the same old mud banks we had met with all day (Nassau Sound excepted), until we finally met a pretty fair-looking spot to pitch the tent. Just as the sun was casting his rays over marsh, woods and stream, the bow of the Rambler grated on a small sandy beach, and preparations for the night's camp were under way.

Before entering this stream Sam had absorbed the notion in his head that it was not the one that connected with the St. John's. But Tom and I thought it was. Being in the majority, we had it our way.

A Night in Black Hammock.

After supper, consisting of the usual fare, very much fatigued after our two days' work, we turned in early to secure a good night's rest. Sam and I occupied the tent, Tom and the dog the boat.

We had no sooner stretched our weary limbs under the blankets than we were greeted with the singing of hundreds—yes, thousands—of mosquitoes. We had struck them beyond a doubt, or they had struck us rather. How they did bite! May I never live to see another night like that one. We covered ourselves head and heels with our heavy blankets, but it was no use. We pulled the tent down and nearly smothered ourselves under it. Still no use. They got there just the same. Finally I could stand it no longer, so crawling out and taking my blanket with me, I made for the beach. After wrapping my head up in the blanket, I managed to gather some wood to start a fire, so as to smoke them out.

I made smoke enough, heaven knowns. I smoked a pipe until I was sick, and hung around in the thickest of it from the fire, still it was of no use. Those incarnate devils fairly reveled in it. They peppered my face in spite of its covering, they gnawed my hands, they drilled through coat, pantaloons, and I honestly believe my grain leather boots, while I just galloped and danced.

How Sam, Tom and the dog made out that night I don't exactly remember. I know that the infernal pests never gave me a moment's chance to think of anything else but myself and them. I just kept the shindig up all night long.

When morning came we just pitched things aboard, shoved off, and started out of that creek without bothering about breakfast; we were not hungry. We all looked as though we were suffering from a most virulent attack of measles. Even at this late day the very thought of that night's experience sends an itching sensation stealing over my body.

The sun rose as hot as an oven, and there was not a breath of air stirring, so we had to take to the oar again. By this time we all concluded that we were in the wrong creek. A sharp lookout was kept for some chance to make inquiries. Finally we spied a log cabin off on the left bank. Tom and I jumped ashore and started for it. After wallowing and sprawling through the mud for half an hour we finally emerged on firm land. The cabin proved to be the abode of a regular old-fashioned family of Southern darkies. They ranged from the four-months-old pickaninny to the monstrous fat old mammy. There was about a dozen of them all told, and they were as shy as weasels. Clothes didn't interfere with the movements of the juvenile portion of the family to any extent, and Tom and I agreed that the mosquitoes must fairly revel at their expense.

We asked the direction to Jacksonville. The old mammy informed us that the man of the house had gone off in the woods to haul some firewood, and if we would follow an old road she pointed out to us we would soon find him, when he would give us all the information we wished, as he very often went to Jacksonville. Following her directions we started off in the pine woods and soon had the satisfaction of finding the man of the house.

He had a couple of oxen hitched to a huge two-wheeled ox cart which he was filling with wood. He eyed us rather suspiciously, for which we couldn't blame him much. He probably thought we had the small pox.

We found this person a very handsome, intelligent specimen of the colored race. He informed us that "we were in the wrong creek. We had come too far to the west." He asked us with a grin if we were the persons that camped over on Black Hammock the night before? We told him that we didn't know the name of the place, but that it would always remain green in our memories.

He laughed at this and said he wouldn't wonder if it would, as the place had the very worst reputation for mosquitoes in Florida.

We talked with him for some time and found him quite a nice fellow. He was far and above any of the "Crackers" we met afterwards, both in intelligence and accommodation. In fact, the class of "Crackers" we met while in Florida were the most ignorant, lazy, dirty, least accommodating class of human beings, black or white, it has ever been my misfortune to meet. There may be a better class of this part of the human race than we met; I hope there is. But for downwright degradation and degeneracy, introduce a "Florida Cracker" and you have the best case I know of.

Bidding our colored friend good-by after receiving full directions how to find the creek, we started back through the mud and hot sun for the boat, where we arrived nearly baked.

Sam had a good breakfast or dinner ready for us. After eating we hoisted sail to take advantage of what little air was stirring, and about noontime were once more on the waters of the sound.

A Bit of Eden.

We sailed, sculled and drifted until the middle of the afternoon, when we saw a nice-looking residence up on the shore. We landed to get information as to our course and to see if we could buy some oranges, seen hanging in golden globes from the trees of a fine large grove in the rear of the house.

When we reached the house we found every door and window closed and nailed up tight. After knocking for awhile, we agreed that nobody was home. So, as we wanted oranges, and could not buy, we helped ourselves.

This was certainly a beautiful place to spend the winter, a perfect paradise—in fact. A fine beach extended from the front of the house to the water, and stretched away on either hand for a long distance, looking in the sheen and dazzle of the sun for all the world like a blanket of snow. This beach was as hard and firm as a race course. From the front of the house one looked directly out to the sea, through the opening that connects the sound with the ocean. Across this opening there is the usual sandbar, so common at the entrances of inland waters connected with the ocean in Florida. Over this bar the ocean swells were seething and boiling in the grandest and most boisterous manner; while far out at sea, just on the line of the horizon, the white sails of three or four schooners glistened in the sunlight like pearls, forming a beautiful picture of marine enchantment. The house was surrounded by all kinds of semi-tropical vegetation, and it was so cool and shady that we were slow to leave. But after loafing around for a while, we went aboard and started again.

We had not proceeded very far before our ears were saluted with quite a racket; and we were amazed to see, where the beach came out to a point, the sand literally smothered with snipe, plover and two or three other kinds of birds. Whether they were feeding or what their object was to be all mixed up that way, I don't know. We tried to get a shot at them, but they flew before we got near enough. Tom fired anyhow to scare them, and such a roaring of wings and discordant sounds as they made I never heard before nor since.

Just off this point a short distance we spied a red can buoy, which our colored friend of the morning had told us we would find at the entrance of the creek of which we were in search,

When we reached the buoy, sure enough there was the creek and no mistake. We soon entered it, and as there was a little wind we made fair headway and began to congratulate ourselves on the prospect of reaching the St. John's that night; but "the fickle wind" played us false again and we had no other alternative but to resort to the oar. Then the tide turned against us, so we decided that the best thing to do would be to look for a suitable place to camp.

Our First Cracker.

Just as the sun began to sink, we spied a habitation off on the bank a short distance ahead and immediately headed the boat for it. We found it to be a small log cabin with one door and no windows. As we were rather short of provisions, canned goods excepted, we hailed the place and after two or three trials the form of a man appeared in the doorway. We first asked him if we were in the right creek to reach the St. John's river? and he said "yes." We then asked him if he would sell us something to eat; he said he "would come and talk with us." This was said in such a weak indolent manner that we decided he must be sick; then he started to walk to the boat and we knew he was sick. The reason we knew he was sick was because we had never seen one of his kind before.

If we had ever been in Florida before, we would have recognized in this unwashed, thin, humpbacked, concave chested, long-haired, bewhiskered, vermin-covered, lazy, trifling, good-for-nothing exister a very good built, quick moving, fine specimen of the best class of Florida Crackers.

We asked him again if he had anything to eat that he would like to sell. He said something that sounded to me like "grapes" and the effort seemed nearly to take his strength away.

"All right," I said, looking at the rest of the crew, "I guess we will try some grapes." He turned and went back to the house, from which he reappeared with a tomato can. After making the trip of 50yds. from the house to the boat in the excellent Cracker time of about five minutes, he handed us the can. We found it about three-quarters full, not of grapes, but what we afterward found were named grits.

I handed him 35 cents for 3 cents' worth of grits, which caused the only flickering gleam of intelligence to cross his face that we observed on it at any time during our short acquaintance with him.

We asked permission to build a fire on his premises so as to cook supper, which he granted. We soon had supper under way, our Cracker acquaintance watching us all the while with hungry eyes and a great variety of motions. He couldn't sit still. He had to scratch. I think that is what made him so tired.

When supper was ready, for manners' sake we invited him to join us. He swallowed a number of times, and "guessed he would." So after waiting a short Cracker while for him to make the trip to the house (to get his plate, cup and knife) and back, which consumed just twelve minutes of time to make the necessary 100yds., we commenced our meal.

For some reason the healthful outdoor air, the bright sunshine, the sparkling water, the strange, new sights we had seen that day, the hard work, and all else combined, couldn't keep our usual voracious appetite from deserting us. It had fled entirely. But what we had lost the Cracker had found. We ate nothing, he ate everything.

That man worked harder at supper that night and at breakfast next morning than he ever did before or since. He even forgot to scratch.

After the dishes were washed and put away, we accepted an invitation to go up to the house. The Cracker started ahead, and as we didn't wish to get there first, we waited until he was within 10ft. or so of the door before we started. We all reached there neck and neck.

I wish some of my Northern friends could have seen the inside of that domicile. For furniture there was one soap box, which answered the purpose of table, chair and cupboard; one tin cup, which was handleless; one corncob pipe and an old rusty knife. There was nothing else excepting a pile of dirty straw off in one corner of the room, which served as a bed. The Cracker seemed as proud as a peacock of this display of wordly wealth. In fact, between scratches and gouges, he tried to show off.

We stayed until about 9 o'clock listening to the very entertaining talk of this creature. It was entertaining because it was a new kind of puzzle, or variety of puzzles, which we had great sport in trying to unravel afterward. He tried to enlighten us as to his birthplace, which proved to be a magnificent puzzle. It was either Philadelphia or Patagonia.

Tom and Sam, at this worthy's invitation, slept on the floor in one corner of the room that night. But the cabin of the Rambler, with the dog for company, suited me very well.

We were up bright and early next morning, and after feeding the Cracker we soon got under way. We sailed, drifted and sculled all that morning, with the sun shining down on us like a ball of fire, through a creek so crooked that it is beyond my capability to describe it. We finally were favored with some wind, but on account of the crookedness of the stream we had it dead ahead as often as any other way.

When we were so close to the St. John's as to see the men on different vessels passing up and down the river we were still a long distance from the river, on account of the twists and turns of this crooked creek. But we finally reached it about 2 o'clock.

Just before entering the river we passed a number of neat, clean-looking residences. In front of one of these residences a boat was anchored and from it a lady was fishing. We watched her lure several fine sheepshead from their watery element in a most graceful and artistic manner. She looked daggers at us when we went by, however, for what has always been a conundrum to me. We certainly didn't give her any occasion to look that way. I think probably she took us for Crackers. If she did she has my forgiveness for looking that way. I admire her for it.

On the St. John's.

The breeze came out very steady from the south after we entered the river, and we enjoyed the most delightful sail that afternoon that we had been favored with since the Rambler had floated on Florida waters.

We were surprised to see so much life and traffic on the river. There were all sorts of vessels, from rowboats to the majestic ocean steamship which had just begun to make regular trips from New York to Jacksonville. Porpoises rolled and sported all around us. The declining sun cast his slanting golden rays out of a sky of deepest azure over green groves of orange trees, groaning under their loads of luscious fruit; over brown marsh and glittering waves; or, searching out some merchant schooner's sails, it would touch them with a luster and glittering loveliness not their own. The whole formed a picture of enchanting beauty far beyond the ability of any author to describe or artist to paint.

About 4 o'clock we headed the Rambler for a wharf on the right hand side of the river, where we could make out quite a cluster of houses. We were rather short of provisions, so we thought this would be a good opportunity to store up.

When we reached the wharf we found a great number of fishing boats tied to the wharf. This was Yellow Bluff. The boats had been outside the river on the ocean after their fish, and all were literally loaded to their full capacity.

After getting a supply of eatables, we pushed off from the wharf and proceeded up the river. The wind had become very light again, but what there was was in our favor; so we kept right on. We had supper while we sailed. Then under the soft light of the moon we drifted and wondered what the folks at home were doing. We told stories and felt the calm contentment of perfectly satisfied mortals. Every now and then one of the huge cages which mark the channel of the river would seem to drift up and by, looking in the wierd light of the moon like some strange, fantastic, skeleton monster of another world. Then, again, the wild melody of some darky boatman song would drift to us from far across the moonlit river, distance lending softness and melody to what under other circumstances would sound hard and discordant.

We must have slept well that night, or I would remember something about it. I know we were under way early next morning, and that it was cloudy. The sun soon came out, however, and there was a light breeze almost dead ahead. That morning we passed between banks covered with orange groves and lovely residences. We were told that "they belong to Northern people mostly," who reside there in the winter time.

Just before we reached Jacksonville we passed a small sunken steamer that had got the worst of a collision with some other craft. Just the smokestack and a small portion of the upper works showed above the water. She was in an excellent position for some other vessel to run afoul of.

About this time the wind had died away, so we anchored and had dinner. After dinner, we were anxious to reach Jacksonville that night to get letters from home, but the wind having died away, we were forced to resort to the oar again. This proved to be tedious, unsatisfactory work against the current.

We had not kept the strictest account of dates since we left home, so it happened to flash across the mind of one of the crew that this was Sunday, which set the rest of us to figuring, and finally the fact dawned on us all. We had thought it was Saturday, so as it would do us no good to reach Jacksonville that day we decided to take things easy. We were just about to anchor when a few faint zephyrs gave notice that we might expect a little wind. We soon got it, almost northeast. Before a great while it began to cloud up.

About 3 o'clock the city of Jacksonville opened to our view. But as we did not care to reach there on Sunday we kept a lookout for a place to camp. Noticing what appeared to be an unused wharf nearly opposite the city, we headed the boat for it, and in ten minutes the sail of the Rambler was furled, and she lay snugly tied to the wharf.

I took advantage of this opportunity to change my clothing all the way through, even to clean canvas jumper and overalls. Sam and Tom thought I was getting to be pretty much of a dude. I got square with them though, as some people came down to the wharf to go over to the city in a row boat, which was tied near the Rambler. They cast disdainful looks on Sam and Tom, whom I have no doubt they took to be Crackers, on account of the natural born tired look they exhibited, and in the way their bodies were disposed on the wharf, which was only 4ft. wide and they lay crossways on it. They couldn't very well lie otherwise on account of strips of wood that were nailed across the wharf at intervals of a foot or so.

What these strips were for is a problem we have never solved. But I won't forget them, as the sequel will show. At any rate these people all smiled and said (to me), "How de do?" Sam said it was because I was attired in the same manner as the male portion of their party was. Tom swore it was because I resembled a Sunday-go-to-meeting Cracker, but Tom knew very well that that wasn't so, as Crackers are too lazy to go to meeting.

By this time the sky was so clouded and the wind was rising in such a manner from the north that there was every indication of rain.

We didn't erect the tent that night. Tom occupied the cabin, while Sam and I put on our overcoats and oil-skins, and spreading rubber coats over our heads made up a bed on the wharf with blankets and the tent. This is where the sticks that were nailed across the wharf were impressed on my memory as well as my body. We couldn't lie lengthwise of the wharf on account of one of these sticks every foot or so, so we had to lie crosswise. We were both 6-footers and the wharf was only 4ft. wide, so it can be easily imagined how comfortable our bed was. Besides it began to rain before long and kept it up all night; still it was a great deal better than Black Hammock, as we did manage to get some sleep.

It was a long night, but morning broke at last, cloudy and dripping wet, with a hard wind from the north. After partaking of a hasty breakfast, we hoisted sail and started to cross the river to the city.

When we had about reached the middle of the river Tom suddenly uttered an exclamation and said: "If I wasn't in Florida I would say that I had seen that ferryboat before." He said she looked the identical counterpart of the old Armsmere that used to cross the Connecticut River at Hartford. She was headed down the river while he was speaking, but almost as soon as he finished she swung her bow for the shore and showed us her broadside, on which in large letters the name Armsmere was painted.

She was a wide, squat, comical-looking affair, smaller a great deal than the New York ferryboats. The sight of her made a very satisfied look of contentment steal over Tom's face, though, which was there the rest of the day, for the boat brought up memories of his younger days, which had been passed in Hartford. WM. H. AVIS.

Natural History.

The Scarcity of Birds.

FRAMINGHAM, Mass., June 10.—*Editor Forest and Stream:* Now that the migrants have left us and the local species settled down, so to speak, I send you a few notes by way of supplement to my former article.

The report of the apparent (almost) extermination of the bluebirds is confirmed. Some twenty letters from various northern sections all tell the same story. I cannot hear of even one breeding pair in this vicinity.

An attempt to arrange in four rather roughly defined classes (from a limited field of observation, however) results as follows:

First—Very much scarcer than usual: Bluebird, phœbe, white-bellied and barn swallows, purple finch.

Second—Scarcer than usual: Tanager, oriole, brown thrasher, wood pewee, wood thrush, chipping sparrow, warbling vireo, Maryland yellow-throat.

Third—About as usual: Rose-breasted grosbeak, catbird, kingbird, Wilson's thrush, yellow, chestnut-sided and black-throated green warblers, red-eyed vireo, robin, oven bird, song sparrow.

Fourth—Apparently more abundant than usual: Redstart, bobolink.

There was a noticeable irregularity in dates of arrival this spring. We have been accustomed to a fairly regular succession; but this season some species came ahead of time and other species were more or less behindhand. It would be interesting to know if an observation of this character was general. F. C. BROWNE.

"Does a Deer Challenge?"

PORTLAND, Ind.—*Editor Forest and Stream:* I will try to reply to your question, "Does a deer challenge?" In the Lake Superior region it is not an uncommon thing to hear a buck whistle, as we call it. He may be following the trail of another buck, or may be only disturbed by the hunter. The sound is somewhat like escaping steam, but shrill and loud enough to be heard from a fourth to a half mile. I have known one after being slightly wounded to take cover in a dense swamp and repeatedly send forth his angry challenge. The sound is, I think, produced by the throat and mouth, and would require the head to be elevated and mouth slightly open. I am of the opinion that this is the only note of anger or warning that the whitetail deer gives. C.

A Cambridge Bird Exhibition.

MR. WM. E. D. SCOTT will show a special collection of birds in the Museum of Comparative Zoölogy at Cambridge, Mass., beginning June 18.

THE DEER OF WESTERN TEXAS.

Habits and Peculiarities, and the Best Means of Preservation and Protection.

BY A. Y. WALTON.

[*Concluded from page 486.*]

Size.

THE individuals of the common species vary very much in size and weight. The largest stag we have ever seen of this species in Texas—and the fattest we have ever seen anywhere—was killed during the last winter by a young friend of ours some forty miles below this place; and three days after being killed, with the viscera, the head, the antlers, a large part of the neck, and the legs up to the knees and hock joints removed, weighed 115lbs. Had all these members, excepting the viscera, been allowed to remain with the animal, he would have weighed, without doubt, 160lbs.

The antlers of this stag were not large, but were very regular in the tines and handsome, having five points on each antler. Nearly all the points of the tines were broken, showing that he had been a great fighter.

We do not think the average weight of deer of this species in Texas will reach 100lbs., speaking only of stags.

It is generally believed by hunters and naturalists that in their more Northern ranges deer grow larger than they do in the farther South. As a general rule this is doubtless true, but there is a belt of country extending from about the mouth of Red River to, say, the north line of the State of Mississippi, embracing within its bounds the alluvial lands of the Red, Mississippi and Yazoo rivers, where deer of the common species attain as great a size, we are satisfied, as they do anywhere else in the United States.

We can account for this fact by stating that within the limits of this belt the conditions favorable for their development prevail in a marked degree. The weather is never very hot in summer, nor very cold in winter. Snow never remains long on the ground, and during the entire year there is an abundance of the most succulent and nourishing food.

On one occasion I was present on a hunt in Texas Parish, La., when a stag was killed by one of the party which weighed with the viscera removed 276lbs. We afterward killed one in Concordia Parish, in the same State, which we are satisfied was larger still, but we had at the time no means of weighing it.

These large stags, though there not uncommon, are yet the exception and not the rule, and the general average would be very much below the weight mentioned, although much above what it would be in this State.

Dangerous Pets.

All the *Cervidæ* under domestication seem to manifest a disposition to attack the human family. This is more especially the case with the males, although sometimes the females show the same propensity.

We have never known tame deer or elk to attack horses, cows or any other domestic animals except dogs, and for these they seem to have an especial spite. Having, by domestication, lost their fear of man, they become as they grow old exceedingly dangerous, and all persons having in contemplation the keeping of the males of these animals as pets should be warned against them.

A memorable instance of the ferocity of a stag of the common deer is well remembered by the writer, and the occurrence illustrates the truth of the statement just made.

Upon the plantation in Mississippi where I was born and grew up to manhood was a herd of deer which had increased until they numbered some thirty head or more. There were several stags among them, but the monarch and master of them all was one of the largest of his kind we have ever seen.

This stag had been presented to the family by a neighbor, who accompanied the gift with a warning as to his savage temper and dangerous propensity to fight. The deer were confined in a park, which was a well fenced woodland of some 200 acres—and when the antlers of the stags were in full growth, no one, unless he went on horseback, could enter this inclosure, except at the risk of his life. Most stags which are dangerous will fight only in the fall of the year, but this one was ready for a fight at all times, and even when his antlers were soft and covered with the velvet, he would attack any one who came near him by striking powerful blows with his forefeet.

On one occasion a storm of wind had blown down a tree, which fell upon the park fence, crushing it down; and the stag, in the height of his vigor and viciousness, along with some others made his escape. The other deer wandered off in different directions, but this fellow went straight to the negro quarters, some half mile off, and after chasing the children and old women into the houses established a state of siege. Just at this time the manager of the estate, riding by on his way to the field where the grown and able-bodied hands were at work, saw the deer and went in quest of the stockman and directed him to mount a horse and drive the animal back into the inclosure and repair the fence. The stag was afraid of a man on horseback and could be driven anywhere by a mounted person. Unfortunately the man disregarded the instructions given him, and endeavored to drive the animal on foot. The manager in the meantime had passed on on his way to the field. The stockman was one of the finest specimens of physical manhood we have ever seen and was the terror of all the negroes in the neighborhood at wrestling and fighting.

With the remark to one of the old women looking out of a door near by that "he thought he was man enough to drive that thing anywhere without a horse," he picked up a large stick and walked toward the animal. The deer, nothing daunted, advanced to meet the man; the hair on his body bristled up on end, ears drooped down, lips drawn back in a vicious snarl and his head lowered for attack, like that of a bull about to join battle with an adversary.

When he came within reach, the negro, seeing that he was not to be driven, dealt him a blow with the stick, probably not with full force, but with a view to intimidate him. The blow fell upon the deer's antlers and with a quick wrench of his head he twisted the club out of the man's grasp. The negro, now fully alive to the strength and wickedness of the beast, unluckily lost his head, and instead of facing the animal and grasping him by the antlers, turned and attempted to run away. The infuriated stag instantly charged him at full speed, driving a long tine of one of the antlers through his thigh and knocking him down. He followed up the attack by falling upon his prostrate victim, goring him in the breast, making in one place a wound which extended to but luckily did not penetrate the lungs, and wound up the performance by driving the end of one of his antlers through the man's arm under the biceps muscle, where it remained, partly held by the small tine near the end of the antler, and besides the man had now succeeded in getting a grasp on the deer's antlers with both hands and held on for very life. Luckily, just at this moment the manager, having heard the negro's cry for help, came up at a gallop and threw himself from the saddle, and, being a powerful and fearless man, seized the stag by the hind legs and twisted him over on his back, and held him until help arrived from the field.

All this time the antler remained fixed in the negro's arm, as neither he nor the manager dared let go, and it was not extracted until a hand-saw was brought and the antler severed from the stag's head as he lay. For a long time the negro's life was dispaired of, as there was great danger of tetanus supervening, but with careful nursing and the attention of a skillful surgeon he ultimately recovered, and was ever after a wiser man in the ways of deer.

The antlers of the *Cervus virginianus*, as far as our observation extends, are, as a general rule, larger in the State of Texas, and have a tendency to bear more points, than in any other locality with which we are acquainted.

We have met with in some other States as large antlers as we ever saw here, but they are not so common, and we are inclined to believe that these large and many tined antlers are more numerous in west Texas than in the eastern part of the State.

Why this should be so we are unable to say. The native cattle, before having been crossed with the improved and smaller horned breeds, were noted for the large development of their horns, and even the pure bred cattle reared here show a marked tendency to an increase in the size of the horns beyond those of the parent stock. The law which governs in the case of cattle may operate in the same way with deer, and the causes for these effects may lie in surroundings of food and climate.

The Antlers.

We take up now the most curious and interesting of all of the phenomena in the natural history of the deer tribe: the casting, growth and renewal of the antlers.

To one unacquainted with the fact that all—from the stately *Cervus canadensis*, with a length of antlers running sometimes to upward of 5ft., to the most diminutive of the species—shed and renew these appendages once a year, the statement would seem almost beyond belief; and the casual listener, who had never given the subject any attention, would in his doubts, when informed of the facts, be perhaps as pardonable as a friend of ours—a young limb of the law—who, on a hunting trip at the camp fire one night, had the truths attending this habit of the deer family imparted to him by a waggish companion, less from a desire to increase the hearer's knowledge of natural history than from a mischievous prompting to see how he would take the statement. He listened patiently until the narrator was done and then his indignation gave vent in the following words: He said he had listened to long-winded hunting yarns and had held his peace, he had imbibed huge fish stories and made no reply; but there was a stopping-point somewhere to human credulity. When any man or set of men thought he was blanked fool enough to believe that deer shed and grew their antlers every year, the time had come when the felt called upon to inform the crowd that he was not the man they took him for.

The whole subject has been treated thoroughly and exhaustively by Judge J. D. Caton in his work, "Antelope and Deer of America," to which we take great pleasure in referring those who wish to examine the subject in its entirety.

The same general law applies to all the *Cervidæ* of America alike in the shedding and growth of the antlers, except that the larger species—the moose, elk, and the two species of reindeer—drop their antlers earlier in the season than the smaller species.

The habits of the two species of which we are now treating are in this particular, so far as we know, identical. The shedding of their antlers takes place, as a general rule, from the 15th of February to the 15th of March, varying with and dependent upon the mildness or severity of the weather preceding this period.

When the time arrives for the antlers to fall, a crack occurs between the base of the antler and the bone of the skull upon which it had rested, and the antler either falls off of its own accord by its weight, or is shaken off by any slight jar or the motion of the animal's head. They very rarely fall off both together. We have scarcely ever found two mated antlers lying near together, and we have seen deer walking around with one antler on the head and the other missing.

When the antler drops away from its place on the head there always occurs more or less of an effusion of blood, but this soon ceases and a new skin forms over the healed spot, and under this the blood vessels at once begin the deposition of bony matter which is to form the new antler. This skin protects the new antler and grows with it, and the deposit to form the antler "is true bone and does not differ materially from that substance in its analysis."

As the antler grows, and from its very commencement, "it is surrounded not only with a periosteum, but with the dark-colored outer skin, covered with short hairs and called the velvet."

The remarkable features are that not only this "periosteum" and the outer velvet skin, but also the antler itself internally—for it is not entirely solid—are provided with blood-vessels, which grow with and nourish each, and when the proper time arrives and the antler has completed its growth, the internal blood-vessels "contract and cease to act, and those on the outside, with the periosteum and velvet, are rubbed off by the animal."

This operation takes place in this locality about Oct. 1 as a rule, earlier or later a little, as the season may be cool or warm.

I have been so fortunate as to have witnessed on several occasions this rubbing off of the velvet. While it is going on the animal seems to be under the influence, if not of actual pain, of some great bodily uneasiness. He rushes at speed from bush to bush, rubbing his antlers violently against the bodies and brush of small trees, the velvet hanging in bloody shreds from his antlers and the blood dripping down upon his neck and head. The running is kept up and the rubbing continued until every vestige of the velvet is removed. After this process is gone through with we are satisfied that for some time the stags lie very close and do not stir about much in the day, evidently resting and recuperating from the unwonted strain to which they have been subjected.

Laws for Deer Protection.

What course is best and shall prevail in the amending of old statutes and the framing of new ones for the better protection and preservation of these animals within the State is rather difficult to determine. One thing is very clear at present, that if some means is not found under the law, and that soon, more effective than has been provided in past years, we shall ere long be in the predicament of the man who proceeded to lock the stable door after the horse was stolen. We are no sensationalists when we sound the alarm in calling the attention of all true sportsmen to the truth of the condition, that not only deer, but all other kinds of game, in Texas are being rapidly exterminated.

Partridges by the thousand are trapped, snared and shot, and shipped out of the State. Ducks and geese by the ten thousands go the same way, and deer and their skins are no exception to the rule. Where some few years ago wild turkeys were found by the hundred now not one is to be seen.

Unless the knife is put to the root of the evil, and speedily, the matter will soon be past remedy.

The present law framed for the protection of deer is defective—first, in that, in the southern half of the State at least, the open season commences a month and a half too soon and the does are permitted to be killed when their young are incapable of taking care of themselves, and, deprived of the protection of the dam, fall an easy prey to wild animals.

Second.—The close season should not fall on Jan. 15, but a month later, because in western and southwestern Texas we often have no cold weather to speak of until after the new year, and game cannot be hunted and kept when killed until the weather becomes cold. Moreover, the stags begin to drop their antlers about Feb. 15, and that is the proper time to cease killing them.

Third.—The law is lamentably defective and clearly unconstitutional in that it permits in certain counties the killing of game and forbids the killing in others during the close season.

This is most assuredly a conferring of rights upon one part of a community and denying the same to another, and is clearly class legislation.

Unfortunately, but in the nature of the case, in the thinly settled parts of the State, where the game is most abundant, even where the law is in force, no one pays any attention to it; there is no public sentiment about the matter and the whole thing is a dead issue. But it is in just such localities that the deer-butcher and skin-hunter gets in his work and carries on his trade of extermination, and where he will continue to flourish, if not stopped, until game ceases to exist.

Other States have gone over this ground and found the remedy. Colorado was threatened with the extermination of large game until the shipping out of the State of carcasses, heads or hides was forbidden under severe penalties.

So, also, was the case in Arkansas, and in some other States.

The remedy has proved efficacious for them and would most assuredly bring about the same results here. But there is no time to be lost in dealing with the evil.

The average Texan legislator knows little, and cares less, about the habits of game, and is little competent to frame laws which will adequately protect.

They should be educated to the proper point by the intelligent sportsmen's clubs of the State, and through them an influence exerted upon our law-makers to bring about the necessary legislation in this matter before it becomes forever too late.

Modes of Hunting.

The modes of deer hunting in west Texas are, first, stalking or still-hunting, which to some is the most exciting and fascinating of all means of killing deer. This manner of hunting is generally followed in the early morning and late in the evening, when the deer are on their feeding grounds, and requires for success on the part of the hunter extreme caution, keen eyesight, steady nerves, and an intimate acquaintance with the habits and modes of feeding of the animals sought for.

There is another mode of hunting them which, we are sorry to say, is still freely indulged in in spite of the penalties of the law—viz., fire-hunting—and of all the means of killing deer this is the most destructive. The hunter provides himself with a lamp with a strong reflector so arranged that it is worn on the head on the outside of and fitting around the hat, and on dark nights goes out upon the feeding grounds, and if they have not been hunted much the fascinated animals will stand and stare at the light until he comes close to them. In the dark the light of the lamp is reflected in the eyes of the deer, so that they appear like two small balls of fire, and when they seem about an inch or more apart the hunter knows he is close enough to shoot. This means of killing deer will always be the most difficult to stamp out under the law, as it is carried on in stealth and darkness, and the chances for identifying the guilty parties are small.

The most exciting and fascinating of all modes of deer hunting—following them with horse and hounds—we have never seen resorted to much in western Texas, and the fencing up of the lands with barbed wire has in late years altogether abolished it.

My early manhood was passed in Louisiana and Mississippi, and as this mode of deer hunting was then and there to be indulged in to perfection, a short sketch of the pastime may prove interesting:

At the time we speak of the plantations in Louisiana were confined to the banks of the Mississippi River and the neighboring large lakes, and back of these, until you reached the plantations on the Tensas and Black rivers, there was an almost unbroken wilderness of forest and canebrake from the Arkansas line to the mouth of Red River. This uninhabited strip varied in breadth from ten to twenty-five miles, and was, except when overflowed, which was not often in those days, one vast game preserve. Deer and game were abundant, and at the proper

season there were many wild turkeys, with ducks and geese by the million.

This forest, although intersected by many sloughs and bayous, was easily accessible to any one acquainted with the country. The canebrakes were confined to the high ridges, which were seldom flooded, and where during overflows the lands were deep under water little or no underbrush grew, and when the flood had receded the land was mostly firm and hard, the forest quite open, and one up to the business could ride here often at full speed.

With Horse and Hounds.

But to our tale. The time is early dawn in the month of October. The soft, mellow haze of the Indian summer dims the distant forest, and wraps in a misty mantle the far shores of the lake. An appointment has been made with neighbors for a deer drive, and you are waiting for them to appear.

After a light repast, you take your double barrel and walk out to where on the shore of the lake in front of the dwelling your huntsman is waiting with your horse and hounds. This old tough, grizzle-pated negro—the best and most faithful of servants, God bless him—is also hostler and an adept at his business, having served his apprenticeship in a racing stable; and your saddle horse and equipments are all right. Your mount is a thoroughbred—not tall, for a low animal is best for this work—and of all breeds when properly handled this is the most docile and quiet. A mare, too, for you hold to the idea of the Arabs that the mare is more tractable and yields more readily to control than the horse or gelding.

The hounds crowd around you with yelps and howls of delight, each anxious for a carcass, and now down the lake you hear the horn of your near neighbor and hunting companion, and soon he makes his appearance from a bend in the road, trotting along, followed by his hounds and huntsman.

Almost simultaneously the other expected hunters ride up, and after a general hand-shaking and inquiries after the health of families, all dismount to have a look at the dogs. Here they are exchanging dog salutations, for they all know each other—the two packs, numbering some ten couple, having often been hunted together. They have all been carefully bred for their business—some in color beautifully mottled and spotted, but most of them black and tans and tawny reds.

After a short consultation, the proposed hunting ground is agreed upon and all mount and are off. After a ride of a mile or two, here we are upon the hunting ground. On all sides spreads away one of the grandest forest growths of the world. Still and solemn, with no sound breaking the silence but the quacking of the mallards in a distant lagoon, or the strange piercing cry of one of the most beautiful of all birds, the ivory-billed woodpecker, the company rides slowly through the forest glades—no talking is the understanding—and the hounds are eagerly questing around on every side.

All at once, old Bellman, the leading trailer under yonder huge over-cup oak, where the acorns lie thick upon the ground, begins to feather his sides with his tail, and thrusting his nose down among the fallen leaves, throws his head aloft and gives out a cry like the long drawn note of a bugle.

Instantly every hound makes for him. The trail is taken up, picked up by one here, hit off by another there; for now the deer, a stag and a large one—you have seen his tracks—has done feeding and has gone off to lie down.

All the time the scent is growing hotter, the cry of the hounds more eager. You look around for your companions, but they know their business; they have silently seperated, each going off by himself, to take the chances for a shot; for they know the game will soon be on foot. The negro huntsmen stay with the dogs.

You draw rein for an instant to listen; hotter and hotter grows the scent, ever more continuous the cry—when suddenly there is a general outburst of voice from the whole pack, which re-echoes and reverberates through the forest. What an uproar!

Your game is up and away!

One instant you pause to determine what course the stag is taking and then you give your mare her head, for the idea is to get ahead of the pack and deer, and as the weather is cool and the hounds fresh, you will have to ride to do so. Away you go at almost a racing stride—dodging a stump here, stooping under a limb there—checking up at the small thickets and threading them at a trot—giving rein and stretching out at speed in the open glades.

Here is a nasty cypress brake, a regular bog of mud and water; but here, a little below, the "cypress knees" grow thick above the water, and you know the ground is hard underneath, and you cross and again settle into the long gallop.

The cry of the hounds never checks—they are running their best off to one side and parallel to your course. Right before you lies an immense prostrate tree; no time now to go around it—take a grip of the saddle with your knees and ride straight at it. Over you go with a bound like that of a deer, your mare catching on her feet with the activity of a cat.

You have now come some miles, and you pull up to listen to the dog chorus, which has never ceased. Hark! they have turned and are coming this way, and right here where these two open glades come together he will pass, for he will follow one or the other. Nearer and nearer comes the uproar. Turn your mare just a little to avoid shooting over her head, watch that open glade before you and be perfectly still. Your horse knows what is coming, and scarcely breathes. All at once she turns her pretty head a little and points her ears forward. Yes, there he is, coming at a long low gallop, head carried low, and tail down, for he is beginning to tire. He suspects no danger in front, and his attention is given to the clamor behind him. Heavens, what antlers! As he leaps into an open space within range you raise your gun, he sees you, and throwing up his head and tail, darts to one side; but you have the gun on him, and the two loud reports follow in quick succession. The stag rushes at speed into the brush with his tail down and lashing his flanks. The pack comes up and catching the scent of blood redouble their wild music. Suddenly there is a silence. You know what that means. You ride in the direction the pack has gone, and come upon them; old Buster, the fighting dog of the pack, standing over the dead stag and warning the others with a savage growl not to touch him.

Get down, loosen the girth of your saddle, turn your mare free to pick around on the sweet young cane shoots. Wind your horn for your companions and take a look at your game. Six points on each antler and he will weigh 200lbs. Here come your friends riding up. Shake hands all around, and the hunt is over.

Game Bag and Gun.

SLAUGHTERING ADIRONDACK DEER.

Editor Forest and Stream:

On the morning of June 9 my friend, Robert P. Froelich, of New York City, and William Clark, an expert woodsman, living in Northwood, left for a fishing trip to Horn Lake, beyond North Lake, a State reservoir eighteen miles distant, to Indian River beyond Horn Lake, and down that river to Moose River, and down Moose to the Carachagola stillwater, where they struck across north of Carachagola Lake, down the grade to North Lake and home again.

Between North Lake and Horn Lake they met a party of six on their way out of the woods, who said to them that they had seen, and the incomers would see, twenty-five or thirty deer, not alive, but dead and rotting. Neither Froelich nor Clark would believe it. They saw none at Horn Lake, nor along the trail to Indian River, but between the trail and Moose River there were dead deer; between the mouth of Indian River and Carachagola stillwater there were dead deer; between Carachagola stillwater and Carachagola Lake there were dead deer. They found them along the banks of the rivers, and when they left the banks of the rivers found them in the depths of the woods.

Their wanderings took them through some of the finest deer countries that we have here. Last fall deer, while not so numerous as in the years before, were still plenty enough to be seen any day. Their fresh tracks and signs were everywhere back in the woods. Every day they were jumped, and on the first day of still-hunting it is estimated that the five of the party which I was in with saw twenty-two all told. But the expert woodsman was astounded when he walked rod after rod, and for from a quarter to half a mile at a stretch, saw not one fresh sign and mighty few old ones where deer had been.

The deer found dead were in the gray coat—the winter one.

On the Adirondack League lands, between Carachagola Lake and Moose River, there were two sets of lumbermen's camps last fall and winter, now deserted. When I came past there one day last fall a deer skin lay on the end of a log beside beside our trail. The two men here saw piles of deer hair from the winter coat. The ordinary meat furnished by lumbermen contractors is either salt pork and salt beef, or both. Fresh meat gallops through the woods past most lumber camps about every day. If not there it is to be found a ways back.

In every lumber camp in use that I ever visited there is a rifle or shotgun, usually the former. Sundays are holidays. Some man out of the forty or fifty is a hunter. In fact, I have been reliably informed that there is usually a man in the largest of camps who is hired ostensibly as a tree chopper, but really to hunt day after day, and keep the camp supplied with fresh meat. It is a common report that one such hunter told that he killed over twenty deer, twenty-two to be exact. He is a poor man, and to prosecute him would not reach either the foreman who hired him or the responsible contractors.

In the immediate vicinity of Northwood a year ago this spring at least five different deer had been seen by June 15. Up to this writing not one has appeared, although rumors of them have twice been around which when followed up were found to come from dubious sources. To the best of my knowledge no deer has been within three miles of Northwood, nor did I see a sign in going to the south branch reservoir on Little Black Creek, over a road where deer are prone to run every spring.

The tourist who went along Moose River three summers ago would see there four or five deer in the middle of a day. Along toward sundown a dozen or so would tamely stare at the human laden boat. In the evening and night their snorts and splashings were audible fifteen rods from the river bank. When startled they ran back into the woods thirty or forty rods or less. But the two living deer that Mr. Froelich and Mr. Clark saw ran as if dogs were snapping at their hams.

To this is added the destruction of fish—they have disappeared almost. On Moose River they could find but few. On the best cold beds they had not a rise. In deep water and shallow, swift and still, with flies and bait, yet they found them only at times. There they used to throw themselves six or eight at a time for the flies. Two flies were sufficient for a cast, three a nuisance, but one was a great plenty. Dynamite sticks and fuses were found by Froelich and Clark.

All in all it was an interesting trip, but, My God! it is enough to make a man sick to think of what they saw. It is earnestly recommended that the Adirondack League take steps to see that such slaughter does not again take place on its territory. It has been claimed that wolves did it, but as yet I have not heard that any one has seen a wolf in that region within ten years, although some have claimed to have heard them howl.

RAYMOND S. SPEARS.

NORTHWOOD, N. Y., June 15.

The Case of the New Jersey Judges.

THE Supreme Court of this State on Friday rendered a decision in the somewhat famous duck shooting cases, holding that the complaints should have been dismissed by the justice for want of jurisdiction. The suit was instituted by the warden of this county on the evidence of some ten or a dozen people at Greenwood Lake. The warden not having seen the offense committed made the complaint "on information and belief," a form of prosecution which had never before been questioned in proceedings under the fish and game act, and sustained frequently by the higher courts in criminal proceedings. Many a man has been hanged on complaints made on information and belief. But in this case Judge Dixon claimed that the papers were not correct because the law contemplated that proof absolute should be submitted. On this question Judge Dixon removed the case to the Supreme Court, of which tribunal he is a member. He, however, did not sit on the argument of the case. The court holds that Judge Dixon is correct in his interpretation of the law and dismisses the case. The question as to the guilt or innocence of the accused did not come up in any way, the question involved being merely one of law.

No further steps will be taken in the matter until a copy of the court's decision has been received, so that its full scope may be ascertained. The Board of the Fish Commissioners will then take action, but just what it will be is impossible to tell. The strongest kind of influence was brought to bear as soon as the cases were begun to save Judge Dixon, permitting the law to take its course as to the others implicated, but the commission declined to be influenced, seeing no reason why a Supreme Court Judge should not be punished for violating the law. So certain was the warden of the guilt of the accused that he offered to discontinue the proceedings if the accused would give him their words that they were innocent, an offer to which no attention whatever was paid.

The commission may drop the whole matter now, an appeal may be taken to the Court of Errors and Appeals, or the proceedings may be instituted anew again on proper papers. The decision of the court will considerably hamper the wardens in the discharge of their duties, as it is frequently a difficult matter to secure affidavits from persons who have seen violations of the law.—*Paterson N. J.) Chronicle.*

That Game Market Law.

UNDER the new Game Code, which Gov. Morton has just made a law, it will be extremely difficult to guard against the illicit killing and selling of game in New York City. The law practically removes every limit to the period of open traffic in game. It permits the dealer to justify such all-the-year traffic by exhibiting evidence that the game was shipped from a point at least three hundred miles from the State of New York, a provision so easy to evade that it need hardly have been imposed. The first effect of this law will be the unloading upon New York City of refrigerated game clandestinely held in cold storage in other markets. The law will encourage both the illicit sale of game and the unlawful killing of it in this State. It will encourage the violation of the law in sister commonwealths which forbid the sending of game out of those States. Instead of being a bill to further protect game birds and animals it is rather a retrograde movement, and will do more to encourage the unlawful killing of game than the other excellent provisions of the law will do to discourage it. FOREST AND STREAM, the leading sportsmen's organ of the country, has taken up the cudgels against the obnoxious section of the law and declares that it will not rest until it is repealed.—*New York Mail and Express.*

A case in point of the tyranny of trade is found in the approval by Gov. Morton of the Donaldson Fish and Game law, which permits the sale of game in New York throughout the entire year, provided that it has not been killed within the limits of the State or within 300 miles of its boundaries. This law met with unanimous disapproval on the part of sportsmen, but their efforts to prevent its passage or to secure a veto from Gov. Morton were futile. The commercial interests of cold-storage warehousemen and dealers in game brushed aside all opposition. The law cannot but be most injurious to game. New York, as the great distributing center of the country, will call for an enormous increase in the supply of game from all parts of the Union during the open season, to be disposed of in the close season. This will be an incentive to market gunners in every direction to greater efforts to meet the demand, with a corresponding destructive effect upon game of all kinds.—*New York Sun.*

Sea and River Fishing.

A LITTLE TRIP UP LYTLE CREEK.

SLAM! bang! crash! I started up from a sound sleep thinking the side of the house had fallen in, but it was only the window shutters blown shut and then slammed against the side of the house by a "norther" that was whooping around the house in a hurry to get from El Cajon to the sea. "They will not go in such a wind," I sleepily said to myself and turned over to be awakened in a short time by the whir-r-r of the alarm clock, which was the signal that it was 3:30 A. M., and that I must get up if I was to start for Lytle Creek at 4 o'clock with two friends who said they would call for me at that hour. I hardly thought they would come, the wind blew so hard, but promptly at the hour they were on hand, and at their call, "All aboard," I hastily swallowed the contents of my coffee cup and skurried out to where they sat in the buckboard awaiting me.

How that "norther" did blow though as we started off in the dawning of the morning. The only sound, aside from the wind, was the crowing of the roosters. And right here I want to say, for all-night crowers I'll match the roosters of southern California against the world.

What a morning drive that was. Through the orange groves we went for a while. For one mile there was a row of palm trees on one side and of pomegranates on the other, the red flowers of the latter showing like coals of living fire against the dark green leaves in the just-before-sunrise light. Soon streaks of golden light began to stream up from behind the great mountains which encompass Bear Valley. The snow-capped tops of San Bernardino and Grayback gleamed white against the clear, dark sky. Away to the southwest San Jacinto was outlined upon the heavens.

Soon it was no longer gray dawn, but bright sunlight, and we had left the orange groves behind and were crossing the desert toward the mountains. The desert is all abloom this morning. What a variety of flowers and how brilliant their coloring. All are strange to me and of names unknown, except the cactus, of which there are several varieties. Those tall, white-robed, sentinel-like things o'ertopping all growth on the desert are the flowering yucca or Spanish bayonet.

Here we are entering the gorge where the creek leaves the mountain. How the "everlasting hills" do loom up. That great scar there tells where hydraulic mining has been carried on. We cross the creek not only once, but many times. The road is so rough that I wonder the buckboard holds together or that we keep our seats. The jolting did shell several of the hard-boiled eggs in the lunch basket as neatly as we could have done it ourselves.

Yonder red-shirted man is a placer miner, and that stream of water he is so busy over is washing gold for him. The four men we see over there are also washing for gold, good yellow gold. On we go, stopping at length under the shadow of the mountain in a sycamore grove, where the horse was made comfortable. We ate a lunch, then put up our rods and went to fishing.

It was the first time I ever wet a line in a mountain stream. How I did wish for Stephens and Jack. The cup of happiness had run over if they had been along. My two friends assured me that we would not have much luck, as the creek was too muddy, and getting muddier every hour, from the placer washings on the north fork. It was too true. Noon found us with only fifty trout, and no tale of the big one that got away.

But it was glory enough to be out there in the cañon, and as I lay in the shade after lunch, with the great mountains on either side, the rushing, roaring creek between on its way into the Santa Ana and the Pacific, while far up the cañon I saw a great patch of snow crowning a lofty peak, I felt that my lot had fallen in a pleasant place, for that day at least. I was nearly in the condition of a man I met on the wharf at Long Beach. He was fishing for sculpin and had two of the "critters" on the wharf. "Are they good to eat?" I asked. He gave me a look of pitying contempt and said, "Good to eat! Why, I eat sculpin last night till I like to bu'st." We fished some more, then started home with a total catch of seventy-seven trout—no giants, but just ordinary, fair-sized trout.

On the way home I picked, with the help of my friends, one of the little Spanish bayonet flowers. It was only 12ft. high, a monster bouquet all by itself. I am drying the stem and intend to cut it up into pin cushions and send them to some of my friends as souvenirs of my first trip in the mountains of southern California after trout.

MYRON COOLEY.

COLTON, Cal.

OUANANICHE, TROUT AND SALMON.

Editor Forest and Stream:

Almost every incoming train and steamer from both south and west brings a number of anglers to join the legions of the fraternity at present whipping Canadian waters for salmon, trout or ouananiche. The steamship Otter, on Saturday last, took down a number of salmon fishermen to the different north shore rivers, and it is probable that on her trip of the 22d inst. she will take a much larger number. Some of them, including Dr. Morris, of New York, will leave the steamer at Natashquan, the extreme easterly point visited by her, and will there take schooner for a month to fish a number of the unleased and far easterly salmon streams that are so far but little known. Dr. Morris is at present at Lake St. John, enjoying splendid sport among the ouananiche of the Grande Décharge, where he made a marvelous catch this time last year.

Kit Clarke, of New York, the author of "The Practical Angler," "Where the Trout Hide," etc., is here to-day, and leaves to-morrow for La Grande Décharge after the festive ouananiche. He will also fish the preserves of the Amabalish Fish and Game Club on the waters of the lower Metabetchouan, for trout, and will then luxuriate at his camp on Isle Paradise, Lake Edward, for some weeks.

Reports from the various salmon rivers are to the effect that the first run of salmon this season is unusually large. In the Jacques Cartier, a few miles above Quebec, the highest tributary of the St. Lawrence now ascended by salmon, the first fish of the season, one of 11lbs., was killed on the 9th inst. by Dr. J. H. Henchey, of this city.

Mr. Eugene McCarthy, of Syracuse, was here yesterday on his way to Ste. Anne des Monts River in Gaspé, where he will enjoy his first salmon fishing as the guest of Mr. Henry Hogan, of Montreal, proprietor of the stream.

Lake Edward has already produced a number of really magnificient trout this season. Two six pounders and a number weighing five pounds each were brought to town last week by a party of Quebec anglers, and a number of American fishing parties have been almost equally fortunate.

As anticipated in my last letter, Messrs. Hart, Durand, Turner and Atwood enjoyed even better sport during the latter part of their stay at Lac des Commissaires than for the first few days after their arrival. They took a number of four and five pound fish and had a good time generally. The rest of the boys tell a good story at the expense of "papa" Hart. One morning all chipped a dollar each into a jackpot for the benefit of the guide of the man who should take the biggest trout that day. The fish were weighed at night, and Mr. Hart who held the jackpot paid it over to his own guide in virtue of his big fish of 4½lbs. The largest fish from the other canoes were none of them far behind, and it appeared to Mr. Atwood on comparing them subsequently that it was strange why his should have only turned the scales at 3½lbs. Mr. Hart promptly weighed it again to convince him, when it was quickly made clear that he had erroneously read 4½lbs. as 3½, and that Atwood's guide was entitled to the jackpot. "George" promptly paid the second jackpot out of his own pocket, and also bought a bottle of wine on his return to Quebec, to mark his appreciation of the joke.

There has been on exhibition here for some days past, at a tombola in aid of the Quebec Amateur Athletic Association, a superb oil painting of a brook trout, presented by Walter M. Brackett, of Boston. This specimen compares favorably in point of artistic perfection with any of the larger and more ambitious works of his brush. It is a male fish in prime condition; not in what appears to many upon canvas the almost exaggerated high coloring that marks its breeding livery in the height of the season, like the deep crimson and gold of late autumn leaves and Kreighoff's pencilings of Canadian fall scenes, but an every-day midsummer fish, with the familiar bright-colored spots upon its variegated sides, the changing from the dark olive green, almost black, of its vermiculated back to the light silvery sheen of the under part of the side, where it is met by the more than *soupçon* of the August and September red belly. It is one of the most ideal representations of the average *fontinalis* that was ever placed on canvas, and its eye alone is a living picture. The soft, hazy indistinctness of the background eminently serves to bring out into strong relief the perfect figure and markings of the fish.

Martin Howe, a farmer of Laval, only 15 miles north of the city of Quebec, came to town this morning with a magnificent bear skin and a story of an exciting bear hunt. Howe was working yesterday afternoon in a field near his home when his attention was directed to a commotion among his sheep in a neighboring field, due to the action of a large she bear accompanied by a couple of cubs, and who was chasing the plumpest of his flock. The farmer rushed into the house for his gun, which unfortunately has but a single barrel. However, he took so good an aim that mother bruin received the ball full in the forehead and fell to the ground mortally wounded. But what was the farmer's surprise to find himself in the presence of three other full-grown bears outside of the two cubs, all after mutton. He rushed back to the house for more ammunition and hurried off his children to a neighbor's for assistance and a rifle. Meanwhile, however, all the bears had disappeared but that which was stretched lifeless upon the ground, and it was growing too late in the evening to follow them for any distance into the woods.

Those in the habit of fishing and shooting in the Lake St. John country will be glad to hear that Crown Lands Commissioner Flynn, who drafted and passed through the Legislature the law establishing the National Park Preserve in the interior of the country to the east of the line of the Quebec & Lake St. John Railway, has just liberated there several fine specimens of the small red deer that thrive so well on the south shore of the St. Lawrence and in other parts of Canada, as well as in Maine.

Information just received from Lake St. John is to the effect that the ouananiche season is fully open at the Grande Décharge, and has been good all week. J. Nelson Parker, of Boston, killed twenty-six ouananiche with the fly in one forenoon, once successfully landing two at a time. In the morning and evening fishing of two days, Dr. and Mrs. Brown, George F. Gregory, Calvin G. Seymour and Arthur Beebe, of Syracuse, killed seventy beauties. The Misses Olin, of Kalamazoo, Mich., have also been very successful. E. T. D. CHAMBERS.

QUEBEC, June 12.

ANGLING NOTES.

Deep Trolling for Brook Trout.

RECENTLY I learned that a man of my acquaintance had returned from fishing one of the Adirondack ponds, bringing six brook trout weighing a little over 18lbs. Knowing the pond, and that it contained large trout which rarely took any kind of a lure, I was curious to know how these particular trout met their fate, and I found that when the trout refused various kinds of bait still-fishing, the fisherman arranged a trolling line with heavy sinker, as in lake trout trolling, and with a phantom minnow for a lure trolled near the bottom, with the result that he caught a number of large trout. This took me back in memory more than a dozen years to another Adirondack pond known to contain large trout with a reputation for not biting, but a gang baited with a chub, exactly as for deep trolling for lake trout, and heavily weighted to take the bait near to the bottom, was the means of taking several trout weighing from 3 to 5lbs. each. Any one who is not above deep trolling for brook trout in ponds may act upon this hint with pleasurable results.

Vaulting Black Bass.

We have heard much about the leaping powers of the small-mouthed black bass, but almost without exception such power is displayed when the bass is hooked. The black bass can jump when it is not hooked, and jump in such a way as to establish the fact that it is a very knowing fish. Not very long ago the water in a canal feeder in the western part of New York was drawn down for the purpose of making repairs to the feeder; and as it contained black bass, the men from Caledonia hatchery were sent to secure such bass as they could for the purpose of distributing them in other State waters. A net was set from bank to bank across the bottom of the feeder, and another net was drawn toward the fixed net; and as the nets were brought nearer and nearer together it was found that a large number of bass were imprisoned; and about the same time they also discovered that they were trapped and they swam to and fro seeking means of escape. Suddenly some of the bass went with a rush at the approaching net and jumped clear over it, and others followed as a flock of sheep follows a leader. It was almost impossible to secure any of the fish, as they would jump the net every time it was drawn.

Beach Bass Beds.

The Fisheries, Game and Forest Commission of New York is engaged in experiments to hatch black bass artificially. The applications for black bass call for more bass than the State can furnish, for as a rule the adult bass now distributed have to be purchased, and it is not only difficult but expensive to furnish the fish to fill the applications, and for this reason the attempt is being made to rear them artificially, and there is reason to believe that in the end it will be successful. A few days ago one of the men of the Commission was sent to a bass lake to obtain spawning fish if possible, but they were not to be found just at that time. He did find a number of spawning beds, and from these secured a few thousand of impregnated eggs—eggs that had been impregnated naturally. The curious part of the affair is that he did not find a single black bass on or near the beds guarding them, as they should have been doing. Another curious thing was that the eggs obtained were not particularly glutinous, less so, in fact, than the eggs of pike perch.

Caledonia Fishing Club.

Visitors to the Sportsmen's Exposition at Madison Square Garden, if they were anglers, doubtless noticed the pair of brown trout mounted in the exhibit of Mr. Fraine, of Rochester. I am not now sure as the fish bore any legend to tell where they came from, but whether they did or not they came from the waters of the Caledonia Fishing Club, and one weighed, in life, a fraction over 11lbs., and the other a fraction over 10lbs. There was in the same exhibit a rainbow trout of 9lbs. and a fraction, which came from the same waters, all of which is evidence that this club is fortunate in being the possessor of such fishing waters. Should there be any lingering doubt on this subject, one has only to stand on the club house veranda and look up and down Spring Creek and into the creek itself to be fully convinced that it is one of the best fishing streams in the whole land. There are brook, brown and rainbow trout, as numerous as any angler could wish, and then they take a lot of fishing to reduce them to possession, and it must be artistic fishing, too. For day fishing the finest of drawn gut leaders and flies tied on Nos. 16 and 18 hooks are used, and by careful handling they bring good trout to the boat well. Occasionally a trout will rise and take flies and leaders in a way to make the angler think he is fortunate to save his rod and reel. For night fishing flies of a size ordinarily used on other waters for day fishing are used, and it is at night that the larger trout are taken. Nearly every section of the country has boats for fishing which are in a way peculiar to that particular section, though more or less related; but the boats of the Caledonian Club, with their anchoring attachment, are not related to any other boats that I know. Flat-bottomed, square at the ends, made for one, with the oarsman's seat covering a fish well, there is at the right hand side of the seat a pole and a hole. The hole goes through the seat, the well and the bottom of the boat, and the pole goes through the hole. Jab the pole down hard and it goes into the bottom of the creek and anchors the boat; when anchored lift the pole and the boat floats down with the current. The whole thing is as handy as a pocket in a shirt and seemed to have been designed for that gently-flowing creek with its wealth of educated trout.

It is often said that we in this country use coarse tackle, but the tackle used on the Caledonia Club waters is as fine as any used in England, and the club members know how to use it. A. N. CHENEY.

THE NIAGARA COUNTY FISH DAY.

LOCKPORT, June 10.—The Niagara County Anglers' Club, which, with a membership now of 246, claims to be the largest fishing organization in the United States, held its annual excursion and tournament at Youngstown, Friday, June 7. Lake Ontario, at the mouth of the historic Niagara River, was the scene of much fun and a genuine club outing, but the black bass were unusually shy. Some large ones were caught, but the big score made by both sides depended to a great extent upon yellow perch, white bass, herring, rock bass and pike. Only thirteen black bass were caught as against nearly 100 last year. Seine fishermen have been doing quite effective work on the river, and to their depredations is attributed the poor fishing this year. Later something will be said of the crusade against the pot-hunter in this district.

A special train of four cars carried the Lockport members via the New York Central to Lewiston, and at Niagara Falls they were joined by the Cataract City representatives. Western Passenger Agent Edson J. Weeks, of Buffalo, always takes especial care of the anglers and adapts the time of his flying trains to their hours. Leaving here at 6 A. M., the special reached Lewiston, thirty miles, in exactly forty minutes, including the stop at Suspension Bridge. The return was made at 8:45 P. M.

The steamer Onen carried the expectant and merry party of anglers to Youngstown, eight miles down the river. A more perfect day could not be desired by the immortal Izaak himself. On the parade grounds near the fort the boatmen were lined up, with blades flashing in air like the spearmen of Philip's invincible phalanx.

All who cared to contest for the banquet to be given by the defeated party were chosen by Capt. W. J. Jackman or Capt. W. E. Wicker, leaders of the purple and the white. The sides were as follows:

Purple—Capt. Jackman, chairman Republican county committee; C. W. Hatch, W. A. Williams, William Cocker, M. N. Haskell, Burt J. Ferguson, A. Raphael Beck, E. F. Smith, Charles L. Nichols, M. H. Hoover, C. F. Smith, Bert A. Wayman, O. D. Prudden, F. K. Sweet, Thomas Eckensperger, Hon. John A. Merritt, ex-Assemblyman John F. Little, A. L. Smith, George E. Emerson, John Wilson, L. H. Lureman, Will Hoag, David Bruce, W. W. Stevens, Ed. Brown, Joseph Dumville, Jr., W. H. Clark, Superintendent Public Instruction Emmett Belknap.

White—Capt. Wicker, J. E. Emerson, John H. Craddock, John Hittenmeyer, D. E. Brong, Dr. C. N. S. Ringueberg, G. Louis Holmes, James H. Staats, Walter Rider, John Klopp, W. R. Compton, Dr. E. W. Gantt, Benj. F. Steele, Hon. Cuthbert W. Pound, State Senator F. N. Tryor, Ed. Williamson, George S. Gooding, W. E. Huston, Chris. Wolf, Cleland A. Ward, Supervisor Charles A. Warren, W. F. Bennett, Dr. W. B. Rice, Jake Fisher, Albert H. Stevens, Dan McKim, W. E. Shaeffer, F. O. Allison.

All day long the battle waged fiercely, with fortune favoring the two sides alternately. Ex-Assemblyman Little lead off with a three-pound black bass and his boat accordingly was decorated with the high hook banner. The trophy soon was captured, however, by W. E. Huston and fell finally to the lot of A. L. Smith. The victory was claimed by the purple, score 3,725 to 3,707—the closest contest in the history of the club. On a technicality the white based a claim of four and the controversy has been referred to a committee of three, to take evidence and report next Saturday at a meeting of the club. The banquet will be given the latter part of the month at the Niagara House, and by unanimous vote the editor of FOREST AND STREAM is invited to grace the occasion by his presence.

At 6:30 P. M. the steam whistle summoned the contestants to unjoint their rods and present their fish to the scorekeeper for the count and the individual prizes. Uncle Sam's soldiers looked on while Judge Daniel E. Brong made the awards, which usually had to be decided by the scales. The prizes were won as follows:

Largest Small-mouth Black Bass—First prize, O. D. Prudden; second prize, A. L. Smith; third prize, Burt J. Ferguson; fourth prize, C. W. Hatch.

Largest String Black Bass—First prize, W. E. Huston, also winner of club gold badge; second prize, J. E. Emerson; third prize, Jake Fisher; fourth prize, John Klopf.

Largest String Perch—First prize, C. L. Nicholls; second prize, John A. Merritt; third prize, C. A. Warren.

Largest Perch—First prize, F. O. Allison.

Largest String Mixed Fish—First prize, M. H. Hoover; second prize, E. S. Brown; third prize, A. H. Stevens.

Guests' Prizes—First prize, Alfred M. Little; second prize, David E. Tice.

Boatmen's Prizes—First prize, No. 24; second prize, No. 26.

The consolation prizes will be awarded at the banquet to be held at a future date.

RULES.

1. Hours for fishing—On arrival until 6 P. M., at the option of each angler.

2. No two contestants on the same chosen side for the

banquet will be permitted to fish in the same boat. It is optional with members to enter in this contest.

3. Each person will be allowed to fish with but one rod and line, two hooks and bait. Artificial bait allowed.

4. Boats will be numbered and the persons drawing the corresponding number will be entitled to that boat.

5. Agreeable changes will be permitted in the boats provided Rule 3 is observed.

6. The high hook banner will be in the boat having the largest black bass.

7. Each person will be provided with a score card to record his entire catch thereon. The catch must be exhibited to judges and scores handed to them at the close of the day's fishing.

8. The rivalry will be decided upon points as given in the schedule of fish adopted by the club.

Board of Directors—Transportation, C. W. Hatch, Chairman. Boat, bait and guides, John F. Little, Chairman. Accommodations, John A. Merritt, Chairman. Lunch, Joseph Dumville, Jr., Chairman. Programme and tickets, J. E. Emerson, Chairman. Prizes, W. E. Huston, Chairman. Selling tickets, William A. Williams, Chairman. Badges and banner, F. N. Trevor, Chairman. Judges for awarding prizes, David Millar, Chairman. Conductor, Burt G. Fergason, Chairman.

Fish Schedule—Black bass 50, white bass 15, salmon trout 100, muscalonge 500, pickerel 25, herring 5, yellow pike 20, blue pike 15, perch 2, rock bass 2, eel 20, catfish and bullhead 15, suckers 5, sheepshead 20, sunfish 1.

Fish and Game Protector Dan. N. Pomroy, formerly U. S. deputy marshal here, is doing splendid work in rooting out the fishermen and pot-hunters who habitually disobey the fish laws in this city. Saturday morning about 2 o'clock he arrested four men named Dick Johnson, alias "Bullhead Dick," William Schultz, Herbert Cleveland and John Price at La Salle. With three deputies he watched the pirates make three hauls with a 150ft. seine, and caught them red-handed. In a box were found 220 small-mouth black bass captured in the three hauls by the pot-hunters. Three nets were destroyed. Protector Pomroy has had several sensational encounters with the law breakers, and already has destroyed over a dozen nets, although he has been in office but six weeks. M. H. H.

BOSTON AND MAINE.

BOSTON, June 13.—Still the reports of good catches of trout at Moosehead continue to come in. Mr. and Mrs. B. F. Larabee are at the Kineo House. They are reported to have fished one day with a result of a dozen trout, the largest weighing 3lbs. Mr. and Mrs. E. N. Kimball, of Brookline, have recently returned from a three weeks' stay at Lake Memphremagog, Vt. They were quartered at the Owl's Head Hotel. Mrs. Kimball landed a 13lb. lake trout, her first success with a fish of that size, and the largest fish caught in that lake this year.

Mr. Walter L. Hill is back from his Moosehead fishing trip and is as enthusiastic as ever concerning fishing in that lake. He was accompanied by Mr. C. W. Wilder, of Lowell, and H. B. Kirk, of New York. They had good fishing, taking all the fish they wanted, which was all they could use. They took a lake trout weighing 12½lbs. and a great many smaller ones. Mr. Hill mentions the fact of his having thrown back into the water a great many lakers, one weighing 3 or 4lbs. The guide remarked that it was the first time in his experience that he had guided anybody who returned trout to the water. But Mr. Hill asked him what could be done with them if kept. He had had the sport of landing them, the fish were uninjured and why not return them, in order that some other fellow might have the sport of catching them again. They did the same with small brook trout, of which they got a good many; taking a string of over thirty in one day from a cove where the guides said that nobody was in the habit of fishing. Mr. Hill had the pleasure of landing a trout of over 3lbs., taken on the fly. Judge Wilson, of Washington, could not be with them, much as the party regretted the fact. He was hindered by important law cases, after having made all his arrangements to be with the party at Moosehead. It was Mr. Kirk's first excursion to Maine trout waters, and he is now a thorough convert. The party is credited with having taken a 6lb. landlocked salmon, but the report is not true. They caught a very light-colored lake trout, and some of the uninitiated were ready to pronounce this fish a salmon in spite of its forked tail. Another Boston gentleman, however, did take a 3½lb. genuine landlocked salmon or blackspot. Mr. Hill says that the Commissioners are putting a great many landlocked salmon and brook trout fry into Moosehead, and he has no doubt of the success of the landlockers, for the landlocked smelt are beginning to be seen in abundance. He visited the fish hatcheries at Moosehead and was agreeably surprised with the amount of restocking that is being done.

It will not be out of place to mention here that the Maine Commissioners turned loose 12,000 brook trout at Bemis the other day. These fish were a year or more old, and are likely to be of more value than a great many turned loose as soon as hatched.

Mr. George D. Clapp has just returned from a fairly successful trout fishing trip to the brooks in the vicinity of Jackson, N. H. He mentions extremely hot weather, however, and poor fishing some days. He came very near a sunstroke, but sought shelter in good time. A good work has been done in restocking the brooks in that vicinity. Mr. Clapp caught a great many trout that were evidently young, being small. These he returned to the water, so far as not injured by the hook. He thinks that it is the duty of everybody who fishes to return the small trout to the brook again.

I see by the papers that some Maine sportsmen have been having good luck at Houghton's and the Four Ponds, taking a great many trout. They report that there is "no possibility of these ponds ever being fished out." Trout fishermen will be glad to learn that Houghton's is on the line of the new Portland & Rumford Falls Railroad. This road is bound to be pushed through to Bemis, and will open up a new section to the trout fishermen. The road will also open a new way to the Rangeley Lakes, shorter and easier than either way now in vogue, and since the new road is broad or full guage, a parlor car can be run through from Boston to Bemis. I have it from Superintendent L. L. Lincoln direct that this road is bound to favor sportsmen. It has decided to check sportsman's boxes of trout as baggage, though the Maine Central issued an order last winter that it would do so no longer, and so far as I am informed it still adheres to that order. The Boston & Maine has, however, issued no such an order, nor does it propose to do so. Hence a [sportsmen's box of trout, coming over the Portland & Rumford Falls road, gets to Boston without trouble. The Grand Trunk road is also putting a most liberal construction on what they will handle for sportsmen as baggage. It will carry guns, dogs, tents and paraphernalia to the extent of full weight of baggage, and above full weight allowed will only charge regular excess baggage rates. It will forward fish and game as baggage under the same regulations. Later I will give the FOREST AND STREAM the full decisions of the roads running into Maine on the question as to what they will forward for sportsmen as baggage.

June 15.—The trout and salmon fishermen are meditating on the causes of their recent ill success. Generally the unexpected forwardness of the season in Maine is thought to be to blame. The hot weather is also blamed. Others declare that fishing at the Rangeleys and Moosehead is rapidly "playing out." Mr. C. H. Andrews, of the Boston *Herald*, says that the only compensation for the exceedingly poor fishing he had on Mooselucmaguntic Lake was the hooking and landing of a 3lb. landlocked salmon. The guides tell him that the salmon are following the landlocked smelts down from Rangeley Lake. A good many of these smelts have been seen in Mooselucmaguntic this spring.

Some good reports of fishing come from the home of the Inglewood Club, in New Brunswick. Mr. Henry E. Cobb and Mr. Joseph W. Byers have just returned from a most enjoyable fishing trip to that point. They were there from the 6th to the 12th of June. Mr. W. J. Follett received tangible proof that Mr. Cobb got some good trout. They were put up in such a nice way, and doubtless novel to many trout fishermen, that it makes the matter worthy of mention. The trout were nicely dressed and wiped. Then they were put into a glass jar, a large one, and sealed as tightly as possible. On the way out they were kept in the ice chests of the trains and steamers. Mr. Follett is delighted with the way the trout reached him. Isn't here an idea, brother trout fishermen?

Mr. Andrew S. March, President of the Inglewood Club, has also been there for quite a while with Mr. Bert March. Doubtless Mr. March will go back for a season with the Follett party, which is mentioned below.

On the evening of July 2 the steamer State of Maine will have on board a most happy fishing party as she sails away on her trip to St. John. Twelve staterooms have already been engaged by this party, which is in charge of Mr. W. J. Follett. It also includes Mrs. W. J. Follett, Master A. W. Follett, Jr., and Master W. Dana Follett, sons of W. J. Follett, whom he is training to be lovers of the angle. In the party will also be the following Brooklyn, N. Y., people: Mr. and Mrs. John O'Donahue, Mr. and Mrs. George Howe, Miss Grace Horton, and Mr. and Mrs. Edgar W. Follett. Miss Horton's parents are of the celebrated Horton dry goods house in Brooklyn. The party will also contain Mr. and Mrs. James W. French, Miss Maggie French, Mr. John T. Lodge, and Master John Lodge, of Newton, Mass. Mr. and Mrs. Arthur Veasey and Master Arthur Hall Veasey, of Haverhill, Mass., will also be in the party.

Nor would the party be complete without the Cobbs and the Marches, as suggested above. Mr. and Mrs. Henry E. Cobb, Miss Lucy Cobb, Miss Helen Cobb, Master William Ely and others will make up this wing of the party. The March wing will include Mr. and Mrs. Andrew S. March, Miss Claire March and Miss Leslie Field.

The weather being fine the party will much enjoy the sail down the coast on the 3d. Stopping at St. John over night, the party will reach the Inglewood Club home about 11 o'clock on the morning of July 4. Mr. Follett has arranged to start fishing as soon as the company arrives. "Some trout must be had for dinner."

Mr. Frank H. Robinson, of the Boston Chamber of Commerce, seems to have visited a new Eldorado for trout fishermen. In his party were Mr. Chace and Mr. Farley. They went to Portage Lake, in Aroostook county, Maine. From that lake they went up the river in canoes over 20 miles to Big Fist Lake, and camped on an island in that lake. There was not an inhabitant within 25 miles of them, though a couple of Maine sportsmen had begun a camp on the lake, in which they staid one or two nights. They found the trout fishing all that could be asked for. They took trout every time they went out, taking some that were 20in. in length. Having no scales, they could not get at their weight. The lake they found to be nearly two miles long. Think of it, brother sportsmen, a trout lake of that size away in the unbroken forest, and full of trout! Their only wish was that some of the trout could be got out to their friends. Deer they found to be very plenty, seeing them frequently, and at one time five in a herd. Moose tracks they also saw in abundance. SPECIAL.

At Blakesley Lake.

EUSTIS, Maine, June 7.—I have spent the last ten days at Douglass & Emery's camp, on Blakesley Lake, some fifteen miles from Eustis, Me., and have had rare sport with the trout. The weather has been warm, with several cloudy days, and the fishing has been superb, notwithstanding the fact that the water has been a little high. The stream fishing has been particularly fine. Two of us whipped old Spencer Brook for an hour yesterday, starting at the old dam at this place, and caught one hundred and twelve trout—mostly small, of course, but fighters every one of them, and in the quick waters of the swollen stream they put up a battle fully up to their reputation. Five and six would rise for the flies at once and double and treble catches were often made. For the streams we have had the best success with the red-ibis, professor and Jenny Lind flies.

At Blakesley Lake we have taken our surfeit of trout running from ½ to 2lbs. in weight. I never saw trout rise so vigorously to the fly. They leap a foot out of the water and are as quick as a flash. One almost feels as though he ought to have a rifle instead of a rod, so fierce is the attack. The successful flies for the ponds and lakes, with us, have been the parmachene-belle, the Jenny Lind, silver-doctor, red-ibis, coachman, professor and white-miller. The parmachene-belle is a wonderful fly for these waters.

Deer are plentiful. We have seen numbers of them. Several bear have been caught. Partridges will evidently be plentiful this fall, judging from the number of drummers we have heard.

The black flies and the sociable mosquito are in evidence, but not very troublesome.

If your readers are looking for a comfortable place for fly fishing, where the beds are as good as the table (which is very good indeed), let them write Douglass & Emery, Eustis, Me. CHARLES H. MEIGS.

NEW FLORIDA TARPON WATERS.

ROXBURY, Mass., June 10.—*Editor Forest and Stream:* I enclose to you a copy of a letter one of my friends received from a Kansas City fisherman. Possibly it might be interesting reading, if you think; but you can omit names and use the initials. CHARLES A. DEAN.

The letter, addressed to "R. W. J.," New Jersey, reads: "I am telling the shark story for a true one. It happened to Mrs. S. instead of myself, and, of course, it is not colored. She did have a large tarpon within 30ft. of the shore, when a shark rushed out on it and gulped it in at one gulp. I do not know how big the shark was, but it looked to be 20 or 25ft. long.

"I write this letter in particular to let you know that we have revolutionized the tarpon fishing. We had poor success at Marco, also at Myers. This thing of cutting up mullet and fishing in a mud hole a week for a bite is a thing of the past. So I will explain: We came up to Captive Pass, and while we were badly fixed for trolling we had great success there. Mr. S. C. had twenty-four strikes in nine days and caught one. Mrs. S. had some seventeen or eighteen strikes and caught two. I had some twenty strikes and caught four. The way we fished for them was to cut the belly of a mullet as much in shape of a live fish as possible, and fish when the tide is coming in or going out with a circle sinker and piano wire snood some 6ft. long, and it should have double hooks. Of course, we account for losing so many that strike because the hook is seldom swallowed, but it is the grandest sport I ever saw. I have seen thousands of tarpon in Captive Pass in one day. For the truth of the statement you can call upon my wife. They came so close to the boat and flitted around so much that I have seen her take her handkerchief out to wipe her glasses dry. It is grand fishing. I believe next year there will not be room enough to anchor a fishing boat in Captive Pass. Mr. Vom Hofe and his party were with us. He is getting up a lot of hooks and snoods that we agreed upon and cut the plan for while there.

As I wrote you before, I have put your gun in the best possible shape that I could. I hope you have received it, but I know it is in a rusty shape, as you know all things rust in Florida except memory of those who have met there. I killed a great many birds with it, for all of which I am much obliged. Myself and family wish to be remembered to you and your family, and we hope to meet you at Captive Pass next year. If you know Mr. D.'s address, after reading this letter, be kind enough to send it to him, as I know he is an enthusiastic tarpon fisher and would like to see it. I saw Mr. Jacobas catch fourteen tarpon, as many as four in one day. He had a kind of a double hook, three backed together, and I think this is the reason he was so much more successful than we. I used some large bass hooks that I had with better success than a single hook. We caught any amount of leopard sharks, which are as gamy as a tarpon. We also caught several kingfish, one 5ft. 9in. long. A. J. S.

GREAT FISHING ON THE JERSEY COAST.

ASBURY PARK, N. J., June 13.—*Editor Forest and Stream:* The hearts of rod and reel fishermen are once more made glad by the presence in goodly numbers of the glorious striped bass. Fishing for that king of game fishes is just now particularly good at most all points along our coast. While in size perhaps they are not up to the standard of some years ago, yet their numbers are beyond doubt largely in excess of the three last past seasons. The average weights are 3 to 7lbs. each. The heaviest weights of which I have learned were 11¾lbs., which fell to my rod, and one of 17¼lbs. to Dr. Herbert, of Manasquan. Characteristic of the never-ending vagaries which seem to be a part of the make-up of all members of the finny tribe, the bass almost totally refuse to take the shedder crab, usually the most killing bait to be used, and confine their attention entirely to the bloodworm.

Fine fishing can now be had at many points along our coast, notably Elberon, Deal Beach, Asbury Park and Manasquan Inlet. The kingfish have just made their appearance in this locality, the last week witnessing the first of these highly prized fellows. J. D. Woodward, of Bradley Beach, so far holds the record with seven at one tide, all taken in the surf with bloodworm. An occasional bluefish is seen, but so far none have been taken with the rod. One struck my bait while I was fishing for bass about a week since, but the gut leader was of no force in his knife-like jaws, and lost tackle was the result. A general review convinces me that the season will be one of positive delight to salt-water anglers. I will answer any communications of inquiry from readers of FOREST AND STREAM in relation to "fishing points," hotels, railroads, necessary equipments, etc.

Chief Warden Shriner has made several important arrests for illegal fishing in Barnegat Bay, and has stationed deputies at various points to watch for violators. This is as it should be, and its continuance until due respect for the law is firmly established is a thing to be desired.

N. B.—While closing the above the following self-explanatory message was handed me: "Caught at Avon, N. J., his majesty, a 20¼lbs. bass, by Guild.—FOSTER." And so the record is now in the hands of Judge Wm. B. Guild. LEONARD HULIT.

Wisconsin Muskallonge.

THREE LAKES, Wis., June 13.—The following score was caught at my place on the Eagle chain of lakes last week; W. J. Johnson, Edwin Wynn and C. H. Blair, of Chicago, eleven muskallonge, the three largest 15lbs., 22lbs., 25lbs. June 9, Gov. J. B. Grant, of Denver, Col., one lunge, 38lbs. J. W. Moorse, of Chicago, in three days caught five lunge, largest 18lbs. C. H. Blair, of Chicago, in one day at Butternut Lake caught ninety-eight black bass, largest 3lbs. There was a large number of pike and pickerel caught also. F. R. FRENCH.

THE FIRST OF MAY.

OF course I went out after grayling on the First of May. I spell first in this instance with a capital F, as there is no day in the whole year of so much importance to the angler. With what impatience the "crank" awaits its tardy arrival. With what loving care he inspects his fishing tackle against its coming, and with what bounding spirits and joyful anticipations does he sally forth when it finally dawns. Blessed is anticipation. The reality may fall far short of it, but all the same it has brightened many a day of eager waiting.

In order to be on hand early in the morning, I started on the afternoon of the day before, my destination being Bear Creek station, where our line—the Manistee & Northeastern R R—crosses Bear Creek. This is the tributary of the Manistee River which I described in my "Week with the Grayling," which was published in FOREST AND STREAM last winter. Man never cast a fly on a prettier stream. With me went Mr. Robert Porteous, our Auditor, and Mr. Robert S. Babcock, a Manistee lumberman. There were many other fishermen on the train, bound for various points, and of course there was much talk over the probabilities of the morrow, discussion as to the merits of worms as bait against the artificial fly, and not a little swapping of fish stories, not to say fishing lies, which are always in evidence when a number of anglers get together.

I was talking with a traveling salesman when I noticed a party coming down the aisle whose unsteady gait and watery eyes betokened a too familiar acquaintance with the flowing bowl. His painful efforts to maintain an upright position and appear sober attracted instant attention, and all hands ceased talking to watch him. Stopping at our seat he rested both hands upon its arm and thrust his bleary countenance close to that of my companion, weaving backward and forward with the motion of the car. After a long inspection of my friend's features he said, speaking slowly and deliberately, and in tones that were audible to all in our vicinity, "Shay, friend, d'you know this ole face?"

"It seems to me that it looks familiar," answered the salesman, with an indulgent smile that he tried hard not to make something more than indulgent.

"S'pose not. No, I reckon not. Shaw you first time sheventeen years 'go—sheventeen or fifteen years 'go—(hic). Mighty rough road, ain't it, down t' Baldwin, ye know? Used ter know (hic), used ter know all the Grand Rapids dudes 't come to Bald'n fishin'. (Suppressed snicker from the crowd.) Sho' yer don't 'member this ole face?"

"Can't say that I do."

"Can't help it (hic), can't help it. I shay, shaw yer first time sheventeen year 'go. Long time, that is, to 'member (hic) man's face. I 'member you all right, you don't 'member me 'tall. Can't help it. Sheventeen years good while. P'r'aps 'twasn't but fifteen. That's long time, too. Shorry you don't 'member me, but I can't help it," and with a sorrowful shaking of his head he stumbled back to his seat.

The crowd restrained their mirth over this incident as best they could and nobody knows to this day who the fellow was.

Arriving at Bear Creek station, where lives a section foreman who has two or three rooms for the accommodation of fishermen, we left our duffle and went over to the creek, some eighty rods distant, to see if the grayling were rising.

At the first glance I knew that the chances for any luck were against us. The creek was booming along, bank full, its current turbid and discolored with the wash from the many clay banks along its course. We had been having summer weather for several days and I had expected to find it down to a decent level. Sitting down on a log we lit our pipes and watched for a rise, but nary rise did we see.

"Our names are Dennis, Mud and Pants!" exclaimed Bob B.—Bobbie for short. "You fellows can take whichever one you like, but we shall have to divide them up between us for certain." In our hearts we felt that he was right. Many and many a time had we sat on that log, in seasons gone by, and well we knew that the absence of rising fish in the stream below us augured ill for our fishing on the morrow.

Common sense, backed by past experience, said to us, "Go home and wait for a better time." There was a train coming in a few minutes which would take us there. A few weeks later, when the keen edge of our fishing desire had been worn off by a few good catches, we might have obeyed the dictation of common sense. Now desire was strong within us and hope whispered, "What, go home and not fish on the First! Miss a day on the creek, in this beautiful, balmy weather, which you have been looking forward to all winter! To be sure, the grayling are not rising now, but they are there without doubt and will rise to-morrow. Stay and try them."

While we were silently debating the question I chanced to cast my eye into the top of a water elm, standing on low ground across the creek, and spied a large brown bunch upon a limb, which seemed to move. After watching it for a few minutes I saw that it was a porcupine and pointed it out to my companions. That porcupine settled the question of our staying or not staying, for while we were vainly pelting him with stones, the distance being so great that we could barely reach him by the utmost effort, the train thundered by and our chance to return to the city was gone.

Secretly, I think that each of us was glad to have the matter settled in that way.

Bobbie and myself had a room together that night, while Bob P. had one to himself. It was very warm and when we turned in we found, to our horror, that we must sleep on a feather bed. Now I abominate feather beds, even in cold weather. On this one I turned and twisted and perspired, and sleep came not, while Bobbie snored peacefully for two or three hours, much to my disgust.

Finally, unable to endure it any longer, I furtively punched him in the ribs until he woke up. "Whew!" said he, sitting up, "I'm about melted." I thought he might be a little warm, as I had doubled all the clothing except the sheet over him. He began to throw off the clothes, while I lay perfectly still. Bobbie is tolerably fat, and when he once gets warmed up it takes a long time for him to cool off. He squirmed about for awhile, cussing the feather bed under his breath, and then awakened (?) me.

"I don't see how you can sleep on this blamed old feather bed, with all the clothes over you, when I am roasting!" he exclaimed, somewhat testily. "There is a mattress under the feathers, let's throw the old thing off."

"All right," I answered, that being just what I had in mind to do myself.

So we lit the lamp and fired the feather bed. We could hear Bob P. snoring away in his room and it occurred to me that he might be cold. So I gathered up the discarded article, stole quietly into his room and gently laid it over him. We then remade our bed and turned in again.

Bob P. said next morning that he had an awful nightmare—that the devil was holding him down all night.

We were up with the lark—the lark in this case being a little bird which says: "Plant your corn, plant your corn, plant your corn; cover deep, cover deep, cover deep; pull it up, pull it up, pull it up." After a cup of coffee and a bite we started off up the creek, taking a path which led first through old choppings, then through some half-cleared farms, and finally wound through a hard-wood forest. It was a beautiful morning, and we were in the highest spirits, notwithstanding the fact that the prospects for sport were anything but flattering. Jogging along in Indian file, our long mackintosh wading boots thrown over our shoulders and dangling behind us, we startled the crows and the little "corn planters" with bursts of song, and waked the sleeping inmates of the farm houses with "Good Night, Ladies."

After going a couple of miles, we again struck the creek, donned our boots and commenced the serious business of the day. Serious, indeed, it proved. Hour after hour went by without a rise, either to our counterfeit presentments or to the natural fly, a few of which were on the water.

The plebeian but usually attractive worm, used as a last resort, brought no better success. Finally Bob P. got a trout and a grayling out of one hole, and bragged about his superior ability for the next two hours, albeit they were poor little things which should have been put back to grow. I got "snagged," and the snag proved to be a 10in. trout, which simply sucked the bait into his mouth and settled to the bottom. There was none of the trout vigor in his bite.

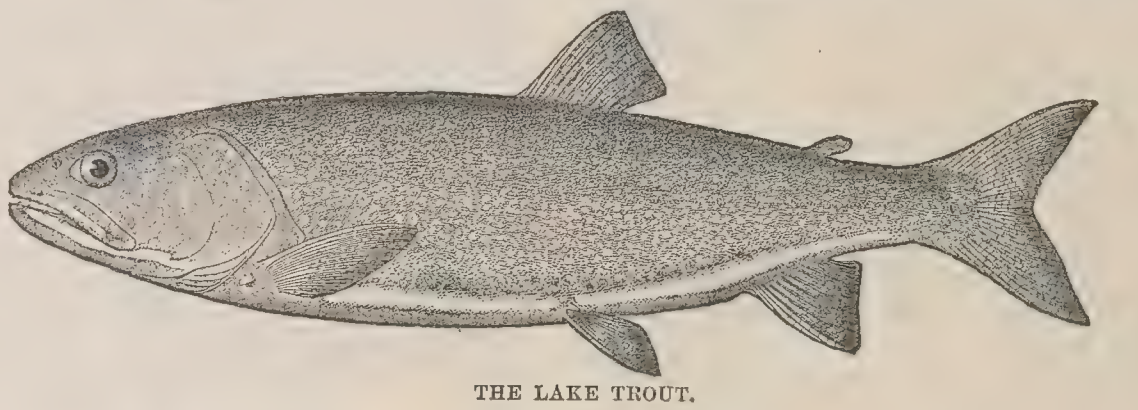
At noon we built a little fire, fried our bacon below it on a forked stick, and enjoyed a good dinner, which each of us had carried in a haversack upon his back. Wading pants are extremely uncomfortable things to walk in on dry ground, and when we are to fish streams which have to be waded we always carry a haversack capacious enough to hold our shoes and dinners.

After a good long siesta, we resumed our fishing. Bob P. caught another small grayling and a fair-sized trout, and Bobbie got one good trout. We had given up the fly, and were all using bait, as it had become a ground hog case. The water was nearly always waist deep, and ran with such force that it was difficult to keep one's feet. When it got a little deeper we had to take to the shore, as the buoyancy of the air in our voluminous boots, aided by the current, would have made it impossible to retain our footing. Each of us had several fish on which we knew nothing of, there being no vigor in their bite, and the extremely heavy sinkers which we had to use deadening their pull. Several were lost from this cause.

About the middle of the afternoon I again put on a cast of flies and, of course, forged ahead of the two bait fishermen. Getting no rises, after a thorough trial of different flies, I went back to bait, and in my next pool got a trout which repaid me for much of the day's disappointments.

The speckled gentleman took my worm with a rush and sank to the bottom when he felt the steel. There he stayed, without run or break, for several minutes, resisting all the strain which I dared to put upon the line with bull-dog stubbornness. Some country lad had dropped his alder pole on the bank after his fishing was done, and with this I stirred him up. Then he made a dash down stream which caused my reel to fairly scream. There were only a few turns of line on the spool when I stopped him and turned his head to the current. Slowly, slowly, I reeled him back, his weight against the swift current testing my rod to the utmost. I was standing at the head of a long, deep pool, which I knew was over the tops of my boots, over my head, in fact. The bank was impassable, shelving down steeply, and covered the water's dge with a thick growth of alders. There was no other way to save him than to pull him up to me by main force. However, my mind was made up to have that trout at all hazards, and had he made another rush for liberty, which I could not have stopped in time to save myself a ducking, I should have been ducked.

But he did not make a second run. Slowly, slowly, inch by inch, he was drawn upward, sagging back with all his might, but still not showing himself for an instant. The top of my bait leader showed above the water at last, but still I could not see him. He was still close to the bottom, still keeping up his bull-dog fight. Having no landing net it was now a serious question as to how I should land him. Casting my eye over my shoulder, I saw that if I could back up a rod or so I could lead him into shallow water, where the bank was lower and less steeply inclined. It was hard backing up against the current, in which I stood waist deep. Keeping my eyes fastened upon the line, I leaned hard up stream and worked one foot backward with a twisting movement of the ankle, the toe dragging over the bottom. Had I attempted to raise the foot entirely I should have been lifted at once and swept downward. Little by little I edged into shallow water, where I could command my feet, and then I knew that, barring careless handling, that trout was mine.



The other boys had come up behind me and were asking what I had, but I was too busy to answer any questions just then. I could see my fish, and he was a big one. The fight was about out of him, however, and I towed him up to the bank, lifted his head above the surface, thrust my left foot under him and threw him high and dry among the bushes.

How happy one feels when he has landed a good fish after a hard and desperate battle, especially when luck has been against him all day! I fairly gloated over my prize, and well I might. Sixteen and a half inches long from nose to center of tail. He weighed full 2½lbs., and was the prettiest specimen of his kind that it has ever been my good fortune to see. As his weight denotes, he was exceedingly plump, as well as broad and thick, and his markings and coloring were exceptionally fine. Bob P., who is an accomplished angler, and has cast his fly on many waters from New Brunswick to Washington, agreed with me that he had never seen a handsomer trout. Bob maintains that my capture was entirely due to the fact that he and Bobbie had "smiled" just around the bend above me and had dropped a "smile" into the creek for luck. "Cast thy 'smile' upon the waters and the fellow below thee shall reap the benefit thereof," said he.

Howbeit the "smile" must have exhausted its influence very soon, for we got no more fish that day.

Going home on the train we found that those who had fished the same stream ten or fifteen miles higher up had made good catches. So much for the First of May.

F. A. MITCHELL.

THE LAKE TROUT.

TRAMP TRIPS.

EVERY lover of the rod and gun knows how, as the proper season approaches, the hunting or fishing fever comes with it with almost unerring certainty.

Like an exile we mourn until we are in the midst of forest and stream indulging our shooting or fishing propensities.

It was in May, 1895, that I began to feel unfit for the ordinary duties of life. I was not sick, but was certainly in a morbid mood.

It was early, too early, for fly-fishing. I was not sure it was the piscatorial fever, but somehow as often as I thought to try the change from work to meandering along trout streams, so often even the thoughts of it seemed to brace me up.

There was no reasonable alternative but to go, and I determined to try some of the numerous trout streams whose waters finally find comparative rest in the basin of Lake Superior.

Crossing the Strait of Mackinaw, I took a D. S. S. & A. train for Humboldt, on the Escanaba River. The trip westward was through a dreary-looking swamp country, broken only by occasional glimpses of a parallel hard wood ridge to the south and pine lands to the north of us, the railroad evidently keeping the center of the swamp from economic advantages in grading.

Landing at Humboldt, we made haste to try our luck. We found three or four natives along the banks fishing, and their catch was an occasional fine trout and an almost unlimited amount of suckers.

We soon found that by fishing with a roving bait the suckers could not "catch on". The movement of the rod, we may observe, should not be a broad sweep as with the trolling spoon, but a series of short jerky movements that together make the sweep your rod is capable of. An hour and a half rewarded me with seven fine fellows of an average weight of one pound.

The sun had sunk out of sight and I was ready to quit. And as is not always the case, I was not disappointed in having come. There was nothing to regret; I felt physically as I had not felt for weeks and realized that along these streams I would find the panacea I had felt the need of. I was reasonably full of the spirit that I suppose brought poetry and peace to the soul of Izaak Walton. That night I could write an enthusiastic and cheering letter to a dear one back in Ohio, go to bed and sleep the sleep of the righteous, and rise to spend one full day along the Escanaba before extending my tramp trips further west or northward. The day's efforts were equally inspiring. From inherent modesty I withhold the catch, lest some one says it is a fish story and others that it was wanton waste. I was there to feast my piscatorial soul and a feast it was in fullness.

More later on.

N. R. PIPER.

Salmon in the Merrimac.

LAWRENCE, Mass., June 10.—The salmon have lately began to run, and P. McCarthy, who keeps a close watch upon the characteristics of the king of fish, has been waiting patiently for the time he would have an opportunity to add to his reputation as a salmon angler. The chance came yesterday. Mr. McCarthy, armed with his favorite rod, a strong line many fathoms long held taut upon a reliable reel, a leader long enough for an ordinary line, and his famous Irish salmon fly, went out upon the river between the Duck and Lowell railroad bridges. After whipping the stream for a time the fly was greedily taken by a beauty of about 12 pounds, which gave Mr. McCarthy a struggle of nearly half an hour's duration before coming to gaff. The fish was exhibited last night at Mr. McCarthy's place of business and attracted much attention.

Here is a Shark Experience.

ARANSAS PASS, June 7.—*Editor Forest and Stream:* A party of twenty-three came here fishing from Denison, consisting of H. Brooks and wife, F. A. Utiger and wife, W. H. Mills and wife, J. W. Creager and wife, Fred Hibbard and wife, F. E. Shaeffer and wife, N. H. L. Decker

and wife, Miss Carrie Marshall, I. M. Standifer and wife, J. T. Munson, W. P. Deering, Levi Lingo, D. I. Brumbaugh, Pierre Wilson, W. G. Terry and myself. We are staying at the Seaside Hotel, and are having splendid fishing of all kinds. Yesterday evening I started out for tarpon for the first time and had very good luck, catching a 124lb. tarpon that measured 6ft. 8in. This point, in my judgment and experience, far exceeds other sea and coast fishing. My first visit here was last year, which, I presume, you remember. On the 14th day of June last, while out fishing for tarpon, a shark got on my hook and the boom of the boat struck me in the back of the neck, knocking me head first into the channel, and the shark then got me in the calf of the left leg, taking me 20ft. down in the chanuel. However, I managed to pull myself up on the line which I had in my hand and tied to the boat, and when I pulled myself up to the boat I kicked the shark in the jaws at least twelve times, tearing a large gash in my limb, and the boatman then dumped me in the boat and I landed the shark, killing him, and we sailed for shore. It laid me up for seven weeks. However, I am going out this evening and presume you will hear from me again before leaving here. W. H. MULLER.

Note on "Angling without Hooks."

NEW YORK, June 10.—*Editor Forest and Stream*: If you can, without injuring the feelings of your compositor, print these notes of correction on my sketch "Angling without Hooks" in last week's issue, you will greatly oblige me. First, I did not in my humble scrawl accuse the kingfisher of "wringing past, heading down stream." In fact, I cannot say I ever saw any feathered creature "wring." My plain old-fashioned kingfisher was "winging past." Nor was his triumph "rancorous," as the typetosser has alleged, but "raucous," implying only hoarseness, not malignity. Finally he seizes upon a mother fishhawk a little further down the column and refers to her a dozen times as "he." All of the above I recognize as slight errors for the compositor, but they cast a considerable shade of carelessness over the whole sketch, naturally to be credited by the reader to the author.

H. PRESCOTT BEACH.

The Lake Trout.

BOSTON.—*Editor Forest and Stream:* Kindly give me your definition of a salmon trout? Have fished for twenty-five years and do not know of a fish I can designate by this name. I find different people call togue, landlocked salmon and large square-tail trout (caught in lakes) by this name. By helping me in this matter you will oblige. A. C. H.

[The fish is here figured. It is the *Salvelinus namaycush*, and is known as the salmon trout, lake trout, longe togue, tuladi, namaycush, lake salmon or Mackinaw trout.

Fishculture.

American Fisheries Society.

THE twenty-fourth convention of the American Fisheries Society was held in the United States Aquarium, New York city, beginning June 12. There were present W. L. May, president, Omaha, Neb.; James A. Dale, recording secretary, Pennsylvania; Frank J. Amsden, treasurer, New York; Edward P. Doyle, secretary; Herschel Whitaker, Michigan; Fred Mather; H. C. Ford, Philadelphia; W. R. Weed, Potsdam, N. Y.; H. B. Mansfield, U. S. N.; B. H. Davis, Palmyra, N. Y.; H. H. Lyman, Oswego; H. P. Frothingham, New Jersey; Edward Thompson, Northville, N. Y.; W. H. Bowman, Rochester; D. G. Hackeney, Fort Plain; Robert Hamilton and Jacob Rice, Cambridge; Monroe Greene, Rochester; G. F. Peabody, Appleton, Wis.; B. W. James, Philadelphia; Dr. T. H. Bean, New York; W. de C. Ravenel, Washington; J. J. Stranahan, Put-in-Bay; H. F. Hurlburt, Lynn, Mass.; N. R. Buller and J. W. Hoxie, Carolina, R. I.; L. D. Huntington and C. L. Guy, New York.

The following is the list of new members elected: A. F. Holt, Lynn, Mass.; T. P. Corwin, Pittsburgh; E. T. Rounsville, E. Freetown, Mass.; E. Hanson, Osceola Mills, Wis.; Oliver L. Jones, Chas. E. Griffith and G. E. Jennings, New York; H. T. Drake, H. E. Thompson, C. W. Bunn, Dr. J. O'Hage and O. F. Crary, St. Paul; and Messrs. Lyman, Weed, Thompson, Buller, Peabody and Dale, who were present.

Following is the list of officers elected for the ensuing year: President, L. D. Huntington, New Rochelle, N. Y.; Vice-President, Calvert Spenseley, Mineral Point, Wis.; Treasurer, Frank J. Amsden, Rochester, N. Y.; Corresponding Secretary, Lieut.-Com. H. B. Mansfield, U. S. N.; Recording Secretary, Dr. T. H. Bean. Executive Committee, Henry C. Ford, Philadelphia; H. P. Frothingham, No. 2 Wall street, New York; Herschel Whitaker, Detroit, Mich.; Dr. H. H. Cary, La Grange, Ga.; W. de C. Ravenel, Fish Commissioner, Washington, D. C.; Edward P. Doyle, New York; W. L May, Omaha, Neb.

The papers read in full or by title were as follows: "The Influence of Railroads in Fish Culture," by Fred. Mather. "Impoverishment of the Food Fish Industries," by Dr. B. W. James, Phila. "The Decadence of Trout Streams," by J. S. Van Cleef, Poughkeepsie, N. Y. "Artificial Hatching of Trout and Relation of Planting to Results," Seymour Bower, Detroit. Two papers by H. Whitaker, of Detroit. "Moral Phases of Fish Culture" and "A New Hatchery: "Operations of the U. S. Fish Commission," Dr. T. H. Bean.

Report of Supt. M. E. O'Brien, of the Nebraska Hatcheries, on general operations of hatcheries, particularly on a fish disease which appeared last year; "Distribution of the Trout Family," W. D. Tomlin; a paper by Dr. Chas. Wright Dodge, from a letter to Frank J. Amsden, referring to experiments on the growth of fungus on fish at Caledonia.

On the second day the members took a trip to Eaton's Neck, Long Island, where they enjoyed a clam bake and inspected the oyster grounds. A meeting was held on the boat while *en route*. A vote of thanks was tendered to the Board of Parks, the N. Y. Fish Commission, to the outgoing president and secretary, to J. H. Starin for the enjoyable trip on the steamer, and to M. Thompson for the courtesy in showing the oyster-works. President Cleveland, and Secretary Morton and the Governors of each of the States were elected honorary members of the society.

Summer Service via the Fall River Line.

The mid-summer schedule of the Fall River Line will become effective on Monday, June 17th, when the great steamboats Priscilla, Puritan, Plymouth and Pilgrim will be placed in commission and operated together. Steamers will leave New York week-days at 5:30 and 6:30 P. M. (Sundays 5:30 P. M. only), the early steamer running direct to Fall River, the later touching at Newport and remaining there until 6:00 A. M. before proceeding to Fall River. Connecting vestibuled trains leave the steamboat wharf, Fall River, at 5:30 and 7:40 A. M., being due in Boston at 6:50 and 9:00 A. M. Trains for all other points on the Old Colony System leave the steamboat wharf, Fall River, at convenient hours. The record of the Fall River Line is one of supremacy, and the traveler, whether intent on business or pleasure, who has not enjoyed a trip by this wonderfully popular route has a delightful experience yet to realize.—*Adv.*

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 3 to 6.—Kingston Kennel Club, Kingston, Ont. H. C. Bates, Sec'y.

Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.

Sept. 17-20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Sept. 24 to 27.—New England Kennel Club's second annual terrier show, Boston, Mass. D. E. Loveland, Sec'y.

Oct. 8-11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at Morris, Man. P. T. Madison, Sec'y, Indianapolis, Ind.

Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.

Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 29.—New England Field Trial Club, at Assonet, Mass. S. R. Sharp, Sec'y.

DOGS AND CATS.

A CERTAIN class of my critics are constantly finding fault with me for giving so much attention in my researches in animal psychology to dogs. In commenting upon something that I said in an interview in the *Sun*, one of these said: "There are animals that are much more intelligent than the dog." I doubt this. But admitting it to be true, there is one particular in which the dog takes precedence of all animals, man included, and that is in faithfulness. A gentleman said a true thing to me a day or so ago:

"The cat will profit by your love while you live and eat you when you are dead."

"Yes," I replied, "and the dog is not only faithful in life, but in death also."

The gentleman nodded his head, indicating that that fact was in his mind when he spoke. I proceeded to tell a story, which the gentleman in question had never heard, of the Newfoundland whose master took him to the brink of the river for the purpose of drowning him. The dog saw what the master's purpose was, and resisted to such effect that the master went into the water. Then what? Had it been another man that that master had attempted to drown the man would at least have been tempted to let him stay in the water till he was pretty badly choked, at any rate. But the dog had no such feeling. He saw the master whom he loved in danger, and he leaped into the water and pulled him out. What would any other animal have done under the circumstances? It would have turned away—the cat to licking its fur, the horse to grazing, the bird to pruning its feathers, seeking its mate, or looking for a worm.

In talking the dog up, however, I would talk no other animal down. I have been a life-long student of animals, from the chicken to the elephant. My memory, which I find the best note book, is full of incidents of the intelligence and other subjective qualities of other animals as well as the dog—incidents of my own observation and experience and of those of others. An ex-captain of the United States regular army tells me about a horse that was his servant, his companion and friend in years of Indian warfare. The captain has talked to me so much about that horse that I might write his biography, and interesting reading that biography would be. Take one manifestation of intelligence which he made over and over. When he would scent the enemy at night, he would come to where the captain slept and put his nose on the captain's breast and gently emit his breath. This would awaken the captain and the horse would stand on the alert ready for the mount and to obey the captain's slightest will—indicated by word or rein or pressure of the knees. Had the captain not loved that horse, he would have been less a man than he is.

Within the week a German gentleman stopped me on the street and gave me an incident of the evidencing of intelligence by a canary bird in Germany. The master loved his canary as much as Boythorn loved his. Lying upon his bed one evening smoking, he fell asleep. The cigar dropped from his lips and set fire to the bed clothing. The smoke partially asphyxiated him. He was in great danger. The bird awakened him, and so saved his life, by pecking at his lips.

As to cats. Some days ago, my friend, the Rev. Thomas Cole, of Saugerties, N. Y., and I sat together on the train. We had been talking about—so far as this letter is concerned—indifferent matters, when a gentleman said to me:

"I have been reading a good deal about you and your theories as to the immortality of the lower animals. I wanted to meet you."

When I had assured him that I was glad to meet him, some conversation followed, which concluded by his saying:

"Well, whether you are right or wrong, your teachings can do no harm."

When he was gone Mr. Cole said:

"Why is it that you are so fond of dogs. I live in perfect terror of them."

"That does not argue against the lovableness of dogs," I replied, "any more than the fact that an acquaintance of mine lives in perfect terror of women argues against the lovableness of women, or the fact that a certain maiden woman whom I know lives in perfect terror of men argues against the lovableness and trustworthiness of men. As in their cases, so in yours, your not liking dogs may be the result of an idiosyncrasy or an unpleasant experience. You must have been bitten by a dog some time or another, or maybe some ancestor was bitten and you have inherited your horror. I was bitten once."

"Were you?" said Mr. Cole, and changed the subject by saying: "I am a great lover of cats."

"Are you?" I said. "Cats come under the head of all animals in any love. I have no special love for the cat. You cannot train them, for instance, to the extent that you can a dog."

"Maybe not to the same extent," said Mr. Cole. "But you can train them. I once had a cat to which I had taught a good many tricks. I would tell him to go and get into his basket—and he would do so. I would put h milk in a pitcher with a mouth too small for him to ge his head in, and he would dip his paw in the milk, pu the paw out and lick the milk off."

"Your cat had a little of the same power of though t that the man had who invented that machine," I said, pointing to one of those great excavators which take the places of so many human shovelers. "The inventor had much of the same thing of which the cat had a little. Go on; I am interested."

"I," continued Mr. Cole, "have a beautiful Angora. I call her Mother. She is old, but not too old to be guilty of a little frivolity now and again. A fit of frivolity struck her about the time the blizzard struck the country this winter. I could not keep her in the house. I was afraid she would freeze to death. I would wrap myself up and go out after her. I would find her under the porch surrounded by a dozen lovers. They were about her in a ring. One of them would make an advance. Mother would spit at him. They would quarrel among themselves. This Mother would seem to enjoy quietly, but deeply. She evidently thought more of some of these lovers than of others. She was quite human in her actions. She finally selected one from among the number that pressed their suit for her paw. Before the blizzard was over she was as quiet a member of the household as before. But she did not chose a husband until after many fights among her lovers. I watched those fights with great interest. They increased my respect for the cat. When two bulls or two dogs make up their minds to fight they pitch right into each other. It is simply a question of which of the bulls is the stronger, or which has the advantage of the lay of the land; or of which dog has the most muscle or the sharper teeth, or of which bull or which dog has the most power of endurance. It is not so with the cats. They will watch each other for hours, looking for an opening, each of them waiting for a chance to take the other at a disadvantage. When they come together it is with tremendous energy. How the fur does fly! Before the whole matter was settled, and Mother was duly married, for the occasion, to the one of her choice, the snow all about the rectory was covered with cat fur. Antagonistic cats do not come together at once, but after advances and retreats and circumventions. Their warfare is one of intelligence, of deliberation, of calculation. It is not a warfare of impulse and passion simply. It is a rational warfare."

"But the cat is so selfish," I said.

"Yes," was the reply, "but it is the very refinement of selfishness."

It is only fair to Mr. Cole to say that, having no verbal memory, I have reported only the substance of what he said. That I have done faithfully. Our conversation closed by my saying:

"In the Southwest, some years ago, I knew an old cat, Tom, whom I loved for his scars, and in Chicago I had a great black fellow, Jim by name, of whom I thought a great deal; but I must confess that what you have said has awakened a psychological interest in me for the cat." And Mr. Cole replied: "I'll send you one of Mother's kittens."—*Charles Josiah Adams in New York Sun.*

C. F. T. C. Derby Entries.

YOU will see that we have secured 51 entries for the Chicken Derby. The club should feel proud of the success it has made. The dogs were all whelped in 1894. Pointers, 17; setters, 34.

POINTERS.

SAPPHO—Dr. O. Totten's liver and white bitch (Strideaway—Warwick Nellie).

STRIDEMORE—Richard Merrill's liver and white dog (Strideaway—Hops II).

DOWLAH—Charlottesville F. T. Kennels' lemon and white dog (Rip-Rap—Dolly D.).

NABOB—Charlottesville F. T. Kennels' black and white dog (Rip-Rap—Dolly D.).

INDIA—Charlottesville F. T. Kennels' orange and white bitch (Rip-Rap—Dolly D.).

AMEN—Charlottesville F. T. Kennels' liver and white dog (Wrecker—Selah).

LADY RUSH—H. T. Schmidt's liver and white bitch (Rush of Lad—Pet S.).

IGHTFIELD MENTOR—A. P. Heywood Lonsdale's liver and white dog (Ightfield Loveridge—Ightfield Mara).

BOWERLY DAN OF COLDHILL—A. P. Heywood Lonsdale's liver and white dog (Don of Bolcord—Duchess of Bolcord).

LADY CLIPPER—George E. Gray's liver and white bitch (Little Ned—Pearl's Dot).

VIRGINIA—H. K. Devereux's liver and white bitch (Little Ned—Pearl's Dot).

COURAGE—C. G. Stoddard's liver and white dog (Trinket's Coin—Ightfield Blythe.

STRIDEAWAY'S LAD—S. W. Alsdorf's liver and white dog (Strideaway—Ightfield's Teign).

SIDMONT—P. T. Madison's liver and white dog (Strideaway—Hops II.)

SISTER SUE—N. T. DePauw's liver and white bitch (Jingo—Rooney).

REX—F. H. Phippen's black and white dog (Rector—Miami).

PAUL BANG—Frank Althouse's liver and white dog (Jap—Frankie Paul).

ENGLISH SETTERS.

RUDGE BO—Richard Merrill's black, white and tan dog (Paul Bo—Tube Rose).

PAULINE BO—Richard Merrill's black, white and tan bitch (Paul Bo—Tube Rose).

ROD'S BOY—King Graphic Kennels' black, white and tan dog (Roderigo—Larry Gladstone).

GLEAM'S DART—Manchester Kennel Co.'s black, white and tan bitch (Count Gladstone IV.—Gleam's Maid).

GLEAM'S RUTH—Manchester Kennel Co.'s black, white and tan bitch (Count Gladstone IV.—Gleam's Maid).

BRIGHTON DICK—T. G. Davey's black and white dog (Brighton Tobe—Lady Brighton).

BRIGHTON TOM—T. G. Davey's black and white dog (Brighton Tobe—Lady Brighton).

BRIGHTON MAUD—T. G. Davey's black and white bitch (Brighton Tobe—Lady Brighton).

CHLOE S.—C. G. Stoddard's black and white bitch (Gladstone's Boy—Kitty Ward).

TOUCHSTONE—Avent & Thayer Kennels' black, white and tan dog (Orlando—Dolly Wilson).

PATRICIAN—Avent & Thayer Kennels' black, white and tan dog (Chevalier—Patsy).

FEN FOLLET—Avent & Thayer Kennels' black, white and tan dog (Count Gladstone IV.—Folley).

LADY VASSAR—J. W. Gollan's black, white and tan bitch (Dash Antonio—Queen Bess II.).

COUNT VASSAR—J. W. Gollan's black, white and tan dog (Dash Antonio—Queen Bess II.).

BOB—J. J. Spracklin's (agt.) black and white dog (Sharpe—Susie).

ST. PETER—John Wootten's black, white and tan dog (Duke of Manitoba—Hickory Link).

ALLICE F—Theo. Frenka's black and white bitch (R. C. Dawn—Zippo Dixie).

TORY FASHION—F. R. Hitchcock's black, white and tan dog (Count Gladstone IV.—Fleety Avent).

TORY CELIA—F. R. Hitchcock's black, white and tan bitch (Roderigo—Norah II).

TRADE MARK—Geo. A. Presley's cream, white and tan dog (Toledo Blade—Luzelle).

REX—C. P. Mingst's black and white dog (Antonio—Columbia).

KING'S DAN II.—Geo. W. Ewing's black, white and tan dog (King's Dan—M'liss II).

M'LISS III.—Geo. W. Ewing's black, white and tan bitch (King's Dan—M'liss II).

KATE—Geo. W. Ewing's black, white and tan bitch (King's Dan—M'liss II).

——— —Geo. W. Ewing's cream, white and tan bitch (King's Dan—M'liss II).

LITTLE BILLIE—Thomas Johnson's black dog (Black Prince—Rill)).

TAFFY—Thomas Johnson's black, white and tan dog (White B.—Dido III.).

THE LAIRD—Thomas Johnson's black dog (——— ———).

SAM T.—W. W. Titus's black, white and tan dog (Luke Roy—Bettie B.).

HARWICK—H. R. Edward's black, white and tan dog (Topsy's Rod—Opel).

PAUL BO, JR.—Claremont Kennels' black, white and tan dog (Paul Bo—Susie).

MARK OF IGHTFIELD—Joseph Becker's black, white and tan dog (Ightfield Rhiwlas—Queen Regent).

HENRY B.—D. E. Rose's (agt.) black, white and tan dog (Antonio— ———).

IRISH SETTERS.

DASHING NELL—Claremont Kennels' red bitch (Claremont Patsy—Sally Gold). P. J. MADISON, Secretary.

DOG CHAT.

IN respect to the Northwestern Field Trials Club's meeting, Mr. Johnson writes as follows: "Mr. George Galt returned to-day from Europe. I have in consequence to rush out to our Western branches to find if they are there yet. Consequently I am sending cards to members adjourning the meeting of the Northwestern Club (which was to decide on trials) till my return two weeks hence, or until the 24th. * * * Our Mr. H. Galt, of Chicago, wanted a fox terrier, a good one, for a friend in Chicago. I wrote to Mr. Brailsford, who selected one for Mr. H. Galt, and very kindly met them with it at the vessel at Liverpool. Mr. Galt says it is a 'bird.' Mr. Brailsford has also selected for me a young black setter dog which I wanted to breed to, being afraid to inbreed too closely. I have entered him in the Continental Derby, but he is yet at Mr. Lonsdale's kennel." From a clipping we learn that Mr. Johnson has purchased the Carveth packing factory, which was close by his residence, and has used the back part of the lot for additional room for his kennels, thereby enlarging them by 50ft.

Under date of June 10, concerning the Northwestern Beagle Club's trials, Mr. Louis Steffen, secretary of the club, writes: "The prospects are brighter than ever for a large entry."

Mr. W. A. Coster, secretary of the E. F. T. C., writes us that the complete particulars of Mr. Ledbetter's entry are as follows: "Marie Sport, black, white and tan English setter bitch, whelped May, 1894, by Gleam's Sport—Marie Avent."

In a letter of recent date Mr. Henry Jarrett, Chestnut Hill, Philadelphia, writes us as follows: "I am pleased to say my stud dogs have had a most successful season so far this year. Fourteen bitches have been sent to Christopher, eleven to Wellesbourne Charlie, and four to Domino II., and five to the Irish terrier John Briggs."

The Pacific Coast Field Trials Club has decided to run its next trials at Bakersfield, commencing on Jan. 20, 1896.

Field Sports says: "The regular monthly meeting of the Pacific Kennel Club was held on June 6. The secretary-treasurer's report showed the club's assets to be over $1,200. The bench show committee submitted its report of the late show, showing the receipts to be over $3,400 and the net loss to be $216. A communication was read from Secretary Lelong, of the State Agricultural Society, asking the club to take charge of a bench show to be held in conjunction with the State Fair at Sacramento in September next. A motion to appoint a committee to investigate the advisability of such action was lost, and the secretary was then instructed to reply that the club thought the matter inadvisable. A committee consisting of Messrs. Barker, Watson and Haight was appointed to confer with the A. K. C., in response to a communication from the secretary of the A. K. C. asking the club to appoint a delegate to act with other delegates from other clubs of the coast on all club matters for adjudication west of 110 degrees. The annual election of officers resulted as follows: H. Bier, President; E. H. Wakeman, First Vice-President; Herbert Spencer, Second Vice-President; Horace Orear, Secretary; C. A. Haight, Financial Secretary and Treasurer. The following list was proposed for membership: J. H. Debbron, Louis Hagan, Dr. F. W. D'Evelyn, F. J. Baxter and L. H. Waldron. T. F. Williams was elected an honorary member.

The Winnipeg *Free Press* of June 8 made the following favorable comment on field trial matters: "The Northwestern club and the Manitoba club have not acted harmoniously in the past, but negotiations are in progress in which it is hoped past dissensions, which were created by local jealousy, will be wiped out. Both organizations are of too wide a nature to permit petty feelings to have a place. The best class of the genuine true sportsman take a big interest in field trials, and this is no doubt occasioned by the fact that it is a sport that has never been contaminated with gambling influences."

St. Paul, Minn., has somewhat recovered from its recent violent mad dog scare. The newspaper reports would indicate that many of the dogs were all going mad at once. One newspaper said that "Health Commissioner Stone and Dr. Price, the live stock inspector, were kept busy all day investigating reports from all parts of the city relative to dogs suspected of suffering from rabies." But then the mad dog scare becomes emulative, much after the fashion of the bicycle craze, etc., and neighborhoods vie with each other for the sensation of producing the greatest number, the largest and most ferocious, demoniacal mad dogs and the most bitten people of any place or city.

Complaints of unjust or dishonest treatment in dog dealing are heard once in a while, coming either from the seller or buyer. There is a sameness in the stories. Either the seller sends the dog on approval to a man some hundreds of miles away, of whom he never heard prior to the transaction, or the purchaser ignores letters and fails to pay. Or the purchaser sends his money and receives an inferior or worthless dog, one whose deficiencies are in sharp contrast to the praises bestowed on him by the seller. Whether the cheated one is buyer or seller, he is prone to blame some one or something other than himself for his own negligence in observing the most ordinary business precautions. Men who own dogs are much the same as other men. Ownership in dogs does not change human nature. While nearly all dogmen are good, there are a few who are not. A business transaction should not be a matter of sentiment. The purchase of a dog is quite as much a business transaction as the purchase of anything else, and there should be no effort to make it a poetical event. If the seller will let dogs go to a purchaser whose only recommendation is that he loves to hear the whirr of wings while the rime of the frost and glint of the sunlight are on the brown autumn leaves, and if purchasers will buy dogs of strangers who write letters of embellishment, they must abide by the results, be they good or ill. It is not just to blame others for their own negligence under such circumstances.

We are informed the Rhode Island State Fair claims September 17 to 20 for its third annual bench show. Spratts Patent will bench and feed, and the popular and skillful fancier Mr. E. M. Oldham will superintend. A revised premium list will be issued in the near future, and the names of the judges will be announced in due time.

We are informed that the Executive Committee of the New Jersey Kennel League held a meeting on the evening of the 17th inst. to determine definitely whether or not the league would hold a bench show this year. The matter rests chiefly on whether or not a suitable building can be secured for show purposes.

At the Canadian Kennel Club's last meeting Dr. D. S. McDougal, Russell, Ont.; J. W. Churchill, Salem, Mass.; E. Lynge, Toronto; R. S. Steacy, Brockville; George Dunn, Woodstock, were elected to membership. "It was decided to recognize wins up to the end of 1894, held under C. K. C. or A. K. C. rules."

The first show of the Ladies' Kennel Association (England) had about 1,500 entries. As entries were confined to dogs owned by ladies, the total is quite a good showing.

Tours to the North via Pennsylvania Railroad.

To provide the most attractive method of spending a summer holiday, the Pennsylvania Railroad Company has arranged to run two delightful tours to the North. The points included in the itinerary and the country traversed abound in nature's beauties. Magnificent scenery begins with the journey and ends only with its completion.

The names of the places to be visited are familiar to all and suggestive of wonderland. No matter how much may be expected, one cannot be disappointed in Watkin's Glen, Niagara Falls, Thousand Islands, Quebec, Montreal, Au Sable Chasm, Lakes Champlain and George, Saratoga, or the Highlands of the Hudson. The dates fixed for the departures of these two tours are July 16 and August 20, and the round-trip rate of $100 from New York, Brooklyn, Newark, Trenton, Philadelphia, Harrisburg, Baltimore, and Washington will cover all necessary expenses during the time absent. A beautiful descriptive itinerary can be procured from the tourist department of the Pennsylvania Railroad, 1196 Broadway, New York, or Room 411, Broad Street Station, Philadelphia.—*Adv.*

Rifle Range and Gallery.

New York Rifle Club.

GREENVILLE, N. J., June 8.—*Editor Forest and Stream:* This club held its regular shoot to-day at Armbruster's Park.

The following scores were made by the members present: Off-hand, German ring target, distance 200yds., any rifle, sights and trigger-pull:

*M Herrington	23	24	23	20	21	23	18	22	19	21—214

R. J. YOUNG, Secretary N. Y. R. C.

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

June 19–22.—PORTLAND, Ore.—Eleventh annual tournament of the Sportsmen's Association of the Northwest, under the auspices of the Multnomah Rod and Gun Club. D. L. Williams, Sec'y, Portland, Ore.

June 20-22.—PORTLAND, Ore.—Multnomah Rod and Gun Club's eleventh annual tournament. D. L. Williams, Sec'y.

June 24-28.—SARATOGA, N. Y.—Annual tournament of the New York State Sportsmen's Association, under the auspices of the Saratoga Gun Club. H. M. Levengston, Sec'y.

June 26-27.—VICKSBURG, Miss.—Tournament of the Interstate Association, under the auspices of the Vicksburg Gun Club.

June 29.—MARION, N. J.—Fifth tournament of the New Jersey Trap-Shooters' League, under the auspices of the Endeavor Gun Club.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

It would add greatly to the value of the trap reports that appear in these columns if secretaries and correspondents would be particular in giving the conditions of the various events. All that is needed is a note to the effect that the event was shot "everything known," "unknown angles," "expert" (five unknown traps, known angles), etc., etc. It is taken for granted that, *unless otherwise stated*, every event is decided "everything known." Where all events are decided at one style of shooting, a note to that effect is sufficient. In sweepstake shooting at tournaments, the entrance money should also be mentioned. The above details may not be of interest to everybody, but they make reports of shoots complete, and certainly are of interest to many readers of FOREST AND STREAM.

The following extract from a letter, dated Grand Rapids, Mich., June 7, will be read with interest: "At the Valley City Gun Club tournament, at Grand Rapids, the total number of targets thrown, official figures, was 13,655. The thoroughness with which the office was managed is evidenced by the fact that, while the total amount of money paid in for the three days was $2,077 50, the cash account came out within $1.07 at the termination, and the purses in each event were ready before the next event was finished. But two errors were made, and the amount of these only made a difference of 20 cents. The club is out of pocket about $250 by the tournament, but artistically it was such a success that it is not disheartened, but will be on deck again in 1896. In fact, an impromptu tournament for 'all day' on July 4 is almost assured."

N. E. Money and "U. M. C." Thomas called at this office on Monday morning, having just returned from the Memphis tournament. Their opinions of the shoot, freely expressed, fully bear out everything that has been written about it by Mr. Hough, whose interesting account of the week's work at Memphis appears in another column. One feature of the shoot that Messrs. Money and Thomas pointed out to me was the fact that as a rule 15 and 16 out of 20 paid better than either 17, 18 or 19. When one comes to think of it, it is only a natural result with such a class of shooters as were present. Why did not more 80 per cent. men think of this earlier?

The Morgan's Grove Fair Association's trap-shooting tournament will be given at Shepherdstown, W. Va., on Sept. 4 and 5, under the management of the Interstate Association.

The ranks of the Interstate Association have been swelled by the addition of the well-known gun firm Parker Bros., of Meriden, Conn., to its membership.

It is stated Dr. W. F. Carver ("Evil Spirit") will make his home in Chicago, Ill., where he has purchased a handsome residence on the South Side.

Walter E. Lewis, secretary of the Naromake Gun Club, Norwalk' Conn., writes that his club will hold an all-day shoot on its grounds at Dorton's Point on the Fourth of July. Trolley cars run direct to the grounds, while shore dinners and refreshments of all kinds may be obtained within gunshot of the traps.

There will be several local clubs represented in the Dean Richmond cup contest at the State shoot next week. Among the clubs represented will be the present holders—the New Utrecht, the New York County, Emerald, Long Island, Cobweb, etc. The New Utrechts will be strongly represented, a large delegation of members having promised to be present at Saratoga on Friday morning.

The scores made at Memphis show how slight a handicap it would be to make experts shoot at unknown angles, while semi-experts and novices shoot at known angles. On Tuesday, June 11, Rolla Heikes dropped two targets during the day, scoring 162 out of 165; Van Dyke made four straight scores in eight events, Glover being credited with the same number. What chance would tyros have against such high-class work? Heikes's record is an extraordinary one.

The next New Jersey Trap-Shooters' League contest takes place at Marion, N. J., on the grounds and under the auspices of the Endeavor Gun Club of Jersey City, N. J. This meeting promises to be well attended, as every club in the league will almost certainly be represented by a team of five men.

Annie Oakley's shooting always catches the crowd. According to the Boston *Globe* of June 12, she received a very warm reception the previous night, at the hands of a crowd estimated at 20,000. Buffalo Bill's show is evidently as popular as it ever was.

Enoch Miller tells me that the Union Gun Club, of Springfield, N. J., will hold an all day shoot on the fourth of July, at live birds and targets. Shooting will commenue at 9 A. M. He adds that all who attend the shoot may be assured of finding plenty of shade and ice-cold refreshments.

Among the tournaments in the near future are the New York State shoot, June 24–29; Vicksburg, Miss., Interstate tournament, June 26–27, and the Altoona, Pa., tournament, July 10–12.

Owing to some oversight, no programme of the New York State shoot at Saratoga, has reached us. We have had to depend for our notice of the same on the kindness of a friend who loaned us a copy for a few hours. Hence the shortness of the notice given elsewhere.

The Diahoga Gun Club, of Athens, Pa., announces an all day shoot for July 4, shooting commencing at 9 A. M. Targets will be charged for at the rate of 2cts. each. A cordial invitation to attend is issued by the club.

The Charlotte, N. C., Interstate will be a good shoot. Although the club has not advertised any money, I understand that it will add from $100 to $200 per day. The tournament takes place on August 27–29.

Speaking of the State shoot, what a pity it is that such an important event as the Dean Richmond Trophy contest cannot be decided at some other time of the year. Mid-summer is a poor time to shoot live birds, unless they are specially selected. Even then they scarcely ever come up to moderate fall or winter birds.

Next week is the International week in London. At Hurlingham, Monday, Wednesday and Friday, and at the Gun Club, Tuesday, Thursday and Saturday, the crack pigeon shots of Europe will compete for valuable prizes. There will be a fair sprinkling of Americans among the contestants.

EDWARD BANKS.

The Saratoga Programme.

THE programme for the thirty-seventh annual tournament of the New York State Association covers the six days of next week, commencing Monday, June 24. On that date there will be no State events, but a card of twelve events, consisting of 10, 15 and 20-target races, open to the world, will be shot off. This programme for the open events will be repeated on Tuesday, Wednesday, Thursday and Friday.

State events, with a uniform entry fee of $4, will be shot as follows: Tuesday—two 25-target races, 7 moneys. Wednesday morning—merchandise event, 25 targets, 7 classes of prizes; afternoon, a 25-target race. On Thursday there will be two 25-target races as on Tuesday, and there will also be the team championship of the State contest, four men to a team. Friday will see the contests for the Individual Championship, the Lefever Arms Company's diamond medal and the E. C. Powder Company's silver cup. This is shot at 100 targets, unknown angles, the cup becoming the property of the winner. The entrance is $5, birds extra; anybody, however, is entitled to shoot for the cup on paying the price of the birds. The Lefever medal is held by the winner in trust for the Association; this contest is at 20 singles and 5 pairs, entrance $3, birds included. As above stated, on each of these days there will be a card of open events run off.

Saturday, June 29, is the day set apart for the Dean Richmond trophy. The conditions are: $20 per team, 15 live birds per man, three men to a team. The three men on a team "must be residents of the town or city in which the club is located, or in a town or city in the same county immediately adjoining thereto."

In all target events the money will be divided on the Levengston system. The system is as follows: 4 nearly equal moneys in 10-target events, viz.: 28, 26, 24 and 22 per cent.; 5 moneys in 15-target events, viz.: 24, 22, 20, 18 and 16; 6 moneys in 20-target events, viz.: 22, 20, 18, 16, 14 and 10 per cent. The introduction states: "While the moneys are so nearly equal, the expert will still be amply rewarded for his superior shooting by the fact that there are fewer tens than nines, fifteens than fourteens, and twenties than nineteens, and the amateur who shoots a 70 or 80 per cent. will not be shut out."

A point for shooters to remember is that transportation at the rate of a fare and a third for the round trip can be secured by obtaining a certificate from the agent when you buy your ticket.

Eureka Gun Club.

CHICAGO, Ill., June 8.—The weekly shoot of the Euroka Gun Club, held to-day, was marked by a large attendance and plenty of enthusiasm. A wind was blowing strongly enough to increase the uncertainty of the frisky bluerocks' flight to a considerable extent.

A special meeting was held during the afternoon. Among the business transacted was the election of Dr. H. H. Frothingham as president in the place of Mr. C. E. Willard, whose resignation was accepted with regret. The doctor is one of our best shots, and was the winner at the recent State shoot of the L. C. Smith cup and of the Montgomery Ward & Co.'s target medal. It was also decided to hold an all-day open shoot on July 4, and to make certain repairs and additions to the club's grounds and buildings. Scores:

No. 1, 25 targets, unknown angles:

F. M. D.

Knapp Beat Chapin.

BABYLON, L. I., June 8.—A special train from Long Island City brought a good crowd down here to witness a match between J. P. Knapp and C. M. Chapin at 100 live birds, 30yds. rise, the shoot taking place on the Westminster Kennel Club's grounds. Although Knapp only killed 79 birds, he won with ease, his opponent scoring 12 less—67. The birds, as usual, were a good fast lot; the strong wind from the north helped them also. After the match several sweeps were shot, the scores in all the events being given below:

J P Knapp	2022222222222202202222202—21
	2111222212222222222222220—24

Trap at Robeline, La.

ROBELINE, LA., June 7—J. H. Caldwell and L. R. Gay captained teams of eight men this afternoon, and shot a match to see which team should eat ice cream and which should eat mush and milk. The subjoined score shows that Captain Gay's men will have the pleasure of enjoying the more wholesome diet:

Caldwell's team: J. F. Welch 20, F. C. Gay 16, J. H. Caldwell 15, A. Manheim 15, W. C. Cox 14, Wm. Nevins 12, D Blacksher 5, R. W. Steele 2,—total 99.

Gay's team: M. F. Burns 14, Peter Hogue 14, E. M. Lindsay 13, L. B. Gay 12, W. H. Cox 9, R. Burdick 7, W. O. Carter 7, C. L. Lust 6,—total 82.

Missoula Rod and Gun Club.

MISSOULA, Mont., June 9.—The Missoula Rod and Gun people were out in full force to-day, and for a couple of hours enjoyed about the liveliest club shoot of the season. Practice shooting was the first order of business, which was followed by the medal shoot. This in turn was followed by team shooting and more practice, in the course of which a spirit of friendly rivalry was developed among a number of the shooters, which resulted in a match between H. A. Stephens and John M. Evans.

The first conditions agreed upon were: 100 singles at unknown angles, Stephens to allow Evans 15 dead birds in addition to the latter's score. These conditions were, however, changed to 50-singles, Stephens allowing Evans 7 birds. The stakes were just enough to make the shooters interested in their work. In the shoot Stephens failed to strike his gait, and only succeeded in getting 37, while his opponent knocked out 39 and still had his allowed 7 to spare.

The following were the scores made in the medal shoot.

Medal shoot, 20 traps, unknown angles:

Class A.

C. J. Lamley	10010010101011110001—10
W. P. Brayton	11011111101111011100—15
A. M. Sterling	00010000111010001001— 7
L. L. Hurst	01100110100011000000— 7
J. P. Manard	01111111010111010100—13
F. H. Woody	00001010100000010010— 5

Class B.

W. H. Mace	00001100100001000111— 7
Will Cave	11101101101011111110—15
C. A. Searles	10011100101111101110—13
H. W. Thompson	10011110111001011101—12
J. K. Wood	00110111111001001100—11
Lieut. Devol	11110001110100010101—11
J. M. Evans	01011010111111101111—15
F. P. Kern	10000100101001000000— 5
Capt. Andrews	01010011100110010011—10
A. M. Stevens	10011011101000111111—13

In the shoot-off for the silver medal, Evans scored five straight, while Cave missed three out of a similar number. WILL CAVE.

A Trophy for Worcester Sportsmen.

MEMBERS of the Worcester (Mass.) Sportsmen's Association are holding a series of weekly club shoots for a valuable trophy, presented

THE FOREHAND ARMS TROPHY.

to them by the Forehand Arms Company, of Worcester, Mass. The conditions of the competitions have been previously mentioned in these columns. To-day we give a cut of the trophy itself.

New Utrecht Gun Club.

BROOKLYN, N. Y., June 15.—To-day was set apart for live birds and targets by the New Utrecht G. C., but the attendance was light, owing no doubt to the counter attraction at Sheepshead Bay—the Suburban Handicap. At the target traps the wire pull gave out, putting an end to the shooting. Two events for nominal entrance fees were decided. The live bird shooting was uninteresting, the birds being a poor lot, something very unusual for this club's grounds. Three sweeps were shot: No. 1, 5 birds, $2; Nos. 2 and 3, 3 birds, $2, miss and out until three guns are left. Scores:

Target events:

	No. 1.	No. 2.
Phister	1111111110—9	00101111111— 7
Deacon	1011111111—9	1111111010— 8
Wash	1111111110—9	1111111111—10
Coulston	0111011010—6	.....
Edwards	1101111101—8	0011111011— 7
McAlpin	0111111111—9	1111111111—10
Dr Littlefield	1110101111—8	1011110111— 8

Messrs. D. C. Bennett and D. Deacon also shot a match for the price of the targets. Conditions, 25 targets, unknown angles:

D C Bennett	1001111111100111011011100—17
D Deacon	1111011111011010111101101—19

Live bird scores were as follows:

	No. 1.	No. 2.	No. 3.
C W Floyd	02122—4	202—2	12111—5
G W Coulston	22001—3	022—2	021w
McAlpin	22121—5	•12—2	22221—5
C Furgueson, Jr.	22222—5	222—3	22222—5
Edwards	22210—4	222—3	202w
R Phister	21121—5	212—3	22222—5
Dr Littlefield	•1221—4	210—2	211•1—4
E B Knowlton	22110—4	...	.....
Dr V Parker	21212—5	222—3	.....

Dr. Littlefield and G. W. Coulston started the afternoon by shooting a match at 10 birds for the price of the birds. At the end of the tenth round the score was a tie, each man having killed all. The tie was shot off in No. 1; Littlefield dropping his first bird, paid for the pigeons shot at.

Targets at Travers Island.

NEW YORK, June 15.—The members of the New York Athletic Club, Travers Island, held a target shoot to-day. The chief event was at 25 targets, a handicap by allowance of extra targets being given to the poorer shots. Loomis and Van Schaick, two scratch men, and O. F. Mackey, allowed one extra target, tied on 20 breaks. On the shoot off at 10 targets Loomis went straight, while Mackey missed his eighth and tenth targets. Van Schaick dropped three out of his first five and retired. Score:

V. A. Cattus	1011010100001100111111101 —15
O. F. Mackey	1111111101101011101001111 —20

J H Kroeger (28)	1101121010—7	N Gerdes (25)	0222011201—7
A J Chester (28)	1010111111—8	F Reichard (25)	1111010010—6

J. Hainhorst won the gold medal in Class B without a tie. In shooting off the tie for gold medal in Class A, H. Otten won by killing 4 straight.

C. F. OFFERMAN, President.

Bloomsburg Gun Club.

BLOOMSBURG, Pa., June 6.—The scores given below were made this afternoon by members of the Bloomsburg Gun Club. A team race was shot at live birds, between J. C. Hagenbuch, J. H. Mercer and W. S. Rishton on one side, and C. P. and W. K. Armstrong and W. H. Snyder on the other side. Each man was to have shot at 10 birds, but the supply fell short, Rishton and W. K. Armstrong having but 9 birds each to shoot at. The totals were a tie, and there being no more birds on hand, it was decided to shoot off at bluerocks. The result shows that the first-named team won by 5 breaks. Scores:

Team race, 10 live birds per man:

J C Hagenbuch...0221201012—7	C P Armstrong...1111111000—7
J H Mercer.....2110111221—9	W K Armstrong..2022200001 —5
W S Rishton.....010000122 —4—20	W H Snyder.....2211120102—8—20

Tie, 10 targets per man:

J C Hagenbuch...1101111111—9	C P Armstrong...1110111011—8
J H Mercer.....1110110010—6	W K Armstrong..0011010100—4
W S Rishton.....0101011111—7—22	W H Snyder.....0010101011—5—17

B. W. H.

The North Side Gun Club.

DEXTER PARK, L. I., June 11.—In lovely weather and with breeze enough to help the birds, the members of the North Side Gun Club, of Brooklyn, held their regular monthly shoot here yesterday. M. M. Manning and Eugene Barlow killed their seven birds in the club shoot, event No. 1, while Barlow and Pieper divided the pot in event No. 2, which was a miss and out. Scores:

	No. 1.	No. 2.
M M Manning (30)	1112121—7	.....
Eugene Barlow (28)	2121122—7	112112—6
Henry Heyer (28)	0222222—6	.....
George Siems (28)	2011211—6	212210—5
J J Tiernan (28)	2•112210—5	2210 —3

Pieper	.....	112211—6

"GREATEST OF THE GREAT."

Memphis Second Annual.

DIFFERENT DOWN THERE.

MEMPHIS, Tenn., June 14.—As was predicted in the hurried glance possible in the opening of the shoot, Memphis, second annual has proved to be all and more than all that was expected even by the most enthusiastic. It might very well be called the greatest of the great shoots of recent seasons, even in matter of size, for its initial entry, 104 actual shooters, broke the record of the year. It is not, however, in matter of size alone that a shoot is great. A cow is big enough to catch a mouse, but she can't. There must be quality as well as size. Memphis shoot certainly had distinctive quality. There was news in this tournament, something to see, something to feel, something therefore to write about. One can express this no better than by the unformulated comment made by a Northern shooter, "It's different, someway, down here."

Memphis tournament was probably better advertised than any shoot of the season; that is to say, it was more discussed, more was promised in regard to it, and more was expected of it. The management made a pronounced departure from the old methods of trap managements, and indeed perhaps inaugurated a new day in the sport of trap-shooting. It cut loose from the old subservience to the Shooter with a big S, and announced that it would run its own shoot, and run it square, promptly penalizing anything but straightforward and honest shooting. To say this and to mean it was indeed an innovation, and one not of a sort, in the opinion of many, to make a great popular tournament. The plucky Memphis men received only lukewarm support from certain sources, and there were not lacking many cheerful friends who predicted that the Memphis would be a calm and placid failure. Yet the events of the past winter in regard to change of sentiment in trap matters are well known. To-day, if there be less rooked shooting all over the country, if the young and inexperienced hooter be better protected, and if the whole sport be better than it was, it is very largely due to the fact that these Memphis Gun Club men—I shall not distinguish among them—came out boldly from the old ways and laid down a path of their own. They did this in the face of odds and in the face of certain customs, but they pluckily held to their doctrine, and their pluck won. They made their announcements plainly, and did not rest content with hanging up a meaningless announcement. They said they were going to run things square, and they did it. They said the referee's decision would be final, and it was. They said they would run a gentlemen's shoot, and they did. The same quiet firmness was manifest everywhere. It was apparent that the affair was in charge of a management business-like, courteous, but firm, one that intended to run its own shoot, and to do exactly as it had said it would do. The result was an event smooth, perfect, fair to all and immensely satisfactory, with an entry of amateur shooters no doubt the largest ever known in the South, and one called out solely by the resources and under the limitations of the Memphis Gun Club. In the past there have been larger entries in wild pigeon tournaments, and a few merchandise tournaments with cheap entry fees have had larger entries, but an entry of 104 men at straight rates, men from all over the country, and representing twenty-four different States of the Union, is something which of itself is a record breaker. Had the cashiers not been forced to close up and figure out the first shoot just when they did, the record would have been more badly broken. There were 109 shooters entered in event No. 1, and it would have had 115 shooters could it have been held open an hour or so more.

All these things, and a success such as this in face of conditions such as those above recited, are reasons for calling the Memphis second annual shoot the "greatest of the great." The management, which calmly set aside all thought of anything but success and so went ahead and succeeded, can receive from any just point of view nothing but congratulation and compliment. They probably never knew how good a chance they had of making a failure in these days of hot tournament competition. None the less they proved that the sportsmanship of this country is after all devoted to fair play and proper methods. The whole question was solved at once by just two features which one must hold very desirable in sportsmanship—a gentlemanly love for honorable methods in sport, and a manly determination to do what has been declared. This will do for the general comment on the character of the shoot.

GROUND ARRANGEMENTS.

The arrangements for a tournament in a warm climate need to be well considered if the shooters are to be comfortable. Everything was well planned at Memphis. The great grand stand at Billings Park was sheltered with heavy canvas, and furnished a cool retreat below for the shooters when not at work. The judges' stand made a good place for the cashiers (and one should compliment Messrs. T. B. Hills and S. R. Simmons, the young gentlemen who kept the entry and purse books so well). The old grand stand made a good place for a good restaurant. President Divine had two spacious tents, Mr. Noel Money his "E. C." tent; Mr. Schmidt, of Memphis, a loaded shell tent; and Fred Waddell, Southern agent of the DuPont powders, had a cool big tent for shooters to lounge in.

The traps were set in a long row, three sets of 5 traps, but each trap duplicated, so that in case of a balk by the electric pull the wire pull could be used instantaneously. The 30 traps were under supervision of Mr. Fred. Quimby, and Chas. Hebbard had them in hand. (Empire traps and targets were used.) Capt. Divine, Mr. Irby Bennett, Mr. W. F. Allen, Mr. F. P. Poston and Mr. Fred Schmidt, of the tournament committee, all in turn pushed things along merrily. Mr. Sims was aided by Mr. Quimby and a tireless corps of squad hustlers. Mr. Paul Litzke, of Little Rock, Ark., one of the best of young tournament handlers in the country, was also of assistance at times in the hustling, when he was not working on the FOREST AND STREAM tabular report, which latter, one must frankly say, could not have been prepared so well and promptly without him. In this table it has been attempted to give the news and the record of the shoot in the most condensed and terse manner possible to be devised.

FEATURES.

Shooters were present from Massachusetts, New York, Pennsylvania, New Jersey, Connecticut, Virginia, North Carolina, District of Columbia, Ohio, Iowa, Illinois, Wisconsin, Indiana, Georgia, Louisiana, Texas, Mississippi, Missouri, Kentucky, Florida, Arkansas, Kansas and Tennessee. The scores will show that the best of the land were present, though there are some desirable new names. It was an interesting gathering and one typical of a high order of sport. One must call this the best looking and best dressed crowd of shooters seen at a modern tournament. The weather was warm, and in consequence much variety and ingenuity in costume were in evidence. Many sorts of cool head wear appeared—white helmets, straw helmets, etc. A basket-shaped straw fishing helmet was practical uniform for the shooters, and was pronounced a great success for hot sunshine. These helmets are apt to appear further north now, as most of the boys equipped themselves here. An "E. C. and Empire" squad attracted some attention by a uniform of red shirts. This squad ran from 5ft. or so up to about 7ft., being composed of Messrs. Worthington, Young, Upson, Van Dyke, Merrill and Cornett. "U. M. C." Thomas added local color by a generous distribution of big-vizored red caps with "U. M. C." lettered on the front. The usual amount of tournament jollity was continually in progress.

The ladies, whom may God ever bless, favored the tournament with their presence.

A POPULAR AND SUCCESSFUL PLAN.

The tournament was very smoothly run. Kicking was not in ashion. The cash was well handled. In the first three events the hooting was all done without disbanding the squads, each shooter hus firing sixty-five shots before leaving the score. This saved much time. The blackboard score was used. I am by no means paral to this form of scoring, but it seems to be general, and in a shoot el; eo f this "dropping" to advantage is next to impossible anyow. Good order was maintained about the score. At the desks a nicely engrossed card showed all the moneys in each purse already figured out, so a shooter could tell at a glance what was due him. As much as possible the first day's order of entry was preserved and entrance money was collected in a lump. A big incentive to amateurs to shoot through the programme was offered in the *pro rata* division of $500. The daily sum of $100 to the twenty high guns was a very popular and desirable way of getting at the daily average money division. It pleased the amateurs.

In short, Memphis shoot was an amateur's tournament as much as might be. It will be noticed that the birds were so thrown that they could be broken by the average shooter as well as the expert. Straights were common and the money, on the system of purses adopted (30, 20, 15, 15, 10, 10 per cent.), put the money into a great many hands. Of course, a few who did not get all the money objected to this, the old wolf idea of want it all cropping out. But no system by which a few can get it all and still all get some has ever yet been devised. The Memphis plan of many purses and many ties is undoubtedly the most reasonable as well as the most popular one, and that it best subserves the original purposes of this tournament s best attested by the remarkable way in which the entry held up on the second and third days.

The rest of the story of the shooting can best be told by reference to the FOREST AND STREAM tables, which follow later.

The programme for each day was as below: No. 1, 20 singles, $3 entrance, $50 added; No. 2, 20 singles, $3, $50 added; No. 3, 20 singles, 3, $50 added; No. 4, 25 singles, $3, $50 added; No. 5, 20 singles, $3, $50 added; No. 6, 20 singles, $3, $50 added; No. 7, 20 singles, $3, $50 added; No. 8, 20 singles, $4, $50 added; $100 to be divided into twenty purses of $5 each, to be awarded to the twenty high guns shooting in all programme events.

The FOREST AND STREAM tables show the daily and total averages figured to the first decimal. The gun and load (powder and shell) of each shooter is given with his name. The shot load is not given, because there is no news in it, and we must not make a market report out of the story of the shoot.

THE DAILY HIGH GUNS.

The twenty high guns for the first day's average, $5 each gun, were as follows: Heikes 162, Glover 156, McMurchy 155, Fulford 155, Ruble 155, Van Dyke 155, Young 154, Conner 153, Upson 153, Merrill 152, Wagner 152, K. M. Moore 151, Calhoun 151, Rike 150, Buker 150, Hughes 148, Money 148, LeRoy 148, McIlheney 148, Shorty 148.

The 20 high guns for Wednesday, the second day, divided $100 and were: Heikes 158, Connor 157, Merrill 156, Rike 155, Young 155, Glover 154, McMurchy 154, Trimble 153, Wagner 152, LeRoy 151, Fulford 150, Woodworth 150, Shorty Bacon 150, K. M. Moore 150, Upson 150, Holz 149, Ruble 149. Money, Redwing, Greene and Miller tied on 148 (21 guns, owing to tie).

The high guns for Thursday, the third day, divided $100 and were: Heikes 159, McMurchy 157, Van Dyke 152, Holz 151, Merrill 151, Young 150, Rike 148, Fulford 148, Woodworth 141, Glover 147. Drake 145, Redwing 145, Foote 145, Buker 145, Connor 145, Miller 144, Shorty Bacon 144, Legler 144, Hughes 143, Bartlett 143, Upson 143 (21 guns, owing to ties.)

THE HIGH TOURNAMENT AVERAGES.

The following supplementary table of averages will be interesting as showing the men who went above 90, above 80, above 70, above 60 and above 50. It will be observed that Rolla Heikes has offered additional proof of the fact that he is nothing short of a phenomenon. In the three days of the tournament shooting, he lost only 16 birds out of the 495. In the practice day before the tournament opened, he shot at 100, scoring 98. This brings his total average for four days up to 96.98, or for the three tournament days 96.76. There is but one target shooter in this country and the boys all know it. Mr. McMurchy did well to pace him so closely with 94.14. The shooting conditions were not of the best, the weather being hot and depressing for more than half the time. The table shows concisely what the crackerjacks did at Memphis, so that he who runs may read the classified averages.

Above 90:

Heikes	96.76	Fulford	91.51
McMurchy	94.14	Rike	91.51
Young	92.72	Van Dyke	90.10
Merrill	92.72	Wagner	90.10
Glover	92.32	Ruble	90.10
Connor	91.91	Upson	90.10
Above 80:			
Woodworth	89.50	Gambell	85.25

Leach	67.15		
Above 50:			
Brown	55.85	Walker	55.42

THE HIGHEST WINNINGS OF THE TOURNAMENT.

As was stated elsewhere, this was not a tournament of great individual winnings, but one of a great many smaller winnings, the success of the tournament being due to that very fact. A glance at the ties will show the frequency of straights and high scores, every man there struggling his best to "go straight," and meeting often in the straight hole a number of swift competitors. "Dropping" was a thing unknown. It would take too much valuable space to tabulate all the small winnings. Among the great ones were Mr. Sumpter's 25 straight alone, which paid him $93. On the last day Heikes opened the ball with two 20 straights, and pulled off a good thing alone, the two purses netting him $140.50. In the next event he scored 19, which only paid him $3.25. Heikes was no doubt the largest winner, but an exceptionally large number of men went home with money in their pockets. This was by no means a "wolf shoot," unless the amateurs wolfed the experts. About half of the men who shot above a 90 gait were amateurs, or so-called amateurs. In fact, the amateur was on hand everywhere at Memphis shoot.

THE "AMATEUR" CLASSIFICATION.

The following are the names of the men who divided the $500 pro rata, each having shot through the programme. The committee no doubt exercised their best descretion in making out this list, and it should be accepted without argument, although of course much argument would be possible on so difficult and nice a question. The list was once cut down to 41 names, and was then much more nearly correct than it is with its increase to 50 names. Friends and interested parties gave the committee much trouble and got in a few names which probably do not belong there. The known manufacturer's agent does not belong on the same footing with the actual amateur at any shoot, for he is asking odds for himself all the time. Much worse is the secret manufacturer's agent, who gets equipment or expenses secretly, for he is getting odds all the while when his competitors are ignorant of it. These men are one of the customs of the modern, highly artificial tournament system, but they are a pest to the trade and a detriment to the sport, and when the manufacturers have taken a little more thought over it they will abolish them and put an end to a pernicious custom. Memphis management could have done nothing more desirable than to speed that way, and no doubt this was the intention, tempered only by the wish to be just and temperate rather than just and harsh. Be that as it may, the Memphis Gun Club has done so much to put trap shooting on a high and gentlemanly plane of absolute honorableness and fairness that it would be in poor taste to offer much advice on this matter. The names are as follows: Anthony, Mitchell, Miller, Holz, Moore, Tway, Trimble, Gambell, Hill, Meaders, Duley, Pemberton, Hughes, Sumpter, Lloyd, Alexander, Lindsey, Rike, Connor, Leroy, Alkire, Buker, Foote, Legler, Redwing, Upson, Merrill, Cornett, Gulick, Robinson, Wagner, Baker, Calhoun, Greime, Best, McIlhany, Kenmouth, Woodworth, Shorty, W. D. Thompson, Morgan, Guessaz, Smith, Little, Rix, Porterfield, Kaufman, Hoffman, Jefferson, Drake.

SQUAD RECORDS.

The "E. C. and Empire" red-shirt squad made the highest squad record of the shoot, which is as follows: Red Wing (Worthington) 19, Upson 20, Young 19, Merrill 19, Van Dyke 20, Cornett 18; total 115 out of 120.

The second high squad record was made by the "Arkansas Squad" as follows: Duley 16, Pemberton 18, Hughes 20, Sumpter 20, Lloyd 20, Alexander 18; total 114 out of 120.

There was a "Pump Squad," 4 out of the 6 shooting Winchester "pumps." A "Texas Squad," a "Memphis Squad," a "Mystic Shrine gang," etc., etc., added spirit to a sport ordinarily monotonous. It has never been the fortune of the writer to attend a tournament so pleasant and interesting in so many ways.

HAZARD AVERAGE.

The Hazard Powder Co., or rather their Memphis agents, Messrs. Shanks, Phillips & Co., gave an additional purse on Thursday, $65, to be divided pro rata among the five highest guns using the new Hazard smokeless powder (the "Blue Ribbon" brand) throughout the day's programme. This was divided among Holz 151, Woodworth 147, Buker 145, Shorty Bacon, Legler and Miller 144, Hughes 143, Ruble 142, Trimble 141. [Ties and a mispayment of the purse made it number 9 guns instead of 7. The purse was divided, 30, 25, 20, 15 and 10.]

THE AVERAGE DAILY ENTRY.

The first day's entry averaged 85 guns, the second day 81, the third day 76.50, a total tournament average of 80.83 shooters for each day. This record, considering the lateness of the date in the year and the great distance from which most of the shooters came, is surely a record breaker and fairly to be called the highest tournament average of the season.

FRIDAY SHOOTING.

After the close of the tournament on Thursday a few of the enthusiasts lingered on the scene and kept up sweepstake shooting for half a day on Friday. A wind storm prevented some team and individual races which would elsewise have been shot. A very interesting team race was shot, Messrs. Noel Money and Irby Bennett against Messrs. T. H. Keller and T. A. Divine, 50 targets, for $25 a corner. Betting ran brisk on this, and each man added a new hat to his wager, besides laying several bets of hats and cash on the side. Probably $100 or so changed hands, Noel Money alone winning $85 on side wagers. Messrs. Keller and Divine were chosen to win, but Mr. Divine's score fell lower than was to be expected, he being nearly down sick with his old enemy, the fever, though he stood to his guns all through the trying week. Mr. Money shot a splendid race, running the last 31 straight. The score:

Money	11111111111111111101110111—23
	11111111111111111111111111—25—48
Keller	11111011111111101110111111—22
	11111110111111111101111101—22—44
Bennett	11111101111111101011101101—20
	11111010010100111110111100—16—36
Divine	11111101011010101011111—18
	01111110101000011000101011—13—31

Messrs. Money and Bennett won.

DISCOVERIES.

The nigger and the mule do most of the hard labor in the South except the trap reporting. Neither of them can be induced to do that.

The yellow-legged chicken is a great civilizer, inducing as it does a centralization of Methodist preachers, trap-shooters and other good people. The yellow-legged chicken made Memphis and Memphis shoot what they are.

There were several ways of getting out to the grounds, but the best way was to go in an ice wagon.

Irby Bennett was called away Tuesday and Wednesday to a hardware convention at Louisville. [P. S.—He said so. It may have been a pink tea.]

If anything, Tom Divine was a little thinner, a little more energetic and a little sassier than ever.

It did the writer good to see "Old Hoss" Allen miss about half his birds in one shoot, because it reminds one of a day when Mr. Allen killed all the quail. Variety is the spice of luck.

Mr. William Tell Mitchell made public the startling discovery that the left barrel of his Parker gun, and of all Parker guns, shot to the left. They do, they do. It may be because they are on the left side of the gun. But will William Tell about the cast-off in his brain which made him ventilate such absurdities in the presence of so courtecus a man as Capt. DuBray and of his friends?

Mr. Buker, of Rockport, has a 10-gauge, and evidently he thought it was bored for an 11-gauge, for he tried shooting about half-way up to the 12-gauge score. Col. Irby finally advised him that he could set his foot against the 10-gauge peg or set it outside the gate, just as he liked. This re-bored the gun to 10.

John Sumpter, of Arkansas, was in the 25 hole straight with John Ruble, of Chicago. Ruble missed a bird, which the scorer marked dead by mistake. Asked if he missed the bird Ruble said, "I'm not refereeing this shoot." Yet his manly thrift was not rewarded, for the bird was scored lost, Sumpter winning the $93 alone, one of the heaviest winnings of the week.

For a time it was threatened that the London fashion introduced by Miss Vesta Tilley, of wearing bows of ribbon instead of cuff buttons, would break out generally at this shoot, but the scare blew over.

Mr. McMurchy announces that hereafter all contestants for Smith cups in different States will be obliged to wear bloomers. This will prove of interest to Ed. Rike and Ferd. Van Dyke.

At the Hotel Luehrmann a certain shooter could find no towel in his room. "Here, what am I going to do?" he said to his room mate, "there aren't any towels." "Dunno, unless you just keep on washing," was the unfeeling answer.

The first day entry in Memphis shoot was great, but it was not the best index to the greatness of the shoot. The second and third day entry made the best index for that, and proved the tournament really great. There was small froth on the Memphis cup. The club actually did what dozens of managements continually try to do and fail of doing. "This shoot is of some use to manufacturers' agents," said Jimmy Elliott, "because the shooters are staying through."

The Memphis idea of running a shoot was out of the ordinary, but it succeeded. Memphis shoot was good for amateurs, and therefore good for experts and agents. Most managements have for years firmly fixed their eyes on the experts and the known or secret agents, and let the amateurs and novices shift for themselves. Time will show that Memphis is right, even if this one tournament has not proved it. All honor to the brains and nerve of this Southern city. It fairly shames the stereotyped methods of Northern shoots.

One admires pluck wherever seen. The Memphis men had pluck.

There is only one Tom Divine, and there isn't much of him, and the pattern is broken.

Irby Bennett had a lot of fine bass given him by some of the angling shooters, and invited the latter out to eat them, but the fish had mysteriously disappeared. The boys maliciously accused Irby of selling them, which broke his heart.

By the way, FOREST AND STREAM was never lukewarm in its support of the Memphis shoot.

With soft sawdust to walk on, a long canopy over the firing line, and plenty of shade and ice ten feet back of the score, the boys got along in spite of the heat.

Had the whole entry shot through the programme, they would have shot 16,500 targets daily. As it was, between 13,000 and 15,000 were thrown daily.

The Texas 20-bores, Guessaz and George, of San Antonio, attracted much attention with the rifle-like reports of their pieces. These guns are made by Kessler, whoever he is or wherever he lives. The guns have cheek pieces and shoulder straps, but they took the straps off when they were shooting Some may not believe that it was with this 20-gauge that Mr. Joe George (he is now postmaster of San Antonio) broke 100 straight targets at unknown angles, yet such was the case. Texas sent five men up to Memphis. Holzapfel, of Cuero, is much liked for first in Texas target matters. Miller, of Farmersville, also shot like a house a-fire, if you know how a house a-fire shoots.

The "dropper" was absent. He usually is absent in so large an entry, because no dropping to advantage is possible. But had he appeared, he would very likely have heard something drop. There was a generally meek and subdued look about the attitude of a certain small element toward the Memphis management.

The impression seems general that the Memphis Gun Club has whiskers and talks bass.

Mr. Gemmett ("Reader"), of Ft. Madison, Ia., was one of the amateurs who intended shooting through the whole programme. Unfortunately he was taken sick and missed one event the second day, which cut him out of his pro rata in the $500.

Rolla Heikes was calmly splitting kindling wood at the old stand. He only missed two birds Monday, and three out of 165 the first day. Undoubtedly this man is a freak. He could shoot targets if he was fast asleep, and probably he is asleep some of the time at the score. There is plenty of disgusting talk among the pigeon "champions," but everybody agrees that there is only one target shooter in the world, and that is Rolla Heikes. This alone would not make a fellow love him, but his modest good nature does. To be decent is sometimes to be great, and the man who is both great and decent doesn't need to try to work the newspapers for any advertising.

Shorty Bacon wore the same strap he did last year and his trousers remained in the same perilous condition.

At the cashier's stand an expectant shooter called for his winnings, but the cashier instead collected 25 cents more from him. He left looking dazed.

One kicking brother roared at the cashier's desk because he was scored seventeen instead of nineteen, which latter he declared by all the gods of war he was going to have. "But seventeen pays $2.75 more than nineteen," remarked the cashier blandly. "Oh, does it?" said the shooter, rapidly tumbling down out of the air. "Well, maybe I did make seventeen." Human nature is a great and lovely study, and at a tournament you can see it some.

All angles were unknown, except that the Afro-American boy trappers sometimes got lazy and forgot to change the traps. Then there would be a threat of instant destruction from Tom Divine or Fred Quimby, and a resultant switch of a trap bar which destroyed many fond hopes of straights.

To go straight up to twenty-four and then miss the twenty-fifth bird—no wonder the shooter's face looked like one of these hitherto unpublished portraits of Napoleon.

The average amateur who attended Memphis shoot will go home and as he puts a peck of diamonds in cold storage will resolve to be there again next year. And as he looks at the photograph of the expert he will sniff the air and say, Aha!

Speaking of diamonds, it is stated that McMurchy uses his shirt stud for a paper weight when he is home at the office.

In Chicago in good society they say, "You fellers." In New York good society they always say, "Youse fellies." In Memphis they say, "Yo' gentlemen."

In one notable respect the Memphis management did not resemble the late Miss Maud Muller. It had no rake-off.

Mr. Noel Money is willing to see shooters use a hatful of E. C. if they like, but usually sticks to 42grs. himself. Yet when Mr. Money shoots targets it is as when a hired man eats lettuce.

The amateur arose and smote the gang in the neck.

The Memphis press boys did fine work.

The Arkansas boys each took home enough money, to use the words of our friend Chimmie Fadden, "To burn a wet dog wid."

Kansas and Missouri used to fight in Free Soil days, but here they stood in line together. And the Mason and Dixon's line seems lost forever.

In the past the fate of the shooting amateur might have been described in a little newspaper story which lately went the rounds. It seems that the owner of a menagerie in Berlin, which included a "happy family," consisting of a lion, a tiger, a wolf and a sheep, was asked one day in confidence how long these animals had lived together. "About nine months," he replied, "except the sheep, which has to be renewed occasionally." The trouble with trap-shooting has been that the amateur needed renewing so much. Are we to believe that it is going to be the expert hereafter who will need renewing? If so, let it be so.

All of which reminds one of another newspaper story—you find such awfully good things in the newspapers sometimes, you know. In this story it appears that a belated tourist was obliged to ask for a bed at a farm house, having wandered far from his hotel. On rising in the morning he found himself without tooth powder. Looking about him he espied on the mantelpiece a small box containing powder, which he used. When he paid for his bed he apologized to the farmer's wife for having used her tooth powder.

"Tooth powder?" she queried. "We have none."

"Yes, my good woman. It was in a small round box on the mantelpiece."

"That," she screamed, "that was not tooth powder! That was aunty!"

Aunty had been cremated.

The amateur has been in the box long enough. Let us give the expert a touch of cremation.

They talk about amateurs not being game enough to stay. Just how true is this? The amateur gives odds of 10 to 1 against the expert and rejoices if he wins once in a while. When an expert is a little out of form, who quits quicker? The expert has too long been used to the best of the betting. He is not game enough to stand an even thing without whimpering.

The shoot was one for gentlemen, by gentlemen and with gentlemen.

"Why can't we have as pleasant a tournament in our country?" asked one curious, and another answered, "Somehow, we don't know how."

The door was open.

The door will be open next year.

'Rah! for Memphis.

Memphis management did not offer one merchandise prize. Memphis management "pulled the leg" of no citizen. Memphis management has not lowered the sport of trap-shooting by beggary in any form, but has run an ideal shoot which shows that trap-shooting can be a square, self-respecting and self-supporting sport.

The referees were admitted by all the shooters to be of the best. The scoring was accurate, and moreover the scores were not fiddled with and changed.

Buker, of Rockport, pulled the wrong trigger once, and tried to claim a misfire for it, there being no shell at all in the barrel he tried to fire. The referee promptly spotted him and he got what he deserved (or part of it).

A gentleman from Cleveland found himself without a shell in his gun when he called "pull," and the trap sprung. "The trap went too quick," he explained, as he started back for a shell. But the referee could not be flim-flammed, and the gentleman got what he also deserved (or part of it).

Heikes did it all as easy as chopping hash for breakfast.

The newspaper men of the sporting and daily press were most handsomely treated. Every facility was given them for getting the news, and getting it intelligently and easily.

And there was news to get.

Rike, Guessaz, Keller, Sumpter and George made the pneumatic tire squad. Ferd. Van Dyke, Tway, Cornett, Divine and Dick Merrill wanted to get into this, but were voted not round enough.

The San Antonio team was by unanimous consent voted a holy terror.

A little black chicken roamed around the trappers' bank for a time, till Noel Money potted it and took it home to eat. It had yellow legs.

Irby Bennett got back from the pink tea at Louisville in time to do a lot of good hustling on Thursday. He had on new clothes, so the Texas gang roped him in plains fashion and pulled him in the dust. At lunch Tom Divine filled Guessaz's hat with buttermilk, and then flew for the door. Oscar led him about two feet with a fresh pie and caught him fair in the ear. At tournaments one renews his youth and general sassiness.

Lou Ehrhardt, of Atchison, was unfortunately taken quite sick the second day of his stay, and was unable to shoot or come out to the grounds.

A gay shooter chalked a large sign "For Rent" on the innocent cashier's back near the close of the last shooting.

LeRoy Woodward has been away from home seven weeks on the circuit, and says it will be two months in all before he gets back. He goes to Cleveland shoot.

"U. M. C." Thomas has a "system" by which he can break straights all through the day. He says it consists of taking care of himself and going to bed early.

The negro quartette which, under the management of the Texas fiends George and Guessaz, rendered such sweet music in room 27 at the Luehrmann (where averages were being figured at 3 A. M.), did well enough to win recognition on the boards.

Col. Dabney, of Clarksdale, Miss. ("Coahoma," well known as a FOREST AND STREAM correspondent from the Southern country), was one of the spectators for a brief time at the shoot. Mr. Bobo, of bear-hunting fame, was expected, but did not come. The Brownsville contingent lacked Dr. Taylor.

Everybody was there but Mr. Mason and Mr. Dixon.

The watermillion was right in line.

Mr. Baker, of Macon, Ga., says Macon will have a big shoot pretty soon and wants FOREST AND STREAM to see it.

Tom Callender, of Nashville, Tenn., the Troisdorff Southern agent, says Nashville may give a shoot this year, and would have done so long ago had she had grounds more convenient of access.

Mr. W. F. Allen is the best kind of a wheel horse for a tournament committee, Mr. Frank Poston is always cool and level-headed, and Fred Schmidt has full knowledge of all the intricacies of a big shoot. Irby Bennett is a hustler at every station, and all the shooters of the country know Tom Divine. It took such men to build such a shoot, and all deserve credit.

Irby Bennett says kindly that FOREST AND STREAM is the "Winchester of newspapers."

The president of the Memphis Gun Club last year was sick and unable to attend. This year he was taken down and went to bed the day after the tournament closed.

Memphis may have many names, but her right and proper name is the Beloved City.

Mr. Jos. George, of San Antonio, and O. C. Guessaz, of the same city, both say that city is discussing a big mid-winter shoot this coming winter.

Verily the South is the country for trap-shooting now.

Memphis showed that sport can be clean and successful, and most successful when most clean.

The sport that can stand on its own legs is the best sport to tie to.

The attendance of honorable and courteous gentlemen at a trap shoot never did or will hurt it. Their absence can.

Memphis sho' am a honey!

The magnolia blooms were out in honor of the occasion.

There was a silver convention in progress at Memphis at the same time with the tournament. It is 16 to 1 the tournament entry was the larger.

Sliced tomatoes and ice are good in Memphis. It is the yellow-legged chicken, however, let us repeat, which is the keystone, the foundation and the crowning pinnacle of Memphis's commercial and tournamental glory. I do not know of any other city where a chicken is all these things.

The Memphis Gun Club is thinking of annexing Chicago and Greater New York.

The mosquitoes were not there this year.

The pits for the trappers were well arranged, but anybody but those trappers would have died in there when the sun got over and shone on that side.

There seems to be no end nor limit to Rolla Heikes's shooting ability.

When the traps broke a bird some member of the committee would call out, "You, niggah, what's the mattah?" After this there would be a muffled "All right!" and a brief display of fifteen hands before the bank, said hands ranging in color from old gold to blue-black. But the trapping was very good.

The oldest of the tournament shooters said Memphis shoot was the best they had ever seen. It was truly unimpeachable.

The percentage of those who hung round the score books and studied the scores was small. One does not need to name them. They are known all over the North.

Of all sad words of tongue or pen, the saddest were those said by about thirty more men who thought they ought to have gone into the amateur class and had a chance at that cool $500. They said the $500 was too cool to them. Two of these people are nearly sick with grieving over this.

The shooter with the big S does not seem to be in so much demand in trap shooting as the shooter with the little front letter. The latter sort are all alike. When you make shooting so that all shoot alike in the matter of odds you will see still more shooting and shooters of the small initial sort. Memphis is the dial on which this forerunning shadow falls.

Years ago FOREST AND STREAM, alone in the wilderness, cried out for square shooting and equal odds, for no stealing, no beggary, no supine weakness and no unmanly dishonorableness in shooting at the trap. The day desired is surely coming. For one, at least, I cannot say enough for one tournament run as all tournaments should be.

E. HOUGH.

Trenton Gun Club.

TRENTON, N. J., June 13.—The regular monthly shoot of the Trenton Gun Club was held to-day. The club contest was for two badges, first and second; the conditions were 30 targets per man, each man first shooting at 15 for place; the men breaking 11 and over being in first class, the men breaking under 11 in second class. Mickel and Hicks tied for first badge; in shooting off the tie at 20 targets Mickel won. Taylor won the second badge. After the regular shoot a team shoot took place between two of the club crack shots. W. T. Taylor and C. H. Allen shot a race at 20 targets each with the two expert shots of the Ewing Gun Club, V. Rose and W. Roche, defeating their opponents easily. Following are the scores:

For place:

Allen	111111110111111—14	Taylor	111111110110000—10
Mickel	111110111111111—14	Smith	001111101110100— 9
Hicks	101111110101111—13	Williams	101110101010001— 8
Harper	001110111111101—11	Grant	011111000110001— 8
Hutchinson	100110110101011—10	Bumbough	110101000010011— 7
Carson	111100011110110—10	Starkey	000100110000110— 5

For first badge:

Allen	111110111110101—12	Hicks	111111111010111—13
Mickel	110110111111111—13	Harper	110110000010101— 7

For second badge:

Taylor	111111111111111—15	Carson	111111111101001—12
Williams	111101111110111—13	Bumbough	111110010011111—11
Smith	110101111111111—13	Hutchinson	101110101111010—10
Starkey	111100111111011—12	Grant	110001010111010— 8

Shoot off for first badge:

Mickel	11111010011110111110—15	Hicks	11001110111110101101—14

Match, Trenton vs. Ewing:

L. C. HUCKINS.

Hollywood Futurity Handicap.

THE Hollywood Futurity Handicap, under the management of Mr. John S. Hoey, is an assured success. The date set for the close of regular entries is July 1, yet seventeen entries were made three weeks prior to that date. The event will be shot on July 6 at "Hollywood," West End, N. J., shooting commencing at 10 A. M. The boundary is about 21yds.; handicaps range from 25 to 31yds., Fred Hoey being taken as the scratch man.

The conditions of the event are as follows: Regular entries close Monday, July 1; $25 to be paid in on entering, which is forfeited if the subscriber is not present up to 11:30 on the morning of the contest; $25 additional at the post; post entries will be received up to close of second round on payment of $75; 25 birds each; ties at 5 birds; 50 per cent. and cup to the winner, 25 per cent. to the second, 10 per cent. to third, 5 per cent. to fourth, with 10 per cent. to the club.

The handicaps that will be awarded the following shooters, should they take part in this event, are as follows:

Thirty-one yards: Fred Hoey.

Thirty yards: George Work, J. P. Knapp, L. S. Thompson, J. G. Messmer.

Twenty-nine yards: R. A. Welch, H. Yale Dolan, Capt. A. W. Money, Louis T. Duryea, Edgar G. Murphy, Chas. Macalester, Thorne.

Twenty-eight yards: F. G. Moore, J. S. Williams, W. Wynn, W. G. Brokaw, H. Gilbert, C. O. Iselin, "Jim Jones," C. A. Sykes, C. Furgueson, Jr., F. L Train, Smith, T. S. "Mott," "Seabright," Ellison, G. A. McAlpin, N. C. Reynal, F. L. Thomas, R. Heber Breintnall.

Twenty-seven yards: W. P. Thompson, Jr., E. L. Post, W. S. Edey, J. O'H. Denny, Phil. Daly, Jr., Hoyt, N. E. Money, Wolstencroft, L. Finletter, B. R. Kittredge, W. G. Murphy, "Zellner," E. B. Knowlton, "J. L. M., Jr.," Grant, H. R. Sweny, C. M. Chapin, "Chauncey," Green, H. M. Levengston.

Twenty-six yards: A. E. Watrous, W. M. Downing, George Gould

W. H. Mead. Sullivan, "Gilder," Harned, W. H. Stafford, E. C. Potter' C. Dolan, "Edward," Bacon, A. W. DuBray, "E. H. G.," Ballard, O. T' Mackay, Schultze, Ladew, W. F. Sykes, I. Eckert, Held, H. Eckert' Peter Morris, Johnson.

Any persons who think of entering for this event, and who are anxious to know what their handicap will be, can easily ascertain by writing to the manager, J. S. Hoey, Hollywood, West End, N. J.

The Latest in Nitros.

FOR more than fifty years "The Hazard Powder Company" has enjoyed the distinction of holding an enviable position in the front rank of our leading black powder manufacturers, and they now place before the sporting public the latest discovery in nitros—Hazard's "Blue Ribbon" smokeless. After spending considerable time and money in testing countless chemical processes, and by having the benefit of the experience of numerous other companies who have met with varied measures of success, these gentlemen now feel fully assured that they have discovered "the perfect combination," and that their well-earned reputation will be fully sustained by "Blue Ribbon." "Blue Ribbon" made its first appearance at Memphis, Tenn., on the third and last day of the annual tournament of the Memphis Gun Club, Thursday, June 13, and immediately attained great prominence, being used on that occasion by twenty-nine contestants, each and every one of whom won prizes, and all of whom pronounced it the cleanest, quickest, strongest, best pattern nitro on the market. It can hardly be questioned that no other explosive ever attained such general popularity in so short a time. The experience of a few short hours has already sent heralds of its merits into a dozen States.—*Adv.*

Bridgeport Gun Implement Company.

UNDER date of May 1, 1895, the Bridgeport Gun Implement Company have issued a very handsome little price list of the specialties controlled and manufactured by this company. In this list are shown many improvements in B. G. I. goods, and especially worthy of note are the new "Rapid" loaders for nitro and black powders, standard powder and shot measures, hand loading outfits and new style cleaning sets. The book is from the press of the American Lithographic Company, and is a model of good taste.—*Adv.*

Yachting.

FIXTURES.

*Dates marked thus are unofficial.

JUNE.

22. Yankee Doodle-Norwood race, Hudson River.
22. Douglaston annual, Douglaston Sound.
22. Atlantic special, New York Bay.
22. Royal St. Lawrence, A, 30ft., 25ft. and 21ft. classes, Montreal
22. Rhode Island, annual.
22-23. San Francisco cruise, San Francisco Bay.
23. California regatta, San Francisco Bay.
24. Seawanhaka Cor. annual, Oyster Bay, Sound.
24. Pavonia annual, Communipaw, New York Bay.
25-26. Seawanhaka Cor. annual race to New London, Sound.
29. Atlantic special, New York Bay.
29. Yankee Doodle-Vamoose-Rex race, Sound.
29-30. San Francisco cruise to Mare Island, San Francisco Bay.
29. New Rochelle annual, New Rochelle, Sound.
29. Dorchester open, Boston Harbor.
29. Squantum first cham., Squantum, Mass.

JULY.

1. Royal St. Lawrence fourth annual, Sir Donald A. Smith Cup Montreal.
1. Cor., Atlantic City record, Atlantic City.
1. Indian Harbor special, Greenwich, Sound.
2. San Francisco club sail, San Francisco Bay.
3. Seawanhaka Cor. race to Larchmont, Oyster Bay, Sound.
4. Larchmont annual, Larchmont, Sound.
4. Boston City open, Boston Harbor.
4. Lake Michigan Y. R. A. annual, Milwaukee.
4. Cor. Marblehead Club, Marblehead (Mass.) Bay.
4. Northwestern International Y. R. A. race, Seattle, Puget's Sound.
4. Cleveland regatta, Cleveland, Lake Erie.
4-7. San Francisco cruise, up river, San Francisco.
5. American annual, Milton Point, Sound.
6. Royal St. Lawrence Commodore's Cup, Montreal.
6. Riverside annual, Sound.
6. Duxbury Club, Duxbury, Mass.
8. Seawanhaka Cor. special, Oyster Bay, Sound.
9. Horseshoe Harbor special, Larchmont, Sound.
10. Huguenot special, New Rochelle, Sound.
11. New York Athletic Club annual, Travers Island, Sound.
12. Larchmont, 1st class, special schooners, and 34 and 21ft. classes, Sound.
12. Larchmont-Atlantic combined annual cruise, rendezvous at Larchmont.
13. Larchmont to Block Rock.
14. Block Rock to Morris Cove.
15. Morris Cove to New London.
16. Special race, New London.
17. New London to Shelter Island.
13. Royal St. Lawrence cruising race to Beauharnois, Montreal.
13. Cor., Marblehead, first cham., Marblehead (Mass.) Bay.
13. Hempstead Harbor annual, Sound.
13. Squantum second cham., Squantum, Mass.
14. San Francisco open race, San Francisco Bay.
15. Savin Hill open, Savin Hill, Boston Harbor.
15. Riverside annual cruise, Sound.
15. Rhode Island annual.
17. Cor., Atlantic City Special Cup, second race, Atlantic City.
17. Cor., Marblehead cruising and knock-about classes, Marblehead.
20. Sea Cliff annual, Sound.
20. Royal St. Lawrence A, 30ft., 25ft. and 21ft. classes, Montreal.
20-21. San Francisco cruise, San Francisco Bay.
21. Cor. San Francisco regatta, San Francisco.
25. Riverside special, Sound.
27. Indian Harbor annual, Greenwich, Sound.
27. Quincy, Quincy Point, Boston Harbor.
27. Cor., Marblehead, second cham., Marblehead (Mass.) Bay.
27. Royal St. Lawrence, 18ft. skiff and steam yacht class, Montreal.
27. San Francisco outside sail, San Francisco Bay.
27. Duxbury club, Duxbury, Mass.
—. Cor., Atlantic City annual, Atlantic City.
29. New York Y. C annual cruise, rendezvous and race, Glen Cove.
* New York Y. C., first run, Sound.
* New York Y. C., second run, Sound.
* New York Y. C., third run to Newport.
* New York Y. C., Goelet Cups, Newport.
* Ne York Y. C., fourth run to Vineyard Haven.
* New York Y. C., at anchor, Vineyard Haven.
—. New York Y. C., special races at Newport.

AUGUST.

—. Lake Michigan Y. R. A.
2. Lincoln Park, Chicago.
3. Columbia, Chicago.
7. Racine, Racine.
3. Cor. Fleet annual, New Rochelle, Sound.
3. Monatiquot open, Boston Harbor.
3. Shelter Island annual, Greenport, Shelter Island, Sound.
3. Larchmont, 34ft. and 21ft. classes, Sound.
3-4. San Francisco chowder cruise to Pinnacle Rock, San Francisco.
10. American special, Milton Point, Sound.
10. Winthrop open, Great Head, Boston Harbor.
10-11. San Francisco cruise to California Y. C., San Francisco Bay.
10. Squantum, ladies' day, Squantum, Mass.
10. Duxbury Club, Duxbury, Mass.
13. American open, Newburyport.
14-15-16. Cor., Marblehead mid-summer series, Marblehead (Mass.) Bay.
15. Green Bay, Green Bay.
15. Cor., Atlantic City Special Cup, third race.
15. Sea Cliff special, Sound.
17. Huguenot annual, New Rochelle, Sound.
17. San Francisco cruise to Mare Island, San Francisco Bay.
17. Roton Point Imp. Co. annual, Roton Point, Sound.
17. Cor. open, Marblehead (Mass.) Bay.
17-18. San Francisco cruise to Mare Island, San Francisco Bay.
17. Royal St. Lawrence Hamilton trophy, 18ft. and 21ft. classes, Montreal.
17. Cleveland, ladies' day, Cleveland, Lake Erie.
19. Manchester open, Manchester, Mass.
22. Riverside special, Sound.
24. Norwalk, Norwalk, Sound.
24. Squantum open, Squantum, Mass.
24. Horseshoe Harbor annual, Larchmont Sound.
24. Cor., Marblehead third cham., Marblehead (Mass.) Bay.
25. San Francisco open regatta, San Francisco Bay.
26. Rhode Island open.
29. Cor., Atlantic City Special Cup, fourth race, Atlantic City.
29. Squantum open, Squantum, Mass.
30. American special, Milton Point, Sound.
31. San Francisco cruise to Benicia, San Francisco Bay.
31. Larchmont 34ft. and 21ft. cabin cat classes, Sound.
31. Huntington annual, Huntington Sound.
31. Squantum annual cruise, Squantum, Mass.
31. Duxbury Club, Duxbury, Mass.
—. America's Cup trial races, New York Bay.

SEPTEMBER.

—. Seawanhaka Cor., 15ft. class, Oyster Bay.
2. New York Y. R. A. annual, New York Bay.
2. Larchmont fall regatta, Sound.
2. Cor., Marblehead Club, Marblehead (Mass.) Bay.
2. Lynn open, Nahant (Mass.) Bay.
2. Cleveland fall regatta, Cleveland, Lake Erie.
5. Larchmont, 34ft. and 21ft. classes, Sound.
7. San Francisco cruise to Mare Island, San Francisco Bay.
7. New York America's Cup, first race, New York Bay.
—. New York America's Cup, second race, New York Bay.
—. New York America's Cup, third race, New York Bay.
7. Revere open, Marblehead (Mass.) Bay.
7. Larchmont, 34 and 21ft. classes, Sound.
8. San Francisco squadron sail, San Francisco Bay.
9. San Francisco sail to Sausalito, San Francisco Bay.
12. Sea Cliff special, Sound.
13. Cor., Atlantic City Record, Atlantic City.
14. Larchmont, schooners and 34ft. and 21ft. classes, Sound.
15. Cor., San Francisco regatta, San Francisco Bay.
19. Larchmont, 34 and 21ft. classes, Sound.
21. Huguenot cruiser's race, New Rochelle Sound.
21. Larchmont, schooners, 34 and 21ft. classes, Sound.
21-22. San Francisco informal sail, San Francisco Bay.
27. Cor., Atlantic City Special Cup, fifth race, Atlantic City.
28-29. San Francisco cruise to Petalumna Bridge, San Francisco Bay.

OCTOBER.

6. San Francisco closing sail, San Francisco Bay.
6. California regatta, San Francisco Bay.
12. Cor., Atlantic City record, Atlantic City.
12. Huguenot cruiser race, New Rochelle Sound.

THE fact that the largest ship-building firm in America is to-day duplicating the model of a steam yacht built by it fifteen years ago is capable of but two possible explanations; either that the art of steam yacht designing had been brought to such a high degree of perfection by this firm in 1880 that it has not since been improved on by designers, American or foreign; or else that this country is at least fifteen years behind in this important branch of naval architecture. That the latter explanation is, unfortunately, the true one, is but too clear to any one who will compare the new yacht, or worse yet, the much vaunted Columbia, built by the same firm last year, with any of the recent Clyde-built steam yachts.

The two sister boats, Stranger and the first Corsair, are both well known to American yachtsmen, and in the fifteen years that they have been afloat they have proved themselves very serviceable craft; by no means handsome, even as style went when they were launched, not over-speedy, but taken all in all they were in their day probably the best of the American steam yachts, certainly superior to Atalanta, Electra, Nourmahal, Yosemite, Bretagne and Polynia. After the conspicuous failure of the very costly and useless Columbia, it must be admitted that both builders and owner have shown good judgment in avoiding the risk of a similar failure by resurrecting an old but tested model; but what a comment all this is on American progress in naval architecture.

There is no good reason to-day why this country should not turn out a steam yacht that could hold its own with anything afloat, but there is one very good reason why she cannot. The British steam yacht is built from the designs of an expert, an experienced naval architect, like Mr. Watson, Mr. Brown, Mr. Beavor Webb, Mr. Storey, specialists who have devoted years of study to steam yachts alone, and who are known by their work; such craft as May, Maria, Cleopatra, Rona, Zara, Hermione, Semiramis, Sultana, Utowana, Corsair II. and Intrepid. The American steam yacht of large size is designed by whom—we do not know; the boats are ordered of some firm of commercial builders, who may or may not know anything about the essentials of a pleasure vessel, however successful they may have been in their special line of commercial work; the drawings are produced, how and by whom is a mystery, but certainly not by anyone who has established a reputation that would warrant success.

The present season will see a large number of British-built steam yachts in American waters, probably the new Giralda, one of the finest craft afloat, and some smaller but equally handsome and shipshape craft. What have we here to put beside them—Columbia, Thespia, Nourmahal, and others of the kind.

There are to-day American yacht designers who are capable of turning out steam yachts far superior to any yet seen here, and no one who has witnessed the marvelous advance in the design of sailing yachts since the professional designer supplanted the old-time builder will doubt that, in a little time, if not at the start, America might hold her own in steam craft as well as in sailing yachts. The trouble lies with the steam yacht owner, with whom the upholsterer and decorator come first, the builder next, and the designer nowhere. The British yachtsman who proposes to build consults, at the very start, some well-known designer; the American yachtsman in all probability first consults his captain, and the latter selects a suitable builder, very prudently steering entirely clear of the designer.

One may admire in the abstract that spirit of patriotism which impels an owner to pay more on the Delaware for a poor vessel than on the Clyde for a good one; but for ourselves, we should much prefer to see him buy a good ship where he can best get her, and salve his patriotic feelings by devoting the difference in cash to the encouragement of naval architecture at home. No possible good can come from money lavished in ignorant experiments or in perpetuating obsolete models; and on the other hand, there never was a time in this country when more was needed or more could be effectively done in promoting a knowledge of naval architecture. The opportunities for technical education are disgracefully inadequate; in fact, such as they are, they have only existed for three or four years; there is, as yet, no provision for nor inducement to men who would follow up the many interesting fields of original research connected with designing and naval architecture; and there is little or no encouragement given by the wealthier class of steam yacht owners to the few American yacht designers.

There is some slight gratification in the fact that this class of owners is at last awakening to a realization that their pet tubs, in spite of ostentatious furnishing and elaborate decoration, are not the only steam yachts in the world, or even the finest, and every foreign yacht which comes to New York drives the lesson home. As it once was in sailing yachts, the first thing is the realization that the home-built craft are not immeasurably superior to everything "furrin" that floats; the second is the appreciation of the superiority of the foreign vessel; the third is the desire to produce a superior craft at home. This was the course of improvement which produced Puritan, Volunteer and Gloriana in place of the old centerboard sloop, and the same course will in time replace Nourmahal, Electra, Columbia and the rest with such steam yachts as have never yet been seen.

If any American yachtsman is desirous of hastening this change, he can do so by giving his personal attention to the type of yacht which he wishes to build, and his hearty encouragement to the yacht designer, through whom alone it can come.

ONE of the amusing sights at the races of the week was the little Sibbick 1-rater Wave, sailed by two men. In the Atlantic Y. C. regatta she was matched against an opponent which looked large enough to carry her on davits. The marvelous manner in which she whirled round and round was a cause of surprise to those who saw her for the first time. The class promises to become quite popular here this season.

DURING the week Queen Mab has done very good work, though with nothing much to race against of her own size. The heavy metal centerboard which was put in when she was built was removed last winter, and she is sailing quite as well to windward as she did with its aid.

THERE is a good old adage about not hitting a man when he is down that may apply just now to the dealings of the Y. R. A. with the centerboard. That ancient and most estimable appliance has verily fallen on hard lines of late—what with the mysterious disappearance, re-appearance and final disappearance of Vigilant's board last summer, and the deliberate selection of the keel type by Messrs. Iselin and Herreshoff for the Cup defender of 1895. After the triumph of Saracen and Kathleen in the 30ft. class, of Minerva and Gossoon in the 40ft., of Wasp and Gloriana in the 46ft., and the performances of Valkyrie II. and Britannia against Vigilant, all the claims of the keel party were well substantiated and it rested with the centerboard to show that it still had a *raison d'etre* in a racing yacht. With matters as they now are, it would not only be unjust, but most unwise, to discriminate in the least against the centerboard in adopting a new rule. It is of course necessary to include the centerboard in some way in any scheme of measurement that will attain the end now in view; but great care is necessary in order to avoid any charge of discrimination on the part of the centerboard men.

FROM all that we can learn, the New York regatta committee has made a mistake, that cannot be too quickly and thoroughly remedied, in the classing of the schooner Loyal in the regatta last week. The yacht was remeasured before the race, her classification under the new rule depending on her racing length instead of her l.w.l. The measurer's certificate, filed at the club house the day preceding the race, showed her to be under 65ft. racing length, and thus entitled to sail in the 65ft. schooner class, in which Neaera, of 60ft. racing length, was also entered. Instead of this, Loyal was put up a class, and made to sail against two very fast schooners, each nearly 10ft. longer than she; of course failing to save her time. The only reason given by the committee is that to have put Loyal and Neaera together would have spoiled the race in the "mixed class;" in other words, the committee, with two strictly cruising schooners of nearly the same size and a very fast racing cutter considerably smaller, prefer to make a "pig and eagle" match between one schooner and the cutter, and to dispose of the other schooner by putting her into a class where she does not belong, and where she was hopelessly beaten before she started. As was to be expected, the so-called race in the "mixed class" resulted in the cutter defeating the schooner by 28 minutes elapsed time. The idea of the "mixed class," established in 1893, was to make a race between such yachts which, for want of competitors in their respective classes, would otherwise be compelled to sail over alone. In such a case it serves a good purpose, but if it is to be strained to the detriment of *bona fide* entries, it cannot be too soon abandoned.

THE latest reports from Bristol state that a number of extra hands were set to work on Monday to complete the caulking and polishing of the plating, and that every effort will be made to launch on one of the high tides of June 22.

The Steam Yacht Thespia.

THE new steam yacht built by Wm. Cramp & Sons for David Dows, Jr., owner of the steam yacht Starling, was launched at the works, Philadelphia, on June 12. An unsuccessful attempt was made to launch her on the previous day, but she stuck on the ways, and five tugs failed to move her. On the high tide next morning the tugs succeeded in floating her. Thespia, as she was named, is practically a duplicate of the old Stranger, being 196ft. over all, 174ft. 5in. l.w.l., 23ft. 6in. beam, 13ft. hold and 10ft. draft. The model shows all the characteristic crudities of Peerless, Columbia and the other Cramp steam yachts, a square forefoot, short, awkward fore overhang and round counter. The hull is strongly built, with in-and-out plating. The machinery is the same as in Stranger, engines 22 and 42×24, with two boilers 10ft. 9in. long and 11ft. diameter. The wheel will be of Parsons's manganese bronze. The yacht will be schooner-rigged, and, like Columbia, she will be disfigured by a two-story deck house, the dining-room, on deck forward, being surmounted by a large pilot house. The interior will be fitted with every possible convenience and luxury in the way of electric lights, ventilating pipes, ice machine, etc., and the joiner work and furnishing will be very elaborate. The yacht will be ready for the August cruise, in charge of Capt. W. E. Withey.

YACHTING NEWS NOTES.

Zara, steam yacht, recently purchased by F. S G. d'Hauteville, of New York, arrived at that port from Gourock on June 15. She was designed by Watson and built by Fleming & Ferguson, of Paisley, being launched on June 3, 1891. Her dimensions are: length between perpendiculars, 136ft., hull 130ft., beam 20ft. 1in., depth lift 8in., Thames tonnage, 249. Her engines are quadruple expansion, of a type patented by her builders, the cylinders being 10, 15, 20 and 30in.×24in. She has one boiler with a working pressure. She is built to the highest class at Lloyds. The hull is of steel with three bulkheads and she is rigged as a schooner. On her builder's trial she made 12.5 knots over the measured mile on the Clyde, the engines indicating 500 horsepower. Mr. Peter Coats, her original owner, has replaced her with a larger steam yacht, also designed by Mr. Watson.

Capt. Hank Haff, of Vigilant and Colonia, who will sail the new defender, has for some time suffered from a cancer of the throat, and on June 7 he went to Dr. W. P. Kingsley's cancer hospital at Rome, N. Y., where an operation was performed on the following day, a portion of the jaw being removed. At last reports Capt. Haff was doing well, and he expects to be aboard the new boat soon.

An amusing account is given in one of the New York dailies of the very successful trial trip of the new Vanderbilt 21-footer Alcestis. The true facts are that, so far from being successful, the yacht was taken out with only her wooden keel and no lead bulb on and laid flat on her side, threatening to pitch her crew overboard. She will not be tried again until her lead is on.

Wadena, steam yacht, reached New York on June 16 from Gibraltar via Bermuda, after a cruise to Japan, having been absent exactly one year. Mr. J. H. Wade, her owner, with a party, went from Cleveland, O., to Japan by steamer from San Francisco, joining the yacht at Yokohama, and staying by her as far as Naples, where they left to return to New York by steamer.

The steam yacht designed by Gardner & Cox, and building at Roach's yard, Chester, is for Mr. F. C. Dinniny, owner of the steam yacht Aztec, which was wrecked in Hell Gate last year by the steamer Starin. It is reported that the same designers have an order for a similar yacht, also to be built at Roach's.

Vigilant has shipped her new centerboard at Bristol and has returned to New York. Her new boom is 103ft. 8in. long, and her gaff 61ft. 4in. On June 16 she was under way down the Bay when the jaws of her gaff gave way.

There has been lately completed at the Bristol shops a new 21/3-rater named Vaquero II. for Mr. H. B. Duryea, who is now living in the Solent, where he will race her through the season.

It is reported that on June 16 the fin-keel Wild Cat, designed and built last year by C. H. Olmstead, lost her fin while sailing in the Sound on Saturday.

We learn from the *Field* that Messrs. Ramage & Ferguson are laying the keel of a 500-ton three-masted steam yacht for an American owner.

Jubilee has been finally launched at East Boston, after the breaking of the ways last week. The yacht was not injured, and is now fitting out.

Larchmont Y. C. Spring Regatta.

LARCHMONT—LONG ISLAND SOUND.

Saturday, June 15.

THE best racing of the week was that of the Larchmont Y. C. on Saturday, there being not only a large fleet of starters, but a number of close matches in various classes, while the whole race was visible from start to finish. Unlike the New York and Atlantic clubs, the Larchmont is so situated that it can devote itself steadily through the season to the promotion of racing, and by availing itself of its exceptional opportunities for some years it has built up a big fleet that may be depended on for a race at almost any time. Saturday was a special occasion, the first trial of the club's new triangular courses, described in the FOREST AND STREAM of May 11, and yachts and yachtsmen together turned out for the sight. The day was perfect—clear, bright and sunny, yet not too hot, with a moderate N. W. wind. The starters were:

SCHOONERS—CLASS A, ALL OVER 90FT.

	Racing Length.
Ramona, H. M. Gillig	105.84
Fleetwing, J. De Lamar	....
Constellation, Bayard Thayer	107.24

SCHOONERS—CLASS B, 81 TO 90FT., HANDICAP.

Emerald, J. R Maxwell	89.51
Sachem, F. T. Adams	90.61

SCHOONERS—CLASS C, 71 TO 81FT.

Elsie Marie, J. B. King	75.60
Shamrock, W. P. Ward	78.18

SCHOONERS—CLASS D, 60 TO 71FT.

Loyal, B. F. Sutton	64.96

SLOOPS AND CUTTERS—CLASS 1, ALL OVER 77FT., HANDICAP.

Colonia, C. O. Iselin	90.02
Katrina, George Work	76.08

SLOOPS AND CUTTERS—SPECIAL CLASS.

Queen Mab, Percy Chubb	....
Wasp, H. L. and R. F. Lippett	54.97

SLOOPS AND CUTTERS—CLASS 6, 43 TO 49FT.

Gossoon, L. Vaughn Clark	47.83
Uvira, F. P. Sands	47.14
Minerva, H. W. Bucknall	45.61

SLOOPS AND CUTTERS—CLASS 7, 36 TO 43FT.

Eidolon, H. F. Crosby	42.60
Norota, F. M. Hoyt	....
Eurybia, Charles Pryor	40.02
Sasqua, H. Andruss	39.87

SLOOPS, CUTTERS AND YAWLS—CLASS 8, 30 TO 36FT.

Infanta, J. B. Mills	33.50
Gavilan, C. E. Diefenthaler	31.00
Audax, H. W. Eaton	28.62

SLOOPS AND CUTTERS—CLASS 8, 34FT.

Dragoon, F. M. Freeman	34.00

SLOOPS AND CUTTERS—CLASS 9, 25 TO 30FT.

Wildcat, W. H. Fischer	28.80
Beatrix, J. S. McDonald	27.59

SLOOPS AND CUTTERS—CLASS 10, 25FT. AND UNDER.

Wave, L. Le Droit Barber	17.45

CABIN CATS—CLASS 11, OVER 25FT.

Mary, W. E. Elsworth	28.76
Almira, Hanan Bros	28.62
Exonian, P. H. McGlehan	27.00

CABIN CATS—CLASS 12, 25FT. AND UNDER.

Kittie, Hazen Morse	23.10
Allegro, F. M. Randall	22.92
Keora, Corning & Parsons	....

OPEN YACHTS—CLASS 13, OVER 20FT.

Fairy, F. E. Towle	....
Lurline, A. M. Tighe	....
Violet, H. J. McKee	....

OPEN YACHTS—CLASS 14, 20FT. AND UNDER.

Terrapin, H. L. Curry	19.97

SPECIAL CLASS—21 FOOTERS.

Houri, E. Burton Hart	21.00
Celia, C. A. Gould	21.00

SPECIAL CLASS—HALF-RATERS.

Question, W. H. Clark	15.00
Trust Me, C. McL. Clark	15.00

Emerald allowed Sachem 8m. handicap, Colonia allowed Katrina 26m. handicap, and Queen Mab allowed Wasp 4m. 26s.

The greater number of classes had at least two competitors, but Loyal was obliged to sail alone, her promised antagonist, Cavalier, not starting. The 34-footer Vorant II was entered, but failed to face Dragoon, leaving her to sail alone. Two courses were chosen, No. 5, the Parsonage Point and Red Springs marks, and No. 9, the short Scotch Caps Course. Classes A, B, C and class 1 sailed three rounds of No. 5, 32½ miles. The others down to and including class 9 sailed two rounds, 21½ miles, and the smaller boats sailed twice around No. 9, 10½ miles.

The first division was started at 11:35, with three minutes to cross, being timed:

Wasp	11 35 35	Shamrock	11 37 06
Ramona	11 35 51	Constellation	11 37 39
Queen Mab	11 36 00	Loyal	11 38 00
Fleetwing	11 36 28	Sachem	11 38 00
Elsie Marie	11 36 44	Colonia	11 38 00
Emerald	11 36 54	Katrina	11 38 00

The second division was started at 11:43, being timed:

Norota	11 43 30	Minerva	11 44 40
Eidolon	11 43 44	Dragoon	11 44 51
Eurybia	11 43 47	Gavilan	11 44 56
Gossoon	11 44 10	Uvira	11 45 49
Audax	11 44 18	Sasqua	11 45 56
Infanta	11 44 31		

The last division was started at 11:43, being timed:

Wave	11 51 26	Keora	11 53 14
Beatrix	11 51 48	Question	11 53 16
Wildcat	11 51 48	Terrapin	11 54 37
Trust Me	11 52 05	Mary	11 55 51
Kittie	11 52 27	Violet	11 56 00
Fairy	11 52 29	Lurline	11 56 00
Caper	11 52 52	Exonian	11 56 00
Allegro	11 52 57	Houri	12 01 00
Almira	11 53 13	Celia	12 01 00

Emerald and Elsie Marie crossed the line together, the latter to windward and just a little astern. Her bowsprit fouled the port shrouds of Elsie Marie, but the two cleared without serious damage. As the wind was, there could be no windward work; the first leg was a reach, the second a run with spinakers to port, and the third a reach again. The first round was timed:

Colonia	12 55 37	Shamrock	1 10 26
Queen Mab	1 00 35	Sachem	1 41 21
Emerald	1 01 13	Uvira	1 15 53
Constellation	1 01 40	Gossoon	1 17 56
Elsie Marie	1 06 11	Minerva	1 21 20
Wasp	1 07 13	Eidolon	1 21 45
Loyal	1 07 16	Norota	1 21 58
Ramona	1 09 58	Fleetwing	1 24 15

Katrina had lost her topmast after the start, and withdrawn.

The second round was timed:

Colonia	2 11 30	Ramona	2 31 48
Constellation	2 19 22	Shamrock	2 34 09
Emerald	2 20 34	Sachem	2 39 32
Elsie Marie	2 29 54	Fleetwing	2 51 03

The smaller boats finished on this round, as follows:

Queen Mab	2 25 17	Eidolon	2 59 45
Wasp	2 32 06	Sasqua	3 09 20
Loyal	2 34 03	Infanta	3 09 20
Uvira	2 54 18	Dragoon	3 10 00
Gossoon	2 55 41	Gavilan	3 21 16
Minerva	2 56 12	Audax	3 31 16
Norota	2 59 32		

The third round was timed:

Colonia	3 22 14	Shamrock	4 10 58
Constellation	3 41 12	Ramona	4 11 55
Emerald	3 43 22	Sachem	4 19 21
Elsie Marie	4 03 15		

The little fellows were only timed on the final round:

Almira	1 59 40	Lurline	2 14 51
Mary	2 00 04	Beatrix	2 15 52
Kittie	2 00 50	Violet	2 23 54
Allegro	2 05 29	Wave	2 23 58
Fairy	2 06 59	Trust Me	2 28 17
Houri	2 06 59	Question	2 28 25
Keora	2 12 34	Wild Cat	3 42 06
Celia	2 13 44		

Oconee, cat, came up too late to start, but was sailing over the course when she lost her mast.

The official times were:

SCHOONERS—CLASS A.

	Start.	Elapsed.	Corrected.
Ramona	11 35 51	4 36 04	4 35 20
Constellation	11 37 39	4 03 33	4 03 33

Question	11 53 16	2 35 09	2 35 09
Trust Me	11 52 05	2 36 12	2 36 12

The winners were: Schooners—Class A, Constellation; Class B (Handicap), Emerald; Class C, Elsie Marie; Class D, Loyal (walk-over).

Sloops and Cutters—Class 1 (Handicap), Colonia; Class 3 (Special), Queen Mab; Class 6, Uvira; Class 7, Norota (subject to measurement); Class 8, Infanta; Class 8 (Special), Dragoon (walk-over); Class 9, Beatrix; Class 10, Wave (walk-over).

Cabin Catboats—Class 11, Mary; Class 12, Kittie.

Open Yachts—Class 13, Fairy; 21ft. class, Houri; 15ft. class, Question.

The race was managed by Messrs. Lovejoy, Sarony and Marshall. Everything went off satisfactorily, and the first trial of the new course was a great success.

Knickerbocker Y. C. Annual Regatta.

COLLEGE POINT—LONG ISLAND SOUND.

Saturday, June 8.

THE Knickerbocker Y. C. sailed its annual regatta on June 8, with fair weather and a moderate wind from the eastward to help. The courses were from off College Point, classes F, G, H, J and L sailing a 17-mile course around the Gangway Buoy, while the other classes sailed a 20-mile course around the buoy off Execution Rock. The fleet included several new boats, the 34-footer Dragoon, designed and built by Thomas Webber; the 15-footer Question and the cabin cat Exonian. The fleet was started from the gun in two divisions, the first at 11:10 and the second at 11:20. The times were:

CLASS A—SCHOONERS.

	Length.	Elapsed.	Corrected.
Vanitas, W. H. Bates	33.66	Withdrew.	
Gabrielle, J. G. Honey	32.46	6 14 45	....

CLASS B—SLOOPS OVER 42FT. RACING LENGTH.

Penguin, George E. Brightson	47.00	4 07 28	4 07 28

CLASS C—SLOOPS OVER 36FT. AND NOT OVER 43FT RACING LENGTH.

Gipsy, L. H. and S. Shanks	40.98	5 16 39	5 16 39
Eurybia, Charles Pryer	40.02	4 41 49	4 40 39

CLASS D—SLOOPS OVER 30FT. AND NOT OVER 36FT RACING LENGTH.

Aliris, J. A. Constant	35.25	Withdrew.	
J. S. M., Charles T. Smith	34.57	5 30 25	5 30 25
Edith, George H. Cooper	33.50	5 14 21	5 12 41

CLASS L—OPEN CATBOATS 24FT RACING LENGTH AND UNDER.

Violet, G. A. S. Wieners	....	4 38 05	4 38 05

The winners were: Class A, Gabrielle; Class B, Penguin; Class C, Eurybia; Class D, Coya; Class E, Dragoon; Class F, Nanita; Class G, Houri; Class H, Question; Class I, Mary; Class J, Kittie; Class K, J. I. M.; Class L, Violet.

Britannia, Ailsa and Niagara.

LAST week the racing fleet reached the Solent, where three races were sailed on June 13, 14 and 15, the first under the flag of the Royal Southampton, and the second and third under that of the Royal Southern Y. C. On Thursday only the big boats started, Britannia and Ailsa, the course being from off Netley, down the Solent and out to the Warner, then to a mark off Lymington and home, 44 miles. Ailsa led by 4s. over the line, both carrying club topsails, and they reached for about 6 miles with a fresh wind forward of the port beam, after which the wind shifted to N.W., and the remaining 6 miles to the Warner were run off under spinakers. Britannia turned with a lead of 22s. Another shift of wind to the S.W. made a beat to the Lymington mark, the wind coming harder with heavy rain. Britannia held her lead, but after Cowes was passed Ailsa split her jib and withdrew. Britannia sailed the 44 miles in 5h. 7m. 56s.

On Friday only the 20-raters started, Niagara, Audrey, Inyoni and Luna. The day was rainy with a moderate southerly wind which only lasted over the first leg, the race ending in a long drift. The course was from off Calshot Castle around Calshot Spit Lightship, then around the Lepe Buoy and home, sailed twice. Inyoni had weather berth at the line, with Audrey a little ahead and Niagara last. Audrey soon led and Niagara worked up to second place. The second leg of 4 miles to the Lepe Buoy took two hours, there being little wind and a foul tide. Inyoni took the lead and Luna withdrew. The race was called at the end of the first round, the times being: Inyoni, 3.20.38; Audrey, 4.11.50; Niagara, 4.35.—.

The course on Saturday for the larger boats was from Calshot Castle to the Spit Lightship, thence down the Solent to Lepe Buoy, to Sturbridge, to the Bramble Buoy off Gosport, and back to Calshot Castle; twice around. The 20-raters sailed the same course as on Friday; two rounds. Ailsa led at the line and held first place on the short beat to Calshot Lightship, then Britannia took the ground on Calshot Spit and hung for a couple of minutes, Ailsa meanwhile leaving her. Ailsa sailed fast on the way to the Lepe Buoy, with a fresh breeze abaft the port beam, the two being timed off Cowes: Ailsa, 11:05:50; Britannia, 11:13:30. They were timed at the Lepe Buoy: Ailsa, 12:03:55; Britannia, 12:10:40.

On the way to the East Sturbridge Buoy, off Ryde, Ailsa continued to gain, the times at that mark being: Ailsa, 1:41:40; Britannia, 1:55:20. The end of the first round found Ailsa 10 minutes ahead, and she had lost but little at the Lepe Buoy: Ailsa, 3:31:30; Britannia, 3:41:00. After the two passed Cowes the wind freshened from S.W., and Britannia began to overhaul her larger rival, finishing just enough astern to win on allowance.

In the 20-rating class Luna led at the start, with Niagara second, but on the beat to Calshot Spit Niagara took the lead. The fleet was then becalmed for a time, Audrey catching the first of the breeze and leading to the Lepe Buoy, where they were timed: Audrey 11:14:15, Luna 12:15:18, Inyoni 12:15:30, Niagara 12:16:18, Stephanie 12:17:50.

There was more drifting, but the race finally finished: Niagara 5.5.42, Inyoni 5.6.41, Audrey 5.7.1, Stephanie 5.8 20, Luna 5.13 3.

It is reported that Ailsa will at once be altered, her mainsail being reduced and her topmast and topsail enlarged, to correct her weather helm, while new changes will be made in her ballasting, the lead added to the keel prior to the Thames races being removed. The next racing is on the Mersey, at Liverpool, on June 20-21, after which the fleet goes to the Clyde.

The Cup Defender.

THE building of a thoroughly up-to-date racing machine for the adequate defense of the America's Cup is proving a much greater task than first estimated; while the yacht, if built after the ordinary steel construction of Colonia and Navahoe, might have been under sail before this, it is now a question whether she will be ready to race by July 10, on which date the New York Y. C. proposes to give a preliminary trial race for the 90ft. class off Sandy Hook. All idea of her racing at Larchmont on July 4 has been abandoned and it will require hard work to get her into shape even by July 10. The present state of the work is told as follows by the Boston *Globe* of June 16:

The launching of the defender is now surely two weeks off, unless she is put overboard half finished. Although everything possible is being done for an early launch, there is still a large amount of work to be done both on the exterior and interior of this costly Cup defender by the riveters and platers, and by the carpenters.

Good judges of the time it will take to finish the boat so that she may be launched say that it will be the first week in July before she makes her maiden dip into the blue waters of Bristol harbor.

Not until Wednesday of this week has the work of the platers progressed so far as to allow the carpenters an opportunity to do any work whatever on the yacht, and on that day the first of the deck planking was laid. The stock for this work has been out of the saw and planing mill several days, waiting for an opportunity to lay it, but the aluminum diagonal deck braces and other work had to be finished before this could be done.

Since the carpenters began work their progress has been very marked and to-day nearly one-third of the deck is laid. By next Saturday night there will be little of the deck but what will be covered.

The wood of which the deck is constructed is Michigan pine, selected because of its superiority over the common white pine used on decks of boats in regard to lightness and strength. This pine was obtained in part from Carpenter's yard at Providence, and part from a New York firm. The consignment from the Boston firm, which was to have been used, is still at the works, and will be used on boats built in the future at the shops.

The planking is in various lengths, and is 2½in. in thickness and 2⅞ in. wide. The work of laying was begun amidships, and four gangs of men are working forward with it. As each successive plank is laid, galvanized steel nails are driven into the sides of the planks at short intervals, thus holding them firmly together and preventing bulging when wet. At every aluminum and steel deck beam, long galvanized steel screws are placed and run up into the planking from underneath, holding it securely to the deck beams. At the top of each plank, at the edge, the wood is shaved off slightly, so that when two of the planks are laid together they leave a V-shaped space in the deck. This space will be caulked as the work progresses, and later will be filled with Jeffries marine glue. Every man that is a wood worker and can possibly be spared from other work is at work on the defender.

On the interior of the yacht is another large force of men engaged in laying the floor. This floor is laid in yellow pine timbers of small dimensions. The flooring is of spruce, ⅞in. thick, and is fastened to the beams with screws. Below the flooring all the braces and other work of the riveters and platers has been completed. This work has also been rushed during the week.

The distance between the flooring and the deck at the sides of the boat is about 6ft. 3in., while in the center it is about 3in. higher, due to the "crown" of the deck. The flooring will be all laid the coming week.

A force of steel workers are busy on the interior of the defender, placing aluminum braces from the frames to the deck beams. These braces are short, about 2ft. in length, and have wider flattened ends, which set on the frame and beam, the brace running obliquely from the frame to the beam. These braces are put in along the midship section of the boat, and will greatly stiffen that section where it is needed.

Above the flooring line there is a quantity of work to be done by the riveters, there being much of the plating that is not yet riveted. All over the boat, where the shores and props were in place, the riveters find work to do. These shores are removed one by one, and when the riveting is finished they are put in place again.

Along the top strake the riveters are still busy and are hammering away, smoothing up the rivets. There is much work to be done yet at the stern, and this part of the boat, which resembles in lines the sterns of Isolde and Niagara, the 20-raters, has not had the stern piece made for it yet, the men being at present working on it.

The mast ring at the partners was placed in position the first of the week and is of steel, galvanized. The step ring for the mast was also set before the men began the work of laying the flooring, and is of steel, painted. The distance from the step to the partners, as measured yesterday, is exactly 9ft. 6in. The mast is stepped between frames numbered 25 and 26.

The bulwarks of the defender, which are of aluminum, will rise from the deck but 4in., and will be flush with the plating on the outside, with a bulb on the inside. Portions of the rudder have arrived from the Providence brass foundry during the week, but it is said that some of the pieces were imperfect, and are to be cast again.

With all that is to be done on the yacht, how it is possible to launch her inside of two weeks cannot be seen. After the riveting is finished and the rudder is hung, there still remains a big job of burnishing the manganese bronze plating, if it is to be as bright as was the bottom of Vigilant when she went overboard in '93.

Six riggers from the well-known firm of Billmans of Boston are at work on the rigging of the defender at the shops, having arrived the first of the week. The spars are nearly ready, and have had the steel work fitted, and with the sails completed it will take but a few days to give her a trial trip after she is launched.

The defender has been looked over during the week by several officers from the torpedo station at Newport, who came by invitation of the Herreshoffs.

The sailmakers are at work on the sails for Vigilant.

Valkyrie.

The above photo shows very plainly the boat that will, in all probability, represent the ninth challenge for the America's cup. The exact dimensions are as yet unverified, but may be set down as about 130ft. over all, 26ft. beam and 18ft. draft. While different from the second Valkyrie, the boat shows the handiwork of her designer, even in spite of a greater beam than he has before taken. The freeboard and sheer are moderate, the bow is similar to the other Watson boats, of but moderate length and handsomely proportioned, and the afterbody, though wide, is carried out in the same characteristic fashion. The most important point about the boat, though not fully shown in this photo, is that the side has considerable flare. As is shown, the rail is set in from the sheerstrake something less than a foot to all appearances. The yacht is essentially a shoal, and comparatively wide hull with a fixed fin; the shape of the fin differs from the former Valkyrie in being more nearly rectangular. The lead only is coppered the bottom planking thus far being bare, though it will probably be coppered before the races on this side. The yacht is now at Gourock, and it was intended to try her under sail on Saturday last, using a mainsail of the old Valkyrie enlarged. The adjusting of the compasses took until 2 P. M., so the trial trip was postponed until Monday. The yacht will not go to the Mersey, and will not race before June 29, if then. The photo showed in the background the stocks on which the yacht was built, with the sliding ways by which she was moved broadside into a marine railway, on which she was run down into the water. Up to 1 P. M. on Tuesday the yacht had not started on her trial trip.

The steam yacht Ginita, Mr. Geo. B. Sloan, of Oswego, N. Y., left that port on June 6 for the Thousand Islands, having on board Capt. John Blackburn, Engineer John Sprague and a young boy, John Donnelly, employed in Mr. Sloan's office. A severe storm swept over Lake Ontario the same day, and as nothing has been heard from the yacht, it is certain that she is lost. A thorough search has been made of the shores of the lake and the St. Lawrence River, and the yacht's yawl has been found in the possession of the lighthouse keeper at Tibbett's Point. A strange story is told by the finders, Mr. Geo. B. Sloan, Jr., James Donnelly and R. G. and Wm. Blackburn, of finding the yawl and oars hidden in a barn, the keeper having failed to report that he had found them. Two caps, one having belonged to Capt. Blackburn have been found on the shore just east of Tibbett's Point.

The Change of the Y. R. A. Rule.

OUR readers are aware that for nearly a year the question of the alteration of the rule adopted in 1886—the "rating rule"—has been under consideration by the Y. R. A., with what result is told very fully in the following report, lately published by the Y. R. A. This report is of special interest to American yachtsmen from the fact that the extreme types exist here as well as in Great Britain, and though the conditions are different in some respects, any remedy which is effectual in one case will probably apply in the other. The report is as follows:

Report of the committee appointed by the Council of the Yacht Racing Association on the 24th of October, 1894, to recommend what amendment to the rating rule is desirable; embodying the resolution unanimously adopted at the meeting of the committee, April 26, 1895.

1. It will be convenient in the first instance to state shortly the circumstances which have led up to the present report.

2. In 1892 the yacht designers expressed to the rating rule committee of that year a strong opinion that an alteration of the existing rule was desirable, on the ground that it was necessarily leading, especially in the classes of 40-rating and under, to the construction of an extreme type of yacht, with small under-water body and poor internal accommodation, unfit for any purpose but racing. At that time, however, it was considered that yacht designing had not gone so far in the direction indicated as to render an alteration of the rule necessary.

3. In 1894 the yacht designers again urged the desirability of altering the rating rule on the same grounds as before, and the matter was brought before the council at its meeting at Ryde, in August last, and after discussion a committee, consisting of the following members, Mr. A. Manning, Mr. Peter Donaldson, Mr. G. F. Flemmich and Mr. W. Baden-Powell, was appointed to report on the working of the existing rule, and whether it was desirable.

4. On the 24th of September that committee made the following report:

"*To the Council of the Yacht Racing Association:*

"GENTLEMEN—In accordance with your resolution of Aug. 18, 1894, appointing a committee to consider and obtain the opinions of the leading yacht designers on the working of the rating rule, the members of the committee who signed this report met on Sept. 8, and they have now to report as follows:

"1. That in the smaller classes the rating rule is producing a type of vessel undesirably shallow and useless except for racing; your committee, however, do not consider it would be wise to attempt an alteration of the rule this year. They are of opinion that the time which would necessarily be consumed in discussing, drafting and passing a new rule would render all designing and building for next season practically impossible.

"2. In view of the fact of the more frequent occurrence of international contests, and of the fact that at present the English and American rating rules are practically identical, the committee recommend that the council should take steps to ascertain if a common rating could not be adopted by the countries interested in yacht racing. Should the council be unwilling to or fail to bring about an international rating rule, the committee recommend that a revision of the existing rule be made next spring, to come into operation in 1896.

"3 The committee have not attempted to formulate any proposal for altering the rule; but they are of opinion that immersed depth at the quarter beam might be introduced into the formula in such a manner as to insure a greater bulk of under-water body, but your committee do not put this forward with a view of prejudging the case in any proposal which the council may decide to make to bring about an international rating rule.

"4. The committee further report that at their meeting they had to confer with them the following naval architects: Mr. G. L Watson, Mr. W. Fife, Jr., Mr. A. E. Payne and Mr. Dixon Kemp, and the views of these gentlemen are embodied in our sport.

"5. Your committee, as well as the naval architects, were of opinion that it was most important that the recommendations of the committee should be made public at once, before it was possible to present their report to the council; the committee, therefore, decided that the sanction of the senior Vice-President, the Marquis of Exeter, should be obtained for immediate publication; this was accordingly done, and the recommendations made known to the public.

"(Signed) "AUGUSTUS MANNING.
"PETER DONALDSON.
"G. F. FLEMMICH.

"SEPT. 24, 1894."

5. That report was considered by the council at its meeting on the 10th and 24th of October, 1894, and at the latter meeting a resolution was passed to the effect that the rating rule requires amendment. At the same time the present committee was appointed, consisting of the undermentioned members: Mr. H. Crossley, Mr. Peter Donaldson, Mr. G. F. Flemmich, Sir George C. Lampson, Bart., Sir G A. Leach, Mr. A. Manning, Mr. W. Baden-Powell, Col. Saunderson, M. P., Mr. G. B. Thompson, and Mr. C. Newton Robinson. The council subsequently appointed the Earl of Dunraven and Mr. W. G. Jameson to the committee. The committee was invested with all necessary powers to consider and recommend what amendment to the rating rule is desirable.

6. The committee deemed it advisable to ascertain the views of all the principal yacht designers on the subject, and with that object addressed to them the following letter:

"NOVEMBER 14, 1894.—Dear Sir: I am requested by the Rating Rule Committee to inform you they are of opinion the present rule tends to produce in yachts unduly large circumscribing dimensions relative to displacement and useful living room on board; they consequently consider it advisable to alter or modify the rule, so that a type of vessel of more compact form, and having greater depth of under-water body, may be produced.

"The Rating Rule Committee will be much obliged if you will be good enough to consider this matter, and suggest what formula you consider necessary to attain the object the committee have in view.

"I am further requested to ask you to favor me with your answer by Jan. 1, 1895.

"I am, sir, faithfully yours, DIXON KEMP, Secretary."

7. The yacht designers entered heartily into the question; obtained the able assistance of Mr. R E. Froude; and after meetings and correspondence between themselves, and giving the subject most careful consideration, addressed the following letter to the committee:

"LONDON, Dec. 31, 1894.—*The Chairman of the Y. R. A. Rating Rule Committee*—Dear Sir: Referring to the circular letter dated Nov. 14, 1894, issued by the committee appointed by the Y. R. A. to again consider the rule for rating racing yachts, and addressed to us individually,* we, the undersigned, beg to advise you that as the result of our joint deliberations we recommend, for the purpose of securing the objects specified in that circular, the following formula, viz.:

$$\frac{(L+B+.75G+.5\sqrt{S.A.})^3}{C}=\text{Rating.}$$

"In this formula,

"L=Length on l.w.l. as now measured.

"B=Greatest beam wherever found.

"G=Under-water girth of the vessel from l.w.l. to l.w.l., taken at .6 of the loadwater line from its fore end and measured along the actual outline of the vertical cross section at that station. If the draft forward of that station exceeds the draft at that station, twice such excess to be added to G. In the case of centerboards, twice the drop of the board measured at the center of its length to be added to G. In taking these measurements, all hollows in the fore and aft underwater profile of the vessel and centerboards to be treated as filled up straight, and this length to be measured in a fore and aft direction from the extreme forward limit to the extreme after limit of the board when down. Bulb or ballasted boards to be measured in the same way as fixed or fin-keels.

"S. A.=Sail area.

"While we are certain that this rule will strongly tend in the desired direction, we wish to point out that in the event of the type developing in any undesirable direction, such tendency could at any time be controlled by a suitable modification of the co-efficients applied to the several terms, without radical change in the formula. In view of the possibility of your committee seeing fit to adopt at once other coefficients than those we have recommended, we have not specified any value for the constant divisor C; but should the formula be adopted, this can easily be arranged so as to include existing vessels, and our members are prepared to give such data concerning yachts of their design as may be requisite for the purpose.

"As regards the method of measuring and ascertaining girth, we suggest that the present principle of accepting sail makers' certificates for the dimensions of the sails be applied, and that the certificates of builders and designers be accepted for the girth measurement; corresponding permanent l.w.l. marks being affixed by them, such as can be checked by the actual surface of the water while the vessel is afloat, or serve, if required for the verification of the certified girth at any time the vessel is dry.

"The foregoing briefly conveys our unanimous opinion; and we may state that it is the result of very careful thought and consideration, both in conference and separately, and by the preparation and comparison of a number of test designs and diagrams.

"In the event of your desiring us to meet you for the purposes of discussion and explanation, we shall be pleased to do so, upon the understanding that we do so as a body.

"We are, dear sir, yours faithfully, "G L. WATSON, Chairman,
"C. P. CLAYTON,
"ARTHUR E. PAYNE,
"J. M SOPER,
"WILLIAM FIFE, JR.,
"A. RICHARDSON,
"C. E. NICHOLSON,
"R. E. FROUDE."

8. On the 7th of February the committee had a conference with the yacht designers, which Mr. Froude was good enough to attend, when their proposals were more fully explained and considered.

9. At this meeting the yacht designers emphatically confirmed the opinion they had previously expressed that an alteration of the existing rule is desirable.

10. They also expressed a confident opinion that relatively to rating size, the proposed rule would not be detrimental to speed, or, otherwise expressed, that yachts built under the proposed rule would be as fast, if not faster, than yachts built under the existing Y. R. A. rule, the Seawanhaka, or any other known rule, provided the yachts were measured and classed under the proposed rule.

11. During the conference the question was raised whether it would not be preferable to adopt a rating based on a linear instead of a cubic measurement, as being more simple and more easily worked, and the attention of the designers was drawn to this point.

After discussion and informal conversation, the further consideration of the proposal was adjourned in order that the yacht designers might consider the constant to be used as a divisor with the suggested formula, the effect of the formula upon the classification of existing yachts, certain points with reference to the proposed tax on centerboards, and whether it would be desirable to have the rating upon a linear instead of a cubic measurement.

On the 26th April the committee had another interview with the yacht designers, when they submitted their views upon the points which had been deferred for further consideration at the last meeting. Those views are expressed in the following letter:

"LONDON, April 25, 1895.—Dear Sir: In accordance with the request of your committee, made to us at your meeting of the 7th of February last, we have carefully considered the question of constants and classes applicable to our proposed rule for racing purposes, together with other points to which our attention was directed, and now beg to report as follows:

"With this rule we advise that the present form of 'rating' be discarded in favor of the simpler and more direct system which has hitherto generally been referred to as 'corrected length,' but as this term is misleading we prefer to describe and define it as simply 'racing measurement.'

"In this view we suggest the form of formula thus:

$$\frac{L+B+.75G+.5\sqrt{S.A.}}{2}=\text{R.M.}$$

with class divisions (expressed in feet) of 65ft., 52ft., 42ft., 36ft., 30ft. and 24ft., in place of the existing classes of 40, 20, 10, 5, 2½ and 1. The time scale being altered accordingly.

"If on the other hand the present system of 'rating' is to be retained the formula would be expressed as

$$\frac{(L+B+.75G+.5\sqrt{S.A.})^3}{C}=\text{R.}$$

and we suggest 55,000 as the constant divisor with classes of 40, 21, 11, 7, 4, 2.

"With either form of the rule we advise that all existing vessels, which may be found to exceed the measurement, or rating, as the case may be, for the classes for which they were built, shall be allowed to compete in such class and give the time a lowance for such excess so long as they are not altered so as to increase their measurement. Some disturbance is inevitable under any change of rule, but we think none of any moment will occur under the constant and classes we have suggested. We have carefully held in view the obvious rights of vested interests which account for the somewhat 'in and out' gradation of the racing measurement division of classes.

"As regards the question raised about measuring centerboards, we suggest the following after the words 'added to G of the formula':—This length to be measured in a fore and aft direction from the extreme forward limit to the extreme after limit of the board when down. Bulb or ballasted boards to be measured in the same way as fixed or fin-keels.

"The foregoing includes the main points we were asked by the committee to confer and report upon, but we wish further to suggest for your serious consideration the desirability of dealing with the constantly growing size of the 1st class cutters. It may not be advisable to place a hard and fast limit to size, but we are unanimously of opinion that it is desirable to check the size in some way, such for instance as a revision of the time scale above say 100 present rating, so as to appreciably penalize vessels above that size.

"We are, dear sir, yours faithfully, "G. L. WATSON, Chairman,
"C. P. CLAYTON,
"ARTHUR E. PAYNE,
"J. M. SOPER,
"WILLIAM FIFE, JR.,
"A. RICHARDSON,
"C. E. NICHOLSON."

At this meeting the following points, all of considerable importance, were mooted and discussed in addition to the proposed rating rule: whether there should be two separate rules for the large and small classes, but to this the designers were adverse; they also expressed the opinion that, without establishing any hard and fast rule, an endeavor should be made to check the constantly growing size of the larger class of cutters, which are becoming too large for handling, and suggested that this might be done by a modification of the time scale. And they further suggested the expediency of trying to establish an international rule of rating.

The committee have carefully considered the rule proposed by the yacht designers, which has obviously been very carefully thought out, and is as follows:

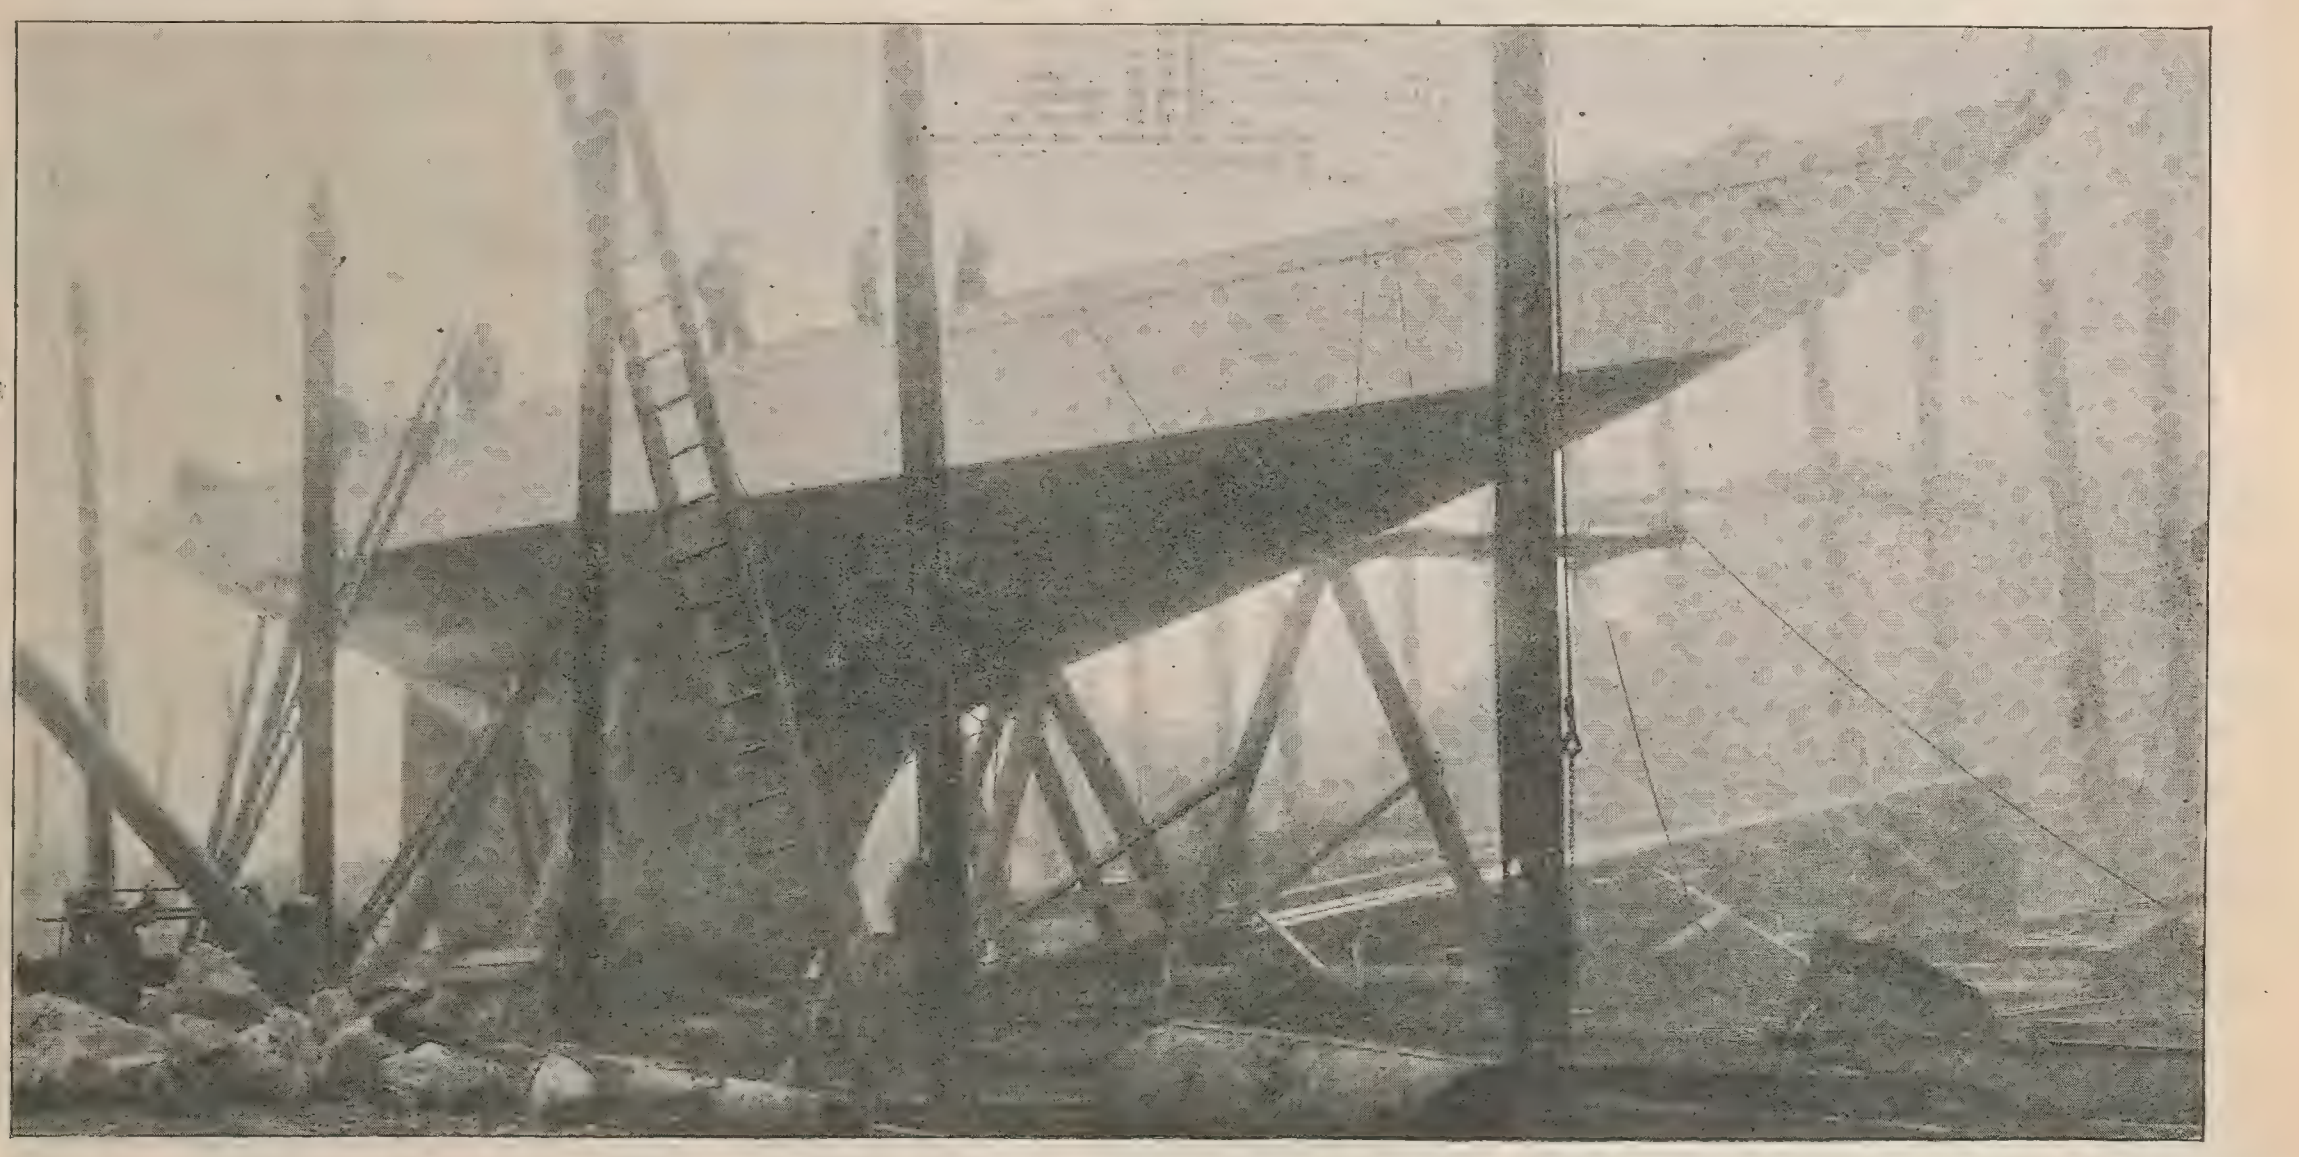
$$\frac{L+B+.75G+.5\sqrt{S.A.}}{2}=\text{R.}$$

The proposed rule appears to the committee to possess the following advantages:

1. That as it takes all the principal dimensions into account it will probably accomplish the object desired, and prevent the development of any extreme type of yacht.

2. That as there are no untaxed dimensions it is unlikely that any of the principal dimensions will develop under it to an undue extent, but that, should such prove to be the case, undue development in any particular direction can be checked by merely changing the co-efficients, or introducing co-efficients to the other dimensions without altering the principle of the rule.

3. That while its probable tendency will be to produce yachts of more compact and useful form of under-water body than those built under the present rule, it is not, in the opinion of those most competent to judge, likely to produce a slower type of yacht, but probably the reverse.



The committee therefore recommend that the rating rule proposed by the yacht designers and Mr. Froude should be adopted.

The measurements the rule will require to be made are somewhat complicated, but the committee see no reason to anticipate difficulty in obtaining these measurements any more than in obtaining the measurements of the sails. The yacht designers have no doubt that all designers and builders will be quite ready to give and to certify the accuracy of the measurements in the same way that the sail-makers give the sail measurements, and they suggest that such certificates should be accepted. The committee recommend that, as these measurements can readily be checked if required, the course suggested by the yacht designers should in the first instance be followed, subject to future alteration if not found to work satisfactorily. The exact points at which the girth is measured to be marked both at the load waterline and at the keel.

With regard to the question whether the rating should be based on a linear instead of a cubic measurement, the committee are of opinion that it would be desirable to adopt the former as being more simple and more easily worked. It would also have the advantage of being in the form most likely to lead to an international rule.

The linear rating under the proposed rule will approximate to the load waterline lengths, and will compare with the existing class ratings as follows:

* Mr. Froude joined our conference at the unanimous invitation of he ther members.

VALKYRIE III. CHALLENGER FOR THE AMERICA'S CUP.—DESIGNED BY G. L. WATSON, 1895.

(Linear) Rating.	Rating under existing rule.
18ft. rating.	0.5 rating.
24ft. "	1.0 "
30ft. "	2 5 "
36ft. "	5 0 "
42ft. "	10.0 "
52ft. "	20 0 "
65ft. "	40 0 "

If either form of rating is adopted a modification of the existing scales of time allowance will be necessary, but this can readily be accomplished, and it is recommended that in modifying the time scale the suggestion of the yacht designers with reference to the desirability of checking the growing increase in the size of the large cutters, by increasing the time allowance between the larger yachts, should be adopted.

It would be necessary in the propcsed new rule to give more exact definition to the term "ballasted centerboards."

If these recommendations are adopted by the council it would be desirable that the committee should be re-appointed to work out in detail the necessary alterations in the rules and time scales, mode of measurement, and otherwise.

As any rule to come into operation in 1896 should be settled as early as convenient, the question of an international rule would necessarily have to be left for future consideration.

The proceedings at the conferences with the yacht designers are given in the appendix.

The committee cannot close their report without expressing their appreciation of the ability and labor which has been bestowed by the yacht designers and Mr. Froude on this question, and they suggest that the thanks of the council should be conveyed to those gentlemen for the very valuable assistance they have rendered to the committee.

(Signed) G. A. LEACH (Chairman),
for the committee.

Accompanying the report is a transcript of the proceedings before the rating rule committee, including the correspondence and the statements of the designers, which is very interesting, being further illustrated by diagrams of different sections, etc., showing the probable effect of the proposed rule. The council of the Y. R. A., in calling a special meeting of the Association for June 17, presents for adoption or rejection the formula proposed by the designers, but with an amendment in the clause relating to centerboards, providing that the extreme depth of the centerboard below the keel be measured and multiplied by 1.5, the product being added to the girth of the hull. This is equivalent to including three-fourths of the extreme exposed depth of the centerboard as part of the girth of hull.

The report of the committee, representing the study of many experts for a period of several years, with many meetings and accompanying discussion, covers too much ground to be closely criticised at first sight, or without thorough examination. So far as we have thus far been able to examine it, we should say that the formula would attain as fully as possible the immediate end in view of producing a vessel of more compact form and general utility and at the same time fast under the rule, and that the method of measurement, though less simple than previous ones, is no more complicated nor difficult than the case demands. We are glad to see that the designers have abandoned the idea, touched on in their report of 1893, of limiting overhangs, as we believe it to be entirely unnecessary.

The most important point of the new rule is the measurement of the centerboard; it is perfectly obvious that if depth is to be used as a factor of measurement, either directly or indirectly, some account must be taken of the centerboard, or the rule will amount to a practical prohibition of the keel type.

On the other hand, it is quite as important, especially at the present time, that no injustice, real or imaginary, be done to the centerboard, but that it be allowed every reasonable opportunity of demonstrating its superiority to the keel. In the long battle between centerboard and keel in this country, and for eight years in Great Britain, the centerboard has been absolutely unrestricted, until the extreme has been reached of a deep and heavily ballasted keel cutter masquerading as a "centerboard sloop" by virtue of an immensely heavy centerboard. With all the odds in its favor, the centerboard has been driven out of the fight by the natural course of evolution and the survival of the fittest. It will be a serious error of policy if the Yacht Racing Association now comes to the aid of the defeated centerboard by enabling it to pose before the yachting world as a martyr.

To determine the just value for the centerboard in this formula from an American standpoint would require a long and careful comparison of the designs of centerboard and keel boats in the same classes; and without this it is impossible to say, off-hand, what the effect of the rule would be, or how well it is adapted for this side of the water.

The international aspect of the whole question is a very important one. While the necessity for a change of rule is by no means so imperative in this country as in England, there is no doubt that the general welfare of yacht racing demands some limitation of the finkeel, and that a rule which would accomplish this in England, as the proposed rule is designed to do, would be of great benefit here. The fate of international racing is now in doubt; we very much fear that if it should happen this year that the America's Cup be successfully defended, not, as always in the past, through superior power and model, but through extreme light construction, British yachtsmen and designers will realize the impossibility of constructing a yacht for the safe passage of the Atlantic without fatally handicapping her for racing at New York. If, as is quite possible, the point has already been reached beyond which an extreme lightness of hull ceases to be beneficial, or if necessary strength has been sacrificed in the experimental use of new materials, or if for any reason the third Valkyrie should prove a winner, then the racing for the Cup will continue; in which latter event it will be essential to the challenger, the American, that his regular designing and racing shall be under a rule not widely different from that of his opponent.

While there are certain considerations of climate and environment, which must tend to develop different types in different countries even under the same common system of measurement, we look forward to the time when there will be but one such system in use in America and Europe, and we hope that the proposed rule may prove a step toward this result. The meeting of the Y. R. A. was called for June 17, but no report had reached New York up to the time of going o press.

New York Y. C. Annual Regatta.

NEW YORK—NEW YORK BAY.

Thursday, June 13.

THE fiftieth annual regatta of the New York Y. C. was sailed on June 13 in good weather, all things considered, but with a very poor field of starters, the actual racing being limited to five boats in two classes, the other yachts merely sailing over. The regatta committee had exerted all of its influence to induce owners to enter, either in the open or cruising rig classes, but with very poor results, as usual. The entry list was as follows:

	Length.	Allowance
FIRST CLASS SCHOONERS—CRUISING TRIM.		
Coronet, D. W. and A. C. James	114.84	Allows.
Ramona, H. M. Gillig	105.84	3 37
SECOND AND THIRD CLASS SCHOONERS—CRUISING TRIM.		
Emerald, J. R Maxwell	89 51	Allows.
Clytie, H. C. Ward	79.46	6 01
FOURTH CLASS SCHOONERS—RACING TRIM.		
Elsie Marie, J. B. King	74.67	Allows.
Shamrock, W. P. Ward	73 18	1 06
Loyal, B. B. Sutton	65.93	6 58
FIFTH CLASS SCHOONERS—RACING TRIM.		
Neaera, H. K. McHarg	59 31	Allows.
Fenella, W. A. Hazard	56.39	3 04
THIRD CLASS CUTTERS—RACING TRIM.		
Hildegard, J. C. Bergen	65 39	Allows.
Queen Mab, Percy Chubb	63.28	1 53
SIXTH CLASS CUTTERS—RACING TRIM.		
Gossoon, L. V. Clark	47.83	Allows.
Uvira, F. P. Sands	47.14	0 48
Minerva, H. W. Bucknall	45.61	2 35
Norota, F. M. Hoyt	.....	. . .
MIXED CLASS—CRUISING TRIM.		
Eclipse, L. J. Callanan	55 15	Allows.
Wasp, H. F. and R. L. Lippitt	54.97	0 11
Awa, A. D. W. Cochrane	46 78	8 41

Of these, Coronet, Fenella, Gossoon, Norota, Eclipse, Hildegarde and Awa failed to start, while Ramona and Queen Mab were very late and badly handicapped.

The courses were from off Buoy 13, just outside the Narrows, around the Southwest Spit and out past the Hook, Neaera, Wasp and the smaller boats turning the Scotland Lightship, while the larger ones turned the Sandy Hook Lightship, returning by way of the spit. The allowances were for 31 and 25 nautical miles. The prizes were $200 for first and $75 for second (if four or more start), with $75 and $50 in the cruising class.

For a week past the easterly winds and high temperature have brought in a thick haze every night after sundown, lasting well into the morning, and Thursday was no exception; the atmosphere was thick and heavy and the water hidden by a dry haze as the steamers and sailing craft made for the line. The haze lifted, however, about 10 A. M., showing a clear sunny sky, while a cool fresh breeze came in from S. E. Com. Brown was on hand with the new flagship Sylvia, a very small craft to dare the Atlantic in mid-winter, but looking trim and shipshape. The regatta committee, Messrs. S. Nicholson Kane, Chester Griswold and Wm. E. Iselin, the latter acting in the absence of Mr. Irving Grinnell, was aboard with Com Brown. The club has this year made a comparatively small but important change in abolishing the old swallow-tail pennant and substituting an oblong one; a needed step to the complete retirement of the lubberly "swallow-tail" and the substitution of the oblong for the private signal of owners. The steamer Taurus carried the members of the club. There were very few steam or sailing yachts out to witness the racing, none of the large steam yachts and only three large schooners being visible hrough the day.

The start was advertised for 11 A. M., and though the committee held the gun for thirty-five minutes waiting for the usual laggards, several were left astern. Most of the racers were ready in good season, standing off and on for nearly an hour, the most prominent being Colonia, in fine shape and with her new Yankee crew aboard. The same absurd restriction which kept Iroquois out of the races in 1893, when she was under charter by the Vigilant syndicate, operates this year to exclude Colonia under similar conditions; the New York Y. C., like the British Y. R. A., clinging fondly to an old rule prohibiting the entry of chartered yachts, even though, as in both of these cases, the charterers are members of the club. If any good reason for such a rule ever existed, it is certainly offset to-day by the scarcity of entries and the need of every yacht that can be induced to compete.

Just before the preparatory signal was given at 11.25, a heavy squall of rain broke over the bay, lasting until the yachts were half way to the Spit, when the sun broke through the clouds and showed himself for the rest of the day, though a few drops of rain fell late in the afternooon.

The starting gun fired at 11 35, the wind being S.S.E, moderate and the tide near the top of the flood. Colonia and Wasp, both swinging club topsails, crossed together, Wasp to windward, and stood down the West Bank on port tack, followed by Minerva and Uvira. Of the four cutters Colonia pointed quite as high and held on as well as any, or a little better, for the short time they were in close company. She and Wasp soon made a short hitch on starboard tack and then came about for a long port tack to the Spit. Shamrock and Elsie Marie were really racing, and started in close company, but apart from them the start was a most uninteresting procession, very pretty for the ladies, but with nothing to claim the attention of yachtsmen. Of the yachts which were about the line when the gun fired, all crossed without a handicap within the limit of 5m. for the cutters and 10m. for the schooners. Ramona and Queen Mab were late in getting down to the line, and crossed long after the main body of the fleet

For a time the boats were partly hidden by the rain, but long before the Spit was reached the sky was clear and the whole bay visible, the fleet making a pretty spectacle. Shamrock had passed Elsie Marie, and the two were having a very pretty race. Uvira had already beaten Minerva, and the rest of the fleet were jogging along over the course with nothing to lose or gain. The times at the Spit were:

Colonia	12 33 00	Loyal	12 51 30
Wasp	12 42 50	Minerva	12 54 35
Emerald	12 43 20	Neaera	12 54 45
Shamrock	12 45 40	Ramona	1 01 30
Elsie Marie	12 46 25	Clytie	1 04 45
Uvira	12 50 10	Queen Mab	1 08 00

The sky was clear, the air neither too warm nor too cool, the sea smooth and clean, in spite of a big fleet of garbage scows in the distance, and it would be hard to find a more delightful day for an outing afloat, especially for the ladies. The fleet worked out to windward, turned the Sandy Hook and Scotland Lightship, set balloon jibtopsails and sailed home. The fight between Shamrock and Elsie Marie was really exciting, the two being close together all day and Shamrock leading all the way out and a good part of the way in, though finally beaten by the newer boat. The fleet was timed at the Sandy Hook Lightship as follows:

Colonia	1 50 00	Queen Mab	2 32 13
Emerald	2 16 00	Loyal	2 35 00
Shamrock	2 23 00	Ramona	2 42 37
Elsie Marie			

The official times were:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS—FIRST CLASS.				
Ramona	11 50 00	4 34 32	4 44 32	4 44 32
SCHOONERS—SECOND AND THIRD CLASSES.				
Emerald	11 42 07	4 04 47	4 21 40	4 21 40
Clytie	11 42 32	Withdrew.		
SCHOONERS—FOURTH CLASS.				
Elsie Marie	11 41 08	4 20 18	4 39 10	4 39 10
Shamrock	11 41 56	4 24 14	4 42 18	4 41 08
Loyal	11 42 38	4 40 54	4 58 16	4 51 18
CUTTERS—THIRD CLASS.				
Queen Mab	11 40 00	4 27 49	4 47 49	4 47 49
CUTTERS—SIXTH CLASS.				
Uvira	11 38 24	3 55 55	4 17 31	4 16 43
Minerva	11 37 18	4 26 18	4 49 00	4 46 25
MIXED CLASS.				
Wasp	11 36 00	3 37 34	4 01 34	4 01 34
Neaera	11 44 20	4 14 09	4 29 49	4 25 18
FIRST CLASS CUTTERS.				
Colonia	11 35 54	3 43 03	4 05 09	

The winners are Ramona, Emerald, Elsie Marie, Queen Mab, Uvira and Wasp.

Loyal protests on the ground that she should have been classed with Neaera, being under 65ft. sailing length.

Atlantic Y. C. Annual Regatta.

BAY RIDGE—NEW YORK BAY.

Tuesday, June 11.

The Atlantic Y. C. sailed its thirtieth annual regatta on June 11 with hard luck, a dense fog enshrouding the fleet outside of Sandy Hook, hiding the yachts from view and making a very late finish. There was a haze over the Upper Bay in the morning and very little wind, while the tide ran flood until 10:30. The start was called at 11 o'clock, and a little after that hour there was wind enough to warrant a start, the tide having then turned ebb, but none of the yachts were ready, and it was not until 12:35 that the signal was finally given. The haze had disappeared long before and the sun was shining brightly, while a light S. E. wind was blowing. A lot of valuable time was lost in waiting for the yachts to make their way slowly down from the anchorage. The usual time start was made, with 5m. for the first division to cross in, the second division following immediately. The courses were:

For all Classes of Schooners, and Cutters in Classes 1, 2 and 3—From the starting line, between buoy No. 11 and a stakeboat anchored to the southward and eastward thereof, to Southwest Spit buoys Nos. 12 and 10, leaving them on the port hand; thence to bell buoy off the point of the Hook, leaving it on starboard hand; thence to the Scotland Lightship, leaving it on port hand; thence around the Sandy Hook Lightship, leaving it on port hand; thence to the bell buoy off the point of the Hook, leaving it on port hand; thence to Southwest Spit buoys Nos. 10 and 12, leaving both on the starboard hand; thence to the finishing line, keeping to the southward and westward of the beacon on Romer Shoal, and to the eastward of buoy No. 9 on west bank, both going and returning. Distance, 30¾ miles.

For Cutters in Class 4—From starting line to Southwest Spit, and around the Scotland Lightship, and home over same course; 23¼ miles.

For Classes 5 and 6—From starting line, past a stakeboat anchored near buoy No. 6, off the northern point of Sandy Hook; thence around the Scotland Lightship, and return by Swash Channel. Distance, 19¼ miles.

For All Other Classes—From starting line to Southwest Spit buoys 12 and 10, leaving both on port hand; around a stakeboat anchored near buoy 6, off the northern point of Sandy Hook, leaving same on port hand; thence to the finishing line by way of the Swash Channel. Distance, 12¼ miles.

For several years the Atlantic Y. C. has started its races off the black channel buoy above Hoffman Island and just outside the Narrows. This buoy, long known as No. 15, was last year No. 11, and has since been changed to No. 13, while the block buoy 1½ miles below, No. 9 for several years, is now No. 11. This change has not been recognized in the official statement of club courses, and as a consequence the start was about 1½ miles further down than usual, and the course 3 miles shorter than stated. The entries were:

	Length.
CLASS 1—SCHOONERS OVER 95FT.	
Ramona, H. F. Gillig	105.84
CLASS 2—SCHOONER 85 TO 95FT.	
Emerald, J. Rogers Maxwell	89.51
CLASS 4—SCHOONERS 65 TO 75FT.	
Elsie Marie, J. B. King	74.68
Shamrock, Willard P. Ward	73.18
CLASS 5—SCHOONERS NOT OVER 65FT.	
Loyal, B. F. Sutton	64.96
Fenella, W. A. Hayward	56.39
CLASS 3—CUTTERS 60 TO 70FT.	
Hildegarde, J. C. Bergen	65.39
Queen Mab, Percy Chubb	63.30
CLASS 4—CUTTERS 51 TO 60FT.	
Ventura, J. Porter	59.90
Eclipse, L. J. Callanan	54.99
Wasp, Lippett Bros	54.97

CLASS 5—CUTTERS 43 TO 51FT.

Penguin, G. E. Brightson	50.80
Gosson, L. V. Clark	47.83
Uvira, F. P. Sands	47.14
Wenonah, J. G Meehan	47.10
Lotowana, A. E. White	47.10
Awa, A. D. W. Cochrane	46.78
Choctaw, T. L. Arnold	46.40
Minerva, H. W. Bucknall	.....

CLASS 6—CUTTERS 36 TO 43FT.

Norota, F. M. Hoyt	42.00
Tigress, James Weir, Jr.	41.80

CLASS 7—CUTTERS AND SLOOPS 30 TO 36FT.

Dragoon, F. M. Freeman	34.00
Wabassa, H. B. Shaen	34.00

CLASS 8—CUTTERS AND SLOOPS 25 TO 30FT.

Feydeh, E. D. Cowman	29.00
Royal, W. B. Growtage	28.60
Nomad, W. B. Growtage	26.60

CLASS 9—CUTTERS AND SLOOPS NOT OVER 25FT.

Miles Standish, F. W. Boyer	.....
Wave, L. L. Barber	18.00

CATBOATS—CLASS 1.

Mary, W. Elsworth	28.76
Almira, Wilmer Hanan	28.62
Oconee, C. F. Pierce	26.00
Marguerite, F. M. Randall	26.00

CATBOATS—CLASS 2.

Allegro, F. M. Randall	22.90
Kittie, Hazen Morse	22.40

The non-starters were Gossoon, Awa, Wenonah, Lotowana, Tigress, Wabasso, Royal, Oconee and Marguerite Mary had sprung her solid mast on the previous day, but had it banded and stayed with the spreaders used last year, and was ready at the line. Elsie Marie, the fast 70ft. Cary Smith schooner, was the first away at 12:41:43. The others were timed as follows:

Queen Mab	12 41 51	Penguine	12 47 32
Hildegarde	12 42 04	Allegro	12 47 42
Shamrock	12 42 43	Almira	12 49 00
Emerald	12 43 27	Kittie	12 49 10
Loyal	12 44 03	Dragoon	12 49 28
Wave	12 46 08	Nomad	12 49 38
Wasp	12 46 43	Fenella	12 49 40
Choctaw	12 46 56	Feydeh	12 50 00
Miles Standish	12 47 13	Uvira	12 50 15
Ramona	12 47 22	Mary	12 50 32
Norota	12 47 26	Ventura	12 50 35
Eclipse	12 47 32	Minerva	12 51 05

Minerva was hindered at the line by the big cat Almira, and had to make a second start, she with Ramona, Uvira, Mary and Ventura being handicapped. With a weather-going tide, all could fetch the Southwest Spit, but several tried a useless tack toward Coney Island shortly after crossing the line. The leaders were timed at the Spit buoy:

Queen Mab	1 25 00	Hildegarde	1 32 00
Emerald	1 26 30	Loyal	1 33 30
Elsie Marie	1 29 30	Wasp	1 33 50
Shamrock	1 31 40		

The windward work from the Spit outside the Hook was very pretty, there being a moderate breeze and a heave to the sea; but long before the Scotland was reached the whole fleet was swallowed up in a dense fog that rolled in from the sea. The club steamer, Gen. Slocum, and the judges' boat the tug Lohman, managed to find the Scotland, and waited for the yachts, timing them as follows:

Queen Mab	2 42 00	Hildegarde	3 00 00
Emerald	2 46 06	Shamrock	3 01 00
Wasp	2 49 10	Loyal	3 03 05
Uvira	2 50 08	Minerva	3 05 02
Elsie Marie	2 55 00	Choctaw	3 07 00
Norota	2 56 30	Ramona	3 23 00
Penguin	2 59 00	Eclipse	3 24 04

There was no thrilling racing nor quick work on the twelve miles from the start to the Scotland, but an easy, go-as-you-please sail, each boat jogging along on her own hook, bothering no one and bothered by none. All sailed under the same conditions, however, and the elapsed times are interesting:

Uvira	2 00 00	Elsie Marie	2 13 27
Queen Mab	2 00 09	Hildegarde	2 17 56
Wasp	2 02 27	Shamrock	2 18 17
Emerald	2 02 33	Loyal	2 19 02
Minerva	2 05 00	Choctaw	2 20 04
Norota	2 09 04	Eclipse	2 36 28
Penguin	2 11 28	Ramona	2 38 00

The two cutters Uvira and Queen Mab did by far the best work, as the figures show. Queen Mab and Hildegarde, with the five schooners, continued on to find the Sandy Hook Lightship in the fog, the others soon setting spinakers for a run in. When well up with the point of the Hook the fog was left astern, but the wind fell light; the smaller boats managed to finish before dark, but the larger ones, after rounding the Sandy Hook Lightship, Queen Mab still in the lead, lost the wind and laid becalmed for a time, finishing about 8 P. M. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS—FIRST CLASS.				
Ramona	12 45 00	9 20 40	8 35 40	8 35 40

The winners were Ramona, Emerald, Elsie Marie, Loyal, Queen Mab, Wasp, Uvira, Norota, Dragoon, Feydeh, Wave, Almira and Allegro.

Columbia Y. C. Annual Regatta.

NEW YORK—HUDSON RIVER.

Tuesday, June 11.

THE twenty-eighth annual regatta of the Columbia Y. C. was sailed on June 11 over a triangular course from off the club station, Eighty-sixth street, New York, across the Hudson River to a mark off 145th street, down the river to a mark off Guttenberg, and home, two rounds, making 15 miles. The wind was light, variable and very unsatisfactory; the times were:

Steam Launches.

MARINE IRON WORKS, Chicago, have just issued their 1895 catalogue mailed free.—*Adv.*

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

Notice to Rod Makers.

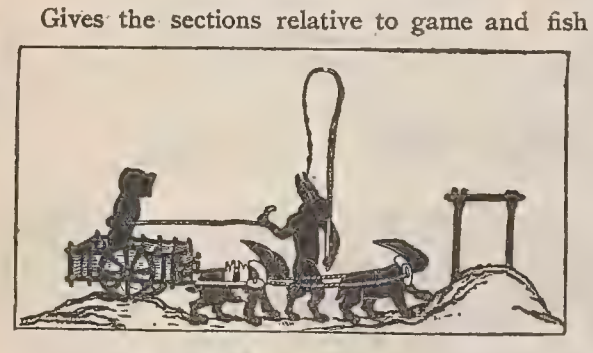
ENTIRELY NEW.

Just what has been wanted by Every Sportsman. We have it

THE KENWOOD CAMPING AND SLEEPING BAG is an all wool, heavy blanket, woven bag shape, and closely felted, and has a thick soft nap inside. It is cut down the front to a convenient point, and being supplied with special fasteners, it allows one to completely envelope themselves for a night's sleep in camp, with no discomfort, even in zero weather. It can be securely fastened across the top, and used as a carryall.

Made in Two Weights:
Light Weight, Gray, - $6.00 each.
Heavier Weight, Red, - $10.00 each.
Weight 7 to 8 lbs.

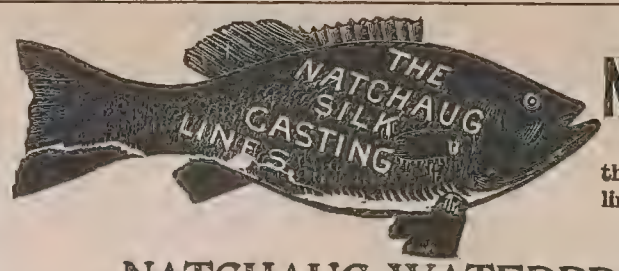
We also have a Steamer Rug on same principle. Catalogue on application.



HULBERT BROS. & CO.,
SOLE AGENTS,
26 West 23d Street, - New York.

So simple in text that you may know the law at a glance.
So beautiful in illustration that you will preserve it for its pictures.

Game Laws in Brief



UNITED STATES AND CANADA.

Gives the sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for *the practical guidance* of sportsmen and anglers. Carefully compiled, and shorn of verbiage, by CHAS. B. REYNOLDS of *Forest and Stream*. The *Brief* is a standard work of reference. Handsomely illustrated with twenty-five half-tone engravings from *Forest and Stream*.

Price 25 Cents. We send it postpaid. All Sportsmen's Goods dealers sell it.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

THE ONLY PERFECT FISHING LINE IS THE

Natchaug Braided Silk Line.

Made from the choicest stock braided 16-strand three-cord silk. They will outwear three ordinary lines. Spool perfectly when in use.
Never flatten or become water soaked.

NATCHAUG WATERPROOF BAIT & FLY LINES

will float on the water. The finish cannot be broken. Those who have used them will have no others. Send four cents for samples and prices and pamphlet containing our awards of prices for last season and cash prizes for 1895. For sale by all dealers.

$225 in Gold Given Away!

WE offer the following Prizes for the Season of 1895, $225 in Gold for the largest fish caught on the

NATCHAUG SILK LINES

From April 1st to November 1st, 1895.

First Prize—$25 in Gold for the heaviest Muskallonge.
Second Prize—$25 in Gold for the heaviest small-mouthed Bass.
Third Prize—$25 in Gold for the heaviest large-mouthed Bass.
Fourth Prize—$25 in Gold for the heaviest Lake Trout.
Fifth Prize—$25 in Gold for the heaviest Mountain Trout caught west of the Mississippi River.
Sixth Prize.—$25 in Gold for the heaviest Brook Trout caught in Maine or Canada.
Seventh Prize—$25 in Gold for the heaviest Brook Trout caught in the United States, east of the Mississippi River, outside of Maine and Canada.
Eighth Prize—$25 in Gold for the heaviest Pickerel, Pike or Salmon.
Ninth Prize—$25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.

CONDITIONS:

All of these fish must be caught with the Natchaug Silk Fishing Line, and by fair angling.

Competitors must forward to us their full name, P. O. address, together with description and weight of fish caught, and name of dealer from whom line was purchased, within thirty days after such catch is made, together with the name of one reputable witness affixed. On November 7, 1895, the award will be made and the list of successful competitors announced in the FOREST AND STREAM and the *American Field*.

All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.

If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

Forest and Stream *one year and the set of four pictures*, $5.
Forest and Stream *6 months and any two of the pictures*, $3.
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order. Make orders payable to

FOREST AND STREAM PUB. CO., New York.

PUBLIC FISH FOR PRIVATE WATERS.

THERE are men in public life and in the public service who lift up their voices in eloquent periods and loudly declaim for the greatest good for the greatest number, and when their official record is ciphered up it is discovered that by the greatest number they mean every time Number One. When these people get into Congress they are up to all degrees of jobbery, expensive or petty, that may be calculated to advance the interests of this particular individual and personal greatest number. They will even steal fish.

At the meeting of the American Fisheries Society, on motion of Mr. L. D. Huntington, this resolution was adopted:

Resolved, That it is the senses of this society that no fish or fry should be distributed at public expense for private waters.

The reason for such a manifesto was in plain English that it has been a regular custom to steal fish which belonged to the public for private waters. United States Senators have been in the way of sending to such of their constituents as have fish ponds and fishing preserves fish and fry from the United States Fish Commission. In other words, they have diverted public funds to their own private purposes.

The remedy for this evil is not to be found in deprecatory resolutions of a fishery society. The parties to the scheme ought to be indicted. That of course would be out of the question, for the Americans do not require of their representatives in Washington the same honesty in the administration of public funds that is demanded in ordinary business and private life, and the fathers who laid out the details of our Government neglected to provide for the punishment of public fish thieves in the Senate. In spite of what the American Fisheries Society has resolved, it is likely that the old system will continue, and the people will be taxed to support the United States Fish Commission to raise fish for the private waters of the friends of Senators. There are men right here within twenty-five miles of New York who have now fish in their private ponds with not a particle more of right to them than had the fish been stolen from some other private preserves instead of from the breeding ponds of the United States Government. "Why should I buy any more fry of you," said a fishing preserve owner to a trout breeder the other day, "when I can get all I want for nothing from the Government?" The conundrum was too much for the fishculturist, but he knows that he cannot sell his former customer any more trout fry so long as the Senatorial pull shall last and the Senator shall be willing to steal fish for his friend from the Government.

Many persons in office make a distinction between public integrity and private integrity. An United States Senator may defraud the Government of its fish and not feel that he is doing a dishonest act, whereas he would scorn to cheat a private individual of a nickel. When the Fish Commission jobbery bill was before the New York Legislature, an employee of the Fish Commission wanted to put on a superfluous man at one of the hatcheries, in order thereby to secure the influence of a Senator from a western part of the State. He suggested that it would be quite proper to do so because it would not cost the State much; and yet this individual, who was quite willing to squander public money in this way, if appointed executor of an estate might guard the interests of the widow and the fatherless with scrupulous zeal to the last cent. We have seen in this State the head of a great financial institution secure from the Fish Commission fish for his private ponds by the dishonest ruse of writing in his application blank that the waters for which they were intended were public, while as a matter of fact they were private; and yet if one were traveling with this individual one would not feel it necessary to keep his hand on his pocket book.

How shall we account for this distinction between public and private honesty? How shall the paradox be explained?

AN ANIMAL THAT HIES.

WITH the single exception of his dog, the sportsman is probably the only animal now living on the earth that hies. All others are extinct.

Even the sportsman never hies except in print or in manuscript intended for print; and even then, our observation would appear to indicate, he hies more frequently in the manuscript than in the actual print.

Other creatures, quadruped or biped, simply go, walk, run, travel, make a break, skip, scoot, slope, set out, light out, peg out, mosey; as the New York police say, get a move on themselves; or in the classic speech of the Bowery, chase derselfs. But the shooter hies him to the field, and the angler hies himself to the stream; there the one sees his dog freeze into a statue, the other catches speckled beauties; and neither ever eats his dinner or supper, but invariably does full justice to it.

SNAP SHOTS.

The Hoboken Turtle Club, of this city, last week celebrated its ninety-ninth anniversary with a dinner, in which, as in each of the ninety-eight that had gone before it, turtle soup was the chief dish. The club was organized in 1796 by Aaron Burr, Alexander Hamilton and other prominent men of the day, who used to go turtle hunting on the marshes of Hoboken opposite New York City. Hamilton and Burr must have eaten turtle together within sight of that fatal field where afterwards their duel was fought.

We note a foolish proclivity of Florida newspapers to disseminate snake stories. There are snakes in Florida, thousands of them, big fellows, ugly and deadly; but it is fatuous for Florida editors to multiply the actual snake supply and magnify its terrors. People live in Florida and go about their business, children grow to manhood and old age and pass away, without ever seeing snakes. The populace is not in a continuous stage of reptilian siege, as the snake reporters of the Florida papers would have us believe. What can be the special purpose of the snake stories? Do the editors expect to induce immigration by them?

No story can come out of Florida or any other remote quarter too silly for metropolitan journalists to pay telegraph tolls on, if it comes in the silly season. The latest yarn is of an enormous alligator which came out of the St. John's River, dashed with wild fury through a Jacksonville street, and, hotly pursued by a bombarding mob of shooters, finally climbed a telegraph pole. The fact that an alligator could not climb a telegraph pole in a thousand years does not count for anything with the managers of the rival press associations, who are continually sending out to their clients competitive doses of just such silly specials, and quarreling in print with each other over their scoops.

We observe with interest that the lie about President Cleveland's Sunday fishing, given currency by a Pennsylvania clergyman in a Sunday-school address, has gained such headway in most parts of the country that the denial never can catch up with it. This presidential Sunday fishing fake has taken its place with Senator Mitchell's Alaskan Indian duck egg fake, the Jacksonville telegraph pole climbing alligator fake, and the ancient and honorable hoopsnake fake. Each of these, once started, is hard to head off. As for the Pennsylvania gentleman who set the Sunday fishing story going, nothing could have restrained him but an experience like that which cured Uncle Peter of his hoopsnake lies, as related by "Will Scribbler" in another column, and that was conversion.

In Elizabeth, N. J., and many other towns, when summer comes, the police turn out and shoot the dogs running at large in the streets. Good dogs and bad dogs, thoroughbreds and curs, all are killed indiscriminately. This method of abating the stray dog nuisance is barbarous, indecent and unworthy of a civilized community. Because it makes no distinction between dogs that ought to live and dogs that should die, it is an outrageous infringement on the rights of owners of valuable animals. Because it does brutal dog murder in the public streets, it terrifies women and children. There is no excuse for the system. There are other ways of ridding the town of dogs and of doing it decently and in order. In Elizabeth and every other dog-infested community not run by Piutes, the superfluous canine supply should be rounded up, corralled in a pound, held a suitable time for redemption, and then given a painless death. The system practiced by the New York Society for the Prevention of Cruelty to Animals has been described in our columns and is set forth in detail in the society's annual report, which might well be given study by municipal authorities.

Once upon a time there was a little boy and he had a little dog. They lived in a little city, so ridiculously small that the entire population, dogs and all, might have taken shelter in a single one of New York's big buildings, had there been such giant structures in those days. The little city had a little marshal, who used to wear his hat cocked to one side, his shoulders thrown back, and his chin in the air, all in a way which clearly said that he thought himself the biggest thing in the little town. He also carried a gun and kept both eyes out for dogs in the street, just for all the world like those Elizabeth, New Jersey, dog cops. Now the little boy loved his little dog, as little boys do love little dogs; and no one had told him about the new dog law and the marshal with the gun. One morning long before light—for such was the custom in the little southern city—the boy and the dog went to the market on the square for meat. As they were crossing the square, there stood the marshal. With not a word of warning he threw the cruel gun to shoulder; there was a crash in the air, a flash of flame, a heart-rending cry; and the little dog lay dying, licking the hand of the little boy, who cuddled it in his arms and cried over it. That was thirty years ago, and the marshal has long been asleep with his fathers, but to this day the boy has never forgotten nor forgiven the cruel deed of that morning. Perhaps he never will.

Now that shooting licenses are coming into vogue as a panacea for all our ills, why would it not be an excellent scheme to require a license of taxidermists in localities near to the game supply? They have adopted the plan in Maine, where the laws restricting the amount of game in possession are stringent. Such a law works no hardship, it allows the utmost freedom to responsible men, and afford opportunity of calling to account those persons who encourage and aid the violation of the game laws. If those taxidermist establishments in the neighborhood of the Yellowstone National Park were under the surveillance and control of determined Game Commissioners there would be more hope for the Park buffalo.

Illinois is rejoicing that it has passed through a legislative session without having a Blow bill foisted upon it. New York's Donaldson law will bring to its markets the tons of Western game which the enactment of Warden Blow's measure would have kept in Chicago. The *Game Laws in Brief* as now revised shows that the laws of more than thirty States have been changed this year. The destructive effects of Donaldson market-men's law will quite offset the sum total of advantage gained by al the new legislation put together.

Among the season's records of big fish are a 26lbs. striped bass caught off Greenwich, Conn., in Long Island Sound, and a 30½in. brown trout netted for the State hatchery in the Beaverkill, Sullivan county, N. Y. I you score anything larger than these, report your luck t FOREST AND STREAM.

The Sportsman Tourist.

TWO TALL STORIES.

IN its halcyon days our camp was a large one, and in connection with its various departments of labor employed nearly three hundred men. The mines were distant about three or four miles from the main camp, where were located the company's offices, smelter, the store, and of course the inevitable saloons. Every Saturday night many of the miners made it a point to visit the camp, both for the purpose of purchasing needed supplies, as well as having a bit of a good time. The store, a large, commodious frame building, was the general meeting place, and here, as the evening wore on and the men gradually mellowed under the influence of frequent libations, as well as their own rough, good fellowship, there were sure to be heard some tales of adventure calculated to give the average tenderfoot a bad case of the shivers.

For there were some rough blades in the crowd, old "49ers," who had braved the perils of the overland route and the privations of the diggings, and who had since drifted from one to the other of the great mining camps of the West. They had quite naturally accumulated a fund of rare experiences, and withal had acquired, in a high degree, the faculty of telling a story with a peculiar picturesqueness of diction such as I have never heard elsewhere. When one of them cleared his throat preparatory to a story everyone drew near, all talk in the room ceased, and each face bore eloquent testimony to the belief that a mighty good thing was about to be given to the world. At times a fierce rivalry developed between these old fellows, and under its inspiration some strange and fearful tales were born.

It has long been a source of regret to me that I did not at the time jot down the more salient features of many of these stories, although it would be impossible for me, I think, to give them the peculiar flavor which these men imparted to them, and which, in reality, constituted their greatest charm.

I well remember one night, however, when the stories ran on hunting adventures and experiences with the big carnivora of the mountains, for it is a theme in which I have always been deeply interested, and besides some of the stories were of such a startling character that they were likely to impress themselves rather deeply on one's mind. An eager, credulous tenderfoot in the audience was, I have always thought, responsible in a large measure for their rather sensational character this night; for if there was ever an occasion when these old yarners would spread themselves, it was in the presence of the gullible tenderfoot.

There were probably fifteen or twenty men seated about the big stove at the rear end of the room, the majority of whom were pulling away at their pipes, while a few munched away at their plug, varying the exercise with occasional deluges of expectoration aimed at the sawdust filled boxes which stood about the stove. Brownell, the storekeeper, had just finished telling how the big bison bull had chased him on the top of Bullion Mountain, and how narrowly he had escaped with his life, when old Tom McKinnon, one of the elect, removed his pipe from his mouth and, giving his shoulders a slight shrug, said with a rather contemptuous air that it was mighty easy to dodge a critter when one had the whole top of the ground do it in, but that it was an entirely different matter when the critter had you down in a hole in the ground, and was madder than all furiation besides.

Immediately there was a general drawing nearer the stove, for everyone knew that a story was coming. Tom, as was his wont, however, said nothing for a moment, whereupon the tenderfoot, thinking that some interrogation was necessary to draw him out, asked him if he had ever had such an experience.

Without deigning to reply directly to the question, Tom, after another moment's silence, began as follows: "In th' winter of '67 I hed a contract on the Bogash Mine, near th' Argentine Pass. There wuz four of us in it, an' we wuz makin' purty good money, till we run inter some turribl' mean rock, when we didn't make enough ter pay fer our tools, which we wuz knockin' ter pieces turribl' fast.

"One day we wuz short a drill, an' thinkin' ez I might find one in an old drift which hadn't been worked fer some time, I went inter it ter prospect. Jist off'm th' breast of th' drift thar wuz a hole eight or ten feet deep, an' curled up in th' bottom wuz th' biggest cinnamon b'ar thet I ever see. I thinks at fu'st thet he's dead, but d'rectly I watched him a leetle bit I see his side move, an' then I knowed ez he wuz alive. D'rectly ag'in I seed ez he hed one of his big paws in his mouth, an' then I knowed ez he wuz takin' his reg'lar winter snooze, what th' books calls hibernatin', or su'thin' like it. Th' perfessers an' th' book smart folks says ez they don't eat nothin' then. Wall, mebbe ez they doesn't eat reg'lar like, but they gits substance inter the'r stummicks all right enuff.

"An old Arapahoe Injun fu'st told me of it, an' when I seed thet thar b'ar a-suckin' of his paws, I knowed ez th' Injun wasn't a liar, which I 'lowed ez he wuz at fu'st. He tole me thet afore th' b'ar tied up fer winter he laid in a lot of ile inside his old karkiss, which he sucked out of his paw in winter, an' thet it kept him from gittin' hungry, an' kept him powerful sleepy all th' winter. Wall, it seemed turribl' onreasonabl' like ter me then, an' I give th' Injun th' laff, but I threw up both hands when I seed th' b'ar doin' what th' Injun says they does.

"I don't know what put th' idee inter my head, but I guess it must have bin th' devil hisself, but leastways I got a thinkin' ez what th' b'ar would do, 'lowin' ez I wuz ter pull his paw out his mouth. The more I thinks about it, the more cur'ous-like I gets, till I ups an' d'rectly does it. Now, I had 'lowed ter a certainty most thet th' b'ar would put her back d'rectly an' keep on er sucklin', but he don't do nothin' of th' kind. D'rectly I noticed him twitchin' about an' gruntin', like ez he wuz havin' powerful bad dreams, an' then of a sudden he started like an' opened his eyes. Thar wuz suthin' in th' looks of 'em ez made me feel kinder oneasy, like ez I hed made er mistake 'an' waked up th' wrong feller. But I didn't have much time ter think about it, fer all of a suddint he let a terribl' howl out of 'm an' then quicker 'n Jack Robinson he riz ter his feet an' comes straight at me.

"I don't think ez I ever see sich a mad-looking critter n all my life, an' he seemed turribl' narvous-like, th' same ez a pusson when he fu'st comes to arter a two weeks' stidy drunk. I wuz jist natchelly too paralyzed ter move, an' if the b'ar hadn't took a suddint stagger ter th' right, why, I reckon ez th' perceedin's would 've eended right thar. Ez 'twas he missed me by two foot, but he turns about d'rectly an' comes at me ag'in. Now, I didn't hev even a knife with me, an' ez th' game wuz runnin' I allowed ez I was purty sure ter pass out at th' next call.

"However, I sees purty quick ez I wus only playin' inter th' bar's han's by standin' still an' waitin' fer him ter collar me, so I turns about an' legs her down th' drift fer all thet's out. Now, th' b'ar wuz kinder onsteady an' groggy on his pins, but he somehow got over th' ground discouragin' fast, an' I sees d'rectly ez he wuz purty sure ter lay a hold on me afore I got ter th' mouth of th' drift. But I kept peggin' erway till all of a suddint suthin' ketches me by one of my legs, an' over I goes. Then th' b'ar wuz on top of me, an' I knowed ez th' game wuz up. He jist natchelly sot down on me, an' fer a minute er so seemed ter be sort of gloatin' over me afore perceedin' with th' inquest.

"I noticed ez he wuz sort of holdin' up one of his paws, th' one he hed bin suckin', cause it wuz sort of tender, I reckon, an' then a great idee come ter me. An' I didn't hev any time ter spare nuther, fer jist then th' bar lowered his big ugly head, opened his mouth an' with a savage growl bent over ez if he wuz a goin' take me by th' neck. Jist at that ar moment I swung his big paw in atween, an' his jaws closed on it stid of me. Wall, you never see anythin' like the curious effect it hed on him.

"I allus 'lowed ez he got er extry dose of ile out his paw, for he gin over bein' savage all of a suddint, an' almost afore I could see ez I hed called his bluff he lopped clean over on me, an' with his paw in his mouth went fast asleep. I hed a terribl' time, though, in gettin' out from under him, fer he was scandalous heavy, an' besides I wuz terribl' skeered that his paw would come out his mouth ag'in, a perceedin' ez I knowed wuz pooty sartin to wind me up.

"Wall, I finally gits out all right, but when I tole my pardners of th' game ez I hed bin in, they gives me th' biggest kind of er laff. I wuz so terribl' arnest about it, though, that they finally goes back with me ter see th' bar ez wuz sleepin' with his paw in his mouth. I allus 'lowed, though, ez th' perceedin's of th' day kinder got his narves out of kilter, fer we didn't find him whar I hed left him, an' of course my pardners thought ez I hed bin stuffin' of 'em; but, fellers, it's th' dead sober truth, ez I've bin tellin' ye."

For a moment a deep silence reigned among the circle about the stove, for it took the rough men there some time to fully grasp the startling character of the suggestions conveyed in Tom's story. Even then there were no open manifestations of incredulity, whatever the men may have thought privately as to the truthfulness of the story, for it was a fixed principle with them never to manifest surprise at any story they heard.

Pollard, the tenderfoot, had not, however, schooled himself to any such stern self-repression, and many expressions of wonder at the surprising nature of Tom's revelations escaped him. Indeed, it was very apparent that he was deeply impressed with the story, and the very evident prestige which Tom had acquired in his estimation clearly occasioned the other story tellers a great deal of unhappiness; for, as I said before, the keenest rivalry existed between them.

Suddenly I noticed old Si Emslie beginning to twitch about in his seat, which phenomenon I knew from long observation to be the precursor of a yarn, and such it proved to be in this case, for after an extra twitch he said slowly as his seamed and weather-beaten old face stretched into an amused smile, as though Tom's yarn might do to feed boys with, but was no diet for men: "I ain't gainsayin' as b'ars ain't troublesome at times, an' mebbe they does suck ile through the'r toes ez puts 'em asleep. I ain't gainsayin' it and I ain't gainsayin' ez 'tain't 'zactly pleasant ter hev one on 'em er chasin' yer through er drift, but law, 'tain't nothin' ter hevin' two starved lion an' er snowslide arter ye at th' same time."

At this Si paused and looked triumphantly at Tom, who hung his head as though conscious of the fact that the coming story was likely to throw his own able effort far in the shade.

"It wuz in th' winter of '69," resumed Si, "thet I started ter cross th' range on snowshoes near St. John. I wuz pooty near th' top o' th' divide when all o' er suddint I hears th' tallest kind o' howlin' back o' me, an' ez I turns my head ter see what it wuz all erbout, I sees two mountain lions er tearin' erlong arter me ez fast ez ever they could get erlong through th' snow. My! but they wuz th' leanest lookin' critters ez ever I sot my eyes on, an' the'r jaws wuz workin' like they thought they wuz er chewin' on me. Well, you kin bet ez I perceeded ter git th' tallest kind o' er move on immejate, fer I knowed thet if I could onct git over th' top I wuz all right, fer I 'lowed th' lions never could ketch me onct I got in motion down th' steep slope on t'other side. But 'twaz mighty slow work gittin' up thar, an' toward th' last I 'lowed fer sure ez th' lions would sample my ole karkiss.

"I don't think ez thar wuz six foot 'tween us when I turned th' top, an' jist ez I begin ter git inter oncommon good motion th' lions wuz thet close 'at I feel the'r breath, an' it wuz that hot 'at it feel cl'ar through my close like ez some one hed sot er hot iron ag'in me. But in er minit' my ole shoes hed got er hump on thesselves, an' I wuz jist er burnin' up space. The lions wa'n't in er leetle bit, an' th' way they wuz er howlin' ter thesselves wuz su'thin' seandalous. They wuz th' wu'st losers ever I see, an' they wuz er kickin' like they wuz some humans I knows on.

"But d'rectly I heard er sort o' rum'lin' sound what stidily growed louder, an' ez I turned ter see what wuz up, I see th' biggest snowslide I ever sot eyes on come er tearin' down th' mountain arter me. Wall, I 'lowed ez I wuz sart'in ter beat 'er down, an' didn't worry myself much erbout it. But pooty soon I notice thet th' roarin' wuz er gittin' louder, an' ez I looks back I sees ez th' 'tarnal ole slide wuz sure enough er gainin' on me, an' I figgered ez 'twuz likely ter ketch me 'fore we reached th' bottom. Wall, I sot down lower on my ole shoes ter squeeze out th' last drop o' git thar wuz in 'em, but hump thesselves ez much ez they would—an' they wuz er gittin' er powerful move on—th' slide wuz stidily overhaulin' ov 'em.

"Now, thet wuz er sitiwation ez wuz kalkilated ter bu'st er man's narves wide open, but wuss wuz comin', fer d'rectly I hears above th' roar o' th' slide what sounds oncommon like er lion's voice, only that it seemed ter be sort o' laffin', like 'twuz 'most tickled ter death. Now, I never heerd o' er slide makin' sich er noise erfore, an' ez I turned ter see what wuz amoozin' it, I see them two lions er sittin' right on th' edge o' th' slide, watchin' me, an' wery apparent enj'yin' thesselves monstrous at th' appetizin' prospect.

"Wall, it sent er peck o' cold chills er chasin' thesselves down my back, fer I 'lowed then to er cartainty thet it wuz er game ez wuz sure ter do me. I wuz gittin' down toward th' bottom o' th' walley amazin' fast, but so wuz th' slide an' er heap faster, an' ez it begin ter git right close ter me, th' appetite o' th' lions wuz su'thin' painful ter look at, 'specially ter me. They wuz that hungry ez it seemed like ez they couldn't wait fer th' dinner bell ter ring, but they never stopped givin' me th' laff at th' way they wuz er doin' me. D'rectly they wuz so close thet I feels the'r breath on th' back o' my neck, an' it wuz so monstrous hot 'at it curled up th' ha'r on th' back o' my head like ez er fire hed struck it.

"I 'lowed then ez th' chuck would be sarved up ter th' lion in 'nother minit, an' not feelin' 'zactly easy 'bout it I suddint like sot low down on my shoes. Now th' lion hed worked thesselves up to er p'int ez they wuz oncommon eager ter begin perceedin's, an' ez I went down I reckon ez they 'lowed I hed done 'em er dirty mean trick an' dropped out o' th' game. Leastways they seemed ter lose the'r heads all o' er suddint, fer they both let er reg'lar Comanche yell out o' 'em an' jumped straight arter me. They lands jist erhead o' th' pint o' my shoes, an' then d'rectly th' shoes hits 'em fa'r an' squar'.

"Now I respecks th' truth, I does, an' I ain't er goin' ter say how far I goes up in th' a'r subsequent, but when I comes down I lands jist on th' edge o' th' slide, 'zactly whar th' lion hed sot er minit b'fore. Th' slide hed bin goin' so much faster 'n me ez it hed ketched me while I wuz up in th' a'r. O' course I lose my shoes, but I lose th' lion too, an' that wuz er concarnin' me more'n most anything else about that time."

As Si brought his tale to a close a deep silence pervaded the room, but it was clear from the looks bent upon the old man that he had fully maintained his reputation as the most unique story teller in camp.

Pollard, the tenderfoot while evidently profoundly impressed with the tale, seemed nevertheless to have something upon his mind, and in a moment he asked: "Wasn't you covered up by all the snow that was coming down the mountain after you?"

"Kivered by the snow!" said Si with a snort of impatient disgust. "Be you sich or dog blasted eejot ez ter 'low ez I wuz er goin' ter git erway with two lion with nothin' but snowshoes, jist ter let er pesky lot o' snow git erway with me? Say, young feller, you'se monstrous foolish."

TWO MONTHS ON THE ST. JOHN'S.

[*Continued from page 507.*]

WE found Jacksonville, that is, the principal street and the wharves, a very busy place. We made a number of purchases, among them a new axe, to replace the one borrowed by our Fernandina friends. Stopping in a fine large grocery store, we asked the clerk if there was such an article as grats or grits. There was quite a crowd in the store at the time, and they all burst out laughing, clerk included. He informed us that after we had been in Florida for awhile we would be very apt to discover that there was such an article as grits; that most everybody lived off them down there.

Now, Tom don't say much, but his remarks are generally very dry and right to the point. So he informed the clerk (and crowd at the same time) that "the grits were wanted to boil up for the dog. The poor dog had to eat something, even if it was grits." Some of the crowd didn't smile at this at all, but looked real offended. But we found that grits were excellent food, and there wasn't a meal that we were without them afterward.

When we returned to the boat, where we had left Sam in charge, it had stopped raining, and the clouds showed signs of breaking up. There was nearly a gale of wind blowing right out of the north, and of course in our favor.

The little Rambler did some great sailing that day. I thought she would swamp more than once, or tear her mast out, anyhow. But Sam was at the tiller, and what he don't know about handling a small boat is hardly worth learning. The waves would come chasing after us astern, and catching her would lift her stern high in the air and plunge her bows under, so that she would be buried forward clean up to the foot of the mast. At the same time she would yaw, as though she was bent on pitching everything clean out of her.

Overhead ragged clouds chased each other across the sky in the wildest manner conceivable. We were very much surprised to see such a sea raised on a river. It was rough and no mistake, as we had an opportunity to observe when a river steamer passed us. She was the Magnolia from Palatka. She would lift so that we could see considerable of her forefoot; then she would plunge into the head sea, and smashing it into atoms the spume and spray would fly as high as the pilot house.

We took particular notice that there was no one on her forward deck. I wouldn't be afraid to wager that she didn't reach Jacksonville that night on time. As she passed us quite a number of her passengers and a portion of her crew came to the side of her after decks and stared at us as though they thought we were either crazy or else we wanted to sail pretty bad to be out in such weather in such a boat.

Soon after the Magnolia passed, one of us noticed an object rising and falling on the waves directly ahead. It proved to be a large square-ended scow, truly a most dangerous menace to vessels passing up and down the river.

After making what we thought was a fair day's distance we headed toward the east bank, and sailing along close to the shore kept a sharp lookout for a good place to spend the night. Rounding a point where the ground seemed to be somewhat higher than usual the Rambler was run into a sort of cove, where the water was almost smooth. We couldn't run her bows directly up to the bank on account of the shallowness of the water. We run up as close as we could, however, when we took in sail and made fast a line to a tree ashore.

We had decided that we would find a good place and get a good night's rest this night, for we had grown tired of wharves, Cracker shanties, hard pine boards, etc.

I think this spot was as wild looking a place as I ever saw—being covered with huge pine and cypress trees as far as we could see, from the branches of which hung

long festoons of gray Spanish moss, which the heavy wind that was blowing swayed and tossed in the wildest manner conceivable.

Sam and I busied ourselves about collecting wood for the fire and erecting the tent while Tom prepared supper. We gathered armful after armful of moss which the wind had dried and filled the tent nearly up to the ridge with it. Over this we spread a couple of blankets, and after supper, when everything had been made secure for the night, and while a clear streak of grayish light, which extended clear across the western horizon, was rapidly growing broader and broader, which made Sam remark, "Wind sou-west to-morrow and plenty of it," we, dog and all, crawled under our little tent. Our tired bodies sunk to the farthest depths that our full weight would allow them to into a bed that was truthfully softer than any bed of down, and with the far-off hoot of an owl stealing over our senses as in a dream all sunk into the sweetest and most restful slumbers.

I was awakened about 3 A. M. by the dog. He was acting in an uneasy, suspicious manner. He would whine and tremble and try to get closer to us, which he couldn't do very well, as he was pressed right against our feet. I wondered what was the matter with him, when suddenly from out of the depth of the wood there issued the wildest, wierdest, most blood-curdling screech or scream I ever heard. It woke Sam and Tom with a start. It was repeated twice after that, but not so loud as the first time, seeming as though it was farther away each time. What it was I don't know. We never found out, but we made up our minds that it was a panther and I have always thought so since.

Whatever it was, it started the owls going all around us. I should think half a dozen gathered in the tree over our heads, and of all the confounded hootings and yawpings ever listened to by man I think theirs was decidedly the worst.

We couldn't get to sleep again so long as they persisted in keeping their confab going, so we lay and talked, and laughed now and then at some of the ridiculous noises they would make. It was quite a comedy. We were not very sleepy, anyhow. We had gone to bed so early that we had had eight or nine hours' good solid sleep. But the owls finally "let up" somewhere in the neighborhood of 4 o'clock, and we gradually, one by one, dropped off to sleep again, and didn't awake until the sun was quite high.

In spite of our being disturbed and awakened from sound sleep, we had rested as only exhaustion, resulting from hard exercise in the pure air under the free heavens, can make a true lover of nature and nature's hardship rest.

We didn't hurry about getting away that morning, but took our time. When we did finally cast off the line that held our little vessel fast, and spread her single sail to the breeze, which was, as Sam said it would be, "from the southwest," it must have been nearly 11 o'clock, and a fine day it was, too, as bright and pure as it could be.

Although the wind was not favorable, being almost ahead, necessitating a long leg and a short one, we did not mind that much. It gradually increased in weight though, fulfilling Sam's prediction to the letter.

It wasn't long before we had all we could conveniently stagger under. But Sam, who held the tiller, handled her in the most marvelous manner. I would have upset her a dozen times. But Sam, with the tiller in one hand and the main sheet in the other, was just in his glory. The wind came in hard, sharp puffs, so one minute we would be sailing comfortably enough, considering the short, choppy sea that was running, and the next minute it would hit her so suddenly that Sam would have to let fly sheet, and luff as quick as you could say scat. Then again she would almost stand still, in regular sharpie fashion. Sometimes she would actually begin to go astern before she could be brought to her course again. She wouldn't get very far before the whole performance would have to be gone through with again.

About noontime we passed Tocoi on the left bank. We didn't make much progress this day. About three o'clock we saw a tempting looking lot of orange trees, all by themselves, on the east shore. We landed, expecting to find a house near by, but there wasn't one within miles. It was such a desirable looking place for a camp, however, and the wind was blowing so hard and unfavorable, that we decided to spend the night there.

We soon had the tent up, right in the midst of the grove. It wasn't a great while before moss was gathered, and beds were made. Then we cut the trunk of a huge fallen tree into three pieces. We rolled the middle log in front of the tent for a seat. In front of the log we prepared a place for our camp-fire.

Thinking it would be a good idea to try an orange, I selected a nice one and peeled it carefully. Then I broke out a section and put it in my mouth. One section was enough, and too much, too. I didn't try any more of that kind of oranges while in Florida. They were wild; and no wonder there was not a house near them. I did not say anything, but let Sam and Tom get their dose, which they were not long in doing.

The river here, I should judge, is at least two miles wide; yet that evening, while we were gathered around the camp-fire eating supper shortly after sunset, the sound of a darky singing as he rowed came plainly to us, the singer being clear across the river under the west shore. The wind had died with the sun and the surface of the river was as smooth as a mirror, so the voice of the rower, floating to us as it did in the soft twilight, sounded very sweet, distance smoothing off the rough edges.

We sat around the fire until late into the night, talking over the events of the day and devising plans for the future. With the aid of our boat, maps and compass we depended on ourselves altogether.

There is not that wild, careless freedom in living in a hotel that there is when you have to depend on yourself, your boat, camp-fire and little tent. No. Let those who prefer them have their hotels. But as for me, give me the free outdoors, with its smiling blue skies, its rippling rills, shimmering lakes and flowing rivers, its mighty forests and boundless plains, its golden sunsets and blushing mornings. Let me pitch my little tent near Old Ocean, where I can hear his mighty voice as it roars along the sands. Let me enjoy all these things and I would ask but one thing more, and that would be, "that my pen might be dipped in the fountain of eloquence," so that I could tell of these blessings in such a manner that my fellowman, who loves these gifts of nature as I do, but who, on account of circumstances over which he has no control, never can enjoy them in the body, might be carried among them in fancy.

We slept well along into the morning next day; and when we finally did turn out it was such a nice day and such an elegant camp, and we felt so lazy, that it was voted to spend another day here. After breakfast I called the dog, and taking a six-shooter cavalry revolver started through the hammock into the thick pine woods for a stroll. Such woods as these were I never saw before. As far as the eye could penetrate, nothing but tall straight yellow pines met the gaze. A very easy place, these woods, for a green camper to get lost, for every part of the forest looks alike. But I had no fear of losing myself, as I had a good pocket compass with me, and didn't intend to go far enough from the river to do so.

I was sauntering along in a lazy manner, when suddenly the dog, in advance of me, set up a furious barking. I hurried ahead, keeping a cautious lookout the while, for fear he might have had a rattler or something as bad. He had found something, as I soon discovered, but it was no rattler. Before I knew it, I found myself in the midst of a whole family of skunks. As soon as they saw me they began to shoot. I succeeded in killing four of them with the revolver, and then had to retreat.

I left the skunks, but not their essence. I think it took a month to get entirely rid of that. I didn't have to tell them where I had been when we reached camp. In fact, they knew before we reached there. All that day, whenever I happened to cast my eyes in the direction of the dog, I would almost invariably find him eyeing me in the most appealing, reproachful manner imaginable. Then if any of us approached him, he would get up, and with arched back and tail and ears hanging, and a look of apology out of the corner of his eye, take himself away to the darkest corner of the camp. I suppose he thought that I had set that trap for his particular benefit.

We were astir bright and early next morning and were off almost as soon as the sun rose. It proved to be another grand day, with no sign of cloud and just breeze enough from the west. The river opened to us in a succession of lakes. In fact, that is what it is practically from mouth to source.

I remember that day as though it were yesterday. The air was soft and balmy and the surface of the river was ruffled over with little waves, which sparkled and scintillated in thousands of dazzling prisms and brilliant colors, and lipped, splashed and tinkled merrily under the bows and the counter. Every now and then a flock of blue or white cranes would sail through the air overhead, or some river craft would come steaming by. There were two kinds of stern-wheelers—one the modern screw propeller, looking clean, neat and business-like; the other was what Tom designated "the saw-mill engine propeller." Craft of this class received propulsion from one large paddle-wheel hung on the stern, which did not give them a very nautical look, I must confess. In passing, the noise of their machinery sounded as much like a saw mill as anything else.

About 11 o'clock we were off Federal Point. I was at the tiller. Tom was attending to something forward and Sam was stretched at full length on the cabin top, when a puff struck us so suddenly and unexpectedly that I had not time to let go the sheet. All I could do was to shove the tiller hard down. She all but capsized. I was surprised when I found that we would not have to swim. As it was, the cockpit was full of water and everything in the cabin was afloat on account of the water pouring through the open companionway. There was no indication of anything of the kind until it happened. We always after that kept the sheet in hand with one turn around a cleat.

We noticed many beautiful orange groves between this place and Palatka, which place we reached about 3 o'clock that afternoon. We tried to buy some bread, but they didn't keep it. Then we asked for cake, but the clerk said they had nothing but sweet crackers and ginger snaps, so we bought 5 or 6lbs. of ginger snaps. I was surprised to find that most of this kind of pastry sold down here came from a New Haven concern. We were never able to buy bread in any of the stores, as they didn't keep it, so we had to get along on our pilot bread, which is good enough for anybody with a good appetite. We were never able to obtain butter.

We passed San Mateo about 5 o'clock, and when it began to get dark tied up to the wharf at Rolleston. While we were eating supper a cloud of blind mosquitoes settled all over us. They don't bite, but it is almost as bad, as they fill eyes, ears, nose, mouth, hands, and in fact all parts of one's body that are exposed. The more one mops the faster they seem to come. They disappeared as suddenly as they came, however, and we were glad they did, for such familiar neighbors are not apt to suit the fancy.

Sam and I prepared our bed on the cabin top that night, with the tent stretched over the boom for a roof. Tom slept in the cabin and the dog monopolized the cockpit. We slept pretty soundly until near morning, when we were awakened by feeling cold.

We didn't get asleep again after this, as it grew colder and colder, and by sunrise it was so cold that we were thoroughly chilled to the very marrow. This was a great surprise, coming after such a warm day.

We did not tarry to prepare breakfast, but hoisted sail and started to find warmer quarters. We kept a sharp lookout on either bank, trying to find a suitable place to build a fire, but nothing met our gaze but one continuous swamp, so we finally gave up the idea; running the Rambler to the leeward side of a clump of trees and bushes that grew out of the shallow water on the east side of the river, where we could receive the full benefit of the sun's rays.

At the same time we anchored, lit the oil stove and started some coffee to boiling. It seemed impossible to get warm, no matter how we tried, as it grew colder and colder. After breakfast it was decided to continue up the river until we should find a good place to camp, and to stay until it got warm again, so we were soon flying up the river before the heavy north wind.

We sailed eight or ten miles before finding a suitable place. Both banks were nothing but dreary, dismal swamps, and as we rounded bend after bend, we began to despair of finding a place at all. Finally there, directly ahead, was a nice, high, dry spot, covered with pine and cypress trees intermixed with palmettoes, from the branches of which the long gray moss waving in the wind seemed to beckon us on.

Just as we were in the midst of pitching things out on the bank, preparatory to making camp, we were surprised to observe a young fellow walking rapidly toward us out of the hammock. He said the land belonged to his father, but that we could camp there if we wished, and around the next bend we would find a much better place. Rounding the point, we found the highest piece of land we had met with since leaving Jacksonville. It was a shell mound, and made an excellent place to camp. There was a line of trees at the foot of the mound along the edge of the water.

Our tent being so small and low, we gathered a lot of palmetto leaves, and after driving a number of stakes in the ground, the same dimensions as the tent in length and width, and about three feet in height, we thatched them all around with the palmetto leaves, making good substantial sides, which proved an excellent protection both against wind and rain. Over these sides we erected the tent for a roof.

After two or three hours' work, we had the most perfect camp we enjoyed while in Florida. We spent three weeks here, and enjoyed ourselves hugely.

WM. H. AVIS.

[TO BE CONCLUDED.]

Natural History.

THE "FLAG-TAIL" DEER.

HON. H. C. KING: Dear Sir—My attention was first directed to the small mountain deer, mentioned in your letter, during the spring and summer of 1885, while in camp at Nevill's Springs, Tex., ten miles north of the Chisos Mountains. Deer were very scarce from the fact that a hide-hunter named Sparrow, from the town of Fort Davis, had spent the winter in and about the Chisos, and had, it was reported, sent out upward of 600 skins, leaving the carcasses to rot on the ground. That numbers had been so killed I know from the great number of remains I found in the country.

As this was not the hunting season, I devoted most of my time to becoming familiar with the country by frequent scouts. Later on, the Seminole scouts were sent in temporarily, their places being taken by white soldiers, mostly recruits and very indifferent hunters; so that, in order to get some fresh meat to serve as a necessary change from our daily bacon, I felt constrained to turn pot-hunter in spite of the season.

While scouting I had seen three deer in the large and well-wooded cañon which comes out from the north of the mountains. They were well up above us on the mountain side, had large white tails, and seemed but little larger than jack rabbits. This small size I attributed to the probability of their being much further off than they appeared to be—a most common source of error in that climate. The presence of white-tail deer so far from the river valley surprised me, and I mentioned this to Mr. Brough, an old western Texas hunter, who was prospecting in the Big Bend. He told me that they were not the common deer, but a much smaller variety, very much resembling them, and differing from them principally in the relatively much larger white tail, on account of which they were called "flag-tail" deer.

When, therefore, I found that it would be necessary to go out myself in order to get some venison, I determined to visit this cañon, knowing that the does would probably be alone in the brush and that the three deer seen together were quite likely bucks.

Taking one man, private Bohn, with me, I rode to the cañon, about twelve miles distant, and soon found my three deer. They ran over a high spur into a side cañon. Sending the man with the horses to the narrow mouth of this cañon, I climbed over the dividing ridge and found the deer in the narrow valley about 400ft. below me. They were in a box cañon from which escape seemed impossible, and I was confident that I had them all, only debating in mind whether I should kill two, one to each horse, or else kill them all and send back after them. Not waiting to recover my breath from the steep climb I fired, but without effect; a second shot had the same result, and the deer, becoming fully alarmed, scampered up the opposite wall over ground that I believed impracticable for a goat.

Returning to the horses we continued up the main cañon a short distance, when the ground becoming too broken, we dismounted, tied the horses and proceeded on foot, taking opposite sides. Soon after, while climbing up a steep and wooded bluff, so difficult that it was only by hanging to roots and boughs that I could keep from falling back, I heard a rustling just above me, and looking saw, not 15ft. away, a small deer dodging about the rocks and brush, not trying to run, but rather to hide—like a squirrel or a wounded bird. It was impossible to shoot, as I had but one hand free and could get no footing, and the boughs prevented my using the carbine with one hand. Moving on to where I could get a foothold it would be necessary to take my eyes from the deer, which would either have disappeared behind a jutting rock or a bush. In this manner, clambering back and forth, I got four or five glimpses of it, always only a few feet off and apparently unalarmed, but every time I was either unable to shoot or else it succeeded in dodging out of sight before I could fire. Eventually, overcome with heat and fatigue, I had to give it up, although I knew that the deer was not 50ft. from me when I finally scrambled to the summit. I was thoroughly disgusted, hot and tired, and covered with bruises and scratches; for more than fifteen minutes I had been playing at hide and seek with a deer so close that at times I might have caught it with a shepherd's crook.

While resting on the top I noticed that the hill fell off abruptly into another cañon. Some 200ft. below me was a circular moth of scrub oak. I could see that Bohn was about half a mile off across the main cañon. I set about, therefore, in the unsportsman-like business of rolling boulders over the cliff toward the thickets. Three or four had crashed through the brush, making a tremendous noise, when finally another one flushed two deer which had been in the small clump all the time; I got a hurried shot at them as they scampered over the next ridge, but missed. This showed me two things: that the deer were lying in the thickets and, to borrow from the bird hunter's vernacular, they were lying mighty close. Following on I came to a level bench covered with scrub, and,

just as I passed a thick bush, was startled by a deer not 10ft. away which jumped and ran past, almost brushing against me. It stopped about 12yds. to look, when I fired, dropping it in its tracks. It was a doe, and, as might have been expected, big with fawn. She was of a bright red color and was quite small, although apparently full grown. Her tail was long and bushy and there was much white on the quarters under the tail. This gave her the appearance when running straight ahead of being almost all white. The red color at this season and the great amount of white shown by a running deer are both marked features of the common deer, but not, I believe, to such a degree as existed in these Chisos Mountain deer. The doe just killed would dress, I should judge, about 50lbs. I returned to camp, but little satisfied with my hunt.

Two days after I returned to the cañon with private Hyatt, the only good hunter of my attachment. We did not see my three deer, but we spent most of the day chasing a bear, which finally escaped. About sunset Hyatt shot and killed, from his horse, a flag-tail doe; she was also with fawn and did not differ materially from the one killed two days before. About dusk I shot a black-tail buck—we were then out of the mountains.

A few days later I returned to the cañon with privates Hyatt and Kjennerud, taking pack mules with the intention of spending the night in order to get the evening and early morning hunting. As we approached the park-like valley just west of the mouth of the cañon I saw three deer running down the mountain side about half a mile ahead and coming directly toward us. Dismounting, Hyatt and I hurried to a ravine and worked up, looking out from time to time. At last we found them in a small clearing about 120yds. off; we both fired and mine dropped; the other two ran about 60yds. and again stopped. We fired again and another deer dropped, the remaining one running up the steep rise toward a thicket which grew on the side of the mountain. Hyatt followed this one, while I went to the second one that had dropped; it rose and tried to run, but could make but little progress and I shot it again—through the neck. Hyatt came up with his deer in the thicket, where he found two more, and from his account had very much the same experience as that of mine with the lone deer some days before. He did succeed in firing a number of shots and claimed to have wounded one or two very severely. He said that the deer were hardly able to walk, just managing to dodge behind rocks or bushes, and was confident that one or more of them would be found dead, but that for his part he had had enough of that kind of hunting and would not go back if the place were full of deer. Although he was a good shot, I thought, remembering my own experience, that owing to the difficulties of the ground he had generally missed and had been led to believe, from the peculiar actions of the deer, that they were too hard hit to run off.

Both of the dead deer were does and like the others with fawn. This decided me to stop hunting until late in the season, and as I was soon after relieved and ordered to New Mexico, I had no further experience with the deer of the Chisos Mountains.

The following year, while scouting in New Mexico on the headwaters of the Gila, we followed up one of the western branches which rose in the Mogollons. I had as a guide a man named Woods Poland, a professional hunter who had helped kill out the buffalo in the Panhandle in 1877 and '78. He was now engaged in hunting in these mountains, jerking the meat and selling it to miners and prospectors. While I had but little respect for his business, I could not help admiring his thorough practical knowledge of the game of the country and of everything that related to it. We had tired of trout and the sport of catching them, so I determined to go up into the mountains on a hunt, as it was reported that a band of twenty or thirty elk had wintered there. Poland and I took a long walk up the sides of Baldy, the main peak of the range, and while we saw plenty of elk tracks in the parks they were all old, having been made when the melting snow had softened the ground. They were now further up in the mountains. Poland fired one shot, and when, shortly after, I rejoined him he said that he had seen two little flag-tails, but they were running and he missed them. Questioning him further concerning these deer, he described them as being very much like the Chisos Mountain deer in size, color and habits. He knew they were different from the common white-tail deer which were plenty in the Gila valley, but could not say whether the difference was due to a different habit or because they were a distinct species. We did not kill any, nor did I see any.

I have gone into these details in the hope that I might thereby show something concerning the habits of the deer. There is certainly in South-west Texas and thence in Northern Mexico and New Mexico a small red deer, with large white tail, which is found only in the higher mountain ranges, and then only where timber or underbrush exists. Personally I am strongly inclined to the opinion that they are the same as the white-tail deer, or a closely allied variety, and not a distinct species. The main points of difference are as follows: First—Their much smaller size; none of the deer we killed would have dressed sixty pounds, the average being probably a trifle under fifty; it is true they were all does. Second—The larger development of tail. Third—Their habit of trusting for security to their ability to hide in broken and brushy ground; the black-tail deer will hide if it does not think that it has been observed, and particularly if it sees that your route will not bring you too close. In quail shooting I have come up suddenly on white-tail deer in the brush, but when once started they lost no time in getting away instead of dodging about the brush like a winged bird. Fourth—The range of these deer was entirely in the mountains, at an elevation of from 5,000 to 9,000 feet, and only in those parts which were covered with timber—mainly piñon and scrub oak.

The Chisos Mountains are the only ones that have timber until you reach the Guadaloupes. They rise from an elevated plateau, itself over 4,000ft. above the sea. All over this plateau, which is much cut up by cañons, from the base of the mountains to the Rio Grande bottoms, the black-tail deer were found. In and near the river valley proper a few white-tail deer existed; they were larger than the Chisos deer and similar to the common deer of eastern Texas. There was, therefore, between these deer of the valley and the mountain deer a zone of country where only the black-tail deer ranged, separating the two white-tailed varieties.

The small size of the mountain deer may have been due to their habitat, living as they do on the rugged mountain sides, although this theory is not borne out when we consider that the black-tail deer lives in equally broken but untimbered regions, and that the elk and mountain sheep seem to have no difficulty in spite of their much greater bulk in getting over ground as rough as the Chisos. The great point of similarity between the two white-tailed varieties is the color and form and the fact that they are only found in countries where timber or underbrush exists.

At the risk of repetition I will add that in the Big Bend of the Rio Grande the common deer was found in the river valley proper, the black-tail deer on all the ridges and cañons which were timberless, the antelope on the level plateaus, and the flag-tail only on the high and timbered mountains. H. F. KENDALL, Capt. 8th Cav.

FORT MEADE, S. D., Oct. 31, 1894.

SOME FIELD NOTES.

A Snake Story.

ON the 21st of last April a black snake, being closely pursued by my dog and I, "shinned" up a tree as quickly as if it was every-day sport. There were three little trees growing together and limbs close to the ground. Now instead of going round and round, as I thought they did, it just reached up and took hold of a limb with its fore-feet, and so on to the next higher branch until it reached the top. I didn't see his feet, but I don't see how he did it unless he had feet. There seemed to be no labor connected with the act, he glided over each limb as easily as if the limb lay on the ground.

Two Peculiar Points.

One evening I killed a snake near the house and my Gordon setter examined it thoroughly. The next evening I saw him pointing, and supposing it a little bird I called him, and as he did not come I investigated. At first I could see nothing, but on looking closer I saw a few feet to the left of his point a black snake. I got a club and when I returned he had swung around and was pointing directly at the snake. After I killed it he seemed to be much pleased. Did he associate my killing the snake the night before with this one and thus think he ought to indicate its position to me?

The same evening as I was coming home I found him standing something in the bushes, and as I came up an opossum walked out of a bunch of weeds and advanced "like a hog going to war" on the dog. The way the dog's flag began to drop and his final disgraceful retreat brought roars of laughter from me, at which "br'er possum" seemed mildly surprised and walked coolly and sedately away. Whether it had a family to protect or just wanted to show its independence, I do not know, but for cool audacity it "took the cake."

Buck Fever.

I have read your controversy with "Kingfisher" about the proper name and symptoms of buck paralysis. That is the name I believe proper and here are my reasons.

I was hunting spruce grouse in the Greenhorn Mts., Col., in the fall of '91, and had a 22-15 Winchester single shot rifle with me. I was descending the side of a mountain watching for grouse, when a big-eared object jumped from cover and trotted away. Now I did not shake; I did not get up a wonderful temperature; I did not do anything, only stand and look at that deer. I doubt if my pulse increased a single beat. I remember thinking it was awful fat and saying to myself: "It's no use to shoot, it's 250 yards away."

Now was not that buck paralysis? I never moved until that deer was out of sight, and then slowly and in a dazed manner. I know my mind was paralyzed, and I doubt if I could see a deer's side shake at 250 yards, and I certainly saw that one's shake. I would suggest that each call it just as they feel, "fevered," "agered" or paralyzed.

A Mother Grouse.

I was much amused this evening to see my Gordon come rushing out of the bushes and a ruffed grouse accelerating his progress, and as he came with head and tail lowered to heel I said: "Never mind, old boy, our turn will come in October." TED.

A HOOP SNAKE STORY BLASTED.

Editor Forest and Stream:

Tales told by the darkies of snakes that form themselves into a hoop and roll in pursuit of their victims with race-horse speed, and whose tails are furnished with horns, deadly even to the touch, are among the most cherished traditions of child life in the South. Therefore it is with deep regret that I note the recent insinuations in your valuable journal casting doubt upon the existence of the species. That they do exist I shall not attempt to prove; but I herewith produce the most authentic information upon the subject I have been able to collect.

For very many years and until comparatively a recent period, the decaying trunk of a giant apple tree marred by its presence one of the most beautiful gardens in the State. Sentiment accounted for its toleration by the sweet-faced woman with snowy hair, whose artistic instinct created its surroundings, and, while it is not impossible that she was mistaken, no one can doubt the sincerity with which she relates her terrible encounter and narrow escape behind its friendly shelter from a savage horn snake, and that from the blow intended for her the tree straightway withered and died.

Among my books there is a curious old volume printed in Dublin 158 years ago, entitled "The Natural History of North Carolina," and in which the author, John Brickell, M. D., describes "The Manners and Customs of the Christian and Indian Inhabitants, and Several Strange Beasts, Fishes, Birds, Snakes and Insects." I regret that it would spoil the book to send you the woodcut given of the horn snake, as it is truly an object of art, so I append what is said of the reptile.

"The horn snake, so called from a horn growing in their tail like a cock's, with which they strike and kill whatsoever they wound with it. This horn in the tail is their weapon. They hiss exactly like a goose when anything approaches. They are very venemous snakes, hardly admitting of a cure from the Indians. These snakes are plenty in the Province, and I am credibly informed by several planters that they have seen them strike their horns in trees which in a few hours decayed and died, though before they were in full bloom."

Recalling the tales told of this same creature with "horn like a cock's" to the amazement and entertainment of my childhood by a venerable old negro, I called upon him to repeat the "reskaly capers" he has seen them perform, that I might fear nothing from memory at fault when I came to produce them in evidence.

"Uncle Peter," I said, "I have been thinking about the stories of horn snakes you so often have told to the children. Tell me of the one that chased you the night you were dodging the 'pat'er-rol'ers,' and that kept you trembling in the tree-top until daylight enabled you to see that his horn was struck deep in the wood past hope of escape. You cut out the horn, did you not, and have since worn it about your neck as a charm against witches and tricks?"

The old man regarded me solemnly for fully a minute before he replied: "De string wo' in two, an' I los' de bag wid dat horn in hit 'long in de spring."

"That was a great loss, Uncle Peter. You could have sold that horn for more than your cotton will bring you this fall."

"Who—who buys um?"

"Anybody, everybody, particularly FOREST AND STREAM, a great big newspaper published away up North; but that is the story, is it not?"

"Honey," replied the old fellow with a mournful shake of his head, "I'se pow'ful sorry I dun los' dat horn, an' my 'memb'ance hain't so overly good fur tales an' sich dese days. 'Sides dat, I got 'ligion endurin' de 'stracted meetin' arter de crop was laid by las' sum'er, an' I don't lock ter talk erbout dem sinful guine-on's er mine, way back yander when de debel helt me fas'. You go an ox sum er dese triflin' young niggers what's run'in' in de range. I lay dey can tell yer 'bout horn snakes an' whip-snakes an' ebry yuther debelment what de moon shin' on. I hain't er studdyin' 'bout nufin' now but prar."

GREENBRIER, Ala. WILL SCRIBBLER.

FISH SENSE.

I was once in the '40s camping at the head of Molly Chunkemunk Lake (one of the Rangeleys), near Beaver Brook, in September, and the evening being warm and pleasant, I thought I would try the trout where the brook emptied into the lake, to satisfy myself if they would take the bait in the night time. I baited my hook with salt pork—all the white bait I had—and had good luck, catching a good string of about 1lb. weight trout. I had the best luck sinking my hook to the bottom, then jerking it along up toward the surface quite quick, and each time would either feel a bite or bring up a trout. The night was quite dark.

I was once fishing through the ice and lay down to watch the bait, and soon saw a 1lb. trout run his nose against the bait, then settle back and run again, butting his head against the hook, seeming to be playing with the bait; he did not open his mouth, but he soon stuck the hook into his head outside, and I pulled him out.

I have frequently been fishing in a deep hole in a brook or river and catching trout very fast, and all at once they would stop biting and not another one could I get there that day. I suppose they found their numbers depleting so fast that it frightened them, or it might be one got pricked with the hook and rushed away, and the whole school followed like a flock of sheep.

I was fishing one morning quite early down the Rapid River, there being a white frost covering the rocky shore. I had quite good success, and as I fished from one deep hole to another I left my trout lying on the rocks where I caught them, intending to gather them up on my return. On returning I could not see my fish at one place, but saw where some animal had dragged them along, making a road in the white frost to a hole in the rocks. Having a string of trout in my hand I shoved them into the hole where my fish had disappeared and soon found something holding them. I had to pull pretty smart, but held my left hand close to the hole, and as the animal's head appeared above the rocks I made a grab and caught a fine mink by the nape of the neck, which added a couple of dollars to my before-breakfast fishing.

I once had nearly 100lbs. of frozen trout stolen in one night by a mink and carried in every direction and hidden under rocks, logs and brush, but the rascal paid with his life and his fur coat for his mischief, as I caught him in a trap the next night. J. G. RICH.

Points About Moose.

I NEVER saw a tree that a moose had gnawed the bark entirely around. Had they done so the tree would have died. Is it moose sense or accident?

The antlers of the moose loosen and fall off in the first winter thaw. Should there be no winter thaw, they will remain on longer, perhaps through February. Soon after the shedding, new horns commence to grow, and by the first of June have attained their full size, and one prong more each year. They then retire to the mountains until their antlers are hardened. While in the velvet state, when first grown, they easily get twisted out of shape and grow deformed.

We have in the Maine woods two kinds of moose—the tall, long-geared, slab-sided, gray-colored, and the short-legged, round-bodied black moose, or almost black. We distinguish them as "black" or "gray." We have never known the two kinds to yard together in winter or mate together in summer. J. G. RICH.

BETHEL, Me.

The Innocent with the Guilty.

A FEW days since two hounds were killed by the early morning train (sleeper) on the D. & H. R. R. at the "dry wall," head of Willsborough Bay. Their bodies were discovered by watchman Dennison, and a short time afterward a "four prong buck" was found dead on the rocks just below the track. It is thought that the deer was forced to jump from the track on to the rocks by the approaching train and that the dogs were run over and killed by it.—*Elizabethtown (N. Y.) Post.*

The Few Song Birds.

WATERTOWN, N. Y., June 15.—Bluebirds and song sparrows are remarkably few in number; bobolinks are also scarce. Robins, orioles, catbirds seem abundant, the two last unusually so. Judging by the notes of the nightly travelers as they arrived, how few indeed were there compared to the hosts leaving at the close of the last season. A.

Game Bag and Gun.

WOODCOCK IN ONTARIO.

THE American woodcock is a strange bird. A bird that feeds by night and rests by day, sees behind it without turning its head, gets its food by making deep drills, or "bores" in the earth with its bill, and which has two distinct methods of flight if not more, may fairly be called peculiar.

He is one of the finest of American game birds, ranking, as regards difficulty in shooting him, quite with the ruffed grouse, and being far less abundant. I fear, too, that unless prompt measures are taken to save him from extermination, this beautiful and wily game bird is doomed to follow the wild turkey here in Canada on the path of extinction. And the end of the wild turkey in Canada is now in plain sight, and twenty or twenty-five years at most will see it. The extermination of the woodcock will probably follow (though a much longer lease of life may be given), and for the same reasons—viz., his range is limited and his covers are being destroyed. The axe is more fatal to him than the gun. Then the woodcock cannot be preserved and artificially reared, as is the pheasant in England, and as the quail is in some parts of America and Canada. So I fear he is doomed. Of course, I speak only of Canada; but I believe the same may be said of his prospects in the New England and Central States.

The woodcock is seldom found in the States beyond the Mississippi, and never in our great Northwest country. His range in Canada proper, or old Canada, is over southern and central Ontario and southern Quebec. I have never heard of him in Muskoka or in the country north of Peterboro, though I have shot in those regions pretty often; and in northern Quebec he is quite unknown. It is true that on my first visit to Muskoka, while shooting in the vicinity of Lake Rosseau, I was informed by a native, of whom I was making some inquiries as to game birds, that "ef I went right ahead a little ways I'd find a couple of woodcock—big uns, too—poundin' away on an old pine shell with their bills like all gee-whittaker." Curious to inspect so miraculous a change in the habits of the woodcock as I had known them further south, I pushed on, and found that my friend meant by "woodcock" the great ivory-billed woodpecker or "cock of the woods."

The name "woodcock" is universally applied to this bird all through our northern woods, and is apt to prove misleading to the sportsman.

In the Niagara Peninsula and about Hamilton the woodcock, once very abundant, is now rapidly passing away.

Prince Edward county, where the writer of this paper now lives, is probably the best county for woodcock shooting left in Ontario, though the falling off in the number of birds of late years even there is sadly perceptible.

A good many American sportsmen come here in the summer for bass and maskinonge fishing, some even staying till the fall to have a crack at the ducks. These gentlemen little think that within three miles of Picton, the county town, there are large stretches of cover, where really good woodcock shooting can be had.

In my poor opinion, any kind of duck-shooting (whether you squat like a bullfrog in the rushes behind your bough house, or lie cramped in a monitor with both legs asleep and slowly freezing to death) is as inferior to a good day's tramp after woodcock behind a steady old pointer, or even a well-broken cocker or Irish spaniel, "as is moonlight unto sunlight, or as water unto wine."

An incident, which happened to me only last season, will show that woodcock are still tolerably thick in the covers referred to. As a friend and myself were returning down the outside of one of these covers late one afternoon in October, after a pretty hard and successful day's work, we came on a small tongue or point, running out from the main cover, which somehow or other we had omitted to beat in the morning.

As we approached it my Irish spaniel, which ought to have been at heel on the very edge of the cover, flushed a bird pitched in a lot of Canada thistles not 25yds. out in the open field. I walked the bird up and shot him. On reaching the place where he had emerged, we followed my friend Mr. S.'s pointer (the steadiest old dog I ever shot over) into the thicket.

He had not gone 10yds. before he came to a dead point. The bird rose on my side, and at the report of my gun performed that peculiar dive into the bushes in the midst of a stream of feathers the sight of which causes a pleased grin to overspread the features of the average sportsman.

The cover was so thick that my friend and I, though not 20yds. apart, could not see each other, as we slowly drew the dogs on toward the dead bird. But this did not prevent Mr. S. shooting three woodcock and myself two more before we reached the place where the bird, first killed, fell.

Another cock, which I missed, Mr. S. (who is one of the best shots at woodcock or ruffed grouse I ever was out with) cut down as he rose wild from the edge of a further off cover.

This made eight birds shot in about ten or fifteen minutes in a little bit of cover about an acre in extent. We felt as we pursued our toilsome way that we'd both "been on in that last act."

The great beauty of the bit of country that I have been speaking of is that in the course of a day's shooting you have every chance of making what old sportsmen call "a mixed bag." The Wilson or English snipe is very plentiful in and about the covers, and, strange to say, is often flushed in the same dense thicket of vines and bushes as the woodcock. I remember once shooting a woodcock with one barrel and a Wilson snipe with the other in this neighborhood.

There is also a fair sprinkling of ruffed grouse and hare to be found. In the marshy grounds between the covers in the small fields covered with a sickly growth of buckwheat, sticking out of the sour water-soaked ground, or in occasional rows of forlorn turnips or disgusted-looking beans, you can put up golden or yellow-leg plover, as well as Wilson snipe. And in some of the larger ponds, often hid in the densest woodland, you get an occasional crack at blue or green-winged teal or black duck. But of course the main standby for the sportsman here is the woodcock. The others are incidentals, welcome as the flowers in May to him when they come in his road, but not sought after as the main business of the hour.

I have observed that in this big cover, and in others like it, throughout the county (for the place I have been speaking of is only one out of many), the woodcock early in September—about their moulting time here—leave the dense wet swamp altogether in the daytime, and go up to the knolls and dry upland ground, covered with dwarf poplars, maple and brambles in the immediate vicinity of their swampy feeding grounds. They certainly come down to feed in the wet covers at night, for you will find the mud round the pools and small streamlets of the low grounds riddled with their bores, and yet go for a couple of miles without flushing a bird. Go up to higher ground close by and you may put up a dozen in a very short time. A week or two later they are all back in the swamp again. This fact is worth noting by every pursuer of the wily woodcock.

This same woodcock is a queer bird. Sometimes you will think he is the biggest fool of a bird that ever lived, and at others you will say, as a Southern friend of mine did, "that he knows as much as an Injin and more than a nigger." I've known one come out of the cover in an aimless sort of way, hang in the wind for a moment, and then flop down within sixteen feet of me, right out in the open, looking as if he thought he'd picked out the safest part of North America to rest in; and then again I've known one to keep two good shots and two good dogs dodging about for half an hour in one thick bit of cover, going off in every direction but the right one with the velocity of a ruffed grouse, and the twist and dodge of a Wilson snipe. Half an hour's pursuit of a bird like this, in a dense thicket, on a hot September afternoon, with the thermometer about 90° in the shade, not a breath of wind stirring, and about a thousand mosquitoes to the square yard in the atmosphere round your person, gives you a much higher opinion of the woodcock's intellect.

He seems to know, too, when you have got one leg hip deep in a bog-hole, and generally selects that moment to rise and depart. Even when you have him in front of a steady point, it's a toss up whether he shoots over the dog's back straight in your face like a sky-rocket, or zig-zags off so close to your comrade's head that you dare not fire for your life—or rather, for his life—or flops into a tangle of wild vines, and sticks there long enough for a boy ten years old to shoot him.

For all that, he is one of the best of game birds to the real sportsman, who likes to kill his game fairly and on the wing; and it is a sad thing for all such to see him becoming, as he is, scarcer and scarcer each succeeding year.

REGINALD GOURLAY.

NOTES FROM MINNESOTA.

Editor Forest and Stream:

I am afraid that the grouse shooting in this section of Minnesota will not amount to much this fall on account of the frequent heavy rains and extraordinary destructive hailstorms which have prevailed between the 45th and 47th parallels for fifty miles. Hailstorms have destroyed whole broods of tame fowls, including hens, and this when partially protected by coops; so what chance have wildfowl on the open in such weather? Hailstones measuring 10in. in circumference fell at Lisbon, N. D., Abercrombie and other points last week, and at Fergus Falls, Minn., stones fell with sufficient force to break plate glass fronts. The hail lay 6 and 8in. deep and pelted holes in soft ground in which eggs could easily be dropped.

Plover shooting is being indulged in to some extent hereabouts, and I learn that some sportsmen (?) are killing meadow-larks.

There is little fishing now in the Red River. A few sturgeon have been taken this spring at Fergus Falls, below the dam, weighing 35 and 38lbs. Bass are biting very nicely at Battle Lake and Clitherel, but taste rather weedy, and a few of a mess presented me June 10 were yet full of eggs. The closed season on these fish should be extended to July 1, or June 20 at least.

T. B. Bushnell, one of the leading sportsmen in Minnesota, has expended a lot of money in fixing up a pleasure resort at Ten Mile Lake, in Otter Tail county, 12 miles south of Fergus Falls. He has about as much as he can attend to.

Great numbers of farmers from the prairie districts are now at neighboring lakes, notably those at Pelican Rapids, salting down fish for winter use, the pike being the kind most suitable for keeping.

There are no ducks about here, it fact, I havn't seen a wild one since leaving the Superior region two weeks ago.

Jack rabbits are numerous, and I look for the organization of a coursing club here next year.

Elk and Moose Antlers' Spread.

I have read with considerable interest the items concerning the spread of elk and moose antlers. I am going to measure some I know of at Brainerd, Minn., and think I can find a prize winner, for the West is rarely beaten on anything—except, possibly, a few truth expanders. I have had in my possession a moose head, the spread of whose prongs were about 200 miles, *i. e.*, the portion I possessed and its companion prong were spread that distance apart, away out at Minot, N. D. Speaking of Minot reminds me that I don't know much about horns. In April, 1891, I stopped off at this place on my way to Montana on business. Near the depot were two parallel heaps of bones which had been picked on the prairie and sold to bone buyers. The piles were 600 feet long and fifteen or twenty high, and contained the bones of every sort of prairie animal, the buffalo predominating. Going over the piles in search of relics, I came across a fine pair of Texas steer horns which measured twenty-eight inches each. I took my find in triumph to the *Journal* office, and asked the boys if they ever saw a finer "pair." The boys began to snicker and I wondered thereat. Finally one of them whispered to me, "They are from the same side of the head." I had noticed that the horns did not jibe, one pointed ahead while the other pointed to the rear, but did not "tumble" to my error until too late. Of course the crowd "irrigated" at my expense and the editor "fixed." I searched the pile for the missing mates, but like my moose antlers they were somewhat on the spread themselves. This pile, however, yielded me some interesting trophies, viz.: a shoulder-blade of a buffalo with one iron and one flint arrow head imbedded in it; a buffalo skull with eleven bullet holes in it, a silent story of a hard death; two deer heads firmly locked together, evidence of a deadly contest between two monarchs; and last, but not least, two pairs of fine large buffalo horns that now are serving a good purpose as a footstool. At this place several "pet" deer were allowed to roam at large through the streets. One of these pets, a two-year-old buck, caught a railroad engineer out back of of the Great Northern round house the following fall and gently tickled him almost to death with his antlers. I guess he, the engineer, had a slight attack of the "buck ager" we read of in FOREST AND STREAM.

"Buck Fever."

Yes, I have had intermittent fever, scarlet fever and "buck fever." The "buck fever" came to me when I was in search of a broken telegraph wire fifteen miles east of Glendive, Mont., in 1880. I was out on a railroad tricycle of rude construction and was spinning along at a good rate on the newly made track, when I heard the sharp *ki-o-tee* of the coyote or plains wolf. I was a "tenderfoot" from Egypt (Ill.), and had read of whole families being eaten by wolves, and naturally grew timid. Looking over my shoulder I discerned a pack of eight yellow, yelling monsters in full cry, coming in my direction. I

"BY ANY OTHER NAME."

had no weapon of any sort except a pair of pliers and a pair of climbers, and all would have gone well if a freight train had not hove in sight. The train of course had the right of way, so I was forced to try my luck at sprinting. I embraced the first telegraph pole and was quickly at its peak. The freight thundered by and I signaled it to stop. The engineer blew a blast that frightened the coyotes away and nearly blew me off my perch. The trainmen helped me and my machine aboard the caboose. I had a clear attack of "buck fever or ager," as you like to term it. I cut more gyrations than a go-devil firecracker, and my legs "wobbled" like the governor of a stationary engine. Oh, the feeling is delicious! Try it some time. When I got to Glendive I resigned in favor of the coyote, and with the $26 I got for salary went back to Illinois, only to be attacked a few weeks later with the genuine swamp chills and fever. My opinion of coyotes is not flattering. They are like some legislators I know of who "don't believe in game laws, nohow"—all noise and no bite (work). So much for "b-b-u-c-k-k a-g-e-r."

F. J. S.

MARYLAND ASSOCIATION.

BALTIMORE, June 6.—*Editor Forest and Stream:* An association known as the Maryland State Game and Fish Protective Association was permanently organized at a meeting held in the Academy of Sciences April 16, 1895. It is most gratifying to the officers and members to see the deep interest manifested in the association by so many persons in Baltimore and throughout the state. Nearly one hundred members joined at the first meeting, and as many more have made application to become members since. In order that the Association become powerful and influential, we appeal to every person in the State interested in the preservation and propagation of game and fish to become members. The annual dues have been put at a nominal sum in order that the membership may be very large, thus adding to the popularity and usefulness of the association. Our beautiful song birds and all insectiverous birds will be cared for, as well as game birds. All laws for the protection of game and fish will be rigidly enforced, and if the present laws are fouud to be inefficient, the "law committee" of the Association will draft new laws and ask the General Assembly to pass them.

The most destructive agencies and violations of law that are driving wildfowl from our rivers, exterminating our game, and depleting our waters of fish may be summed up as follows: The use of big guns and shooting at night, which drive the ducks from their feeding and roosting grounds; shooting partridges and woodcock by market gunners during the close season for clubs and restaurants, which serve them as short bills; dogs that run at large hunting rabbits day and night all summer, killing young rabbits and destroying partridge nests; hauling seines during the spawning season; allowing small fish that are emptied from seines to lie on the shore and die; setting fish traps, which kill everything, great and small, that get into them; putting lime into trout streams, and the abominable custom of throwing dynamite cartridges, which kill every fish within several hundred yards of the place of explosion; and last, but not least, is a want of authority to enforce the laws for the protection of that magnificent fish, the black bass, in the Potomac River. The dispute about the boundary line between Maryland and the Virginias is the stumbling block in the way that can be removed by uniform legislation.

It can be readily seen that the task undertaken by the Association is not an easy one; but we have entered upon the work with a determination that nothing will be left undone to accomplish the results for which the association was organized, and to this end we invoke the co-operation of all persons interested in the work undertaken by the Maryland Game and Fish Protective Association. We are persuaded beyond doubt that with proper laws regulating and restricting shooting and fishing, rigidly enforced,

the game and fish supply of the State will become as abundant as ever.

The Association will also stock the fresh, water streams with trout and bass, distribute live birds in the different counties of the State, to replenish those who perished during the blizzard last winter, and inaugurate a systematic plan for feeding the birds in times of deep snows in every election precinct in the State.

An appeal will be made to the proprietors of hotels and restaurants and to the stewards of the various clubs in the city to refrain from buying game during the time prohibited by law. Co-operation by them with the Association will assist in accomplishing much good. At the same time they are admonished that a secret detective service has been organized, and that whosoever is found violating the game and fish laws will be prosecuted to the fullest extent.

Annual dues: Baltimore city members, $2; county members, $1; county club membership, $3; honorary members, $5.

DR. GEORGE W. MASSAMORE, Secretary-Treasurer,
334 North Charles Street, Baltimore, Md.

A DEER HUNT IN THE EVERGLADES.

A Story for the Boys.

Before Ned Cutler left his home in New York, to spend the winter with his parents in Palm Beach, Fla., he caused it to be known among his friends that he should shoot deer and alligators in unknown quantities while there. He was almost thirteen, and as boastful as boys are wont to be at that age, and pardonably proud of his marksmanship. He had pictured to himself how the deer would fall before his unerring aim like the wooden images in the shooting gallery.

Arriving at that beautiful spot, Cocoanut Grove, Lake Worth, his first inquiries were with reference to the deer and alligators, and he was somewhat disconcerted to learn that deer did not sleep under the eaves of the hotel and that alligators could not be shot from the back door of the bath-house; but that the former had to be sought five or ten miles in the Everglades, while the latter must be hunted at night with much caution and skill.

Not discouraged, however, he spent the next three weeks, wondering and delighted, in acquainting himself with that wonderland of fruits and flowers, of wildfowl, mosquitoes and sand fleas, and, by no means incidentally, in striving to induce some one to take him deer-hunting in the Everglades.

None were easily induced to take a boy on such a dangerous and exhausting trip; but by much coaxing Lane one day promised to take him the next time he went, if his parents were willing. There was a sly twinkle in the old Floridian's eyes as he made the promise, and there is a suspicion that he would not have made it had he not felt sure that the conditions could not be met. Indeed, it looked for a time as though the old hunter had reckoned wisely; for, when Ned's mother heard of the hard marches through scrub and hammock and marsh, of the dangers from snakes and fever, she refused to grant his request.

His father had dismissed him with "You may go if your mother is willing;" so he found, as many an older one before and since, that his destiny hung upon the decision of a woman. Ned had learned in his thirteen years of experience that a woman's heart is pliable as well as solicitous, and hence bent his energies in obtaining the much coveted permission. An able ally he found in "Doc" Hart, of the store down on the "p'int," who had shot every kind of game in Florida during his twenty-five years' residence, as squatter and merchant, at the p'int. So "Doc" came around to the hotel one evening and was introduced to Ned's mother. During the conversation that followed Mr. Hart's opinion was requested in reference to the boy's desire, and Mr. Hart thought he could safely go, and expressed a hope that his mother would permit it. "But the snakes!"—"Oh yes, there are some snakes. The cottonmouth moccasin is the most dangerous, since it gives no warning, as does the rattler; but then the Seminole Indians go through that whole region barefoot and with bare legs and are rarely if ever bitten." Mr. Hart might have added that the skin on the feet and legs of the Seminole Indian is as tough as the "dasher, from tough old hide, found in the pit when the tanner died," and that his sight is as sharp and quick to pene trate the palmetto as the hawk's. Be it to his credit or discredit, according as you occupy Ned's or his mother's position, he did not, and as a result of that conversation Ned found himself a week later going on a deer hunt in the Everglades.

The guns and provisions are all in the skiff, as is Ned in the bow, "Doc" Hart in the stern, and "Traps" Lane at the oars, pulling the two miles across Lake Worth, in the wonderful quiet of the very early morning. Having made the transit, the skiff is tied under the overhanging trees, that the hot sun may not start the seams during their absence. Each one then takes his pack and gun, and they start single file over the narrow path leading for two miles through the pine and oak forest. Ned's load weighs about 30lbs., while the men carry considerably more. But 30lbs. is a load for a boy of thirteen after the first mile. Now they strike a clearing of an acre or more covered with growing pineapples. Ned thinks they look like a lot of small century plants. Then through the woods again, and soon they come upon a lake, on whose shore they deposit their burdens. Our young hunter sits down to rest, while the men skirt the shore, one in one direction and the other in the other, diving in every thicket of palmetto scrub like dogs for a covey. Soon Lane calls out, "Here she is," and as Ned is wondering who "she" can be, he sees him come around the fringe of shore propelling an old punt or flat-bottomed boat. Into this everything is loaded, and off they glide swiftly and almost noiselessly, propelled by the long powerful strokes of the paddle, wielded by Lane standing near the stern, an erect six feet of athletic humanity.

From one lakelet to another they proceed through tortuous channels so narrow as to almost prevent their little bark from passing. After an hour they come upon a vast expanse of water and slime dotted here and there by miniature islands. The water is all depths, from 5 or 6ft. to as many inches, and frequently they are aground, and then all step overboard and, grasping the rail, drag the boat forward. Now Ned knows why the bottom of the boat was made flat; and he sees many things to make him exclaim "Oh!" "Wonderful!" "What is that?" It is indeed a fairy-land, for web-footed fairies perhaps, but marvelously beautiful. The dead gray cypress stumps, some of them 10ft. high, stand like sentinels in every direction, and upon almost every one of them clings an air plant (epiphytic orchid) in full bloom—that wonder of tropical Florida. The roots, white, fibrous and exposed, grasp the dry dead wood and, without a particle of moisture except what pervades the atmosphere, send forth a dozen or more spined leaves, similar to those at the top of the pineapple, and from their center a single spike, at whose extremity appears the bloom—scarlet, pink, blue, yellow and variegated, almost every color of the spectrum. Then the living cypress and oak, festooned with yards of the silvery Spanish moss. And the birds: curlews, with their great pink, crescent shaped beaks and red legs; and the egrets, carrying between their wings that wavy plume so much prized by ladies; and the flamingo, standing like a flame on his long black legs; and the pelican, with his great fish pouch hanging like a sower's sack under his half yard of bill; and—but there in the soft mud is deer "sign"—sheep tracks, Ned would have said—and so a gun must not be fired, although he would like so much to take his mother an egret plume.

The "sign" becomes more numerous, and the men direct Ned to paddle softly along the right shore of a small island, while they wade to it and carefully stalk on its shore.

Ned lays his .38-caliber rifle across the boat from rail to rail, and a double barrel 10-gauge shotgun loaded with buckshot by his side, thinking, if a deer should appear, he would first shoot with the rifle, and if he failed to hit with that would then use the shotgun. He then pushed the boat forward, keeping his face to the bow and his eyes on the scrub. Suddenly he hears a slight noise to his right, and turning in that direction sees the foliage open and out of it leap the cleanest, sleekest, most beautiful, slender limbed creature he ever saw. Holding his oars poised, he watches it in wonder and admiration as it takes easy lopes, splashing the shallow water at every jump, until it disappears within the dense foliage, not more than fifty yards away at any time. The men have heard the splashing, and, knowing what it means, rush toward Ned's side of the island. He hears them and looks down at his guns, and only then realizes that he has had what he had always boasted he never would have—buck ague. As he came up to the boat Lane asked, "Did you see the deer?"—"Yes."—"Then why didn't you shoot?" But as he saw the two great tears stand in the boy's eyes he did not press the question, but Ned heard him mutter, "We've all had it."

They now push on for a mile or more, and then carefully hide their craft from the sun and any roving Seminole that may be "plume hunting" in that vicinity.

It is now past noon and they lunch under a great pine and then shoulder their packs and trudge on. Ned is startled frequently by a whip snake darting for an instant above the dwarf palmetto. The suddenness of their appearance and their proximity to his legs gives him an uncomfortable feeling, and he wonders how far it is yet to their camp.

He has been up since midnight, toiling under a pack part of the time and often helping to drag the boat, while the sun has burned his skin until it stings, his eyes smart from the glare of the fierce rays upon the water, his back and feet ache, perspiration pours from his face, and he is happy, for he is accomplishing his purpose.

"Here we are," he hears Doc say, as they approach a clump of trees situated on a slight rise of ground.

Palmetto leaves are gathered and covered with a blanket for a bed, pine knots are soon blazing and the coffee pot is suspended over them. Then supper, and as the twilight deepens Ned listens while Traps and Doc "swap" stories in the glare of the camp-fire. Then to bed they go, three in a row, boots for pillows and the smoke from the pine knots floating over them to discourage the mosquitoes.

While the other two sleep Ned looks for a long time into the face of that marvelous blue, studded with more brilliant gems than he has ever seen in any northern sky. It seems to him that he has only just fallen asleep, when he is aroused and told that the coffee is ready.

During the pre-sunrise breakfast the boy is advised to take the shotgun instead of the rifle, for the reason that it does not require so accurate aim. Remembering his experience of the previous day, he reluctantly decided to do this. All the "truck" being securely locked within the camp box, the party again set forth. It is near sunrise and the wilderness is echoing with avian songs. Keeping to the uplands and avoiding as much as possible the marshes and lakes, they strike toward a point two miles beyond, where, in a large marsh, grows a particularly succulent species of weed known as deer grass, and where deer are sure to be found if any are in the neighborhood. Soon "sign" is found, and they agree to speak only in whispers, and that if one says "halt" they are all to stand at once perfectly quiet. This because the game is exceedingly shy and alert to discover danger; and while a deer will look at a man standing still for full two minutes and then go to feeding again unalarmed, the least movement on the man's part would send it scurrying away.

Thus they were advancing over an expanse of shallow water and ooze, their eyes sharply examining every object beyond—Ned on the right, Traps next and Doc on the left, with Spot, Traps's dog, a few yards in front of Ned, when the dog gave a smothered whine and sprang to the left. "Look out; snake," whispered Lane. And there, a little to the right and not more than ten feet away, lay two coils of an obscurely blotched snake, its head in the center and its jaws thrown wide apart, showing the white interior of its mouth and the swiftly-vibrating forked tongue. Its small eyes gleamed wickedly and its body began to thicken and the circle of the coils to decrease in diameter as Traps grasped Ned by the arm and drew him back twenty feet or more. Then drawing the shell from his rifle and inserting another charged with silent powder, he stepped a few steps forward and raised his gun. There was a little white puff of smoke, and the venomous cottonmouth moccasin (*Ancistrodon piscivorus*) was perforated just below its flat head, and after beating the mud for an instant lay dead. It measured 3ft. 7in., and as they noted its trail in the soft mud, they saw that it had crossed squarely in front of them, and that, had it not been for the dog's warning, Ned would have walked upon it and must surely have been bitten.

It is said, and old hunters affirm, that this species of snake will contract the body, and then by sudden expansion throw themselves three or four times their length toward the object of attack, striking their fangs into the victim, and that while they have known cases of men recovering from the bite of a rattler, they have not known of any recovering from the bite of the cottonmouth.

After this incident it was agreed that one should look upon the ground for snakes while the others watched for deer. About an hour afterward Ned whispered. "Halt! Isn't that a deer over there to the right?" After looking for some moments Traps said in an undertone, "The boy has a good eye, there's two of them about a mile away."

Now came the most difficult part—to get within range without frightening them. Traps secured Spot with a strap to his hunting belt, and then a consultation was held.

In front of where the deer were feeding there stretched a long narrow ridge thickly covered with cypress and palmetto. If that could be reached it would afford a safe cover, but there intervened a stretch of three-fourths of a mile that must be made in plain view of the game, and although the breeze was in their faces and the deer were feeding in the same direction that they were going, it would take much care to reach the cover. Ned was instructed to keep his eyes on the white spot at the rump of the larger animal and when that disappeared to stand perfectly rigid until it reappeared; that the white spot was the under side of the buck's short tail, and when he was feeding he would have his tail thrown up over his back and show the white, but that as soon as he looked up or was at all startled, the tail would come down and the white spot disappear.

Then they started with long rapid strides and the first half mile was made quickly with only one stop, but the rest of the distance was made more slowly, as the game had changed its direction and was now feeding across their line of approach.

At last they are behind the scrub and make their way until about opposite where the deer are feeding. It is agreed that Traps shall proceed and then cross the ridge beyond, while Doc shall cross midway between Traps and Ned.

At a given signal they all enter the dense and tangled thicket and carefully and as rapidly as possible push through to the opposite side, knowing that one of them will have a fair target within range when they emerge. Which one it will be none of them know, as the animals may have shifted their position since they have been lost to view.

Ned's heart beats with intensity as he proceeds, wondering alternately if he will be the fortunate one and if there are snakes in the thicket. At length he pushes aside the vines and sees to his left—but out of range—the buck and doe feeding side by side, and knows that the next man will have the shot. How beautiful and sleek they look, these elegant aristocrats of the Everglades, and he almost hopes Doc will miss.

Suddenly the buck raises his head and looks toward the thicket, then a sharp report rings out and echoes and re-echoes and re-echoes over and breaks the almost distressing silence. The buck rears on his hindlegs, and the doe turning dashes directly toward him. He cocks both barrels and pulls the triggers so nearly at the same time that the reports succeed each other like successive watch ticks. The recoil of the gun, produced by the almost simultaneous explosion of 10drs. of powder, was so great as to hurl him backward upon the ground and loosen his hold upon the gun. Almost frantic and hardly knowing but that an earthquake was in progress, he tore his way out, leaving his gun behind.

The first thing he saw was the buck lying in the water, and then the men preparing to draw it to the ridge. It was found that the bullet from Doc's rifle had struck the left shoulder and broken it, then passed downward and out of the body on the other side.

"But where is your gun?" asked both men of Ned. He then told them what had happened. "Well, didn't you hit her?" "I don't know, but I think I did." "We will look for your gun first and then see what has become of the doe," said Doc.

Doing this, they found both, the doe lying dead at the edge of the thicket, less than thirty rods from the gun.

As they were returning to camp loaded with venison Traps made a side remark to Doc to this effect, "That's the pluckiest young un I ever run ag'in. He's like a purp I had once. When he got after a possum he'd have him 'fore he quit if it took a month. That boy will succeed." He was right. "That boy" is to-day a successful young man.

E. J. KLOCK, M.A.

ADIRONDACK LEAGUE CLUB DEER.

NEW YORK, June 21.—*Editor Forest and Stream:* Upon my return to-day from a trip to the Adirondack League Club Preserve I read with astonishment Mr. Raymond S. Spears's letter in the last issue of FOREST AND STREAM. Mr. Spears is of tender years, and should not be confounded with his father, who is well and favorably known as a writer from Northwood. His boyish letter is, unwittingly, I believe, an outrageous libel.

During the past winter the Adirondack League Club's great tract was carefully watched by game constables, who are expert woodsmen, and frequent reports of what was going on at the lumber camps were sent to me as chairman of the fish and game committee. Since the fishing season opened members visiting the preserve have sent occasional reports of their observations. In addition to these opportunities for keeping informed I have spent much time there and have continued to study and enjoy, as I have done during the past twelve years, what I believe to be the most charming fishing and hunting grounds in the world. I think I know most of the facts about legal and illegal deer killing in the club territory, and am glad to have the opportunity of showing how Mr. Spears has been misled by his friend's tattle.

He is informed that dead deer were seen between Moose River and Canachagala Lake. It is true that there are (or were a few months ago) at least nine dead deer there. They were not killed by dogs or wolves or weapons. Neither did they die from starvation, as the carcasses were in fairly good condition. The nature of their disease is to me entirely a matter of conjecture. One large buck was found alive, but in a dying condition. He was able to rise and move a short distance, when his hindlegs gave way. One of our men examined him carefully, found no mark on him, and did what he could to save his life. A doe was found in a helpless condition, with no marks on her. Her disease was apparently in the throat or lungs. As she was in a bad position, a bough bed was made for her and her immediate wants were supplied. I have

spent a part of a considerable number of years in the woods, and have rarely failed to find deer skeletons in the spring fishing season. I am inclined to think that the number of deaths from disease and severe weather last winter was somewhat greater than usual, although not at all alarming.

Three log jobbers had crews in the lumbering camps on Moose River during the past year. The jobbers were straight men. Our relations with them and methods of watching were such as I do not care to detail. It is enough to say that all the sportsmen in our club who cared to make inquiries have been satisfied that the sporting in Moose River region has not been seriously damaged by the lumbermen. On the contrary, there is reason to believe that both the hunting and the fishing will be bettered by the scientific lumbering which this club has specified and secured. I have no doubt that the hide and hair seen at Rape's camp were those given by our members to Rape's men to make moccasins, etc.

Mr. Spears thinks the number of deer in the Adirondacks is decreasing, and this is probably true, but it is also reasonably certain that in the 120,000 acres of the League Club there are more deer now than there were six years ago. He apparently forms his opinion from the fact that his friend in one march across a narrow belt of our tract did not see so many deer and trout as he saw there several years ago. His friend, not being a club member or a club guest, either abstained from poaching or else committed a misdemeanor, so that in either event his evidence as to the quality of our fishing does not carry weight. One swallow does not make a summer; nevertheless, my experience the day before yesterday, in taking twenty-one fine trout, all with flies, in about three hours' fishing in Moose River, is surely better positive evidense than a report at second hand that a man caught nothing in a region where he had no right to be. During my walk back to Bisby Lodge on the Combs Brook trail, I started (but did not see) two deer. At Combs Lake I saw a two-year-old doe. Between that lake and second pond I started and saw two more deer, one of them an unusually large buck.

Our club rules protect deer much more strictly than does the State law, and there is little doubt that the deer in the preserve are increasing both naturally and also by being driven in from more poorly protected regions. The fishing is certainly improving. Our hatchery has turned out several hundred thousand trout each year —this spring 423,000. In addition to this liberal stocking we purchased and put in our different streams and lakes last January 25,000 one and two year old trout. Their transportation and distribution, by the way, was rather a remarkable feat. They were taken in six car loads from Caledonia, halting each trip over night at Utica to Forestport, White Lake and Fulton Chain stations. From these stations, respectively, they were drawn on runners to our lodges at Honnedaga, Bisby and Little Moose. From each lodge they were distributed to the different waters in pack cans on men's backs, in some instances being carried seven miles. An accurate account was kept of dead trout and the loss was less than one-half of one per cent. The credit for this remarkably successful distribution is entirely due to James Annin, now State Superintendent of Hatcheries, and to Henry Studor and John Commerford. W. H. BOARDMAN.

Minnesota Moose Captures.

ADAM MCKIBBEN, of Joliette, caught two baby moose as they were swimming across the Red River last week. They are very young, but are thriving on cow's milk.—*Pioneer Express.*

Mr. J. L. Dunbar, living near Red River, in the vicinity of Joliette, but in this county, captured the mother, which was nearly as large as a mule. The State game warden in some way got wind of it and came up from Minneapolis last Friday and seized the animal. The law reads: "No moose, elk, caribou or antelope shall be killed or had in possession until Jan. 1, 1898." If this law is violated the animals then become the property of the State and violators may be punished by imprisonment or fine. Mr. Dunbar was, like the rest of us, ignorant of the new game law, and was therefore, on the first offense, allowed to go without punishment.—*Hallock (Minn.) Enterprise.*

[The law forbidding taking moose before 1898 is not a new one; it has been printed in the *Game Laws in Brief* for a year and more.]

Canvas Boats for Shooting.

SINCE 1889 I have used a canvas boat 12ft. long, 40in. wide, with flat bottom, made by one of FOREST AND STREAM'S faithful advertisers. I have shot from it, lying, sitting, kneeling and standing, and do not hesitate to do so still, whenever I get a chance. It is light and responds somewhat to the recoil of a gun, but I never thought of its being unsafe. A friend once reached around the wrong way to shoot at a flying duck and got kicked off the folding stool. The boat rocked a good deal and shipped a little water, but it was clearly his fault. It will convey five men, but does better with two or three. I have floated or rowed up on many an old sprig-tail with it. To say I am pleased with the investment is to put it mildly. Its only serious fault is that it sits high and catches a great deal of wind. AZTEC.

About Crows.

Mr. M. R. Bortree recites an odd experience with crows mentioned to him by his friend Mr. Wesley Gary, of Gary's Mills, Ill., last year. Mr. Gary observed three crows engaged in a contest with a turkey hen over a brood of young turkeys. Two of the crows would attack the mother turkey, flying at her head and pecking viciously, until they had her fully occupied, when the third crow would dash in and kill and carry off the young turkey. This happened several times, and Mr. Gary was exasperated at the losses the crows inflicted on his turkeys. This year Mr. E. H. Gary, of Wheaton, Ill., has been losing turkey eggs, and has found a great deposit of egg shells in a certain marsh to which the crows have carried the eggs to eat them. From all these things both Mr. Gary and Mr. Bortree figure that the crow is a very deadly enemy to quail and other game birds, and ought to be suppressed.

E. HOUGH.

Sea and River Fishing.

SOME MORE ABOUT LEAPING BASS.

Editor Forest and Stream:

It may seem presumptuous in a poor devil who has never owned a whole trout stream on his own property, nor any part of one, nor been resident physician at any sort of springs and whose experience with black bass does not extend over the waters from Pennsylvania to Louisiana, who has never been a fish commissioner even, with numerous other reasons to hear from, to differ in opinion with one who has reveled in all these comforts and honors; but I am going to assert that I have seen a bass jump out of the water, while hooked, 5ft. or more, notwithstanding Dr. M. G. Ellzey says "the eyesight is the most deceptive of our senses."

This particular bass I have in mind was handled by old Ben Renshaw, standing up in a boat in Central Lake, Michigan, while I was standing up in another boat 30 to 35yds. away. The fish left the water straight up, not on a curve, nearly in line between us, and when he reached the top of his leap was on a line level with our heads.

Ben was about 5ft. 10in. in height, while I am a couple of inches shorter. Now, taking the rule regarding the velocity of falling bodies, count in the time used in reaching the highest point of the leap and the time in falling back, and it seems to me that it would figure up more than a quarter of a second that the bass was in the air.

This is only one instance in which I have seen bass jump nearly if not quite as high, and in three instances have I seen maskinonje jump higher. I am quite positive in this, although Dr. Ellzey may say he is quite certain I was mistaken.

The Dr. tells us: "A leaping bass is not generally in the air above one-tenth of a second, and I take it to be a physical impossibility for anybody to see whether his mouth is wide open or not, or whether he shakes his head or not. I repeat what I formerly said: I do not pretend to doubt that gentlemen believe they have so seen, but I am quite certain they are mistaken."

To use a street gamin phrase, "Come off, doctor, yer talkin' through yer hat."

From where I write I have just thrown through an open window the "heel" of a loaf of bread on to a neighboring roof about 10 yards away, and I can see some English sparrows pecking at it, and I can easily see when one has its mouth open with a good sized crumb of bread in its bill. Why should not I, or anyone else, be able to distinguish when a bass has his mouth open, or shakes his head at the same distance, or a few yards further away?

If it is a physical impossibility to see a bass open his mouth or shake his head 30, 40, or 50 feet away, I take it that it is a physical impossibility to see the bass at all. Are we to disbelieve the evidence of our eyes, defective though they may in a measure be, and blindly agree that we are all mistaken, because Dr. Ellzey is quite certain that we are? Must we all retire into our shells and acknowledge that we can't see, nor estimate a distance within 40ft., and confess that we can't tell the truth about anything we do happen to see? Because this angler of 35 years' experience never saw a bass jump 3ft. high is evidence enough—for him—that no one else ever did. The doctor seems to have the conceit that if we don't see as he does, we are not competent to judge: we are all mistaken.

He has "seen a great many bass jump into a boat, but none jump over one." I have seen several bass jump over a boat, and two that I remember failed in their calculation of the distance and dropped into the boat. Does anybody with "hoss sense" suppose that a bass makes the leap from inshore with the especial purpose of dropping into the boat?

Because the Doctor never saw one leap over a boat is, I suppose, evidence enough for the rest of us that they must necessarily all drop inside, and I reckon I must be mistaken when I say that once, when a comrade and I were fishing from a boat in the Little Miami River, near Remington, Ohio, a bass made a flying leap from inshore near a patch of weeds clear over the boat of 4ft. beam, striking the water on the outside 3 or 4ft. from the boat—estimated of course—and owing to the unexpectedness of the performance, and not having a yard stick along, I forgot to measure the distance from the water while he was at the highest point of his leap, hence I am unable to give the exact "curve" he described while in the air, but I am reasonably sure, although I may be mistaken, that the distance from where he left the water to where he went into it again must have been not less than 10ft. on a horizontal line.

My experience with leaping bass when hooked has also been, I am sorry to say, somewhat at variance with the Doctor's, as at least eight in ten have leaped nearly straight out of the water, striking it on the return rarely a yard from where they left it, making no "curve" to speak of while in the air.

However, as I have never fished the waters from Pennsylvania to Louisiana, my testimony may not be competent—in the Doctor's opinion—and besides, the bass in these waters may have different "curves," and "drops," and "inshoots," and "outshoots," from the bass with which I have had to do, which would put mine to a disadvantage in the matter of a low, graceful curve while making a leap.

It requires small perception to make out that a bass can't jump as high in shallow water as he can in deep water, for the reason that the depth is not there to give him a start upward, same as a man can't stand and jump as far as he can with a running start.

This might have occurred to the Doctor had he stopped to think while telling about Mr. Page's bass—a great number of them, no doubt, all dropping into the canoe instead of going over it, as they doubtless intended to do; they had not depth of water enough under them to get a start with the proper upward angle for an "outshoot" that would carry them over the canoe, so they just dropped into it. They were simply mistaken, possibly by reason of defective eyesight.

"Several hundred bass" are a good many to leap clear of the water to one rod and not lose half of them while in the air, and I am strongly moved to say that I am "quite certain that the Doctor is mistaken," but I will not be so discourteous; I will take his word for it.

Toward the last he tells us, "Play your fish on the surface and you will see them leap very often, but very few will get away." I am moved again to ask, "How are you going to play your fish on the surface in 20ft. of water, with 20 or 30yds. of line out, unless you have a rod 20 or 30yds. long and reel up till there are only a few feet of line free of the rod tip?

Dr. Ellzey may be able to do it, but I confess that I have not yet learned the knack of it, maybe because my rod was always too short to "hold them peremptorily near the surface," with line out eight or ten times the length of the rod.

He further tells us, "If you want your fish to stay under water play him with a low tip and a light hand and he will be nearly certain to accommodate you." Shade of gentle Izaak! I am just beginning to find out how little I know about bass fishing, and I'm going to get rid of all the old notions and traditions that have been infesting me for years and start fresh—begin it all over again and learn how to handle a bass *secundum artem* or words to that effect. I'm going to get me a pole 30yds. long, as near as may be, so I can play 'em on the surface, where I can see what they're doing; and if I want them to stay under water it will be less trouble maybe to lower the tip of a rod of that length than it would one of 7ft. or 8ft.

One more quotation and I'll "submit the case for arbitration." The Doctor says, near the beginning of his article, "As my opinions are founded on very long experience and many careful observations, I find no reason to modify them."

It is scarcely to be expected that he will. I don't know of any one in the land that is more welcome to his opinions that Dr. Ellzey, but I claim the privilege of differing from many of them, and if I have "played him a little too near the surface" in expressing some of my notions about matters and things, he can charge it up as one of the mistakes of "the most deceptive of our senses" and keep right on finding no reason to modify his "opinions."

KINGFISHER.

CINCINNATI, O.

THOSE MASTIGOUCHE TROUT TANKS.

MONTREAL, June 18.—I have lately returned from our club lakes, where I spent about a fortnight enjoying the fishing. I thought perhaps you might like to hear something about our waters. We have had a larger number of visitors at the Mastigouche this spring than usual, and on the whole the fishing has been better. More large trout have been caught than during any past season, some five or six of over 4 to 4½lbs. being among the number, besides quite a lot of two to three-pounders. Several of the parties took out some very handsome boxes of fish, which I have heard caused quite a stir when exhibited to the friends on their return home.

The first arrival at our camp was Mr. W. L. Maltby, vice-president of the club, a keen fisherman and enthusiastic lover of all outdoor sports, and one whose name is so well known in connection with the Montreal Amateur Athletic Association, of which he was president for several years. He was followed a few days later by a party from Syracuse, N. Y., among whom were Mr. Louis F. Powell (who has been a regular visitor for the past eight years), Wm. Allen Butler and son, Mr. Hall, Pierce Larrabee, L. C. Smith with his brother and Dr. Smith, Mr. Jones and others from the same city. Mr. Stebbins, of Watertown; Mr. Moore and son, Bentley Whitman, of Little Falls; L. F. Pike and brother, of New York, Paterson and son, and H. B. Ames and wife, of this city, besides several others whose names I do not recall at this moment.

The weather was generally cool, sometimes cold; and until about the 28th we had very few really warm days, and the flies were not really troublesome until after that date.

One of the gentlemen from Syracuse, on his way through this city, ordered a couple of strong galvanized iron boxes made and sent up to camp to carry home his fish. The boxes arrived a few days later, addressed to the Mastigouche House. Whether a mistake had been made in giving the dimensions or in the making, it was evidently a surprise to the party who ordered the boxes when the two big boxes were brought to the house and laid side by side on the piazza. As they were addressed to the Mastigouche House and there was no other name upon them, the landlord asked whom they belonged to and what they were for, but no one would own them, or acknowledge that they knew anything about the matter. A good deal of chaffing was indulged in at the expense of the unfortunate owner, and fears were expressed that if anyone had so far trespassed upon the good will of the Canadian authorities as to attempt to carry off into the United States two such huge boxes of trout, there would be just cause for another fishery arbitration between the two countries. One of the boxes is now in Syracuse, and it has leaked out that some of the L. C. Smith party went home in it. The other box remains at the camp and will be utilized as a cold storage room.

The fly-fishing, up to the time I left, June 2, had not been very good, but was improving as the water was going down in the lakes. Most of the fishing up to the last of May was done by trolling with small spoon, live minnow or fly.

I did not succeed in capturing any of the largest trout, but was very well content with landing one of 3lbs. and one of 2½lbs., the former with a Parmachene Belle and the other with a small light blue fly that is very taking in these waters early in spring. It is a local fly, and not like any I have seen elsewhere. I returned home on the 3d after a most enjoyable trip, both as regards the fishing, and the very pleasant company of sportsmen from your side of the line whom I had the pleasure of meeting, some for the first time, but others known for several seasons past, and whom I hope to have the pleasure of meeting frequently again. Mr. and Mrs. Bruning called on me Friday last on their way up to the camp, where they expect to remain until early in August. A Mr. and Mrs. Plunket, friends of theirs, are also at Mastigouche for the summer. I hope to join my family there about the 1st of September. HENRY W. ATWATER.

Game Laws in Brief.

THE *Game Laws in Brief*, new edition, ready Thursday, June 27, has new game and fish laws for more than thirty of the States. It covers the entire country, is carefully prepared, and gives all that shooters and anglers require. See advertisement.

SHENANDOAH BASS FISHING.

Editor Forest and Stream:

Black bass fishing has been exceptionally good this season in the Shenandoah River. At Overall, Page county, Virginia, in May last, three Washington gentlemen took eighty odd bass all in one day from the Shenandoah, which averaged nearly two pounds each. Live bait was the attraction, and the fishing was done from boats. More and larger black bass, all of the small-mouth species, are taken every year from this particular point than anywhere along the Shenandoah River, which is a succession of the "eddy" and swift water, good alike for live bait and fly fishing. A walk of two miles up the river from Overall affords three miles of as fine and comfortable wading as can be found anywhere on this continent, and when the bass are in humor for taking the fly, a "No. 5" cruel may easily be filled in that distance.

Overall is merely a flag station on the Norfolk and Western R.R., about 60 miles from Harper's Ferry, and 12 miles from Luray, and the same distance from Front Royal, where General Lomax had the little misunderstanding with General Philip Sheridan in 1863.

Mr. Mandley Triplett, who is the postmaster, keeps open house for fishermen during the fishing season and for sportsmen during the fall and winter. His terms are only one dollar per day, and how he can afford it and feed and lodge his guests as well as he does is a mystery. He certainly does not make anything out of it. Mr. Triplett also has families from Washington, Baltimore and other cities, who remain with him for months at a time. He makes special arrangements with those remaining one month or longer. Those who would be satisfied with plain country fare need not hesitate to spend a few weeks with the Tripletts. They have milk, cream and butter in plenty, and raise their own vegetables. There is ice in abundance, a luxury not always to be found in country farmhouses. All this for one dollar a day! I had almost forgotten to say that the beds are comfortable—both feather and hair.

The largest small-mouth bass ever taken in the Shenandoah River was caught by Mrs. Triplett, a lady over 60 years of age, last summer, within 100 yards of the house. It weighed a fraction less than 8lbs., and was caught on a hand-line, small frog for bait.

As fine partridge (quail), pheasant (ruffed grouse) and turkey shooting as can be found in the State may be had within easy walking distance of Overall. Deer were formerly quite plentiful, but are now scarce. It was also feared that the past cold winter had killed off nearly all the "Bob Whites," but your correspondent heard them calling from every hill-side while spending a few days at Overall a few weeks ago, and fair quail shooting may confidently be expected there this season as usual. The open season begins Oct. 15th.

Sportsmen desiring to visit Overall would do well to write beforehand, as so popular a resort is liable to have all the rooms occupied at this season of the year. It is hardly necessary to dwell upon the scenery and climate of that section of the "Old Dominion" known as the "valley of Virginia." Overall, Page county, is in the very heart of that matchless region, where your correspondent would love to spend every day of his life. He arrived there a perfect stranger and departed after a stay of only a few days, feeling as though he were a Virginian and with a friendly feeling for every man, woman and child he met while there.

Admiral Jouett, U. S. N. (retired), has at Overall the most ingeniously contrived fish car. It has compartments at both ends for line-bait, and room for more than one hundred bass. The car is oval in shape, covered with fine wire and withal exceedingly light. Bass have been kept alive in such a car for weeks at a time. N. P.

NEW YORK, June 20.

OUANANICHE NOTES.

ROBERVAL, Can., June 17.—Here I am at Lake St. John again in the midst of leaping ouananiche. I started from New York on a salmon trip, but had to run up to Roberval to try the ouananiche for just a few days. It is a motley assortment of fishermen who are drawn to this region by the reputation of the active little salmon. First we have the native habitant, who stands on a rocky point and yanks his surprised victim up among the boughs of the fragrant balsams and larches overhead. His original investment in the way of bait is a piece of pork, with which he catches an ouitouche (dace). The ouitouche is then cut up into strips and business is soon under way. The larger ouananiche almost always gets away from the habitant, because when he yanks they have a peculiar faculty of yanking back again. And as the large fish are about as plentiful as the little ones, it is painful to think of the things that the wife and children must listen to at evening by the fireside.

Next in order comes the man who has come all of the way into the wilderness wholly unprepared. I met one of them on the train *en route*. He had a heavy bass bait pole, and had heard that the ouananiche should be taken with the fly; so he had somehow managed to get hold of a trout leader with four flies on it. The leader was frayed and the flies were very small. One of them was nearly broken off at the head, another was looped on the leader so that it pointed the wrong way, and the remaining two were passable. But this man's spirit was right. He was all full of it; and when he left after a three days' stay he had caught some fine fish on borrowed flies, and promised to spend all of the coming year in learning how to do things properly.

Another character is the really expert trout fisherman, who tries trout tactics in fishing for ouananiche; but the ouananiche is a salmon, and I have met very many men here who had not yet found that out.

For any fisherman who studies the habits of fish and who outwits them by a superior intelligence Roberval and the Grand Décharge are a paradise. The ouananiche this year went out of the lake into the Décharge about June 10th, and on the 14th they were in the foam. They work in the foam all day long when certain millers appear in great abundance—during a period of about two weeks, beginning at the middle of June. Any one can catch them then with any sort of fly or bait. During the greater part of the season the ouananiche are among the sunken rocks at the tail of rapids, or in the return currents, and then the skillful fisherman has the greatest sport, but the majority of the fishermen whom one sees here are very inexpert, and they find all manner of fault with the fishing. As Mr. Ritchie of the Island House says, "If a man is going to do anything at a trade he must first learn the trade." And I never have seen a disappointed fisherman at Roberval if he had learned his trade. When one is tired of ouananiche fishing, he can take any quantity of great pike and doré in the quieter waters. And there are plenty of brook trout in neighboring streams.

I have fished a great many waters and there are none that I visit with greater pleasure than the Grand Décharge, excepting possibly the Nipigon. These two streams make an interesting comparison. The Upper Saguenay is of the same length as the Nipigon—forty miles. Its waters are dark from the stain of sphagnum bogs, while the Nipigon waters are beautifully clear. The Upper Saguenay rises in the spring time nearly thirty feet above its summer level, while the Nipigon fluctuates hardly that number of inches. The principal game fish in these two rivers are of about the same weight, averaging from 2 to 5lbs. each in the daily catch of an expert fisherman. In the Upper Saguenay the fish is the ouananiche, a salmon, and he is best caught by employing big salmon tactics. In the Nipigon the fish is the speckled trout, and he is best taken by using little trout tactics. On the Saguenay the canoemen are French Canadians; on the Nipigon the canoemen are Chippewa Indians. On both rivers the geological, botanical and general zoölogical features are fairly alike—excepting for the bold trap precipices of the Nipigon, which are replaced by bluffs of gneiss and syenite on the Saguenay. On both rivers the majority of visiting fishermen are unskilled and unprepared for their work; and on both rivers these fishermen lay it all to the fish, and they are right. The fish are really to blame. A very attractive way to reach Roberval is by way of steamer from Quebec to Chicontimi, passing up the grand, sullen and inspiring lower Saguenay. The steamer passes rock islands on which seafowl are breeding, and sandy islands on which seals with their young are sporting, but the most striking feature of the landscape is furnished by the milk-white whales which are almost constantly in sight in still water, rolling lazily out of water, and gleaming so white that they can be seen miles away. Many of the white whales which the steamer approaches at this time of the year are seen to have one or two cunning little grayish whale babies following astern. ROBERT T. MORRIS.

DECADENCE OF OUR TROUT STREAMS.

BY J. S. VAN CLEEF, POUGHKEEPSIE, N. Y.

[A paper read before the American Fisheries Society.]

SOME three or four years ago an article was contributed by me to FOREST AND STREAM in which the above subject was discussed, and while this is not a reproduction of that article, it must necessarily contain many of the facts and conclusions which were contained in it, and which further investigation satisfies me are correct.

Every angler who has waded and fished our trout streams during the past thirty or forty years has observed the general decrease in the water flow, especially during seasons of drought, and the decrease does not seem to be local, but universal.

The Legislature of this State has endeavored for some years past to arrest this decrease, especially in the North Woods; but in spite of legislative action it still goes on steadily and uniformly both in the "forest primeval" and out of it.

This legislative action has been based upon the theory that the causes of the gradual diminution in the water flow are and have been wholly or very largely local, and it seems to have been assumed that if the destruction of the trees at or near the sources of our streams can be prevented this decrease will be practically arrested.

Do the results thus far obtained justify this conclusion? or, in other words, are these causes local, and can the preservation of the trees at the sources of our streams do more than retard a result which is inevitable from other and more far-reaching causes?

It has not been my fortune to visit the North Woods or Adirondack region, as my fishing trips have been confined to the Catskill region and Canada. For over thirty-five years, however, I have constantly visited the Catskills, and during all that time have been thoroughly familiar with the streams of that region, and while my personal knowledge of these streams does not extend much beyond thirty-five years yet I feel assured that the statement of facts given below will be corroborated by many persons who could be named, and who have been familiar with these streams for over fifty years.

It will be conceded that, all other things being equal, like causes will produce like results, and if the North Woods and the Catskills are alike in their characteristics, then the causes which have produced and are producing a decrease in the water flow of one of these regions will produce a like result in the other.

The eastern part of the State of New York is divided into two immense water sheds—the northern, with its streams emptying into Lake Ontario, the St. Lawrence, Lake Champlain and the Mohawk River; and the southern, with its streams emptying into the Mohawk, Hudson and Delaware rivers.

Both of these regions are mountainous, and the altitude of these mountains and the intervening valleys above tide water is substantially the same.

The highest mountain in the northern water shed is Mt. Marcy, which is 5,468ft. high, and one of the highest in the State of New York is Slide Mountain in the southern water shed, which is 4,205ft. high.

The lower water shed, which extends through Schoharie, Greene, Ulster, Sullivan and Delaware counties, contains fifty-nine mountains which are over 3,000ft. high. Of these thirty-seven are of the height of 3,500ft. and upward, and of an average height of 3,728ft.

Included in this immense tract is what is generally known as the Southern Catskill range, contained within an area of perhaps thirty miles in length and twenty miles in breadth.

Fourteen mountains in this range are from 3,571ft. to 4,205ft. in height, the average height being 3,747ft.

These mountains are covered with nothing but hard wood, beech, birch, maple and balsam. The axe has never touched these trees except to provide an occasional camp for some benighted bear hunter or lost angler, and examination shows that these trees are of immense age.

The hemlock, which formerly abounded in this region and has been used so largely for tanning purposes, has with but few exceptions been cut entirely, or almost entirely, from the valleys, which are from 2,000ft. to 2,500ft. below these mountain peaks. It has not abounded nor has it been cut anywhere within many miles of the sources of the largest of the streams which rise in this mountain range.

In this range the following noted trout streams have their source, the largest ones, though running in opposite directions, having their sources very close to each other, viz.: the Beaverkill, Neversink, Rondout, Willewemoc, Esopus, Dry Brook and Millbrook.

For the purpose of calling attention to certain facts in regard to these streams I will first select the most noted of all of them, the Beaverkill, which has its source in the very heart of the Southern Catskill range, and runs for many miles before it reaches even the smallest clearing.

There are but few veteran anglers in this State who did not visit the delightful fishing retreat of James Murdock, which is situated on this stream some 25 or 30 miles below its source, in the 50s, and all will bear testimony not only to the abundance of the trout, but also to the abundance of the water flow.

At that time this region was always visited during the latter part of May and the fore part of June with one or more severe northeast storms, which were largely or wholly local, and so regularly did these storms occur that the lumbermen could always rely upon what was generally termed by them the "June freshet" for the purpose of rafting their lumber from a point some 12 miles below Murdock's, at the junction of the Beaverkill and Willewemoc streams, down to the Delaware River, and thence to Trenton or Philadelphia; and they could also always rely upon the high water produced by these storms for the three or four days required for that purpose.

In 1859 I encountered one of these storms just after reaching Mr. Murdock's house. He immediately started off his rafts, and my brother anglers and I waited for some five days before the waters receded to such an extent that we could wade the stream. The next day another storm of like severity occurred, and after waiting for some five or six days and finding the stream still unfit to wade I returned home, having had but one day's sport in a trip of two weeks.

About the year 1863 I had a similar experience on the Rondout stream. A severe and sudden storm had raised the stream, and it was four or five days before the stream was fit to wade.

These are isolated cases, but they are in line with my constant experience between thirty and forty years ago. It was not low water then, but high water, which was most feared by anglers.

On returning home from these trips, when we had been visited by these severe storms, it was found that they had not extended to any great extent either to the east or west of this mountain region, but seemed to be almost entirely local.

These storms were almost invariably followed by strong westerly winds, which usually continued for two or three days.

All this is entirely changed. The storms which prevailed so frequently thirty or forty years ago seldom occur any more, and when they do the streams run down almost as rapidly as they rise. In 1891 I was on the Rondout stream, when I found that it was nearly bank full in the morning from the effects of a storm which had prevailed during the previous night, and which was followed in the morning by the usual westerly wind. The stream ran down so rapidly that in the afternoon I found it possible to wade it, and in the afternoon of the next day it was too low for good fishing.

I have had the same experience in the Beaverkill, and have found within the last few years that not later than the second day after a storm it was in good condition for fishing, and on the third day too low for any satisfactory sport.

For the purpose of ascertaining whether the rapid depletion of the water in these streams commenced at their sources or at the point where the land on the banks had been cleared, I made a personal examination of the Beaverkill some four or five years ago, within a day or two after a heavy storm, following the stream for several miles above the point where a tree had never been cut, and found that the water had run down almost to the drought level.

I have also found by actual comparison that these mountain streams have of late years run down quite as rapidly as the streams which in other places run through lands which have been cleared and drained from source to mouth, and I firmly believe that the experience of others will thoroughly coincide with my own in this respect, and if I am correct in my statement of the above facts, then I am forced to the conclusion that the cutting or destruction of the trees at the headwaters of our streams is but one—and a very limited one—of the causes of their gradual drying up.

I suggest the following theory as accounting in part at least for the condition above referred to. Years ago the lands lying west of this mountain range were very largely unbroken, the prairies were covered to a greater or less extent with natural grass, and the swamps in the low lands were undrained. Under these conditions the winds which during that time largely prevailed from the west were surcharged with moisture by reason of the gradual evaporation from the soil, the lowlands and the swamps, and when these winds were forced up to a height of from 3,000ft. to 4,000ft., the moisture was condensed into rain and the mountain tops were saturated with moisture which slowly and steadily through springs and rivulets kept up the water supply of the streams. During the last thirty years the prairies have been almost entirely reclaimed from their natural state, the lowlands and swamps which furnished a large amount of moisture to the atmosphere have been drained, the rain as it falls sinks rapidly into the cleared lands is carried off immediately by surface drainage, and as a result the atmosphere as it blows over these lands is no longer kept in its normal condition, or supplied with moisture from the soil through gradual and natural evaporation, but rather yields moisture to the soil to produce an equilibrium; and when this atmosphere reaches the mountains of this State and is forced up to the altitude of from 3,000ft. to 4,000ft., the moisture which it contains is not sufficient to be condensed into rain, but, like a dry sponge, it withdraws or soaks up moisture from the soil in order that it may be restored to its normol condition.

The same is equally true as to the forests which thirty or forty years ago abounded in the States lying west of us, and which to a greater or less extent have yielded to the

lumberman's axe or have been destroyed, that the land might be opened up to cultivation. The amount of moisture which scientists tell us is evaporated annually from every tree is almost beyond comprehension, and in addition the destruction of every tree submits the soil which had been protected by its shade and had yielded moisture by gradual evaporation to the direct rays of the sun.

Does not the clearing of every acre of the original prairie, the draining of every swamp, and the cutting of every tree in the vast region of this country lying west of the water sheds of the State of New York, through which the earth is exposed to the direct rays of the sun, constitute a unit in the process of the destruction of the water supply of our streams? And if so, would not the planting of every tree constitute a unit of force in the opposite direction?

If there is any force in the above theory, and if it is sustained by the facts, then it must necessarily follow that our mountain streams are largely doomed, and that the preservation of the trees at or near their sources will but partially save them.

If this is true, it is to be hoped that the Board of Fisheries, Game and Forest in this State will check, so far as may lie in its power, the further cutting or destruction of the trees in the cleared lands and woods throughout the entire State, and use every effort in its power to foster a general spirit in favor of planting and preserving trees everywhere throughout the State.

BLUEFISH, TROUT, SALMON.

BOSTON, June 22.—Buzzard's Bay, on the southern coast of Massachusetts, is the destination just now of all the Boston men who love to go bluefishing. The first good run of the season has struck in these waters and everybody who can is out after them. Ninety fish were taken by one boat last Monday and many good scores have been made by others. The presence of bluefish in the bay has been so uncertain of late years that a run of this kind makes it somewhat hard to secure boats and skippers enough to accommodate all who wish to go. Most of the Boston men have summer homes on the shores of the bay and many have boats of their own, while others engage for the season. A great many Western people are summering in this locality during the last two or three years, and to them bluefishing is a rare treat.

At the regular meeting of the Megantic Club directors held last Tuesday evening, enough new members were added to the membership rolls to make the club total 296. As the limit is fixed at 300, but four more names are needed to complete. This will soon create the necessity of a waiting list, when applicants will have to await their turn for entrance. Early visitors to the club preserve report fine fishing, also that the camps and club house are in good running order, and that everything is in a satisfactory condition. Landlocked salmon 6 to 12in. in length have been taken at Big Island Pond, proving beyond all doubt that the fish placed there are prospering. A new 30ft. steamer has been ordered and is expected to be on the waters of Macannamac Lake, on the shores of which the club house stands, in about two weeks' time.

Leon Keach and friends, of Boston, who have been spending two weeks at Pine Point camps, Weld Pond, Maine, have reached home again, and are loud in their praise of the beauties of this locality. The camps are situated on a high point overlooking the lake, and occupy an ideal position. The fishing during their stay was only fair, not so good as earlier in the season. It consists of salmon and square-tailed trout, and the best place to drop a line is over the numerous shoals, of which there are quite a number. Mr. Keach is confident that the lake is full of fish, but as it is a large body of water, it is not always easy to find them. It is the custom of this gentleman to make a map of any country he may visit, and his reputation for accuracy among sportsmen friends is well established. He possesses a natural gift in this direction, and generally does much better than those who make a profession of making sporting maps.

Mr. J. N. Parker and wife, of Boston, have recently returned from Lake St. John. Mr. Parker killed 25 trout, all of good size, with the fly the day before he came away, and had splendid luck during his entire trip. His experience indicates that his trip was timed just right, a fact that should be noted by brother sportsmen who intend visiting these northern waters.

Salmon fishing at Dan Hole, the New Hampshire lake that proved so productive in the early spring, has not come up to expectations during the present month. A friend who is an expert at this sport tells me that he has tried every lure that he could think of, and has devoted many hours in endeavors to hook a fish, but without success. When on the water in the early morning it was a common sight to see big salmon breaking water all around, but that was all the satisfaction one could get. Joseph Murphy, the actor, who was so successful at Dan Hole last year, is fishing there now, but with poor luck indeed. F. A. Hersey, of Boston, is fishing in that locality, and will visit Dan Hole and try to stem the tide of hard luck before returning home.

A letter received from Mr. C. B. Barnes, of Boston, who, in company with Mr. Lyman Nichols, is fishing the Barnes pools on the Cascapedia, states that although the weather has been unusually warm, still they have had very fair luck. Miss Mary P. Barnes has taken a salmon weighing 35lbs., and Mr. Barnes two others, weighing respectively 37 and 42lbs. From the tone of the letter I judge that several other fish have been taken, although no mention of others is made. The party will return about July 1.

Dr. E. R. Cutler, of Waltham, will shortly leave home to spend the month of July on the Cascapedia. He will fish the R. G. Dun pools some distance below the Barnes waters. The fishing on this stream is best in June, but there is always a good run in July, and out of this Dr. Cutler expects to have good sport. The largest fish recorded on this stream, that I have heard of, was taken by R. G. Dun, I think, one or two seasons ago, and weighed 56lbs. The upper part of the river for a stretch of some miles has always been reserved for the use of the Governor General of Canada. It includes probably the finest salmon pools on the American continent, and I understand has lately been leased to R. G. Dun and other New York men, who, report says, have paid a fabulous sum for the territory.

Philip W. Moen and Geo. F. Blake, Jr., of Worcester, are fishing the lower waters of the Cascapedia, and Mr. Moen has taken one fish of 22 and another of 23lbs. How many others I have not heard.

George von L. Meyer, Speaker of the Massachusetts House of Representatives, has left for Metapedia to fish the Restigouche. Louis Curtis and F. L. Higginson, of Boston, have gone to the same place. All of these gentlemen are members of the Restigouche Salmon Club, Mr. Higginson being one of the earliest.

Mr. Henry Whitman has gone to try the salmon in the rough waters of the Nepissiquit. He is one of Boston's old salmon anglers, and formerly fished on the Nepissiquit at Grand Falls.

Prof. Sewall, of Braintree, has left for the Marguerite River, and Mr. Louis Cabot, of Boston, will soon leave to fish his own river, the Grand.

The Loud party, consisting of Geo. D. Loud, F. H. Babcock, John A. Ordway, Jr., and H. J. Hanson, all of Boston, and Rudolph Jacoby and Mr. Higgins, of Newburyport, have lately returned from Camp Loud, Diddywash Lake, New Brunswick. This lake is about five miles long and one mile wide, and is situated in the heart of the so-called Bonny River country. The fishing in this region is quite noted, and Diddywash Lake is said to furnish splendid sport, the trout running in size from ¾lb. to 3lbs. and 4lbs. in weight. The party were looked after by T. A. Sullivan, who is to that country what Captain Barker or John Danforth is to the Rangeley region. Their camp was located on an island in the lake, which is described as a most beautiful spot. In addition to the fishing, with which all hands were satisfied, the party secured a bear and one porcupine. They have been away about five weeks and hope to visit the same locality next year.

HACKLE.

A ONE NIGHT CAMP.

As I was engaged in garden work one pleasant September morning, I glanced up the street and saw my friend Doc bearing down upon me in a highly excited condition. I could easily see that something was on his mind, for his ordinary pace is rather slow and dignified, and he was now coming at a good four-miles-an-hour gait.

I soon considered his excitement was justifiable, for he told me that two men had just come in from Freeman Creek with about twenty fine black bass. We at once decide that we are needing some bass ourselves, and that we want them right away, for experience has taught us that Freeman Creek bass have very uncertain appetites and must be taken (if at all) at early morning and evening during the season (here very short) when they bite well.

Freeman Creek is about twelve miles away, though I believe Doc calls it sixteen whenever he has a night call from that section. So we agree to drive up in the afternoon and stay one night, so as to have a chance at both evening and morning fishing. About two o'clock we were ready to start except that we must still get our minnows.

Now if we had not wanted a minnow-catcher, the streets would have been lined with boys, but as it was there did not seem to be a boy in the county. We were several times directed to where boys had been, but they were like the Irishman's flea, and we finally had to start out after minnows ourselves, and such a time as we had! It seemed as though every minnow in the country had heard that we wanted him, and had found important business somewhere else.

Our minnow net was a very primitive affair, consisting of a section of mosquito netting attached to two short poles, and so arranged with a piece of wire as to form a pouch at one end. And maybe that thing wasn't tough on a man's wrists. Owing to the fact that my legs are longer than Doc's I was elected to work the net, and soon had a strong conviction that the boys who did this kind of work had never been paid half enough. After repeated "water hauls" in the "place where the boys always catch 'em," we found we were short some breath and a good deal of temper, and decided that we would have to walk about a mile and try the "hole by the big log."

We had wasted quite a bit of valuable time, and I tell you I set Doc a lively pace over that mile. The first scoop of the net at the new location brought up ten or a dozen fine minnows, and in a few minutes we had caught all we needed. "You bet," says Doc, "we wouldn't have sense enough to come here at the start. No, we must fool around down by the race because that's where the blame kids go. Won't I pound Gyp on the back when we get on the road!" So he grumbles away, and I help him a little, for neither of us likes to fool away much time when there are bass waiting to be caught.

Fairly off at last, right up the valley we go, passing two sloughs where there are fish enough, but the water is so choked with moss and weeds that bass can hardly be taken except with a long cane pole and short, strong line. Neither of us cares much for fishing that way, and so we keep on for Freeman Creek and better water. Our good Gyp seems to need very little "pounding on the back," for when we rattle over the bridge at our destination a glance at the watch tells us that we have covered the twelve miles in just sixty-five minutes.

We camp in what was once a nice little grove, but which has been thinned out by reckless hunters and fishermen until only a dozen or twenty small trees are left. Our first move is to set our minnow pail in the creek, then we attend to our horse and get out our rods, Doc's being a 8ft. lancewood and mine a 10½ft. 8oz. split bamboo.

Next, there still being plenty of time, and feeling very sure that when we get through we shall be hungrier than anybody ever was before, we prepare a wood-pile, dig a small fire-place and begin to think it is time to fish.

We cross the bridge, creep cautiously over a wire fence, wade through a patch of high weeds with rods held well aloft and find ourselves at last in a likely place for bass.

Out goes my minnow just over and to the left of a little clump of lily pads, and it had hardly struck the water before a bass has taken it, and the sport is on in earnest.

Away he goes and Doc stands waiting to see me land him. He makes a good fight at the start, but has hardly the staying qualities of the small-mouths I used to catch in old Sunapee, so in all too short a time in he comes, a nice fellow of a good pound and a half weight.

Within a few minutes Doc gets a strike and lands one which is, as he says, "A dead running mate to yours." We strip the twigs from the crotched branch of a convenient bush and after a minute or two spent in admiring our catch, get to work with renewed zeal.

But we must have caught those two too easily, for with the exception of three which are decidedly of the small-fry order and which we return too catch another day, those were all we got that night.

This was hardly doing so well as we expected, but we console ourselves with the reflection that the morning fishing will be better and that we have caught enough for supper anyway.

"I'm not dead sure," says Doc, "but I believe I could eat a fried mule." "Just out of mule," I reply, "but you can have part of one of these fish." "Part of blazes! why, I figured on eating the two." "Well, you don't get 'em 'til after you've licked me," I respond firmly.

We arrived at camp just at this point of the argument, and at once suspend hostilities and begin to hustle.

Being chief cook, I busy myself in starting a fire, and Doc goes to light the lantern and get some water for our coffee. Presently his voice rings out that we have forgotten the lantern.

Of course each of us insists that the other was to have seen to the lantern's being put in, but to this day we have neither of us been able to prove the other's negligence. As I am busy cleaning our fish, Doc decides to ride Gyp up to Nate Dearer's, get a lantern there, and leave the horse in his stable. When he gets back we have our supper. It is not elaborate, but don't it taste good? Well, I guess it does.

We have our fish, fried potatoes, bread and butter, coffee, and a small bottle of olives, which Doc triumphantly produces from his pocket. We have found it a great convenience in these one-night trips to take along a few of the oval wooden plates such as are used by country merchants for convenience in retailing butter. They make good plates, and as they cost next to nothing can be thrown away after using, thus saving washing and carriage of crockery.

We have eaten everything in sight, but that does not bother us a bit. Fish and coffee are all a man needs for breakfast anyway. We replenish the fire, fill and light our pipes, and lie back on our blankets in a blissful state, talking little, but feeling good. Talk about happiness! When we have eaten all we want of something we have killed ourselves, have lit our pipes, and have found a soft spot on which to recline at full length, kings and princes are "not in it" with Doc and your humble servant.

It grows darker, and how still it is. Faint sounds come up from the creek at our backs, and I wonder lazily as to their cause, finally concluding it to be a muskrat or turtle. And now the yapping of the coyotes begins.

The breeze has gradually increased until it is now a chilly wind, so we stretch one of our blankets between two trees, roll ourselves in the others, and lie down. The wind increases, grows less, nearly dying out at last, and with its gentle murmur in our ears we are soon fast asleep.

CHARLIE.

Eee umh uh is the next sound I hear, and glancing up I see Doc on his feet going through a sort of contortionist act to get the kinks out of himself.

It is early morning, quite early, ten minutes of four, and I make a mild kick at being aroused before it is time to fish.

"Well, it ain't as early as it was that time you routed me out after ducks, anyway," says Doc, and the memory of that awful morning when we waited about three weeks for light enough to shoot by is so humiliating that I can find nothing to say, so I do not answer him, but jump up and do a little stretching myself. It is, or rather will be, a glorious morning for fishing—perfectly still and rather chilly, for there was a slight frost in the night.

We are still rather sleepy, so we go down to the creek and the refreshing water makes us feel better.

We have got to catch our breakfast before we have any, so though it is still a little early we decide to try the "bluff pool," and off we go.

A big hawk is sitting quietly on a post and flaps lazily away as we approach. We round a little point and come upon a family of ducks, which pull out rapidly for parts unknown. Next we see a big muskrat. He is swimming sturdily along, towing a green bough, and is so busily employed that he comes very close before seeing us. Splash! Down he goes and the forgotten freight bobs on the water above him. A big turtle slides into the water on the other side of the creek.

By the way, a turtle is a pretty cute bird. If a string of fish is left fastened in the water he will chew them up in no time; but when still-fishing, how often one will see Mr. Turtle lift his head above the water for an observation, see the fisherman on the bank and sink down again, and never touch the bait. Now, I believe he lets it alone because he sees the man. What do the rest of you think?

All this time we have been plugging steadily along until we have reached our destination. There is a faint smoke-like mist hanging close to the water, and the sight pleases me, for so it was on the morning when I was most successful here.

We station ourselves about 50ft. apart and are ready for business. We have no luck at first, but truly "it is not all of fishing to fish," and as we breathe the crisp morning air and take in the fresh, sweet, indescribable "morning smell" we exult in the joy of living.

Hullo! Doc has a strike, and a picnic he has to steer him clear of weeds. Now the fish seems inclined to cross the creek, climb the bank and take to the open country. Doc stays with him though, and finally lands the best fish of the day. Not a monster by any means, but a good one for this water, three pounds and maybe a quarter over.

"Well, here's my breakfast; where's yours?" says Doc.

"Oh, it's down here in the creek, be along in a few minutes," I reply, and I guessed right that time, for the fishing was fine from then on. I can't describe the fun; they came too fast for me to remember just how we got them, but I can give you an idea of the sport by saying that one or the other of us was at the minnow bucket about all the time. Before they stopped biting we had thirty-one good bass, and thought that would do for this time, for a voice within us was howling for breakfast, and howling pretty loud, too. We had eaten all the "trimmings" the night before, so our breakfast consisted of fish and coffee, but we made up in quantity what it lacked in variety. We disposed of four of our smaller fish—pounders or thereabouts—and I wouldn't dare to say how much coffee we drank, but we drank all there was.

After breakfast we prepare for going home. We haven't much to do, and after emptying the rest of our minnows into the creek we "half clean" our fish, pack up our traps and are ready to start. You will remember that our horse was left at Dearer's, and we decide to haul

the buggy up there, thinking it a very easy matter. We start gaily off, I in the shafts and Doc pushing, and as it is down grade at first the buggy runs very easily. But presently we strike a hill and sand to boot, and then there is a roar. "Confound yer, brace up there, you ain't pulling a blame pound," says Doc.

"The deuce I ain't; think I can't see you hanging back there making me haul you and the buggy and the whole blasted load?" I reply.

That was hard work and the mile seemed to stretch itself into four, but there is an end to all things and we at last pull slowly and painfully into Dearer's, return his lantern with thanks, and set out for home, devoutly thankful that we are not horses doomed to perpetual hauling of buggies and agreeing that we have had a noble good time at our one night camp. CAP.

BOSTON AND MAINE.

JUNE 21.—Ex-Governor Russell and Mr. B. F. Dutton have gone to the Little Pabos, P. Q., salmon fishing. Mr. Dutton controls the fishing rights of that river. He will remain for several weeks, while ex-Governor Russell will be absent for a couple of weeks. The river is reported to be one of the best for both salmon and trout, and few sportsmen will be more likely to succeed or better appreciate the fishing.

Mr. Edward E. Allen is about starting for the Godbout for salmon fishing. The fishing rights of this river are in the hands of a club including several Boston gentlemen, the names of whom it is composed having been published in FOREST AND STREAM already, I believe. It is said to be an excellent salmon river, far enough away to avoid the crowd and many of the evils that civilization brings about such a stream.

Mr. N. N. Thayer, of Boston, is at home again, after five weeks of fishing in Maine. Mrs. Thayer accompanied him, as she usually does; and this greatly adds to the enjoyment of the couple, since both are experts with rod and line, and both are fond of nature in its seclusion and wildness. They have this time visited the Birches at Mooselucmaguntic, Billy Soule's Pleasant Island Camps, and the Middle Dam. They tried the fishing at each place with their share of success. But the crowning excursion of their outing was their visit to King and Bartlett. Here they found about all the fishing they could ask for, but they also found the tramps rather long and canoeing not generally possible from one fishing spot to another, or home to camp, and since much of that country has been burned over the tramping through the woods is much of it rough and bereft of the charm that is to be found in the forests that have stood for many years But the country was a source of delight to both in that they saw large game at home and tried to take pictures of it, and with what success will only be known when the films are developed. In her trip down the Spencer Stream Mrs. Thayer saw two buck deer fighting, and the same day she saw a large bull moose. He was first seen standing on the bank of the stream. Fortunately the lady had her camera at hand, and brought it to bear on the monarch of the Maine forests once or twice. The development of the films will show the results of her snap shots. This had not been done yesterday. Several shots were tried, but it is possible that the light was not all that could be wished, since the dark woods and green leaves are not good surroundings for snapshot work. The results of the work I shall ascertain, and if the pictures are worth producing they may yet be seen in the FOREST AND STREAM.

The black bass season opened in New Hampshire on the 15th of June. A number of Boston sportsmen were on hand at Lake Winnipiseogee and at other points at Weirs, Wolfboro and East Wakefield. Representative Horan, of South Boston, took the biggest bass on opening day, weighing about four pounds Mr. W. A. Grozier, of Boston, also made a fine catch. Hon. William S. McNary, with a party of Boston politicians, and other friends, fished the ponds at East Wakefield. They report a good day's sport.

June 22.—Mr. E. C. Stevens has just returned from a fishing trip to Lake Dunmore, Vermont. He was accompanied by Mr. E. A. Wilson, of Watertown. The first day they caught two pickerel of large size, one weighing nearly 5lbs. The next day they got eight pickerel and several bass. One bass weighed over 4lbs. They were much pleased with their outing. Since that time Mr. Stevens has had a chance at the white perch in Fresh Pond, in Cambridge. This pond is a part of the Cambridge water supply, and fishing is done only by special permit. With a friend he had splendid luck with the perch.

Another perch fisherman, Mr. William Cumming, has had fine success on a pond in Newton, near Newton Centre. He had a special permit to fish the Newton pond, which seems to be well stocked with white perch. He caught forty-three, or rather forty-three came to his boat. The smallest weighed 5oz. and the largest over 2lbs. His luck has started fish stories at his place of business, and Herbert, better known as the bright young Woodworth of the house, says that his father, being an enthusiast at trout fishing, has attempted to "enthuse" him. He recently took him to a stream trout fishing. The younger Woodworth was clad in boots that were full of holes. "This was not objectionable," he says, "for we were to wade up the brook, and there should be a chance for the water to get out. I was also clad in old woollen pants that would absorb all the water that came above the boots. Then I had on a woollen sweater that was to absorb all the water that came above the pants. I waded till the boots were full, and like a towel dampened at one end, the water worked upward through the pants and into the sweater till that was completely wet. Even my hat," Herbert adds, "was wet where it touched the sweater behind. I got a deal more wetting that trout." "How came so much water in your clothes?" his father asked. "Have you been in the water above your boots?" "N-n-o!" Mr. Tilden, the confidential man of the firm, quickly explained that it was simply a case of "The sun (son) drawing water."

Mr. Frank S. Dexter, formerly of Boston, has at last fixed upon Weld Pond as a fishing place that will suit his tastes. It will be remembered that he visited Kennebago for several seasons with Mrs. Dexter, who won the good will of everybody by her genial and ladylike courtesy as "a fishing woman" before ladies were commonly seen at the Rangeleys. He is so in love with the landlocked salmon fishing at Weld Pond and the surroundings there that he has bought a farm of some 200 acres near that pond, and is now building barns and putting wharves and other buildings into shape. His Boston brother has just returned from a fishing trip, and reports great sport with seventeen salmon in one day to his party, with a splendid outing. Frank is likely to spend some eight months of each year at his new fishing home, where he can entertain his brothers and fishing friends in a manner that is like him. Mrs. Dexter, who was a native of Dixfield, is reported to be pleased with the venture. SPECIAL.

TRAMP TRIPS.—II.

LEAVING Humboldt, Mich., and the pleasures of the Escanaba behind us, we pass through the rock-ribbed hills of the iron region, with the swamp behind us. At Nestoria we leave the main line for points to northward. Deer can be seen any day at Nestoria and we mean at some future date to test the flavor of the venison of that region.

To the northward the country is broken and rocky and worthless, except as a hunting ground. We stop off at a little way station just north of the summit, and a couple of miles' walk brings us to a trout stream *par excellence*. Here the trout seem to have the right of way. No other fish, not even the ready and ever-hungry perch, offer to take the tempting bait. It is a romantic country. Waterfalls abundant. The atmosphere is perfumed with ozone from the pines and the more perceptible perfume of the balm of Gilead. There is something suggestive in our surroundings. And the trout are so plenty that a couple of hours' fishing will satisfy the most enthusiastic. They strike the hook immediately on its touching the water; and fine fellows, too, are most of them. A few small fish are taken, but nearly all are above a half-pound in weight, and two-pounders are not uncommon.

Some of the best pools are at a considerable distance from habitation or pathway.

We were covetous enough of the pleasures about to prolong our stay several days beyond what we had intended.

A temporary drop in the mercury prompted us to go on to the next point charted in our map of pleasant places. Fall River and its tributaries above L'Ause, Mich., rich all of them in their rewards, was the next point at which we would drink health and pleasure from nature's storehouse. N. R. PIPER.

St. Lawrence River Angling Permits.

SECRETARY WM. H. THOMPSON, of the Anglers' Association of the St. Lawrence River, sends us the following letter, which was addressed to him in relation to the non-resident angling permit of the Canadian waters of the St. Lawrence River:

OTTAWA, Canada, June 5.—Sir: In view of the representations made, and to make the Thousand Islands an international summer resort, to be limited on the United States side between Cape Vincent and Ogdensburg, and on the Canadian side between Kingston and Prescott, I have to inform you that this department would consider the proposition worthy of fair consideration; and will instruct Dr. Wakeham, or other officer of the department, to meet a commissioner or commissioners appointed for that purpose by the Senate of the State of New York, to discuss the details of the proposed scheme; and with a view to its promotion, this department, acting on the assurances given by the Hon. Senator Joseph Mullin, of Watertown, New York, and the Angling Association of the St. Lawrence, that the United States Alien Labor Act would not be enforced within the said district, will at once instruct the Canadian fishery officers that the Angling Permit License Fee of $5, established by Orders in Council, is not to be exacted during the present season within the limits referred to. I am, sir, your obedient servant, JOHN HARDIE, Acting Deputy Minister of Marine.

WM. H. THOMPSON, ESQ.,
Sec'y St. Lawrence Angling Ass'n, Alexandria Bay.

Color of the Flesh of Trout.

IN your issue of June 1 the remarks of Mr. John Mowat about the difference in the color of the flesh of the salmon reminds me of observations I have made in the varieties of color of the brook trout.

In keeping public camp at the lakes in the Rangeleys for many years, and of course cooking trout for daily food, I had a chance to note all colors that occur in that fish.

I observed this fact, that all colors ever seen in the flesh of trout, red, pink, salmon and white, I often found in one lot of trout taken at one place at one time. There was a variety of color in any lot of trout taken at any one place. This fact I always found held good. No matter where the fish were caught or at what time of year, we always found many different colors in the same catch.

Now if the food taken makes the color, why should not the fish of the same school be all colored alike? Or if the bottom of the lake or river where the fish inhabit influences the color, why may not fish of the same school that are found in a certain locality at the same time of year be colored alike? J. G. RICH.

BETHEL, Me.

Dead River Region.

EUSTIS, Me., June 20.—Perhaps some of your readers would be interested in catches of trout in the Dead River region. At my Camp Jack, near Eustis, Me., Mr. C. W. Epting, of Philadelphia, caught three fish weighing 2lbs. 9oz., 2lbs. 8oz. and 1½lbs. Mr. F. J. W. Diller, of Brooklyn, has landed half a dozen trout which weighed 1¾lbs., two of 2lbs. each, 2lbs. 4oz., 2lbs. 8oz. and the largest 3lbs. 6oz. OTIS R. WITHAM.

Nebraska Fish and Game.

CEDAR RAPIDS, Neb., June 13.—People are doing some fish stocking here. S. S. Hadley and N. C. Bowen made a plant of 250,000 wall-eyed pike fry. This plant is all that has ever been made here, with the exception of a few carp. Prairie chickens and quail are doing well and ought to be plentiful, as the farmers have done no grass firing this spring. C. A. P.

A great many fish have been caught in Emmons county this year. Owing to the protection given by the stringent anti-fishing law passed by the Legislature last winter, the wall-eyed pike, blind sturgeon and channel cats have increased so rapidly that their natural food has run short, and they have been compelled to climb up on the bank and sandbars to graze. They are getting to be a nuisance along the Missouri River, as the catfish frequently visit and rob the settlers' hen roosts of young chicks.—*Emmons County (Minn.) Record.*

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 3 to 6.—Kingston Kennel Club, Kingston, Ont. H. C. Bat s, Sec'y.

Sept. 9 to 13.—Industrial Exhibition Association's annual bench show, Toronto, Ont. C. A. Stone, Sec'y and Sup't.

Sept. 17-20.—Orange county Fair Bench Show, Newburgh, N. Y. Robert Johnson, Sec'y.

Sept. 24 to 27.—New England Kennel Club's second annual terrier show, Boston, Mass. D. E. Loveland, Sec'y.

Oct. 8-11.—Danbury, Conn.—Danbury Agricultural Society. G. L. Rundle, Sec'y.

FIELD TRIALS.

Sept. 2.—Continental Field Trials Club's chicken trials at Morris, Man. P. T. Madison, Sec'y, Indianapolis, Ind.

Sept. 10.—Morris, Man.—Manitoba F. T. C. John Wootton, Sec'y, Manitou.

Nov. 5.—Chatham, Ont.—International F. T. Club. W. B. Wells, Sec'y.

Nov. 7.—Newton, N. C.—U. S. Field Trial Club's Trials A. W. B. Stafford, Sec'y, Trenton, Tenn.

Nov. 11.—Hempstead, L. I.—National Beagle Club of America, fifth annual trials. Geo. W. Rogers, Sec'y, New York.

Nov. 18.—Eastern F. T. Club, at Newton, N. C. W. A. Coster Sec'y, Saratoga Springs, N. Y.

Nov. 25.—Continental Field Trials Club's quail trials at Newton. P. T. Madison, Sec'y, Indianapolis, Ind.

Oct. 29.—New England Field Trial Club, at Assonet, Mass. S. R. Sharp, Sec'y.

THE LANGUAGE OF DOGS.

ST. LOUIS, Mo.—*Editor Forest and Stream:* Can dogs intelligently communicate with each other? Have they certain sounds which have certain meanings when uttered, and signs which are understood? But if the ability to communicate their thoughts or wants is conceded, however limited or crude the same may be, it concedes also the possession of ideas by the dog; for to concede the one presupposes the other.

Dogs have means of communication which are ample for their limited needs and simple life.

Language is a growth coming from necessity. Man did not first make a word and then hunt for some object or action to fit it. He first observed the action or object or quality, and then uttered some sound which he and his fellows agreed would represent the object or action. These sounds are largely artificial, as one soon discovers to his chagrin if he attempts to learn a foreign tongue, for he then comes across sounds which he cannot utter and which affect his ear strangely. Yet there are certain tones common to all races, naturally understood by all, as the scream of fright, the harsh tones of anger, etc.

As language is the growth of necessity, and is merely a means of communicating ideas, it is not necessary that among dogs the language should be very copious or abstract. It may be supplemented by a sign language, or sounds and signs may both be combined to convey the meaning desired, the signs conveying information to the mind through the sense of sight as the sense of hearing conveys it to the mind through the ear.

The humble and narrow life of the dog calls for a language of but moderate compass. It would, we may suppose, more immediately be related to his animal wants, and have little or no reference to the ornamental. Researches into the history of savages who are without a knowledge of the arts or sciences show that this is also true of them. The language is a growth from the savage state, in which a few sounds are uttered, up to the immense vocabulary of the civilized and intelligent man. The same, in my opinion, holds equally true when applied to the dog. In his wild state he has but one note, the howl. Wolves understand the meaning of certain howls, if the description of them given by belated travelers, who have been pursued by wolves or driven to bay by them, is true. A wolf gives a howl which is answered by wolf after wolf, all of them drawing toward the leading howler, they understanding that there is prey to battle for and capture.

The common dog, tamed as he is, and long redeemed from his wild state, has acquired a control of his voice which the wild dog has not, or which he does not need in a wild state—*i. e.*, the tame dog has learned to utter barks differing in tone and pitch and length and combination from the tones of the wild dog; barks which have delicate shadings of meaning, expressing joy, defiance, notes of warning of the approach of strangers, or expressing communication of ideas. To the master but few of his dog's barks have a definite meaning. He may comprehend the barks which the dog gives when strangers approach, or when there are strange noises heard; but between dogs themselves there is quite a full language of sounds and signs, if we consider the simple needs of their life. A warning note of defiance uttered by one dog is readily understood by another dog. One dog, fearful of the stronger powers of a larger and more formidable dog, crouches and by every sign and expression shows that he surrenders and acknowledges the superiority of the stronger dog, and then is safe from attack, the latter dog understanding the submission and showing a magnanimity akin to a sense of honor. Two dogs, well acquainted with each other, understand each other's notes of attack. If they are in the habit of taking vagrant trips, one makes a sign readily understood by the other, and they steal silently away; for no animal understands better than the dog when not to make a noise. In this he is equal to his two-legged idol. In approaching prey which they intend to kill, dogs draw near very silently, particularly if the animal is in sight and is forbidden prey, as in killing sheep. Animals, too, which have peculiar means of escape, as woodchucks, which run into holes, are stalked very silently. An exception to this is the free tongue of the hound, though, as these dogs run in packs, the voice of the hound indisputably is used to warn his companions of the true course of the trail, the cry serving as a rallying point and keeping the pack together. If the hound runs alone, he may still use the same cry from habit or from inheriting the trait from ancesters which hunted in packs. Nevertheless, after certain kinds of game, as foxes, deer, etc., dogs may run noisily, while after other kinds they may run mutely. Again, some breeds of dogs prefer a certain kind of game, to the exclusion of all other kinds. But whatever kind a dog prefers, he has certain notes and signs which serve as a means of communicating with his companions. In his efforts to communicate with man the dog finds more difficulty, not from lack of effort, but from the inattention or dulness of those about him. The dog may wish to get out or in doors. He whines, looks appealingly at his master, scratches at the door, if he wishes to go out; if his plead-

ings to get inside are ignored, he may bark furiously at an imaginary enemy, which brings his master outdoors, and during this deceptive diversion he sneaks inside, having accomplished his purpose. Dogs bark at each other without any show of anger, holding a chat together apparently.

I have a friend who firmly believes that dogs and all the lower animals have the power of understanding each other by the subtle transmission of thought, one mind having a knowledge of the workings of the other, the manner of the communication not being clear to our senses. The mind-reading power which a few men possess, he maintains, is but the fragment of a lost sense, which is becoming extinct, but which was common to all men in a savage state before there was a language. He holds that the acts of dogs show beyond cavil that the dogs understand each other's motives and desires, without any means of communication which are perceptible to the senses of man, and therefore there must be some animal magnetism which conveys their thoughts one to another. GAZEHOUND.

THE FOOD OF DOGS.

BUFFALO, N. Y.—*Editor Forest and Stream:* It seems strange to me, strange that, in the light of such broad every-day evidence, there are those who still maintain that the dog is a carnivorous animal exclusively, and that a vegetable diet is injurious to him, or at least unhealthful and improper, and that the dog in his nature is much the same as he was in a wild state, a meat-eating, bloodthirsty animal, ever vigilant to kill and destroy. The life of the dog to-day, the practical every-day habits of the dog as a companion to civilized people, is enough of itself to refute this theory. Dogs eat vegetable food and thrive on it. Many eminent physicians and veterinarians teach us that animal food, fed to the dog without a large proportion of vegetable food, is sure to produce vitiated blood, organic trouble of the liver, stomach and kidneys, and to a certainty obnoxious skin diseases, mange, eczema, etc. These results, coming as they do directly from feeding meat, are a proof of the unwholesomeness of meat as an article of diet. We have the testimony of the best veterinarians—Glover, Sherwood, "Ashmont," Mills, etc. which should settle the scientific phase of the question.

We have the evidence of the dog's fondness for vegetable food to settle the natural features of the question.

It is true that at some time in the past, so far back that the mind or knowledge of man cannot reach, when the dog was in a wild state, and when he was forced to eat meat or starve to death, he was carnivorous. While he has the capabilities of living on vegetable food, nature seems to be remiss in furnishing him with the correct teeth for grinding, such as we observe in the horse, ox, sheep and goats. This is surely a remarkable instance of adaptability, as we observe in only one other animal, and that is man himself.

No doubt all these changes in the nature of the dog have been brought about by domesticity; the association with man and the consequent impressions and education which have been transmitted from generation to generation through centuries, till at last what was mere education became natural and hereditary.

Man himself has changed greatly in his nature from civilization, or the association in a state of society which has beneficent effects in enlarging his mind, improving his body, and adding to his knowledge.

These effects, while not so pronounced, are quite noticeable in all the animals under his dominion, the horse, the ox, the dog, and the cat, which in its wild state is the most bloodthirsty and cruel of all animals, and has withstood the beneficial effects of associating with man to a degree exceeding that of any other animal; still, the nature of the cat has been much softened and improved by its life in domesticity, and it too is gradually changing from a meat-eating animal to an eater of vegetables.

With the testimony of our best professional men, the testimony of many owners of dogs and the testimony of the dog's natural craving for vegetable food, and the good health which follows living on a vegetable diet, is it not astonishing that there should be any person who claims that a diet of meat alone is proper for our dogs? In the light of modern science and experience, the old-fashioned notions are gradually being swept away to the oblivion which overtakes the misbeliefs left in the rear by progress.

It is possible that the habits of the dog as they are acquired about the home of his master may not be considered as containing complete evidence of his whole nature. Then I offer one or two traits which I observed while on a visit in the South the past year, and which I was informed were so common and well known in that section as to occasion no remark.

The native negro dogs and hounds will visit the cornfields and tear off the green ears from the growing corn and eat them with relish and avidity. They also will visit the persimmon trees and eat the ripe fruit which has fallen to the ground. Dogs have a regular route from one persimmon tree to another, sometimes long distances from home, which they travel daily, so dearly do they crave for the fruit. All this evidence convinces me that the dog is naturally a vegetarian now, no matter what he was in a wild state. VEGETARIAN.

The Chickens and Dog Training.

MILWAUKEE, Wis.—*Editor Forest and Stream:* I have just returned from the Memphis tournament, which was a grand success, having the largest number of entries of any shoot of the season. Mr. Hough and myself met two of our San Antonio friends there, Messrs. Oscar Guessaz and Joe George, and we had a very pleasant reunion and planned for another hunting trip together next winter in Texas, if nothing prevents.

I have had plenty of trap-shooting, for a while at least, and I am now getting my dogs in shape to send to North Dakota to begin work on chicken for the coming trials. Thomas Richards and myself will leave here about June 25 with eight dogs of my own and several others to work for other gentlemen. We will locate near the Turtle Mountains, where the chicken and grouse are very plentiful, and I hear that there has been a good rainfall in that section of late, so the conditions seem to be very favorable for us for a good season's work. On my arrival at the kennel I was pleased to find two fine litters of puppies sired by Ch. Paul Gladstone out of Tube Rose (Count Noble ex Lit) and one out of Lady Lucy (Druid, Jr., ex Lady Patch). There are in both litters six dogs and five bitches, all hearty and strong, and all but two of the puppies are black, white and tan. I shall keep all of these puppies until old enough to make a good selection for myself, as I am anxious to get a good stud dog from one of the litters. RICHARD MERRILL.

English Setter Type.

BRIDGEPORT, Conn.—*Editor Forest and Stream:* Which type is correct? Why does not the A. K. C. define it and appoint judges who will follow the standard adopted?

It is as a lover of one of the handsomest of all our canine friends, the English setter, and not as a kicker, that I am induced to write the following:

When attending the New York show last February, and after paying particular attention to the dogs, both in the ring and for two days afterward, I was forced to the conclusion that while there were more good dogs exhibited than there have been for four or five years past, there was a decided lack of uniformity of type, and it was from that very lack of uniformity that the question arose in my mind as to what was its cause. After talking the matter over with various breeders of experience, and seeing the conflicting awards at the shows following New York and terminating at Boston, I was forced to one conclusion, viz., that the fault, and fault it undoubtedly is, lies with the judges' interpretation of what constitutes the proper type of an English setter—their decisions in the judging ring being responsible for the perpetuation of the type of the winner to a more or less extent, for the reason that the novice invariably breeds to the winning dog irrespective of type, and as far as he has confidence in the abilities of the party to adjudicate on the qualities of the dog exhibited. If I am right in the above conclusion, does it not behoove the show committees to appoint men as judges who will conform to a certain type, and not men who have a type of their own and can see no good in anyone's else?

"Stonehenge" is, I believe, the authority up to the present time, and while the English Setter Club of America tried two years ago to improve on it many will agree with me that they made a dismal failure; for the dogs which won nine-tenths of their specials were nearer to "Stonehenge" standard than any other. This being the case, why do not kennel clubs head the premium lists for setter classes as follows: "Will be judged by 'Stonehenge' standard," so that exhibitors can form some idea of the type of dog needed to compete with a chance of winning, and thus do away with the necessity of keeping, as some do, two distinct types of the same breed to show under different judges.

To lead to no false impressions, I will state that I am a firm advocate of the "Stonehenge" or Lavarack type of setters, and as such I aim to breed to that type, and until we can produce a dog of that type why try to breed otherwise? I think I hear some one say, "It is easier to breed the otherwise," or, in other words, we would rather fit the standard to the dog we have than breed a dog to the standard required.

This, gentlemen, is the ruination of the breeding of English setters, and I think I can honestly say has been the cause of many an old admirer and breeder as well as new ones leaving the fancy.

I have stated that I firmly believe the judges are to blame; the reporters too are so in a measure, for whatever type of dog wins it is rarely they criticise the award, and that fact alone to parties not attending the exhibitions is confirmatory evidence that they agree with the decisions. To illustrate, The Earl, a dog of Lavarack type, won at New York. Every paper, I think, without exception, agreed with the decision or acquiesced by their silence in reporting otherwise. He then goes to Boston, and we find the same dog got vhc., while Cincinnatus Pride, a dog only vhc. at New York, is placed second. Surely condition alone cannot make such a difference.

No, it is one man's opinion against another's, and no standard is taken into consideration in forming a conclusion as to the relative merits of the several dogs to it.

Another evil to the just reports of the merits of the several dogs is the "judge reporter." A man honored by the appointment of judge should certainly refrain from criticising his own awards unless it be for a special judge's report to the A. K. C. Subscribers to the several canine journals want an opinion from some other source, and are entitled to it. To the secretary and committees of the coming fall shows I would say: Consider the matter; see if it is not to your interest, as well as the English setter interest in America, to appoint judges who are known to judge by a standard, or appoint men known to be setter breeders and instruct them to use such a standard as the show shall decide, whether it be Stonehenge or Tennessee, only let it be known to the dog men who are lovers of the Laverack type of setter.

To those who have talked with me, and especially those who have written and whom I have never met, I would say: Keep your dog at home unless judges favorable to that type are appointed. A few shows with decreased entries will do more to bring about the desired results than any amount of kicking after they are judged. ALBERT.

DOG CHAT.

Mr. J. Pierpont Morgan's well-known prize winning collie died recently, a press dispatch which has been given wide publicity relating the circumstances as follows: "The famous dog, which was the favorite of her owner, whose kennel of collies is one of the finest in the world, was not well this morning when Armstrong took the dogs out for exercise. They frisked around—all except Roslyn Wilkes—and then came the time for the daily bath in Mr. Morgan's pond. All jumped in without hesitation, Roslyn Wilkes among the rest. They swam around for several minutes, and when the keeper's whistle sounded all left the water except Roslyn Wilkes. The keeper called and whistled, but it was to no purpose. The collie swam around the pond and refused to come out. Armstrong was exasperated, and began untying his shoes. It was the first time the dog had disobeyed the keeper. When Armstrong had his shoes untied and his trousers rolled up he started to go in the pond. The collie saw him and deliberately dived under the surface. Armstrong thought the dog was playing, but when minute after minute passed and the collie failed to appear the keeper became alarmed. He called to his assistants and a drag was brought. From the bottom of the pond near the spot where he sank was drawn the lifeless body of Roslyn Wilkes. The keeper declares it was a clear case of suicide. The dog was purchased by Mr. Morgan in England several years ago, at a cost of several thousand dollars. Mr. Morgan is now in Europe." There is no proof whatever that any dog ever committed suicide. There is every probability that no dog ever did so. Roslyn Wilkes may have died from epilepsy, or apoplexy, or heart disease, or from one of many other causes while in the water, but that he committed suicide is not even a probability. In straining for the sensational and the marvelous, the ridiculous is often reached.

From an exchange we clip the following humorous example of Western justice: "Here is an amusing account of a dog fight in one of the Western States which interrupted the proceedings of a court of justice. The case was going dead against the prisoner, whose neck did not seem worth sixpence. The culprit, who was looking through the window at this side, seemed to be the only uninterested person present. A deputy standing near was about to recall his attention to the proceedings, when, following for an instant the direction of the prisoner's gaze, he, too, became absorbed. The sheriff himself then glanced at the window, through which short barks could now be heard, and after one look he rushed to the door and commenced hurriedly descending the steps. The audience gazed at each other in amazement for an instant, before, with a simultaneous movement, they took a hurried survey of the yard. Having looked, they wasted no more time, but with an expression of rapture stealing over their faces they made for the door, accompanied by the prisoner and his guard. The judge, being left alone in the empty court house, frowned severely at the vacant benches, as he said with impressive dignity, 'I think this court will now adjourn.' Then he tucked up his sleeves and made good time for the yard. Here a dog fight was proceeding between the prisoner's dog and a stray animal who had offended him. After an exciting contest the prisoner's dog won, and the whole court went back to business. The judge took his seat, scrutinized the faces of the audience, and apparently satisfied himself by what he had read there, cleared his throat and began: 'Gentlemen of the jury,' he said, 'when we were interrupted by unforeseen circumstances a short time ago I opine that you were just a-goin' to declare that accordin' to the best of your belief the pris'ner was innercent of the charge agin' him.' 'You've struck it, jedge,' unblushingly responded the jury. The judge frowned down an attempt at speech on the part of the sheriff, and turned to the prisoner. 'Pris'ner,' he said, 'you heerd the remarks of them gentlemen opposite, so you may take it that the proceedin's is concluded. But don't you get up to any more of your tricks in this county, for it 'pears likely that next time you won't get off so easy. And now, what'll you take for that dog?'"

Mr. J. B. Stoddard, the well-known handler, has arrived at Winnipeg with his string of dogs, which he will prepare and run in the trials. Under date of the 21st inst. he writes: "I arrived here without accident on Saturday last. We are having some trouble with the customs this year. The strings have been drawn a little tighter. Handlers must make oath that dogs are entered in trials and the secretary must do the same. Mr. Thompson, deputy collector, says that dogs entered in the Continental Club's trials will not pass, as that is a foreign club. I am no lawyer, but I think him wrong. I do not think the law specifies that. Anyhow, a deputation will call upon the boss man here, of the Province, and have him see the head man down in Ontario and get matters arranged. My dogs are not through the customs yet—out on personal bond. Legally we have no right to bring a dog in unless he is a *bona fide* entry and we can show the secretary's certificate under oath. A meeting has been called for Monday night to try to amalgamate the two clubs, the Manitoba and Northwestern, and the prospects are good that it will be done. I have a very good string of dogs."

Messrs. James Mortimer and E. M. Oldham write us that the E. Bardoe Elliott fund is still receiving contributions, the following having been added since the last report: A friend from Pittsburg, $25; Walter J. Comstock and a few friends, $15; Henry Brooks, $5; H. F. Church, $5; George Thomas, $5; Alex. M Hughes, $5; C. G. Browning, $1; Donald Munro, $2. Total received to June 22, $312 68. Subscriptions promised, $64.

Mr. F. W. Ingalls, secretary S. C. K. C., writes us as follows: "At a meeting of the Southern California Kennel Club, held at Los Angeles, the following officers were elected for the ensuing year: President, C. A. Sumner; Vice-Presidents, J. A. Edmonds, T. E. Walker, T. Bright, H. G. Evans, R. J. Widney; Treasurer, J. H. Kiefer; Secretary, F. W. Ingalls; Dr. Button, Veterinary Surgeon; J. H. Kiefer, member of the A. K. C. investigating committee for the Pacific coast."

In our business columns, the Chestnut Hill Kennels, Chestnut Hill, Phila., offer puppies. Rockland Beagle Kennel, Nanuet, N. Y., offer beagles. Greendale Kennels, Kensington, O., offer coon, squirrel, partridge and bear dogs. Muckross Kennels, Springfield, Vt., offer Irish setters. Richard Merrill, Milwaukee, offers English setters. W. H. Pierce, Peekskill, N. Y., offers pointers. Geo. H. Kunkel, Mexico, Mo., offers Irish setter. O. G. Matthews, Pottsville, Pa., offers trained setter. Geering, New York, offers mounted spaniel. James Hawkins, Rockville, Conn., offers Italian greyhounds. A. Rose, Scranton, Pa., offers bulldog. R. I. Holbrook, Townsend, Vt., offers a hound and a setter. The Old North State Kennels, Munroe, N. C., will train pointers and setters.

Mr. John Wootton, sec'y M. F. T. C., informs us that Mr. W. S. Bell, of Pittsburg, has consented to act as judge at the club's trials this fall, and that the entries for the Derby are coming in well.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

BRED.

Mr. Charles See's Nellie L., English setter bitch, May 13, to Snapper Garrison.

Mr. John Moorhead, Jr.'s.
Streatham Monarch's Daughter, bull-terrier bitch, May 3, to Streatham Monarch.
Lady Dinah, bull-terrier bitch, May 17, to Streatham Monarch.
G. T. Lord's U No, Irish setter bitch, to Henmore Shamrock.

WHELPS.

Mr. Irving Watkinson's Lady Ann, St. Bernard bitch, whelped fourteen, by Alton, Jr.
Mr. E. B. Bishop's Gibbe's Maud, pointer bitch, whelped May 22 seven (one dog), by Trinket's Don.
Mr. I. O. Converse's Lou Pape, pointer bitch, whelped May 23 nine (seven dogs), by Phil.

SALES.

Muckross Kennels have sold
Irish setter dog pup to J. H. Kellogg.
Sir Donegal, Irish setter dog, to Dan Frost.
G. W. Patterson has sold
St. Bernard dog pup to E. A. Merrill.
St. Nicholas, St. Bernard dog, to C. F. Brooks.
Young Blaine, St. Bernard dog, to L. C. Hoss.
C. T. Brownell has sold
Little Girl, Gordon setter bitch, to F. H. Beecher.
Blossom Reg, Gordon setter bitch, to F. H. Beecher.

Canoeing.

FIXTURES.

JUNE.

29. Marine and Field club annual, Bath Beach.

JULY.

6-20. W. C. A., 10th annual meeting, Ballast Island, Lake Erie.
4. New York chal. cup, International races.

AUGUST.

9-23. A. C. A., 16th annual meeting, Bluff Point, Lake Champlain.

SEPTEMBER.

Red Dragon fall regatta, Delaware River.

AMERICAN CANOE ASSOCIATION, 1895.

Commodore, Walter C. Witherbee, Port Henry, N. Y.
Sec'y-Treas., Chas. E. Cragg, Port Henry, New York.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, Thomas Hale, Jr., Yonkers, N. Y.
Central Division, W. S. Hackett, Albany, N. Y.
Eastern Division, R. N. Cutter, Winchester, Mass.
Northern Division, E. F. Burritt, Ottawa, Canada.

Annual dues, $1; initiation fee, $1. Applications for membership must be made to the Purser of applicant's division, from whom blanks for the purpose may be obtained.

WESTERN CANOE ASSOCIATION, 1895.

Commodore, N. B. Cook, Chicago.
Vice-Commodore, L. F. Porter, Madison, Wis.
Rear-Commodore, H. D. Spenser, Bloomington, Ill.
Sec'y-Treas., F. W. Dickens, Milwaukee, Wis.
Executive Committee, W. H. Sardley, St. Paul, Minn.; R. M. Lampe, Madison, Wis.; F. B. Huntington, Milwaukee, Wis.

Red Dragon C. C.

ON Saturday, June 8, the Red Dragon C. C. held its first club record sailing races of the season. These are a series of five races each for canoes and yawls, for cups donated by Messrs. Murray and Fenimore in the respective classes. The yawls rate according to the L. and S. A. rule with time allowances; and the canoes sail in two classes, senior and junior. The seniors allow the juniors 30 seconds per mile over the length of the course, given at the start, and any junior winning a race becomes a senior. Yawls are allowed to carry one man beside the helmsman.

The starters in the yawl race were as follows: Tadpole, R. G. Fleischmann; Pluto, Lloyd R. Titus; Oni, W. J. Scott; Nixie, H. E. Bachmann; Olie, E. W. Crittenden, Charlee, H. E. McCormack. Tadpole and Nixie are boats of La Gloria type, Olie is what is known as a mosquito boat, carrying one large leg o' mutton with a sprit and club. On account of being a single-sticker, she rates at 20 per cent. above her actual sailing length. Oni is a typical British double-ended canoe-yawl of 15ft. over all length; Charlee is a skip-jack and Pinto is an altered tuck-up. None are over 15ft. 6in. sailing length and none under 13ft., and all are canoe-yawl rigged except Olie.

The wind was light and very fluky. Charlee won over a 4-mile triangular course; Pluto was second; the rest did not finish, the wind flattening out to a calm.

The starters in the canoe race were as follows, same course and weather conditions: Seniors—Smuggler, A. S. Fenimore. Juniors—Fineen, John M. Hamilton; Her Name, M. D. Wilt; Kie Loe, H. M. Rogers; Osceola, Omar Shallcross. Fineen won, with Smuggler second by about an hour, as the wind flattened out. The rest did not finish.

The annual spring regatta was held on Saturday, June 15.

First race. Yawls, 1¾ miles to windward and return. Starters, Pluto, Lloyd R. Titus; Tadpole, R. G. Fleischmann; Nixie, H. E. Bachmann; Charlee, H. E. McCormick; Oni, W. J. Scott. Tadpole won on time allowance; Nixie second.

Second race. Maneuvering and upset sailing; Smuggler, A. S. Fenimore, won; Fineen, J. M. Hamilton, second.

Third race. Single paddling, decked sailing canoes; about $^1_6$ mile around buoy and return. Her Name, M. D. Wilt, won; Kie Loe, M. A. Freeman, second; Osceola, E. W. Crittenden.

Fourth race. Tandem paddling, decked sailing canoes, double blades, same course. Kie Loe, M. A. Freeman and E. W. Crittenden, won; Osceola, M. D. Wilt and Omar Shallcross, second.

Fifth race. Swimming 200yds. Walter A. Whetstone, won; H. A. Hayward, second.

Sixth race. Tandem paddling, open canoes, single blades. R. G. Fleischmann and E. W. Crittenden, won; Chiquita, J. M. Hamilton and M. A. Freeman, second.

Seventh race. Hand paddling, decked canoes. Her Name, M. D. Wilt, won; Kie Loe, M. A. Freeman, second.

Eighth race. Tub race, 50yds. J. M. Hamilton won, Harry Hayward upset, and E. W. Crittenden could not make his tub go any way but round and round, so he gave up.

Ninth event. Tournament. J. M. Hamilton and M. D. Wilt in Her Name won by upsetting Kie Loe, containing H. Blumner and Harry Hayward.

The races were followed by supper call. Various good things were served on the lawn, and these in turn were followed by an entertainment by our Minstrels Nautique and the Kanoo Klub Kwartet, which was a great success.

The prizes were then presented by Mr. Harry Fleischmann with various appropriate and inappropriate remarks, and the evening wound up with dancing.

We held a very successful regatta, with well contested races run off without delay, our minstrels acquitted themselves royally, and altogether it was a Red Letter Day for the Red Dragon. M. D. WILT.

The Eastern Division Meet.

THE division meet of the Eastern Division, American Canoe Association, took place at Lake Mascuppic on June 15, 16 and 17, the races taking place on the latter day, there being little wind for sailing. The races resulted as follows:

One mile straightaway, double blade paddle, for Eastern Division trophy—Clarence Euson, Springfield, first; Walter L. Perry, Boston, second. Time, 46m. 45s. (The trophy, by this winning, becomes Mr. Euson's property.)

Paddling, single blade paddle, half mile straightaway—Moses Colon, Boston, first; J. W. Brown, Woburn, second; R. Appollonio, Boston, third.

Tandem paddling, single blade paddle, half mile straightaway—Moses Colon and C. B. Ashenden, Boston, first; W. S. Coburn and J. K. Whittier, Lowell, second; J. W. Brown and J. W. Waters, third.

Tandem paddling, double blade paddle—C. Euson and J. M. Gates, first; W. T. Hahn and W. S. Coburn, second.

War canoes, one mile straightaway—Wawbewawa, Boston, first; Waltham, second; Wahahbezee, Newton, third.

Paddling, club fours—Wells, Smith, Colon and Drake, Wawbewawa Club, Boston, first; Apollonio, Euson, Gates and Cartwright, Puritan Club, Boston, second.

Sailing, unlimited, three miles—Paul Butler, Wasp, Lowell, first, 53m. 45s.; Howard Gray, V., Lowell, second, 58m. 30s. D. S. Goddard and Butler Ames, both of Lowell, were the other starters.

Standing paddling—J. W. Cartwright, Boston, first; W. S. Coburn, Lowell, second.

Hurry-scurry (run, swim or paddle)—W. S. Coburn, Lowell, first; Dr. E. S. Lamson, Lowell, second,

Hand paddling—J. J. Burrage, Newton, first; W. L. Perry, Boston, second; W. T. Hahn, third.

Sailing upset—Butler Ames, Lowell, first; Howard Gray, Lowell, second.

A. C. A. Membership.

EASTERN DIVISION—Henry K. Gates, F. E. Baker, Henry G. Pollard, Arthur M. Burtt, Julian B. Keyes, S. D. Butterworth, Jr., Walter S. Coburn, A. A. Sargent, Lowell, Mass.; J. W. Waters, Woburn; Wm. I. Hahn, J. B. Waterbury, Boston; Louis G. Hoffman, Brookline; Gardner W. Pearson, Butler Ames, Lowell, Mass.; James Mosley Gates, Springfield, Mass.; C. E. Foss, Lowell, Mass.; Edgar G. Frost, Auburndale, Mass.; Harry L. Bixby, Newton, Mass. Central Division—Chas. B. Kirby; John S. Wright, A. S. Newell, Rochester, N. Y.

Yachting.

FIXTURES.

*Dates marked thus are unofficial.

JUNE.

29. Atlantic special, New York Bay.
29. Yankee Doodle-Vamoose-Rex race, Sound.
29-30. San Francisco cruise to Mare Island, San Francisco Bay.
29. New Rochelle annual, New Rochelle, Sound.
29. Dorchester open, Boston Harbor.
29. Squantum first cham., Squantum, Mass.

JULY.

1. Royal St. Lawrence fourth annual, Sir Donald A. Smith Cup Montreal.
1. Cor., Atlantic City record, Atlantic City.
1. Indian Harbor special, Greenwich, Sound.
2. San Francisco club sail, San Francisco Bay.
3. Seawanhaka Cor. race to Larchmont, Oyster Bay, Sound.
4. Larchmont annual, Larchmont, Sound.
4. Boston City open, Boston Harbor.
4. Lake Michigan Y. R. A. annual, Milwaukee.
4. Cor. Marblehead Club, Marblehead (Mass.) Bay.
4. Northwestern International Y. R. A. race, Seattle, Puget's Sound.
4. Cleveland regatta, Cleveland, Lake Erie.
4-7. San Francisco cruise, up river, San Francisco.
5. American annual, Milton Point, Sound.
6. Royal St. Lawrence Commodore's Cup, Montreal.
6. Riverside annual, Sound.
6. Duxbury Club, Duxbury, Mass.
8. Seawanhaka Cor. special, Oyster Bay, Sound.
9. Horseshoe Harbor special, Larchmont, Sound.
10. Huguenot special, New Rochelle, Sound.
11. New York Athletic Club annual, Travers Island, Sound.
12. Larchmont, 1st class, special schooners, and 34 and 21ft. classes, Sound.
12. Larchmont-Atlantic combined annual cruise, rendezvous at Larchmont.
13. Larchmont to Block Rock.
14. Block Rock to Morris Cove.
15. Morris Cove to New London.
16. Special race, New London.
17. New London to Shelter Island.
13. Royal St. Lawrence cruising race to Beauharnois, Montreal.
13. Cor., Marblehead, first cham., Marblehead (Mass.) Bay.
13. Hempstead Harbor annual, Sound.
13. Squantum second cham., Squantum, Mass.

IT will be no surprise to our readers to learn that the very much advertised race of the fast steam yachts was just such a fizzle as all previous attempts. The Philadelphia boat, Yankee Doodle II., did not start for New York until Friday, the day preceding the race. On her way through the Delaware and Raritan Canal, when some miles beyond Trenton, she struck some obstruction, said to be a sunken canal-boat, and wrecked her wheel. A mule team towed her ingloriously back to Trenton for repairs, the race being postponed indefinitely. Yankee Doodle II. being disabled, Norwood was on hand off 125th street, New York, the starting point, on Saturday afternoon, and she and Vamoose had an informal brush up the river. Norwood ran ahead some distance at the start and held her lead for some time, but finally her blower broke down and she ran into Yonkers. Another race, between Vamoose, Marietta I. (now renamed Judge), Yankee Doodle II. and Rex, is set for next Saturday, June 29, but we have not the slightest idea that it will result in one boat out of the four beating any or all of the others.

THERE is no reason whatever to suspect that the owners of Yankee Doodle II. deliberately wrecked their boat, or were in any way responsible for the mishap, but the yachting public is hardly interested in the question of blame or responsibility; what it wants is to see, for the first time after years of brag and free advertising, a *bona fide* race of steam yachts. The true nature of this fast steam yacht racing is shown by the fact that on depositing a check for $100 with Mr. Chauncey M. Depew, and entering a yacht which has no pretensions to very high speed, a certain newspaper becomes entitled to three or four months of free advertising by other papers. This may be good business, but it is not sport, and the men who lend themselves to it in one way or another are neither sportsmen nor yachtsmen.

Free Lance.

THERE is unintentionally something particularly appropriate and suggestive in the name Free Lance, given last week to the new steam yacht designed by Mr. A. Cary Smith, on her launch at the Crescent Shipyard, at Elizabethport. Long years ago Mr. Smith was a pioneer and a free lance in the fight for better methods in the designing of sailing yachts; and in this his first venture in steam yacht designing he comes forward again to tilt against old beliefs. Some four years ago, Mr. Smith, much against his will, was bullied by one of his friends into attempting the design of a large steamer, a type of vessel to which he had previously given no attention, his tastes and his instincts being essentially those of a sailing yachtsman. In undertaking this task, after some little time devoted to observation of the existing boats engaged in the same class of work, he started in to cut away the deadwood, literally from the design and figuratively from the old-time theories and ideas which have so long ruled the production of the larger inland passenger steamers. In almost every important detail his design differed from the conventional and stereotyped model of the shipyards; so much so that it was impossible that both could be right. The result of this bold experiment was not long in doubt; before the boat was launched some of her greatest admirers were those who had first scoffed at her peculiar model; and a very short time in actual service proved her exceptional speed and general good qualities. This boat, the R. J. Peck, of the New Haven Line, was followed by a larger one, the City of Lowell, for the Maine Line, which has proved quite as successful. In both craft the full, round lines of the modern sailing yacht replaced the old hollow-ground bows and extensive deadwoods of the typical Sound steamer, and with the best results.

Two years ago, when the steam yacht Embla was built by Seabury & Co., Mr. Smith was called on to superintend the construction, and the under-water body was altered by him, the boat proving, as is well known, quite fast. In the Free Lance, however, he has made his first attempt at a steam yacht, and the result cannot fail to be interesting and instructive. The boat was ordered by Mr. F. Augustus Schermerhorn, of New York, for the same service as his old yacht Empress, about New York Bay, the Hudson and the Sound, to run to Newport and to accompany the New York Y. C. fleet on the annual cruise; and without competing with the so-called "fast" steam yachts, to make considerably more than the average speed of yachts of her class.

The dimensions chosen were: Length over all 137ft., l.w.l. 108ft., beam 20ft., draft 6ft. 9in. The model is radically different from the familiar steam yacht of this class, the midship section starts with a flat trough keel of 2ft. width, similar to a sailing yacht, and the floor is very sharp with an easy bilge. Starting with a breadth of 2ft. instead of the few inches breadth of the usual bar keel, this form of section still gives the necessary displacement and internal space in spite of the great deadrise. From the fore end of the waterline down and aft, the line of keel runs at a great angle, there being no suspicion of a forefoot; in fact, the cutting away could not be carried much further. The after portion of the keel is nearly straight, with a moderate amount of drag, the sternpost being of course vertical. The stem above the water is similar to Katrina, Thistle and the sailing yachts of six years back; and the counter is also that of a sailing yacht, long and with considerable body, but fair and symmetrical. The leading motive of the design, as in the Peck and Lowell, is the dependence on long, fair and convex diagonals, the result being a good balance of bulk both above and below water between the middle body and the two ends.

The topsides are chiefly marked by the absence of the rank sheer so generally affected in the older yachts, sail as well as steam; a feature that, apart from its inherent ugliness, has no practical justification. In all descriptions of pleasure craft, save perhaps the racing machine, from the smallest dinghy up to the large steam yacht, an ample allowance of freeboard amidships is a prime requisite. Given this necessary height of side at the mid-length, there is no longer any reason for carrying the ends up in a curve like the new moon, a fashion that is even now by no means extinct, though less prevalent than ten years ago. If any reason for an extreme height of bow and stern existed in the days of very short overhangs and hollow bows, which is very doubtful, it certainly does not exist to-day, when the designer, with full liberty to extend his fore and aft lines as far as he pleases, and consequently to employ a full convex deck line from end to end, with convex frame lines, can be sure of buoyant ends with but moderate freeboard and a straight sheer.

As far as appearance goes, it is true, though many have thus far failed to realize the fact, that a smart, lively look is attained, not by an extremely round sheer with low waist and high stem and stern, but by an artistic and harmonious combination of the lines of the stem, horn timber and counter with the sheer line and the bowsprit. This may be accomplished, provided the line of sheer be properly drawn, and the greatest curve in the right place, as well or better with a straight sheer than with one of great curvature. As seen in her launching trim, the new yacht promises to show up remarkably well in a side view, though the line of the rail is very nearly straight. On this type of craft a monkey rail and nettings are a necessary evil, like all superstructures, serving to kill the true sheer of the boat, but they have been mitigated as far as possible by stopping them short of the taffrail and avoiding the common right-angled and vertical chicken yard fence.

The peculiar model has called for a variation in the construction, as already mentioned, there being no bar keel, but a wide, flat one, giving excellent facilities for docking, and certainly far better in the event of taking the ground. With this construction there is no difficulty in securing adequate strength in the floors, and there is nothing outside to suffer from a blow.

The yacht has been built at the Crescent Shipyard, where Emerald was built two years ago, since which time the yard has been taken by Mr. Lewis G. Nixon, formerly Naval Constructor, U. S. N., and later with the Cramp Ship Building Co., of Philadelphia. Mr. Nixon has a very good plant, and the large foundry and machine shops of S. L. Moore & Sons, the original owners of the yard, are adjoining, and offer every facility for engine and machine work, the engines of the yacht being built there. The hull is, of course, of steel, a very good piece of construction, the lapstrake system of plating being used. The lines of the plating have been run with especial care, and altogether the result is very much superior to the in-and-out plating, while presenting some advantages over the flush plating.

The rudder is of the new single-plate pattern, the frame being forged with three arms, projecting as usual from the stock, one at the top, one at the bottom and one in the middle. Instead of using two plates of steel, riveted on the outside of the arms or rudder frame and leaving a space to be filled in with wood, the three arms are slotted out to receive one single steel plate. Of course a half of each arm is exposed on each side of the plate, but the construction is stronger, simpler and lighter than the old. The stuffing box and bearing for the rudder are so arranged that while the former is immediately against the skin of the ship, the bearing is supported above it on three arms, leaving room to get at the gland without disturbing the bearing.

The engines are now building in the Moore shops, three cylinders, 11, 17 and 29in.×20in.; they have been specially designed for the yacht and no pains and expense have been spared in the construction, all the wrought parts being worked out from solid stock. The bearings are of Parson's white metal. The sharpness of the floors has called for a compact construction of the machinery, and a vertical Davidson air pump is bolted on the back of the condenser, occupying little room.

The boilers were built to order by the Almy Watertube Boiler Co., of Providence, with some new and special features from which good results are anticipated. They are two in number, placed side by side athwartships. The engine and boiler rooms are separated by a thwartship bunker, and there are two large side bunkers. The usual bunker plates in the decks are conspicuous by their absence, all of the bunkers being filled by shutes located in the top of the boiler-room casing. The water tank is abaft the saloon, formed by two steel bulkheads entirely across the ship.

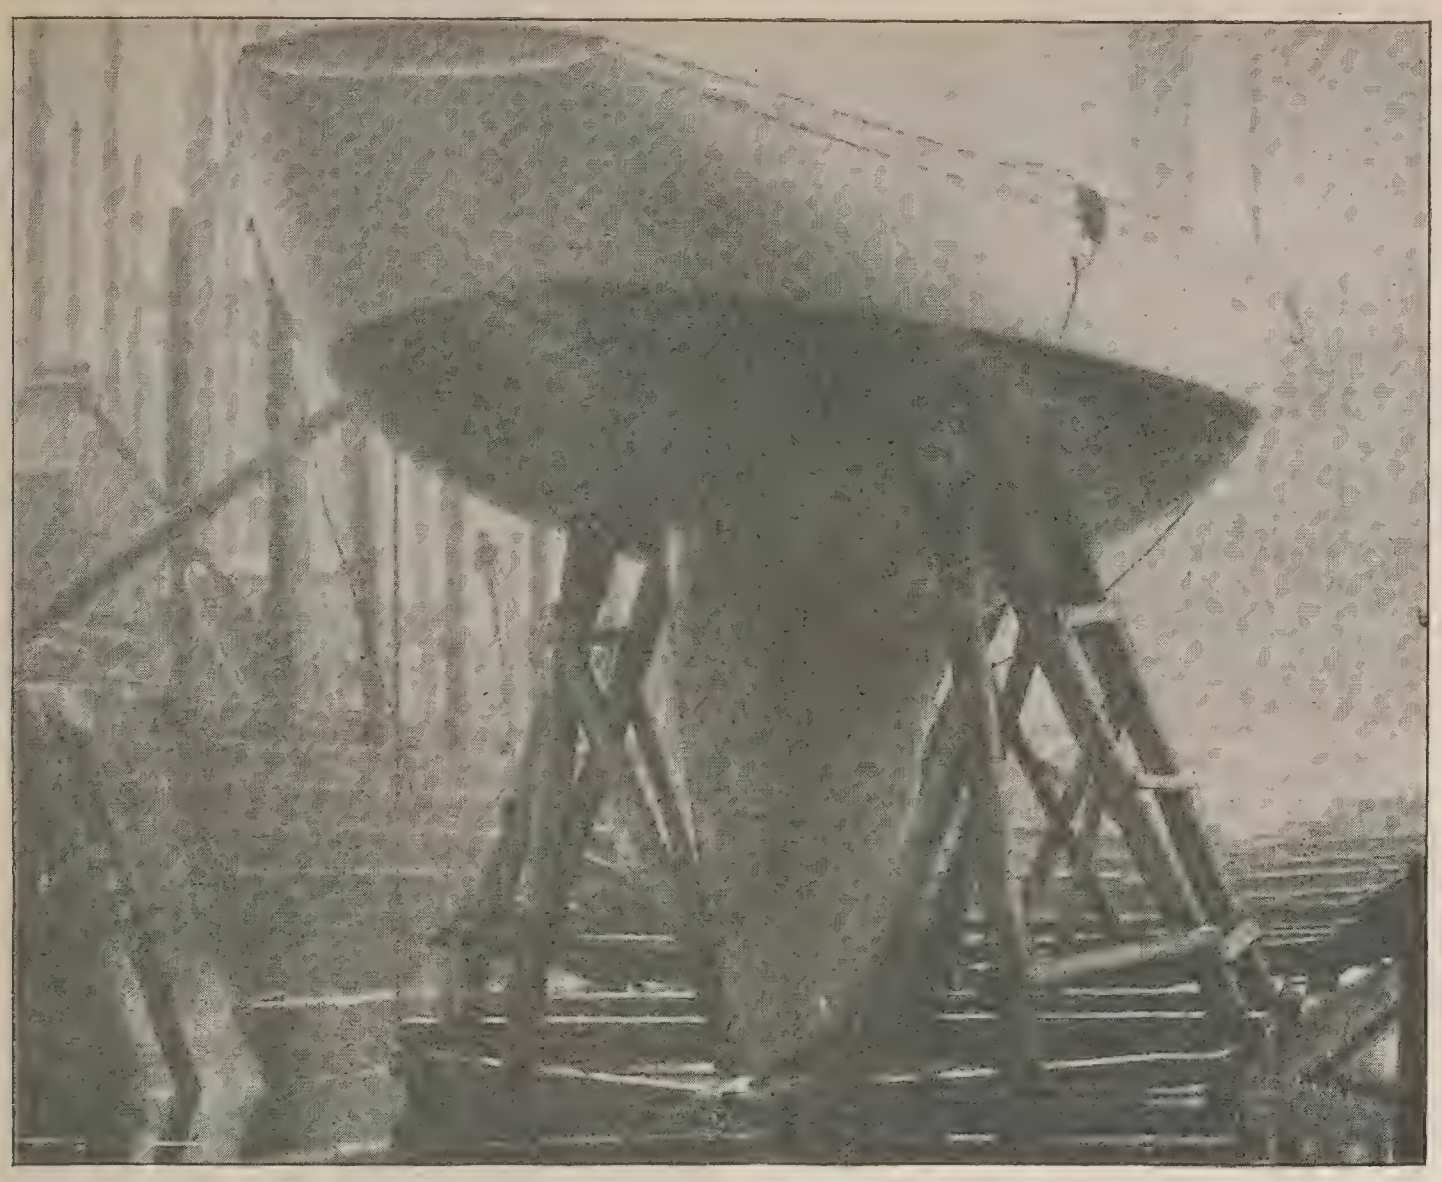
There are two deck houses, the forward one being occupied by the pilot house, captain's and engineer's rooms, and a companion leading to the messroom. The galley is directly forward of the boiler room, and includes the full width of the ship; forward is the officers' messroom, then there is a passage to the forecastle, with a stateroom on each side. The forecastle is roomy and well arranged.

The after house will be used as a dining room, with a companion leading down just abaft the engine-room bulkhead. On the starboard side is the owner's room, and on the port side of the steerage the toilet and bath room. The saloon is aft, under a low trunk house, entered directly by a companion from the after deck. Abaft the owner's room, on the starboard side, is a second stateroom, the corresponding port room being fitted up with berth, etc., but serving by day as a passage from the saloon to the steerage. The rig includes a short foremast and long mainmast, giving a very shipshape look to the craft. The topsides are black and the bottom dark green.

The launch took place about 5 P. M. on June 20, the yacht sliding off quickly and smoothly as soon as the planks were sawn off. The christening was done by Mrs. Hall, daughter of the designer, who smashed the bottle very promptly and prettily just as the yacht started. The yacht will be out some time in July.

To all appearances, both designer and builder have worked hard to turn out a craft that is thoroughly original, and that both in appearance and performance will fully justify the radical departures from established standards; in which we hope that they may be entirely successful.

YACHTING NEWS NOTES.



Lloyd's Yacht Register for 1895 is now in this country, where it has many subscribers among American yachtsmen; a volume uniform with its many green-bound predecessors and quite as full of information. The total number of yachts enumerated is 7,527, of which 3,741 are British. The Register contains the particulars of 6,206 yachts, of a total tonnage of 246,654, of which 4,785 are sailing craft and 1,412 are steam. It is rather surprising to learn that of the sailing craft only 20 are built of iron, 44 of steel, 114 composite, there being 4,607 of wood. The book may be had by subscription of Lloyd's agent in New York, Thos. Congdon, principal surveyor for the United States, Kemble Building, Whitehall street, New York.

The fourth annual regatta of the Greenville (N. J.) Y. C., on New York Bay, will be held on Saturday, July 13, at 1 P.M., under the rules of the N.Y.Y.R.A. There are five different classes as follows: Class A., jib and mainsail under 20ft.; shifting ballast not allowed in this class; Class B, cabin cats; Class C, open cats 20 to 24ft.; Class D, 18 and under 20ft. for open cats; Class E, open cats under 18ft. The course will be a triangular one from a stake-boat off the club house to a second stake-boat near the statue of Liberty, and from there to the Robbins Reef bell buoy, and return to the club house. The entries close on July 11, with C. D. McGiehan, 2 Pearsall Avenue, Jersey City, N. J. The entire race can be witnessed from the club house, which is near the station of the Central Railroad of New Jersey. The club house is a fine old colonial mansion of historical note, and is provided with commodious grounds for the accommodation of yachtsmen and their friends.

The Indian Harbor Y. C. announced a special race, the second of the Y. R. U. circuit, to be sailed on July 1, and open to yachts enrolled in any recognized club, subject to the approval of the regatta committee. The race will be for the 34ft. class, the 21ft. class, the 30ft. and 25ft. cabin cat classes and the 20ft. fixed ballast class of open sloops (1 raters). The course for the 34ft. class will be from the starting line around buoy off Center Island, back around station marketboat and around buoy off Matinnicock and home, 20¼ miles. The course for the other classes will be from off the station around Matinnicock and Center Island buoys and home, 15 miles. The time limit will be 7 hours. The prize in the 20ft. class will be the Tyson cup. The start will be made by the Y. R. U. rules, as near to 11 A. M. as possible.

Return of Lasca.

FOR some little time nothing has been heard of the schooner Lasca, Mr. John E. Brooks, the last known of her being that she was in the Mediterranean. On June 24 she sailed into New York and quietly anchored off Twenty-sixth street, looking as fresh and trim as if just fitted out, with topmasts on end and square yard slung. She left Teneriffe on May 30 and met with light winds. On board were Mr. Brooks and a friend, Mr. Bement, while Capt. Rhodes is still in command. The yacht has been absent from New York since April 21, 1894.

VALKYRIE BEFORE LAUNCHING.—FROM A PHOTO BY WEST & SON.

Modern Yacht Construction.

IN view of the different methods of construction adopted by the designers of the new challenger and defender, and the fact that this difference may prove the ruling factor in the races, the following extract is particularly interesting. It is from the yachting volumes of the Badminton Library, and was written by Mr. Watson immediately after the races of 1893.

"In the lecture on 'Progress in Yachting and Yacht-building' which I delivered in 1881, in a fanciful specification of the yacht for the season 2000, I required that the plating below water should be of manganese bronze. Curiously enough, a few years later saw an attempt to combine the strength of steel and the smoothness, anti-fouling and non-corrosive properties of copper, in the building of a torpedo-boat of this material; while this year (1893) the chosen defender of the America's Cup has been plated with a similar bronze on a steel frame, the builders claiming, and not without reason, that the additional smoothness of bottom gives her an advantage of five to seven minutes on a forty mile course. But such a practice seems hardly likely to become general for ordinary racing yachts built for men of normal depth of pocket; and whilst, as in the old Mississippi steamboat days, it sometimes paid to burn hams, most of us have to try and get along with good coal.

"I was going to build the topsides, frames and beams of my ideal vessel of aluminum, and the other day a small yacht has been built on the Continent of this lightest of metals; but the present cost of this material, and, as yet, its unreliability, place it, for the present at least, outside the range of practical material for yacht-building. There seems more hope for some of the very beautiful and immensely strong alloys of aluminum, but they are too expensive, and also heavy. It may be some years before the complete realization of my design is accomplished, and platinum is substituted for lead as ballast, though when syndicates of millionaires start yacht-building there seems very little limit to extravagance in construction.

"In nickel-steel there is promise of a very perfect material. This is an alloy of the ordinary Siemens-Martin steel with nickel, and called by the makers Yolla metal. It can be made to comply with all the ordinary tests applied to ship steel, in the way of ductility under stress, and at the same time have a breaking strength of 40 tons to the square inch, as against 27 for ordinary steel. This metal was used by Mr. Fife in 1893 for the frame and beams of the 20-rater Dragon III.; and although the few pounds of weight saved by no means accounted for the phenomenal success of this little ship, yet the gain was all in the right direction."

In his prediction of fourteen years ago Mr. Watson was barely five years out; in fact, less, as the complete scheme has not yet been realized, only common, every-day lead being used for the keel of the new defender. Why the certainty of success should have been risked by the use of such a cheap and old-fashioned metal in place of the *fin-de-siècle* platinum, we do not know; money will do anything in these modern days, and if platinum is faster than lead, then the new boat should have had it, cost what it may. The other details, of manganese bronze bottom and aluminum topsides and deck beams, with the liberal use of aluminum alloys, have been fully realized in the new Bristol boat; with what advantage yet remains to be seen.

The article at least shows that two years ago Mr. Watson had looked over the whole field of construction in the most thorough manner. Whether he is yet up to the times can only be known after the racing of the two yachts; but it is evident that while the difference in weight of construction, the gain in speed from that difference, and the possible loss of necessary strength in the defender as compared with Valkyrie III. are all unknown quantities, that Mr. Watson has thus far gained a positive advantage in being ready much earlier, and in having a vessel that is hardly likely to require any subsequent strengthening. The defender, on the other hand, is still far from completion, with barely nine weeks to the date set for the first race; and not one but her designer, and possibly not even he, can say how much alteration and strengthening may be necessary after the first trials.

Valkyrie.

THROUGH bad weather and other circumstances, the first trial of Valkyrie under canvas did not take place until June 18, and then she was out for but two hours, a short sail in a light breeze being ended by a hard shower, her mainsails being stowed and covered while she ran into Gourock Bay under headsails; however, she was under way for a time with clubtopsail set in a moderate breeze. From the reports she handled well and carried her canvas satisfactorily, heeling readily to a certain point, but hanging there. The reports, however, are very inconclusive, and while they are good so far as they go, it will not be until she has been under way for some little time that her true form will be in part apparent. We always distrust the first accounts of trials with a new boat, as, unless she shows some marked defect at the start, it takes some time for her captain and crew to know just what she is and still longer before their experience becomes known to outsiders. A great many wild rumors are afloat to the effect that the yacht will not race at all in British waters, and that the good people of Glasgow are pained and indignant thereat, and other unimportant yarns. She will probably sail in the Clyde regattas next week, meeting Ailsa and Britannia. The former boat is now at Gourock for alterations, including, it is stated, the removal of the lead added outside prior to the Thames races. There is a report that thirteen of her crew left the ship because her owner and skipper refused to make such alterations as they (the crew) considered necessary. It is also reported that a series of matches have been arranged, to be sailed very soon, between Ailsa and Valkyrie. Those who are looking for sensations may find one in the renewed report that Valkyrie has a centerboard. We are indebted to Messrs. West and Son for the excellent photo of the after body of Valkyrie, a complement to the view published last week. From none of the photographs can any exact figures of dimensions be obtained, all showing more or less distortion or foreshortening; but they show her to be a very wide boat, though whether 27, 26 or even 25ft. beam, no one can tell. They show a moderate freeboard, taking the whole length of the boat from stemhead to taffrail, the ends being long, but not very high. They, together with the photo of the yacht at her moorings in Gourock Bay, taken by Mr. Adamson, show what might be expected from all that is known of Mr. Watson's earlier work—a fair, round and clean sweep to the whole side, with an avoidance of those extreme features now so frequently seen, such as the forcing down of the lines of stem and horn-timber just above the waterline, and an excessive round to the frames, forward and aft. The great beam and the abnormal fin are indeed extreme features, but hardly to be classed with some of the eccentricities of genius recently floated. The view of the spars bears out all that has been said about their extreme dimensions; mast, boom and gaff are very long and large, the latter two being hollow.

Jubilee.

After the breaking of the ways under her on June 10, Jubilee laid until the night tides on June 22, when she was finally launched. The launch is described as follows by the Boston *Globe*:

"At high tide yesterday morning a pile-pulling lighter was placed on either side of Jubilee, and as the tide fell a heavy stick of timber was passed under her stern, just aft the fin, and its ends attached to the steam purchases on the lighters. As the tide rose in the evening the lighters rose with it, and with them, aided by a pull on the purchases, the stern of Jubilee.

"When only the bow was left resting on the ways, the boat was hauled astern by means of purchases from the cradle to capstans on the piers at either side, and she was thus floated with comparative ease. The purchases on the big timber were then slacked away and Jubilee settled to her proper lines.

"Nothing now remained but to clear her of the timber and the cradle, and this was done soon after high tide, 11 P. M., the work of lifting, floating and hauling out having occupied less than two hours.

'By lines to the piers the boat was warped to the outer end of the Atlantic works dock, under the shears, and here she will receive her spars and complete her fitting out Mast and bowsprit are in place, so that little remains to be done save to sling the mainboom and gaff, get the topmast on end, reeve the running rigging and bend the sails.

"This should not take more than three or four days, so that by Wednesday or Thursday Capt. Newcomb is expecting to have her under sail. She has apparently received no injury from the breaking of the ways, as the cradle held firm and supported her.

"Her looks have been improved by the extra length at the water line forward, and the new bow promises increased speed."

The Newport Races.

Mr. F. P. Sands, who has been at the head of the scheme for a series of yacht races off Newport at the close of New York Y. C. cruise, has announced the following program :—

The races will take place immediately after the return of the fleet to Newport, propably on Aug. 7, and will continue for four days.

The races will be open to yachts of any regularly organized club, and will be in charge of the regatta committee of the New York Y. C., who have consented to act upon the occasion. The general conditions of the races are as follows :—

First day.—Schooners in cruising trim.
Second day.—Sloops, cutters and yawls in cruising trim.
Third day.—Schooners in racing trim.
Fourth day.—Sloops, cutters and yawls in racing trim.

Any class may sail in cruising trim by the unanimous consent of all interested.

The classes for which entries will be received, together with the prizes in cash, which have been determined upon, are as follows :—

SCHOONERS.

First Class.—Over 80ft. racing length ; $300 to the first and $120 to the second.

Second Class.—Under 80ft. and over 70ft. racing length ; $250 to the first and $100 to the second.

Third Class.—Under 70ft. racing length ; $200 to the first and $80 to the second.

SLOOPS, CUTTERS AND YAWLS.

First Class.—Over 80ft. racing length ; $400 to the first and $160 to the second.

Second Class.—Over 60ft. and under 80ft. racing length ; $200 to the first and $80 to the second.

Third Class.—Over 50ft. and under 60ft. racing length ; $150 to the first and $60 to the second.

Fourth Class.—Over 33ft. and under 50ft. racing length; $100 to the first and $40 to the second.

Fifth Class.—Over 43ft.; $50 to the first and $20 to the second.

No second prize will be given in any class unless four or more start. Sloops and other craft in the fifth class must be up to the requirements for representation in the New York Y C.

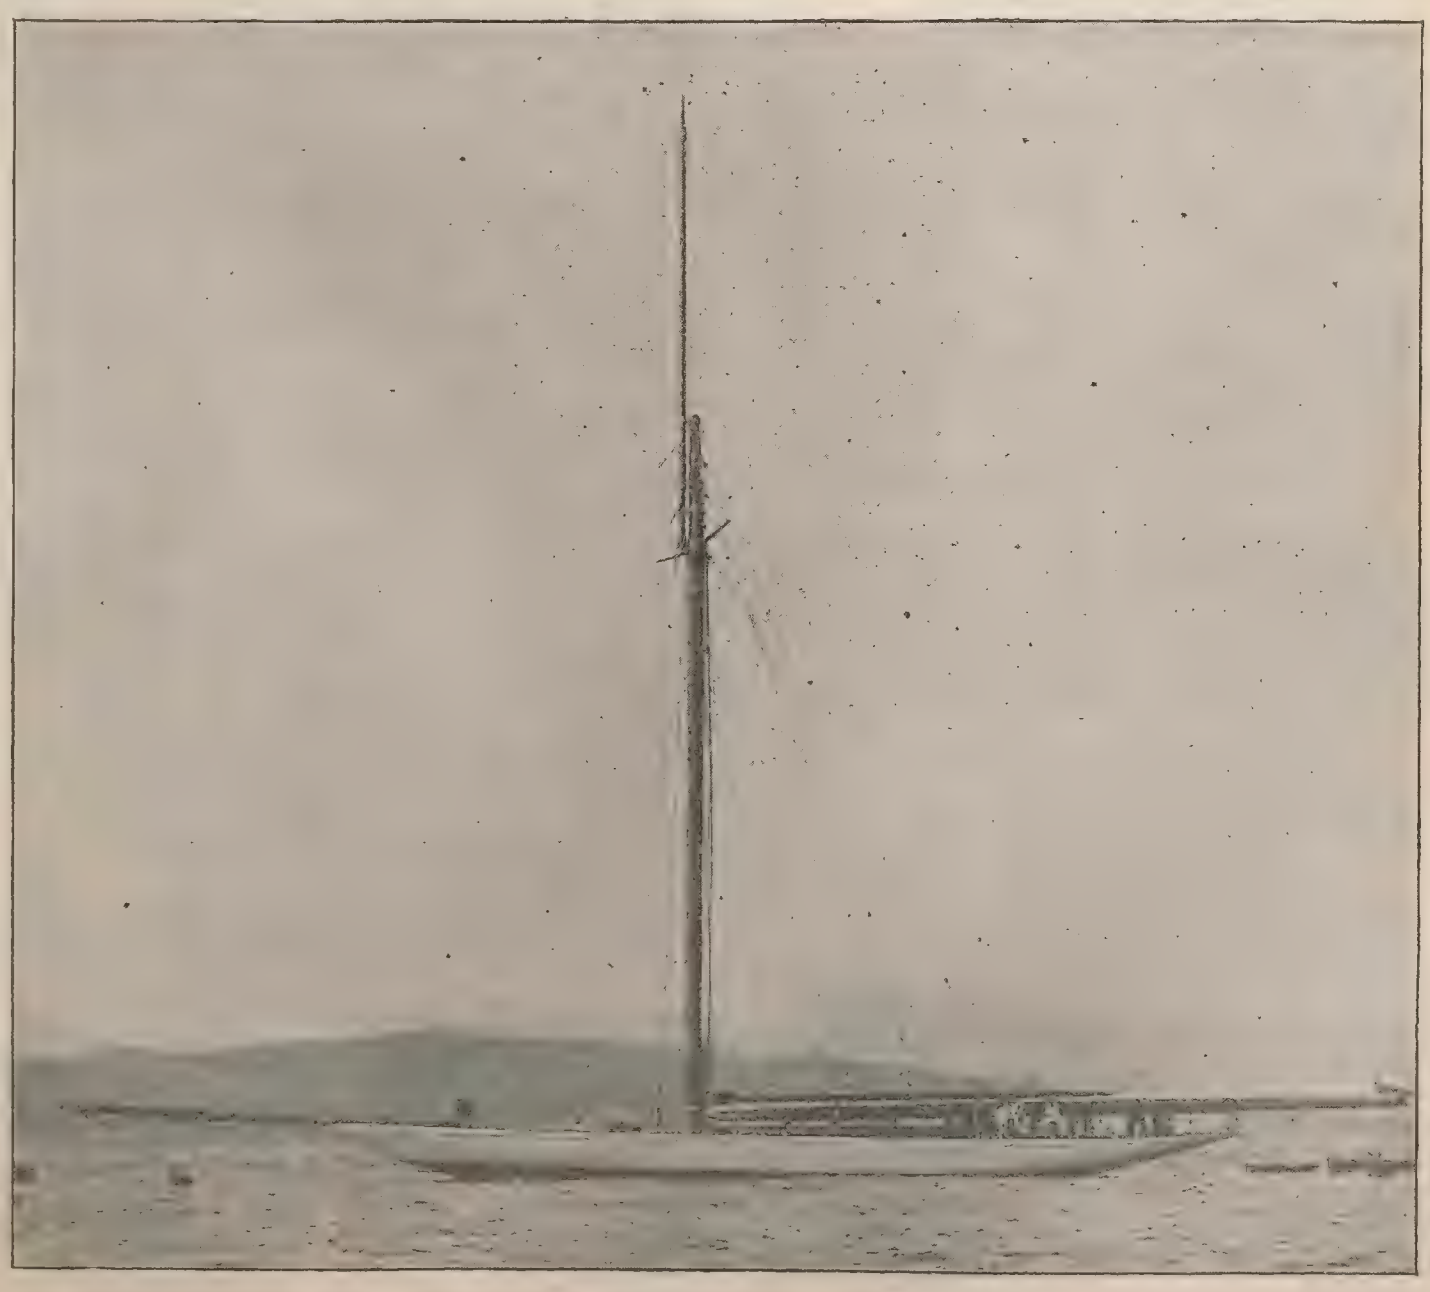
The course will be an equilateral triangle, formed by Brenton's Reef Lightship, Point Judith whistling buoy and an off shore mark—a red and white flag or buoy placed by the committee.

Compass bearings of marks, starting signals, etc., may be obtained from the committee the day previous to races.

All classes of schooners, and classes one and two of sloops, cutters and yawls, will sail twice around the course, except by order of the committee. Classes three, four and five of sloops, cutters and yawls will sail once around.

The same course will be used for each day's racing, except that the committee will start yachts so as to make one leg as much as practicable to windward.

The committee have power, if they consider it advisable, to stop any race at the end of the first round, and award the prizes.



The start will be from Brenton's Reef Lightship. The racing rules and time allowance of the New York Y. C. will govern.

Entries should be addressed to the Regatta Committee, New York Y. C., Newport, R. I., and must be made twenty-four hours prior to the start of each race.

The Cup Defender.

FOR the past ten days the most contradictory reports have been afloat concerning the date of the launch of the new defender at Bristol, June 22, 23 and 26 being given, as well as July 4. The facts seem to be that while all interested were intensely anxious to launch on the very high tide of June 22, the yacht was not ready, and the discovery at a late moment of the rottenness of the launching ways made a further delay necessary. The ways on which Colonia was launched were built of heavy timbers of yellow pine, painted with anti-fouling paint, being laid in the spring of 1893. Recently these ways have been added to in length, it being assumed that they were still sound and good. When Colonia was launched there was a score in her keel, evidently made by a bolt head or other projection in the ways, and last week a diver searched for the defect. He soon found signs of decay, and a part of the ways was taken up and found to be completely destroyed by worms. It was necessary to examine all of the old work, which was then found to be worthless; so the work of rebuilding this part of the ways was begun and pushed as rapidly as possible. On Tuesday an official statement was made that the launch will take place at a quarter to 1 on Saturday, June 29, and will be public. According to the New York *Sun*, in an interview on June 24 Mr. Iselin stated that the beam of the defender is 24ft. and draft 18ft.

The ownership of the new steam yacht building by Ramage & Ferguson is credited to Mr. Rutherford Stuyvesant, owner of the schooner Palmer, this latter yacht being now on the sale list.

VALKYRIE IN GOUROCK BAY.—FROM A PHOTO BY ADAMSON.

Seawanhaka Corinthian Y. C.

THE present week will be an important one for the Seawanhaka Cor. Y. C., the annual regatta and the racing cruise to New London and return keeping the yachtsmen busy. The annual regatta was sailed on June 24 with a very good fleet of starters, the day being fair and pleasant, with a light breeze until near the finish, when a heavy rain squall struck the fleet. The times were:

Winthrop Y. C. Racing Run.

WINTHROP—BOSTON HARBOR.

Saturday, June 15.

THE fleet of the Winthrop Y. C. made a run on June 15 to Marblehead, some of the boats racing for prizes offered in two classes. The chief competitors were the new boats Savitar and Satanic. The wind was fresh from the east. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Satanic, Wm. Daly	22.05	2 34 50	1 52 42
Savitar, Syndicate	23.06	2 33 50	1 53 18
Harolde, A. T. Bliss	24.07	2 57 45	2 18 43
Whisper, W. H. Stimpson	29.00	2 53 45	2 20 02
Little Rogue, I. W. Spencer	21.04	3 29 10	2 45 20
CATBOATS.			
Mist, A. H. Merrill	20.03	3 34 20	2 38 50
Harriet, L. T. Harrington	21.00	3 27 30	2 43 08

The fleet included eighteen boats, but no others were timed. The winners were: First Class—Satanic first, Savitar second. Cat Class—Mist first, Harriet second. The judges were A. T. Bliss, E. A. Cook and W. T. Garrett.

Minnetonka Y. C. Opening Race.

LAKE MINNETONKA.

Saturday, June 15.

THE Minnetonka Y. C. opened the racing season on June 15 with a good race over the 10-mile "short course" in a fresh breeze. There were three new boats in the fleet, Dragon, Wasp and Orphan. Dragon capsized and Wasp and Orphan were only in the middle of the fleet. The two Herreshoff boats, Kite and Alpha, were beaten by a local boat, Marie, the times being:

	Elapsed.	Corrected.
Marie	1 47 31	1 45 36
Kite	1 48 27	1 47 00
Alpha	1 54 50	1 53 37
Wasp	1 58 22	1 56 27
Orphan	1 59 48	1 58 41
Siren	1 59 21	1 59 21
Thistle	2 02 54	2 00 59

Vigilant.

ALL of last week Vigilant was under sail about New York, using a suit of her old canvas re-cut and the mainsail enlarged by Sawyer & Son. On June 16, while in the Upper Bay, the new jaws of her gaff, a heavy and solid forging, straightened out under the heavy strain, there being no flaw, but only a bending. The boat returned to City Island, where the jaws were made, and reshipped the old pair originally carried. On June 22 she was towed by her tender, a craft of similar model to the renowned Hattie Palmer, to the balance dock at Elizabethport adjoining the Crescent Shipyard, and late the same evening she was docked. Some repairs and alterations will be made on her by Mr. Nixon. Hattie Palmer is now in the service of the new defender.

We have received from H. M. Wylde, the secretary, the year book of the Royal Nova Scotia Yacht Squadron, of Halifax. The squadron's fixtures for the season are: June 8, open race; June 22, open race, Capt. Russell's cup; July 1, Wenonah cup and skiffs and sailboats; July 6, open race; July 20, open race and skiff handicap, squadron cruise; Aug. 10, open handicap; Aug. 24, 3-rating handicap; Sept. 7, open handicap; Sept. 14, open race.

Hull Y. C. Opening Race.

HULL—BOSTON HARBOR.

Saturday, June 15.

THE Hull Y. C. opened the season with a good race on June 15, the new Adams boat Rooster sailing her first race. The weight of her centerboard as recently given, 800lbs., is incorrect, the true weight being but 200lbs. The race started with an east wind, but it dropped and finally came from S.E. The times were:

	Length.	Elapsed.	Corrected.
THIRD AND FOURTH CLASSES.			
Beatrice, J. Cavanagh	30.11	1 59 00	1 29 53
Gleaner, F. O. Wellington		2 02 56	. .. ..
White Fawn, A. E Jones	30.11	2 03 50	1 34 43
Eulalie, R. G. Hunt		Withdrew.	
KNOCKABOUT CLASS.			
Spinster, S. M Clark	21.00	2 00 36	. .. ..
Nike, T. E Jacobs	21.00	2 00 37	. .. ..
Nabob, H. W. Friend	21.00	2 01 57	. .. ..
Lachica, C. V. Souther	21.00	2 02 47	. .. ..
Hullo, J. R. Taylor	21.00	2 04 15	. .. ..
Santa Maria, J. J. Souther	21.00	Withdrew.	
FIFTH CLASS.			
Swirl, H. M. Faxon		1 37 57	. .. ..
Rooster, G. C. & C. F. Adams		1 39 18	. .. ..
Kayosk, F. G. Rice		1 40 58	. .. ..
Opeehee, W. P. Barker		1 47 35	. .. ..
SIXTH CLASS.			
In It, R. B. Williams	20.04	1 54 06	1 32 11

Nike and Spinster filed counter protests which have not been decided.

Savin Hill Y. C. Handicap Race.

SAVIN HILL—BOSTON HARBOR.

Saturday, June 15.

THE Savin Hill Y. C. was fortunate in having good weather for its handicap race on June 15, the day being fine, with a fresh easterly wind. The times were:

	Elapsed.	Corrected.
Clara, Walter Burgess	1 23 41	1 41 11
Primrose, J. H. Starke	1 27 44	1 15 06
Romance, Loring Sears	1 24 08	1 16 38
Imp, L. A. Horton	1 32 40	1 16 00
Emerell, W. H. Lowe	1 29 29	1 16 39
Willett, Percy Hodges	1 32 21	1 16 41
Siko, S. D. McBeath	1 34 06	1 18 31
Marietta, C. T. Jones	1 33 41	1 18 41
Ruth, Paul H. Fox	1 32 04	1 21 24
Pioneer, J. T. Turner	1 37 04	1 21 49
Smash, S. H. Esbjorn	1 51 06	1 31 56
Moya, G. L. Fitz	1 50 51	1 32 46
Viento, G. W. Chesley	1 51 06	1 32 21

Romance took the ground for a short time near Cow Pasture Buoy, and Vim carried away her mainsheet block. The winners were: Clara first prize, Primrose second, Imp third and Romance fourth, the prizes being silver cups.

The judges were A. A. Swallow, A. L. Hill and R. K. Rice.

Commonwealth Y. C. Annual Regatta.

SOUTH BOSTON—BOSTON HARBOR.

Monday, June 17.

AFTER a cruise to Marblehead on Saturday, the fleet of the Commonwealth Y. C. returned to its anchorage for the annual regatta on Monday, the fleet disbanding at Hull and the yachts sailing home from there as they pleased. In Class A only the flagship Countess arrived in time, so there was no race in this class. The wind was light to moderate from S.W., the times being:

	Length.	Elapsed.	Corrected.
SECOND CLASS.			
Wahneeta, Smith & Cobb	21.07	1 56 55	1 28 59
Topsy, C. M. Peterson	21.05	2 01 55	1 33 57
Altruria, P. Monahan	19.07	2 08 05	1 40 57
Pansy, J. F. Johnson	23.05	2 08 22	1 41 17
Kittie, J. A. Evans	19.06	2 11 25	1 44 17
THIRD CLASS.			
Cave Adsum, J. L. Jardine	23.07	1 48 11	1 21 08
Helen, Fred Pfund	19.08	1 49 48	1 22 40
FOURTH CLASS.			
Trio, A. H. Baker	18.06	2 18 16	1 44 16
Tiot, J. Cobb	16.01	2 09 02	1 44 59
Ada, Butler & Speth	17.08	2 10 25	1 46 24
Mina, C F. White	16.11	2 12 48	1 48 46

The judges were Messrs. John B. Smith, John Marrow, Andrew Bekkenhuis, C. R. Lyman and O. S. Eilertson.

Cape Cod Y. C. Opening Race.

EAST DENNIS, CAPE COD—CAPE COD BAY.

Saturday, June 15.

THE opening race of the Cape Cod Y. C. on June 15 was sailed in a two-reef breeze from N.E., only four yachts starting and two finishing; the heavy weather preventing the attendance of boats from Barnstable. The wind and sea were so bad before the start that the crew of Eclipse was twice capsized in the surf in trying to board the yacht. Just as the boats crossed the wind fell and left them rolling in the sea, Nauset fouling a fish wier and being compelled to withdraw. The wind came in hard and an exciting race begun, the City of Chicago being soon disabled, leaving Addie and Eclipse to fight it out alone. The latter part of the race was sailed with whole mainsails, and Addie won easily, the times being:

	Length.	Elapsed.	Corrected.
Addie, R. C. Nickerson	25.3	2 27 45	1 55 57
Eclipse, H. H. Sears	25.9	2 35 43	2 04 27
City of Chicago, I. F. Crosby	25.6	Withdrew.	
Nauset, J. H. Cummings	29.6	Withdrew.	

Olympic Y. C. Annual Regatta.

BROOKLYN—NEW YORK BAY.

Saturday, June 15.

THE Olympic Y. C., of South Brooklyn, sailed its fifth annual regatta on June 15, the course being on the Upper Bay. There was a fresh S E. wind which disabled Louisa B., Ethel C. and Surprise. The times were:

	Start.	Finish.
CLASS A.		
Black Duck, F. Buse	11 18 45	1 43 45
Led, Com. Lawson	11 27 00	1 47 50
CLASS B.		
Mickey, B. F. Mumm	11 26 00	2 40 00
Lady Ella, J. Crouch	11 27 30	2 49 00
CLASS C.		
Annie K., R. Kalp	11 26 00	2 10 00
Homing, G. Gatkiss	11 26 30	1 45 40
Louisa B., C. F. Bohland	11 26 40	Disabled.
Surprise	11 27 30	Disabled.
Ethel B., W. Charleton	11 29 00	Disabled.
CLASS D.		
Columbo, T. Naresca	11 34 50	2 20 00
CLASS G.		
Sassie Sam	11 37 50	12 56 00
Diana	11 37 56	1 07 15

The winners were: Class A, Black Duck; Class B, Mickey; Class C, Homing; Class D, Columbo; Class G, Sassy Sam.

New Jersey Athletic Club.

BAYONNE—NEWARK BAY.

Saturday, June 15.

THE New Jersey Athletic Club, of Bayonne, N. J., has built up a flourishing yachting department, with a good boat house and quite a fleet of small craft anchored just below the long bridge over Newark Bay. Capt. Joe Ellsworth last winter presented to the club a handsome challenge cup, the first race for which was sailed on June 15. The course was a triangle of 3⅛ miles, three rounds, on Newark Bay below the bridge. There was a fresh northerly breeze all the afternoon. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Iroquois	2 23 15	3 36 20	1 14 05	1 09 05
Drift	2 21 45	3 40 00	1 18 15	1 10 55
Tiche	2 24 48	3 42 30	1 17 42	1 11 37
Jonquil	2 21 48	3 41 00	1 19 12	1 12 22
Cute	2 21 20	3 47 08	1 25 48	1 25 48
Tomboy	2 27 07	3 50 55	1 28 48	1 17 58
Chip	2 22 23	3 48 22	1 25 59	1 13 59
La Chispe	2 21 05	3 59 40	1 38 35	1 28 00
Emma Jane	Time not taken; did not finish.			

The next race will be sailed over the same course on Saturday, July 13.

Beverly Y. C. 220th Regatta.

WING'S NECK—BUZZARD'S BAY.

Monday, June 17.

THE 220th regatta of the Beverly Y. C. was sailed on June 17 off the new club house on Wing's Neck, Buzzard's Bay. Wind S.W., strong, all the boats being reefed, most of them carrying two reefs, though it lightened later and reefs were shaken out on the way home.

Salmon and Ashumet, which had been expected to make a good race in the special class, were both in the repair shops.

Little Peter and Mistral, built for second class, both measured into first, and the Hanley boat got her revenge for her recent defeat at Fall River.

There was a hot fight in second class cats, Linotte seeming for the first time to be in really good shape, and winning in good style.

Nobska was badly missed in third class; but the old Doris showed up in good style, making best actual time, and losing only by 9s. to the new Melro.

It looked as if the hottest race would be in fourth class sloops, where last year's champion, the Minnetonka boat Grilse, met the new Minnetonka boat Ghuzz and the new Sylph, built by Huchins, and both built to meet her. Turkey and Fin were also on hand

Sylph looked dangerous with a 14ft. 6in waterline and a sailing length of 16ft. 10in.; she is over 26ft. on deck, with 7ft. beam, and gets an allowance of some 3m.

However, she found a 3½in. hollow mast not sufficiently strong, and it broke short off just before the start. Ghuzz carried away port shroud and had to give up. Grilse sailed as well if not better than last year, beating entire third class in actual time, without taking trouble to set spinaker or balloon jib.

Fin had Turkey well beaten when the latter parted her throat halliards.

Courses for first and second classes, 11¼ miles, triangular, with reach on the short side of the triangle; 8½ miles for third and fourth classes, mostly to windward and back, and 5½ miles for fifth class, all to leeward and back.

The new measurement for allowance was used for the first time—viz., length parallel to waterline and 5 4, 3 and 2in. above in first, second, third and smaller classes

Winners: Class 1, sloops, Little Peter. Class 2, sloops, Flirt, walkover. Class 2, cats, Linotte first, Bernice second, Mollie third. Class 3, cats, Melro first, Doris second, Colymbus third. Class 4, sloops, Grilse first, Fin second. Class 4, cats, Howard. Class 5, sloops, Raccoon. Class 5, cats, Vif.

Judges—A. S. Hardy, N. H. Emmons, W. Lloyd Jeffries.

Columbia Y. C., Michigan City Race.

CHICAGO—LAKE MICHIGAN.

Saturday, June 15.

THE fourth annual race of the Columbia Y. C., of Chicago, to Michigan City, was sailed successfully on June 15 in a strong breeze, the result being an exciting race of 38 miles. The entries were:

	Length.
SCHOONERS.	
Hawthorne, B. J. McConnell	59.21
CUTTERS AND SLOOPS.	
Rambler, E. Ramsdell	43.59
Peri, Ed Bond	36.36
Skate, Wm. Hinshaw, Jr.	21.88
Scorpion, Olaf Michaelson	
Pinta, Ole Almundson	34.61
Ellida, H. E. O. Heinemann	31.38
Allie T., H. Thompson	34.93
America, R. A. Harper	30.30
Valiant, E. C. Berriman	39.10
Enola, D. C. Cregier	
Hattie B., H. P. Finney	36.34
Phantom, E. P. Warner	39.52
Satsuma, Robert Givens	

There was a fresh N.E. wind and heavy sea, some of the smaller boats wisely giving up. Valiant parted her weather rigging and Rambler broke off some 6ft. from the end of her main boom. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Rambler	1 07 30	6 27 05	5 19 35	5 19 35
Scorpion	1 03 25	6 35 55	5 32 30	5 29 21
Phantom	1 04 00	6 56 10	4 52 10	4 43 07
Valiant	1 06 14	6 47 30	5 41 16	5 31 13
Peri	1 02 25	6 56 40	5 54 15	5 37 07
Pinta	1 04 55	7 24 20	6 19 25	5 57 34
Hattie B	1 01 05	6 49 20	5 48 15	5 31 07
America	1 03 15	7 20 40	6 17 25	5 31 32
Enola	1 06 30	. .. ..	. .. ..	. .. ..
Allie T	1 01 30	. .. ..	. .. ..	. .. ..
Ellida	1 06 14	. .. ..	. .. ..	. .. ..
Satsuma	1 06 00	. .. ..	. .. ..	. .. ..

Phantom wins first prize, a yacht cannon, and Rambler second prize, a yacht dinghy.

The judges were D. M. Lord, Judge L. C. Collins, P. F. Pettibone, George Martin, J. Williams and G. W. Rogers, chairman of regatta committee.

The steam yacht Calumet accompanied the fleet.

The fleet returned to Chicago next day.

Lynn Y. C., Expert Cup.

LYNN—LYNN HARBOR.

Saturday June 15.

THE first race of the Lynn Y. C. in the Expert cup series was sailed on June 15 in a light breeze, the times being:

	Length.	Elapsed.	Corrected.
CUP RACE CLASS.			
Black Cloud, E. H. Taylor	23.04	1 43 08	1 19 21
Irene, W. E. Gordon	24.11	1 55 31	1 39 01
Helen, J. A. Clough		2 01 07	. .. ..
Odd Fellow, J. Curtis		Withdrew.	
SPECIAL CLASS.			
Evadna, R. M. Benner	17.04	0 56 16	0 34 54
Trilby, Frank Bassett	17.03	0 58 25	0 36 54
Alpine, C. J. Blethen	16.09	1 00 03	0 38 09
Swan, R. Auger	18.00	1 04 56	0 44 09

The winners were Black Cloud and Trilby; the latter and Evadna are new boats.

Old Colony Y. C. Open Race.

DORCHESTER—BOSTON HARBOR.

Saturday, June 15.

THE postponed race of the Old Colony Y. C. was sailed on June 15 in a moderate easterly wind, the times being:

	Elapsed.	Corrected.
Princess, Gay Ware	0 59 00	0 39 38
Penguin, J. E. Robinson	1 00 00	0 40 30
Tantrum, F. D. Perkins	1 02 00	0 41 02
Vivian, George Carson	1 19 30	0 59 30

Princess won. Cutty Sark lost her centerboard early in th race.

Massachusetts Y. C. Open Regatta.

NAHANT—MASSACHUSETTS BAY.

Monday, June 17.

THE old Dorchester Y. C. never failed to celebrate "Bunker Hill" day by a big regatta, and its successor, the Massachusetts Y. C., still makes this date the occasion of its principal open race. This year the club had a good fleet of boats and favorable weather, everything passing off successfully. The start was made off Nahant, the courses being for the special class, the two 30ft. Herreshoff fins, Handsel and the new Anoatok, around the Graves, Buoy, Half Way Rock and home, the others sailing around the Winthrop Bar Buoy, the Graves and home The starting was done by a new system of steam whistles announced as follows:

The whistle calling attention to the course numbers for the race will be blown at 10:45. Ten minutes later four short whistles will be blown as a warning signal for class A, the special class; and five minutes later one long and three short whistles will start the class and warn the first class. The first class starts ten minutes later on one long whistle; the second class five minutes after the first on two whistles; the knockabouts five minutes after the second on one long and one short whistle, and the third class five minutes after on three whistles.

If the first signal is on time, the other times will be as follows: 10:55, warning for Class A; 11, start of Class A; 11:10, start of first class; 11:15, start of second class; 11:20, start of knockabouts; 11:25, start of third class.

The wind was moderate, from S.E. at first, settling later in the S.W., and the weather was fine with a smooth sea. The start was only 35 minutes late, at 11.30. The only starters in Class A were Handsel and Anoatok, the latter marked by a finely sitting suit of cross-cut canvas from Bristol, while the older and wider fin carried the ordinary sails. Crossing together, Anoatok to windward, the two reached for the Whistler, Handsel soon taking a clear lead. They ran from the Whistler to Half-way Rock and beat in, Handsel finishing 4 minutes ahead. Satanic easily led her class, being sailed by her designer, R. M. Wood. The full times were:

Trilby, F. L. Barrett	18.06	Withdrew.	
Idono, W. E. Wilson	20.11	Disabled.	

The winners were: Handsel, $25; Beatrice, $20 (second prize subject to protest); Satanic, $15; Romance, $10, and Gleaner, $5; Nike, $15; Sprinter, $10; Bonita, $15; Alpine, $10, and Evadne, $5.

Gleaner protests Romance and Emma C. and Ada J. make counter protests, all on measurement.

The judges were S. P. Perrin, W. S. Crosby, L. M. Clark, C. E. Backus and P. T. Lowell, and the tug Sylvester Ward was used as a judges' boat.

Corinthian Y. C. Handicap Race.

MARBLEHEAD—MASSACHUSETTS BAY.

Monday, June 17.

THE Corinthian Y. C., of Marblehead, celebrated June 17 by a handicap race, the wind being moderate from S.W., and course No. 5 being sailed. The new auxiliary knockabout, Barnacle, left her wheel with the regatta committee and made the course under sail alone. The times were:

	Elapsed.	Handicap.	Corrected.
CLASS A.			
Keewaydin, J. A. Burnham	1 16 14	..	1 16 14
Susie, J. B. Cole	1 18 20	01	1 17 20
Anaqua, A. P. Loring	1 19 32	02	1 17 32

Dorothy, Frank Brewster	1 26 47	..	1 26 47
Trouble, Henry Wheeler	1 33 04	06	1 27 04

The winners were: Class A, Keewadin $10, Susie $7, Anaqua $5. Class B, Edith $10. Knockabouts, Sally $10, Carl $7, Maia $5.

Corinthian Y. C. Annual Regatta.

ESSINGTON—DELAWARE RIVER.

Saturday, June 15.

THE Corinthian Y. C., of Philadelphia, sailed its fourth annual regatta on June 15; but the lack of a breeze limited the contest to the smaller boats, there hardly being wind enough for them. The first race was for the 21ft. class, as follows:

21FT. CLASS, SLOOPS.

Start 11:41:00:

	Finish.	Elapsed.
Louise	12 24 11	0 43 11
Lenni Lenape	12 24 44	0 43 44
Sagamore	12 26 08	0 45 08
Scott	12 26 52	0 45 52
Pinta	12 28 51	0 47 51
Nural Dan	Withdrew.	

Two races were sailing in the afternoon, the three boats in one event being steered by ladies, Miss Scott winning in Coryphee. The times were:

LADIES' RACE.

Start 3:25:00:

	Finish.	Elapsed.
Coryphee	4 34 38	1 09 38
Lenni Lenape	4 43 12	1 18 12
Louise	4 45 14	1 20 14

25FT. CLASS, SLOOPS.

Start 2:50:00:

	Finish.	Elapsed.
Mermaid	5 08 19	2 10 19
Pinta	5 21 00	2 31 00
Dawn	5 24 30	2 31 30

Henry S. Jeanes offered a handsome silver prize for the ladies' race. The race committee were A. F. Bancroft, A. R. Ellison and I. W. Jeanes.

Philadelphia Y. C. Annual Regatta.

TINICUM—DELAWARE RIVER.

Saturday, June 15.

THE Philadelphia Y. C. sailed its annual regatta on June 15 over the club course from off Tinicum, on the Delaware River, the starters including the two new Cary Smith boats Helene and Julnar. There was a good N.W. breeze at the start, but it soon died out and the race was very slow. The times were:

	Start.	Finish.	Elapsed.
Helene, schooner	11 11 45	3 25 00	4 13 15
Nanon, first class sloop	11 16 15	3 26 00	4 09 45
Julnar, yawl	11 14 45	3 28 00	4 13 15
Mascotte, yawl	11 12 45	3 54 00	4 41 15
Schemer, second class sloop	11 12 00	3 52 00	4 40 00
Zeeland, knockabout	11 11 00	3 56 00	4 45 00

Nanon won the Ellis and Middleton cups.

Revolver Shooting in England.

LONDON, England, May 30.—The scores made at the revolver competitions of the North London Rifle Club have greatly improved lately, owing to the better weather. Mr. Walter Winans made the first highest possible of the season on May 25. The scores made on May 23 were shot at the South London Rifle Club:

May 23.—50yds. target:

Walter Winans	756777—39	Clementi-Smith	564565—31
C Knapp	755765—35	Lieut J Howard	537637—31
Capt T W Heath	456666—33	E Howe	446545—28

Revolver competition, 20yds., stationary target:

C Knapp	766777—40	Lieut J Howard	477477—36
Capt T W Heath	677757—39	E Howe	566675—35
W Winans	756777—39	Clementi-Smith	774647—35

North London Rifle Club:

May 25.—Revolver series 1 (20yds. stationary):

Walter Winans	777777—42	Granville	752357—29
Lieut W W Chitty	777776—41	A Crawley	034524—18
Maj H Palmer	767555—35		

May 29.—Mr. Winans made another highest possible score to-day. This is the first ever made at the 2in. bull on a disappearing target in competition, though he has often made it in practice. The target at the club though, by some oversight, appears and disappears at intervals of 5 instead of 3 seconds (as at Bisley), so this score does not constitute a record at the faster speed.

Revolver series 3 (disappearing 20yds.):

Walter Winans (best on record score)			777777—42
Lieut C Chitty	776655—36	B Comber	776553—33
C Knapp	777654—36	Capt Earle	766544—32
Chicken	775555—34	E Howe	775444—31
Clementi-Smith	776554—34	A W Carter	755544—30
Lieut Richardson	537577—34	Maj H Palmer	665543—29
H Andrews	766554—33		

A full-sized diagram of Mr. Winans's score at the disappearing target is given herewith. The revolver used was a Smith & Wesson .45-cal., target sights, U. M. C. ammunition, 13grs. powder (black) and conical bullet; 4½lbs. trigger pull. Target appearing for five seconds at a time, the revolver not to be raised till the target appears, one shot each appearance.

May 30.—At the South London Rifle Club the following scores were made to-day in the revolver shooting for the revolver championship:

Twenty yards target:

Walter Winans	677767—40	Capt T W Heath	765765—36
C Knapp	774767—38	Lieut J Howard	566757—36
E Howe	677467—37	Clementi-Smith	666664—34

Fifty yards target:

Walter Winans	666667—37	Lieut J Howard	565574—32
Capt T W Heath	666774—26	C Knapp	466654—31
E Howe	546674—32	Clementi-Smith	455067—27

At the North London Rifle Club the following scores were made in revolver competitions. On the second day the wind was very high, and as he already had good scores for 50yds. toward the championship of the club, Mr. Winans did not shoot.

June 1.—50yds. target: Walter Winans 36, Major H. Munday 29, Lieut. Chitty 27, Major Palmer 25.

June 5.—50yds. target: C. Knapp 34, Lieut. Chitty 31, Major Munday 33, Franzmann 30, Bashford 28, Capt. Earle 25.

At the St. James Revolver Gallery, London, the scores for the two competitions now on stand: Revolver, Walter Winans 41, Knapp 38. Rifle, Walter Winans 29; several scores of 28.

Indian Head Riflemen.

NASHUA, N. H., June 15.—At the weekly shoot of the Indian Head Rifle Club to-day the medals were won as follows: First class—Forest A. Rich first, Albert Hill second. Second class—Stephen A. Wing first, Fred Giddings second. Third class—Chas. Cook first, Hobart Tipping second. Scores made were as follows:

First Class.

Rich	43454—20	54444—21—41	Wheeler	44444—20	43534—19—39
Hill	44453—20	44444—20—40	Shedd	44313—18	45344—20—38

Second Class.

Wing	45534—21	54435—21—42	Raby	35324—17	43433—17—34
Giddings	54443—20	44435—20—40	Mitchell	43045—16	35444—20—36
Adams	34414—19	44444—20—39			

Third Class.

Cook	45344—20	34445—20—40	Tipping	32233—13	45352—19—32

Dominion Off-Hand Rifle Association.

PARRY SOUND, Ont., June 8.—The Dominion Off-Hand Rifle Association shot their monthly matches to-day, all the affiliated clubs shooting over their own ranges. The weather was oppressively hot and sweltering. The scores went down as the mercury went up.

Parry Sound (First Team).	100yds.	200yds.	T'l.

D. F. MACDONALD.

Petty Challenges Paine.

NEW YORK, June 22.—*Editor Forest and Stream:* In FOREST AND STREAM of March 23, Mr. Sumner Paine stated that he would like to meet me in a friendly competition with revolvers. As the match could not be shot on the date originally set (April 3), and as Mr. Paine has expressed a desire to have the shoot come off, I propose the following: One-hundred shots each, distance 50yds., target Standard American 8in. bull, "all six chambers to be loaded at once, and the six shots to be fired within a time limit of one minute; one minute to be allowed between scores to load and clean." Revolvers: The new .38cal. Colt Army, 6in. barrel, regulation sights, full charges only allowed, 3lb. trigger pull. The shoot to come off in New York early in August, under management of FOREST AND STREAM. If this can be brought about I will get a Colt and practice a little with it if I can get the time.

WILLIAM E. PETTY.

951 LEXINGTON AVE.

New York Rifle Club.

GREENVILLE, June 22.—This club held its regular shoot to-day at Armbruster's Park. The following scores were made by the members present, off-hand, German ring target, distance 200yds., any rifle, sights and trigger pull:

M Herrington	205	208	Geo Shorkley	194	...
R J Young	195	201	F Walters	178	...

Rest match:

E B Barker	221	231	232	240	232
F Walters	214	216	...	...	...

R. J. YOUNG, Sec'y N. Y. R. C.

Missouri Rifle and Pistol Club.

ST. LOUIS, June 21.—The Missouri Rifle and Pistol Club has secured a new indoor range and club room at No. 212 N. 4th st., which is in the heart of the business part of St. Louis, convenient to the large office buildings, restaurants, etc., and will doubtless become a headquarters for St. Louis riflemen generally. The range has no connection with any public gallery, but is managed exclusively by the club, for members and visitors only. Team and prize shooting will be resumed at once. The range is 50 feet.

HORACE KEPHART, Sec'y.

New York Rifle Club.

NEW YORK, June 15.—This club held its regular shoot to-day at Armbruster's Park. The following scores were made by the members present. Off-hand, German ring target, distance 200yds., any rifle, sights and trigger pull: M. Herrington 234, E. R. Chadbourne 193, 192, 204, 215, 185, Geo Shorkley 204, 205, 205, R. J. Young 189, 191.

Rest match. E. B Barker 231, 240, 224, 230, 235.

R. J. YOUNG, Sec'y.

The New Savage Hammerless Repeating Rifle.

THE Savage Repeating Arms Company, of Utica, N. Y., has now ready for the market its new hammerless rifle, model of 1895.

The rifles are manufactured by the Marlin Fire Arms Co., of New Haven, Conn. The rifle embodies the result of years of careful experimenting by Mr. Arthur W. Savage, a practical sportsman, who spent several years in hunting in Australia. The gun embodies the best features of several well-known systems, and combines simplicity, strength, lightness and ease of manipulation. The guns are built to use metallic ammunition loaded with smokeless powder in its full strength.

The many positive advantages of smokeless powder are so obvious that it is unnecessary to urge its utility with sportsmen. A few of the more prominent points of merit are: First, the absence of smoke; second, long range and flat trajectory; third, high velocity (2,000ft. per second); fourth, great penetration; fifth, non-fouling of the barrel; sixth, less recoil; and seventh, lighter weight. The point-blank range of the Savage rifle with smokeless powder ammunition is 200 yds. for accurate shooting; for practical hunting, 250yds.

The rifles are hammerless repeaters. The magazine is arranged with the steel walls of the receiver, and is constructed to hold five cartridges, together with one cartridge in the breech opening, which makes the rifle a six-shooter. The weight, complete, is 7½lbs.; the length of the barrel is 26in.; the caliber, .303; the pitch of the rifling is one turn in 10in. The rifle can be fired by an amateur 25 shots per minute when used as a single loader, and 40 shots per minute when used as a magazine gun. The barrel and breeching mechanism are built to resist a tensile strength of 100,000lbs. to the square inch; the barrel steel has an elastic limit of 60,000lbs. The rifle has a multiplied extracting power on the ratio of 1 to 16—*i. e.*, a force equal to 1lb. in weight on the lever will exert a force equal to 16lbs. on the empty shell in the chamber. The gun is provided with an automatic indicator, consisting of numerals on the head of carrier exposed through a hole in the wall of the receiver, so that the sportsman can see at a glance the state of his magazine. On the top of the breech-bolt there is arranged an automatic indicator, showing, at all times, whether the firing mechanism is cocked or in safety position. The gun is also provided with a safety device for locking the action, which can be instantaneously operated.

Four different kinds of ammunition are provided for use in these rifles: first, the regular, solid head, metallic cartridge, with an extra heavy primer—the shell holding 30 grains of the "Savage" brand of smokeless powder; the metal-jacketed bullets weighing 190 grains; second, cartridges using the same shell and primer, with a metal-jacketed bullet—the jacket being placed on the rear portion only of the bullet, the front end of the bullet being soft lead forming an expanding bullet for large dangerous game; third, cartridges having the same shell, primer and bullet as first mentioned, the shells being loaded with 40 grains of black rifle powder; and fourthly, a gallery cartridge loaded with 5 grains of "No. 2 S" smokeless powder, with an alloy bullet weighing 100 grains. These latter cartridges are made for gallery practice and for light shooting.

THE SAVAGE REPEATING RIFLE

The company will furnish, on request, catalogue giving detailed description and operation of the gun.—*Adv.*

Chester Beats Lancaster.

THE following is from a Lancaster, Pa., daily of June 21: The first of a series of three intercounty rifle contests between Chester and Lancaster counties was held at Ephrata, Thursday afternoon, on the range of the North End Rifle Club. Chester county won by an aggregate score of 1,153 to 1,084. Each county furnished a team of fourteen men, representing the best marksmen in the counties. The Chester county team was composed principally of members of the Coatesville Gun Club, while the Lancaster team was made up from members of the Lancaster Schuetzen Verein and the North End Club. The distance was 200yds., on standard American target, peg rests being used. Position, standing. Following are the scores in full:

Chester County.

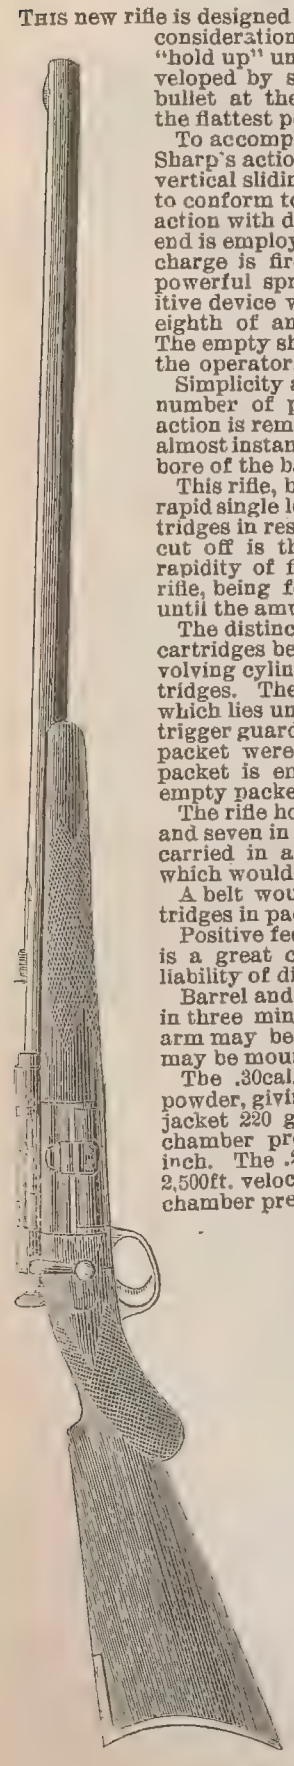
W T Gordon	9	9	9	10	10	9	10	7	6	10	—89
W P Thompson	10	9	10	9	7	10	8	9	9	9	—90
S Fairlamb	6	7	6	8	9	10	8	10	9	9	—85
M Darlington	8	7	9	9	9	10	8	8	6	9	—83
E Patterson	7	10	8	5	7	9	5	9	7	5	—72
C Fulmer	10	0	10	9	10	10	0	6	10	8	—73
Irwin	10	10	9	4	8	4	9	7	10	7	—78
J G Pugh	7	9	10	10	9	9	10	9	10	9	—92
C Gilbert	10	7	9	9	9	8	9	8	10	10	—89
S Moore	8	7	9	7	7	8	5	5	6	10	—72
H Thorne	8	10	10	10	9	8	7	10	9	8	—89
J Entrekin	9	10	10	8	9	9	8	9	8	6	—86
J Rodney	7	7	7	7	7	9	9	6	8	9	—76
J Kendig	7	6	7	8	9	9	7	10	8	8	—70—1153

Lancaster County.

T A Anderson	9	6	8	9	5	9	7	5	7	5	—70
O E Weber	10	9	9	9	7	9	9	9	6	7	—84
D W Wentzel	6	5	8	7	7	8	8	10	7	10	—76
C C Franciscus	9	10	8	5	4	8	9	7	8	5	—73
B F Biehl	7	10	8	9	8	7	7	9	9	5	—79
W K Romig	9	9	10	10	10	9	10	8	8	10	—93
C H Obrieter	7	9	10	9	9	10	9	7	7	6	—83
D W Winters	8	10	8	9	7	10	8	8	10	8	—86
P Dommel	7	6	9	8	6	8	3	..	8	6	—61
L M Weist	8	7	9	10	9	8	10	9	9	9	—88
S L Sharp	10	7	6	7	4	6	7	10	6	7	—73
J F Wolfer	6	7	10	6	8	5	7	5	5	4	—63
D B Lefevre	8	7	9	10	8	7	8	6	9	6	—78
W M Carpenter	6	7	9	9	7	8	7	7	8	7	—75—1084

The contest was interesting from start to finish and was witnessed by a large crowd of people. W. K. Romig, of the Lancaster team, made the highest individual score. He shot 93 out of a possible 100. J. G. Pugh, of the visiting team, was a close second with 92. The next two contests will be shot by representative teams of twelve men from Lancaster and Chester counties at Lancaster, on July 18, and at Coatesville on Aug. 22.

Rifle Notes.



The Hartford *Post* says: "Hartford will be present at one of the greatest events in the history of Springfield target shooting, which will take place July 15 and 16, the tournament of the South New England Schuetzenbund. This "bund" is composed of six Massachusetts and Connecticut cities, Springfield, Hartford, New Haven, Meriden, New Britain and Ansonia, all of which have strong Schuetzenvereins. More than 300 marksmen will participate, and a number of famous marksmen are expected to come up from the tournament of the National Schuetzenbund, which takes place at New York from June 30 to July 8. For the general prize targets $250 in cash prizes has been offered. A special prize of $10 will be paid for the best three scores on Monday."

Messrs. G. W. Cole & Co. will give away 15,000 sample bottles of their "Three in One" Compound for guns during the meet of the National Schuetzenbund at Glendale Park.

Mr. W. E. Petty informs us that he would like to arrange a revolver match with Lieut. Sumner Paine early in August. Mr. Petty has ordered a .38cal. Colt army model from the factory, and hopes by that time to be in condition physically to shoot the match.

The Blake Repeating Rifle.

THIS new rifle is designed for a high grade sporting rifle, the first consideration being a solid breech action, one that will "hold up" under the enormous chamber pressure developed by smokeless rifle powder in projecting the bullet at the high muzzle velocities now required for the flattest possible trajectory.

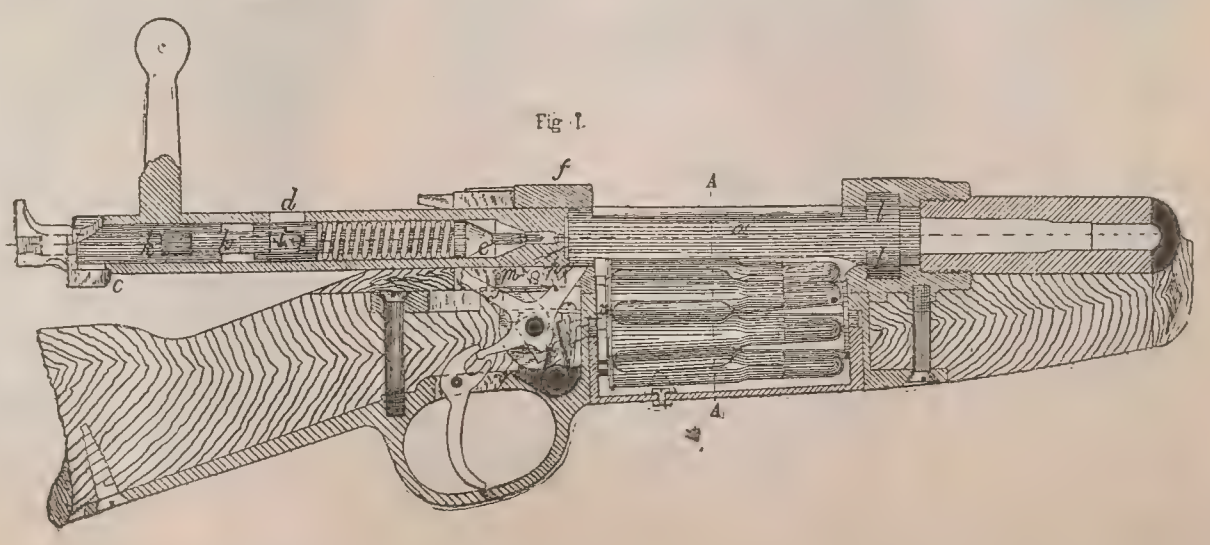
To accomplish this the general idea of the famous Sharp's action has been followed. In the Sharp's the vertical sliding wedge was used, but in the Blake action, to conform to the requirements of a repeater, the bolt action with double locking lugs at the extreme front end is employed. To remove the empty shell after the charge is fired two extractors are employed, one a powerful spring extractor as is usual, the other a positive device which surely starts the shell for the first eighth of an inch, although both pull at the start. The empty shell is thrown to the right and away from the operator.

Simplicity and accessibility are next considered, the number of parts being elemental, and when the bolt action is removed from the receiver, which can be done almost instantly, the breech is open so that the rifled bore of the barrel can be readily examined and cleaned.

This rifle, by the use of a "cut off," can be used as a rapid single loader, with magazine holding seven cartridges in reserve, available as a repeater whenever the cut off is thrown in. As a repeater the sustained rapidity of fire is probably greater than any known rifle, being forty-two shots per minute by an expert until the ammunition is exhausted.

The distinctive feature of the system is that of the cartridges being carried in the belt or pockets in a revolving cylindrical packet, holding generally seven cartridges. These packets are charged into the magazine which lies under the receiver and just forward of the trigger guard, in one movement and "en bloc," as if the packet were a single cartridge. When the cartridge packet is empty the magazine door is opened, the empty packet drops out and a full packet is recharged.

The rifle holds eight cartridges, one in the chamber and seven in the magazine. Two more packets may be carried in a vest, or shooting jacket, lower pocket, which would give a supply of twenty-two cartridges.



A belt would hold, as shown in cut, forty-nine cartridges in packets and thirty in single loops.

Positive feed of cartridges in magazine is used. This is a great convenience in loading, and also reduces liability of disablement.

Barrel and receiver may be removed from the stock in three minutes by the use of a screwdriver, and the arm may be packed in an ordinary length trunk. It may be mounted in the same time.

The .30cal. is supplied loaded with smokeless rifle powder, giving a muzzle velocity to the cupro-nickel jacket 220 grains bullet of 2,000ft. per second, and chamber pressure of about twenty tons per square inch. The .236cal. with smokeless rifle powder gives 2,500ft. velocity to the jacketed 135 grain bullet, at a chamber pressure of about twenty-five tons per square inch. Both cartridges are supplied also with 55 grains black powder and jacketed bullets, which makes a good charge for target work and small game.—*Adv.*

Fig 1.

MECHANISM OF THE BLAKE RIFLE.

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

June 29.—MARION, N. J.—Fifth tournament of the New Jersey Trap-Shooters' League, under the auspices of the Endeavor Gun Club.

July 4.—UTICA, N. Y.—All day shoot; live birds and targets.

July 4.—CHICAGO, Ill.—All day shoot of the Eureka Gun Club; targets.

July 4.—SPRINGFIELD, N. J.—All day shoot of the Union Gun Club; live birds and targets.

July 4.—ATHENS, Pa.—All day shoot of the Diahoga Gun Club; targets.

July 4.—WILKESBARRE, Pa.—All-day shoot of the Luzerne County Sportsmen's Club, at West Side Park; live birds and targets.

July 4-5.—DULUTH, Minn.—Third annual tournament of the Central Gun Club. J. W. Nelson, Pres.

July 10-12.—ALTOONA, Pa.—Third annual tournament of the Altoona Rod and Gun Club at Wopsononock; targets. W. G. Clark, Sec'y.

July 17-18.—MACON, Ga.—Tournament of the Interstate Association under the auspices of the Macon Gun Club; $200 added.

July 17-18.—BELFAST, Me.—Second annual tournament of the Belfast Gun Club; $125 in cash guaranteed.

Aug. 9-10.—NEW ORLEANS, La.—Tournament of the Inter-state Association, under the auspices of the Louisiana Gun Club; $200 added money.

Aug. 20-24.—HOLMESBURG, Pa.—Pennsylvania State Sportsmen's fifth annual tournament, under the auspices of the Keystone Shooting League of Philadelphia. John C. Shallcross, Sec'y, Frankfort, Pa.

Aug. 27-29.—CHARLOTTE, N. C.—Tournament of the Interstate Association, under the auspices of the Charlotte Gun Club.

Aug. 29-31.—HOT SPRINGS, S. D.—Hot Springs Gun Club's second annual tournament.

Sept. 2-3.—UTICA, N. Y.—Two days tournament; live birds and targets.

Sept. 2-3.—NEWARK, N. J.—Tournament of the South Side Gun Club; targets. New Jersey Trap Shooters' League contest at 2 P. M. on the second day. W. R. Hobart, Sec'y.

Sept. (second week).—INDIANAPOLIS, Ind.—First annual tournament of the Limited Gun Club. Royal Robinson, Sec'y.

Sept. —.—FREDONIA, N. Y.—Tournament of the Clover Trap and Target Company. $1,000 added money.

Oct. 9-11.—NEWBURGH, N. Y.—West Newburgh G. and R. Association tournament. W. C. Gibb, Sec'y.

1896.

April 1-3.—NEW YORK.—Interstate Association's Fourth Annual Grand American Handicap.

May 5-8.—NEW YORK.—Tournament of the American E. C. Powder Company; $2 000 added money.

May (second week).—MEMPHIS, Tenn.—Tournament of the Memphis Gun Club, $2,000 added money.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

Paul North a bicyclist! I didn't know it until I got a letter from him last week, in which, after giving me certain information I needed, he related the following little episode:

"My habit of talking too much with my mouth got me into another pleasant little encounter with an Irishman the other day. I was riding my wheel togged out in a bicycle suit, and passed half a dozen men pushing a large reel of telephone cable that they were about to lay in a conduit across the street. It was very hot, and they were grunting and sweating away at the work. I gently remarked that their wheel ran considerably harder than mine did, when quick as a flash the Irishman in the party retorted: 'Yis, it does, but there are a —— sight better min on it than anny short-panted dude!' He was hot and not feeling well,—because I am no dude."

The executive committee of the Worcester Sportsmen's Club, of which association Mr. Charles E. Forehand is secretary, is doing a good deal to keep up the interest of its members. What is to be known as the "Nitro Powder Series" of shoots was arranged with a view to encouraging the attendance of its members at shoots. The series consists of five shoots, one each month (June—September), the best four scores to count. Each man shoots at 25 targets, known angles, with a handicap allowance. There are twelve merchandise prizes offered for competition in this series, no charge being made for entrance money.

Dick Phister, of Brooklyn, N. Y., a member of the New Utrecht, New York County and Emerald Gun Clubs, is known to shooters around New York as one of the best live-bird shots in this section. We discovered another of his accomplishments recently:—He is great on weakfish. Mrs. Schappert, of Goose Creek, L. I., told us the other day: "Ah! Mr. Pheester, he's a good fisherman. He knows how to catch weakfish!" All of which meant that we didn't. She was right.

The Stanley Gun Club, of Toronto, Can., held its annual meeting on June 11, and elected the following list of officers: President, T. W. Briggs; Vice-President, T. Sawdon, Sr.; Secretary-Treasurer, G. P. Mason; Executive Committee—G. Renardson, T. Sawdon, Jr., Wm. McDowall and W. S. Pearcy; Auditors—F. E. LeRoy and S. McClure. The club is in a very satisfactory condition, the past 12 months having been prosperous ones.

Fred Quimby has gotten back from his month's tour in the West and South. While away on this trip Mr. Quimby attended the Illinois State shoot and the Memphis shoot, at both of which tournaments he watched the shooters smash empires. On his way back from Memphis he stopped off at Cleveland and took in the "Chamberlin tournament," and incidentally proved that, if he did sell empires, he could at any rate break bluerocks.

"Every amateur in the Northwest is invited to attend the third annual tournament of the Central Gun Club, of Duluth, Minn., to be held July 4-5." The above is on the cover of the programme for the Central Gun Club's shoot, with the additional note that "Professionals are positively barred." The programme is a good one, while the list of average prizes, nineteen in number each day, should draw a large attendance.

The programme for the Interstate Association at Macon, Ga., is at hand. Owing to the amount of trap copy which poured into this office on Monday morning, it was impossible to give much attention to this programme. The tournament, which will be held July 17 and 18, is going to be a good one from what we hear. The boys who have returned from "the circuit" say that there will be a capital attendance at Macon.

On Saturday afternoon, June 15, Douglas Darby and John Benner, both members of the Climax Gun Club, of Plainfield, N. J., shot a match on that club's grounds at 25 live birds for a stake of $25 a side. Darby won by killing 22 to Benner's 20, Benner losing 3 birds out of bounds.

Secretaries and correspondents who have sent in scores and who do not find the same in these columns will please be lenient and take into consideration the fact that trap columns are not as elastic as I could wish. The yachting and kennel editors need some space too.

The account of the recent target tournament held in England, written by "A. S. W.," will be read with considerable interest by trap-shooters of this country. It is evident that target-shooting in England is now established on a firm basis.

A notice of the Altoona (Pa.) Rod and Gun Club's programme for its third annual tournament appears elsewhere. Shooters who can spare the time should visit "Wopsy" on July 10-12. Those who cannot should also do so!

Messrs. H. G. Lemcke and William M. Davison passed through this city on Monday on their way to the New York State shoot. Both these gentlemen hail from Savannah, Ga., and are well known in trap-shooting circles.

The Luzerne County Sportsmen's Club, of Wilkesbarre, Pa., will hold an all-day shoot, open to amateurs only, on the Fourth of July. Shooting, which commences at 9 A. M., will be at live birds and targets.

The Emerald Gun Club, of New York City, will hold no shoot during the month of August; and we understand that the club will not be represented in the Dean Richmond contest at Saratoga.

Mr. G. L. Hess, of Staatsburg, N. Y., writes us that a gun club has been organized at that place, the charter members numbering 20. Mr. Hess is secretary of the new organization.

The Bluerock tournament was another of the big ones! It was a fitting *finale* for a great circuit which opened on May 7 at Cincinnati with the DuPont tournament.

The report of the North Dakota State Sportsmen's Association is unavoidably held over until next week.

EDWARD BANKS.

The Single-Trigger Gun.

LIEUT. PETER GIBSON, Assistant Rifle Inspector, First Infantry, O. N. G., writes from Cincinnati, O., as follows: "Everything new and of commendable parts in fowling pieces is always of interest to the American sportsman. The latest is a double barrel shotgun with only one trigger, brought out by Charles Lancaster, New Bond street, London. The new gun, or rather locks, as described by those who have seen it, are quite strong and simple, not easily gotten out of order, and quite sure to prevent a premature fire even in rough handling. These locks can be put in any gun, either hammer or hammerless. The lock frame is not altered and therefore the symmetry of the gun is preserved. You can fire either barrel as desired, or from left to right, like revolver action. The trigger pull is no greater than in other guns, while the pull off can be regulated to any number of pounds desired. In firing both barrels the shooter does not need to release the trigger hold to catch the second; nor does he need to shift his hand on the stock; while in cold weather gloves may be worn without any inconvenience or jamming of the finger—a point winter shooters will appreciate."

In connection with the above the following from the London *Field* of June 1 will be of interest:

"In our issue of April 27 we described the mechanism of a double gun recently perfected by Mr. Charles Lancaster, in which both barrels were discharged by the action of a single triger. The chief difficulty in a gun of this description had been to prevent the second barrel being jarred off by vibration, caused by the discharge of the first, or simultaneously discharged by unconsciously prolonged pressure of the single trigger. Mr. Lancaster's new invention, as we pointed out, obviated this satisfactorily so far as one could judge by an examination of the mechanism and the result of a severe charge fired. It only remained to put it to a practical test in the field. We therefore asked the inventor, as soon as he had a gun of this pattern finished, to allow us an opportunity of using it in our own way at clay pigeons.

"Accordingly, on Tuesday last, we proceeded to Mr. Lancaster's shooting ground at Stone Bridge, Willesden (which is quickly reached by train from Euston, and is but forty minutes' drive from the Marble Arch). Here we found every convenience for testing guns and rifles, including targets, both moving and stationary, iron deer, clay pigeons with single and double rises, and last, but not least, a tower some 40 or 50ft. in height, from the top of which clay birds could be projected at a height and with a velocity sufficient to satisfy the keenest appetite for 'rocketers.'

"The gun submitted to us was a double 12-bore hammerless ejector, 6¾lbs. in weight, and the cartridges were loaded with 32grs. of Walsrode powder and 1⅛oz. of shot. As the clay pigeons offered as good a practical test for our purpose as could be desired, we confined attention to them—firing at first single shots, then double rises, and finally breaking with the right barrel, and smashing the largest fragment as it fell with the left—thereby demonstrating that great rapidity in firing could be effected without loosing off both barrels at once. (The pull-off, by the way, can be regulated to any weight desired.) We were not sensible of any discomfort in the manipulation of the gun; and although it has never been our misfortune to suffer from bruised fingers, we can well imagine that this inconvenience is less likely to arise when there is one trigger instead of two to a double gun.

"The length of a stock being measured from the trigger to the heel plate, it follows that in the new gun the length of stock is the same for each barrel—which, theoretically, at all events, is an advantage. The ordinary push-trigger safety bolt on the top of the gun, with automatic blocking safeties to prevent accidental discharge, complete the effectiveness of a weapon which we must say does great credit to the ingenuity of the maker."

Missoula Rod and Gun Club.

MISSOULA, Montana, June 16.—Since the last week's report, the Missoula shotgun cranks have been enjoying themselves immensely. On Thursday, the 13th, a team of six from Stevensville came down to return the match which we had shot with them on their grounds a month since. At 1:30 P. M. the match commenced, and the result proved that the home people were too much for the visitors. The home boys are just a little proud of their scores made this time, considering that the weather conditions were horrible. It was cloudy and dark, and a strong wind amounting almost to a gale blew right over the shooters toward the traps. Though the Missoulians won the match, the Stevensville club got satisfaction in the after sweepstakes, a couple of their members walking off with the biggest part of the "boodle."

Stevensville.

In the shoot off for the silver medal (class B), Devol won by breaking 9 out of 10, Evans scoring 8.

WILL CAVE.

A State Association for California.

The *Record-Union*, of Sacramento, California, of June 10, gives the following information in regard to the "California Inanimate Target Association" recently organized at San Francisco: "The California Inanimate Target Association, comprising many of the principal gun clubs of the State, was organized at a meeting of representatives from the different organizations at the San Francisco Olympic Club on Saturday night.

"The Board of Governors of the new association will meet on the evening of June 29 in that city for the purpose of electing permanent officers. At the same time the following committee on constitution and by-laws will make its report:

"Edgar Forest, Electric Club; O. M. Judy, Visalia; A. A. Martin, Mill Valley Country Club; F. E. Miller, Alameda County Sportsmen's Association; George Deitz, Stockton Gun Club; I. R. D. Grubb, Empire Club. Daniel Daniels, Lincoln Club; E. J. Crane, Green Brae Gun Club; M. T. Hunt, Freeport Gun Club; W. J. Golcher, Olympic Gun Club.

"It is the intention of the association to give a big shooting tournament near San Francisco in September, and after that other similar affairs will follow in rapid succession. Saturday's meeting was presided over by Merton C. Allen, while M. Shaffer acted as secretary."

BLUE ROCK SECOND ANNUAL.

Early Days in Cleveland.

CLEVELAND, O., June 20.—Early in the present century about sundown a solitary horseman might have been discovered wending his way along the best bank of the Cuyahoga River toward the shore of Lake Erie, where the Indians had just started the town of Cleveland. At that time the Maumee River ran through Cleveland, but has been moved over to Toledo since, because Toledo was always crying for its Maumy and Cleveland wasn't; so that was how it happened, and this is why the solitary horseman rode along the Cuyahoga and not the Maumee, as was stated in the first place. The solitary rider was Paul North on his good horse Blue Rock, and he discovered Cleveland and organized the first tournament among the Indians on the lake front, and when the oyster shells gave out they made artificial oyster shells and called them Blue Rocks, after the horse. So that was where targets began and also where tournaments began, and that is why the Blue Rock annual tournament came to be known as the great grandpa shoot of all the target fixtures. The old Chamberlin tournaments made of history back in the '80s, and no shoots have ever attracted more attention or brought together a more typical collection of the noted shots of the country, or offered a more numerous, more hotly contested or more valuable competition. Every year the shooters from all over the country drift into Cleveland to lay in a stock of new shoes for the baby. Every year the fame of Cleveland, of the Chamberlin Cartridge and Target Co., and of Paul North and his good horse Blue Rock, spreads wide and wide through the land, so that each year this shoot becomes more representative and more elaborate, and has more expected of it by the critical shooters of America.

There were several of the old Chamberlin tournaments so called, and since the consolidation into the Chamberlin Cartridge and Target Co., there have been two, including that of the present year. It is the history of the great tournament centers for the most part that they rise, reach their zenith and decline in a few years, but the vitality of the Chamberlin fixture has proved such that it may be said to be no more than in the prime of life long after other series of shoots have passed into the sere and yellow leaf. Nowhere has the sport of artificial target shooting had better stimulus of brains and cash, and to no other source of benefit are the shooters of the country more indebted than to the liberal management which has always backed these shoots. This year the handsome sum of $1,200 was added to the purses, from $30 to $50 being added to each event of the three days' programme. It is no wonder that inducements so royal (with the usual high average badge and $150 to the next fifteen guns) brought out the great attendance of the present week. Knoxville, with $3,000 added, had 102 shooters. Memphis, with $2,000 added, had only 104. With $1,200 cash and a prestige built on years of success, the Blue Rock annual for '95 called out 96 shooters the first day and 86 the second. The additional shooters up to the above records would be costing $100 to $200 apiece for three days, so that the Cleveland event can only be called a great one, both in numbers and in financial basis. In fact it is one of the regular and popular fixtures of the year, and its reputation is a name to conjure with. If we say that the Blue Rock second annual is up to the standard of the past, we shall have made very critical and very satisfactory comment upon it. In spite of unfavorable weather, which is the worst handicap a shoot can have, the event was an entire success, as usual, as reference to the masses of scores will show.

THE NEW GROUNDS.

The grounds chosen for this year's tournament were the old East End Club grounds, formerly used as a rifle range. They lie at the top of a high plateau which rises back of the "Blue Rock Springs." A swift trolley ride through the best of the beautiful city of Cleveland brings one to the foot of a steep defile through a heavy native forest. At the summit is a wide green expanse, fringed on the ravine side with heavy foliage, and rimmed on the background with great native trees. Here lay the cosy club house, the high pullers' boxes, the several tents, canopies, etc., which furnished the ample accommodations for the shooters. Two sets of the famous bluerock traps with handy low screening were backed by a planked firing floor, which was protected by a wide canvas awning. Seats were placed under the tents back of this. A blackboard was located at each end of the long score, the pullers being in towers high above the score in the middle of the line. Of course the electric pulls were used. With Paul North constantly on hand to supervise the shooting, and Mr. J. H. Webster, of the Chamberlin Cartridge and Target Co., presiding over the books, it need not be said that the event passed off smoothly and with perfect system. All arrangements were made for a good shoot, and a good shoot was had. They were not there for anything else. The Republican League convention, which crowded the Cleveland hotels and made them uncomfortable stopping places, did not give as good a show as the Blue Rock second annual, and did not play to as good business.

SICK AND ABSENT.

The table which follows will show the personnel of the shooters, and their places of residence. It will be seen that the shooters came from a very wide range of country. The East was very well represented, the West and the South fairly so. The three plucky Texans, Holzapfel, Moore and Miller, came on to Cleveland from Memphis shoot, and they are going on to New York shoot from here—a good instance of how far from home the tournament circuit can take a lover of the game. Some of the stand-bys expected did not arrive, notably Rolla Heikes, who was taken seriously sick with a fever after Memphis shoot, and is now at home at Dayton, O. Rolla probably got malaria on his fishing trip in Arkansas. Van Dyke was sick when he struck Cleveland. Tom Keller also was badly out of sorts, and went home at the end of the second day. Still another unfortunate was Billy Wolstencroft, of Philadelphia, who came all the way out here to shoot, but was taken very badly sick and never got to fire a shot in the three days. Col. Anthony bids fair to reach North Carolina in good health, and LeRoy Woodward, the Massachusetts prodigal, is now one week nearer to the town of Campello. On the contrary, Mascroft, Dickey and Eager were headed the other way from Massachusetts when they struck that bank of the Cuyahoga mentioned earlier as traversed by Mr. North in early days.

There was the usual day of preliminary practice, about 60 guns taking part Tuesday. The "Pumphrey Equitable" handicap was tried. The experts thought it was good for the amateur, but not for them.

The rules governing the shooting in the programme events were as below: Money divided 25, 25, 20, 15 and 15 per cent. All shooting at known traps and unknown angles. No handicap applied to events Nos. 1, 2, 3 and 4 each day. Events Nos. 5, 6, 7 and 8 each day shot under the Bluerock handicap. A $50 diamond watch charm given for best average in all events. No one barred. Fifteen cash prizes of $10 each ($150) given to the next fifteen high averages in all events. Manufacturers' agents barred from winning any of these prizes. A. S. A. revised rules governed. A 10-gauge handicap was adopted, they to shoot at reverse traps, but only two 10-bores appearing, and there being a misunderstanding over the handicap of these two shooters, by consent of the other shooters this handicap was removed.

Of course, in these days there are many different plans of attempting to solve the vexing question of experts, agents and amateurs. The one adopted here was called the Bluerock handicap. It was applied only to the four 20-bird races each day, the 15-bird events being without handicap. The method was this: All shooting at known traps and unknown angles. All manufacturers' agents and professionals allowed to share in the first, second and third divisions of the purses only, at any time. All others winning or sharing in first, second or third divisions in one event must reach first, second or third divisions in the following event or be out of a place. Having failed to get a place in any event, they to be entitled to compete for all of the divisions in the next event, the scores in each event forming the basis for handicapping in the following event. It is too much to expect of any handicap that it will give satisfaction to all the shooters, but the daily record of entry will show that the handicap did not create a disbanding influence.

The targets were thrown very nicely and evenly, not very hard and not too easy, but fair above the screens and at practicable angles. At times during the cloudy evening hours the background proved trying.

A wise provision, and one showing the care and forethought expended in the arrangements for this tournament, was the daily increase in the amount of money added. The first day had $280, the second $340, the third $380. This with the fifteen average prizes to those who shot the programme made great incentive to stay through the whole three days—something on which tournament managements must always be doing plenty of thinking.

The above synopsis of the shooting rules will show how carefully everything had been considered in advance, and how thoroughly original and up to date in every respect the Blue Rock second annual was. The company and the able executive branch which had it in charge may feel assured that all the promise of their attractive programme was more than carried out, and that they have scored another success for the "Chamberlin shoots"—as the shooters of the country continue to call them.

THE DROPPERS DROPPED UPON.

The foregoing comment on the Blue Rock tournament for 1895 would show it to be a good shoot, well conducted and well attended. In this regard it would not be absolutely unique, for there are many good shoots run in the course of the year. Yet in one respect, and a very notable one, this tournament was unique and absolutely unparalleled in the history of any recent trap shooting.

Dropping for place was detected and punished!

Time out of mind managements have hung up the warning that dropping would not be tolerated, but the shooters have never seen the threat enforced, and have come to regard it as a dead letter. The men who do that sort of thing were at Cleveland in good force, and as usual they began to ply their tidy trade at the first opportunity. On the first day there was not so much of it. On the second day a dozen men were openly and notoriously playing the places, and there was much comment on it among the shooters. As usual, no one liked to say anything about it to the management, and Paul North, busy with the thousand details of the field hustling, had no inkling of the state of affairs. On the last day of the shoot the place-playing became still more open, and Paul North got a suspicion of it. Two shooters especially who were paying their entries one shoot at a time, and going in at the foot of the list, attracted attention. At the score these two, John A. Ruble, of Chicago, and young Thomas, of Logansport, Ind., were both 16 out of 18, with two birds each to shoot. A friend ran up to one of them and whispered something and both men turned and looked at the blackboard. Then they both missed their last two birds, so going into the 16 hole. At once on seeing this Paul North stepped up to the two men and told them that their entry would thereafter be declined. Two shoots, Nos. 7 and No. 8, were thus barred for them, and both shooters left the grounds.

For Ruble, whose tournament record is a notorious one, no sympathy whatever was expressed by any one, and it was agreed by all the shooters that he had had only tardy justice. In the case of Thomas the matter was a little different. This boy is only 16 years of age, and just starting out shooting. His parents are reported excellent people, who surely would not like to think their son guilty of any dishonorable action. Probably the boy himself, mistaught by wrong associations, thought he was doing something smart and not dishonorable in thus dropping into a money where he did not belong. One can only feel regret that it was this youth and not some of the dozen older and deliberate sinners who received justice at the hands of the management, but it cannot be denied that justice was done, and had the proof been brought to view in the other cases they also would have had justice. Let us believe that Mr. Thomas will not take this hardly or bitterly, but will set in better order the early ways of his growth as a shooter.

This, then, is at least one instance of a management which thought proof of sufficiently good sort was at hand to fasten the charge of dropping on a shooter. It has always been said, "You can't prove it." That is all nonsense. It can be proved sufficiently well to bar the dropper out of the further competitions. It can be proved in a great many more cases when a management has sand enough to look for proof. Proof as good as the above is nearly always at hand. A great many are always saying that dropping is very much in the mind of newspaper men, and that to condemn it is evidence of "crankiness." If to be just plain honest is to be cranky, then let us have more cranks, plenty of them, all we can get. In that the management here enforced the doctrine that it hung up, namely the doctrine of plain honesty. No one given to the crime of honesty can to anything but glory in their firmness and their justice. I am willing to say that Paul North went up about a mile high in my estimation at one jump. After continually reading this regular programme bluff at dropping over and over again, all over the country, and never seeing a hand raised to enforce it, I am glad at length to see one man and one management not scared to do the square thing. I am sorry for the young boy who suffered by this, but I am glad of the incident, and I sincerely believe that that one incident is of more value to trap shooting, of more value to the Chamberlin Cartridge and Target Co., than all the rest of this tournament, good as it was. The times are going to change in trap shooting in this country. The old ways will not do. The crookedness will have to go. The day of plain honesty will have to come.

NEXT YEAR'S BLUE ROCK DATE.

The management on the last evening of the shoot announced that it would claim this same week in 1896 for the Blue Rock Third Annual.

First Day.

All events during this tournament were at unknown angles. To Nos. 1, 2, 3 and 4, $30 was added; to Nos. 5 to 8, $40. The entrance money was $3 in each event.

Second Day.

Thursday, the second day, was most unfortunate for shooting. A slow, persistent rain drizzled down all day, making everything decidedly uncomfortable. It was a wonder that the entry held together so remarkably well. To the purses in events 1–4 $40 was added, while $45 was added to the purses in events 5–6. Scores:

Third Day.

The morning was misty, but the sun broke out and a glorious shooting day closed the tournament. The improvement in the weather made a great improvement in the shooting. Ten events were run off easily, including two unfinished from Thursday; $45 was added to each of the first four events, $50 to each of the last four. Scores:

Abe Kleinman, of Chicago, surprised everybody and himself by breaking loose from his work at Chicago and coming out to the first outside tournament he has attended in fifteen years. "I want a vacation," said Abe. "I haven't set foot in a boat for six years, nor been at a shoot for over a dozen years. I made up my mind in about five minutes that I'd come over and see one of the big shoots of to-day." And he was in it in the scores.

Charlie Young, of Springfield, O., as may not be generally known, is the inventor of four patented ejector contrivances, the best of which is now being put in use at the gun works of Liege, Belgium. Charlie had with him a gun built entirely by himself, and he shot it through the shoot. It was unbrowned and showed the file and brazing marks, and had a chunk of pine screwed on the grip, and was tough-looking all around, yet its maker pounded out 98 out of 100 with it. Charlie says he is going to whittle out another gun pretty soon. I am told that two other home-made guns were used at this tournament by Watts and Prechtel.

The shooters' badges this year were of yellow silk, bearing a full-length view of Harvey McMurchy in the act of shooting a bluerock. This was a sweet thing. All the girls at the lunch room wore one.

Gambell, of Aurora, Ind., was in good form. He tied Redwing, of Cleveland, for high place the first day, losing only 6 birds during the day (the last two events not being shot till the following morning).

Upson, of Cleveland, shot a hot gait. On the second day he ran 98 out of 100.

Dropping for place, one regrets to conclude, was common and notorious at this shoot.

Probably the most disgusted man in America was honest John Ruble, of Chicago. On the second day he was, as usual, figuring around and entering among the very last on the list, so as to see "where to go." In No. 6 event he waited too long, and while he was out watching a blackboard the event was closed and he was left out. When he heard of this he roared and wanted to go in, but it was no use. Of course, this shut him out of the average money, as that went only to those who shot through the programme! They say Honest John is threatened with heart disease over this, and it nearly proved fatal to some of the boys, they laughed so hard over it.

There was a "pump squad," all six using the Winchester or Burgess.

The name of the "farmer squad" was claimed by the Texas and New York men making it up.

The Browning boys, of Ogden, Utah (inventors of many of the Winchester patents), were on hand *en route* East with another trunkful. They say that silver is no good in Utah just now, but that the peaches continue to be the best on earth and to retail two for five.

Capt. A. C. Anson, of the Chicago Base Ball Club, with his associates, Wilmot, Decker and Parrott, came out on Thursday, it being a rainy day, so they didn't have to work. Anse took a hand in the shooting game, and shot very well.

This is about the season of the year when Shorty Bacon stops digging his cucumbers, tightens up the straps around his waist, and treads for Cleveland to lay in his winter's provisions.

The cranks and quips of gun tinkering are well shown at a big shoot. One man had black wax painted along the top of his gun, to prevent reflection of the light. Another shot barrels bright and white. Another had a Monte Carlo stock surmounted with rubber and leather. Another had his stock padded with bunches of leather four inches through. Local leather pads were common. Some had the inside of the stock planed off, some built up. Recoil pads were of all sorts, one man having no less than five alternate layers of pads on his stock. One man had a high front sight, as on a revolver; another two ivory sights well forward on the barrel, to "line up" with. Just a plain unmonkeyed gun was something rare in the rolling stock of the big shoot.

Paul North was happy when the sun came out on Friday morning.

Jack Parker says he will give a Detroit shoot (not on Des-Chree Shos-Kee island) about September 12 or 15, dates not yet claimed. There will be added money and guaranteed purses.

The far Western contingent certainly shot hard. Utah and Texas both got into the averages The representatives of both these States were very popular at the shoot.

The "banner squad," or "South and North squad," made plenty of amusement in one event with their antics, breaking out into a regular lark on the firing line and calling "pull" in all colors of the rainbow. Yet they kept on splitting wood This squad was named the "banner squad" early in the shoot, and late on the last day it proved title by breaking the squad record, scoring 116 out of 120. This score was as follows: H. McMurchy 20, Jack Parker 20, Holzapfel 20, Neaf Apgar 19, Moore 19, Miller 18. "Holz," Moore and Miller are all from Texas. McMurchy and Apgar claim New York, and Jack Parker Michigan. They were squad No. 9 and their record came in event No. 7 on Friday.

Redwing and Upson, the two high average prize men, both live in Cleveland, and shoot regularly on these grounds As the background is a bit trying at times, they probably had a trifle the advantage of the visiting shooters through their acquaintance with the grounds.

Mr. J. H. Webster, president of the Chamberlin Cartridge and Target Co, has been mentioned as cashier of the shoot, though one could wish he had not been confined so closely behind the railing all the time. Mr. Webster is one of the old inhabitants of Cleveland, and his prosperity has advanced with that of the beautiful city of which he is so proud. He showed the visitors spots near the shooting grounds where deer were killed in his boyhood, and pointed out great buildings now standing on what he once knew as open commons. A man of great business interests, Mr. Webster says he enjoyed coming out to run cash for the shoot as a sort of vacation from office work. Most tournament cashiers do not think it a vacation exactly.

Assistants in the office were Messrs. J. E. Brocklesby and D. S. Mitchell. The scorers at No. 1 board were Messrs. Wherry and Jones; Mr. Barton, superintendent of the target factory, doing the refereeing. At No. 2 board Messrs. Willis and Wightman scored, and the referee was Mr. Bissett, engineer at the cartridge factory. Mr. North had general charge of the shoot. Certainly an able corps was in line, and it is small wonder that everything passed off so well and pleasantly.

The kicker was there in a small quantity, but he is mostly on hand in one form or another at any shot.

A few of the better shots speak favorably of the Pumphrey equitable handicap, which pays every shooter a pro rata for the targets he breaks, and which prevents all dropping for place. A few others of the experts do not like it, because they can not win so much under it. Naturally the droppers and poolers do not like it.

Cleveland is a wealthy and beautiful city.

Get ready now for the Blue Rock third annual.

After all, have not managements been partly responsible for the growth of dropping in the past? Have they not really set the standard by weak avoidance of the issue?

At last let us hear less of the cry, "How are you going to prove it?" The proof is easy.

If future Blue Rock tournaments have a shadow frown no less than that of 1895, the fixture will continue always one of the great standard events of the shooting year.

It was Cleveland that dropped on the dropper. Now does the dropper drop on to the fact that dropping is very liable to take a drop in popularity and safety?

To drop or not to drop was never a question in a square shooter's mind at this year's Blue Rock tournament. At the next one it may be a very serious question in the minds of a few shooters who are square. Such men are no aid to a tournament and no help to the sport.

Cleveland made some history and there was some news.

The newspaper men were very nicely handled. E. HOUGH.

New York German Gun Club.

NEW YORK, June 20.—Herewith please find score sheet of our fifth shoot of this season, which explains itself. The shoot was held yesterday, which was also the day of our annual picnic. Members arrived early with family and friends (about 120 in number), and the interest in the shoot was an unusual one. After one sweep dinner was served. The president welcomed all members, ladies and guests, and concluded with a toast to the ladies. Prize bowling and wheelbarrow contest for ladies followed. Dancing, etc., kept the party together until about 10 P. M. The day is to be recorded as one of great success to the club in every respect.

Club shoot, 8 live birds:

Sauter (30)	11210011—6	J Schlicht (25)	12222111—8
Schmitt (30)	112222•2—7	A Busch (25)	10012212—6
Dreste (21)	10020000—2	Noble (21)	10001211—5
Lenone (28)	02000102—3	Wellbrock (30)	22220121—7
Elfers (21)	11002120—5	Tomford (30)	02021120—5
König (21)	01001201—4	Greitner (21)	•0000103—1
Baudan (21)	11101110—6	Dannefelser (25)	01101010—4
Frazer (25)	11112211—8	Edwards (30)	02100222—4
Miller (25)	10111011—6	Kromberg (25)	•0022001—3
Huff (25)	11011•01—5	Steuernagel	11002210—5
P Garms, Sr (21)	00200011—3	Lucas	21201002—5
Dr Hudson (30)	12000212—5		

On the shoot-off Frazer won the club medal by killing 3 straight to Schlicht's 2, the latter taking the Garms medal. Wellbrock beat Aug. Schmitt out for the Lenone medal by killing 3 to his 2.

In a 3-bird sweep the following scores were made: Lucas 2, Lenone 1, Busch 3, Schmitt 1, Hudson 3, Huff 3, Krausbe 1, Sauter 2, Steuernagel 2, Frazer 2, Miller 2, Wellbrock 3, Noble 3. Elfers 2, Radle 0, Leitlault 1, Messmann 1. G. H. LEUTHEUSSER, Sec'y.

Inanimate Target Shooting in England.

LONDON, England, June 9.—Inanimate target shooting has not been a recognized sport in Great Britain until within the last few years, but so rapidly has it grown in favor that it now ranks among the most popular pastimes of this land, where outdoor sports are loved, respected, and encouraged. Clubs have been organized everywhere to advance this form of shooting, and once a year a great championship meeting takes place, where lovers of the gun gather to determine their superiority in this art. It has been my good fortune to have attended this their third annual championship meeting, which took place on June 6, 7 and 8, at Wembley Park, Middlesex, a station some twenty minutes by rail from London. It seemed to me that I owed it to my brother sportsmen in the United States to tell them what I saw and to acquaint them with the methods employed. I know of no better channel than through your columns.

First of all, Wembley Park is a beautiful spot laid out by some famous landscape gardener. It is in fact a shooter's paradise. Then the arrangements are excellent, everything is quiet and orderly. The most perfect system prevails in the conduct of the shoot, from the time of entry until the close. A military band of twelve pieces discourses an attractive programme of music. Refreshments are served in many places on the grounds in the best of style and many a bottle of Irroy loses its neck during the meeting. No betting is allowed aside from the entrance stake. Ladies and gentlemen watching the contests cover the spacious steps of the grand stand and fill the seats under the spreading branches of the great oaks.

It is the object of the governing body to give everyone a chance to win by a system of handicapping the most improved that I have yet seen, but one which I will not take up your space to explain. These handicap events are interspersed with scratch events, where everyone stands on an equal plane. So perfectly does this work that it is an exception for an individual to win more than one of the coveted prizes during a meeting. The prizes are silver cups, diamond jewels, etc. A person eligible to shoot and desiring to enter pays a nominal sum to defray the expenses of the birds and trapping. This entitles him to shoot for the prizes, of which there are generally two, high guns winning. There is no class shooting. The prizes are of the intrinsic value advertised and range from $25 to several hundred dollars in value.

During this meeting about eighty competitors took part, and out of this number perhaps a dozen were awarded prizes. Last year seven Americans took part, but none were successful in obtaining a prize. This year one American contested and won for his country its first prize at this national meeting. Of the gentlemen from the United States who shot here last year several of them enjoy national reputations at home, and it may be of interest to trap-shooters in America to know why they failed. The conditions are very different from ours. Here they use both barrels. This, I am sure, will strike the American target-shooter unfavorably, as it did me; but after becoming used to it, I came to the conclusion that it was the best arrangement, as it trains one to use his gun more as he would when live pigeon or game shooting. One learns to use the first barrel quicker and to use both more rapidly, and in more perfect harmony. The traps, which are ranged in ten pairs, each pair 5yds. apart, are hard throwers, remarkably so, and the target is tough and not easily broken. The traps are pulled by ropes, one puller pulling five sets of traps. The Taunton trap is the most perfect one I have yet seen, seldom breaks a bird, but throws them with wonderful strength and accuracy, generally at known angles. It is this combination of strong trap and tough bird which makes the shooting so difficult. In appearance both traps and targets are similar to ours. The rapid-fire system is also in vogue. The traps are hidden by small screens, numbered from 1 to 10. After the traps have been pulled from first to last, ten boys, neatly dressed in white and red duck coats, run out and load the traps; then when each trap has been filled, upon a given signal they all run back, maintaining as perfect a line as a military company. The shooting is refereed and scored excellently as squad after squad is called out. I cannot recall a single instance of mistake during the three days' shooting.

In 1893 the championship of the United Kingdom was won by a score of 15 out of 20, in 1894 by 17 out of 20, and this year by 18 out of 20, 80 men contesting. This appears to be inferior shooting to that done in America, but whether or not it really is can only be decided by Americans coming here and shooting under similar conditions. The American gentlemen who shot here last year entered the contests with such complete confidence that their ultimate failure to win anything rather amused the Britishers. The next event in importance to the championship contest is the team match between clubs from England, Scotland and Ireland, 11 men in a team, 30 birds to a man, and when I tell you that this year England won with a score of 223 out of 330 you may want to know whether I think an American team would have a cinch or not, as it would appear from this evidently small score. My answer is: If a team composed as follows could come over here they would win: Dr. Carver and J. A. R. Elliott, of Missouri; Rolla Heikes, of Ohio; Budd, of Iowa; J. Wolstencroft, of Pennsylvania; Van Dyke, of New Jersey, and Capt. Money, Fulford, Kelsey, Glover and McMurchy, of New York, or a team composed of men of equal ability; but I don't think the feat would be as easy as it looks. The Englishmen would welcome us, treat us generously and give us fair play. Now, why could we not send a representative team here? It could be easily done by forming a national target shooters' association comprised of clubs from every State; then assess each club annually a small amount toward the expenses of a team which would be selected after a series of competitions. The expenses incurred in sending such a team would not exceed $2,500. It seems to me as if I would give the coat off my back to see the above-named team face the traps at Wembley Park, representing the Stars and Stripes in an effort to wrest victory from England, Scotland and Ireland. Now is the time to commence; we have been longer at it than they.

The scene at the presentation of prizes, which took place after the last shot had been fired in the last contest, was most impressive. A platform had been erected in front of the grand stand which was covered with rugs and handsomely decorated, the prizes being conspicuously placed at one side. When all was ready the chairman, J. B. Dougall, Esq., appeared with the Marquis of Lorne K. T. After music and much hand clapping and hat waving, the chairman made a brief speech and then called the prize winners one at a time upon the platform, where they shook hands with the Marquis, were congratulated by him and received their prizes from him. When this was over the Marquis was introduced and made a very happy speech, in which he referred most pleasantly to the United States and its people. He recommended outdoor sports to all, referred to shooting as a noble and manly sport, and said that he enjoyed nothing better than to see Americans competing for and carrying off prizes. So closed the most perfect shoot in many ways that I ever attended. When I left the grounds it was with the hope that I might some day return and see an American team win. A. S. W.

THE INANIMATE BIRD SHOOTING ASSOCIATION'S ANNUAL CHAMPIONSHIP AT WEMBLEY PARK.

(From the London Illustrated Sporting and Dramatic News.)

The Altoona Programme.

THE Altoona (Pa) Rod and Gun Club, an organization that lives and thrives in the heart of the Alleghanies, has issued the programme for its third annual tournament, which will be held on July 10-12. The programme is similar in form to that issued last year, when the Pennsylvania State Shoot was held on the summit of Mount Wopsononock under the auspices of the above-mentioned club. It is as much a work of art as was its predecessor; but there the similarity ends.

This year's programme caters distinctly to that class of shooter which is the bone and sinew of all trap-shooting tournaments—the 75 to 85 per cent. man. In that respect the club deserves every encouragement.

The tournament committee has arranged a programme for three days—July 10-12. On July 10 a 100-target race will be shot; entrance $5, targets extra—a total of $7, targets being changed for at 2 cents each, the club having wisely decided to knock off one cent from the rate usually changed, 3 cents, in preference to adding money to the purses. This is practically the same as adding over $200, 20,000 targets in three days being a low estimate for two sets of traps. The conditions of this race are: "One hundred to 120 targets, 16yds. rise, known traps, unknown angles. Four moneys, 40% to first, 30% to second, 20% to third and 10% to fourth. Entrance $5, targets extra. Entrance may be made up to the commencement of shooting of last squad in first round. Each squad to shoot at 25 targets before retiring. The expert shots will shoot at 100 targets, while the less skillful will be allowed to shoot at from 1 to 20 targets more than 100. No shooter will be scored more than 100 breaks. The handicapping will be done by C. M. Hostetter, 'Old Hoss,' Pittsburgh, Pa.; Edward Banks, of FOREST AND STREAM, New York; W. R. Fieles, Christiana, Pa.; Harry Thurman, Germantown, Phila., and W. C. MacDonald, 'Buckshot,' Altoona, Pa. The handicaps will be announced on the morning of the shoot."

This event should be a popular one. Entries can be made to W. G. Clark, secretary to the club. In regard to this race, FOREST AND STREAM offers to the tournament committee the following suggestion for what it is worth: "That no breaks over 94 or 95 be counted, unless it should happen that a scratch man should break more than that number—in which case his score should be the highest possible that could be made." If 94 were the figure chosen, this would mean that 91 would get a portion of fourth money, providing all the intermediate places were filled. The object of the suggestion is to prevent the effect of a misapprehension of the capabilities of a contestamt giving him such a handicap that he could break straight or even better. It seems to us that it would be a good idea to settle on a "highest possible."

Thursday's and Friday's programmes (July 11, 12) are precisely similar. Each contains 10 events of 15 targets, $1.50 entrance. These events will be governed by the Pennsylvania State Sportsmens Association's rules, the important feature of which is the handicap as follows: "All contestants start on an equal basis; shooting at known traps and angles. Winners of first or second money must shoot in the next event which they enter at known traps and unknown angles. If in this event they fail to secure either first or second prize, they fall back to known traps and known angles in the next event they shoot at, and so continue to graduate, etc."

All shells or baggage shipped in care of W. G. Clark, the secretary, will be carried to the grounds and taken care of free of all charge. The traps will be in position for shooting at the Lookout grounds on the 9th, so that preliminary practice may be indulged in. Shooting will commence at 9 30 a m. each day during the tournament. To those who attended the tournaments at "Wopsy" in '93 and '94 it is not necessary to explain anything. For others the programme gives the following instructions: "To reach the grounds take electric cars to Juniata depot, then take cars on the Altoona, Clearfield & Northern Railroad to Hotel Wopsononock. Point Lookout is a short distance from the hotel and shooters will be carried free between these points by hacks furnished by the club. There will be ample room at the hotel at the grounds for all who desire to remain there over night; others can return to the city, there being convenient trains both morning and evening. Every possible effort will be made to render the occasion a pleasant one to visiting sportsmen."

The shooting grounds at Point Lookout are located on the brow of a hill that overlooks the valley of the Juniata from a height of 1100 feet. It is a perfect skyline—targets thrown from the traps fall on the rocks, 700 or 800 feet below. The view is a magnificent one and the location an ideal one.

Trap at Wilmington, Del.

WILMINGTON, Del., June 15.—The Wawasets defeated the Nonesuch Gun Club, of Newport, in a team race which took place on the latter's grounds to-day. The teams were 12 men a side, 25 targets per man being the number shot at. J. Huber, of the visitors, by breaking 23 won a gold medal offered for the highest score. The scores made were as follows:

Wawaset Gun Club—George Huber 20, C. Buckmaster 20, C. Springer 21, F. Martin 15, W. Buckmaster 22, G. Miller 17, R. Miller 21, E. Mason 20, H. Donaldson 18, L. Manlin 19, T. Weldin 14, J. Huber 23; total, 230.

Nonesuch Gun Club—Allen 15, T. Lynam 23, Myers 13, Wright 17, Duff 16, Grooms 10, Young 20, Galloway 14, Slane 18, Q. Lynam 17, J. R. Lynam 21, King 20; total, 204.

New York State Shoot.

SARATOGA, June 25.—At the meeting last night the attendance was only fair. Buffalo was chosen as the place for the tournament in 1896; the only other application was from Rome. Tournament will be held under the auspices of the Audubon Gun Club. Weather is fine and there is every prospect of a good shoot. EDWARD BANKS.

Nebraska's Nineteenth.

OMAHA, June 17.—The nineteenth annual tournament of the State Sportsmen's Association, which closed here Saturday, was the best attended, the most successful and satisfactory ever held in this section of the West.

Among the prominent visiting sportsmen were Charlie Budd, the ex-American champion, of Des Moines, Ia.; W. H. Skinner, of the new American Smokeless powder manufactory, New York City; Ted Ackerman, one of Nebraska's finest wing shots, Stanton; J. W. Den, a crack from Arapahoe; George Nicolai, the conquerer of the "Plumber," Sutton; George Rogers, one of the stars of Lincoln's shooting realm; U. G. Powell, Fred W. Sharp, F. M. Miller, C. L. Latshaw, C. D. Linderman, E. E. Hallett and A. D. McCandless, also of Lincoln; E. W. Bexton, W. S. Duer, W. S. McKinney, Hastings; E. E. Hairgrove, Sutton; J. M. Crabill, one of the old vets, Clarinda, Ia.; Jack Harkins, Glendon; E. O. Trotter, Kingsley, Ia.; Fred Gilbert, Spirit Lake; D. V. Palmer, Lake Park, Ia.; George Slocum, Primghar, Ia.; Tug Wilson, R. Flanders, Lon Kemery, Chadron; Jim Den, Arapahoe, and the champion of western Nebraska; W. D. Pruitt and J. W. Evans, also of Arapahoe; G. L. Becker, J. M. Browning, A. P. Bigelow, Ogden, Utah; J. G. Hilberry, W. J. Ogden, Beaver Crossing; A. A. Glade, W. W. Harrison, Grand Island; H. S. Westfield, M. D., Will Pyper, Colonel Hoffmayer, Major Bill Hardin, A. W. Riekman, Council Bluffs; Judge Barnes, another hero of the old days, Norfolk; O. G. Smith, assistant superintendent State Industrial school, Kearney; W. T. Den, alias "Uncle Den," the best known sportsman west of the Mississippi, and the man who never misses a shoot, Brownville, and J. S. Hoffman, Atlantic.

Events Nos. 1 to 15 were 15 targets, entrance $1 50 and $2, with $5 added in each. The scores:

No. 1: Elmer 11, Gilbert 14, Parmer 13, Harkins 10, Glade 12, Nicolai 8, Bigelow 14, Browning 14, Wilson 13, Flanders 12, Kemery 14, Becker 15, Trotter 14, Hilberry 14, Small 8, Organ 10, West 15, Pyper 14, Crabill 13, Blake 13, Kennedy 13, Budd 15, Ackerman 14, Parmelee 15, Linderman 11, Skinner 13.

No. 2: Flanders 11, Parmer 15, Browning 15, Becker 13, Bigelow 14, Gilbert 14, Harkins 14, Trotter 14, Wilson 14, Hilberry 15, Kemery 15, Linderman 15, Skinner 12, Budd 15, Crabill 12, Glade 11, Blake 13, Kennedy 13, Ackerman 13, Squirrel 13, Westfield 14, Pyper 15, J. B. Smith 13, Farkler 12, Jayberry 7, Parmelee 14, Powell 14, J. W. Den 13, Sharpe 8, F. Miller 14, Hoffman 14, Brewer 14, Read 8, Slocum 11.

No. 3: Skinner 10, Crabill 14, Budd 15, Blake 11, Kennedy 14, Bigelow 14, Becker 15, Trotter 13, Gilbert 15, Harkins 12, Linderman 13, Elmer 8, Powell 14, J. W. Den 14, Wilson 13, Flanders 14, Ackerman 14, Parmer 13, Glade 10, Kemery 11, Browning 14, Squirrel 10, Smith 12, Westfield 13, Pyper 14, Farkler 11, Miller 13, Parmelee 14, Hoffman 14.

No. 4: Linderman 11, Wilson 14, Flanders 10, Blake 25, Williams 13, Ackerman 14, Skinner 12, Waterman 10, Becker 14, Bigelow 15, Harkins 14, Gilbert 15, Trotter 15, Ferry 6, Crabill 14, Hilberry 12, Budd 14, Squirrel 12, Powell 15, Nicolai 11, Hughes 15, Parmer 15, Brewer 11, Browning 13, Farkler 10, Hoffman 13, Westfield 12, Pyper 12, Miller 14, Rogers 15, Latt 10.

No. 5: Linderman 11, Wilson 14, Flanders 13, Ackerman 13 Kennedy 10, J. W. Den 14, Brewer 11, Becker 15, Skinner 12, Rogers 14, Sharpe 13, Crabill 12, Trotter 12, Gilbert 15, Parmer 12, Browning 15, Bigelow 15, Blake 14, Budd 15, Powell 10, Westfield 15, Pyper 11, Hoffman 12, Miller 14.

No. 6: Wilson 14, Flanders 13, J. W. Den 12, Linderman 9, Rogers 13, Becker 14, Bigelow 15, Browning 14, Brewer 13, Ackerman 14, Trotter 15, Harkins 13, Blake 15, Crabill 10, Budd 14, Parmer 13, Westfield 11, Pyper 11, Parmelee 14, Kemery 12, Smith 12, Read 7, Powell 12, Hughes 14.

No. 7: Wilson 12, Flanders 13, Rogers 14, Becker 13, Farkler 9, Ferry 9, Den 8, Trotter 15, Powell 14, Miller 15, Hilberry 14, Brewer 13, Harkins 13, Browning 15, Parmer 14, Bigelow 13, Crabill 13, Sharpe 14, Parmelee 15, Ackerman 14, Shepherd 12, Gilbert 14, McCandless 13, Blake 13, Budd 14, Read 11.

No. 8: Rogers 13, Trotter 13, Brewer 14, Sharpe 10, Den 15, Powell 13, Read 11, Miller 13, Ackerman 15, Harkins 13 Bigelow 12, Flanders 13, Parmelee 15, Williams 12, Parmer 14, Grabill 13, Gilbert 14, Wilson 13, Jones 15, Becker 14, Hughes 14, Blake 8, McCandless 11, Browning 15, Budd 15, Linderman 15, Brucker 12, Kennedy 11, Elmer 15, Hilberry 15.

No. 9: Ackerman 13, Brewer 12, Flanders 11, Becker 14, Browning 15, Harkins 15, Rogers 13, Den 14, Trotter 14, Budd 14, Linderman 15, Westfield 15, Powell 14, Miller 13, Sharpe 12, Bigelow 15, Parmelee 15, Gilbert 13, Wilson 13, Kennedy 13, Read 14, Blake 11, Cole 14, Parmer 15. Organ 13, Jones 12, Brucker 12, Elmer 11, Smead 13, Berlin 8.

No 10: Ackerman 13, Brewer 12, Flanders 11, Rogers 11, Den 14, Powell 13, Becker 14, Trotter 13, Harkins 13, Westerfield 14, Browning 13, Parmelee 13, Williams 10, Linderman 14, Budd 14, Miller 12, Jones 13, McCandless 7, Bigelow 15, Gilbert 14, Kennedy 11, Slocum 13, Blake 12, Parmer 14, Wilson 12, Kemery 12, Cole 8, Hoffman 12, Uncle Den 12, Read 8, Smead 13, Squirrel 11, Brucker 13, Skinner 13, Rogers 10.

No. 11: Flanders 13, Den 14, Brewer 13, Rogers 14, Harkins 12, Browning 13, Becker 15, Wilson 12, Parmelee 13, Ackerman 15, Linderman 14, Powell 14, Westerfield 15, Berlin 9, Trotter 14, Smead 12, Hoffman 13, Miller 14, Budd 12, Kennedy 13, Bigelow 15, Gilbert 15, Parmer 14, Read 8, Crabill 10, Skinner 12, Nicolai 7, Squirrel 12, Slocum 9, Bogart 7.

No. 12: Flanders 10, Den 13, Rogers 14, Harkins 11, Browning 14, Becker 14, Budd 14, Ackerman 13, Linderman 11, Brewer 9, Wilson 13, Powell 14, Westfield 14, Hoffman 8, Brucker 11, Trotter 15, Bigelow 10, Gilbert 15, Cole 12, Kennedy 13, Crabill 13, Peters 12, Skinner 12, Uncle Den 10, Jones 12, Shepherd 10, Jake Smith 12, Parmer 15, Parmelee 14, Schroeder 14.

No. 13: Ackerman 14, Brewer 13, Linderman 14, Browning 14, Becker 15, Smead 11, Parmelee 15, Hoffman 14, Shepherd 13, Rogers 13, Harkins 14, J. W. Den 12, Gilbert 15, Budd 14, Trotter 15, Flanders 13, Wilson 12, Powell 13, Peters 14, Westfield 13, Bigelow 13, Uncle Den 11, Cole 15, Kennedy 12, Skinner 13, Squirrel 11, Jones 6, Crabill 13, Miller 9, Latt 11.

No. 14: Ackerman 11, Brewer 14, Linderman 13, Browning 15, Parmelee 15, J. W. Den 11, Becker 15, Budd 14, Harkins 12, Gilbert 15, Rogers 15, Trotter 15, Wilson 13, Flanders 13, Shepherd 15, Powell 12, Smith 14, Jones 8, Parmer 13, Schroeder 14, Westfield 13, Tremens 6, Latt 14, Small 7.

No. 15: Ackerman 14, Linderman 13, Browning 15, Parmelee 15, Cole 11, J. W. Den 15, Harkins 12, Trotter 14, Becker 14, Schroeder 13, Parmer 15, Budd 15, Gilbert 15, Shepherd 11, Wilson 12, Flanders 13, Kemery 11, Jones 12

Shoot No. 16 was the champion team event, open to Nebraska contestants only, for a handsome diamond medal, 10 targets to each man, two men to a team, clubs being allowed to enter as many teams as they liked; four moneys, entrance money to go to the winning team next year; entrance per team $5, $50 added money. The score:

Arapahoe—Den 10, Rogers 9—19. Lincoln—Linderman 10, Latt 8—18. Omaha—Parmelee 10, Ackerman 8—18. Omaha—Blake 8, Squirrel 8—16 Lincoln—Powell 7, Miller 9—16 Omaha—Hughes 8, Kennedy 9—17. Chadron—Flanders 10, Wilson 9—19. Omaha—Smead 8, Shepherd 9—17. Stanton—Schroeder 9, Trotter 7—16.

The last event of the day was a live bird shoot, 10 birds to a man, $10 entrance fee, $25 added money. The score:

Squirrel	1111112121—10	Browning	1121122121—10
Parmelee	1111•21112— 9	Flanders	0111210111— 8

No. 11: Parmelee 13, Linderman 14, Den 15, Deak 6, Browning 15, Becker 13, Wilson 14, Blake 12, Crabill 14, Miller 14, Flanders 14, Gilbert 14, Palmer 15, Cole 10, Fogg 10 Bigelow 13, Clyde 13, Schroeder 13, Kennedy 12, Rogers 14, Trotter 14, Budd 14, Read 10.

No. 12: Parmelee 13, Den 14, Rogers 15, Browning 12, Becker 14. Budd 14, Blake 11, Linderman 14, Flanders 11, Wilson 13, Ackerman 14, Cole 12, Kennedy 12, Crabill 12, Trotter 13, Gilbert 15, Schroeder 15, Bigelow Palmer 9, Fogg 11. Hoffman 5, Brocker 10, Brewer 11, Waddy 8

No. 13: Parmelee 13, Den 13, Becker 15, Linderman 12, Ackerman 14, Trotter 13, Miller 13, Gilbert 15, Crabill 12, Clyde 11, Flanders 11, Brewer 12, Budd 15. Schroeder 14, Browning 14, Kennedy 13, Wilson 13, Hoffman 13, McFarlane 13, Palmer 14, Fogg 13, Rogers 14

No. 14: Parmelee 12. Budd 14, Gilbert 14, Becker 15, Schroeder 12, Linderman 14, Browning 14, Kennedy 11, Den 14, Ackerman 13, Flanders 8, Wilson 14, Fogg 12, Hoffman 13, Cole 12, McFarlane 14, Crabill 14, Palmer 14.

Event 15 was 25 targets, $2 50 entrance, $15 added: Blake 18, Gilbert 22, Becker 23, Linderman 22, Budd 25, Parmelee 23, Browning 22, Den 22, Cole 22, Ackerman 22, Crabill 24, Trotter 24. Hoffman 20, Palmer 24, Bigelow 21, Kennedy 21, Wilson 22, Flanders 20, Fogg 20, Tremens 23, Rogers 20, McFarlane 24.

Event 16 was for the Plattsmouth cup, a team shoot of four men to a team, 10 targets to the man, $10 entrance, $50 added. The score: Omaha team—Parmelee 10, Ackerman 9, Brewer 7, Kennedy 9; total 35. Lincoln team—J. W. Den 8, Miller 9, Linderman 10, George Rogers 10; total 37. Chadron team—Kemery 6, Wilson 9, Flanders 9, McFarlane 9; total 33.

Lincoln carried off the honor by 2 birds over Omaha and 4 over Chadron.

The last shoot of the day was a live bird event, 8 birds to the man, $5 entrance and $10 added, 30yds. rise. The score:

Parmelee	02211122—7	Rogers	1122111•—7
J W Den	11011210—6	Kennedy	10211011—7
Den	10101201—5	Cole	22002210—5
Hoffman	21112211—8	Ackerman	20021202—5
Brocker	11121111—8	Read	22210022—6
Brewer	22021211—7	Wilson	22102120—6
Waddington	10220020—4	Flanders	01•11011—6
Fogg	11111111—8	Kennedy	12001111—6
Budd	12120121—7	Crabill	11111111—8

The most interesting event on yesterday's card was that for the diamond medal, emblematic of the State championship, held during the past year by J. C. Read, who won it last June at Columbus. The conditions were 10 live birds, 30yds. rise, modified English rules, entrance $10 The score:

J W Den	2121202111— 9	Latshaw	•202212222— 8
Parmelee	2111112122—10	Nason	111120212• — 8
Ackerman	2000 — 1	Nicolai	2122221022— 9
Linderman	0110110 — 4	Cole	100110 — 3
Uncle Den	1021212202— 8	Squirrel	2221•12121— 9
Rogers	2112210120— 8	Kemery	1222221112—10
Wilson	12212•1122 — 9	Kennedy	2111012211— 9
Peters	20•111110 — 6	Schroeder	11•1221120— 8
Brucker	2120222122— 9	Tremens	1111202011— 8

Mr. Parmelee, of this city, and Kemery, of Chadron, tieing, shot off, and the local man won.

There were fourteen events yesterday at 15 targets to the man, and of these the first money winners are given:

Event No. 1: Parmelee 15, Gilbert 15, Becker 15, Linderman 15, Wilson 15, Budd 15.

No. 2: Gilbert 15, Becker 15, Browning 15, Wilson 15, Budd 15, Ackerman 15, Schroeder 15.

No. 3: Gilbert 15, Bigelow 15, Schroeder 15

No 4: Parmelee 15, Becker 15, Gilbert 15, Schroeder 15.

No. 5: Linderman 15, Becker 15, Budd 15, Wilson 15, Gilbert 15.

No. 6: Becker 15, Budd 15, Browning 15, Schroeder 15.

No. 7: Parmelee 15. Budd 15, Becker 15.

No. 8: Browning 15.

No. 9: Linderman 15, Becker 15.

No. 10: Parmelee 15, Kemery 15.

No. 11: Becker 15, Browning 15.

No. 12: Becker 15, Shepherd 15.

No. 13: Parmelee 15.

No. 14: Browning 15, Becker 15.

In a match shoot of 15 targets to the man, the world's record was broken, but one bird out of the 90 shot at getting away, and that fell to the local champion, Col. Parmelee, and was the last bird shot at. The score of this remarkable match was as follows:

Linderman	111111111111111—15	Wilson	111111111111111—15
Becker	111111111111111—15	Gilbert	111111111111111—15
Budd	111111111111111—15	Parmelee	111111111111110—14—89

At the annual meeting of the Association at the Mercer Hotel, G. W. Loomis was re-elected President; Ted Ackerman, Vice-President; Frank S. Parmelee, Secretary, and W. H. S. Hughes, Treasurer. It was also decided to hold the next annual tournament in this city.

SANDY GRISWOLD.

Wilmerding Gun Club.

WILMERDING, PA., June 15.—The second annual tournament of the Wilmerding Gun Club was held to-day. The weather was all that could be desired. As usual there was a good turnout of shooters from the clubs in western Pennsylvania, all of whom seemed satisfied with the day's sport. The shoot was run on the following handicap system: Those who took part of first money in any event, shooting in the next event at unknown angles, and continuing to shoot in that class so long as they take any part of the purse. All others shot at known angles.

The club having completed a new arrangement of the traps and wire pull, expected to have some slight trouble during the tournament; but everything worked smoothly and to the satisfaction of the club and its visitors. We consider our underground system the equal of any of the electric pulls. The winners in the various events are given below, those shooting at unknown angles being marked with an asterisk:

No. 1, 10 targets, $1, everything known: Kocke 9, I. Gelm 8, F. McIntosh, Scareface and Reich 7, Athos 6.

No. 2, 15 targets, $1.50: Anderson 13, Kocke*, F. McIntosh and Gelm 12, Green 11, Bessemer and Tyler 10.

No. 3, same: Bessemer 15, Gelm 14, F. McIntosh 13, Athos, Scareface and Green 12.

No. 4, 10 targets, $1: Bessemer* and Green 10, Scareface 9, Athos 8, Tyler 7.

No. 5, same: Reich, Anderson, Athos and Scareface 9, Gelm 8, Green*, Bessemer* and Tyler 7, Kocke and F. McIntosh 5.

No. 6, same: Gelm 10, Athos* and Kocke 9, Green,* McIntosh and Hamilton 8, Bessemer* 7.

No. 7, 15 targets, $1.50: Scareface 14, Bessemer*, Green, Hamilton and McIntosh* 12, Gelm* and Athos* 11, Kocke 10.

No. 8, 10 targets, $1: Athos* 10, McIntosh* and Hamilton 9, Green 8, Scareface* and Tyler 7.

No. 9, 15 targets, $1.50: Kocke 14, Green and Hamilton 13, Bessemer 12, Anderson and Gelm 11.

No. 10, 10 targets, $1: Green, Colt, Hamilton, McIntosh and Ony 9, Scareface and Gelm 8, Kocke, Bessemer, Athos and Tyler 7.

No. 11, 15 targets, $1.50: Skilman 14, Ony* 13, Gelm and Scareface 12, Kocke, McIntosh* and Scott 11.

No. 12, 10 targets, $1: Ony* and Gelm 10, Kocke and Hamilton 9, Fritz and Scareface 8, Green, Ferguson, King and Colt 7.

No. 13, 20 targets, $2: Bessemer 18, Ony,* Green and Colt 17, Ferguson 15, Skilman, McIntosh, King and Scott 12.

No. 14, 10 targets, $1: Athos, Fritz and Scareface 9, Oney,* Bessemer*, McIntosh and Colt 8, Skilman 7, Scott and Tyler 6.

No. 15, 15 targets, $1.50: Green 13, Bessemer*, Athos*, Fritz* and Colt 12 Oney* and Skilman 11, Scott and Tyler 8.

No. 16, 10 targets, $1.50, three moneys: Skilman and Fritz* 9, Colt and Oney* 8, Bessemer* 7.

No. 17, 10 targets, $1, 6 entries, one money, ties miss and out: Oney won.

A. A. M., Sec'y.

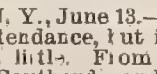
Binghamton Gun Club.

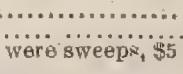
BINGHAMTON, N. Y., June 20.—Below find scores made to-day at the semi-weekly shoot of the Binghamton Gun Club. Mr. J. Adams, of Greene, N. Y., shot as a guest of the club.

Club shoot, 25 targets: Adams 20, Kendall 24, Boss 20, Brown 22, Waldron 19, Hobbie 22.

Eight sweeps, 10 targets, $1 50:

	1	2	3	4	5	6	7	8		1	2	3	4	5	6	7	8
Kendall	8	8	10	9	9	8	9	8	Adams	7	8	9	7	7	9	9	8
Waldron	8	8	8	8	4	7	6	..	Brown	6	9	8	8	..	..	9	10
Snell	7	8	10	9	10	..	..	..	Hobbie	..	..	..	..	8	9	8	7
Boss	7	10	6	6	9	6	6	7	Rose	..	..	8	5	8	7	6	6





H. W. B.

Emerald's Monthly Shoot.

NEW YORK, June 18.—To-day was the fourth shoot for the Emerald Gun Club's championship medals, thirty members putting in an appearance at Dexter Park, L. I., and shooting their allotted 10 birds. As is usual at this season of the year, the birds were only moderate flyers, with here and there a few good ones. The natural result was that straights were numerous, six shooters killing all their birds, among the six being two 30yds. men. Two shooters scored 9 each, "Wash," one of the two, losing an incomer. E. Bell, the other 9, is one of the coming shots of the club; he shot in good time and centered his birds well. No less than ten men scored 8; seven scored 7, two 6, two 5 and one 3, an average for the thirty shooters of 77⅓. The scores:

Club shoot, 10 live birds; handicap rise:

West Newburgh G. and R. Association.

NEWBURGH, N. Y., June 13.—For our field day to-day we did not have a very large attendance, but it was quite select. It threatened rain, and we had a little. From Peekskill there came—Halsted, Dain, Everinghim, Southard and Richmond; from Marlborough, J. Rhoades; Fishkill produced Theo. Rhoades. The free collation was arranged by our steward, J. P. Gibney. It consisted of clams (steamed), beans (baked), ham (boiled), corned beef (boiled), calf cheeks (pickled), cucumbers, onions, Limburger and old English cheese, Dutch courage (beer), etc. Scores:

No. 1, 10 targets, practice: H. C. H. 9, Halsted 8, Likely 8, Richmond 5, Dain 7, Taylor 7.

No. 2, 15 targets, practice: T. Rhoades 10 J. Rhodes 4, Richmond 13, Taylor 12, H. C. H. 12, Stansborough 9, Halsted 10, Likely 11, Wood 11, Dain 12, Stansborough 12, Taylor 13.

No 3, 15 targets, $1 entrance:

Kinney (1)	1010101011010001001001010—12

CHARLES E. FOREHAND, Sec'y.

Crystal Lake Tournament.

URBANA, Ill., June 9.—"Pete, what in the name of gin fizz is goin' on over there toward town? Did you hear the shootin' yesterday,—bang, bang, bang! all day? Jest kinder made my mind wander back to '62, when us Indiana boys made a little of that sort of mu ic down at Fort Donelson."

"That was what was puzzlin' me all day yesterday, Sam; durned if I ever heard such shootin' and shootin'. Haven't heard of any railroad strike nur nothin' except a Democratic convention in town yesterday to nominate some 16 to 1 delegates, or something like that. Some one said Col. Purcell wanted them to, and I did allow maybe they hadn't done just as the colonel wanted them to, and he had called out some of the State soldiers, and was annihilating the hull durned community.

"Well, Sam, I done a little fightin' 'way back in the sixties myself, and I was down on the back forty plowin' corn, and the wind was blowin' from towards town, and the way they kept banzin' and bangin' away put me in mind of old times, and got me terrible interested to know what was goin' on. It's purty dry plowin', and old Nell's got a galled shoulder, and thinks I to myself, I'll jest rest the hosses up a bit this afternoon, and walk over to town and find out what's goin' on. I started out after dinner to hoof it in and 'long comes a chap going the same way and says, 'Hop in,' and I hopped. Told him I was goin' over to Urbana to investigate all this shootin'; was afraid thar was trouble. He laughed and wanted to know if I had not heard anything of the shootin' match Jud Ayers and Postmaster Bills was gettin' up? and kinder all at once I remembered readin' in a paper printed in Urbana, that Sam Slick's wife put over a settin' of eggs she sent my wife last Thursday, something abou the second annual tournament of the Crystal Lake Gun Club. I just recollected readin' somethin' about the shootin' tournament and a good deal the editor, Tom Morgan, said about the 16 to 1 question and 'gold bugs,' and peoples wantin' to pay all their debts with half their money. 'Pears to me like I never seed a durned editor of a country paper who looked like he had half enough of any kind of money.

"Well, I went up and found out they were shootin' between Urbana and Champaign, on the fair ground; and they are havin' a booming big time. Got anything perticular to do to-day? If not, lets go up and see 'um shoot; Andy Miller told me—you know Andy who is Captain of the club and used to be City Att'y of Urbana—well, that's the same fellow—I see you've heard of him, everybody has—he told me they were goin' to have some great shots there to-day and that he, Andy, was goin' to show some of the Eastern and Western cracks a thing or two about breakin' targets."

"Now, you've said enough Pete, if Andy said that, the blasted pigweed and pussly ken grow over the corn a foot high. I'm with you to see the shootin'.

"Gee whiz, they hev started the fun, haint they. Pete? There must be a dozen or more of 'em up there firing away. Man! what the deuce is that sucker standing out there yellin 'Dead,' 'Lost?' I haint seen anything killed. There, he's called 'lost' twice now at the same feller, Pete; is his name 'Lost'?"

"Naw, his name's Geer; he's the jeweler over in Urbana; don't you know him? Say, I can tell you a whole lot about who these fellers are. I was introduced to lots of 'em yesterday. See that good-looking chap with the black mustache sitting down by the ice-water? You do? Well, they told me that was Charlie Budd, of Iowa."

"Say, Sam, b'gosh, you orter seed him smash them pesky targets. I was walkin' along behind him, watchin' him lam it to 'em, and he let down the barrels of his gun, and durned if the shell didn't fly out and pop me in the neck. Guess the powder hadn't all gone off."

"Who is that feller?"

"Knew you would ask who he is; everybody knew him Lou Howe said before he had been here two hours. That's T. H. Keller, from Down East, and the boys all seem to think he's a dandy.

"Yes, I knew you'd notice him. He's all round, aint he. That's W. Tramp Irwin, of Peoria.

"Say, Sam, jist watch that big bruiser make black smoke out of them tarnal saucers; that's Postmaster Bills. Don't he maul 'em! No, he don't handsome much, that's a fact, but he shoots quicker than the left hind leg of a mule; his name's Charlie Grimm, from Iowa. That Keller feller from down East told him yesterday to take his mask off, and he wanted to treat the crowd to a chew of them fine-cut whiskers of that dude-looking cuss over there, Rhoads, I think they call him. He said that tall chap Ruble, of Chicago, never would miss shootin' out a race yesterday unless he found a hole to fall into. I don't see no hole out there big enough for him to fall into. Do you?

"I guess that's that new-fangled Winchester shotgun, and say, that Mr. 'Rex,' of Dayton, Ohio, shows up close to a twenty clip using it, don't he? Do you know, Sam, I'll be chopped fer link sausage if these Crystal Lake Gun Club fellers don't know how to do a thing or two. Here's about seventy-five of these fellows here from all over the country."

The high and hot dry wind made the shooting difficult and lessened the attendance the last day. We had an entry list of sixty the first day, fifty-five the second and forty-eight the third. Not a bad number. Below are the scores:

First Day.

No. 1, 10 targets, $1, $5 added: King 6, Van Vleck 6, Daly 6, Geer 9, Howe 4, Wilson 6, Keller 8, Ruble 7, Irwin 7, Keef 9, Wilde 7, O. Percivel 9, Bills 8, J. Percivel 9, Carrow 5, C. Percivel 4, Daly 6, Jones 8, Gilbert 7, Tucker 4, Heise 9, Magruder 8, Grimm 9, Skinner 5, Grube 9, Budd 8, Powers 8, Wisthuff 3, Masher 9, Fortier 7, Plummer 5, Fabert 7, Partington 8.

No. 2, 15 targets, $1.50, $10 added: Thorpe 11, Fabert 8, King 10, Geer 12, Howe 6, Wilson 13, Jones 13, Gilbert 11, Partington 12, Heise 10, Magruder 14. Mosher 14, Fortier 12, Plummer 5, C. Percivel 11, Wilde 12, O. Percivel 10, Bills 10, J. Percivel 13, Carrow 15, Daly 10, Walden 8, Prather 8, Keef 10, Westhuff 7, Irwin 12, Ruble 14, Keller 11, Grimm 3, Skinner 13, Grube 11, Rex 14, Budd 14, Powers 12.

No. 3, 15 targets, $1 50, $10 added: Wisthuff 7, Anderson 8, Van Vleck 10, Daly 8, Thorpe 14, Walton 12, Grimm 4, Skinner 11, Grube 14, Rex 12, Budd 14, Powers 13, Wilde 13, O. Percivel 10, Bills 12, J. Percivel 10, C. Percivel 8, Keef 10, King 11, Geer 9, Howe 5, Wilson 6, Jones 13, Gilbert 10, Heise 11, Magruder 11, Mosher 12, Fortier 11, Plummer 9, Partington 13, Irwin 8, Prather 11, Daly 4, Bowman 10, Cade 12, Ruble 10, Keller 12.

No. 4, 15 targets, $1.50, $10 added: Luke 10, Allen 12, Summers 10, Cade 15, Bills 11, L. Kirby 14, Vohries 13, Ogden 9, Keef 14, C. T. Walton 12, Thorpe 10, Anderson 9, Lindley 9, Trevett 10, C. No. 3, 20 targets, $2, $15 added: Mosher 18, Fortier 16, Powers 15, Magruder 16, Craig 16. Hubbell 15, Bowman 14, Plummer 9, C. Percivel 19, Heise 9, Clark 16, Keef 19, Luke 15, Jones 19, Grube 17, O. Percivel 14, Gilbert 15, Wilson 14, Vohries 12, Skinner 18, Keller 17, Geer 18, Rex 19, Johnson 12, Carron 14, M. Barnes 16, Trevett 16, J. Percivel 16, Ruble 20, Nelson 17, Budd 15, Grimm 17, Thompson 16, Partingten 19, Wilde 18, L. Kirby 15.

No. 4, 15 targets, $1.50, $10 added: Rex 12, Heise 6, Keef 10, Partington 15, Vohries 7, Johnson 6, Gilbert 9, Wilson 8, Bowman 12, Plummer 9, Skinner 12, Nelson 8, Keller 12, Geer 8, Grube 14, Powers 15, Mosher 13, Fortier 14, Magruder 12, Hubbell 10, Ogden 10, Service 10, C. Percivel 13, McBarnes 12, Wilde 13, T. Kirby 13, Grimm 13, Budd 14, Thomson 13, E. V. Kirby 13, Trevett 7, Ruble 11.

No. 5, merchandise shoot, with Montgomery Ward & Co.'s special prizes added, 50 cents: J. Keef 7, Teef 10, Miller 11, Tramp 11, Luke 9, Walton 5, Grimm 13, Skinner 11, Keller 13, Rex 10, Budd 13, Powers 15, Ruble 14, Grube 12, Carron 12, Glasco 7, Ogden 12, Fabert 10, Heise 14, Toy 6, Howe 11, Fortier 12. Plummer 12, Partington 11, Wilde 12, O. Percivel 11, King 12, Geer 11, Wilson 11, Gilbert 10, Magruder 10, Mosher 12, C. Percivel 11, Jones 10. Bowman 12, Slow 11, J. Daly 8, C. Daly 9, Thorpe 10, McBarnes 13, Vohries 9, Bills 10, Wiggins 4, Cade 13, Van Vleck 10, A. Kirby 12. Hoover 6, Tucker 6, Westhuff 11, Dahl 4, Fortier 12, Clark 10, Boyd 8, Lindley 11, Anderson 8, L. Irle 13, Summers 9, E. V. Kirby 8, L. Kirby 11.

No. 6, 15 targets, $1.60, $10 added: Jones 13, Hubbell 11, Ogden 13, Surface 13, Grimm 15, Trivett 12, Plummer 9, Nelson 10, Keller 11, Geer 13, Johnson 9, Gilbert 13, Wilson 12, Bowman 14, E. V. Kirby 8, Ruble 14, Vohries 11, Mosher 13, Magruder 14, Thompson 12. Skinner 15, Westhuff 10, Powers 14, Partington 15. Grube 13, Fortier 9, Budd 14, McBarnes 13, Wilde 12, Cade 14, Rex 12, Keef 12, Heise 13.

Third Day.

No. 1, 15 targets, $1, $10 added: Grimm 14, Rex 15, Cade 13, Keef 14, Thompson 13, Partington 11, Budd 14, O. Percivel 11, Keller 12, Ruble 13, Tramp 15, Bowman 13, Grube 14.

No. 2, 15 targets, $1, $10 added: Cade 13, Ruble 13, Thompson 12, Partington 10, Keller 12, Hubbell 11, L. Irle 11, C. Irle 10, Grimm 14, Budd 14, Tramp 12.

No. 3, 20 targets, $1.50, $15 added: Thompson 18, Partington 17, Keller 17, Grube 16, Hubbell 11, Tramp 18, Bart 17, Rex 18, L. Kirby 13, Mandeville 12, C. Percivel 11. Bills 17, Grimm 16, Ruble 15, Cade 14, Walton 13, L. Irle 15, C. Irle 15, Westburg 16.

No. 4, merchandise, 15 targets, 50 cents: Bills 15, Guy 4, Van Vleck 10. Hoover 6, Walton 9, Cade 6, Ayers 13, Lindley 15, Bart 4, Kane 6, Miller 11, Wright 5, Prather 11, O. Percivel 11, Westhuff 8, L. Kirby 9, Mandeville 6, Hubbell 9, C. Walton 13, C. Percivel 11, L. Irle 12, C. Irle 8, E. M. Kirby 10, Cade 14, H. Irle 5, W, L Kirby 6, J. Percivel 13, Garrison 9, Anderson 10, Karr 8, Keef 11, McCormack 9, Fabert 12, Thorp 9, Grimm 12, Thompson 12, Budd 14, Keller 11, Ruble 13, Tramp 12.

The team shoot was won by Seymour Gun Club, six Champaign county clubs contesting. This ended our second annual tournament. and the boys expressed themselves as having had a good time. It was very gratifying to the club members to hear the majority of them say, "We will be on hand when the third annual tournament of the Crystal Lake Gun Club occurs." P. M.

The Utica Tournament.

THE scores given below were made on the grounds of the Oneida County Sportsmen's Club at Utica, N. Y., on June 11 and 12. The attendance was not large, but the quality of the shooters present was of a very high class. In event No. 7, on the first day, out of twelve entries, six broke 14, four broke 13, while the other two shooters broke 12 and 11 respectively—an average of 84 per cent. for the two squads. The following are the

First Day's Scores.

No. 1, 10 targets, unknown angles: Kendall 9, Brigden 9, Rayland 8, Richardson 7, Beasley 7, Scott 8, Boss 7, Barker 8, Tuttle 7, Hunter 8, Hobbie 8. Fairchild 8, Gates 9.

No. 2, 20 targets, unknown angles:

Kendall ...11111111111111111111—20	Hobbie ....01111110111111111111—18

CHOKE BORE.

The Worcester Tournament.

WORCESTER, Mass., June 14.—The closing tournament of the New England Shooting Association was held here to-day under the auspices of the Worcester Sportsmen's Club. The attendance was not as large as could have been desired. In all other respects the tournament was a success, while the averages made by the shooters are seldom surpassed. Among those present were F. N. Hoyle, Sutton; H. G. Wheeler, Westboro; A. R. Dickey, Wellington; W. W. Bennett, Boston; H. M. Federhen, Quincy; F. E. Bennett, Boston; William Allison, Hingham; Pitkin, Hartford; C. H. Burbridge, Hartford; J. F. Mascroft, Sutton, and several of the home club, including A. W. Walls, W. L. Davis and C. E. Forehand.

The weather was absolutely perfect, the heat of the sun being tempered by a cool breeze that was not strong enough to render the flight of the targets erratic. Interest of course centered in the sixth and eighth events on the programme—the championship for teams and individuals respectively. In the team race a curious mistake occurred. After the race had been shot and the totals added up, the honor of first place was awarded to the Worcester Sportsmen's Club by a single break. Later in the day it was discovered that an error had been made, and that the Worcester and Boston totals were the same. Some of the members of the team having gone home, it was impossible to shoot off the tie, the decision of the matter being left until some future date. The scores in this match—which was shot under these conditions, 5 men to a team, 15 targets per man, known angles—were as follows:

Worcester Sportsmen's Club.	Boston Shooting Association.
Davis.....111111111111110—14	Dickey.....111111111101111—14

Bucklin .....111111100101101—11	

The individual championship went to Wheeler, who has won this honor three times with a clean score. The scores were as follows: Wheeler 30, O. R. Dickey, V. D. Kenerson, "Herbert" (Federhen), Pitkin and Mascroft 29, Jones (W. W. Bennett) 28, Walls, Bucklin, Allison, Burbridge and Davis 27, Hoyle and Smith 26, Forehand 22 and Tougas 20.

The results of the other programme events were as follows:

No. 1, 10 known: Walls 9. Hoyle 10, Wheeler 10, Kenerson 9, Dickey 9, Bucklin 9, Jones 9, Herbert 10, Smith 8, Allison 8, Mascroft 10, Larkin 7.

No. 2, 10 unknown; Jones 10, Herbert 9, Smith 10, Allison 9, Larkin 9, Mascroft 10, Walls 8, Hoyle 10, Wheeler 7, Kenerson 8, Dickey 9, Bucklin 9.

No. 3, 7 straightaway, 25 yards: Walls 6, Hoyle 3, Wheeler 6, Kenerson 6, Dickey 4, Jones 3, Herbert 7, Smith 6, Allison 5, Larkin 4, Mascroft 5, Snell 5, Burbidge 4, Pitkin 5.

No. 4, 15 known: Walls 13, Wheeler 13, Kenerson 12, Dickey 13, Bucklin 13, Burbidge 14, Forehand 14, Snell 13, Jones 14, Herbert 14, Smith 14, Allison 11, Pitkin 12, Mascroft 12, Hoyle 13.

No. 5, 10 unknown: Mascroft 7, Larkin 9, Burbank 9, Foreband 7, Snell 8, Jones 9, Herbert 10, Smith 9, Allison 10, Pitkin 8, Burbidge 9, Walls 8, Hoyle 10, Wheeler 10, Kenerson 8, Dickey 8. Bucklin 9.

No. 7, 10 known: Burbank 8, Larkin 7, Mascroft 9, Tolman 8, Forehand 9, Jones 10, Herbert 10, Smith 10, Allison 9, Pitkin 9, Burbidge 7, Walls 5, Hoyle 9, Wheeler 9, Kenerson 9, Dickey 10, Bucklin 9.

No. 9, pairs: Davis 8, Ide 9, Forehand 10, Jones 8, Herbert 9, Smith 4, Allison 8, Pitkin 6, Burbidge 7, Walls 7, Hoyle 6, Wheeler 9, Kenerson 10, Dickey 8, Bucklin 10.

No. 10, 7 straightaway, 25yds.: Ide 6, Forehand 6, Burbank 6, Mascroft 7, Smith 7, Tolman 5, Tougas 4, Parker 4, Snell 5, Jones 4, Herbert 7, Allison 7, Pitkin 7, Burbidge 6, Davis 6, Wall 7, Hoyle 6, Wheeler 5, Kenerson 7, Dickey 7, Bucklin 6.

Sacramento Bluerock Club.

SACRAMENTO, Cal., June 9.—To-day was the first club shoot of the Sacramento Bluerock Club under the new arrangement. The shoot took place at Kimball & Upson's grounds. A gold medal has been procured that will be competed for under the following conditions: Shoots to be held twice a month, 50 targets per man, six best scores at the end of the season to decide who is the ultimate owner of the medal. Scores in to-day's shoot were:

Upson.....1011110010111111011110100011001111111001011011101—34

Martin Won the Medal.

PORTLAND, Ore., June 9.—The contest for the Carraher State meda representing the live-bird championship of the State of Oregon took place to-day, Mr. Martin winning the medal after a prolonged struggle with Mr. Moore. The medal had previously been won twice by Mr. Moore and would have become his property had he carried it off this time. How nearly he came to doing it is shown by the subjoined scores:

Trap score type—Copyright 1895, by Forest and Stream Publishing Co.

Wm Martin.....1 0 0 1 1 1 1 1 2 1 1 1 2 1 1 1 1 1 1 1 2 1 • 1—21
E W Moore.....1 1 1 2 1 2 2 1 2 1 1 2 0 2 0 1 0 2 1 2 1 1 1 1 •—21
W F Burrell.....2 1 2 1 1 1 1 • 0 0 2 0 1 1 2 1 1 1 1 1 1 2 • 1 1—20

Shoot-off at 5 and 3 birds:

Martin.....• 1 2 1 1—4 1 0 1—2
Moore.....1 0 2 1 1—4 0 1 0—1

Answers to Correspondents.

No notice taken of anonymous communications.

N. K., New York.—Will you inform me in your next issue if there are any foxes in eastern Connecticut and Rhode Island, and whether red or gray, or both? Ans. Both varieties are found in the sections named, though the red largely predominates in numbers.

MR. WM. H. WOOD'S address is desired; and we would thank the sender of it. Mr. Wood, it will be remembered, was the pioneer in rod fishing for tarpon.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

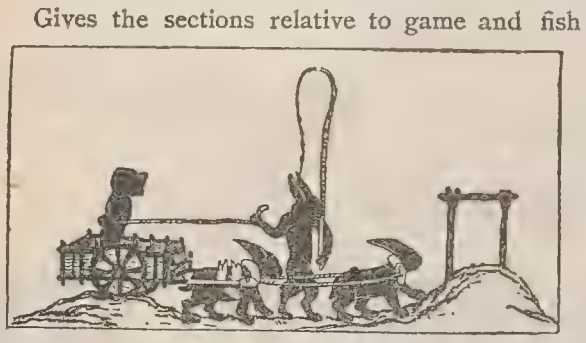
ENTIRELY NEW.

Just what has been wanted by Every Sportsman. We have it

THE KENWOOD CAMPING AND SLEEPING BAG is an all wool, heavy blanket, woven bag shape, and closely felted, and has a thick soft nap inside. It is cut down the front to a convenient point, and being supplied with special fasteners, it allows one to completely envelope themselves for a night's sleep in camp, with no discomfort, even in zero weather. It can be securely fastened across the top, and used as a carryall.

Made in Two Weights:
Light Weight, Gray, - $6.00 each.
Heavier Weight, Red, - $10.00 each.
Weight 7 to 8 lbs.

We also have a Steamer Rug on same principle. Catalogue on application.



HULBERT BROS. & CO.,

UNITED STATES AND CANADA.

Gives the sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for *the practical guidance* of sportsmen and anglers. Carefully compiled, and shorn of verbiage, by CHAS. B. REYNOLDS of *Forest and Stream*. The *Brief* is a standard work of reference. Handsomely illustrated with twenty-five half-tone engravings from *Forest and Stream*.

Price 25 Cents. We send it postpaid. All Sportsmen's Goods dealers sell it.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

THE ONLY PERFECT FISHING LINE IS THE

Natchaug Braided Silk Line.

Made from the choicest stock braided 16-strand three-cord silk. They will outwear three ordinary lines. Spool perfectly when in use.
Never flatten or become water soaked.

NATCHAUG WATERPROOF BAIT & FLY LINES

will float on the water The finish cannot be broken. Those who have used them will have no others. Send four cents for samples and prices and pamphlet containing our awards of prices for last season and cash prizes for 1895. For sale by all dealers.

$225 in Gold Given Away!

WE offer the following Prizes for the Season of 1895, $225 in Gold for the largest fish caught on the

NATCHAUG SILK LINES

From April 1st to November 1st, 1895.

First Prize—$25 in Gold for the heaviest Muskallonge.
Second Prize—$25 in Gold for the heaviest small-mouthed Bass.
Third Prize—$25 in Gold for the heaviest large-mouthed Bass.
Fourth Prize—$25 in Gold for the heaviest Lake Trout.
Fifth Prize—$25 in Gold for the heaviest Mountain Trout caught west of the Mississippi River.
Sixth Prize.—$25 in Gold for the heaviest Brook Trout caught in Maine or Canada.
Seventh Prize—$25 in Gold for the heaviest Brook Trout caught in the United States, east of the Mississippi River, outside of Maine and Canada.
Eighth Prize—$25 in Gold for the heaviest Pickerel, Pike or Salmon.
Ninth Prize—$25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.

CONDITIONS:

All of these fish must be caught with the Natchaug Silk Fishing Line, and by fair angling.
Competitors must forward to us their full name, P. O. address, together with description and weight of fish caught, and name of dealer from whom line was purchased, within thirty days after such catch is made, together with the name of one reputable witness affixed. On November 7, 1895, the award will be made and the list of successful competitors announced in the FOREST AND STREAM and the *American Field*.
All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.
If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from
